32. By adding a new § 98.30-10 to read as follows:

§ 98.30-10 Pipe connections and filling and discharge openings.

(a) No person may transfer a hazardous material to or from a portable tank on board a vessel, unless each filling and discharge opening in the tank bottom is equipped with the following:

(1) If an IM-101 or IM-102 portable tank, the closures specified in 49 CFR 173.32c(g)(2).

(2) If an MPT, the valves and closures specified in §§ 64.33 through 64.41 of this chapter.

§ 98.31-5 [Amended]

33. In § 98.31-5, by removing the word "marine" before "portable tank".

34. By adding a new subpart 98.33 to read as follows:

Subpart 98.33—Portable Tanks for Certain Grade E Combustible Liquids and Other Regulated Materials

Sec.	
98.33-1	Applicability.
98.33-3	Cargoes authorized.
98.33-5	Portable tanks authorized.
98.33-7	Pipe and hose connections.
98.33-9	Stowage.
98.33-11	Smoking.
98.33-13	Cargo handling system.
98.33-15	Transfer operations.

§ 98.33-1 Applicability.

(a) This subpart applies to the transportation of certain low-hazard materials in portable tanks by vessel when that transportation involves the transfer of those materials to or from the portable tank while on board the vessel.

§ 98.33-3 Cargoes authorized.

(a) The following cargoes are authorized to be transferred to or from a portable tank described in § 98.33-5:

(1) Grade E combustible liquids that have a closed cup flashpoint of 300 °F or higher, and which do not meet the definition of a DOT hazard class in 49 CFR part 173 except hazardous substance ("ORM-E").

(2) Materials and aqueous solutions thereof which meet the definition of hazardous substance in 49 CFR 171.8 and which are of DOT Hazard Class ORM-E. (See Appendix to 49 CFR 172.101 and 49 CFR part 173, subpart J.)

(3) Other cargoes subject to regulation under 49 CFR parts 171 through 176 when approved in writing by the Commandant (G-MTH).

§ 98.33-5 Portable tanks authorized.

(a) The following portable tanks are authorized for the transport of the cargoes authorized under § 98.33-3:

(1) DOT Specification 57 Portable Tanks. (See 49 CFR 173.24, 173.32, 173.251, and 173.253.) Minimum design pressure must be 9 psig. Pressure relief devices may not open at less than 5 psig. Frangible pressure relief devices (rupture disks) are not authorized.

(2) A portable tank authorized under 49 CFR 176.340(a)(4).

(3) A portable tank approved by the Commandant (G-MTH).

---

§ 98.33-7 Pipe and Hose Connections.

(a) If a portable tank authorized under § 98.33-5 of this part has a pipe or hose connection in its bottom, the connection must have a manually operated valve and a bolted flange, threaded cap, or similar device to protect against leakage of the tank's contents.

§ 98.33-9 Stowage.

(a) Each portable tank authorized under § 98.33-5 of this part must be secured to the vessel by devices of sufficient strength and number to prevent the tank from moving in any direction during transport.

§ 98.33-11 Smoking.

(a) No person may smoke within 50 feet of a portable tank containing a combustible liquid on the deck where the tank is stowed.

§ 98.33-13 Cargo handling system.

(a) A cargo authorized under § 98.33-3 of this part may not be transferred to or from a portable tank authorized under § 98.33-5 of this part on board a vessel unless the cargo handling system meets the requirements of subpart F of part 64 of this chapter.

§ 98.33-15 Transfer operations.

A cargo authorized under § 98.33-3 of this part may not be transferred to or from a portable tank authorized under § 98.33-5 of this part on board a vessel unless the following requirements are met:

(a) *Cargo pumps:* See § 98.30-11 of this part.

(b) *Ground connection:* See § 98.30-13 of this part.

(c) *Leakage containment:* See § 98.30-15 of this part.

(d) *Qualification of person in charge:* See § 98.30-17 of this part.

(e) *Supervision of person in charge:* See § 98.30-19 of this part.

(f) *Requirements for transfer, general:* See § 98.30-23 of this part.

(g) *Connections:* See § 98.30-27 of this part.

(h) *Pumping incompatible products:* See § 98.30-29 of this part.

(i) *Conditions for pumping:* See § 98.30-31 of this part.

Subpart 98.35—[Removed]

35. By removing subpart 98.35 entitled "Portable Tanks Constructed Before October 1, 1974 That Carry Combustible Liquids."

Dated: August 21, 1989.

J. D. Sipes,

Rear Admiral, U.S. Coast Guard, Chief, Office of Marine Safety, Security and Environmental Protection.

Notices

Federal Register
Vol. 54, No. 174
Monday, September 11, 1989

This section of the FEDERAL REGISTER contains documents other than rules or proposed rules that are applicable to the public. Notices of hearings and investigations, committee meetings, agency decisions and rulings, delegations of authority, filing of petitions and applications and agency statements of organization and functions are examples of documents appearing in this section.

ADVISORY COUNCIL ON HISTORIC PRESERVATION

Meeting

AGENCY: Advisory Council on Historic Preservation.

ACTION: Notice of meeting.

SUMMARY: Notice is hereby given that the Advisory Council on Historic Preservation will meet on Monday, September 18, 1989. The meeting will be held in the Grand Ballroom at the Officers' Club, the Presidio of San Francisco, California, beginning at 1:00 p.m.

The Council was established by the National Historic Preservation Act of 1966 (16 U.S.C. section 470) to advise the President and the Congress on matters relating to historic preservation and to comment upon Federal, federally assisted, and federally licensed undertakings having an effect upon properties listed in or eligible for inclusion in the National Register of Historic Places. The Council's members are the Architect of the Capitol; the Secretaries of the Interior, Agriculture, Housing and Urban Development, Treasury, and Transportation; the Director, Office of Administration; the Chairman of the National Trust for Historic Preservation; the President of the National Conference of State Historic Preservation Officers; a Governor; a Mayor; and eight non-Federal members appointed by the President.

The agenda for the meeting includes the following:

I. Chairman's Welcome/Opening
II. Council Business
III. Executive Director's Report
IV. Section 106 Cases
V. New Business
VI. Adjourn

Note: The meetings of the Council are open to the public. If you need special accommodations due to a disability, please contact the Advisory Council on Historic Preservation, 1100 Pennsylvania Ave., NW., Room 809, Washington, DC, 202-786-0503, at least seven (7) days prior to the meeting.

For further information contact: Additional information concerning the meeting is available from the Executive Director, Advisory Council on Historic Preservation, 1100 Pennsylvania Ave., NW., #809, Washingotn, DC 20004.

Dated: September 6, 1989.

Robert D. Bush,
Executive Director.

BILLING CODE 4310-10-M

DEPARTMENT OF AGRICULTURE

Agricultural Research Service

National Arboretum Advisory Council; Meeting

According to the Federal Advisory Committee Act of October 6, 1972 (Public Law 92-463), the Agricultural Research Service announces the following meeting:

Name: National Arboretum Advisory Council.

Date: October 29–31, 1989.

Time: 8:30 a.m.—4:30 p.m., October 30, 8:30 a.m.—3:30 p.m., October 31.

Place: U.S. National Arboretum, 3501 New York Avenue, NE., Washington, DC.

Type of meeting: Open to the public. Persons may participate in the meeting as time and space permits.

Comments: The public may file written comments before or after the meeting with the contact person below.

Purpose: To review progress of National Arboretum relating to Congressional mandate of research and education concerning trees and plant life. The Council submits its recommendations to the Secretary of Agriculture.

Contact person: Howard J. Brooks, Executive Secretary, National Arboretum Advisory Council, Room 234 Bg-005, BARC-W, Beltsville, MD 20705. Telephone: AC 301/344-3912.

Done at Beltsville, Maryland, this 27th day of July 1989.

Howard J. Brooks,
Executive Secretary, National Arboretum Advisory Council.

[FR Doc. 89-21286 Filed 9-8-89; 8:45 am]

BILLING CODE 3410-03-M

Intention To Grant an Exclusive License; AgriSense

AGENCY: Agricultural Research Service, USDA.

ACTION: Notice of intent.

SUMMARY: Notice is hereby given that the U.S. Department of Agriculture, Agricultural Research Service, intends to grant to AgriSense, 4230 West Swift, Suite 106, Fresno, California 93722, an exclusive license to U.S. Patent Application Serial No. 07/247,546, "Attractants for Dacus Latifrons, The Malaysian Fruit Fly," dated September 2, 1988.

DATE: Comments must be received by November 13, 1989.

ADDRESS: Send comments to: USDA-ARS-Office of Cooperative Interactions, Beltsville Agricultural Research Center, Baltimore Boulevard, Building 005, Room 401, BARC-W, Beltsville, Maryland 20705.

FOR FURTHER INFORMATION CONTACT: M. Ann Whitehead of the Office of Cooperative Interactions at the Beltsville addres given above; telephone: 301/344-2786, (FTS) 344-2786.

SUPPLEMENTARY INFORMATION: The USDA-ARS intends to grant to AgriSense, an exclusive license in the United States, its territories, possessions, and selected foreign countries to practice the invention disclosed in U.S. Patent Application Serial No. 07/247,546, "Attractants for Dacus Latifrons, The Malaysian Fruit Fly," dated September 22, 1988.

Patent rights to this invention are assigned to the United States of America as represented by the Secretary of Agriculture. The exclusive license will be royalty bearing and will comply with the provisions of 35 U.S.C. 209 and 37 CFR 404.7.

The applicant has submitted acceptable development and marketing plans and it is in the public interest to award this license to bring the invention to the point of practical application and, thereby, make it available to the public. The license will be granted unless ARS receives written evidence and argument which convincingly establishes that the intended course of action is not in the public interest.

William H. Tallent,
Assistant Administrator.

[FR Doc. 89-21286 Filed 9-8-89; 8:45 am]

BILLING CODE 3410-03-M

Availability for Licensing and Intention To Grant an Exclusive License; Bristol-Myers Co.

AGENCY: Agricultural Research Service, USDA.

ACTION: Notice of availability and intent.

SUMMARY: Notice is hereby given that the U.S. Department of Agriculture, Agricultural Research Service, has available for licensing U.S. Patent Application Serial No. 07/327,493, "Production of Taxol or Taxol-Like Compounds in Cell Culture," dated March 23, 1989, and intends to grant an exclusive license to Bristol-Myers Company, 345 Park Avenue, New York, New York 10154.

DATE: Comments must be received December 11, 1989.

ADDRESS: Send comments to: USDA-ARS-Office of Cooperative Interactions, Beltsville Agricultural Research Center, Baltimore Boulevard, Building 005, Room 401, BARC-W, Beltsville, Maryland 20705.

FOR FURTHER INFORMATION CONTACT: M. Ann Whitehead of the Office of Cooperative Interactions at the Beltsville address given above; telephone: 301/344-2786, (FTS) 344-2786.

SUPPLEMENTARY INFORMATION: The USDA-ARS intends to grant to Bristol-Myers Company, 345 Park Avenue, New York, New York 10154, a worldwide exclusive license to practice the invention disclosed in U.S. Patent Application Serial No. 07/327,493 "Production of Taxol or Taxol-Like Compounds in Cell Culture," dated March 23, 1989. Patent rights to this invention are assigned to the United States of America as represented by the Secretary of Agriculture. The exclusive license will be royalty-bearing and will comply with the provisions of 35 U.S.C. 209 and 37 CFR 404.7.

This action is based upon acceptable development plans submitted by the applicant and is necessary to bring the invention to the point of practical application and, thereby, make it available to the public. The applicant is also negotiating a Cooperative Research and Development Agreement with the Agricultural Research Service.

The license will be granted unless ARS receives written evidence and argument which convincingly establishes that the intended course of actions is not in the public interest.

William H. Tallent,
Assistant Administrator.

BILLING CODE 3410-03-M

Commodity Credit Corporation

1989 Price Support Levels for Fire-Cured (Type 21), Fire-Cured (Types 22-23), Dark Air-Cured (Types 35-36), Virginia Sun-Cured (Type 37), Cigar-Filler and Binder (Types 42-44, 53-55) and Cigar-Filler (Type 46) Tobaccos

AGENCY: Commodity Credit Corporation (CCC).

ACTION: Notice of determination of 1989 price support levels for six kinds of tobacco.

SUMMARY: This notice sets forth the levels of price support for: (1) Fire-cured (type 21), (2) fire-cured (types 22–23), (3) dark air-cured (types 35–36), (4) Virginia sun-cured (type 37), (5) cigar-filler and binder (types 42–44; 53–55), and (6) cigar-filler (type 46) kinds of tobacco for the 1989 marketing year. The levels of price support for these kinds of tobacco are required to be determined under the provisions of section 106 of the Agricultural Act of 1949, as amended.

EFFECTIVE DATE: May 18, 1989.

FOR FURTHER INFORMATION CONTACT: Robert H. Miller, (202) 447-8839 or Kenneth Robison, (202) 4476-7477. A Final Regulatory Impact Analysis describing the options considered in developing this notice and the impact of implementing each option is available upon request from Mr. Robison.

SUPPLEMENTARY INFORMATION: This notice has been reviewed under USDA procedures established in accordance with Executive Order 12291 and Departmental Regulation 1512-1, and has been classified as "not major." The provisions of this notice will not result in: (1) An annual effect on the economy of $100 million or more; (2) a major increase in costs or prices for consumers, individual industries, Federal, State or local governments, or geographical regions; or (3) significantly adverse effects on competition, employment, investment, productivity, innovation, the environment, or the ability of United States-based enterprises to compete with foreign-based enterprises in domestic or export markets.

The title and number of the Federal Assistance Program to which this notice applies are: Title—Commodity Loans and Purchases; Number—10.051, as set forth in the Catalog of Federal Domestic Assistance.

It has been determined that the Regulatory Flexibility Act is not applicable to this notice since the Commodity Credit Corporation (CCC) is not required by 5 U.S.C. 553 or any other provision of law to publish a notice of proposed rulemaking with respect to the subject of this notice.

This program/activity is not subject to the provisions of Executive Order 12372 which requires intergovernmental consultation with State and local officials. See the Notice related to 7 CFR part 3015, subpart V, published at 48 FR 29115 (June 24, 1983). It has been determined by an environmental evaluation that this action will have no significant impact on the quality of the human environment. Therefore, neither an Environmental Assessment nor an Environmental Impact Statement is needed.

Determinations of Levels of Price Support

Price support is required to be made available for each crop of a kind of tobacco for which marketing quotas are in effect or for which marketing quotas have not been disapproved by producers. With respect to the 1989 crop of the six kinds of tobacco which are the subject of this notice, the respective maximum level of support is determined in accordance with section 106 of the Agricultural Act of 1949, as amended (the "Act").

Section 106(f)(6)(A) of the Act provides that the level of support for the 1989 crop of a kind of tobacco shall be the level in cents per pound at which the 1988 crop of such kind of tobacco was supported, plus or minus, respectively, the amount by which (i) the support level for the 1989 crop, as determined under section 106(b) of the Act, is greater or less than (ii) the support level for the 1988 crop, as determined under section 106(b) of the Act, as that difference may be adjusted by the Secretary under section 106(d) of the Act if the support level under clause (i) is greater than the support level under clause (ii).

Accordingly, under section 106(f)(6)(A) of the Act, the support level for the 1989 crop of such kind of tobacco will be the 1988 level, adjusted by the difference between (plus or minus) the 1989 "basic support level" and the 1988 "basic support level."

In addition, section 106(f)(6)(B) of the Act provides that to the extent requested by the board of directors of an association through which price support is made available to producers ("producer association") the Secretary may reduce the support level determined under section 106(f)(6)(A) for any kind of tobacco (except flue-cured and burley) to more accurately reflect the market value and improve the marketability of tobacco. Accordingly, the price support for a kind of tobacco which are set forth in this notice could be reduced if such a request is made.

Additionally, section 106(f)(8)(A) of the Act provides that for the 1989 crop of a kind of tobacco the support level shall be reduced by 1.4 percent of the level otherwise established. Any such reduction under this subsection shall not be taken into consideration in determining the support level for the subsequent crop of tobacco. Also, section 106(f)(8)(B) provides that in lieu of making any such reduction, the Secretary may impose assessments on the producers and purchasers in an amount sufficient to realize a reduction in outlays equal to the amount that would have been achieved as a result of the reduction required under section 106(f)(8)(A).

The levels of price support for the 1988 crops of various kinds of tobacco, which were determined in accordance with section 106(f)(6)(A), are as follows:

Kind and type	Support (cents per pound)
Virginia fire-cured, type 21	118.8
KY-TN fire-cured, types 22–23	123.0
Dark air-cured, types 35–36	104.7
Virginia sun-cured, type 37	104.9
Cigar-filler and binder, types 42–44, 53–55	90.8
Puerto Rican filler, type 46	74.1

Section 106(b) of the Act provides that the "basic support level" for any year is determined by multiplying the support level for the 1959 crop of such kind of tobacco by the ratio of the average of the index of prices paid by farmers including wage rates, interest, and taxes (referred to as the "parity index") for the three previous calendar years to the average index of such prices paid by farmers, including wage rates, interest, and taxes for the 1959 calendar year (298). For the 1989-crop year, the average parity indexes for the three previous years are: 1986—1093; 1987—1110; and 1988—1166. The average of the parity indexes for these years is 1123 and the ratio of the 1986–88 index to the 1959 index is 3.77. For the 1988-crop year, the average parity indexes used to calculate the 1988 "basic support level" were: 1985—1120; 1986—1096; and 1987—1115. The ratio of the 1985–87 index to the 1959 index equaled 3.72. Thus, the "basic support level" for the 1988 and 1989 crops of the various kinds of tobaccos and the annual increase are as shown in the following table:

Kind and type	Basic support level (cents per pound)		Increase in 1989 from 1988
	1988	1989	
Virginia fire-cured type 21	144.3	146.3	2.0
Kentucky-Tennessee fire-cured, types 22–23	144.3	146.3	2.0
Dark air-cured, types 35–36	128.3	130.1	1.8
Virginia sun-cured, type 37	128.3	130.1	1.8
Cigar-filler and binder, types 42–44, 53–55	106.4	107.8	1.4
Puerto Rican filler, type 46	110.5	112.0	1.5

Section 106(d) of the Act provides that the Secretary of Agriculture may reduce the level of support which would otherwise be established for any grade of such kind of tobacco which the Secretary determines will likely be in excess supply. In addition, the weighted average of the level of support for all eligible grades of such tobacco must, after such reduction, reflect not less than 65 percent of the increase in the support level for such kind of tobacco which would otherwise be established under section 106 of the Act if the support level is higher than the support level for the preceding crop. Before any such reduction is made, the Secretary must consult with the associations handling price support loans and consideration must be given to the supply and anticipated demand of such tobacco, including the effect of such reduction on other kinds of quota tobacco. In determining whether the supply of any grade of any kind of tobacco of a crop will be excessive, the Secretary shall take into consideration the domestic supply, including domestic inventories, the amount of such tobacco pledged as security for price support loans, and anticipated domestic and export demand, based on the maturity, uniformity and stalk position of such tobacco.

As noted in the following table, the stocks of the associations that manage the loan inventories for Kentucky-Tennessee fire-cured and dark air-cured tobaccos are composed almost exclusively of thin leaf, lug and nondescript grades. Therefore, these grades of Kentucky-Tennessee fire-cured and dark air-cured tobaccos are determined to be in excess supply.

Grade Groups	Kentucky-Tennessee fire-cured		Dark air-cured	
	Types 22–23		Types 35–36	
	Mil. lbs.	Percent	Mil. lbs.	Percent
Heavy body	1.3	1	.7	7
Thin body	7.7	62	4.8	46
Tip			.3	3
Lug	3.0	24	4.3	42
Nondescript	.4	3	.2	2
Total	12.4	100	10.3	100

ASCS/CAD, April 30, 1989.

For Puerto Rican filler (type 46) tobacco, the Secretary proclaimed national marketing quotas for the 1989–90, 1990–91, 1991–92 marketing years and proclaimed a zero quota for the 1989–90 marketing year on March 1, 1989. With carryover from the 1988–89 marketing year estimated to be 3.7 million pounds and the reserve supply level set at 2.0 million pounds, an excess supply situation exists. Because of the excess supply situation and the proclamation of a zero quota, zero pounds are eligible to be marketed by a producer without the assessment of a penalty during the 1989–90 marketing year. Even though no Puerto Rican filler production is expected it will eliminate confusion in future price support calculations to determine a price support level for the 1989–90 marketing year.

Because the total supply is below the reserve supply level for fire-cured (type 21), Virginia sun-cured (type 37), and cigar-filler and binder (types 42–44; 53–55) tobaccos, the 1989 support level for each kind consists of the 1988 level of support increased by the difference between the 1989 "basic support level" and the 1988 "basic support level". Because the total supply is near the reserve supply level, but certain grades are in excess supply for fire-cured (types 22–23) and dark air-cured (types 35–36) tobaccos, the 1989 support level for each kind consists of the 1988 level of support increased by 65 percent of the difference between the 1989 "basic support level" and the 1988 "basic support level."

Because the total supply is well above the reserve supply level for Puerto Rican filler (type 46) tobacco, the 1989 support level consists of the 1988 level of support increased by 65 percent of the difference between the 1989 "basic support level" and the 1988 "basic support level."

For the 1989 crops, the 1.4 percent decrease provided by section 106(f)(8)(A) of the Act would require reductions to the support level of 1.7 cents to 1.3 cents per pound, depending on the kind of tobacco.

Determinations

Accordingly, the Secretary of Agriculture has determined, in accordance with sections 106(f)(6)(A) and 106(f)(8)(A) of the 1949 Act, the following price support levels for the 1989 crops of Virginia fire-cured (type 21), Kentucky-Tennessee fire-cured (types 22–23), dark air-cured (types 35–36), Virginia sun-cured (type 37), cigar filler and binder (types 42–44, 53–55), and Puerto Rican filler (type 46) tobaccos:

Kind and type	Amount (cents per pound)	Reduced 1.4 percent
Virginia fire-cured, type 21	120.8	119.1
Kentucky-Tennessee fire-cured, types 22–23	124.3	122.6
Dark air-cured, types 35–36	106.7	105.2
Cigar-filler and binder, types 42–44, 53–55	92.2	90.9
Puerto Rican filler (type 46)	75.1	74.0

Authority: Secs. 4 and 5, Stat. 1070, 1072, as amended (15 U.S.C. 714b, 714c); Secs. 101, 106, 401, 403, 406, 63 Stat. 1051, as amended, 74 Stat. 6, as amended, 63 Stat. 1054, as amended, 1055 (7 U.S.C. 1441, 1445, 1421, 1423, 1426).

Signed at Washington, DC on August 30, 1989.

Keith D. Bjerke,

Executive Vice President, Commodity Credit Corporation.

BILLING CODE 3410-05-M

Forest Service

Lowman Fire Recovery, Boise National Forest, Boise County, Idaho

AGENCY: Forest Service, USDA.

ACTION: Notice of intent to prepare environmental impact statement.

SUMMARY: The Department of Agriculture, Forest Service, will prepare an environmental impact statement for wildfire recovery activitives on the Lowman fire complex near Lowman, Idaho. Wildfire recovery activities may include the harvesting of salvageable timber with development of associated harvest systems, reforestation, and watershed and wildlife habitat restoration.

DATE: Comments concerning the scope of the analysis should be received in writing by October 10, 1989.

ADDRESS: Written comments are encouraged, and should be sent to Dave Rittersbacher, Forest Supervisor, Boise National Forest, 1750 Front Street, Boise, Idaho 83702.

FOR FURTHER INFORMATION CONTACT: Daniel Deiss, Project Director, Bosie National Forest, 1750 Front Street, Boise, ID 83702, (208) 364–4173.

SUPPLEMENTARY INFORMATION: A range of alternatives for recovery of the burn area will be considered in the environmental impact statement, including natural recovery of the fire affected area. Other alternatives will consider the salvage of fire damaged timber and actions to recover long-term productivity of wildlife, watershed, timber, and other resource values. Federal, State, and local agencies, organizations, and individuals who may be interested in or affected by the decision will be invited to participate in the scoping process. This process will include:

1. Identification of those issues to be addressed in the environmental impact statement.
2. Elimination of insignificant issues or those which have been covered by a previous environmental review.
3. Identification of interested agencies, organizations, businesses, and individuals who may wish to prepare alternatives for the analysis.

Some of the issues and alternatives to be analyzed in the environmental impact statement include: the salvaging of fire damaged timber, the relationship of roadless areas to salvage timber and transportation needs, and proposed activity effects on cultural resources, wildlife, fish, water, soils, range, and local communities. Further defining of issues, concerns, opportunities and alternatives will occur through scoping with other Federal, State and local agencies, and with interested individuals and organizations. Contracts with these groups will be through the news media, by letter or personal contact.

Scoping meetings to provide opportunity for comments will be held at Boise, ID, Boise National Forest Supervisor's Office, 1750 Front Street, Sept. 19, 1989, 7:00 p.m.; Garden Valley area, Community Hall, Crouch, ID, Sept.

19, 1989, 7:00 p.m.; Cascade, ID, Senior Citizen's Center, Sept. 20 1989, 7:00 p.m.; Yellowpine, ID, Community Hall, Sept. 20, 1989, 7:00 p.m.; Lowman, ID, Lowman Ranger District Office, Sept. 21, 1989, 7:00 p.m.

Comments concerning Forest Service recovery efforts for all recent burn areas on the Forest will be entertained at these meetings.

Due to the short timeframes involved with the fire recovery efforts, scoping document preparation, and public involvement processes must be expedited.

Dave Rittersbacher, Forest Supervisor of the Boise National Forest in Boise, Idaho, is the responsible official.

The analysis is expected to take four months. The draft environmental impact statement will be 45 days from the date the Environmental Protection Agency's notice of availability appears in the **Federal Register**. It is very important that those interested in this proposed action participate at that time. To be the most helpful, comments on the draft environmental impact statement should be as specific as possible and may address the adequacy of the statement or the merits of the alternatives discussed (see The Council on Environmental Quality Regulations for implementing the procedure provisions of the National Environmental Policy Act at 40 CFR 1503.3).

In addition, Federal court decisions have established that reviewers of draft environmental review of the proposal so that it is meaningful and alerts an agency to the reviews' position and contentions. *Vermont Yankee Nuclear Power Corp.* v. *NRDC*, 435 U.S. 519, 553 (1978). Environmental objections that could have been raised at the draft stage may be waived if not raised until after completion of the final environmental impact statement. *City of Angoon* v. *Hodel* (9th Circuit, 1986) and *Wisconsin Heritages, Inc.* v. *Harris*, 490 F. Supp. 1334, 1338 (E.D. Wis. 1980). The reason for this is to ensure that substantive comments and objections are made available to the Forest Service at a time when it can meaningfully consider them and respond to them in the final.

Dated: September 1, 1989.

Dave Rittersbacher,

Forest Supervisor.

[FR Doc. 89–21204 Filed 9–8–89; 8:45 am]

BILLING CODE 3410-11-M

Warm Lake Fire Recovery, Boise National Forest, Valley County, Idaho

AGENCY: Forest Service, USDA.

ACTION: Notice of intent to prepare environmental impact statement.

SUMMARY: The Department of Agriculture, Forest Service, will prepare an environmental impact statement for wildfire recovery activities on the Warm Lake fire complex near Warm Lake, Idaho. Wildfire recovery activities may include the harvesting of salvageable timber with development of associated harvest systems, reforestation, and watershed and wildlife habitat restoration.

DATE: Comments concerning the scope of the analysis should be received in writing by October 10, 1989.

ADDRESSES: Written comments are encouraged, and should be sent to Dave Rittersbacher, Forest Supervisor, Boise National Forest, 1750 Front Street, Boise, Idaho 83702.

FOR FURTHER INFORMATION CONTACT: Daniel Deiss, Project Director, Boise National Forest, 1750 Front Street, Boise, ID 83702, (208) 364–4173.

SUPPLEMENTARY INFORMATION: A range of alternatives for recovery of the burn area will be considered in the environmental impact statement, including natural recovery of the fire affected area. Other alternatives will consider the salvage of fire damaged timber and actions to recover long-term productivity of wildlife, watershed, timber, and other resource values. Federal, State, and local agencies, organizations, and individuals who may be interested in or affected by the decision will be invited to participate in the scoping process. This process will include:

1. Identification of those issues to be addressed in the environmental impact statement.
2. Elimination of insignificant issues or those which have been covered by a previous environmental review.
3. Identification of interest agencies, organizations, businesses, and individuals who may wish to prepare alternatives for the analysis.

Some of the issues and alternatives to be analyzed in the environmental impact statement include: The salvaging of fire damaged timber, the relationship of roadless areas to salvage timber and transportation needs, and proposed activity effects on cultural resources, wildlife, fish, water, soils, range, and local communities. Further defining of issues, concerns, opportunities and alternatives will occur through scoping with other Federal, State and local agencies, and with interested individuals and organizations. Contacts with these groups will be through the news media, by letter or personal contact.

Scoping meetings to provide opportunity for comments will be held at Boise, ID, Boise National Forest Supervisor's Office, 1750 Front Street, Sept. 19, 1989, 7:00 p.m.; Garden Valley area, Community Hall, Crouch, ID, Sept. 19, 1989, 7:00 p.m.; Cascade, ID, Senior Citizen's Center, Sept. 20, 1989, 7:00 p.m.; Yellowpine, ID, Community Hall, Sept. 20, 1989, 7:00 p.m.; Lowman, ID, Lowman Ranger District Office, Sept. 21, 1989, 7:00 p.m.

Comments concerning Forest Service recovery efforts for all recent burn areas on the Forest will be entertained at these meetings.

Due to the short timeframes involved with the fire recovery efforts, scoping, document preparation, and public involvement processes must be expedited.

Dave Rittersbacher, Forest Supervisor of the Boise National Forest in Boise, Idaho, is the responsible official.

The analysis is expected to take four months. The draft environmental impact statement should be available for public review by December 30, 1989. The final EIS will be filed by March 2, 1990.

The comment period of the draft environmental impact statement will be 45 days from the date of Environmental Protection Agency's notice of availability appears in the **Federal Register**. It is very important that those interested in this proposed action participate at that time. To be the most helpful, comments on the draft environmental impact statement should be as specific as possible and may address the adequacy of the statement or the merits of the alternatives discussed (see The Council on Environmental Quality Regulations for implementing the procedural provisions of the National Environmental Policy Act at 40 CFR 1503.3).

In addition, Federal court decisions have established that reviewers of draft environmental impact statements must structure their participation in the environmental review of the proposal so that it is meaningful and alerts an agency to the reviewers' position and contentions. *Vermont Yankee Nuclear Power Corp.* v. *NRDC*, 435 U.S. 519, 553 (1978). Environmental objections could have been raised at the draft stage may be waived if not raised until after completion of the final environmental impact statement. *City of Angoon* v. *Hodel*, (9th Circuit, 1986) and *Wisconsin Heritages, Inc.* v. *Harris*, 490 F. Supp. 1334, 1338 (E.D. Wis. 1980). The reason for this is ensure that substantive comments and objections are made

available to the Forest Service at a time when it can meaningfully consider them and respond to them in the final.

Dated: September 1, 1989.

Dave Rittersbacher,

Forest Supervisor.

BILLING CODE 3410-11-M

DEPARTMENT OF COMMERCE

Bureau of Export Administration

Transportation and Related Equipment Technical Advisory Committee; Partially Closed Meeting

A meeting of the Transportation and Related Equipment Technical Advisory Committee will be held September 26, 1989, 9:30 a.m., Herbert C. Hoover Building, Room 1092, 14th Street and Constitution Avenue, NW, Washington, DC. The Committee advises the Office of Technology and Policy Analysis with respect to technical questions which affect the level of export controls applicable to transportation and related equipment or technology.

Agenda

General Session

1. Opening Remarks by the Chairman or Commerce Representative.
2. Introduction of Members and Visitors.
3. Presentation of Papers or Comments by the Public.
4. Presentation by the National Center for Advanced Technologies on Key Technologies for the 1990's.
5. Discussion of the 1989 Annual Report and the 1990 Annual Plan.
6. Discussion on Committee Support on the FX Project.

Executive Session

7. Discusssion of matters properly classified under Executive Order 12356, dealing with the U.S. and COCOM control programs and strategic criteria related thereto.

The General Session of the meeting will be open to the public and a limited number of seats will be available. To the extent time permits, members of the public may present oral statements to the Committee. Written statements may be submitted at any time before or after the meeting. However, in order to facilitate distribution of public presentation materials to the Committee members, the Committee suggests that you forward your public presentation materials two weeks prior to the meeting to the below listed address: Ms. Ruth D. Fitts, U.S. Department of Commerce/BXA, Office of Technolgy & Policy Analysis, 14th & Constitution Avenue, NW., Room 4069A, Washington, DC 20230.

The Assistant Secretary for Administration, with the concurrence of the delegate of the General Counsel, formally determined on January 10, 1988, pursuant to section 10(d) of the Federal Advisory Committee Act, as amended, that the series of meetings or portions of meetings of the Committee and of any Subcommittee thereof, dealing with the classified materials listed in 5 U.S.C. 552(c)(1) shall be exempt from the provisions relating to public meetings found in section 10 (a)(1) and (a)(3), of the Federal Advisory Committee Act. The remaining series of meetings or portions thereof will be open to the public.

A copy of the Notice of Determination to close meetings or portions of meetings of the Committee is available for public inspection and copying in the Central Reference and Records Inspection Facility, Room 6628, U.S. Department of Commerce, Washington, DC. For further information or copies of the minutes call Ruth D. Fitts, 202–377–4959.

Dated: September 5, 1989.

Betty A. Ferrell,

Director, Technical Advisory Committee Unit, Office of Technology and Policy Analyses.

BILLING CODE 3510-DT-M

Foreign-Trade Zones Board

[Docket No. 14–89]

Proposed Foreign-Trade Zone, Palmetto, FL; Application and Public Hearing

An application has been submitted to the Foreign-Trade Zones Board (the Board) by the Manatee County Port Authority (MCPA), requesting authority to establish a general-purpose foreign-trade zone at Port Manatee in Palmetto, Florida, within the Port Manatee Customs port of entry. The application was submitted pursuant to the provisions of the Foreign-Trade Zones Act, as amended (19 U.S.C. 81a–81u), and the regulations of the Board (15 CFR part 400). It was formally filed on August 31, 1989. The applicant is authorized to make this proposal under § 288.36, Florida Statutes Annotated (1987).

The application requests zone status for the 837-acre Port Manatee complex operated by MCPA at the east entrance of Tampa Bay on the West Coast of Florida. The site is located west of U.S. Highway 41, adjacent to Piney Point Road, in northwest Manatee County. The Port owns approximately 775 acres and leases an additional 62 acres from the State of Florida.

The application contains evidence of the need for zone services at Port Manatee. Initially, 12,500 square feet of warehouse space within an existing 112,500 square foot warehouse would be activated. Several firms have indicated an interest in using zone procedures for the storage and warehousing of vehicles and vehicle parts, lumber and lumber products, as well as production involving glass, fish, and rubber life raft products. Specific manufacturing approvals are not being sought at this time, however, such requests would be made to the Board on a case-by-case basis.

In accordance with the Board's regulations, an examiners committee has been appointed to investigate the application and report to the Board. The committee consists of: Dennis Puccinelli (Chairman), Foreign-Trade Zones Staff, U.S. Department of Commerce, Washington, DC 20230; Howard Cooperman, Deputy Assistant Regional Commissioner, U.S. Customs Service, Southeast Region, 909 SE. First Avenue, Miami, Florida 33131–2595; and Colonel Bruce A. Malson, District Engineer, U.S. Army Engineer District Jacksonville, P.O. Box 4970, Jacksonville, Florida 32232–0019.

As part of its investigation, the examiners committee will hold a public hearing on October 18, 1989, beginning at 9 a.m., at the Manatee County Administration Center, Manatee County Commission Chambers, 1st Floor, 1112 Manatee Avenue West, Bradenton, Florida 34206.

Interested parties are invited to present their views at the hearing. Persons wishing to testify should notify the Board's Executive Secretary in writing at the address below or by phone (202/377–2862) by October 11, 1989. Instead of an oral presentation, written statements may be submitted in accordance with the Board's regulations to the examiners committee, care of the Executive Secretary, at any time from the date of this notice through November 20, 1989.

A copy of the application and

accompanying exhibits will be available during this time for public inspection at each of the following locations:

Manatee County Port Authority, Port Manatee, Route #1/Tampa Bay, Palmetto, Florida 34221

Office of the Executive Secretary, Foreign-Trade Zones Board, U.S. Department of Commerce, 14th and Pennsylvania Avenue NW., Room 2835, Washington, DC 20230

Dated: September 5, 1989.

John J. Da Ponte, Jr.,

Executive Secretary.

BILLING CODE 3510–DS–M

International Trade Administration

Antidumping or Countervailing Duty Order, Finding, or Suspended Investigation; Opportunity to Request Administrative Review

AGENCY: International Trade Administration/Import Administration, Commerce.

ACTION: Notice of opportunity to request administrative review of antidumping or countervailing duty order, finding, or suspended investigation.

Background: Each year during the anniversary month of the publication of an antidumping or countervailing duty order, finding, or suspension of investigation, an interested party as defined in section 771(9) of the Tariff Act of 1930 may request, in accordance with §§ 353.22 or 355.22 of the Commerce Regulations, that the Department of Commerce ("the Department") conduct an administrative review of that antidumping or countervailing duty order, finding, or suspended investigation.

Opportunity to request a review: Not later than September 30, 1989, interested parties may request administrative review of the following orders, findings, or suspended investigations, with anniversary dates in September for the following periods:

	Period
Antidumping Duty Proceeding	
Canada: Replacement Parts for Self-Propelled Bituminous Paving Equipment (A–122–057)	09/01/88–08/31/89
Canada: Carbon Steel Bars & Structural Shapes (A–122–005)	09/01/88–08/31/89
Canada: Steel Jacks (A–122–006)	09/01/88–08/31/89
Italy: Pads for Woodwind Instrument Keys (A–475–017)	09/01/88–08/31/89
Japan: Filament Fabric (A–588–607)	09/01/88–08/31/89
Japan: Metal-Walled Above-Ground Swimming Pools (A–588–058)	09/01/88–08/31/89
The Federal Republic of Germany: Certain Forged Steel Crankshafts (A–428–604)	09/01/88–08/31/89
The People's Republic of China: Greige Polyester/Cotton Printcloth (A–570–101)	09/01/88–08/31/89
The United Kingdom: Certain Forged Steel Crankshafts (A–412–602)	09/01/88–08/31/89
Suspension Agreements	
Canada: Light Weight Steel Sheet Piling (A–122–007)	09/01/88–08/31/89
Argentina: Carbon Steel Wire Rod (C–357–004)	01/01/86–12/31/86
Peru: Cotton Shop Towels (C–333–401)	01/01/88–12/31/88
Countervailing Duty Proceeding	
Argentina: Pipe and Tube (C–357–601)	07/14/88–12/31/89
Israel: Fresh Cut Roses (C–508–064)	10/01/87–09/30/88
New Zealand: Lamb Meat (C–614–503)	04/01/88–03/31/89
New Zealand: Steel Wire (C–614–601)	07/01/88–06/30/89
Mexico: Lime (C–201–402)	01/01/88–12/31/88
Mexico: Portland Hydraulic Cement and Cement Clinker (C–201–013)	01/01/88–12/31/88

Seven copies of the request should be submitted to the Assistant Secretary for Import Administration, International Trade Administration, Room B–099, U.S. Department of Commerce, Washington, DC 20230.

The Department will publish in the **Federal Register** a notice of "Initiation of Antidumping (Countervailing) Duty Administrative Review," for requests received by September 30, 1989.

If the Department does not receive by September 30, 1989 a request for review of entries covered by an order or finding listed in this notice and for the period identified above, the Department will instruct the Customs Service to assess antidumping or countervailing duties on those entries at a rate equal to the cash deposit of (or bond for) estimated antidumping or countervailing duties required on those entries at the time of entry, or withdrawal from warehouse, for consumption and to continue to collect the cash deposit previously ordered.

This notice is not required by statute, but is published as a service to the international trading community.

Dated: August 31, 1989.

Joseph A. Spetrini,

Deputy Assistant Secretary for Compliance.

BILLING CODE 3510–DS–M

Importers and Retailers' Textile Advisory Committee; Partially Closed Meeting

A meeting of the Importers and Retailers' Textile Advisory committee will be held on Friday, September 22, 1989, Herbert C. Hoover Building, Room H3407, 14th Street and Constitution Avenue, NW, Washington, DC 20230. (The Committee was established by the Secretary of Commerce on August 13, 1963 to advise Department officials of the effects on import markets and retailing of cotton, wool, and man-made fiber, silk blend and other vegetable fiber textiles.)

General Session: 10:00 a.m. Review of import trends, international activities, report on conditions in the market, and other business.

Executive Session: 10:30 a.m. Discussion of matters properly classified under Executive Order 12356 (3 CFR, 1982 Comp. p. 166) and listed in 5 U.S.C. 552b(c)(1).

The general session will be open to the public with a limited number of seats available. A Notice of Determination to close meetings or portions of meetings to the public on the basis of 5 U.S.C. 552b(c)(1) has been approved in accordance with the Federal Advisory Committee Act. A copy of the notice is available for public inspection and copying in the Central Facility Room H6628, U.S. Department of Commerce, (202) 377–3031.

For further information or copies of the minutes, contact Alfreda Burton, (202) 377–3737.

Dated: September 6, 1989.

Auggie D. Tantillo,

Chairman, Committee for the Implementation of Textile Agreements.

BILLING CODE 3510–DR–M

United States-Canada Free-Trade Agreement, Article 1904 Binational Panel Reviews; Request for Panel Review

AGENCY: United States-Canada Free-Trade Agreement, Binational Secretariat, United States Section, International Trade Administration, Commerce.

ACTION: Notice of first request for panel review of a final determination of sales at less than fair value respecting new steel rail, except light rail, from Canada made by International Trade Administration, Import Administration, which was filed by the Algoma Steel Corporation, Limited, with the United States Section of the Binational Secretariat on September 1, 1989.

SUMMARY: On September 1, 1989, the Algoma Steel Corporation, Limited, filed a Request for Panel Review with the United States Section of the Binational Secretariat pursuant to Article 1904 of the United States-Canada Free-Trade Agreement. Panel review was requested of the final determination of sales at less than fair value respecting new steel rail, except light rail, from Canada, Import Administration file number C–122–804, issued by the International Trade Administration, Import Administration, and published in 54 FR 31984 on August 3, 1989. The Binational Secretariat has assigned Case Number USA–89–1904–08 to this Request for Panel Review.

FOR FURTHER INFORMATION CONTACT: James R. Holbein, Acting U.S. Secretary, Binational Secretariat, Suite 4012, 14th and Constitution Avenue, Washington, DC 20230, (202) 377–5438.

SUPPLEMENTARY INFORMATION: Chapter 19 of the U.S.-Canada Free-Trade Agreement ("Agreement") establishes a mechanism for replacing domestic judicial review of final determinations in antidumping and countervailing duty cases involving imports from the other country with review by independent binational panels. When a Request for Panel Review is filed, a panel will be established to act in place of national courts to expeditiously review the final determination to determine whether it conforms with the antidumping or countervailing duty law of the country that made the determination.

Under Article 1904 of the Agreement, which came into force on January 1, 1989, the Government of the United States and Government of Canada established "Rules of Procedure for Article 1904 Binational Panel Reviews" ("Rules"). These Rules were published in the **Federal Register** on December 30, 1988, (53 FR 53212). The panel review in this matter will be conducted in accordance with these Rules.

Rule 35(2) requires the Secretary to publish Notice of the receipt of a Request for Panel Review stating that a Request for Panel Review was filed with the United States Section of the Binational Secretariat on September 1, 1989, pursuant to Article 1904 of the Agreement.

Rule 35(1)(c) of the Rules provides that:

(a) a Party or interested person may challenge the final determination in whole or in part by filing a Complaint in accordance with Rule 39 within 30 days after the filing of the first Request for Panel Review (the deadline for filing a Complaint is October 2, 1989);

(b) a Party, investigating authority or interested person that does not file a Complaint may participate in the panel review by filing a Notice of Appearance in accordance with Rule 40 within 45 days after the filing of the first Request for Panel Review (the deadline for filing a Notice of Appearance is October 16, 1989); and

(c) the panel review shall be limited to the allegations of error of fact or law, including the jurisdiction of the investigating authority, that are set out in the Complaints filed in the panel review and the procedural and substantive defenses raised in the panel review.

Dated: September 6, 1989.

James R. Holbein,

Acting U.S. Secretary, FTA Binational Secretariat.

National Institute of Standards and Technology

Visiting Committee on Advanced Technology; Partially Closed Meeting

AGENCY: National Institute of Standards and Technology, Commerce.

ACTION: Notice of partially closed meeting.

SUMMARY: Pursuant to Federal Advisory Committee Act, 5 U.S.C. App., notice is hereby given that the National Institute of Standards and Technology Visiting Committee on Advanced Technology will meet Tuesday, September 26, 1989, from 8:30 a.m. to 5:00 p.m., and Wednesday, September 27, 1989 from 8:30–11:00 a.m. The Visiting Committee on Advanced Technology is composed of nine members appointed by the Director of the National Institute of Standards and Technology who are eminent in such fields as business, research, new product development, engineering, labor, education, management consulting, environment, and international relations. The purpose of this meeting is to review and make recommendations regarding general policy for the Institute, its organization, its budget, and its programs within the framework of applicable national policies as set forth by the President and the Congress. The discussion on NIST Budget scheduled to begin at 10:00 a.m. and ending at 11:00 a.m., on September 27, 1989, will be closed.

DATES: The meeting will convene September 26, 1989, at 8:30 a.m. and will adjourn for the day at 5:00 p.m. The meeting will resume at 8:30 a.m. on September 27, 1989, and will end at 11:30 a.m.

ADDRESS: The meeting will be held in Lecture Room A, Administration Building, National Institute of Standards and Technology, Gaithersburg, Maryland.

FOR FURTHER INFORMATION CONTACT: Dale E. Hall, Visiting Committee Executive Director, National Institute of Standards and Technology, Gaithersburg, Maryland 20899, telephone number (301) 975–2158.

SUPPLEMENTARY INFORMATION: The Assistant Secretary for Administration, with the concurrence of the General Counsel, formally determined on September 1, 1989, that portions of the meeting of the Visiting Committee on Advanced Technology which involve examination and discussion of the budget for the Institute may be closed in accordance with Section 552(b)(9)(B) of Title 5, United States Code, since the meeting is likely to disclose financial information that may be privileged or confidential.

Dated: September 5, 1989.

Raymond G. Kammer,

Acting Director.

BILLING CODE 3510-13-M

DEPARTMENT OF DEFENSE

Department of the Navy

Intention To Prepare An Environmental Impact Statement for Dredging at Naval Air Station Alameda, California and at Naval Support Center Oakland, CA

Pursuant to section 102(2)(C) of the National Environmental Policy Act (NEPA) of 1969 as implemented by the Council of Environmental Quality regulations (40 CFR parts 1500–1508), the Department of the Navy announces its intent to prepare an Environmental Impact Statement (EIS) to dredge about 600,000 cubic yards at Naval Air Statement (NAS) Alameda to increase the exiting authorized maintenance depth from −42 feet mean lower low water (MLLW) with an overdraft of two feet to −50 feet MLLW. Also, the EIS will address dredging of about 1,000,000 cubic yards at Naval Supply Center (NSC) Oakland to increase the authorized maintenance depth from −35 feet MLLW to −38 feet MLLW in the berthing area and −41 MLLW in the channel. Dredge material disposal alternatives being considered are upland disposal, in-bay disposal, open ocean disposal, and the no action alternative. Environmental impacts of the proposed project and its alternatives shall be determined in the EIS.

The Navy will initiate a scoping process for the purpose of determining the scope of issues to be addressed and for identifying the significant issues related to this action. The Navy will hold a public scoping meeting on September 27, 1989, beginning at 7:30 pm, in the Gold Room of the Henry J. Kaiser Convention Center, 10 Tenth Street, Oakland, California. This meeting will be advertised in Alameda and Oakland area newspapers.

A formal presentation will precede request for public comment. Navy representatives will be available at this meeting to receive comments from the public regarding issues of concern to the public. It is important that federal, state, and local agencies and interested individuals take this opportunity to identify environmental concerns that should be addressed during the preparation of the EIS.

Agencies and the public are also invited and encouraged to provide written comment in addition to, or in lieu of, oral comments at the public meetings. To be most helpful, scoping comments should clearly describe specific issues or topics which the commentor believes the EIS should address. Written statements and or questions regarding the scoping process should be mailed no later than 30 days from date of this publication to Dr. Ronald Hudson, (telephone (415) 877–7695 (Code 2022)), Western Division, Naval Facilities Engineering Command, P.O. Box 727, San Bruno, California 94055–0720.

Dated: September 6, 1989.

Sandra M. Kay,

Department of the Navy, Alternate Federal Register Liaison Officer.

BILLING CODE 3810-AE-M

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. TM90-1-70-000]

Columbia Gulf Transmission Co.; Proposed Changes in FERC Gas Tariff

September 1, 1989.

Take notice that Columbia Gulf Transmission Company (Columbia Gulf) on August 30, 1989 tendered for filing the following proposed changes to its FERC Gas Tariff, Original Volume No. 1, to be effective October 1, 1989:

Seventh Revised Sheet No. 5A
Sixth Revised Sheet No. 31

Columbia Gulf states that the listed tariff sheets set forth the transportation rates and applicable tariff provisions required to place the rates into effect, applicable to the Annual Charge Adjustment, pursuant to the

Commission's Regulations as set forth in Order No. 472 and 472–A issued May 29, 1987 and June 17, 1987, respectively.

Columbia Gulf also states that copies of the filing were served upon the Company's jurisdictional customers and interested state commissions.

Any person desiring to be heard or to protest said filing should file a petition intervene or protest with the Federal Energy Regulatory Commission, 825 North Capital Street NE., Washington, DC 20426, in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure. All such petitions or protests should be filed on or before September 12. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a petition to intervene. Copies of Columbia Gulf's filing are on file with the Commission and are available for public inspection.

Lois D. Cashell,

Secretary.

BILLING CODE 6717-01-M

[Docket No. ID-2424-000]

Robert G. Lane; Filing

September 1, 1989.

Take notice that on August 28, 1989, Robert G. Lane (Applicant) tendered for filing an application under section 305(b) of the Federal Power Act to hold the following positions:

Senior Vice President Operations—Central Illinois Public Service Company
Director—Electric Energy, Inc.

Any person desiring to be heard or to protest said filing should file a motion to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street, NE., Washington, DC 20426, in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211, 385.214). All such motions or protests should be filed on or before September 18, 1989. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a motion to intervene. Copies of this filing are on file with the Commission and are available for public inspection.

Lois C. Cashell,

Secretary.

BILLING CODE 6717-01-M

[Docket No. TM90-1-71-000]

Michigan Consolidated Gas Co., Interstate Storage Division; Proposed Changes in FERC Gas Tariff

September 1, 1989.

Take notice that on August 30, 1989, Michigan Consolidated Gas Company-Interstate Storage Division (ISD) tendered for filing proposed changes to the following tariff sheets in its FERC Gas Tariff, Original Volume No. 1, Original Volume No. 2 and Original Volume No. 3:

Original Volume No. 1

Third Revised Sheet No. 1E

Original Volume No. 2

Third Revised Sheet No. 1A

Original Volume No. 3

Fifth Revised Sheet No. 2

The proposed changes reflect the revised Annual Charge Adjustment (ACA) unit charge of $.0017 in ISD's FERC Gas Tariffs. The proposed changes are pursuant to the Commission's regulations promulgated in Order No. 472.

ISD requests that these proposed tariff sheets become effective on October 1, 1989. ISD states that copies of its filing have been served upon its customers and the Michigan Public Service Comission.

Any person desiring to be heard or to protest said filing should file a petition to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street NE., Washington, DC 20426, in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211, 385.214). All such petitions or protests should be filed on or before September 12, 1989. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a petition to intervene. Copies of this filing are on file with the Commission and are available for public inspection.

Lois D. Cashell,

Secretary.

[FR Doc. 89-21228 Filed 9-8-89; 8:45 am]

BILLING CODE 6717-01-M

[Docket No. TM90-1-47-000]

MIGC, Inc.; Compliance Filing

September 1, 1989.

Take notice that on August 30, 1989, MIGC, Inc. ("MIGC") tendered for filing Fifty-Fourth Revised Sheet No. 32, Sixth Revised Sheet Nos. 102 and 140, and Third Revised Sheet Nos. 165, 188 and 250, all to MIGC's FERC Gas Tariff, Original Volume No. 1. These tariff sheets are proposed to become effective October 1, 1989.

MIGC states that the instant filing is being submitted to reflect Annual Charge Adjustment unit charges applicable to sales and transportation services during the fiscal year commencing October 1, 1989.

Any person desiring to be heard or to protest said filing should file a petition to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street NE., Washington, DC 20426, in accordance with Rules 214 and 211 of the Commission's Rules of Practice and Procedure (18 CFR 385.214 and 385.211). All such petitions or protests should be filed on or before September 12, 1989. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any peson wishing to become a party must file a petition to intervene. Copies of this filing are on file with the Commission and are available for public inspection.

Lois D. Cashell,

Secretary.

BILLING CODE 6717-01-M

[Docket No. TM90-1-18-000]

Texas Gas Transmission Corp.; Proposed Changes in FERC Gas Tariff

September 1, 1989.

Take notice that on August 31, 1989, Texas Gas Transmission Corporation (Texas Gas) tendered for filing the following revised tariff sheets to its FERC Gas Tariff, Original Volume No. 1, FERC Gas Tariff, Original Volume No. 2-A, and FERC Gas Tariff, Original Volume No. 3:

FERC Gas Tariff, Original Volume No. 1

Ninteenth Revised Sheet No. 10
Ninteenth Revised Sheet No. 10A

FERC Gas Tariff, Original Volume No. 2-A

Second Revised Sheet No. 10
Second Revised Sheet No. 11

FERC Gas Tariff, Original Volume No. 3

Fifth Revised Sheet No. 21

The revised tariff sheets are being filed pursuant to section 25 of the General Terms and Conditions of Texas Gas's FERC Gas Tariff, Original Volume No. 1, and section 21 of the General Terms and Conditions of Texas Gas's FERC Gas Tariff, Original Volume No.

2–A, which affords Texas Gas the right to recover the costs billed to Texas Gas by the Federal Energy Regulatory Commission via the FERC ACA Unit Charge method. That unit charge, as determined by the Commission, is $.0017/Mcf ($.0016/MMBtu converted), as set forth on Texas Gas's Annual Charges Bill for fiscal year 1989, to be effective October 1, 1989.

Texas Gas states that copies of the revised tariff sheets are being mailed to Texas Gas's jurisdictional customers and interested state commissions.

Any person desiring to be heard or to protest said filing should file a petition or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street NW., Washington , DC 20426, in accordance with §§ 385.214 and 385.211 of the Commission's Rules and Regulations. All such petitions or protests should be filed on before September 12, 1989.

Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a petition to intervene. Copies of this filing are on file with the Commission and are available for public inspection in the Public Reference Room.

Lois D. Cashell,

Secretary.

BILLING CODE 6717-01-M

[Docket No. TQ90–1–42–000]

Transwestern Pipeline Co.; Proposed Changes in FERC Gas Tariff

September 1, 1989.

Take notice that on August 31, 1989 Transwestern Pipeline Company (Transwestern) tendered for filing as part of its FERC Gas Tariff, Second Revised Volume No. 1, the following tariff sheet:

68th Revised Sheet No. 5

The tariff sheet listed above is being filed pursuant to Transwestern's Purchased Gas Adjustment (PGA) provision set forth in section 19.4 of the General Terms and Conditions of Transwestern's FERC Gas Tariff, Second Revised Volume No. 1.

The Current Adjustment reflected in the instant filing represents an increase of $0.1644/dth as measured against Transwestern's Annual PGA filing in Docket No. TA89–1–42, which became effective July 1, 1989.

The instant filing also reflects a decrease in the ACA Surcharge of $0.0001/dth. The adjustment of the ACA Surcharge is determined each fiscal year pursuant to the Commission's Order No. 472. The ACA Unit Surcharge of $0.0017/dth as determined by the Commission on July 15, 1989 has been converted to a dekatherm basis of $0.0016/dth. Transwestern requests that the revised ACA Surcharge become effective October 1, 1989.

The proposed effective date for the tariff sheet listed above is October 1, 1989.

Transwestern states that copies of the filing were served on Transwestern's jurisdictional customers and interested state commissions.

Any person desiring to be heard or to protest said filing should file a petition to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street, NE., Washington, DC 20426, in accordance with rules 211 and 214 of the Commission's Rules of Practice and Procedure. All such petition or protests should be filed on or before September 12, 1989. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a petition to intervene. Copies of this filing are on file with Commission and are available for public inspection.

Lois D. Cashell,

Secretary.

[FR Doc. 89–21231 Filed 9–8–89; 8:45 am]

BILLING CODE 6717-01-M

[Docket No. CP88–99–004]

Transwestern Pipeline Co.; Proposed Changes in FERC Gas Tariff

August 31, 1989.

Take notice that Transwestern Pipeline Company ("Transwestern") on August 14, 1989, tendered for, as part of its FERC Gas Tariff, Second Revised Volume No. 1, the following tariff sheets: to be effective October 1, 1989:

Substitute 5th Revised Sheet No. 1
Substitute 1st Revised Sheet No. 1A
Original Sheet No. 5(i)
Substitute 5th Revised Sheet No. 38
Substitute 1st Revised Sheet No. 39
Substitute 1st Revised Sheet No. 40
Substitute 1st Revised Sheet No. 41–47
Substitute 5th Revised Sheet No. 133
Substitute 5th Revised Sheet No. 134
Substitute 5th Revised Sheet No. 135
Substitute 5th Revised Sheet No. 136
Substitute 5th Revised Sheet No. 137

Transwestern states these tariff sheets are being filed to comply with the Commission's May 11, 1988 Order issued in Docket No. CP88–99–000, *et al.* ("Order"). In its Order of May 11, 1988, the Commission issued to Transwestern a Certificate of Public Convenience and Necessity authorizing it to institute an on-system and off-system interruptible sales program pursuant to Rate Schedule IS–1, subject to various conditions. On August, 14, 1989, Transwestern notified the Commission that it would accept the IS–1 Certificate as conditioned. The above-listed tariff sheets have been filed to comply with the conditions in the commission's Order.

Transwestern, herein, respectfully requests that the Commission grant any and all waivers of its rules, regulations, and orders as may be necessary so as to permit the above-listed tariff sheets to become effective on the dates requested.

Any person desiring to protest said filing should file a protest with the Federal Energy Regulatory Commission, 825 N. Capitol Street NE., Washington, DC 20426, in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure. All such protests should be filed on or before September 8, 1989. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Persons that are already parties to this proceeding need not file a motion to intervene in this matter. Copies of this filing are on file with the Commission and are available for public inspection.

Lois D. Cashell,

Secretary.

BILLING CODE 6717-01-M

ENVIRONMENTAL PROTECTION AGENCY

[FRL–3643–6]

Region I: Prevention of Significant Deterioration of Air Quality (PSD); Determination of Exemption; Lakes Region General Hospital, Laconia, NH

AGENCY: U.S. Environmental Protection Agency (EPA).

ACTION: Notice of final determination of exemption.

SUMMARY: The purpose of this notice is to announce that on July 14, 1989, Judd Gregg, Governor of New Hampshire, issued a final determination that the Lakes Region General Hospital oil-fired boiler project located at the Lakes Region General Hospital in Laconia, New Hampshire is exempt from EPA's PSD review requirements (40 CFR 52.21(j)–(r)). This determination was made under the March 18, 1982 PSD delegation of authority agreement between Region I and the State of New Hampshire. The determination was issued because the institutional arrangement involving the hospital is such as to render the hospital a "nonprofit health or education" institution pursuant to section 169(1) of the Clean Air Act. (42 U.S.C. 7479(1), and 40 CFR 52.21(i)(4)(vi)). Accordingly, the installation and operation of the 500 HP boiler fired with No. 6 fuel oil (2.0% sulfur, maximum) at the Lakes Region General Hospital will not be subject to PSD review requirements.

DATES: The determination was effective July 14, 1989.

FOR FURTHER INFORMATION CONTACT: Mr. John J. Courcier, State Air Programs Branch, U.S. Environmental Protection Agency, Region I, John F. Kennedy Federal Building, Room 2311, Boston, Massachusetts 02203 (617/565–3260) or Mr. Donald Davis, New Hampshire Air Resources Division, 64 North Main Street, Concord, New Hampshire 03302–2033 (603/271–1370).

SUPPLEMENTARY INFORMATION: This final determination of exemption was made in response to a request dated July 2, 1989 by Robert C. Abbott, Director of Risk Management and Safety, Lakes Region General Hospital.

Copies of this Final Determination and all information used in making the determination are available for public inspection at the New Hampshire Air Resources Division, 64 North Main Street, Concord, New Hampshire 03302. Copies of the determination are also available for public inspection at the U.S. Environmental Protection Agency, Region I, John F. Kennedy Federal Building, Room 2311, Boston, Massachusetts 02203.

The determination is a final action under the Clean Air Act. Under Section 307(b)(1) of the Act, judicial review of this determination is available only by the filing of a petition for review in the United States Court of Appeals for the First Circuit within 60 days from the date of publication in the **Federal Register**. Under Section 307(b)(2) of the Clean Air act, this final determination shall not be subject to later judicial review in civil or criminal proceedings for enforcement.

Dated: August 24, 1989.

Paul G. Keough,

Acting Regional Administrator, U.S. Environmental Protection Agency, Region I.

[FR Doc. 89–21270 Filed 9–8–89; 8:45 am]

BILLING CODE 6560-50-M

[FRL 3643–5]

Region I: Prevention of Significant Deterioration of Air Quality (PSD); Determination of Exemption; Mary Hitchcock Memorial Hospital, a Component of Dartmouth-Hitchcock Medical Center, Hanover, NH

AGENCY: U.S. Environmental Protection Agency (EPA).

ACTION: Notice of final determination of exemption.

SUMMARY: The purpose of this notice is to announce that on June 27, 1989, Judd Gregg, Governor of New Hampshire, issued a final determination that the relocation project of the Mary Hitchcock Memorial Hospital, a component of Dartmouth-Hitchcock Medical Center in Hanover, New Hampshire, is exempt from EPA's PSD review requirements (40 CFR 52.21(j)–(r)). This determination was made under the March 18, 1982 PSD delegation of authority agreement between Region I and the State of New Hampshire. The determination was issued because the institutional arrangement involving the hospital is such as to render the hospital a "nonprofit health or education" institution pursuant to section 169(1) of the Clean Air Act. (42 U.S.C. 7479(1), and 40 CFR 52.21(i)(4)(vi)). Accordingly, the relocation project, in particular the installation and operation of three boilers fired with No. 6 fuel oil (1.0% sulfur, maximum) and an incinerator for the disposal of non-recyclable waste and infectious waste at the Mary Hitchcock Memorial Hospital, will not be subject to PSD review requirements.

DATES: The determination was effective June 27, 1989.

FOR FURTHER INFORMATION CONTACT: Mr. John J. Courcier, State Air Programs Branch, U.S. Environmental Protection Agency, Region I, John F. Kennedy Federal Building, Room 2311, Boston, Massachusetts 02203, (617/565–3260) or Mr. Donald Davis, New Hampshire Air Resources Division, 64 North Main Street, Concord, New Hampshire 03302–2033, (603/271–1370).

SUPPLEMENTARY INFORMATION: This final determination of exemption was made in response to a request dated June 14, 1989 by Frederick W. Nothnagel, Vice President of Facilities Development, Mary Hitchcock Memorial Hospital.

Copies of this Final Determination and all information used in making the determination are available for public inspection at the New Hampshire Air Resources Division, 64 North Main Street, Concord, New Hampshire 03302–2033. Copies of the determination are also available for public inspection at the U.S. Environmental Protection Agency, Region I, John F. Kennedy Federal Building, Room 2311, Boston, Massachusetts 02203.

The determination is a final action under the Clean Air Act. Under section 307(b)(1) of the Act, judicial review of this determination is available only by the filing of a petition for review in the United States Court of Appeals for the First Circuit within 60 days from the date of publication in the **Federal Register**. Under section 307(b)(2) of the Clean Air Act, this final determination shall not be subject to later judicial review in civil or criminal proceedings for enforcement.

Dated: August 24, 1989.

[FRL—3643–8]

Statistical Analysis of Ground-Water Monitoring Data at RCRA Facilities

AGENCY: Environmental Protection Agency.

ACTION: Notice of availability of guidance document..

SUMMARY: The Environmental Protection Agency (EPA) announces the availability of an interim final guidance document entitiled "Statistical Analysis of Ground-Water Monitoring Data at RCRA Facilities." This document provides guidance to RCRA facility permit applicants and writers concerning the statistical evaluation of ground-water monitoring data, pursuant to the recently promulgated requirements of 40 CFR part 264, subpart F (53 FR 39720: October 11, 1988). The hazardous waste regulations under the Resource Conservation and Recovery Act (RCRA) require owners and operators of hazardous waste facilities to utilize design features and control measures that prevent the release of hazardous waste into ground water. Further, regulated units (i.e., all surface impoundments, waste piles, land treatment units, and landfills that receive hazardous waste after July 28, 1982) are also subject to the ground-water monitoring and corrective action standards of 40 CFR part 264, subpart F. These regulations require that a statistical method and sampling

BEST COPY AVAILABLE

procedure approved by EPA be used to determine whether there are releases from regulated units into ground water.

DATE: EPA will accept public comments until December 8, 1989. All comments must be postmarked on or before this date.

ADDRESSES: Three copies of written comments should be submitted to the Docket Clerk, Office of Solid Waste (OS–321), U.S. Environmental Protection Agency, 401 M Street, SW., Washington, DC 20460 and identified as follows: F–89–HWGWS–FFFF. Copies of the document entitled, "Statistical Analysis of Ground-Water Monitoring Data at RCRA Facilities" are available for viewing at all EPA Libraries and in the EPA RCRA Docket (#M–2417), U.S. Environmental Protection Agency, 401 M. Street, SW., Washington D.C. 20460 from 9:00 a.m. to 4:00 p.m., Monday thru Friday, excluding Federal Holidays, by appointment only. Appointments can be made by calling (202) 475–9327. Copies cost 20 cents per page. In addition, this document is available for purchase through the National Technical Information Service (NTIS), U.S. Department of Commerce, Springfield, Virginia 22161, at (703) 487–4600: Guidance Document on the Statistical Analysis of Ground-Water Monitoring Data at RCRA Facilities. (NTIS # PB89-151–047).

FOR FURTHER INFORMATION CONTACT: For general information contact: RCRA/Superfund Hotline, Office of Solid Waste (WH–563C), U.S. Environmental Protection Agency, 401 M Street SW., Washington, DC 20460, telephone (800) 424–9346, or (202) 382–3000.

For technial information contact Jim Brown, (202) 382–4658.

SUPPLEMENTARY INFORMATION: This document provides guidance to RCRA Facility permit applicants and writers concerning the statistical analysis of ground-water monitoring data at RCRA facilities. Section 1 is an introduction to the guidance; it describes the purpose and intent of the document, and emphasizes the need for site-specific considerations in implementing the subpart F regulations of 40 CFR part 264.

Section 2 provides the reader with an overview of the recently promulgated regulations concerning the statistical analysis of ground-water monitoring data (53 FR 39720: October 11, 1988). The requirements of the regulations are reviewed, and the need to consider site specific factors in evaluating data at a hazardous waste facility is emphasized.

Section 3 discusses the important hydrogeologic parameters to consider when choosing a sampling interval. The Darcy equation is used to determine the horizontal component of the average linear velocity of ground water. This parameter provides a good estimate of time of travel for most soluble constituents in ground water and may be used to detemine a sampling interval. In situations where the Darcy equation does not apply (e.g., karst and "pseudo karst" terranes), the reader is referred to recent EPA publications for information on determining an appropriate sampling interval. Example calculations are provided at the end of the section to further assist the reader.

Section 4 provides guidance on choosing an appropriate statistical method. A flowchart to guide the reader through this section, as well as procedures to test the distributional assumptions of data are presented. Finally, this section outlines procedures to test specifically for equality of variance.

Section 5 covers statistical methods that may be used to evaluate ground-water monitoring data when background wells have been sited hydraulically upgradient from the regulated unit, and a second set of wells are sited hydraulically downgradient from the regulated unit at the point of compliance. The data from these compliance wells are compared to data from the background wells to determine whether a release from a facility has occurred. Parametric and nonparametric analysis of variance, tolerance intervals, and prediction intervals are suggested methods for this type of comparison. Flowcharts, procedures and example calculations are given for each testing method.

Section 6 includes statistical procedures that are appropriate when comparing ground-water constituent concentrations to fixed concentration limits (e.g., alternate concentration limits or maximum concentration limits). The methods applicable to this type of comparison are confidence intervals and tolerance intervals. As in Section 5, flowcharts, procedures, and examples explain the calculations necessary for each testing method.

Section 7 presents the case where the level of each constituent within a single, uncontaminated well is being compared to its historic background concentrations. This is known as an intra-well comparison. In essence, the data for each constituent in each well are plotted on a time scale and inspected for obvious features such as trends or sudden changes in concentration levels. The method suggested in this section is a combined Shewhart-CUSUM control chart.

Section 8 contains a variety of special topics that are relatively short and self contained. These topics include methods to deal with data that are below the limit of analytical detection and methods to test for outliers or extreme values in the data.

Finally, the guidance presents appendices that cover general statistical considerations, a glossary of statistical terms, statistical tables, and a listing of references. These appendices provide necessary and ancillary information to aid the user in evaluating ground-water monitoring data.

Dated: August 29, 1989.

Jonathan Z. Cannon,

Acting Assistant Administrator for the Office of Solid Waste and Emergency Response.

Science Advisory Board, Environmental Engineering Committee; Open Meeting

Under the Public Law 92–463, notice is hereby given that the Science Advisory Board's Products Incomplete Combustion Subcommittee will meet September 15, 1989 from 2–5 pm Eastern Time and possibly September 22, 1989 from 12–2 pm Eastern Time by teleconference. The purpose of the meeting is to discuss proposed changes to the Subcommittee's final report, including those based on the June 20, 1989 report "THC Monitor Survey". The teleconference is open to the public, however the teleconference bridge is limited in size and requests for tie-in to the conference call will be honored in the order in which they are received.

Any member of the public wishing to hear the conference call should contact Kathleen Conway, Deputy Director, Science Advisory Board (A–101F), U.S. Environmental Protection Agency, 401 M Street SW., Washington, DC 20460 at 202/382–2552 no later than noon the day of the teleconference.

This emergency notice is requested because the decision to have such a conference call was made on August 29 and times suitable to the Subcommittee were not identified until September 1. The meetings must be held in September if the report is to be approved at the October Executive Committee meeting.

Dated: September 5, 1989.

Donald G. Barnes,

Director, Science Advisory Board.

BILLING CODE 6560-50-M

[FRL-3642-5]

Proposed Settlement; City of Youngstown/Republic Hose Mfg. Co.

AGENCY: U.S. Environmental Protection Agency.

ACTION: Request for public comment.

SUMMARY: In accordance with the requirements of section 122(i)(1) of the Comprehensive Environmental Response, Compensation and Liability Act, as amended (CERCLA), notice is hereby given of a proposed Settlement Under section 122(h) concerning the Republic Hose Site at 1650 Albert Street in Youngstown, Ohio. The proposed settlement requires Youngstown and Republic Hose to pay $300,000 of the approximately $450,000 of costs incurred by U.S. EPA in performing an Immediate Removal Action at the Site. The proposed settlement would resolve the cost recovery case related to response actions taken by U.S. EPA at the Site.

DATE: Comments must be provided on or before October 11, 1989.

ADDRESS: Comments should be addressed to the U.S. Environmental Protection Agency, Region V, 230 South Dearborn Street, Chicago, Illinois, 60604, and should refer to: In the Matter of: City of Youngstown/Republic Hose Mfg. Co.

FOR FURTHER INFORMATION CONTACT: Peggy Q. Andrews, U.S. EPA, Office of Regional Counsel, 5CS–TUB–3, 230 South Dearborn Street, Chicago, Illinois 60604, (312) 886–6827.

Notice of section 122(h) Cost Recovery Settlement: In accordance with section 122(i)(1) of the Comprehensive Environmental Response, Compensation and Liability Act of 1984, as amended (CERCLA), notice is hereby given that on May 19, 1989, a proposed administrative settlement was agreed to by the City of Youngstown, Ohio ("Youngstown") and Republic Hose Manufacturing Company ("Republic Hose"). The proposed settlement requires Youngstown and Republic Hose to pay $300,000 of the approximately $450,000 of costs incurred by U.S. EPA in performing an Immediate Removal Action at the Republic Hose Site located at 1650 Albert Street in Youngstown, Ohio.

U.S. EPA is entering into this agreement under the authority of sections 122(h) and 107 of CERCLA. Section 122(h) authorizes administrative settlement of a claim under section 107 where total response costs incurred by the United States for the facility concerned do not exceed $500,000 (excluding interest). Accordingly, in June of 1988, a decision was made by U.S. EPA and the Department of Justice that a complaint would not be filed in this case. On July 25, 1988, U.S. EPA and the Department of Justice determined this case to be one suitable for alternative dispute resolution ("ADR"), and on January 17, 1989, an ADR agreement was entered into between U.S. EPA and Youngstown. The mediation continued until May 19, 1989, at which time a 122(h) Consent Agreement was signed by Youngstown and Republic Hose. Under the terms of the Consent Agreement, Republic Hose will pay $5,000 within 30 days of the effective date of the Consent Agreement, and Youngstown will pay a total of two hundred and ninety five thousand ($295,000) in three installments over three years following the entering of the Consent Agreement.

The Environmental Protection Agency will receive for a period of thirty (30) days from the date of this publication comments relating to the proposed settlement agreement.

A copy of the proposed administrative settlement agreement may be obtained in person or by mail from the Office of Regional Counsel, United States Environmental Protection Agency, Region V, 230 South Dearborn Street, Chicago, Illinois 60604. Additional background information relating to the settlement is available for review at this address.

Authority: The Comprehensive Environmental Response, Compensation, and Liability Act, as amended, 42 U.S.C. 9601–9675.

Dated: August 15, 1989.

Valdas V. Adamkus,

Regional Administrator.

BILLING CODE 6560-50-M

FEDERAL ELECTION COMMISSION

[Notice 1989–16]

Filing Dates for Texas Special Election

AGENCY: Federal Election Commission.

ACTION: Notice of filing dates for Texas special election.

SUMMARY: Texas has scheduled a special election on November 7, 1989, in the 18th Congressional District to fill the seat that was held by the late Representative Mickey Leland.

FOR FURTHER INFORMATION CONTACT: Ms. Bobby Werfel, Public Information Office, 999 E Street NW., Washington, DC 20463, Telephone: (202) 376–3120; Toll Free (800) 424–9530.

SUPPLEMENTARY INFORMATION: Principal campaign committees of candidates who participate in the Texas Special Election must file reports according to the schedule in the following charts. Party committees and PACs that make contributions or expenditures in connection with the Special Election during the coverage dates listed in the charts must file the appropriate reports. Monthly filers, however, do not file Special Pre- and Post-Election reports.

In the event that no candidate receives a majority of the vote in the Special Election, a second Special Election will be called within 5 days after the official election results are declared. If a second Special Election is necessary, filing dates for the appropriate reports will be established.

CALENDAR OF REPORTING DATES FOR TEXAS SPECIAL ELECTION 18TH CONGRESSIONAL DISTRICT

Report	Period Covered [1]	Reg./Cert. Mailing Date [2]	Filing Date
All committees involved in the 11/7/89 election must file:			
Pre-Special	07/01/89–10/18/89	10/23/89	10/26/89
Situation 1: If one candidate receives a majority of votes, all committees must file:			
Post-Special	10/19/89–11/27/89	12/07/89	12/07/89
Year-End	11/28/89–12/31/89	01/31/90	01/31/90

CALENDAR OF REPORTING DATES FOR TEXAS SPECIAL ELECTION 18TH CONGRESSIONAL DISTRICT—Continued

Report	Period Covered [1]	Reg./Cert. Mailing Date [2]	Filing Date
Situation 2: If no candidate receives a majority of the votes a run-off election will be scheduled. Committees that participate in the special run-off election will be notified of their filing requirements in a separate notice.			

[1] The period begins with the close of the last report filed by the committee. If the committee has filed no previous reports, the period begins with the date of the committee's first activity.

[2] Reports sent by registered or certified mail must be postmarked by the mailing date. Otherwise, they must be received by the filing date.

Dated: September 5, 1989.

Danny L. McDonald,

Chairman.

BILLING CODE 6715-01-M

FEDERAL EMERGENCY MANAGEMENT AGENCY

[FEMA–826–DR]

Amendment To Notice of a Major Disaster Declaration; Alaska

AGENCY: Federal Emergency Management Agency.

ACTION: Notice.

SUMMARY: This notice amends the notice of a major disaster for the State of Alaska (FEMA–826–DR), dated May 10, 1989, and related determinations.

DATES: August 14, 1989.

FOR FURTHER INFORMATION CONTACT: Neva K. Elliott, Disaster Assistance Programs, Federal Emergency Management Agency, Washington, DC 20472 (202) 646–3614.

Notice

The notice of a major disaster for the State of Alaska, dated May 10, 1989, is hereby amended to include the following areas among those areas determined to have been adversely affected by the catastrophe declared a major disaster by the President in his declaration of May 10, 1989:

The communities of Seldovia, St. George, and Sleetmute for Public Assistance.

(Catalog of Federal Domestic Assistance No. 83.516, Disaster Assistance)

Grant C. Peterson,

Associate Director, State and Local Programs and Support, Federal Emergency Management Agency.

BILLING CODE 6718-02-M

FEDERAL MARITIME COMMISSION

Agreement(s) Filed

The Federal Maritime Commission hereby gives notice that the following agreement(s) has been filed with the Commission pursuant to section 15 of the Shipping Act, 1916, and section 5 of the Shipping Act of 1984.

Interested parties may inspect and obtain a copy of each agreement at the Washington, DC Office of the Federal Maritime Commission, 1100 L Street, N.W., Room 10325. Interested parties may submit protests or comments on each agreement to the Secretary, Federal Maritime Commission, Washington, DC 20573, within 10 days after the date of the **Federal Register** in which this notice appears. The requirements for comments and protests are found in § 560.7 and/or 572.603 of Title 46 of the Code of Federal Regulations. Interested persons should consult this section before communicating with the Commission regarding a pending agreement.

Any person filing a comment or protest with the Commission shall, at the same time, deliver a copy of that document to the person filing the agreement at the address shown below.

Agreement No.: 224–200255–001.

Title: City of Los Angeles Terminal Agreement.

Parties: City of Los Angeles, California Stevedore and Ballast Co.

Filing Party: Mr. Raymond P. Bender, Assistant City Attorney, City of Los Angeles, Habor Division, 425 S. Palos Verdes St., P.O. Box 151, San Palos, CA 90733–0151.

Synopis: The Agreement reduces the assigned premises from 30 acres to 22.6 acres and reduces the monthly minimum guarantee from $160,000 to $121,600. The Agreement also provides for the monthly revenue sharing of wharfage, dockage, storage and demurrage. The Agreement provides for the City's right to terminate the assignment under certain conditions.

By Order of the Federal Maritime Commission.

Dated: September 6, 1989.

Joseph C. Polking,

Secretary.

[FR Doc. 89–21274 Filed 9–8–89; 8:45 am]

BILLING CODE 6730-01-M

Agreement(s) Filed

The Federal Maritime Commission hereby gives notice of the filing of the following agreement(s) pursuant to section 5 of the Shipping Act of 1984.

Interested parties may inspect and obtain a copy of each agreement at the Washington, DC Office of the Federal Maritime Commission, 1100 L Street, NW., Room 10220. Interested parties may submit comments on each agreement to the Secretary, Federal Maritime Commission, Washington, DC 20573, within 10 days after the date of the **Federal Register** in which this notice appears. The requirements for comments are found in § 572.603 of Title 40 of the Code of Federal Regulations. Interested persons should consult this section before communicating with the Commission regarding a pending agreement.

Agreement No.: 224–200262.

Title: Maryland Port Authority Terminal Agreement.

Parties: Maryland Port Authority, Polish Ocean Lines, Inc. (POL).

Synopsis: The Agreement provides POL with the lease of 15 acres at the Dundalk Marine Terminal for a term of four years. POL agrees to move at least 12,000 loaded containers through the terminal in each lease year at certain discounted base rates. The rate charges per loaded container cover all charges to POL for land rental, dockage and container wharfage. Separate charges for crane rental, ro/ro cargo, steel and non-containerized cargo are specified in the Agreement.

Agreement No.: 224–200283.

Title: Port of Tampa Terminal Agreement.

Parties: Tampa Bay International Terminals, Inc. (TBIT), Garrison Stevedoring, Inc. (Garrison).

Synopsis: The Agreement provides that Garrison will perform, for the benefit of TBIT, all marine terminal and stevedoring services at the Port of Tampa, including management and supervision of all personnel necessary for the day-to-day operational services. Garrison shall act as an independent contractor in performing its obligations and duties under this Agreement but it

shall not obligate TBIT in any manner without prior consent of TBIT. Compensation and reimbursement for services rendered shall be as specified in the Agreement.

By Order of the Federal Maritime Commission.

Dated: September 6, 1989.

Joseph C. Polking,

Secretary.

FEDERAL RESERVE SYSTEM

Agency Forms Under Review

September 5, 1989.

Background

On June 15, 1984, the Office of Management and Budget (OMB) delegated to the Board of Governors of the Federal Reserve System (Board) its approval authority under the Paperwork Reduction Act of 1980, as per 5 CFR § 1320.9, "to approve of and assign OMB control numbers to collection of information requests and requirements conducted or sponsored by the Board under conditions set forth in 5 CFR 1320.9." Board-approved collections of information will be incorporated into the official OMB inventory of currently approved collections of information. A copy of the SF 83 and supporting statement and the approved collection of information instrument(s) will be placed into OMB's public docket files. The following reports, which are being handled under this delegated authority, have received initial Board approval and are hereby published for comment. At the end of the comment period, the proposed information collection, along with an analysis of comments and recommendations received, will be submitted to the Board for final approval under OMB delegated authority.

DATE: Comments must be received by September 21, 1989.

ADDRESS: Comments, which should refer to the OMB Docket number, should be addressed to Mr. William W. Wiles, Secretary, Board of Governors of the Federal Reserve System, 20th and C Streets NW., Washington, DC 20551, or delivered to room B–2223 between 8:45 a.m. and 5:15 p.m. Comments received may be inspected in room B–1122 between 8:45 a.m. and 5:15 p.m. except as provided in § 261(a) of the Board's Rules Regarding Availability of Information, 12 CFR 261.6(a).

A copy of the comments may also be submitted to the OMB Desk Officer for the Board: Gary Waxman, Office of Information and Regulatory Affairs, Office of Management and Budget, New Executive Office Building, Room 3208, Washington, DC 20503.

FOR FURTHER INFORMATION CONTACT: A copy of the request for clearance (SF 83), supporting statement, and other documents that will be placed into OMB's public docket files upon approval may be requested from the agency clearance officer, whose name appears below. Federal Reserve Board Clearance Officer—Frederick J. Schroeder—

Division of Research and Statistics, Board of Governors of the Federal Reserve System, Washington, DC 20551 (202-452-3822).

Proposal to approve under OMB delegated authority the extension, without revision, of the following reports:

1. *Report title:* Consolidated Financial Statements for Bank Holding Companies; Parent Company Only Financial Statements for Bank Holding Companies

Agencies form numbers: FR Y-9C, FR Y-9LP, FR Y-9SP.

OMB Docket number: 7100-0128.

Reporters: Bank holding companies.

Report	Number of respondents	Frequency	Average hours per response
FR Y-9C and Y-9LP:			
For bank holding companies with total consolidated assets of $150 million or more	935	Quarterly	25.25
For bank holding companies with consolidated assets of less than $150 million but which have more than one subsidiary bank.	449	Quarterly	14.25
FR Y-9SP	4,501	Semiannually	3

No significant effect on small businesses is affected.

General description of report: These reports are required by law [12 U.S.C. 1844(b) and (c)] and are not given confidential treatment.

These reports are the source of information for the Federal Reserve's surveillance function in its ongoing monitoring of the financial condition of bank holding companies.

2. *Report title:* Combined Financial Statement of Nonbank Subsidiaries of Bank Holding Companies; Annual Supplement to the Combined Financial Statement of Nonbank Subsidiaries of Bank Holding Companies.

Agency form number: FR Y-11Q, FR Y-11AS.

OMB Docket number: 7100-0244.

Reporters: Bank holding companies.

Annual reporting hours: 4,380.

Report	Number of respondents	Frequency	Average hours per response
FR Y-11Q	292	Quarterly	2.5
FR Y-11AS	292	Annually	5.0

No significant effect on small businesses is expected.

General description of report: These reports are required by law [12 U.S.C. § 1844(c)] and are not given confidential treatment.

As part of the Federal Reserve System's surveillance function, these reports collect financial data on combined nonbank subsidiaries of bank holding companies with total consolidated assets of $1 billion or more, and on bank holding companies with total consolidated assets of at least $150 million but less than $1 billion and that have material nonbanking activities.

Proposal to approve under OMB delegated authority the implementation of the following report:

Report title: Report of Medium-Term Note Issuance.

Agency form number: FR 2800.

OMB Docket number: 7100-0245.

Freqency: Monthly or quarterly or semiannually.

Reporters: U.S. corporations.

Annual reporting hours: 49.

Estimated average hours per response: 0.083.

Number of respondents: 182.

Small businesses are not affected.

General description of report: This information collection is voluntary [12 U.S.C. 225a and 353] and is given confidential treatment [5 U.S.C. 552(b)(4)].

The report will collect monthly balances of corporate medium-term note issues. Medium-term notes are interest-bearing noncallable corporate obligations with a maturity greater than 270 days but generally less than 10 years. The data will be used to improve the estimates of corporate securities issues issued and outstanding.

Board of Governors of the Federal Reserve System, September 5, 1989.

William W. Wiles,

Secretary of the Board.

[FR Doc. 89-21252 Filed 9-8-89; 8:45 am]

BILLING CODE 6210-01-M

A.B.N. Stichting; Application To Engage de Novo in Permissible Nonbanking Activities

The company listed in this notice has filed an application under § 225.23(a) of the Board's Regulation Y (12 CFR 225.23(a)) for the Board's approval under section 4(c)(8) of the Bank Holding Company Act (12 U.S.C. 1843(c)(8)) and § 225.21(a) of Regulation Y (12 CFR § 225.21(a)) to commence or to engage *de novo*, either directly or through a subsidiary, in a nonbanking activity that is listed in § 225.25 of Regulation Y as closely related to banking and permissible for bank holding companies. Unless otherwise noted, such activities will be conducted throughout the United States.

The application is available for immediate inspection at the Federal Reserve Bank indicated. Once the application has been accepted for processing, it will also be available for inspection at the offices of the Board of Governors. Interested persons may express their views in writing on the question whether consummation of the proposal can "reasonably be expected to produce benefits to the public, such as greater convenience, increased competition, or gains in efficiency, that outweigh possible adverse effects, such as undue concentration of resources, decreased or unfair competition, conflicts of interests, or unsound banking practices." Any request for a hearing on this question must be accompanied by a statement of the reasons a written presentation would not suffice in lieu of a hearing, identifying specifically any questions of fact that are in dispute, summarizing the

evidence that would be presented at a hearing, and indicating how the party commenting would be aggrieved by approval of the proposal.

Comments regarding the application must be received at the Reserve Bank indicated or the offices of the Board of Governors not later than September 25, 1989.

A. **Federal Reserve Bank of Chicago** (David S. Epstein, Vice President) 230 South LaSalle Street, Chicago, Illinois 60690:

1. *A.B.N. Stichting*, Amsterdam, The Netherlands, and Algemene Bank Nederland N.V., Amsterdam, The Netherlands; to engage *de novo* through its subsidiary, ABN Capital Markets Corporation, New York, New York, in (i) providing advice in conduction with merger, acquisition/divestiture and financial transactions f/r nonaffiliated financial and nonfinancial institutions; (ii) providing fairness opinions in connection with merger, acquisition and similar transactions for nonaffiliated financial and nonfinancial institutions; (iii) providing advice regarding the structuring of and arranging for loan syndications, interest rate "swap", interest rate "cap" and similar transactions; (iv) providing valuations of nonaffiliated financial and nonfinancial institutions. The Board has previously determined by Order that the above activities are permissible nonbanking activities under section 4(c)(8) of the Bank Holding Company Act; (v) offering combined investment advice and securities brokerage services, as previously approved by the Board, to retail and institutional customers; (vi) engaging in investment advisory activities and securities brokerage activities on a separate basis pursuant to §§ 225.25(b)(4) and 225.25(b)(15), respectively, and (vii) underwriting and dealing in government obligations and money market instruments pursuant to § 225.25(b)(16) of the Board's Regulation Y. These activities will be conducted in the United States and abroad.

Board of Governors of the Federal Reserve System, September 5, 1989.

Jennifer J. Johnson,

Associate Secretary of the Board.

[FR Doc. 89-21253 Filed 9-8-89; 8:45 am]

BILLING CODE 6210-01-M

Guaranty Bancshares Corp., et al.; Formations of; Acquisitions by; and Mergers of Bank Holding Companies

The companies listed in this notice have applied for the Board's approval under section 3 of the Bank Holding Company Act (12 U.S.C. 1842) and § 225.14 of the Board's Regulation Y (12 CFR 225.14) to become a bank holding company or to acquire a bank or bank holding company. The factors that are considered in acting on the applications are set forth in section 3(c) of the Act (12 U.S.C. 1842(c)).

Each application is available for immediate inspection at the Federal Reserve Bank indicated. Once the application has been accepted for processing, it will also be available for inspection at the offices of the Board of Governors. Interested persons may express their views in writing to the Reserve Bank or to the offices of the Board of Governors. Any comment on an application that requests a hearing must include a statement of why a written presentation would not suffice in lieu of a hearing, identifying specifically any questions of fact that are in dispute and summarizing the evidence that would be presented at a hearing.

Unless otherwise noted, comments regarding each of these applications must be received not later than September 29, 1989.

A. **Federal Reserve Bank of Philadelphia** (Thomas K. Desch, Vice President) 100 North 6th Street, Philadelphia, Pennsylvania 19105:

1. *Guaranty Bancshares Corporation*, Shamokin, Pennsylvania; to acquire 80 percent of the voting shares of Guaranty Bank of Princeton (in organization), Princeton, New Jersey.

B. **Federal Reserve Bank of San Francisco** (Harry W. Green, Vice President) 101 Market Street, San Francisco, California 94105:

1. *Home Credit Corporation*, Salt Lake City, Utah; to become a bank holding company by acquiring 100 percent of the voting shares of Home Credit Bank, Salt Lake City, Utah, a *de novo* bank which will assume the assets and liabilities of Home Credit Financial, Salt Lake City, Utah, a Utah industrial loan corporation currently controlled by Home Credit Corporation.

Board of Governors of the Federal Reserve System, September 5, 1989.

Jennifer J. Johnson,

Associate Secretary of the Board.

BILLING CODE 6210-01-M

Dan R. Moore; Change in Bank Control Notice; Acquisition of Shares of Banks or Bank Holding Companies

The notificant listed below has applied under the Change in Bank Control Act (12 U.S.C. 1817(j)) and § 225.41 of the Board's Regulation Y (12 CFR 225.41) to acquire a bank or bank holding company. The factors that are considered in acting on notices are set forth in paragraph 7 of the Act (12 U.S.C. 1817(j)(7)).

The notices are available for immediate inspection at the Federal Reserve Bank indicated. Once the notices have been accepted for processing, they will also be available for inspection at the offices of the Board of Governors. Interested persons may express their views in writing to the Reserve Bank indicated for that notice or to the offices of the Board of Governors. Comments must be received not later than September 25, 1989.

A. **Federal Reserve Bank of Richmond** (Lloyd W. Bostian, Jr., Vice President) 701 East Byrd Street, Richmond, Virginia 23261:

1. *Dan R. Moore*, Matewan, West Virginia, and James H. Harless, Gilbert, West Virginia; to acquire over 25 percent of the voting shares of Matewan BancShares, Inc., Matewan, West Virginia, and thereby indirectly acquire The Matewan National Bank, Matewan, West Virginia.

Board of Governors of the Federal Reserve System, September 5, 1989.

Jennifer J. Johnson,

Associate Secretary of the Board.

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

Office of Administration

[Docket No. N-89-2045]

Submission of Proposed Information Collection to the Office of Management and Budget

AGENCY: Office of Administration, HUD.

ACTION: Notice.

SUMMARY: The proposed information collection requirement described below has been submitted to the Office of Management and Budget (OMB) for review, as required by the Paperwork Reduction Act. The Department is soliciting public comments on the subject proposal.

ADDRESS: Interested persons are invited to submit comments regarding this proposal. Comments should refer to the proposal by name and should be sent to: John Allison, OMB Desk Officer, Office of Management and Budget, New Executive Office Building, Washington, DC 20503.

FOR FURTHER INFORMATION CONTACT: David S. Cristy, Reports Management Officer, Department of Housing and Urban Development, 451 7th Street

Southwest, Washington, DC 20410, telephone (202) 755–6050. This is not a toll-free number. Copies of the proposed forms and other available documents submitted to OMB may be obtained from Mr. Cristy.

SUPPLEMENTARY INFORMATION: The Department has submitted the proposal for the collection of information, as described below, to OMB for review, as required by the Paperwork Reduction Act (44 U.S.C. Chapter 35).

The Notice lists the following information: (1) The title of the information collection proposal; (2) the office of the agency to collect the information; (3) the description of the need for the information and its proposed use; (4) the agency form number, if applicable; (5) what members of the public will be affected by the proposal; (6) how frequently information submissions will be required; (7) an estimate of the total numbers of hours needed to prepare the information submission including number of respondents, frequency of response, and hours of response; (8) whether the proposal is new or an extension, reinstatement, or revision of an information collection requirement; and (9) the names and telephone numbers of an agency official familiar with the proposal and of the OMB Desk Officer for the Department.

Authority: Section 3507 of the Paperwork Reduction Act, 44 U.S.C. 3507; Section 7(d) of the Department of Housing and Urban Development Act, 42 U.S.C. 3535(d).

Dated: September 5, 1989.

John T. Murphy,

Director, Information Policy and Management Division.

Proposal: Recertification of family income and composition.

Office: Housing.

Description of the Need for the Information and Its Proposed Use: Homeowners will submit these forms to the mortgagees to determine their continued eligibility for assistance and the amount of assistance the homeowner will receive. Mortgagees will use the form to report statistical and general program data to the Department.

Form Number: HUD–93101 and 93101–A.

Respondents: Individuals or households, and businesses or other for-profit.

Frequency of Submission: On occasion, monthly, and annually.

Reporting Burden:

	Number of respondents	x ⅛	Frequency of response	x	Hours per response	=	Burden hours
HUD–93101	150,000		1.25		1.00		187,500
HUD–93101–A	962		12		.17		1,962

Total Estimated Burden Hours: 189,462.

Status: Extension.

Contact: Florence Brooks, HUD, (202) 755–7330 and John Allison, OMB, (202) 395–6880.

Dated: September 5, 1989.

ADDRESS: Interested persons are invited to submit comments regarding this proposal. Comments should refer to the proposal by name and should be sent to: John Allison, OMB Desk Officer, Office of Management and Budget, New Executive Office Building, Washington, DC 20503.

FOR FURTHER INFORMATION CONTACT: David S. Cristy, Reports Management Officer, Department of Housing and Urban Development, 451 7th Street SW., Washington, DC 20410, telephone (202) 755–6050. This is not a toll-free number. Copies of the proposed forms and other available documents submitted to OMB may be obtained from Mr. Cristy.

SUPPLEMENTARY INFORMATION: The Department has submitted the proposal for the collection of information, as described below, to OMB for a review, as required by the Paperwork Reduction Act (44 U.S.C. Chapter 35).

The Notice lists the following information: (1) The title of the information collection proposal; (2) the office of the agency to collect the information; (3) the description of the need for the information and its proposed use; (4) the agency form number, if applicable; (5) what members of the public will be affected by the proposal; (6) how frequently information submissions will be required; (7) an estimate of the total number of hours needed to prepare the information submission including number of respondents, frequency of response, and hours of response; (8) whether the proposal is new or an extension, reinstatement, or revision of an information collection requirement; and (9) the names and telephone numbers of an agency official familiar with the proposal and of the OMB Desk Officer for the Department.

Authority: Section 3507 of the Paperwork Reduction Act, 44 U.S.C. 3507; Section 7(d) of the Department of Housing and Urban Development Act, 42 U.S.C. 3535(d).

Dated: September 5, 1989.

John T. Murphy,

Director, Information Policy and Management Division.

Proposal: Performance Funding System: Formal Review Process, Energy Conservation Savings, Audit Responsibilities, Definition of Responsible Insurance Company (FR–2504)

Office: Public and Indian Housing

Description of the need for the information and its proposed use: Public Housing Authorities (PHAs) and Indian Housing Authorities (IHAs) must submit documentation for approval of a nonprofit insurance entity created by PHAs/IHAs. They may apply for increased operating subsidy payments due to: (1) sharing of energy rate reductions, (2) non-HUD financing of energy conservation, (3) revision of allowable expense levels, or (4) units lost through combining of units into larger units.

Form Number: None

Respondents: State or Local Governments

Frequency of Submission: Annually

Reporting Burden:

DEPARTMENT OF THE INTERIOR

Bureau of Land Management

[MT–070–09–4630–10–H603]

Montana; Area Closure, Headwaters Resource Area; Butte District, MT

AGENCY: Bureau of Land Management, Butte District Office.

ACTION: Emergency area closure on public lands.

SUMMARY: Notice is hereby given that effective immediately all public lands in the Limestone Hills Area, west of the River Road in Sections 1, 2, 11, 12, 13, 14, and 23, T. 6, N., R. 1 E., and Section 35, T. 7 N., R. 1 E., P.M.M. are closed to all motorized vehicle uses. This area is located about 1 mile north of Townsend, Montana. The purpose of this closure is to allow for the rehabilitation of the area burned by the Indian Creek Fire and to prevent the spread of noxious weeds.

Authority for this closure is 43 CFR 8341.2. The closure will remain in effect until further notice.

FOR FURTHER INFORMATION CONTACT: Gary Leppart, Headwaters Resource Area Manager, P.O. Box 3388, Butte, MT 59702.

Dated: August 31, 1989.

Orval L. Hadley,

Acting District Manager.

BILLING CODE 4310–DN–M

[MT–070–09–4050–91; Designation Order MT–075–8901]

Montana; Off-Road Vehicle Designation, Headwaters Resource Area, Butte District, MT

AGENCY: Bureau of Land Management, Butte District Office, Interior.

ACTION: Off-road Vehicle Designation Decision.

SUMMARY: Final notice (supersedes FR Notice of October 28, 1988, Page 43775) is hereby given that effective immediately all public lands in the Jimmys Gulch area (1,524 acres), north of Confederate Gulch Road in Sections 26, 27, and 35, T. 10 N., R. 2 E., and Sections 3, 4, and 9, T. 9 N., R. 2 E., P.M.M. are permanently closed to all yearlong motorized vehicle uses with the exception that a yearlong open route will be established on a portion of the Jimmys Gulch Road pending an easement acquisition. The area is located about 20 miles north of Townsend, Montana. The purpose of this closure is to reduce further soil erosion, inhibit the spread of noxious weeds, enhance elk security, minimize visitor safety risks, provide equitable public access, and reduce user conflicts.

A public meeting and comment period were provided and all responses received were considered prior to making this designation.

This decision is consistent with the Headwaters Resource Management Plan and is authorized in 43 CFR 8342. This designation will remain in effect until rescinded or modified by the authorized official. An appeal of this decision may be filed within 30 days of this notice with the Interior Board of Land Appeals.

FOR FURTHER INFORMATION CONTACT: Gary Leppart, Headwaters Resource Area Manager, P.O. Box 3388, Butte, MT 59702.

Dated: August 31, 1989.

Orval L. Hadley,

Acting District Manager.

[CA–065–09–3110–10–DTHA]

Realty Action; Exchange; California

AGENCY: Bureau of Land Management, Interior.

ACTION: Notice of realty action, exchange of public and private lands in Kern County, CA 23833, CA 23836, CA 24307, CA 24454.

SUMMARY: The following public lands in Kern County have been examined and determined suitable for disposal by exchange under section 206 of the Federal Land Policy and Management Act of 1976 (43 U.S.C. 1716):

CA 23833, Selected public lands:

San Bernadino Meridian, California

T. 11 N., R. 10 W.,
  Sec. 8, S½SE¼

Containing 80 acres of public land, more or less.

In exchange for these lands, the United States will acquire the following private lands in Kern County from Sigmund and Elizabeth Lichter.

CA 23833 offered lands:

Mount Diablo Meridian, California

T. 31 S., R. 38 E.,
  Sec. 31, Parcel 1 of Parcel Map 2187, in the City of California City, County of Kern, State of California, as filed June 14, 1974 in Book 10, Page 108 of Parcel Maps, in the Kern County Recorder's Office, and Parcel 4 of Parcel Map 2200, in the City of California City, County of Kern, State of California, as filed in Book 10, Page 110 of Parcel Maps, in the Kern County Recorder's Office. Containing 81.65 acres of non-federal lands, more or less.

CA 23836, Selected public lands:

San Bernadino Meridian, California

T. 11 N., R. 10 W.,
  Sec. 8, W½SW¼.

Containing 80 acres of public land, more or less.

In exchange for these lands, the United States will acquire the following private lands in Kern County from Marc Batz.

CA 23836, offered lands:

Mount Diablo Meridian, California

T. 31 S., R. 38 E.,
  Sec. 31, Parcel 2 of Parcel Map 2187, in the City of California City, County of Kern,

State of California, as filed June 14, 1974 in Book 10 Page 108 of Parcel Maps, in the Kern County Recorder's Office, Parcel 2 of Parcel Map 2200, in the City of California City, County of Kern, as filed June 14, 1974 in Book 10 Page 110 of Parcel Maps, in the Kern County Recorder's Office. Containing 81.87 acres of non-federal lands, more or less.

CA 24307, Selected public lands:

San Bernadino Merdian, California

T. 11 N., R. 10 W.,
Sec. 8, S½N½SE¼.

Containing 40 acres of public land, more or less.

In exchange for these lands, the United States will acquire the following private lands in Kern County from Wojtek Jaskiewicz.

CA 24307, offered lands:

Mount Diablo Meridian, California

T. 31S., R. 38E.,
Sec. 31, Parcel 1 of Parcel Map 2199, in the City of California City, County of Kern, State of California, as filed June 14, 1974 in Book 10 Page 109 of Parcel Maps, in the Kern County Recorder's Office.

Containing 38.87 acres of non-federal lands, more or less.

CA 24454, Selected public lands:

San Bernadino Meridian, California

T. 11N., R. 10 W.,
Sec. 8, N½NE¼SE¼,NE¼NW¼SE¼.

Containing 30 acres of public land, more or less.

In exchange for these lands, the United States will acquire the following private lands in Kern County from Jim and Gale McMahon.

CA 24454, offered lands:

Mount Diablo Meridian, California

T. 31 S., R 38 E.,
Sec. 31, Parcels 1, 2 and 4 of Parcel Map 3403, in the City of California City, County of Kern, State of California, as filed June 22, 1976, in Book 16, Page 55 of Parcel Maps, in the Kern County Recorder's Office.

Containing 30.36 acres of non-federal lands, more or less.

SUPPLEMENTARY INFORMATION: The purpose of the exchanges is to acquire non-federal lands within the designated Desert Tortoise Research Natural Area. The designated area encompasses lands which have historically supported the highest and most stable population of tortoise within its range.

This Notice is issued to provide supplementary information to Notice of Realty Action CA 23082, published in Volume 54, Number 4, of the **Federal Register**, January 6, 1989. The segregative effect will end upon issuance of patent or two years from the date of first publication, whichever occurs first.

The values of the lands to be exchanged are approximately equal; equalization of values required by law will be achieved by acreage adjustments or by cash payments in amounts not to exceed 25 percent of the fair market value of the selected lands.

Lands transferred out of federal ownership will be subject to the following reservations, terms and conditions:

1. Reservations to the United States: (a). Right of way for ditches and canals, pursuant to the Act of August 30, 1890 (43 U.S.C. 945).

2. Subject to: (a). Restrictions that may be imposed by Kern County in accordance with floodplain regulations established under Kern County Ordinance G–4707, adopted on March 15, 1988. (Applies to 100-year flood zones shown on Federal Insurance Rate Map 060075 1625B as affecting the selected public lands in exchange CA 23836), (b). Public easements in favor of Kern County for road and utility purposes, (c). Such rights as I & M Sheep Company has to graze the land until July 31, 1991, in accordance with section 15 Taylor Grazing Act lease No. 6550.

Private lands to be acquired by the United States will be subject to easements and mineral reservations noted in the preliminary title reports.

The exchanges are scheduled to be completed in February of 1990.

FOR FURTHER INFORMATION CONTACT: Tom Gey, Ridgecrest Resource Area (619) 375–7125. Information relating to these exchanges is available for review at the Ridgecrest Resource Area Office, 112 East Dolphin Street, Ridgecrest, California 93555.

DATES: On or before October 26, 1989, interested parties may submit comments to the District Manager, California Desert District Office, 1695 Spruce Street, Riverside, California 92507. Objections will be reviewed by the State Director, who may sustain, vacate, or modify this realty action. In the absence of objections, this realty action will become the final determination of the Department of the Interior.

Dated: August 17, 1989.

H.W. Riecken,

Acting, District Manager.

BILLING CODE 4310-40-M

National Park Service

Chattahoochee River National Recreation Area Advisory Commission; Meeting

AGENCY: National Park Service, Interior.

ACTION: Notice of Advisory Commission Meeting.

SUMMARY: Notice is hereby given in accordance with the Federal Advisory Commission Act that a meeting of the Chattahoochee River National Recreation Area Advisory Commission will be held at 2:00 p.m. at the following location and date.

DATE: October 4, 1989.

ADDRESS: The Chattahoochee River National Recreation Area, Headquarters Building, at the Island Ford Unit in North Fulton County.

FOR FURTHER INFORMATION CONTACT: Warren D. Beach, Superintendent, Chattahoochee River National Recreation Area, 1978 Island Ford Parkway, Dunwoody, Georgia 30350. Telephone (404) 394–7912.

SUPPLEMENTARY INFORMATION: The purpose of the Chattahoochee River National Recreation Area Advisory Commission is to consult and advise the Secretary of the Interior regarding the management and operation of the area, protection of resources within the area, and the priority of land to be required within the area. The members of the Advisory Commission are as follows:

Mr. J. Neal Shepard, Jr.
Mr. Robert A. Meadows
Mrs. Joy Bauer
Mr. Benjamin H. West
Mr. Howard D. Zeller
Mr. Larry B. Thompson
Mrs. Lillian Webb
Mr. David O. Eldridge
Mr. Robert Kerr
Mr. H. Edwin Schultz
Ms. Evelyn H. Hopkins
Mr. Michael Bennett
Mr. James O. Watson, Jr.

The meeting will be a forum to share information on the Chattahoochee River National Recreation Area and discuss current issues.

The meeting will be open to the public. However, facilities and space for accommodating members of the public are limited. Any member of the public may file with the Commission a written statement concerning the matters to be discussed. Written statements may also be submitted to the Superintendent at the address above. Minutes of the meeting will be available at Park Headquarters for public inspection approximately 4 weeks after the meeting.

Dated: September 1, 1989.

Robert M. Baker,

Regional Director, Southeast Region.

BILLING CODE 4310-70-M

Delta Region Preservation Commission; Meeting

Notice is hereby given in accordance with the Federal Advisory Committee Act that a meeting of the Delta Region Preservation Commission will be held at 7:00 p.m., on October 11, 1989, at the University of New Orleans Student Center, New Orleans, Louisiana.

The Delta Region Preservation Commission was established pursuant to section 907 of Public Law 95–625 (16 U.S.C. 230f), as amended, to advise the Secretary of the Interior in the selection of sites for inclusion in Jean Lafitte National Historical Park and Preserve, and in the implementation and development of a general management plan and of a comprehensive interpretive program of the natural, historic, and cultural resources of the Region.

The matters to be discussed at this meeting include:

—Environmental Education Center
—Water Management Plan
—General Management Plan Revisions
—1990 Budget
—Old Business
—New Business

The meeting will be open to the public. However, facilities and space for accommodating members of the public are limited, and persons will be accommodated on a first-come-first-served basis. Any member of the public may file a written statement concerning the matters to be discussed with the Superintendent, Jean Lafitte National Historical Park and Preserve.

Persons wishing further information concerning this meeting, or who wish to submit written statements may contact M. Ann Belkov, Superintendent, Jean Lafitte National Historical Park and Preserve, U.S. Customs House, 423 Canal Street, Room 210, New Orleans, Louisiana 70130–2341, telephone 504/589–3882. Minutes of the meeting will be available for public inspection four weeks after the meeting at the office of Jean Lafitte National Historical Park and Preserve.

Dated: August 30, 1989.

Richard D. Marks,

Acting Regional Director, Southwest Region.

BILLING CODE 2210-01-M

DEPARTMENT OF JUSTICE

Antitrust Division

National Cooperative Research Act of 1984; American Iron and Steel Institute Direct Steelmaking Project and Steel Technology Corp.

Notice is hereby given that, on August 21, 1989, pursuant to section 6(a) of the National Cooperative Research Act of 1984, 15 U.S.C. 4301 *et seq.* ("the Act"), American Iron and Steel Institute ("AISI") and Steel Technology Corporation filed a written notification simultaneously with the Attorney General and the Federal Trade Commission of a project entitled: "AISI Direct Steelmaking Project." The notification discloses (1) the identities of the parties to the project and to Steel Technology Corporation and (2) the nature and objectives of the project and of Steel Technology Corporation. The notification was filed for the purpose of invoking the Act's provisions limiting the recovery of antitrust plaintiffs to actual damages under specified circumstances. Pursuant to Section 6(b) of the Act, the identities of the parties to the project and to Steel Technology Corporation and their general areas of planned activities are given below.

The parties to the project are Department of Energy, American Iron and Steel Institute (AISI), Steel Technology Corporation, and the following member companies of AISI: Acme Steel Company; Armco Inc.; Atlantic Steel Company; Avesta Stainless Inc.; Berg Steel Pipe Corporation; Bethlehem Steel Corporation; California Steel Industries, Inc.; Citisteel USA, Inc.; Cleveland-Cliffs Inc.; Copperweld Corporation; A. Finkl & Sons Co.; Geneva Steel Company; Georgetown Industries, Inc.; Gulf States Steel, Inc.; M.A. Hanna Company; Harsco Corporation; Hi Specialty America; Inland Steel Industries, Inc.; Earle M. Jorgensen Company; Laclede Steel Company; Lone Star Steel Group, Lone Star Technologies, Inc.; LTV Steel, Inc.; Lukens Inc.; McLouth Steel Products Corporation; National Steel Corporation; North Star Steel Company; Ocean State Steel, Inc.; Oglebay Norton Company; Raritan River Steel Company; Rouge Steel Company; Sandvik Inc.; Sharon Tube Company; Shenango Incorporated; Stony Creek Steel, Inc.; The Timken Company; USS, a Division of USX Corporation; Valley-Vulcan Mold Company; Warren Consolidated Industries, Inc.; Weirton Steel Corporation; Wheatland Tube Company; Wheeling-Pittsburgh Steel Corporation.

The purpose of the project is to develop a coal-based continuous in-bath smelting process for the direct and energy-efficient production of liquid steel. The project will consist of laboratory studies, pilot-scale research and development and full-scale plant trials at existing steelmaking facilities. At the conclusion of the experimental work, an analysis will be made of the feasibility of commercializing a coal-based, continuous direct steelmaking process in the United States. The project will be conducted under the auspices of the Department of Energy's Steel Initiative Program.

In conjunction with the Direct Steelmaking Project and as required by the Steel Initiative Program, AISI and its members have established a holding company, Steel Technology Corporation, for the purpose of holding title to, protecting, licensing and administering intellectual property developed under the Direct Steelmaking Project. Steel Technology Corporation will conduct, on behalf of the participants in the project, such activities as patenting, licensing, accounting, recordkeeping, and funds distributing relating to inventions arising out of the project.

Joseph H. Widmar,

Director of Operations, Antitrust Division.

[FR Doc. 89-21259 Filed 9-8-89; 8:45 am]

BILLING CODE 4410-01-M

National Cooperative Research Act of 1984; Portland Cement Association

Notice is hereby given that, pursuant to section 6(a) of the National Cooperative Research Act of 1984, 15 U.S.C. 4301 et seq. ("the Act"), the Portland Cement Association ("PCA") has filed written notifications simultaneously with the Attorney General and the Federal Trade Commission on August 16, 1989, disclosing that there has been a change in the membership of PCA. Specifically, Blue Circle West Inc. should now be listed as BCW Inc. Also, Cemtech, Inc. has become a participating associate effective July 15, 1989. The notification was filed for the purpose of invoking the Act's provisions limiting the recovery of antitrust plaintiffs to actual damages under specified circumstances.

Accordingly, at present the members of the PCA are those companies listed below:

United States

Aetna Cement Corporation
Alamo Cement Company
Alaska Basic Industries
Ash Grove Cement Company
Ash Grove Cement West, Inc.
Blue Circle Atlantic. Inc.
Blue Circle, Inc.
BCW Inc.
Calaveras Cement Company
CalMat Co.
Capitol Aggregates, Inc.
Continental Cement Company Inc.
Coplay Cement Company
Davenport Cement Company
Dragon Products Company
Dundee Cement Company
Glens Falls Cement Company, Inc.
Hawaiian Cement
Hercules Cement Company
Ideal Basic Industries, Inc.
Independent Cement Corporation
Lafarge Corporation
Lehigh Portland Cement Company
LoneStar-Falcon
Lone Star Industries, Inc.
Lone Star Northwest
Medusa Cement Corporation
Missouri Portland Cement Company

On January 7, 1985, PCA filed its original notification pursuant to section 6(a) of the Act. The Department of Justice (the "Department") published a notice in the **Federal Register** pursuant to section 6(b) of the Act on February 5, 1985, 50 FR 5015. On March 14, 1985, August 13, 1985, January 3, 1986, February 14, 1986, May 30, 1986, July 10, 1986, December 31, 1986, February 3, 1987, April 17, 1985, June 3, 1987, July 29, 1987, August 6, 1987, October 9, 1987, February 18, 1988, March 9, 1988, March 11, 1988, July 7, 1988, August 9, 1988, August 23, 1988, January 23, 1989, February 24, 1989, march 13, 1989, May 25, 1989, and July 20, 1989, PCA filed additional written notifications. The Department published notices in the **Federal Register** in response to these additional notifications on April 10, 1985 (50 FR 14175), September 16, 1985 (50 FR 37594), February 4, 1986 (51 FR 4440), March 12, 1986 (51 FR 8573), June 27, 1986 (51 FR 23479), August 14, 1986 (51 FR 29173), February 3, 1987 (52 FR 3356), March 4, 1987 (52 FR 6635), May 14, 1987 (52 FR 18295), July 10, 1987 (52 FR 26163), August 26, 1987 (52 FR 32165), November 17, 1986 (52 FR 43953), March 28, 1988 (53 FR 9999), August 4, 1988 (53 FR 29397), September 15, 1988 (53 FR 35935), September 28, 1988 (53 FR 37883), February 23, 1989 (54 FR 7894), March 20, 1989 (54 FR 11455), April 25, 1989 (54 FR 17835), June 28, 1989 (54 FR 27220), and August 23, 1989 (54 FR 35092), respectively.

BILLING CODE 4410-01-M

National Cooperative Research Act of 1984; Forecast Update of U.S. Transportation Fuel Quality; Southwest Research Institute

Notice is hereby given that, on August 15, 1989, pursuant to section 6(a) of the National Cooperative Research act of 1984, 15 U.S.C. 4301 *et seq.* ("the Act"), Southwest Research Institute ("SwRI") filed a written notification simultaneously with the Attorney General and the Federal Trade Commission of a project entitled "Forecast Update of U.S. Transportation Fuel Quality". The notification discloses (1) the identities of the parties to the project and (2) the nature and objective of the project. The notification was filed for the purpose of invoking the Act's provisions limiting the recovery of antitrust plaintiffs to actual damages under specified circumstances. Pursuant to section 6(b) of the act, the identities of the parties to the project and its general areas of planned activities are given below:

The parties to the project are:

1. Burlington Northern Railroad Co. (effective April 1, 1989).
2. Texaco, Inc.(effective April 1, 1989).
3. Toyota Motor Corporation (effective April 1, 1989).
4. Euron S.p.A. (effective April 1, 1989).

The purpose of the project is to provide a forecast of future fuel quality (gasoline, diesel and jet fuel) that will be a useful planning tool in the automotive, fuels and transportation industries. The major tasks involve: (1) gathering new information from multiple sources that relates to fuel quality; (2) evaluating the new information and interpreting its potential effects on future fuel quality; (3) considering in-depth those factors which may result in changes to the previous forecast; and (4) reporting forecasts of fuel properties.

Membership in this group research project remains open, and the parties intend to file additional written notification disclosing all changes in membership of this project.

Joseph H. Widmar,

Director of Operations, Antitrust Division.

BILLING CODE 4410-01-M

NUCLEAR REGULATORY COMMISSION

[Docket Nos. 50-269, 50-270 and 50-287]

Duke Power Co.; Environmental Assessment and Finding of no Significant Impact

The United States Nuclear Regulatory Commission (the Commission) is considering issuance of amendments to Facility Operating License Nos. DPR–38, DPR–47, and DPR–55 issued to Duke Power Company (the licensee) for operation of the Oconee Nuclear Station, Units 1, 2 and 3, located in Oconee County, South Carolina.

Environmental Assessment

Identification of Proposed Action

The proposed amendments would revise the provisions in the Technical Specifications (TS) to allow a one-time outage time of 10 days for inoperability of power circuit breaker (PCB) 9.

The proposed action is in accordance with the licensee's application for amendments dated June 9, 1989.

The Need for the Proposed Action

The proposed changes to the TS are required to allow replacement of PCB–9 with a breaker of higher fault current interruption capability.

Environmental Impacts of the Proposed Action

The Commission has completed its evaluation of the proposed revisions to the TS. The proposed revision would allow the licensee to replace PCB–9 which would require that the overhead emergency power path be inoperable for 10 days. Although the extension of the inoperable period may slightly increase the probability of accidents, the consequences of the accidents are within the bounds of those analyzed in the FES for operation. After the modification, the probability of accidents will be reduced due to increased reliability. Consequently, no changes are being made in the types of any effluents that may be released offsite and there is no significant increase in the allowable individual or cumulative occupational radiation exposure. Accordingly, the Commission concludes that this proposed action would result in no significant radiological environmental impact.

With regard to potential nonradiological impacts, the proposed changes to the TS involve systems which are not located within the restricted area as defined in 10 CFR part 20. These changes do not affect nonradiological plant effluents and have no other environmental impact. Therefore, the Commission concludes that there are no significant nonradiological environmental impacts associated with the proposed amendments.

The Notice of Consideration of Issuance of Amendments and Opportunity for Hearing in connection with this action was published in the **Federal Register** on July 12, 1989 (54 FR 29405). No request for hearing or petition for leave to intervene was filed following this notice.

Alternative to the Proposed Action

Since the Commission concluded that there are no significant environmental effects that would result from the proposed action, any alternatives with equal or greater environmental impacts need not be evaluated.

The principal alternative would be to deny the requested amendments. This would not reduce environmental impacts of plant operation and would prevent implementation of the modification which would provide increased reliability of the overhead emergency power path.

Alternative Use of Resources

This action does not involve the use of any resources not previously considered in the Final Environmental Statement related to the Operation of Oconee Nuclear Station, Units 1, 2 and 3, dated March 1972.

Agencies and Persons Consulted

The NRC staff reviewed the licensee's request and did not consult other agencies or persons.

Finding of no Significant Impact

The Commission has determined not to prepare an environmental impact statement for the proposed license amendments.

Based upon the foregoing environmental assessment, we conclude that the proposed action will not have a significant effect on the quality of the human environment.

For further details with respect this action, see the application for amendments dated June 9, 1989, which is available for public inspection at the Commission's Public Document Room, 2120 L Street, NW., Washington, DC 20555, and at the Oconee County Library, 501 West South Broad Street, Walhalla, South Carolina 29691.

Dated at Rockville, Maryland, this 1st day of Sept. 1989.

For the Nuclear Regulatory Commission.

Lawrence P. Crocker,

Acting Director, Project Directorate II–3, Division of Reactor Projects—I/II, Office of Nuclear Reactor Regulation.

[FR Doc. 89–21277 Filed 9–8–89; 8:45 am]

BILLING CODE 7590-01-M

[Docket Nos. 50-369 and 50-370]

Duke Power Co.; Issuance of Environmental Assessment and Finding of no Significant Impact

The U.S. Nuclear Regulatory Commission (the Commission) is considering issuance of amendments to Facility Operating License Nos. NPF–9 and NPF–17 issued to Duke Power Company (the licensee), for operation of the McGuire Nuclear Station, Units 1 and 2, located in Mecklenburg County, North Carolina.

Environmental assessment

Identification of Proposed Action

A planned modification to the McGuire Nuclear Station will add new areas to the station for use in holding, processing and reduction of liquid and solid radwaste materials. As a result of the modification, a new Heating, Ventilation and Air Conditioning (HVAC) system will be added to provide ventilation services for the new area and some areas previously serviced by the Auxiliary Building Filtered Ventilation Exhaust (ABFVE) system. This will require a change to existing ABFVE system flowrates given in the Technical Specifications (TS) because the reduction in the area served by the ABFVE system will result in lower ABFVE system flowrates to the Unit 1 and 2 Vents. Presently, the flowrates listed in TS 4.7.7 are 54,000 CFM +/− 10% for Unit 1 and 43,000 CFM +/− 10% for Unit 2. Upon completion of the modification, these values will be reduced to 45,700 CFM +/− 10% for Unit 1 and 40,500 CFM +/− 10% for Unit 2,

The modification will also relocate an existing gaseous effluent release point, and relocate an existing radiation monitor (EMF 53). Relocating the release point requires a change to TS Figure 5.1–3 that identifies the location of the existing McGuire gaseous release points. A more legible copy of Figure 5.1–3 would also be substituted. Also, administrative changes to several TS tables are proposed to rename the "Contaminated Parts Warehouse Ventilation System" to the "Waste Handling Ventilation System."

The proposed amendments would change the McGuire TS consistent with the above planned modifications. The above proposed changes will affect TS 4.7.7, "Auxiliary Building Filtered Ventilation Exhaust System—Surveillance Reqirements;" Table 3.3–13 (Item 8), "Radioactive Gaseous Effluent Monitoring Instrumentation—Contaminated Parts Warehouse Ventilation System;" Table 4.3–9 (Item 8), "Radioactive Gaseous Effluent Monitoring Instrumentation Surveillance Requirements—Contaminated Parts Warehouse Ventilation System;" Table 4.11–2 (Item 4b), "Radioactive Gaseous Waste Sampling and Analysis Program—Contaminated Parts Warehouse;" and Figure 5.1–3, "Site Boundary for Gaseous Effluents."

The Need for the Proposed Action

The changes to the TS are needed to reflect station modifications to improve the handling and processing of radioactive waste and to provide improved housing and ventilation systems for waste handling and processing areas.

Environmental Impacts of the Proposed Action

A proposed modification to the facility will achieve further improvements in the processing, storage and reduction of solid and liquid contaminated materials to be disposed of as low-level radioactive waste and in the decontamination of reusable materials. A new high-density waste shredder and compactor will reduce solid radwaste disposable volume and associated requirements for temporary holding area space. A new laundry dry cleaning system using a re-usable dry cleaning solvent will reduce waste water by replacing the existing laundry decontamination facility that uses conventional water wash machines. New decontamination equipment will replace existing equipment that uses aggressive cleaning chemicals that are not compatible with materials of construction or with the process media in the radwaste system. The new decontamination equipment will also be more effective in the removal of oil, grease, paint and adhesive residues from surfaces; and unlike existing equipment, can be used to decontaminate electrical equipment.

The equipment will be housed in a new addition to the north end of the Auxiliary Service Building. This new addition will also provide space for temporary radwaste storage, handling and shipping; and will provide additional space for health physics offices and the chemistry laboratory. The existing Waste Storage Building is being modified to be an enclosed structure adjoining the Auxiliary Service Building, with direct access provided between the two.

Enclosing the Waste Storage Building provides for the addition of an HVAC system to service the radwaste areas and new building areas. This will ensure that potential airborne contamination in these areas will be collected, monitored, filtered and exhausted 68 feet above grade level. The new release point is through a vent stack located 60 feet from the existing location. The new stack provides for improved atmospheric disperson of the gaseous effluent because it is higher than the existing release point and is more favorably located with respect to nearby structures. Existing radiation monitor EMF 53 will be relocated to monitor all exhaust gases for the new release point and will continue to terminate releases automatically if significant radiation levels are sensed. Since the new HVAC system will service some areas presently serviced by the ABFVE, changes to the TS are needed to reflect reduced ABFVE system flowrates. TS changes are also needed to reflect the new elevated gaseous release point and changes in structure terminology.

The NRC has reviewed the proposed facility modification and finds no significant adverse environmental impact. Moreover, the proposed changes would represent significant improvements in environmental impacts associated with plant operation. Nonradiological environmental impacts would be improved by the new waste solidification equipment which eliminates the use of volatile chemicals for the waste solidification media and by new decontamination equipment no longer dependent upon aggressive cleaning chemicals. Radiological environmental impacts would be improved as noted above by reducing the disposable volume of solid and liquid radioactive waste and through improvements in the ventilation systems for associated buildings. The new ventilation systems and the existing ABFVE system with adjusted flowrate would provide a suitable environment for workers to maintain occupational radiological exposures within the limits of 10 CFR part 20 and would be consistent with maintaining occupational radiological exposure as low as is reasonably achievable. Moreover, the proposed modifications and TS changes would not result in a significant increase in individual or cumulative occupational exposure. The gaseous curie released to unrestricted areas and associated offsite doses during normal operation or after postulated accidents would not be increased by the proposed facility modifications or the associated TS changes. The modifications and TS changes also would not change the type of radioactivity released to unrestricted areas.

Accordingly, the Commission concludes that this proposed action would result in no significant adverse environmental impact.

Alternative to the Proposed Action

Since the Commission concluded that there are no significant environmental effects that would result from the proposed action, any alternatives with equal or greater environmental impacts need not be evaluated.

The principal alternative would be to deny the requested amendments. This would not reduce environmental impacts of plant operation and would preclude improvements in the processing, storage and reduction of solid and liquid contaminated materials to be disposed of as low-level radioactive waste.

Alternative Use of Resources

This action does not involve the use of resources not previously considered in connection with the "Final Environmental Statement Relating to Operation of the William B. McGuire Nuclear Station, Units 1 and 2," dated April 1976 or its addendum dated January 1981.

Agencies and Persons Consulted

The NRC staff has reviewed the licensee's request and did not consult other agencies or persons.

Finding of no Significant Impact

The Commission has determined not to prepare an environmental impact statement for the proposed license amendments.

Based on the foregoing environmental assessment, we conclude that the proposed action will not have a significant adverse effect on the quality of the human environment.

For further details with respect to this action, see the application for amendments dated May 11, 1989 and supplemental letter of June 14, 1989. These documents are available for public inspection at the Commission's Public Document Room, 2120 L Street, NW., Washington, DC and at the Atkins Library, University of North Carolina, Charlotte (UNCC Station), North Carolina 28223.

Dated at Rockville, Maryland, this 31st day of August 1989.

For the Nuclear Regulatory Commission.

David B. Matthews,

Director, Project Directorate II-3, Division of Reactor Projects—I/II Office of Nuclear Reactor Regulation.

[FR Doc. 89-21278 Filed 9-8-89; 8:45 am]

BILLING CODE 7590-01-M

[Docket No. 50-224]

Environmental Assessment and Finding of No Significant Impact Regarding Proposed Order Authorizing Dismantling of the Reactor and Disposition of Component Parts University of California, Berkeley

The Nuclear Regulatory Commission is considering issuance of an Order authorizing the University of California, Berkeley (UCB) to dismantle their TRIGA research reactor facility located on the licensee's campus in Berkeley, California and to dispose of the reactor components in accordance with the application dated January 8, 1988, as supplemented on January 31, 1989 and April 14, 1989.

Environmental Assessment

Identification of Proposed Action: By application dated January 6, 1988, as supplemented, UCB requested authorization to decontaminate and dismantle the TRIGA research reactor, to dispose of its components parts in accordance with the proposed dismantling plan, and to terminate Facility Operating License No. R-101. The UCB TRIGA was shutdown in December 1987, and has not operated since then. Following reactor shutdown the fuel was removed from the core and shipped as directed by the Department of Energy in accordance with DOE, NRC, and DOT requirements.

Opportunity for hearing was afforded by a "Notice of Proposed Issuance of Orders Authorizing Disposition of Component Parts and Terminating Facility License" published in the **Federal Register** on March 10, 1988 (53 FR 7823).

The City of Berkeley filed a "Petition To Intervene in License Amendment Proceeding, Request For Hearings And Further Relief." The city and the licensee held discussion, arrived at a settlement agreement and filed a "Joint Motion For Dismissal Of Hearing Procedure" with the Atomic Safety and Licensing Board. The Board issued an Order on January 5, 1989 to dismiss the proceeding.

Need for Proposed Action: In order to prepare the facility for unrestricted access and use, the dismantling and decontamination activities proposed by UCB must be accomplished.

Environmental Impact of the Proposed Action: All decontamination will be performed by trained personnel in accordance with previously reviewed procedures and will be overseen by experienced health physics staff. Solid and liquid waste will be removed from the facility and managed in accordance with NRC requirements. The staff has calculated that the collective dose equivalent to the staff and public for the project will be less than 8 person-rem.

These conclusions were based on the fact that all proposed operations are carefully planned and controlled, all contaminated components are removed, packaged, and shipped offsite, and that the radiological control procedures ensure that releases of radioactive wastes from the facility are within the limits of 10 CFR part 20 and are as low as reasonably achievable (ALARA).

Based on the review of the specific proposed activities associated with the dismantling and decontamination of the UCB facility, the staff has determined that there will be no significant increase in the amounts of effluents that may be released offsite, and no significant increase in individual or cumulative occupational or population radiation exposure.

The staff has also determined that the proposed activities will not result in any significant impacts on air, water, land, or biota in the area.

Alternative Use of Resources: The only alternative to the proposed dismantling and decontamination activities is to maintain the facility as a restricted area. This approach would include monitoring and reporting for the duration of the safe storage period. However, the UCB intends to use the area for other academic purposes.

Agencies and Persons Consulted: The NRC staff reviewed the licensee's request and did not consult other agencies or persons.

Finding of No Significant Impact

The Commission has determined not to prepare an environmental impact statement for the proposed action based upon the foregoing environmental assessment. We conclude that the proposed action will not have a significant effect on the quality of the human environment.

For detailed information with respect to this proposed action, see the application for dismantling, decontamination and license termination dated January 8, 1988, as supplemented and the Safety Evaluation prepared by the staff. These documents are available for public inspection at the Commission's Public Document Room, 2120 L Street, NW., Washington, DC 20555.

Dated at Rockville, Maryland this 5th day of September 1989.

For the Nuclear Regulatory Commission.

Seymour H. Weiss,

Director, Non-Power Reactor, Decommissioning and Environmental Project Directorate Division of Reactor Projects III, IV, V and Special Projects Office of Nucear Reactor Regulation.

[FR Doc. 89-21279 Filed 9-8-89; 8:45 am]

BILLING CODE 7590-01-M

[Docket No. 50-320]

GPU Nuclear Corp; Environmental Assessment and Finding of No Significant Impact

The U.S. Nuclear Regulatory Commission (NRC or the Commission) is considering issuance of an amendment to Facility Operating License No. DPR-23 to General Public Utilities Nuclear Corporation (GPUN or the licensee), for Three Mile Island Nuclear Generating Station, Unit No. 2 (TMI-2) located in Dauphin County, Pennsylvania.

Environmental Assessment

Identification of Proposed Action

The proposed amendment would revise the Appendix A Technical Specifications (TS) relating to the disposal of the Accident Generated Water (AGW). The proposed action is in response to the licensee's application dated February 25, 1987 and revised April 13, 1987.

The Need for the Proposed Action

The NRC staff, in response to the licensee's application for a change in the technical specifications to allow the disposal of the AGW, prepared Supplement 2 to the Programmatic Environmental Impact Statement (PEIS) related to decontamination and disposal of radioactive wastes resulting from the March 28, 1979 accident at TMI-2. Final Supplement 2 to the PEIS, issued in June 1987, evaluated the licensee's proposal and a number of alternatives for the disposal of AGW.

Subsequent to the issuance of Final Supplement 2 the licensee has modified its plans for pretreatment and for the packaging and shipping of the evaporator bottoms to the commerical low level waste disposal site near Richland, Washington. Since the current proposal is different than that evaluated in Final Supplement 2 the staff has evaluated the impacts associated with this change and has determined that implementation of the licensee's plan would result in impacts different than those reported for the licensee's proposal in Supplement 2 to the PEIS.

Environmental Impacts of the Proposed Action

The licensee's original proposal involved feeding the water, which was to be pretreated by ion exchange, to a modified commerically available evaporator. The majority of the liquid would be released to the atmosphere and the residue (evaporator bottoms) would be mixed with Portland cement and the slurry poured into containers for solidification. The solid waste would then be transported to a commerical NRC-licensed low level waste disposal site, near Richland, Washington. The total solidified volume was expected to be between 27,000 and 46,000 ft^3. Approximately 80 to 250 shipments between TMI-2 and Richland, Washington would be required. The number of injuries and fatalities due to trucking accidents estimated for the shipping campaign ranged from 0.5 to 1.6 and from 0.04 to 1.3 respectively.

No occupational exposure to the truck crews resulting from the shipping of the evaporator bottoms was expected. No routine radiological dose to the public was calculated due to the low specific activity of the solidified waste and the self shielding characteristics of the Portland cement binder. Likewise no radiation exposure to the public in the event of a trucking accident was expected since dispersal of the solidified evaporator bottoms was unlikely. The total cost of shipping the solidified waste was estimated to be between $410,000 and $690,000.

The licensee's current proposal is to still evaporate the AGW in a commerically available evaporator. However, the evaporator may be used in place of ion exchange for pretreatment. The solid waste stream may contain radionuclides that were expected to be shipped offsite in spent ion exchange resin liners. For the purposes of this assessment the maximum concentration permissible in class A waste was assumed for determining dose. Additionally the evaporator bottoms will, not be mixed with a binder and solidified. Instead the bottoms will be pelletized, dried and the pellets packaged in 55 gallon drums and shipped to Richland, Washington. The packaging and shipment of the dry pelletized waste will be in conformance with all regulations governing shipment of low level wastes. The number of shipments is expected to be 14. The number of injuries and fatalities due to trucking accidents for the shipping campaign is estimated at 0.09 and 0.007 repectively. For the entire shipping campaign the dose of the truck crews was estimated at 3.5 person-rem and the estimated dose to the general public along the shipping route (1.3 million people) is 3.6 person-rem.

There is also a small probability that a shipping accident may be severe enough to result in the breach of a waste container and release of some of the waste. To determine the risk of radiation exposure from a damaged waste container, the staff used a model that estimates the population dose by multiplying accident frequences (the expected number of accidents) by accident consequences. Using these methodology the staff estimated that a dose of about 0.16 person-rem would result from accidents during shipment of all the AGW waste. The shipping cost of the dry pelletized waste is estimated at $70,000.

Based on the reduced level of injuries and fatalities associated with the reduced number of shipments, the small estimated dose to the general population along the truck route and the low level of truck crew exposure the staff concludes that there are no significant adverse environmental impacts associated with the proposed action. Furthermore, the staff recognizes that the licensee's proposal would result in a significant decrease in the amount of waste to be disposed and a significant reduction in the overall cost of shipping.

Alternatives to the Proposed Action.

Since the staff concluded that there are no significant environmental effects that would result from the proposed action, any alternative with equal or greater environmental impacts need not be evaluated. The principal alternative to the licensee's current proposal would be the licensee's original proposal which was to solidify the wastes prior to shipment. Implementation of this alternative would result in increased cost, increase waste, and increased potential for transportation related accidents without a significant reduction in radiation dose to either the public or the truck crews.

Alternative Use of Resources.

This action does not involve the use of any resources not previously considered in Supplement 2 to the PEIS dated June 1987.

Agencies and Persons Consulted.

The NRC staff reviewed the licensee's request and did not consult other agencies or persons.

Finding of No Significant Impact

The staff has determined not to further supplement the environmental impact statements for the proposed license amendment.

Based upon the foregoing environmental assessment, the staff concluded that the proposed action will not have a significant effect on the quality of the human environment.

For further details with respect to this action, see the application for amendment dated February 25, 1987 revised April 13, 1987, the staff's Final Supplement 2 to the PEIS dated June 1987, and the licensee's Technical Evaluation Report dated October 7, 1988, which are all available for public inspection at the Commission's Public Document Room, the Gelman Building, 2120 L Street, NW., Washington, DC and at the State Library of Pennsylvania Government Publications Section, Education Building, Walnut Street and Commonwealth Avenue, Harrisburg, Pennsylvania 17126.

Dated at Rockville, Maryland, this 31st day of August 1989.

For the Nuclear Regulatory Commission.

John F. Stolz, Director,

Project Directorate I-4 Division of Reactor Projects—I/II Office of Nuclear Reactor Regulation.

[FR Doc. 89-21213 Filed 9-8-89; 8:45 am]

BILLING CODE 7590-01-M

[Docket Nos. 50-454 and 50-455]

Commonwealth Edison Co.; Consideration of Issuance of Amendment to Facility Operating License and Opportunity for Hearing

The U.S. Nuclear Regulatory Commission (Commission) is considering issuance of amendment to Facility Operating License Nos. NPR-37 and NPF-66, issued to the Commonwealth Edison (the licensee), for operation of the Byron Station, Units 1 and 2 located in Ogle County, Illinois.

The amendments would change the Technical Specifications to reflect the use of VANTAGE 5 fuel.

Prior to issuance of the proposed license amendment, the Commission will have made findings required by the Atomic Energy Act of 1954, as amended (the Act) and the Commission's regulation

By October 1, 1989, the licensee may file a request for a hearing with respect to issuance of the amendment to the subject facility operating license and any person whose interest may be affected by this proceeding and who wishes to participate as a party in the proceeding must file a written request for hearing and a petition for leave to intervene. Requests for a hearing and petitions for leave to intervene shall be filed in accordance with the Commission's "Rules of Practices for Domestic Licensing Proceedings" in 10 CFR part 2. If a request for a hearing or petition for leave to intervene is filed by the above date, the Commission or an Atomic Safety and Licensing Board, designated by the Commission or by the Chairman of the Atomic Safety and Licensing Board Panel, will rule on the request and/or petition, and the Secretary or the designated Atomic Safety and Licensing Board will issue a notice of hearing or an appropriate order.

As required by 10 CFR 2.714, a petition for leave to intervene shall set forth with particularity the interest of the petitioner in the proceeding, and how that interest may be affected by the results of the proceeding. The petition should specifically explain the reasons why intervention should be permitted with particular reference to the following factors: (1) The nature of the petitioner's right under the Act to be made a party to the proceeding; (2) the nature and extent of the petitioner's property, financial or other interest in the proceeding; and (3) the possible effect of any order which may be entered in the proceeding on the petitioner's interest. The petition should also identify the specific aspect(s) of the subject matter of the proceeding as to which petitioner wishes to intervene. Any person who has filed a petition for leave to intervene or who has been admitted as a party may amend the petition without requesting leave of the Board up to fifteen (15) days prior to the first prehearing conference scheduled in the proceeding, but such an amended petition must satisfy the specificity requirements described above.

Not later than fifteen (15) days prior to the first prehearing conference scheduled in the proceeding, a petitioner shall file a supplement to the petition to intervene which must include a list of the contentions which are sought to be litigated in the matter, and the bases for each contention set forth with reasonable specificity. Contentions shall be limited to matters within the scope of the amendment under consideration. A petitioner who fails to file such a supplement which satisfies these requirements with respect to at least one contention will not be permitted to participate as a party.

Those permitted to intervene become parties to the proceeding, subject to any limitations in the order granting leave to intervene, and have the opportunity to participate fully in the conduct of the hearing, including the opportunity to present evidence and cross-examine witnesses.

A request for a hearing or a petition for leave to intervene shall be filed with the Secretary of the Commission, United States Nuclear Regulatory Commission, Washington, DC 20555, Attention: Docketing and Service Branch, or may be delivered to the Commission's Public Document Room, Gelman Building, 2120 L Street NW., Washington, DC by the above date. Where petitions are filed during the last ten (10) days of the notice period, it is requested that the petitioner or representative for the petitioner promptly so inform the Commission by a toll-free telephone call to Western Union at 1-800-325-6000 (in Missouri 1-800-342-6700). The Western Union operator should be given Datagram Identification Number 3737 and the following message addressed to Paul C. Shemanski: petitioner's name and telephone number; date petition was mailed; plant name; and publication date and page number of this **Federal Register** notice. A copy of the petition should also be sent to the Office of General Counsel, U.S. Nuclear Regulatory Commission, Washington, DC 20555, and to Michael Miller, Esq., Sidley and Austin, One First National Plaza, Chicago, Illinois 60603, attorney for the licensee.

Nontimely filings of petitions for leave to intervene, amended petitions, supplemental petitions and/or request for hearing will not be entertained absent a determination by the Commission, the presiding officer to the presiding Atomic Safety and Licensing Board, that the petition and/or request should be granted based upon a balancing of the factors specified in 10 CFR 2.714(a)(1) (i)–(v) and 2.714(d).

If a request for a hearing if received, the Commission's staff may issue the amendment after it completes its technical review and prior to the completion of any required hearing if it publishes a further notice for public comment of its proposed finding of no significant hazards consideration in accordance with 10 CFR 50.91 and 50.92.

For further details with respect to this action, see the application for amendment dated July 31, 1989, which is available for public inspection at the Commission's Public Document Room, Gelman Building, 2120 L Streeet NW., Washington, DC 20555, and at the Rockford Public Library, 215 N. Wyman Street, Rockford, Illinois 61101.

Dated at Rockville, Maryland, this 1st day of September 1989.

For the Nuclear Regulatory Commission.

Leonard N. Olshan,

Project Manager, Project Directorate III-2, Division of Reactor Projects—III, IV, V and Special Projects.

BILLING CODE 7590-01-M

[Docket No. 50-341]

Detroit Edison Co.; Issuance of Amendment to Facility Operating License

The U.S. Nuclear Regulatory Commission (Commission) has issued Amendment No. 35 to Facility Operating License No. NPF-43 issued to Detroit Edison Company (the licensee), which revised the Technical Specifications for operation of Fermi-2, located in Monroe County, Michigan.

The amendment is effective as of the date of issuance.

The amendment revises the TS to reflect the modifications made to the Automatic Depressurization System (ADS). The ADS will be modified in accordance with TMI Action Plan II.K.3.18 of NUREG-0737.

The application for the amendment complies with the standards and requirements of the Atomic Energy Act of 1954, as amended (the Act), and the Commission's rules and regulations. The Commission has made appropriate findings as required by the Act and the Commission's rules and regulations in 10 CFR Chapter I, which are set forth in the license amendment.

Notice of Consideration of Issuance of Amendment and Opportunity for Hearing in connection with this action was published in the **Federal Register** on July 13, 1989 (54 FR 29622). No request for a hearing or petition for leave to intervene was filed following this notice.

The Commission has prepared an Environmental Assessment related to the action and has determined not to prepare an environmental impact statement. Based upon the environmental assessment, the Commission has concluded that the issuance of this amendment will not have a significant effect on the quality of the human behavior environment.

For further details with respect to the action, see (1) the application for amendment dated April 3, 1989, (2) Amendment No. 35 to License No. NPF-43, (3) the Commission's related Safety Evaluation, and (4) the Commission's Environmental Assessment. All of these items are available for public inspection at the Commission's Public Document Room, the Gelman Building, 2120 L Street, NW., Washington, DC, and at the Local Public Document Room. A copy of items (2), (3), and (4) may be obtained upon request addressed to the U.S. Nuclear Regulatory Commission, Washington, DC 20555, Attention: Director, Division of Reactor Projects—III, IV, V, and Special Projects.

Dated at Rockville, Maryland, this 30th day of August.

For the Nuclear Regulatory Commission.

John F. Stang,

Project Manager, Project Directorate III-1, Division of Reactor Projects—III, IV, V, and Special Projects, Office of Nuclear Reactor Regulation.

BILLING CODE 7590-01-M

[Docket No. 50-341]

Detroit Edison Co., Wolverine Power Supply Cooperative, Inc.; Issuance of Amendment to Facility Operating License

The U.S. Nuclear Regulatory Commission (Commission) has issued Amendment No. 36 to Facility Operating License No. NPF-43 issued to Detroit Edison Company (the licensee), which revised the Technical Specifications for operation of Fermi-2, located in Monroe County, Michigan.

The amendment is effective as of the date of issuance.

The amendment revises the Technical Specification (TS) relating to the Source Range Monitors (SRM) to permit complete core off-loading during the first refueling outage. The proposed amendment also increases the minimum signal-to-noise ratio required for a reduced SRM minimum count rate requirement and eliminates a related TS provision which is no longer needed.

The application for the amendment complies with the standards and requirements of the Atomic Energy Act of 1954, as amended (the Act), and the Commission's rules and regulations. The Commission has made appropriate findings as required by the Act and the Commission's rules and regulations in 10 CFR Chapter I, which are set forth in the license amendment.

Notice of Consideration of Issuance of Amendment and Opportunity for Hearing in connection with this action was published in the **Federal Register** on July 11, 1989 (54 FR 29117). No request for a hearing or petition for leave to intervene was filed following this notice.

The Commission has prepared an Environmental Assessment related to the action and has determined not to prepare an environmental impact statement. Based upon the environmental assessment, the Commission has concluded that the issuance of this amendment will not have a significant effect on the quality of the human behavior environment.

For further details with respect to the action, see (1) the application for amendment dated April 3, 1989, (2) Amendment No. ________ to License No. NPF-43, (3) the Commission's related Safety Evaluation, and (4) the Commission's Environmental Assessment. All of these items are available for public inspection at the Commission's Public Document Room, the Gelman Building, 2120 L Street NW., Washington, DC, and at the Local Public Document Room. A copy of items (2), (3) and (4) may be obtained upon request addressed to the U.S. Nuclear Regulatory Commission, Washington, DC 20555, Attention: Director, Division of Reactor Projects III, IV, V and Special Projects.

Dated at Rockville, Maryland, this 30th day of August 1989.

BILLING CODE 7590-01-M

[Docket No. 50-213]

Connecticut Yankee Atomic Power Co.; Consideration of Issuance of Amendment to Facility Operating License and Opportunity for Hearing

The U.S. Nuclear Regulatory Commission (the Commission) is considering issuance of amendment to Facility Operating License No. DPR-61 and issued to Connecticut Yankee Atomic Power Company (CYAPCO/licensee) for operation of the Haddam Neck Plant located in Middlesex County, Connecticut.

The proposed amendment would provide revised Technical Specifications to reflect changes associated with the Haddam Neck Plant fire detection/suppression system upgrades in support of the new switchgear building. These changes consist of the installation of additional fire detectors, an increase in the minimum number of these detectors required to be operable, relocation of hose stations, and the addition of the new fire detection and suppression systems associated with the new switchgear building.

Prior to issuance of the proposed license amendment, the Commission will have made findings required by the Atomic Energy Act of 1954, as amended

SE
11
989
UMI

(the Act) and the Commission's regulations.

By October 10, 1989, the licensee may file a request for a hearing with respect to issuance of the amendment to the subject facility operating license and any person whose interest may be affected by this proceeding and who wishes to participate as a party in the proceeding must file a written request for hearing and a petition for leave to intervene. Requests for a hearing and petitions for leave to intervene shall be filed in accordance with the Commission's "Rules of Practice for Domestic Licensing Proceedings" in 10 CFR part 2. If a request for a hearing or petition for leave to intervene is filed by the above date, the Commission or an Atomic Safety and Licensing Board, designated by the Commission or by the Chairman of the Atomic Safety and Licensing Board Panel, will rule on the request and/or petition, and the Secretary or the designated Atomic Safety and Licensing Board will issue a notice of hearing or an appropriate order.

As required by 10 CFR 2.714, a petition for leave to intervene shall set forth with particularity the interest of the petitioner in the proceeding and how that interest may be affected by the results of the proceeding. The petition should specifically explain the reasons why intervention should be permitted with particular reference to the following factors: (1) The nature of the petitioner's right under the Act to be made a party to the proceeding; (2) the nature and extent of the petitioner's property, financial, or other interest in the proceeding; and (3) the possible effect of any order which may be entered in the proceeding on the petitioner's interest. The petition should also identify the specific aspect(s) of the subject matter of the proceeding as to which petitioner wishes to intervene. Any person who has filed a petition for leave to intervene or who has been admitted as a party may amend the petition without requesting leave of the Board up to fifteen (15) days prior to the first pre-hearing conference scheduled in the proceeding, but such an amended petition must satisfy the specificity requirements described above.

Not later than fifteen (15) days prior to the first prehearing conference scheduled in the proceeding, a petitioner shall file a supplement to the petition to intervene, which must include a list of the contentions that are sought to be litigated in the matter, and the bases for each contention set forth with reasonable specificity. Contentions shall be limited to matters within the scope of the amendments under consideration. A petitioner who fails to file such a supplement which satisfies these requirements with respect to at least one contention will not be permitted to participate as a party.

Those permitted to intervene become parties to the proceeding, subject to any limitations in the order granting leave to intervene, and have the opportunity to participate fully in the conduct of the hearing, including the opportunity to present evidence and cross-examine witnesses.

A request for a hearing or a petition for leave to intervene must be filed with the Secretary of the Commission, U.S. Nuclear Regulatory Commission, Washington, DC 20555, Attention: Docketing and Service Branch, or may be delivered to the Commission's Public Document Room, the Gelman Building, 2120 L Street NW., Washington, DC, by the above date. Where petitions are filed during the last ten (10) days of the notice period, it is requested that the petition promptly so inform the Commission by a toll-free telephone call to Western Union at 1–800–325–6000 (in Missouri 1–800–342–6700). The Western Union operator should be given Datagram Identification Number 3737 and the following message addressed to John F. Stolz: petitioner's name and telephone number; date petition was mailed; plant name; and publication date and page number of this **Federal Register** notice. A copy of the petition should also be sent to the Office of the General Counsel, U.S. Nuclear Regulatory Commission, Washington, DC 20555, and to Gerald Garfield, Esquire, Day, Berry & Howard, . Counselors at Law, City Place, Hartford, Connecticut 06103–3499 (attorney for the licensee).

Nontimely filings of petitions for leave to intervene, amended petitions, supplemental petitions and/or requests for hearing will not be entertained absent a determination by the Commission, the presiding officer or the presiding Atomic Safety and Licensing Board that the petition and/or request should be granted based upon a balancing of the factors specified in 10 CFR 2.714(a)(1)(i)-(v) and 2.714(d).

If a request for hearing is received, the Commission's staff may issue the amendments after it completes its technical review and prior to the completion of any required hearing if it publishes a further notice for public comment of its proposed finding of no significant hazards consideration in accordance with 10 CFR 50.91 and 50.92.

For further details with respect to this section, see the application for amendment dated July 31, 1989, which is available for public inspection at the Commission's Public Document Room, the Gelman Building, 2120 L Street NW., Washington, DC 20555, and at the Russell Library, 123 Broad Street, Middletown, Connecticut 06457.

Dated at Rockville, Maryland, this 31st day of August, 1989.

For the Nuclear Regulatory Commission.

John F. Stolz,

Director, Project Directorate I–4, Division of Reactor Projects—I/II, Office of Nuclear Reactor Regulation.

BILLING CODE 7590-01-M

[Docket No. 50-213]

Connecticut Yankee Atomic Power Co.; Consideration of Issuance of Amendment to Facility Operating License and Opportunity for Hearing

The U.S. Nuclear Regulatory Commission (the Commission) is considering issuance of amendment to Facility Operating License No. DPR–61 and issued to Connecticut Yankee Atomic Power Company (CYAPCO/licensee) for operation of the Haddam Neck Plant located in Middlesex County, Connecticut.

During the upcoming 1989 refueling outage, CYAPCO will upgrade the reactor protection system (RPS) and the nuclear instrumentation system (NIS) by making advanced technology, hardware changes. These changes will improve RPS and NIS reliability and redundancy. The proposed amendment would change the Technical Specifications to reflect modifications to be made to upgrade the RPS and the NIS.

Prior to issuance of the proposed license amendment, the Commission will have made findings required by the Atomic Energy Act of 1954, as amended (the Act) and the Commission's regulations.

By October 10, 1989, the licensee may file a request for a hearing with respect to issuance of the amendment to the subject facility operating license and any person whose interest may be affected by this proceeding and who wishes to participate as a party in the proceeding must file a written request for hearing and a petition for leave to intervene. Requests for a hearing and petitions for leave to intervene shall be filed in accordance with the Commission's "Rules of Practice for Domestic Licensing Proceedings" in 10 CFR part 2. If a request for a hearing or petition for leave to intervene is filed by the above date, the Commission or an

Atomic Safety an Licensing Board, designated by the Commission or by the Chairman of the Atomic Safety and Licensing Board Panel, will rule on the request and/or petition, and the Secretary for the designated Atomic Safety and Licensing Board will issue a notice of hearing or an appropriate order.

As required by 10 CFR 2.714, a petition for leave to intervene shall set forth with particularity the interest of the petitioner in the proceeding and how that interest may be affected by the results of the proceeding. The petition should specifically explain the reasons why intervention should be permitted with particular reference to the following factors: (1) The nature of the petitioner's right under the Act to be made a party to the proceeding; (2) the nature and extent of the petitioner's property, financial, or other interest in the proceeding; and (3) the possible effect of any order which may be entered in the proceeding on the petitioner's interest. The petition should also identify the specific aspect(s) of the subject matter of the proceeding as to which petitioner wishes to intervene. Any person who has filed a petition for leave to intervene or who has been admitted as a party may amend the petition without requesting leave of the Board up to fifteen (15) days prior to the first prehearing conference scheduled in the proceeding, but such an amended petition must satisfy the specificity requirements described above.

Not later than fifteen (15) days prior to the first prehearing conference scheduled in the proceeding, a petitioner shall file a supplement to the petition to intervene, which must include a list of the contentions that are sought to be litigated in the matter, and the bases for each contention set forth with reasonable specificity. Contentions shall be limited to matters within the scope of the amendments under consideration. A petitioner who fails to file such a supplement which satisfies these requirements with respect to at least one contention will not be permitted to participate as a party.

Those permitted to intervene become parties to the proceeding, subject to any limitations in the order granting leave to intervene, and have the opportunity to participate fully in the conduct of the hearing, including the opportunity to present evidence and cross-examine witnesses.

A request for a hearing or a petition for leave to intervene must be filed with the Secretary of the Commission, U.S. Nuclear Regulatory Commission, Washington, DC 20555, Attention: Docketing and Service Branch, or may be delivered to the Commission's Public Document Room, the Gelman Building, 2120 L Street, NW., Washington, DC, by the above date. Where petitions are filed during the last ten (10) days of the notice period, it is requested that the petitioner promptly so inform the Commission by a toll-free telephone call to Western Union at 1–800–325–6000 (in Missouri 1–800–342–6700). The Western Union operator should be given Datagram Identification Number 3737 and the following message addresssed to John F. Stolz: petitioner's name and telephone number; date petition was mailed; plant name; and publication date and page number of this **Federal Register** notice. A copy of the petition should also be sent to the Office of the General Counsel, U.S. Nuclear Regulatory Commission, Washington, DC 20555, and to Gerald Garfield, Esquire, Day, Berry & Howard, Counselers at Law, City Place, Hartford, Connecticut 06103–3499 (attorney for licensee).

Nontimely filings of petitions for leave to intervene, amended petitions, supplemental petitions and/or requests for hearing will not be entertained absent a determination by the Commission, the presiding officer or the presiding Atomic Safety and Licensing Board that the petition and/or request should be granted based upon a balancing of the factors specified in 10 CFR 2.714(a)(1)(i)–(v) and 2.714(d).

If a request for hearing is received, the Commission's staff may issue the amendments after it completes its technical review and prior to the completion of any required hearing if it publishes a further notice for public comment of its proposed finding of no significant hazards consideration in accordance with 10 CFR 50.91 and 50.92.

For further details with respect to this action, see the application for amendment dated July 28, 1989, which is available for public inspection at the Commission's Public Document Room, the Gelman Building, 2120 L Street, NW., Washington, DC 20555, and at the Russell Library, 123 Broad Street, Middletown, Connecticut 06457.

Dated at Rockville, Maryland, this 31st day of August, 1989.

For the Nuclear Regulatory Commission.

John F. Stolz,

Director, Project Directorate I–4, Division of Reactor Projects—I/II, Office of Nuclear Reactor Regulation.

[FR Doc. 89–21215 Filed 9–8–89; 8:45 am]

BILLING CODE 7590-01-M

[Docket No. 50-213]

Connecticut Yankee Atomic Power Co.; Consideration of Issuance of Amendment to Facility Operating License and Opportunity for Hearing

The U.S. Nuclear Regulatory Commission (the Commission) is considering issuance of amendment to Facility Operating License No. DPR–61 and issued to Connecticut Yankee Atomic Power Company (CYAPCO/licensee) for operation of the Haddam Neck Plant located in Middlesex County, Connecticut.

The proposed amendment would upgrade the current custom Technical Specification (TS) format to the Westinghouse Standard-Format Technical Specifications (WSTS). The NRC staff and Connecticut Yankee Power Company (CYAPCO) agreed that the proposed amendment would represent an interim step before CYAPCO addresses a full WSTS conversion. All sections of the current custom TS will be re-formatted and upgraded except for Sections 3.6, "Core Cooling Systems," 3.7, "Minimum Water Volume and Boron Concentration in the Refueling Water Storage Tank," 3.12, "Station Service Power," 4.3, "Core Cooling Systems-Periodic Testing" and 4.5, "Emergency Power System Periodic Testing." Sections 3.6, 3.7, 3.12, 4.3 and 4.5 will be re-formatted under separate amendment requests. CYAPCO has stated that the current TS requirements will be maintained, that the proposed amendment will not change the facility as described in the Licensing Basis Documents and no changes will be made to the Final Safety Analysis Reprot (FSAR). Furthermore, CYAPCO has stated that the proposed changes will result in additional limitations, restrictions or controls to conform to the WSTS

Prior to issuance of the proposed license amendment, the Commission will have made findings required by the Atomic Energy Act of 1954, as amended (the Act) and the Commission's regulations.

By October 10, 1989, the license may file a request for a hearing with respect to issuance of the amendment to the subject facility operating license and any person whose interest may be affected by this proceeding and who wishes to participate as a party in the proceeding must file a written request for hearing and a petition for leave to intervene. Requests for a hearing and petitions for leave to intervene shall be filed in accordance with the Commission's "Rules of Practice for

BEST COPY AVAILABLE

Domestic Licensing Proceedings" in 10 CFR part 2. If a request for a hearing or petition for leave to intervene is filed by the above date, the Commission or an Atomic Safety and Licensing Board, designated by the Commission or by the Chairman of the Atomic Safety and Licensing Board Panel, will rule on the request and/or petition, and the Secretary or the designated Atomic Safety and Licensing Board will issue a notice of hearing or an appropriate order.

As required by 10 CFR 2.714, a petition for leave to intervene shall set forth with particularity the interest of the petitioner in the proceeding and how that interest may be affected by the results of the proceeding. The petition should specifically explain the reasons why intervention should be permitted with particular reference to the following factors: (1) The nature of the petitioner's right under the Act to be made a party to the proceeding; (2) the nature and extent of the petitioner's property, financial, or other interest in the proceeding; and (3) the possible effect of any order which may be entered in the proceeding on the petitioner's interest. The petition should also identify the specific aspect(s) of the subject matter of the proceeding as to which petitioner wishes to intervene. Any person who has filed a petition for leave to intervne or who has been admitted as a party may amend the petition without requesting leave of the Board up to fifteen (15) days prior to the first prehearing conference scheduled in the proceeding, but such an amended petition must satisfy the specificity requirements described above.

Not later than fifteen (15) days prior to the first prehearing conference scheduled in the proceeding, a petitioner shall file a supplement to the petition to intervene, which must include a list of the contentions that are sought to be litigated in the matter, and the bases for each contention set forth with reasonable specificity. Contentions shall be limited to matters within the scope of the amendments under consideration. A petitioner who fails to file such a supplement which satisfies these requirements with respect to at least one contention will not be permitted to participate as a party.

Those permitted to intervene become parties to the proceeding, subject to any limitations in the order granting leave to intervene, and have the opportunity to participate fully in the conduct of the hearing, including the opportunity to present evidence and cross-examine witnesses.

A request for a hearing or a petition for leave to intervene must be filed with the Secretary of the Commission, U.S. Nuclear Regulatory Commission, Washington, DC 20555, Attention: Docketing and Service Branch, or may be delivered to the Commission's Public Document Room, the Gelman Building, 2120 L Street, NW. Washington, DC, by the above date. Where petitions are filed during the last ten (10) days of the notice period, it is requested that the petitioner promptly so inform the Commission by a toll-free telephone call to Western Union at 1–800–325–6000 (in Missouri 1–800–342–6700). The Western Union operator should be given Datagram Identification Number 3737 and the following message addressed to John F. Stolz: petitioner's name and telephone number; date petition was mailed; plant name; and publication date and page number of this **Federal Register** notice. A copy of the petition should also be sent to the Office of the General Counsel, U.S. Nuclear Regulatory Commission, Washington, DC 20555, and to Gerald Garfield, Esquire, Day, Berry & Howard, Counselers at Law, City Place, Hartford, Connecticut 06103–3499.

Nontimely filings of petitions for leave to intervene, amended petitions, supplemental petitions and/or requests for hearing will not be entertained absent a determination by the Commission, the presiding officer or the presiding Atomic Safety and Licensing Board that the petition and/or request should be granted based upon a balancing of the factors specified in 10 CFR 2.714(a)(1)(i)–(v) and 2.714(d).

If a request for hearing is received, the Commission's staff may issue the amendments after it completes its technical review and prior to the completion of any required hearing if it publishes a further notice for public comment of its proposed finding of no significant hazards consideration in accordance with 10 CFR 50.91 and 50.92.

For further details with respect to this action, see the application for amendment dated October 26, 1988, as supplemented March 6, June 2 and 23, July 28 and August 4, 1989, which is available for public inspection at the Commission's Public Document Room, the Gelman Building, 2120 L Street, NW., Washington, DC. 20555, and at the Russell Library, 123 Broad Street, Middletown, Connecticut 06457.

Dated at Rockville, Maryland, this 31st day of August, 1989.

For the Nuclear Regulatory Commission.

John F. Stolz,

Director, Project Directorate I-4, Division of Reactor Projects—I/II Office of Nuclear Reactor Regulation.

BILLING CODE 7590-01-M

[Docket Nos. 50–413 and 50–414 License Nos. NPF–35 and NPF–52 EA 89–46]

Duke Power Co. (Catawba Units 1 and 2); Order Imposing Civil Monetary Penalty

Duke Power Company, Charlotte, North Carolina (licensee) is the holder of Operating License Nos. NPF–35 and NPF–52 (licenses) issued by the Nuclear Regulatory Commission (Commission or NRC) on January 17, 1985 and May 15, 1986, respectively. The licenses authorize the licensee to operate Catawba Units 1 and 2 in accordance with the conditions specified therein.

II

NRC inspection of the licensee's activities under the license was conducted on November 27, 1988—February 4, 1989. The results of this inspection indicated that the licensee had not conducted its activities in full compliance with NRC requirements. A written Notice of Violation and Proposed Imposition of Civil Penalty (Notice) was served upon the licensee by letter dated May 19, 1989. The Notice stated the nature of the violations, the provisions of the NRC's requirements that the licensee had violated, and the amount of the civil penalty proposed civil penalty and requested that the civil penalty be partially mitigated. In addition, the licensee asserted that Violation B should be categorized as a Severity Level IV instead of a Severity Level III violation.

III

After consideration of the licensee's response and the statement of fact, explanation, and argument for partial mitigation of Violation A and recategorization of Violation B contained therein, the Deputy Executive Director for Nuclear Materials Safety, Safeguards, and Operations Support (DEDS) has determined, as set forth in the Appendix to this Order, that the penalty proposed for Violation A designated in the Notice of Violation and Proposed Imposition of the Civil Penalty should be imposed, and that Violation B was properly categorized.

IV

In view of the foregoing and pursuant to Section 234 of the Atomic Energy Act of 1954, as amended (Act), 42 U.S.C. 2282, and 10 CFR 2.205, *It Is Hereby Ordered* That:

The licensee pay a civil penalty in the amount of Seventy-Five Thousand Dollars ($75,000) within 30 days of the date of this Order, by check, draft, or money order, payable to the Treasurer of the United States and mailed to the Director, Office of Enforcement, U.S. Nuclear Regulatory Commission, ATTN: Document Control Desk, Washington, DC 20555.

V

The licensee may request a hearing within 30 days of the date of this Order. A request for a hearing shall be clearly marked as a "Request for an Enforcement Hearing" and shall be addressed to the Director, Office of Enforcement, U.S. Nuclear Regulatory Commission, ATTN: Document Control Desk, Washington, D.C. 20555, with copies to the Assistant General Counsel for Hearings and Enforcement, at the same address, the Regional Administrator, Region II, 101 Marietta Street, NW., Atlanta, Georgia 30323, and a copy to the NRC Resident Inspector at Catawba.

If a hearing is requested, the Commission will issue an Order designating the time and place of the hearing. If the licensee fails to request a hearing within 30 days of the date of this Order, the provisions to this Order shall be effective without further proceedings. If payment has not been made by that time, the matter may be referred to the Attorney General for collection.

In the event the licensee requests a hearing as provided above, the issues to be considered at such hearing shall be whether on the basis of Violation A set forth in the Notice of Violation and Proposed Imposition of Civil Penalty referenced in section II above, which the licensee has admitted, the Order to pay a Seventy-Five Thousand Dollar civil penalty should be sustained.

Dated at Rockville, Maryland this 31st day of August 1989.

For the Nuclear Regulatory Commission.

Hugh L. Thompson, Jr.,

Deputy Executive Director for Nuclear Materials Safety, Safeguards and Operations Support.

Appendix—Evaluations and Conclusions

On May 19, 1989, a Notice of Violation and Proposed Imposition of Civil Penalty was issued for violations identified during a routine NRC inspection. The Notice cited two Severity Level III violations, and proposed a civil penalty for Violation A. Duke Power Company (DPC) responded to the Notice on June 16, 1989. In its response, the licensee requested mitigation of the proposed Civil Penalty and a reduction in severity level of Violation B. The NRC's evaluation and conclusions regarding DPC's arguments are as follows:

Restatement of Violation

Violation A

Technical Specification 3.6.5.6 requires in Modes 1 through 4 that two independent Containment Air Return and Hydrogen Skimmer Systems (VX) be OPERABLE. With one Containment Air Return and Hydrogen Skimmer System (VX) inoperable, the inoperable system shall be restored to OPERABLE status within 72 hours or the unit is to be in the least HOT STANDBY within the next 6 hours, and in COLD SHUTDOWN within the following 30 hours.

Contrary to the above, during a period of 42 days from February 19, 1988 to April 1, 1988, Unit 2 operated in Modes 1 through 4 with one of the two independent Containment Air Return and Hydrogen Skimmer Systems (VX) inoperable. During this period, both trains of VX were required to be operable.

Proposed Civil Penalty—$75,000

Summary of Licensee's Response

Duke Power Company admits the violation occurred. However, the licensee maintains that escalation of the base civil penalty to $75,000 was not warranted and proposes that the civil penalty be mitigated to $25,000.

The licensee's response addresses the following three mitigation factors and other reasons for mitigation as summarized below.

Identification and Reporting. The licensee maintains that the NRC characterization that the post modification test should have been capable of detecting this unique problem is in error. The licensee contends that their Post Modification Testing and Independent Verification Programs work together in detecting problems, and that the performance test (the VX test), used as the post modification test in this situation, worked properly in evaluating VX operability. The impact of the "sneak-path" established by the wiring error was not fully understood for the VX performance test until lengthy and detailed tests were performed recreating the original miswired condition.

Corrective Action to Prevent Recurrence. The Notice stated, "the base penalty for Violation A was increased by 50 percent becasue initial corrective actions were narrowly focused on correcting the improperly installed electrical wiring and failed to address the broader problem of inadequate PMT."

The licensee's response states that the 50 percent escalation of the civil penalty was inappropriate for two reasons:

—A major effort was required to understand the reason for the failure of the VX Periodic Test to catch the unique error. The comprehensive aspect of that review and the revision of LER 414/88–33 that reported those findings showed initiative on their part to ensure this situation would not recur. The issues of licensee initiative and comprehensive action are both factors for mitigation in this category.

—The improvement made to the PMT process through the TOPFORM program have come about subsequent to this modification and as a result no other similar violations have occurred. Further, the additional "lessons learned" approach taken shows "exstensive" corrective action in PMT to prevent recurrence.

The licensee contends that rather than a 50 percent escalation of the base penalty, a 50 percent reduction should be applied since the actions taken in regard to PMT and those that are ongoing have been complete and timely in preventing recurrence.

Past Performance. The licensee's reply contends that with no similar problems in the past two years and an overall SALP 2 rating, which is clearly "adequate," at least a 50 percent reduction in the base civil penalty should be applied.

Other Reasons for Mitigating the Civil Penalty. The licensee's response argues that the issue of safety significance must play a part in establishing a final level of the civil penalty. The licensee's response states that in the Enforcement Conference it was shown through analysis that equipment qualification profiles were not exceed and the damper could be reopened within 30 minutes as demonstrated in a drill. The licensee also argues that the "B" train of VX being out of service for a total of 7 hours during the 42 days that "A" train was unknowingly inoperable was relatively insignificant in that the probability of a LOCA event having a "one train response" from the VX system was low.

NRC's Evaluation of Licensee's Response

Identification and Reporting

The Licensee's Post Modification Testing and Independent Verification Programs failed to detect a significant VX system operability problem due to a control circuit wiring error prior to placing the reactor in a mode that required the VX system to be operable. Regardless of the failure of the Independent Verification Program to detect the wiring error during the design modification process, an adequate post modification test should have identified the error. The performance test chosen by the licensee as the post modification test was inadequate for this situation because it did not verify operability of that portion of the VX control circuit that would be activated by the Solid State Protection System (SSPS) during an actual emergency, even though the modification was to the control circuit. The error was discovered during reactor operation by performance of the SSPS logic test, which verifies the slave relay actuation of the VX control circuit. Clearly, the licensee's post modification test should have identified the installation error prior to reactor startup, and the NRC, therefore, does not consider this factor as adequate to justify mitigation.

Corrective Action to Prevent Recurrence

In evaluating this event in terms of corrective actions, it was noted that immediate corrective actions on April 1, 1988, were to correct the wiring error, retest the damper in accordance with the original post modification test and declare the system operable. Although the VX damper inoperability and wiring error had been detected by a Technical Specification (TS) required SSPS surveillance test, once the wiring error had been corrected, this test was not repeated prior to declaring the system operable. Instead the same test which had originally failed to detect the wiring error in January 1988 was used to determine operability. Not only did the licensee rely on a test (VX functional) that had already proven itself inadequate, but the system was returned to service without performing the failed TS required SSPS surveillance test that initially identified the deficiency. This, in terms of corrective action, is both unacceptable and narrow in focus.

Substantial changes have subsequently been made in the Post-Modification Test Program and full implementation is in progress. As presented in Duke's meeting with the NRC at Region II on August 15, 1989, the changes include focusing responsibility on the "system expert," verifying that the design basis has not been compromised, and verifying that the system is functionally operable after modification. The new procedures were first used in April, 1989 for S/G PORV modification, but full development is still in progress, including additional training of system experts. However, while these are extensive and appropriate corrective actions, these actions were not sufficiently timely to warrant mitigation. The licensee's June 1, 1989 response to this enforcement action continued to take the narrow view of post modification test requirements. Therefore, the NRC considers the 50 percent escalation of the civil penalty based on this factor warranted.

Past Performance

With regard to the licensee's contention that a base civil penalty be mitigated 100 percent for a SALP 1 rating, 50 percent for a SALP 2 rating, and 0 percent for a SALP 3 rating, the NRC does not believe that application of such a rigid formula serves to appropriately explain the need to improve performance. The Enforcement Policy clearly allows application of broad discretion in this area by allowing the base civil penalty to be either escalated or mitigated by up to 100 percent. Application of discretion (in either direction) can only be taken after due consideration of the many facts that make up each case.

The NRC recognizes that the licensee's general past performance has been adequate as evidenced by an overall SALP 2 rating in all functional areas. However, upon examination of the details in several of the last SALP's functional areas (Operations, Maintenance and Surveillance, and Safety Assessment) that are related to the violations cited here, it was noted that the licensee has experienced past problems with the proper classification and reporting of safety component failures and significant events in a timely manner. Other specific concerns also addressed by the last SALP included the adequacy of maintenance and modification retesting and the need to improve the support provided by the Compliance and Design Engineering groups in determining technical specification compliance. Although these concerns were judged not to be significant enough to warrant a category 3 SALP rating, they were indicative of a need for further improvement. While the licensee's overall past performance was adequate, the staff has determined that the past performance was not such as to merit mitigation in this case.

Other Reasons for Mitigating the Civil Penalty

Once the Severity Level is determined in accordance with the Enforcement Policy (Policy), the base civil penalty is established in Table IB of the Policy. The escalation and mitigation factors are then considered to determine what adjustments, if any, to the base civil penalty are warranted. Safety significance is not an escalation or mitigation factor but a determinant of the severity level. In this case, the NRC appropriately considered safety significance in establishing the severity level of the violation. Specifically, the licensee's Post Modification Testing Program did not ensure that a technical specification required safety system train was operable prior to placing the reactor in a mode where that system was required to be operable. Such program errors are considered significant because they could be applied to any safety system.

Restatement of Violation

Violation B

10 CFR 50.73(a)(2) requires the submittal of a Licensee Event Report within 30 days after discovery of any operation or condition prohibited by the plant's Technical Specifications.

Contrary to the above, on September 14, 1988, the licensee determined that Catawba Unit 2 had previously operated for 42 days in a condition prohibited by the plant's Technical Specifications because train A of the Containment Air Return and Hydrogen Skimmer (VX) System had been inoperable and a Licensee Event Report was not submitted until January 27, 1989.

Summary of Licensee's Response

Duke Power Company admits the violation. In the response, however, the licensee contends that as they interpret the enforcement policy a Severity Level III should not have been imposed in this case and that the violation should have been characterized as a Severity Level IV. The response states that because of the complexity of the circuit as a result of the wiring swap and the time required to understand the effects, an unusual amount of time was taken to report the problem.

NRC Evaluation of Response to Violation B

As stated in the NRC letter of May 19, 1989, Violation B concerned the excessive amount of time that it took to report this event. It is not acceptable to take 10 months to evaluate an event to determine reportability. The NRC was

particularly concerned that after the licensee correctly determined that the system was previously inoperable, it took an additional 4 months to issue the LER. This represents a significant programmatic weakness with the licensee's event evaluation and reporting system. The staff recognizes that the Enforcement Policy provides an example at a Severity Level IV for a violation involving the failure to submit an LER. However, the examples in the Supplement are just that. In accordance with the Enforcement Policy they are neither controlling nor exhaustive. Under the circumstances of this case the staff concluded that the delay in submitting this report represented a significant regulatory concern therefore justifying a Severity Level III categorization. After review of the licensee's response, which provided no additional information not already considered, the NRC determined that there is insufficient cause to reduce the severity level of Violation B.

[FR Doc. 89-21217 Filed 9-8-89; 8:45 am]

BILLING CODE 7590-01-M

[Docket No. 50-220]

Niagara Mohawk Power Corp, et. al. (Nine Mile Point Nuclear Station Unit 1); Exemption

I

Niagara Mohawk Power Corporation, et. al. (the licensee) is the holder of Facility Operating License No. DPR-63, which authorizes operation of the Nine Mile Point Nuclear Station Unit No. 1 at a steady-state power level not in excess of 1850 megawatts thermal. The facility is a boiling water reactor located at the licensee's site in the town of Scriba, New York. The license provides, among other things, that it is subject to all rules, regulations, and orders of the Nuclear Regulatory Commission (the Commission) now or hereafter in effect.

II

Appendix J to 10 CFR part 50 requires that primary reactor containments shall meet certain containment leakage test requirements. Among these are the requirements that containment isolation valves receive local leak rate tests (Type C) and the results of all of the Type C tests are to be added to the results of the Type B tests and the combined leakage rate shall be less than $0.60L_a$.

III

By letter dated May 6, 1988, the staff sent to the licensee a Safety Evaluation (SE) concerning a review of a portion of the licensee's containment leakage rate testing program. One conclusion of that SE was that Appendix J to 10 CFR Part 50 requires Type C tests to be periodically performed on the four containment isolation valves in the shutdown cooling system return and suction lines.

Consequently, by letter dated November 22, 1988, the licensee requested a temporary exemption from certain requirements of Appendix J to 10 CFR part 50. Specifically, the licensee requested a temporary exemption from the requirement to perform Type C testing of containment isolation valves 38-01, -02, -12 and -13 in the shutdown cooling system return and suction lines and from the requirement to include the leakage rates of these valves in the sum of all Type B and C leakage rates for comparison to the acceptance criterion ($0.60\ L_a$) of Appendix J. The requested exemption is for the period up to and including the next plant refueling outage, currently scheduled for 1990.

IV

In the past, the licensee had not included the subject valves in the Type C testing program. The licensee did not consider them to be containment isolation valves under design basis accident situations. However, as stated above, the staff has recently determined that these valves must be Type C tested.

A recent attempt was made to perform a local leakage rate test on the shutdown cooling system isolation valves. However, since these valves were not originally designed to meet Appendix J leakage rate testing requirements and had not been locally leakage rate tested in the past, the valves were found to exhibit leakage rates greater than that allowed by Appendix J. The licensee has determined that these valves cannot be made sufficiently leak-tight to meet Appendix J leakage criteria.

In order to meet the Appendix J requirements the licensee will have to either replace existing shutdown cooling system suction and return line isolation valves or provide the valves with a seal-water system fluid inventory sufficient to assure the sealing function for at least thirty days at an accident pressure of 1.1 Pa. In either case major system changes may be necessary in addition to procurement of any replacement or new equipment. As a result the licensee requested additional time until the next refueling outage to design, procure, install, test, operate and demonstrate the new system.

The following information was provided by the licensee in support of the exemption request.

The shutdown cooling system isolation valves are normally closed even during design basis accident conditions. The shutdown cooling system forms a closed loop with the reactor recirculation system. As a result, if a break inside the containment occurs, leakage will be contained in a closed system. If a break outside the containment occurs, the existing shutdown cooling isolation valves will reduce leakage from the reactor coolant system to the extent that the core will remain covered and fuel damage will not occur. During a water test performed on these valves in 1988, leakage was found to be minor (1.321 gallons/minute).

The shutdown cooling system was recently checked for excessive leakage and was tested for system integrity to be able to contain radioactive materials following an accident.

The shutdown cooling system isolation valves are closed during normal operation. The system is only placed in operation when the plant is in a shutdown condition. These isolation valves are always initially closed prior to, during, and after LOCA.

For a LOCA at NMP-1, the decay heat is removed from the containment by the containment spray system. Even if fission products were released to the reactor coolant, the shutdown cooling system would only recirculate the radionuclides through a closed loop back to the reactor coolant system. The containment spray system will reduce pressure and temperature inside the containment. The rapid depressurization of the containment will reduce leakage through the isolation valves.

The four isolation valves have process system control valves for backup system isolation; thus minimizing any intra-system leakage. Any leakage from the closed loop will be within the secondary containment where it will be treated before release.

The solid wedge valves used as the inner isolation valves have the unique characteristic whereby the accident pressure itself will assist their leakage tightness.

Based on the above information, the staff finds that plant operation without Type C testing of the subject valves, and consequently, without adding the result of these Type C tests into the summation leakages for comparison to the $0.60L_a$ acceptance criterion, during the period until the next refueling outage will not present an undue risk to the public health and safety, considering the mitigating features of the system described above. After the next refueling outage is complete, the plant will be brought into compliance with Appendix J.

V

On the basis of the above evaluation, the staff concludes that the requested temporary exemption from the Type C testing requirements of Appendix J to 10 CFR Part 50 for shutdown cooling isolation valves 38–01, –02, –12, and –13 and consequently, the omission of the results of these Type C tests from the summation of leakages for comparison to the 0.60 L_a acceptance criterion, is justified for the period up to and including the next refueling outage for Nine Mile Point, Unit 1.

Accordingly, the Commission has determined pursuant to 10 CFR 50.12(a), that (1) this exemption as described in section IV is authorized by law, will not present an undue risk to the public health and safety, and is consistent with the common defense and security, and (2) special circumstances are present for this exemption in that the exemption would provide only temporary relief from the applicable regulation and the licensee has made good faith efforts as described below to comply with the regulation since the staff's position was sent to them on May 6, 1988.

The licensee has demonstrated a good faith effort through continuous cooperation with the NRC staff while resolution of this issue was finalized. Although the staff issued its Safety Evaluation on May 6, 1988, further discussions and meetings were required to clarify the issues and separate correspondence dated November 9, 1988 was sent to the licensee to finalize the staff's position. The licensee was cooperative in working through the resolution with the staff and also performed a test, which the staff indicated would be acceptable in its May 6, 1988 Safety Evaluation. However, the test as discussed previously did not produce acceptable results due to physical constraints. Because major system changes may be necessary in addition to procurement of any replacement or new equipment, not granting the exemption would result in an extension of the current outage without significant safety improvements. Therefore, the Commission hereby grants the exemption request identified in section IV above.

Pursuant to 10 CFR 51.32, the Commission has determined that the granting of this exemption will have no significant impact on the quality of the human environment 54 FR 26279.

Dated at Rockville, Maryland, this 29th day of August 1989.

For the Nuclear Regulatory Commission.

BILLING CODE 7590-01-M

[Docket Nos. 50–282 and 50–306]

Northern States Power Co., Prairie Island Nuclear Generating Plant, Unit Nos. 1 and 2; Issuance of Amendment to Facility Operating License

The U.S. Nuclear Regulatory Commission (Commission) has issued Amendment Nos. 89 and 82 Facility to Operating License Nos. DPR–42 and DPR–60 issued to Northern States Power Company (licensee) which revised the Technical Specifications for operation of the Prairie Island Nuclear Generating Plant, Unit Nos. 1 and 2 located in Goodhue County, Minnesota.

The amendment is effective as of the date of issuance.

The amendment revised the Technical Specifications by modifying the pressure-temperature limits taking into consideration the irradiation effects of the embrittlement of the reactor vessel material up to 20 effective full power years. Other modifications are administrative in nature serving to clarify the existing requirements.

The application for the amendment complies with the standards and requirements of the Atomic Energy Act of 1954, as amended (the Act), and the Commission's rules and regulations. The Commission has made appropriate findings as required by the Act and the Commission's rules and regulations in 10 CFR Chapter I, which are set forth in the license amendment.

Notice of Consideration of Issuance of Amendment and Opportunity for Hearing in connection with this action was published in the **Federal Register** on June 8, 1989 (54 FR 24609). No request for a hearing or petition for leave to intevene was filed following this notice.

The Commission has prepared an Environemntal Assessment related to the action and has determined not to prepare an enviromental impact statement. Based upon the environmental assessment, the Commission has concluded that the issuance of this amendent will not have a signficiant effect on the quality of the human environment.

For further details with respect to the action see (1) the application for amendment dated January 12, 1989, (2) Amendment Nos. 89 and 82 to Facility Operating License Nos. DRP–42 and DPR–60, (3) the Commission's related Safety Evaluation and (4) the Commission's Environmental Assessment. All of these items are available for public inspection at the Commission's Public Document Room, the Gelman Building, 2120 L Street NW., Washington, DC, and at the Technology and Science Department, Minneapolis Public Library, 200 Nicollet Mall, Minneapolis, Minnesota 55401. A copy of items (2), (3) and (4) may be obtained upon request addressed to the U.S. Nuclear Regulatory Commission, Washington, DC 20555, Attention: Director, Division of Reactor Projects III, IV, V and Special Projects.

Dated at Rockville, Maryland this August 28, 1989.

For the Nuclear Regulatory Commission.

Dominic C. DiIanni

Project Manager, Project Directorate III–1, Division of Reactor Projects III, IV, V and Special Projects, Office of Nuclear Reactor Regulation.

BILLING CODE 7590-01-M

[Docket Nos. 50–282 and 50–306]

Northern States Power Co., Prairie Island Nuclear Generating Plant, Unit Nos. 1 and 2; Issuance of Amendments to Facility Operating License

The U.S. Nuclear Regulatory Commission (Commission) has issued Amendment Nos. 90 and 83 to Facility Operating License Nos. DPR–42 and DPR–60 issued to Northern States Power Company (licensee) which revised the Technical Specifications for operation of the Prairie Island Nuclear Generating Plant, Unit Nos. 1 and 2 located in Goodhue County, Minnesota.

The amendment is effective as of the date of issuance.

The amendment revised the Technical Specification by permitting the irradiation of the fuel assemblies with enrichment up to 4.25 weight percent (w/o) Uranium-235 and the storage of such assemblies prior to and subsequent to loading the assemblies in the reactors at the Prairie Island Nuclear Generating Plant, Unit Nos. 1 and 2.

The application for the amendment complies with the standards and requirements of the Atomic Energy Act of 1954, as amended (the Act), and the Commission's rules and regulations. The Commission has made appropriate findings as required by the Act and the Commission's rules and regulations in 10 CFR Chapter I, which are set forth in the license amendment.

Notice of Consideration of Issuance of Amendment and Opportunity for

Hearing in connection with this action was published in the **Federal Register** on June 27, 1989 (54 FR 27083). No request for a hearing or petition for leave to intervene was filed following this notice.

The Commission has prepared an Environmental Assessment related to the action and has determined not to prepare an environmental impact statement. Based upon the environmental assessment, the Commission has concluded that the issuance of this amendment will not have a significant effect on the quality of the human environment.

For further details with respect to the action see (1) the application for amendments dated April 6, 1989, (2) Amendment Nos. 90 and 83 to Facility Operating License Nos. DPR–42 and DPR–60, (3) the Commission's related Safety Evaluation and (4) the Commission's Environmental Assessment. All of these items are available for public inspection at the Commission's Public Document Room, the Gelman Building, 2120 L Street NW., Washington, DC, and at the Minneapolis Public Library, Technology and Science Department, 300 Nicollet Mall, Minneapolis, Minnesota 55401. A copy of items (2), (3) and (4) may be obtained upon request addressed to the U.S. Nuclear Regulatory Commission, Washington, DC 20555, Attention: Director, Division of Reactor Projects III, IV, V & Special Projects.

Dated at Rockville, Maryland this August 28, 1989.

For the Nuclear Regulatory Commission.

BILLING CODE 7590-01-M

[Docket No. 030–13036; License No. 45-17606–01; EA 88–287]

Rappahannock General Hospital, Order Imposing Civil Monetary Penalty

I

Rappahannock General Hospital, Kilmarnock, Virginia (licensee), is the holder of License No. 45–17606–01 issued by the Nuclear Regulatory Commission (Commission or NRC), which authorizes the medical use of byproduct material in accordance with the conditions specified in the license. The license was issued September 20, 1977, most recently renewed on July 11, 1988, and is due to expire on July 31, 1993.

II

An NRC safety inspection of the licensee's activities under this license was conducted on January 13, 1987. During the inspection, the NRC inspector noted a number of discrepancies in the minutes of the Radiation Safety Committee meeting for September 13, 1986. Among other things, it appeared that the date on the meeting minutes had been altered. A subsequent investigation conducted by the NRC Office of Investigations (OI) disclosed that the minutes of the September 13, 1986 meeting had been fabricated and were presented to the inspector as representing an actual meeting when in fact no such meeting was held. A written Notice of Violation and Proposed Imposition of Civil Penalty (Notice) was served upon the licensee by letter dated May 17, 1989. The Notice stated the nature of the violation, the provisions of the Nuclear Regulatory Commission's requirements that the licensee had violated, and the amount of the civil penalty proposed for the violation. The licensee responded to the Notice by letter dated May 24, 1989. In this response, the licensee denied the violation and requested the withdrawal of the violation and retraction of the civil penalty.

III

After consideration of the licensee's response and the statements of fact, explanation and argument for withdrawal of the violation and civil penalty contained therein, the Deputy Executive Director for Nuclear Materials Safety, Safeguards and Operations Support has determined as set forth in the Appendix to this Order, that the violation occurred as stated, and that the penalty proposed for the violation designated in the Notice should be imposed.

IV

In view of the foregoing and pursuant to section 234 of the Atomic Energy Act of 1954, as amended (Act), 42 U.S.C. 2282, and 10 CFR 2.205, *It is hereby ordered, That:*

The licensee pay a civil penalty in the amount of Two Thousand Five Hundred Dollars ($2,500) within 30 days of the date of this Order, by check, draft, or money order, payable to the Treasurer of the United States and mailed to the Director, Office of Enforcement, U.S. Nuclear Regulatory Commission, ATTN: Document Control Desk, Washington, DC 20555.

The licensee may request a hearing within 30 days of the date of this Order. A request for a hearing shall be clearly marked as a "Request for an Enforcement Hearing" and shall be addressed to the Director, Office of Enforcement, U.S. Nuclear Regulatory Commission, ATTN: Document Control Desk, Washington, DC 20555, with a copy to the Assistant General Counsel for Hearings and Enforcement, Office of the General Counsel, U.S. Nuclear Regulatory Commission, Washington, DC 20555, and the Regional Administrator, U.S. NRC, Region II, 101 Marietta Street NW., Suite 2900, Atlanta, Georgia 30323.

If a hearing is requested, the Commission will issue an Order designating the time and place of the hearing. If the licensee fails to request a hearing within 30 days of the date of this Order, the provisions of this Order shall be effective without further proceedings. If payment has not been made by that time, the matter may be referred to the Attorney General for collection.

In the event the licensee requests a hearing, as provided above, the issues to be considered at such hearing shall be:

(a) Whether the licensee was in violation of the Commission's requirements as set forth in the Notice of Violation and Proposed Imposition of Civil Penalty referenced in Section II above, and

(b) Whether, on the basis of such violation, this Order should be sustained.

Dated at Rockville, Maryland, this 30th day of August 1989.

For the Nuclear Regulatory Commission.

Hugh L. Thompson, Jr.,

Deputy Executive Director for Nuclear Materials Safety, Safeguards, and Operations Support.

Appendix—Evaluations and Conclusion

On May 17, 1989, a Notice of Violation and Proposed Imposition of Civil Penalty (Notice) was issued for a violation identified during an NRC inspection and investigation. Rappahannock General Hospital (licensee) responded to the Notice on May 24, 1989. In its response, the licensee denied the violation and requested retraction of the civil penalty. The NRC's evaluation and conclusion regarding the licensee's arguments are as follows:

I. Restatement of Violation

License Condition 16 of NRC License No. 45–17606–01 requires the licensee to possess and use licensed material in accordance with statements, representations, and procedures contained in the letter dated October 23, 1981, and the license application dated July 20, 1982.

Item 7 of license application requires the licensee to follow Appendix B of Regulatory Guide 10.8 (Rev. 1). Appendix B of Regulatory Guide 10.8 requires the Radiation Safety Committee (Medical Isotopes Committee) to meet not less than once in each calendar quarter and to maintain written records of all committee meetings, actions, recommendations, and decisions.

Contrary to the above, on or before January 13, 1987, a written record was fabricated to document a Radiation Safety Committee meeting that, in fact, did not take place; and on January 13, 1987, this fabricated record was presented to an NRC inspector for review.

II. Summary of Licensee Response

The licensee denied that a written record was fabricated to document that a Radiation Safety Committee (RSC) meeting took place in 1986 and that the record was presented to the NRC inspector with the intent to defraud. The licensee stated that it could find no other copy of the 1985 RSC minutes, and, because the body of the minutes states 1985, the 1985 minutes were filed in that manner. The licensee stated that its Administrator had the "impression" that the inspector had been authorized to look through the licensee's file cabinets and may have found the document there, and that the claim that the document was presented to the inspector to defraud does not agree with the facts. The licensee acknowledged that required quarter RSC meetings were not held during the two-year period ending in January 1987, and indicated that it was not reasonable to believe that a licensee representative would have offered documentation to indicate that one meeting out of this period was held in the hope of making the situation appear any better when its officers and employees admitted all along that there were no such meetings. The licensee acknowledged that it was odd that the document reviewed by the inspector had two items deleted with white correction fluid ("whited out"), and that contradictory dates appeared on the document.

III. NRC Evaluation of Licensee Response

During the NRC inspection conducted on January 13, 1987, the inspectors requested that the nuclear medicine physician and/or the chief nuclear medicine technologist produce the minutes of the most recent RSC meeting. During the investigation conducted by the NRC Office of Investigations (OI), one inspector testified that, after a brief absence, the nuclear medicine physician provided him with a document purported to be a copy of the requested minutes. The document contained alterations and discrepancies, including a discrepancy in the date of the meeting and a deletion of the name of one of the attendees. Contrary to the statement in the licensee's response, the inspectors did not find the document in the licensee's files.

The licensee indicated both during the Enforcement Conference held in the NRC Region II office on March 10, 1989, and in its May 24, 1989, response that the document which was purported to be a copy of the requested minutes appears to have been altered. The OI investigation did not conclusively establish who actually altered the September 13, 1985, minutes to represent that a meeting had been held on September 13, 1986. However, a review of the pertinent records clearly established that an RSC meeting was convened on September 13, 1985, rather than September 13, 1986, as indicated in the minutes, and that the altered document was proffered to the NRC inspector. Based upon this evidence, NRC has concluded that an individual affiliated with the hospital altered or directed the alteration of a copy of the minutes for the September 13, 1985 RSC meeting, and, when the inspector requested to see the minutes of the most recent RSC meeting held, the altered document was presented to the inspector as the official minutes of a September 13, 1986 meeting that was, in fact, not held.

NRC Conclusion

The NRC staff has carefully reviewed the licensee's response and has concluded that the violation occurred as stated in the Notice and that the licensee has not provided an adequate basis for withdrawal of the violation or retraction of the civil penalty. Therefore, the civil penalty in the amount of $2,500 should be imposed.

National Offshore Safety Advisory Committee; Request for Applications

AGENCY: Coast Guard, DOT.

ACTION: Request for applications.

SUMMARY: The U.S. Coast Guard is seeking applicants to fill one vacancy on the National Offshore Safety Advisory Committee (NOSAC). The committee acts in advisory capacity to the Commandant of the Coast Guard on matters relating to the offshore mineral and energy industry.

The vacancy is for an individual representing a company engaged in the production of petroleum. It is expected that the member would serve for a term of no more than three years.

To achieve the balance of membership required by the Federal Advisory Committee Act, the Coast Guard is especially interested in receiving applications from minorities and women.

DATE: Applications should be received not later than October 11, 1989.

ADDRESS: Persons interested in applying should write to Commandant (G–MP–2), U.S. Coast Guard Headquarters, 2100 Second Street, SW., Washington, DC 20593–0001 or call (202) 267–1406.

FOR FURTHER INFORMATION CONTACT: Mr. Gene Hammel, Executive Director, National Offshore Safety Advisory Committee, U.S. Coast Guard Headquarters (G–MP–2), 2100 Second Street SW., Washington, DC 20593–0001, (202) 267–1406.

Dated: August 31, 1989.

M.J. Schiro,

Captain, U.S. Coast Guard, Safety, Security and Environmental Protection.

BILLING CODE 4910-14-M

Federal Aviation Administration

Air Traffic Control Tower, Martha's Vineyard, MA; Commissioning

Notice is hereby given that on October 1, 1989, the airport traffic control tower at Martha's Vineyard Airport, Martha's Vineyard, Massachusetts, will be commissioned. Tower hours of operation will be published in the Airport-Facility Directory. The designated facility identification for the airport control tower will be: Vineyard Tower.

Communications to the tower should be directed to: Midwest ATC, Martha's Vineyard Airport, RFD, Box 880, Vineyard Haven, Massachusetts 02568.

(49 U.S.C. 1348 and 1354(a); 49 U.S.C. 106(g) (Revised Pub. L. 97–449 (January 12, 1983)))

Issued in Burlington, Massachusetts, on August 29, 1989.

James I. Lucas,

Manager, Air Traffic Division, New England Region.

BILLING CODE 4910-13-M

Federal Highway Administration

Intention to Prepare an Environmental Impact Statement and Conduct a Public Scoping Meeting for Road Reconstruction; Cody Yellowstone National Park, WY

ACTION: Notice is hereby given that the Federal Highway Administration (FHWA) intends to prepare an Environmental Impact Statement (EIS) for proposed road reconstruction in the Cody—Yellowstone National Park Vicinity of northwestern Wyoming. The EIS will be prepared in cooperation with the Wyoming State Highway Department (WSHD) and the U.S. Forest Services (USFS).

SUMMARY: The proposed highway reconstruction project will consist of reconstruction of the existing U.S. Highway 14/16/20 beginning at the east entrance to Yellowstone National Park and extending eastward 27.5 miles along the North Fork of the Shoshone River to the east boundary of the Shoshone National Forest. The purpose of this proposal is to provide a modern two lane road with emergency parking shoulders. Line and grade will be adjusted to improve sight distance and safety of the roadway. All bridges will be replaced.

Alternatives to be considered in the EIS will include the no action alternative and various alignment and design alternatives. The development of these specific alternatives is an ongoing process that will incorporate features brought forth during public scoping in addition to those identified by project engineers as preliminary road design activities progress.

Scoping Process: A public scoping meeting addressing the proposed project will be held in Cody at the City Council Chambers at 7:00 PM on October 4, 1989. Written Scoping comments are due by November 3, 1989, at the address provided below.

EIS Schedule: The draft EIS (DEIS) is expected to be completed by February 20, 1990, at which time its availability will be announced in the **Federal Register** and public comments will again be solicited. A public hearing will be held after the draft EIS has been made available for public and agency review. Public notice will be given of the time and place for the hearing. Final EIS availability will be in May, 1990.

FOR FURTHER INFORMATION CONTACT: C.P. Damon, Operations Supervisor, P.O. Box 1127, Cheyenne, WY 82003, Telephone (307) 772–2101.

Issued on August 31, 1989.

Frederick A. Behrens, P.E.,

Division Administrator, Cheyenne, Wyoming.

Sunshine Act Meetings

Federal Register
Vol. 54, No. 174
Monday, September 11, 1989

This section of the FEDERAL REGISTER contains notices of meetings published under the "Government in the Sunshine Act" (Pub. L. 94-409) 5 U.S.C. 552b(e)(3).

FEDERAL DEPOSIT INSURANCE CORPORATION

Agency Meeting

Pursuant to the provisions of the "Government in the Sunshine Act" (5 U.S.C. 552b), notice is hereby given that at 2:08 p.m. on Tuesday, September 5, 1989, the Board of Directors of the Federal Deposit Insurance Corporation met in closed session to consider the following matters:

Recommendations regarding the liquidation of a bank's assets acquired by the Corporation in its capacity as receiver, liquidator, or liquidating agent of those assets:

Case No. 47,338
  First Service Bank for Savings, Leominster, Massachusetts
Case No. FL-89-001
  First Gibraltar Bank, FSB, Houston, Texas

Application of Stockman's Bank of Commerce, Elk Grove, California, a proposed new bank in organization to be located at 9663 Stockton Boulevard, Elk Grove, California, for Federal deposit insurance and for consent to merge with California Livestock Production Credit Association, Elk Grove, California, a noninsured production credit association.

Application of the First Bremen Bank, Bremen, Ohio, for consent to purchase certain assets of and to assume the liability to pay deposits made in the West Fair, Lancaster, Ohio, Branch of Citizens Federal Bank, a Federal Savings Bank, Miami Florida, a savings association; for consent to participate in the foregoing purchase and assumption transaction deemed a "conversion transaction" as contemplated in the Financial Institutions Reform, Recovery, and Enforcement Act of 1989; and for consent to establish a branch at the location of the West Fair, Lancaster, Ohio, Branch of Citizens Federal Bank, a Federal Savings Bank.

Matters relating to the possible failure of certain insured banks.

A memorandum regarding the Corporation's liquidation activities.

A personnel matter.

In calling the meeting, the Board determined, on motion of Director C. C. Hope, Jr. (Appointive), seconded by Director Robert L. Clarke (Comptroller of the Currency), concurred in by Chairman L. William Seidman, and Director M. Danny Wall (Director of the Office of Thrift Supervision), that Corporation business required its consideration of the matters on less than seven days' notice to the public; that no earlier notice of the meeting was practicable; that the public interest did not require consideration of the matters in a meeting open to public observation; and that the matters could be considered in a closed meeting by authority of subsections (c)(2), (c)(4), (c)(6), (c)(8), (c)(9)(A)(ii), and (c)(9)(B) of the "Government in the Sunshine Act" (5 U.S.C. 552b(c)(2), (c)(4), (c)(6), (c)(8), (c)(9)(A)(ii), and (c)(9)(B)).

The meeting was held in the Board Room of the FDIC Building located at 550—17th Street, NW., Washington, DC.

Dated: September 6, 1989.

Federal Deposit Insurance Corporation.

Robert E. Feldman,
Deputy Executive Secretary.

Corrections

Federal Register
Vol. 54, No. 174
Monday, September 11, 1989

This section of the FEDERAL REGISTER contains editorial corrections of previously published Presidential, Rule, Proposed Rule, and Notice documents. These corrections are prepared by the Office of the Federal Register. Agency prepared corrections are issued as signed documents and appear in the appropriate document categories elsewhere in the issue.

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 763

[OPTS-62036G; FRL-3476-2]

Asbestos; Manufacture, Importation, Processing, and Distribution in Commerce Prohibitions

Correction

In rule document 89-16262 beginning on page 29460 in the issue of July 12, 1989, make the following corrections:

1. On page 29462, in the first column, in the 16th line, "*State 3*" should read "*Stage 3*".

2. On page 29483, in the second column, in the first complete paragraph, in the first line, "control" should read "continue".

3. On page 29497, in the 2nd column, in the 12th line from the bottom of the page, "EAP" should read "EPA".

4. On the same page, in 3rd column, in the 11th line from the bottom of the page, "10^{6}" should read "10^{-6}".

5. On page 29502, in the second column, in the 6th line "environmental" should read "environment".

6. On page 29504, in the second column, in the first complete paragraph, in the eighth line, "consumers" should read "consumer".

7. On the same page, in the same column, in number (33), in the first line, "EED" should read "ETD".

§ 763.173 [Corrected]

8. On page 29511, in the third column, in § 763.173(b)(7) and (8), in the first line, "agency" should read "Agency".

Standards of Performance for New Stationary Sources; Polymeric Coating of Supporting Substrates; Final Rule

---

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 60

[AD-FRL-3528-7]

RIN 2060-AB67

Standards of Performance for New Stationary Sources; Polymeric Coating of Supporting Substrates

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: Standards of performance for new, modified, and reconstructed facilities that perform polymeric coating of supporting substrates were proposed in the **Federal Register** on April 30, 1987 (52 FR 15906). This action promulgates final standards for this industry. These standards implement Section 111 of the Clean Air Act and are based on the Administrator's determination that emissions from the industrial surface coating of fabric cause, or contribute significantly to, air pollution which may reasonably be anticipated to endanger public health or welfare. The intended effect of these standards is to require all new, modified, and reconstructed facilities that perform polymeric coating of supporting substrates to control emissions of volatile organic compounds (VOC) to the level achievable by the best demonstrated system of continuous emission reduction, considering costs, nonair quality health and environmental impacts, and energy requirements.

DATES: *Effective Date:* September 11, 1989.

These standards apply to affected facilities for which construction, reconstruction, or modification commenced after April 30, 1987.

Under section 307(b)(1) of the Clean Air Act, judicial review of the actions taken by this notice is available only by the filing of a petition for review in the U.S. Court of Appeals for the District of Columbia Circuit within 60 days of today's publication of this rule. Under section 307(b)(2) of the Clean Air Act, the requirements that are the subject of today's notice may not be challenged later in civil or criminal proceedings brought by EPA to enforce these requirements.

ADDRESSES: *Background Information Document.* The background information document (BID) for the promulgated standards may be obtained from the U.S. EPA Library (MD-35), Research Triangle Park, North Carolina 27711, telephone number (919) 541-2777. Please refer to "Polymeric Coating of Supporting Substrates—Background Information for Promulgated Standards" (EPA-450/3-85-022b). The BID contains: (1) A summary of all the public comments made on the proposed standards and the Administrator's response to the comments; (2) a summary of the changes made to the standards since proposal; and (3) the final Environmental Impact Statement, which summarizes the impacts of the standards.

Docket. A docket, number A-83-42, containing information considered by EPA in development of the promulgated standards, is available for public inspection between 8:00 a.m. and 4:00 p.m., Monday through Friday, at EPA's Central Docket Section (LE-131), South Conference Center, Room 4, Waterside Mall, 401 M Street SW., Washington, DC 20460. A reasonable fee may be charged for copying.

FOR FURTHER INFORMATION CONTACT: For policy questions—Mr. Doug Bell at telephone number (919) 541-5568 or Ms. Laura Butler (541-5267) Standards Development Branch, Emission Standards Division (MD-13), U.S. Environmental Protection Agency, Research Triangle Park, North Carolina 27711; for technical questions—Mr. James C. Berry (541-5606) or Mr. Robert Blaszczak (541-5408), Chemicals and Petroleum Branch, Emission Standards Division (MD-13), U.S. Environmental Protection Agency, Research Triangle Park, North Carolina 27711.

SUPPLEMENTARY INFORMATION:

I. The Standards

Standards of performance for new sources established under section 111 of the Clean Air Act reflect:

> * * * application of the best technological system of continuous emission reduction which (taking into consideration the cost of achieving such emission reduction, any nonair quality health and environmental impacts and energy requirements) the Administrator determines has been adequately demonstrated (section 111(a)(1)).

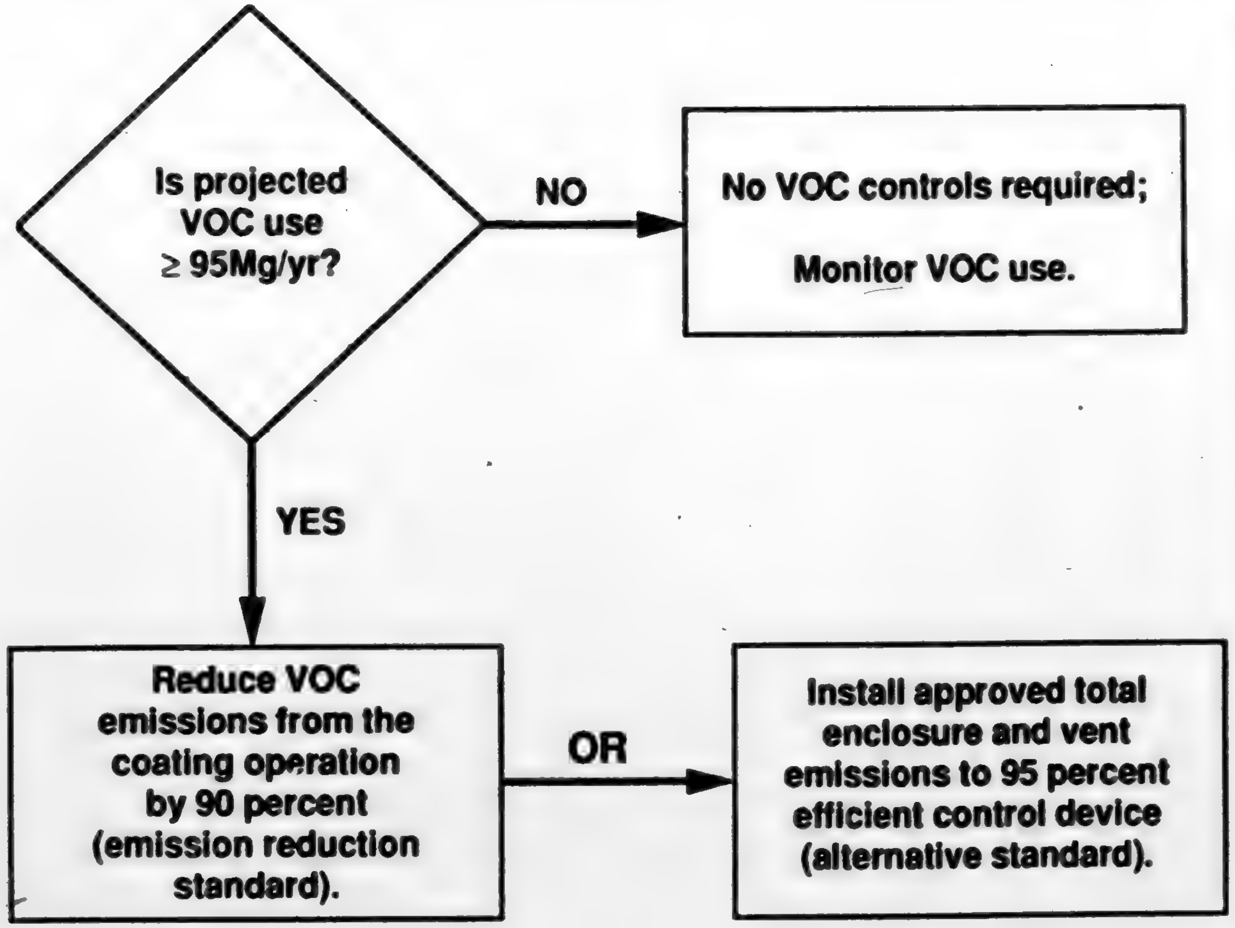
For convenience, this will be referred to as "best demonstrated technology" or "BDT."

The source category to be regulated is the polymeric coating of supporting substrates. "Polymeric coating of supporting substrates" is defined as a web-coating that applies an elastomer or other polymeric material onto a supporting substrate. Typical substrates include: Woven, knit, and nonwoven textiles, fiberglass, yarn; and cord. Examples of polymeric coatings are natural and synthetic rubber, urethane, polyvinyl chloride, acrylic, epoxy, silicone, phenolic, and nitrocellulose.

The promulgated standards apply to each affected facility, which is defined as each new, modified, or reconstructed coating operation and the associated coating mix preparation equipment (mix equipment) used to prepare the coating for the operation. A coating operation consists of the application/flashoff area(s) and drying oven(s). Mix equipment is defined as the vessels in which ingredients are blended to prepare polymeric coatings. Only onsite mix equipment is considered a part of the affected facility.

A. Standards for Coating Operations

The standards for coating operations are based on BDT, which is defined as a 90 percent efficient emission reduction system composed of an emission capture system and control device. The standards require either: (1) A minimum 90 percent reduction of VOC emissions from the coating operation (emission reduction standard), or (2) the installation of an approved total enclosure (as defined in §§ 60.741(a) and 60.743(b)(1) of the regulation) and venting emissions to a 95 percent efficient control device (alternative standard). Once a coating operation becomes subject to the standards (VOC use exceeds 95 megagrams per year [Mg/yr]), emission control would be required even if VOC use falls below 95 Mg/yr at some future time. A logic flow diagram of the coating operations standards is presented in Figure 1.



Is projected VOC use ≥ 95Mg/yr?
NO
No VOC controls required;
Monitor VOC use.
YES
Reduce VOC emissions from the coating operation by 90 percent (emission reduction standard).
OR
Install approved total enclosure and vent emissions to 95 percent efficient control device (alternative standard).

COATING OPERATION STANDARDS

Figure 1. Logic flow diagram for polymeric coating NSPS.

BILLING CODE 6560-50-C

Demonstration of compliance with the standards varies with the type of control system in use and the particular standard that applies. For example, compliance with the emission reduction standard can be demonstrated by the use of EPA Methods 1 or 1A; 2, 2A, 2C, or 2D; 3; 4; 18; and 25 or 25A to measure all the gaseous emissions, including fugitive emissions from the affected coating operation, and all emissions entering and exiting the control device. These data are used to calculate the capture efficiency of the system and the efficiency of the control device. The product of these two values yields the overall efficiency of the control system. This type of compliance demonstration is available for all facilities, regardless of the type of control device.

A second means of demonstrating compliance may be used if a VOC recovery system is used and controls only a single coating operation. This demonstration involves a liquid material balance based on VOC contained in the coatings applied at the coating applicator and of the VOC recovered by the control device. The liquid-liquid material balance may be performed either for each nominal 1-month period every month, or for a single period of 3 to 7 days followed by continuous monitoring. For the latter option, the owner or operator must select the number of days (between 3 and 7) that reflect the plant's typical coating practices and provide data that are representative of normal operating conditions. If a liquid material balance is used to demonstrate compliance, the owner or operator has the option of accounting for the VOC retained on the product. Any credit for retained VOC would be subject on a case-by-case basis to verification and approval by the Administrator.

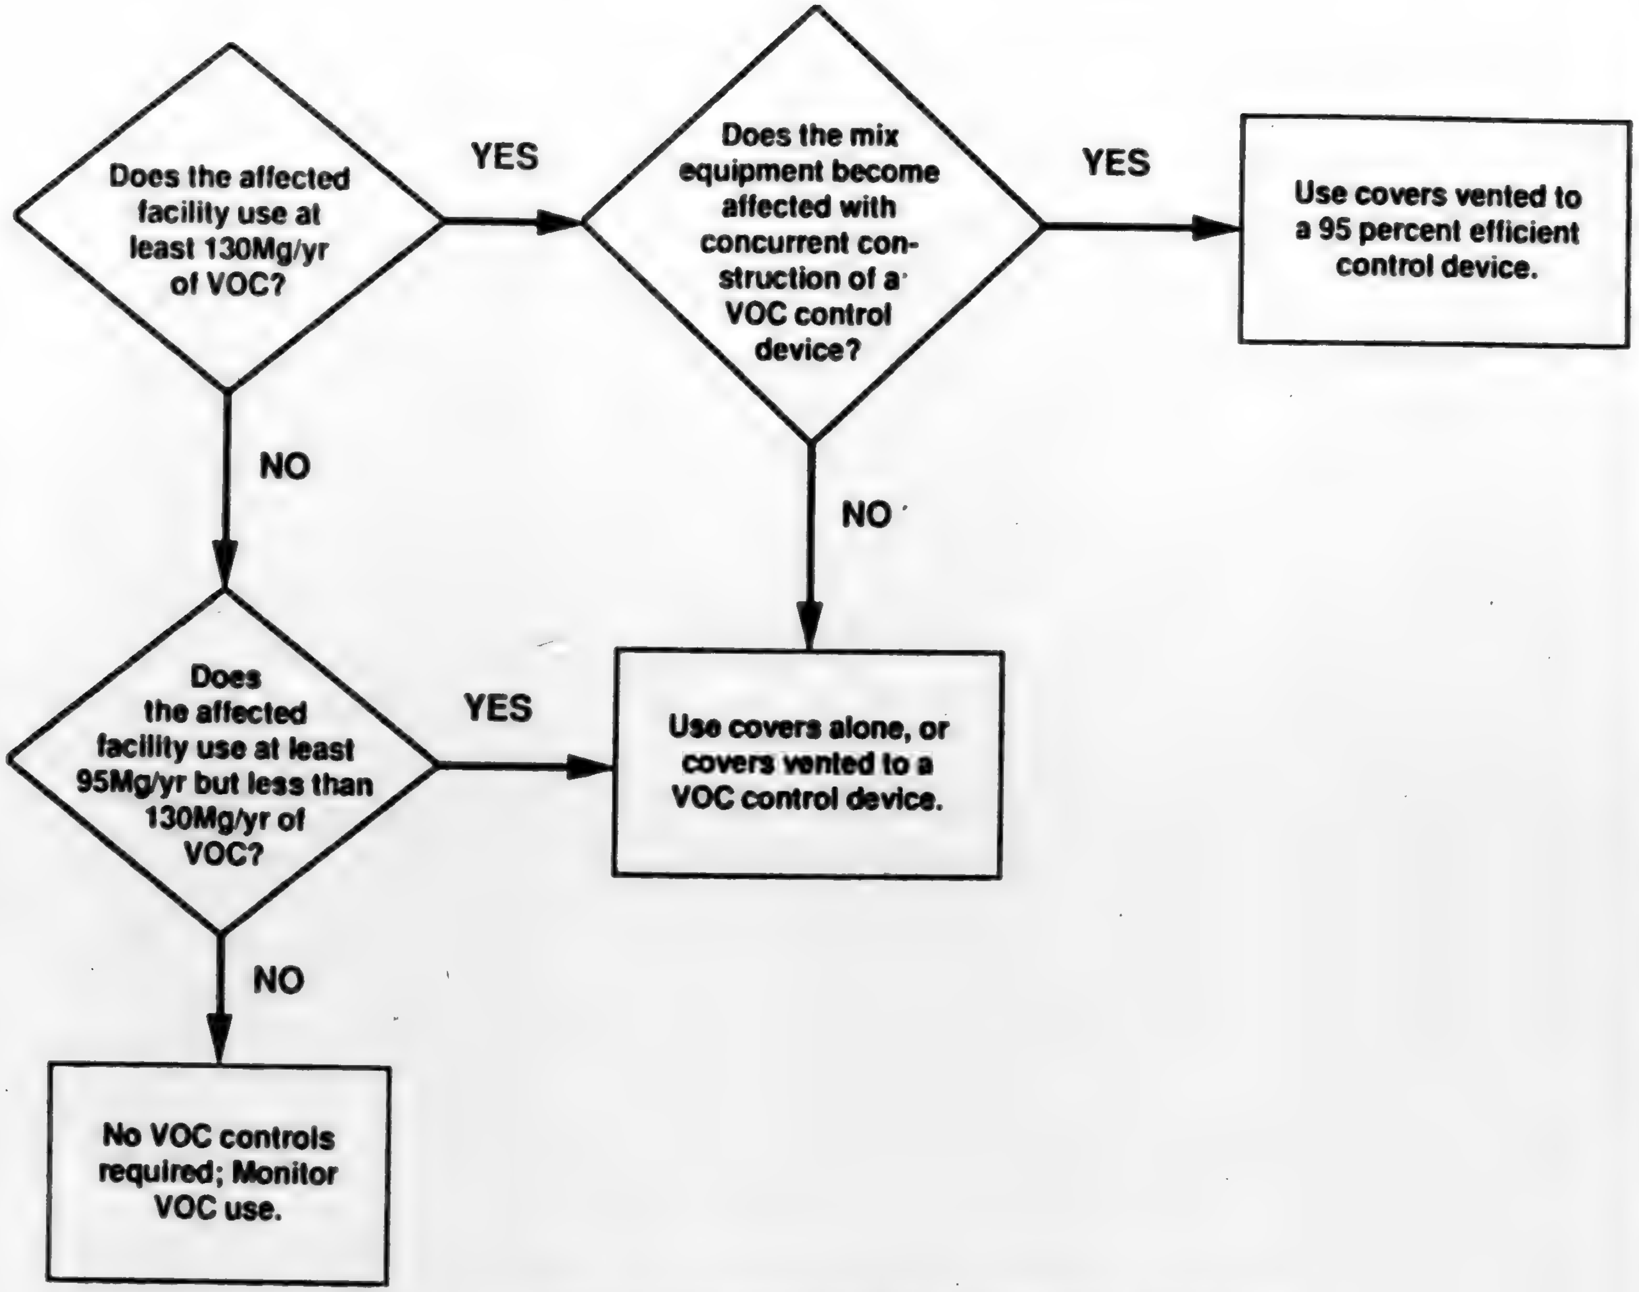
The third means of demonstrating compliance applies to any facility choosing to meet the alternative standard. In this case, the owner or operator is required to demonstrate installation of an approved total enclosure (as defined in §§ 60.741(a) and 60.743(b)(1) of the regulation) around the coating operation and the venting of the emissions from the coating operation to a 95 percent efficient control device. All efficiency measurements will be made using EPA Methods 1 or 1A; 2, 2A, 2C, or 2D; 3; 4; 18; and 25 or 25A.

Monitoring and reporting are required of owners or operators of all affected coating operations. Facilities that claim to use less than 95 Mg/yr of VOC must submit reports of projected and actual VOC use to verify their status with respect to the VOC use cutoff. For coating operations that use a least 95 Mg/yr of VOC are not demonstrating compliance by means of the 30-day liquid material balance method, the requirements specify that a monitor that continuously measures and records a critical parameter of control device operation (e.g., VOC concentration, thermal incineration combustion temperature) must be installed. A baseline level of the monitored parameter is established during compliance tests, and any subsequent 3-hour period (or applicable carbon adsorption system cycle) of excessive variation from the baseline must be reported quarterly.

B. Standards for Mix Equipment

Three categories of mix equipment have been distinguished based on the associated control equipment determined to be BDT. A logic flow diagram of the mix equipment standards is presented in Figure 2. For any polymeric coating facility that uses at least 130 Mg/yr of VOC and is served by a control device that was constructed concurrently with the affected coating operation, the standards require that covers be installed on associated onsite mix equipment and that the mix equipment be vented to a control device that is at least 95 percent efficient. Any coating facility that uses at least 95 Mg/yr but less than 130 Mg/yr of VOC, or that uses at least 130 Mg/yr of VOC but is not served by a control device that was constructed concurrently with the affected coating operation, is required only to install and use covers that meet the specifications of the standard on each piece of mix equipment. Each cover must be in place at all times except during addition and withdrawal of ingredients or visual inspection. Those affected facilities that use less than 95 Mg/yr of VOC are not required to control emissions from mix equipment.

BILLING CODE 6560-50-M



Does the affected facility use at least 130Mg/yr of VOC?
YES
Does the mix equipment become affected with concurrent construction of a VOC control device?
YES
Use covers vented to a 95 percent efficient control device.
NO
NO
Does the affected facility use at least 95Mg/yr but less than 130Mg/yr of VOC?
YES
Use covers alone, or covers vented to a VOC control device.
NO
No VOC controls required; Monitor VOC use.

MIX EQUIPMENT STANDARDS

Figure 2. Logic flow diagram for polymeric coating NSPS.

BILLING CODE 6560-50-C

Equivalent means of emission limitation may be approved on a case-by-case basis by the Administrator if, after notice and an opportunity for hearing, the means of emission limitation is demonstrated to be equivalent in reducing emissions to the level required by the standards.

Compliance will be determined by inspection to verify that each piece of mix equipment is equipped with the required cover and, where applicable, that the equipment is vented to a 95 percent efficient control device. When only covers are required, the procedures for their use must be posted in areas of use. The efficiency of the control device will be determined using Reference Methods 1 or 1A; 2, 2A, 2C, or 2D; 3; 4; 18; and 25 or 25A.

Other than requirements associated with VOC use projections and reports of actual use associated with the applicable cutoffs (95 Mg/yr and 130 Mg/yr), there are no monitoring or reporting requirements associated with mix equipment covers, but a determination of compliance status is made at every inspection. When mix equipment is required to be vented to a control device, the requirements are identical to those presented in section A for coating operation. In fact, it is expected that the mix equipment and coating operation will be vented to a common control device.

As discussed in the proposal preamble, an emission limitation is not a feasible standard for mix equipment. A mass emission limit imposed on this type of equipment (from which emissions vary widely as a function of temperature, vapor pressure, molecular weight of the solvent, vessel capacity, operating time, and throughput rate) could not both be achievable under worst-case conditions and, at the same time, require the construction of systems that reflect BDT under more favorable conditions. The extreme difficulties that would be encountered in attempting to obtain representative and accurate measurements of emissions from mix equipment render impractical a percent-reduction format. Therefore, equipment standards were proposed and have been promulgated.

II. Environmental Impacts

Because it is expected that facilities will choose to comply with the coating operation standards by means of the alternative standard, and thus achieve at least 93 percent overall control, the environmental impacts have not changed since proposal. In the fifth year after the standards become applicable, nationwide VOC emissions from new, modified, or reconstructed polymeric coating lines (consisting of the coating operation and associated mix equipment) will be reduced by an estimated 1,300 Mg below the emission level required by the typical State implementation plan (SIP) in an ozone nonattainment area. This represents a reduction of 83 percent.

The estimated national increase in the volume of wastewater discharge in the fifth year of applicability of the final standards of performance is 5,300 m^3, an increase of 69 percent. The EPA has determined that the benefits from recovering and recycling a large percentage of the VOC in the emissions from polymeric coating processes far outweigh this increase (only 300 gallons per day) over the volume of wastewater currently discharged. In addition, the minimal environmental impact of this raw wastewater would be reduced because the wastewater has to meet either the effluent limitations in the National Pollutant Discharge Elimination System (NPDES) permit for the industrial discharger if it is discharged to a receiving stream or pretreatment standards if it is discharged to a municipal sewer.

As a result of the standards, the estimated nationwide incremental solid waste increase in the fifth year of applicability will be about 1,000 kilograms (kg) greater than that associated with typical SIP control. This assumes that all sources use fixed-bed carbon adsorbers to meet the standards and 75 percent of the carbon is recycled by commercial regeneration rather than disposed of as waste. This is an increase of nearly 145 percent but, again, this amount is insignificant. The benefits derived from the VOC emission reduction far outweigh the negative impacts of this additional amount of solid waste.

The only noise-producing additions that might result from the standards would be the fans, motors, and pumps associated with add-on controls at plants that would not otherwise be required to control emissions. It is not expected that these will result in any significant increase in the noise levels at these plants. There are no radiation impacts associated with these standards.

III. Energy Impacts

The energy impacts remain unchanged from those reported at proposal. In the fifth year after this NSPS becomes applicable, nationwide energy consumption by plants performing polymeric coating of supporting substrates will increase by 15 terajoules (TJ) compared with energy consumption determined from the current regulatory baseline. It was determined that the control technologies that are the basis for the regulatory alternatives have a negligible effect on the energy requirements for facilities performing polymeric coating of supporting substrates. Therefore, a negligible energy impact was attributed to the proposed standards; this determination remains unchanged for the final standards.

IV. Cost Impacts

The estimated cost impacts are identical to those estimated at proposal. Annualized control costs for a new coating line (consisting of the coating operation and associated mix equipment) equipped to meet the SIP level of control would range from a net credit to $66,000. The total annualized control costs for an identical coating line controlled to the level of the promulgated standards would range from a net credit to $105,000. The annualized cost of the coating line itself (utilities, raw materials, building and land costs for the line alone, excluding any control costs) would be $0.9 to $11.2 million. The control system annualized costs represents less than 1 percent of the total annualized cost for the controlled coating line.

The estimated capital cost for control equipment to meet the standards at a new line will be about $310,000 to $750,000 compared with $260,000 to $500,000 necessary to meet the SIP level of control. The capital cost of a new coating line without control equipment will be $0.7 to $1.1 million.

In the fifth year of implementation, the estimated nationwide annualized cost of control of coating lines covered by the standards will amount to $340,000 over the regulatory baseline. The cumulative capital costs for control under the proposed standards will be $3.1 million over the regulatory baseline.

V. Economic Impacts

There has been no change in our evaluation of economic impacts since proposal. By the end of the fifth year after the standards are promulgated, there would be the same number of affected facilities as there would be if the controls had remained at the SIP level. No significant retail price change attributable to the standards is expected because there would be no significant increase in annualized cost. No adverse impacts on capital availability, competition, employment, productivity, or small businesses are expected as a result of the standards.

The environmental, energy, and economic impacts are discussed in

greater detail in the BID for the promulgated standards, "Polymeric Coating of Supporting Substrates—Background Information for Promulgated Standards" (EPA–450/3–85–022b).

VI. Public Participation

Prior to proposal of the standards, interested parties were advised by public notice in the **Federal Register** (50 FR 31025) July 31, 1985, of a meeting of the National Air Pollution Control Techniques Advisory Committee to discuss the standards recommended for proposal for the polymeric coating of supporting substrates. This meeting was held on September 18, 1985. The meeting was open to the public, and each attendee was given an opportunity to comment on the standards recommended for proposal.

The proposed standards were published in the **Federal Register** on April 30, 1987 (52 FR 15906). The preamble to the proposed standards discussed the availability of the BID ("Polymeric Coating of Supporting Substrates—Background Information for Proposed Standards" [EPA–450/3–85–022a]), which describes in detail the regulatory alternatives considered and the impacts of those alternatives. Public comments were solicited at the time of proposal, and copies of the proposal BID were distributed to interested parties.

The opportunity for interested persons to present data, views, or arguments concerning the proposed standards at a public hearing was provided. However, there were no requests to hold such a hearing; therefore, no hearing was held.

The public comment period was from April 30, 1987, to July 14, 1987. In addition, several late comments were received by EPA. A total of 24 comment letters were received concerning issues relative to the proposed standards of performance for facilities that apply polymeric coatings to supporting substrates. All comments have been carefully considered and, where determined to be appropriate by the Administrator, changes have been made to the standards.

VII. Significant Comments and Changes to the Proposed Standards

Comments on the proposed standards were received from industry, one State air pollution control agency, and two trade associations. A detailed discussion of these comments and responses can be found in the promulgation BID, which is referred to in the **ADDRESSES** section of this preamble. The summary of comments and responses in the BID serves as the basis for the revisions that have been made to the standards between proposal and promulgation.

In response to the public comments and as a result of reevaluation by EPA, several changes have been made to the standards since proposal. In addition, several revisions have been made to clarify the standards.

The applicability of the standards has been modified and clarified. The definition of mix equipment has been changed to include only those vessels in which the actual mixing takes place. On paragraph has been added (§ 60.740(c)(2)) to state explicitly the exclusion for the graphic arts industry from the standards. Definitions have been changed to clarify that paper coating facilities (including plastic film and metallic foil coaters), leather finishers that apply coatings to discrete skins, and coaters of metal coil are not covered. An exemption also was added for waterborne coatings because use of these coatings may be incompatible with the control technologies required to comply with the standards. These revisions are not expected to result in any significant changes in the impact of the standards.

The standards for the coating operation have been revised to require a 90 percent overall emission reduction rather than 93 percent as proposed. This change was made based on a reevaluation of the feasibility of total enclosures in this industry and of the test data available to support the standards. In general, EPA concluded that while facilities that can use total enclosures and 95 percent efficient control devices may achieve 93 percent or greater overall control, the use of this technology may not be available if EPA-prescribed total enclosures cannot be used in existing plants. It was determined that 90 percent overall control is universally achievable, and the standards have been set at this level.

The standards also have been revised to include an alternative standard, i.e., the use of a total enclosure and 95 percent efficient control device, as an alternative to the 90 percent overall emission reduction standard. While this alternative was allowed at proposal as an alternative means of compliance with the emission reduction standard, EPA has now decided to include it as an alternative standard in order to clarify the intent of the rule. This change is not a revision to the substance of the proposed rule.

The standards for mix equipment have been changed to provide allowances for opening the covers during periods of legitimate need such as when adding ingredients, withdrawing samples, transferring the contents, or making visual inspection when such activities cannot be carried out with the cover in place. In addition, the standards for mix equipment have been changed to require covers that meet specified requirements rather than vapor-tight covers equipped with conservation vents as proposed. The use of covers alone is also allowed on mix equipment associated with coating operations where there is no concurrent construction of a control device. These revisions are not expected to result in any significant changes in the impacts of the standards.

Several changes have been made in the compliance provisions. Although no public comment was received on the subject, the definition for total enclosure has been clarified, and requirements for demonstrating that a capture system qualifies as a total enclosure have been added. These changes were made to provide guidance to industry regarding the requirements to gain automatic approval of total enclosures to meet the alternative standard for coating operations. The key requirements are as follow: (1) All sources of VOC emissions are a minimum of four equivalent diameters away from natural draft openings (NDO's); (2) the cumulative area of all NDO's is no greater than 5 percent of the surface area of the enclosure; (3) the average inward face velocity across the NDO's is a minimum of 3,600 meters per hour (m/h), and demonstrably inward at all times; (4) all VOC gas sreams from the enclosure are directed to a control device; and (5) all access doors and windows not considered NDO's are closed during routine operation of the process. A procedure for determining the average inward face velocity across the NDO's is included in the regulation.

The final coating operation standards have been revised to clarify that the use of certain equipment, i.e., a total enclosure and a 95 percent efficient control device, are available as an alternate standard to the 90 percent emission reduction standard. In other words, the owner or operator may choose to comply with either the emission reduction standard or the alternative standard. In addition, the compliance provisions for coating operations meeting the emission reduction standard have been revised to clarify that owners or operators may demonstrate compliance by any of the applicable methods. The option of performing a one-time short-term (3- to 7-day) material balance followed by continuous monitoring was added as an optional compliance method. This option may be attractive at facilities that cannot or do not, want to conduct the continuous detailed monthly measurements that are required for the other liquid material balance option.

Other minor revisions to the compliance provisions have been made. One portion of the gaseous emissions test compliance method (§§ 60.743(a)(1)(ii) and (a)(2)(ii)) that was unclear and subject to interpretation has been deleted in favor of the alternative standard previously discussed. A paragraph has been added to provide for the use of control devices other than carbon adsorbers, incinerators, and condensers (§ 60.743(e)).

Minor changes have been made to the section on monitoring (§ 60.744). Wording has been added to specify clearly that monitors must be in place and operating during all performance tests. The monitors required for carbon adsorbers are now required to measure the "concentration level of organic compounds" instead of the VOC concentration in parts per million by volume. Although many monitors give readings in terms of parts per million by volume, the revision is intended to reflect the fact that EPA has not developed performance specifications or other quality assurance procedures to ensure the accuracy of such monitors. However, units are available that are sufficiently precise to allow assessment of operation and maintenance practices by comparing monitoring data with the baseline value established during the performance test. The accuracy requirements for temperature monitors have been changed to be consistent with other VOC control regulations.

The performance testing and monitoring provisions for fixed-bed carbon adsorption systems have been revised to represent more accurately the performance of multibed systems. This revision was an indirect result of a public comment concerning the performance of fixed-bed carbon adsorbers. Performance tests are the direct means of determining the compliance status of an affected facility and serve as the basis for legal enforcement actions against noncomplying sources. In contrast, the monitoring devices required by these standards serve only as indicators of control device performance to aid enforcement agencies in targeting inspections and performance tests toward potential violaters. The revised procedures will ensure that the performance test runs and monitoring averaging periods will parallel the adsorption cycles of all the individual adsorber vessels or the system's complete sequential rotation through the adsorption cycles of all the vessels. Use of a testing or monitoring period that does not correspond to an integral number of adsorber vessel cycles or system rotations could bias the results slightly in either direction. Efficiencies would be biased high if the test run or monitoring period did not include the elevated emissions typical at the beginning and end of a vessel's adsorption cycle; efficiencies would be biased low if the period included a disproportionate number of these emission peaks.

The revised carbon adsorption system performance testing provisions include separate requirements for systems with a single common exhaust stack and for systems with individual stacks for each adsorber vessel. The Agency believes that a common exhaust stack allows simpler performance testing that is more representative of the entire system's performance but has included provisions for individual exhaust stacks because this is currently the more typical configuration.

For adsorption systems with a common exhaust stack serving all the adsorber vessels, the entire system must be tested. Three test runs are required; each run must correspond to one or more complete rotations through the sequential adsorption cycles of all the adsorber vessels.

For adsorption systems with individual exhaust stacks, each adsorber vessel must be tested individually. Three test runs are required for each vessel; each run must correspond to one or more complete adsorption cycles. A procedure has been added to the compliance provisions for computing a system efficiency from the individual adsorber vessel efficiencies.

The final adsorber monitoring provisions parallel the final performance testing provisions. Again, separate provisions apply to systems with a common exhaust stack and those with individual stacks. No increase in monitoring costs is anticipated.

For adsorption systems with a common exhaust stack, a monitoring device must be installed on the common exhaust stack and one also may be installed on the common inlet duct. The owner or operator must report each occurrence when the average emission level or system efficiency (depending on whether the outlet only, or the inlet and outlet gas streams are monitored) over three successive system rotations varies outside the specified range.

For adsorption systems with individual vessel exhaust stacks, a monitoring device must be installed on each individual exhaust stack, and a monitoring device also may be installed on the common inlet duct or on each individual inlet duct. Each adsorber vessel must be monitored for a minimum of one complete adsorption cycle per day. A 3-day rolling average emission level or efficiency for each vessel (depending on whether the outlet only, or the inlet and outlet gas streams are monitored) must be computed each day from the daily averages, and these 3-day rolling averages must be reported when they vary outside the specified ranges.

Other changes have been made to the sections on alternate means of emission limitation, reporting and recordkeeping requirements, and definitions and symbols. For the most part these changes correct or clarify the sections and are dealt with in the comments and responses that follow. All references in the final standards have been changed from cubic meters to megagrams to be consistent with the mass reporting basis typically used by industry and enforcing agencies. It is now specified that monitoring data recorded during performance tests and instances when actual annual VOC use exceeds the applicable cutoff must be reported. Periods when monitors or control devices are not operational during process operations must also be reported. If no excessive variations of the monitored parameters specified in § 60.747(d)(1)–(6) have occurred, a seminannual statement certifying this fact is required.

The major comments and responses are summarized in this preamble. Most of the comment letters contained multiple comments. The comments have been divided into the following areas: selection of the source category, affected facility, selection of BDT and emission limits, control costs, test methods and monitoring, and wording of the regulation. All comments and responses are included in the promulgation BID.

A. Selection of the Source Category

Commenters questioned the applicability of the proposed polymeric coating standards to the leather finishing, graphic arts, and paper coating industries. One commenter said that leather finishing does not meet the applications criteria established in the proposed standards because leather is not handled as a continuous substrate. The commenter stated that leather-like materials (bonded leather fiber products and artificial leathers) can be coated in continuous form and would, therefore, meet the proposed standards'

applicability criteria. Other commenters stated that it was unclear if the standard included graphic arts and paper coating industries (including plastic and metallic foil coating).

The EPA agrees that leather, when used as a general term for discrete hides or skins, is not a continuous substrate and that leather finishing was not intended to be covered under the standards. Therefore, leather finishing has been excluded from the list of web coating operations in the final standards. Leather-like materials, such as urethane-coated and bonded leather fiber products are, however, covered by the standards. The graphic arts and paper coating industries were not intended to be included in the proposed polymeric coating standards. Language has been added to the final standards to make these exclusions clear.

Other commenters requested that EPA establish a separate subcategory in the standards for textile coating operations. The commenters cited product and operational variability as factors limiting this industry's ability to comply with the proposed standards. Specific technical comments related to this issue and EPA's responses are discussed in Section C. After fully considering the points raised by the commenters, EPA has decided not to create a separate subcategory or standard for the textile coating industry. However, EPA has adjusted the overall level of the coating operation standard downward to 90 percent in response to the concerns raised by the commenters. The EPA believes that this level of control is universally achievable by the polymeric coating industry, including textile coaters.

B. Affected Facility

One commenter asked for clarification of how the determination of affected facility is made for coating operations that share mix equipment. The commenter presented an example of a new coating operation served by an existing central mix room and asked whether existing coating operations served by the common mix equipment would also become affected facilities.

The affected facility is defined as "each coating operation and any onsite coating mix preparation equipment used to prepare coating for the coating operation." In the case presented by the commenter, the existing coating operations would not become subject to the standards because they are not part of the affected facility that includes the new coating operation. However, the existing mix equipment that serves the new coating operation would become subject to the standards. The only way that an existing coating operation would come under the standards would be if the potentially affected facility of which it is a part (i.e., the coating operation with associated mix equipment) were to be modified or reconstructed.

Other commenters noted that it is not always possible to dedicate a limited number of pieces of mix equipment to a given affected coating line and were concerned that entire mix rooms would become affected if a new coating operation is added.

The commenters have interpreted the proposed regulation correctly. However, EPA has revised the regulation to reduce the burden on plants subject to the mix equipment standards. In most cases, venting mix equipment emissions to a control device is judged to be cost effective whether one piece or an entire mix room becomes affected. When a new coating operation is constructed, a new control device would be necessary to control its emissions. This control device could readily be designed to accommodate emissions from the associated mix equipment that becomes affected when the coating operation is constructed. Under this scenario, the venting of mix equipment emissions to a control device is cost effective.

The hypothetical scenario of concern is that mix equipment could become affected by the standards through modification or reconstruction of a coating operation that uses an existing control device. Although it is considered unlikely, it is possible that the existing control device would have insufficient capacity in reserve to handle all or part of the mix equipment emissions. This would result in a requirement to install a separate control device for these emissions; such separate control of mix equipment emissions is not cost effective. Because it is possible that mix equipment at some modified or reconstructed facilities could not be controlled by existing control devices, the standards have been revised to require use of covers alone if a coating operation is modified or reconstructed without concurrent construction of a control device. Concurrent construction is defined in the final regulation as the period of time in which construction of an emission control device serving an affected facility is commenced or completed, beginning 6 months prior to the date that construction of the affected facility commences and ending 2 years after the date that construction of the affected facility is completed. This period is designated because it is consistent with the normal planning and purchase cycles for equipment of this type. The 2-year period also coincides with the period for which records required under these standards must be retained.

C. Selection of BDT and Emission Limits

1. Control of Coating Operation. Commenters questioned the overall control efficiency of 93 percent required of coating operations under the proposed standards. The commenters addressed both the degree of capture and the carbon adsorber efficiency required to comply with the standards. One commenter questioned the practicality of capturing virtually 100 percent of vapors at all times and joined other commenters in expressing concern that the need for workers to access equipment for feeding raw materials and retrieving products also makes compliance with a requirement for 100 percent capture difficult. The commenter suggested that, with diligent attention to the equipment, a control device efficiency of 95 percent and a capture efficiency of 80 percent could be attained, for an overall efficiency of 76 percent. Another commenter stated that the 98 percent capture efficiency that would be required to obtain an overall efficiency of 93 percent has not been demonstrated relative to the design factors assumed in the economic analysis.

Other commenters believed that the 95 percent efficiency ascribed to carbon adsorption is based on insufficient data from the polymeric coating industry. The 95 percent efficiency was based on test data that included only one polymeric coating operation that used a single solvent. According to the commenters, these data cannot adequately demonstrate a control technology for an entire industry that uses a multitude of solvents and coating formulations. A commenter said that the recovery efficiencies are biased because they rely on data obtained with gas analyzers only under the most favorable short-term operating conditions.

The EPA has determined that the final standards for coating operations are attainable. The following discussion of support for this conclusion addresses: (a) Capture efficiency, (b) control device efficiency, (c) overall control efficiency, and (d) VOC recovery.

a. Capture efficiency. In response to comments, EPA has reevaluated the feasibility of total enclosures in the polymeric coating industry. The term "total enclosure" is defined in § 60.741(a) as a structure that is constructed around a source of VOC emissions so that all VOC emissions are collected and exhausted through a stack or duct. With a total enclosure, there will be no fugitive emissions, only stack

BEST COPY AVAILABLE

emissions. The drying oven itself may be part of the total enclosure. A total enclosure must satisfy all of the design and operational requirements as defined in the promulgated regulation (§ 60.743(b)(1)) or be demonstrated to be equivalent to these requirements to the Administrator's satisfaction.

To evaluate the comments, information requests were sent to three facilities that had indicated that enclosures were in use, and plant visits were made to three facilities that had indicated that they were batch operations and needed frequent access to the coating equipment during operation. An expert in industrial ventilation and a vendor of local ventilation systems were contacted. Using the data gathered and standard ventilation principles and guidelines, EPA reached the conclusions discussed below.

As a result of its investigation, EPA has concluded that most facilities would be able to install and properly use a total enclosure around an affected coating operation. Even at facilities with extensive access requirements, local ventilation systems (hoods or other partial enclosures) can be constructed that will achieve a very high capture efficiency while affording necessary access. In most cases, the local ventilation system could be used in conjunction with a larger enclosure (up to room-size) to meet the specifications for a total enclosure.

However, there remains the possibility that some facilities may not be able to install an enclosure that meets the specifications. For instance, at an existing facility adding a new coating operation or modifying/reconstructing an existing coating operation, space constraints might not allow construction of any enclosure large enough for personnel to work within during operation. If the same facility could not install a small total enclosure immediately around the application/flashoff area because of access requirements, the use of a total enclosure would not be feasible for that facility. One of the facilities visited during the investigation of this issue would probably encounter these constraints.

Because there may be facilities at which a total enclosure is not feasible, EPA investigated capture systems that fell short of the requirements for a total enclosure and concluded that a capture efficiency of 95 percent can be achieved even without a total enclosure through the use of a well-designed local ventilation system. Although the actual percentage varies from facility to facility, about 90 percent of the VOC emissions from a coating operation are generated within the drying oven. Because proper design, operation and maintenance assure a high capture efficiency of drying ovens, only 50 percent of the emissions generated in the application/flashoff area must be captured to achieve a total capture efficiency of 95 percent. Even if only 80 percent of VOC emissions from the coating operation are generated in the drying oven, only 75 percent of the application/flashoff area emissions must be captured to achieve 95 percent overall capture. The EPA has concluded that these capture efficiencies can be achieved in a cost-effective manner with a well-designed local ventilation system (hood or other partial enclosures).

b. Control device efficiency. The EPA thoroughly reviewed available information and test data for carbon adsorbers to address the commenters' concerns that carbon adsorption may not be able to reduce VOC emissions by 95 percent for the polymeric coating industry. Carbon adsorption has been used for the last 50 years by many industries to recover a wide variety of solvents. With the experience gained from extensive application under very diverse conditions, the technology has matured to the point that an adequately designed, operated, and maintained system can readily attain an efficiency of 95 percent or higher on a continuous basis. This fact has been demonstrated across many industries with many different solvents and solvent blends. The efficiency of a carbon adsorption system is determined by its design and operating parameters and the composition of the solvent-laden airstream (SLA) vented to it, not by the process equipment that generates the exhaust stream. Thus, it is reasonable to expect the attainment of similar efficiencies through the application of this technology in the polymeric coating industry.

Data indicating the efficiency of carbon adsorption in this and related web coating industries were discussed in the proposal BID. Those data as well as data received after proposal from a polymeric coating plant support control efficiencies capable of meeting the standards. The EPA also has recently concluded an extensive study of the ability of carbon adsorbers to operate continuously at an efficiency of at least 95 percent. This report addresses many of the problems cited by commenters that could be faced by a batch operator, such as situations where multiple lines are ducted to a carbon adsorption system or where the SLA contains varying blends of solvents and other VOC, resulting in short-term variations in flow rate or inlet concentrations.

The report fully addresses these concerns and is discussed more thoroughly in the promulgation BID. The report indicates that these concerns would not significantly affect the efficiency of a properly designed and operated carbon adsorption system. The presence of low inlet concentrations or minor variations in outlet concentrations should not pose a major problem for a facility attempting to show compliance with the coating operation standard. Performance test and monitoring data are averaged over adsorber system cycles, so short-term inlet variations will not greatly affect the long-term average. If the bed is properly designed and regenerated, a constant outlet concentration can be attained such that greater than 95 percent removal is achieved for the entire range of inlet concentrations. Furthermore, by diverting or shutting off the airflow from idle equipment, inlet concentrations can be consistently maintained at higher levels to ensure the desired removal efficiency.

c. Overall control efficiency. An overall control efficiency of 93 percent has been demonstrated by a 4-week liquid material balance at a plant in the pressure sensitive tapes and labels (PSTL) industry that is equipped with a "total building air evacuation system," which was assumed to be a total enclosure for purposes of proposal analyses. The performance of this PSTL plant is considered representative of the control efficiency attainable in the polymeric coating industry because of the many similarities in the two industries. In both, coatings with a similar range of solvent contents are applied with the same types of applicators to continuous substrates and dried in the same types of drying ovens. Capture and control systems for emissions of VOC are very similar. The production at the PSTL plant during the test period was characterized by many short runs of many different products using a variety of solvents, as is often the case at polymeric coating plants.

Since proposal of the polymeric coating standards, EPA received liquid material balance data from a member of the industry (Grace) who coats textile printing blankets. This operation consists of two coating lines in a room-type enclosure. The EPA concluded that these data, which show 93 percent overall recovery based on a 3-day liquid material balance, substantiate, along with the PSTL data, that emission capture and reduction systems are capable of achieving 93 percent control.

The EPA, however, has reevaluated the proposed standards in light of industry comments (particularly issues related to batch operations and design and use of total enclosures). Although the polymeric coating standards require demonstration of an overall level of control, the BDT for the standards is discussed typically in terms of the capture system and control device efficiencies. The product of these efficiencies yields the overall level of control. The control device component of BDT has been demonstrated to be a minimum efficiency of 95 percent for this industry. Therefore, the important variable in evaluating the overall level of control that can be achieved by BDT is the efficiency associated with capture component.

Any change in the assumed level of capture efficiency should be evaluated considering that: (1) The two data points at 93 percent overall efficiency (PSTL and Grace) are associated with unknown capture and control device efficiencies and (2) neither capture system demonstrated complete consistency with EPA's total enclosure criteria. It is quite possible (and perhaps probable) that capture efficiency at these plants was less than the 98 percent minimum previously ascribed to a total enclosure. Therefore, to conclude that capture efficiency was 98 percent, based on an assumed control device efficiency of 95 percent (i.e., 0.98 capture × 0.95 control =0.93 overall control efficiency) may be oversimplification. Another way to estimate capture efficiency of these two facilities is to assume the control device efficiency was higher (i.e., 98 percent) instead of the minimum 95 percent. If so, the 93 percent overall control could have resulted with only a 95 percent efficient capture device.

To ensure the selection of achievable standards for the entire industry, the overall level of control required should be based on the minimum efficiencies of the two components of BDT. The EPA has concluded that control devices are at least 95 percent efficient, even while acknowledging that they are capable of, and often achieve, much higher efficiencies. Although EPA believes that total enclosures achieve essentially 100 percent or total capture, it has not been adequately demonstrated that all segments of this diverse industry can install and operate total enclosures that meet EPA's specifications. It is, therefore, reasonable to allow for this variability when setting the capture system efficiency component of BDT for this industry. Based on these considerations, EPA has adjusted the standards downward from 93 percent to 90 percent overall control (i.e., 0.95 capture × 0.95 control =0.90 overall control efficiency). The promulgated standards recognize that strict adherence to EPA's total enclosure criteria may be neither universally achievable nor required to meet the standards but would still allow use of the alternative standard for those sources that can meet the total enclosure specifications. The EPA believes that this will be an attractive alternative for that majority of plants for which a total enclosure is feasible. Because the compliance test provisions associated with a total enclosure are simpler and less expensive to carry out than a capture efficiency test, there is continuing incentive for sources to install total enclosures.

In conclusion, the standards have been established at an overall control level of 90 percent, with BDT defined as a 90 percent efficient emission reduction system that is composed of an emission capture system and control device. The option of using a total enclosure as the emission capture system is allowed where feasible and is attractive to the source because it simplifies the performance test. This change to the standards takes into account concerns about variability in measurement technique, operating parameters, worker access requirements, etc. The revised standards remain cost effective despite a lower emission reduction. This option potentially results in a projected decrease in nationwide VOC reduction over 5 years compared to the standards as proposed (964 Mg compared to 1,060 Mg). However, because of the use of total enclosures or control devices that achieve more than 95 percent efficiency, facilities will actually achieve emission reductions greater than 90 percent.

d. VOC recovery. The type of solvent used and VOC generated is a key design criterion in any carbon adsorption system. The adsorption characteristics of each compound are assessed using data on their physical properties, and the system is designed to accommodate these properties. While adsorbers can be designed to recover a blend of solvents and other VOC successfully, changes in the characteristics of a feed stream (i.e., the introduction of varying solvent blends due to a batch process and cure volatiles) can affect both adsorption and desorption cycles. If the system cannot accommodate the new SLA stream, it is possible that the working capacity of the bed could decrease below design conditions or that costs of increased steam requirements or carbon bed replacement due to excessive fouling could lead to poor performance or excessive costs of operation.

The operator's responsibilities under these conditions are to design the system to accommodate worst-case VOC composition conditions and to monitor the adsorber outlet streams adequately to assure that the beds are not operated after breakthrough. It is advantageous to standardize solvent blends and minimize the number of "incompatible" solvents likely to be ducted to the control device simultaneously. There may be cases where these measures are impossible and carbon adsorber performance cannot be continuously maintained at 95 percent efficiency at reasonable cost; in these cases, carbon adsorption is not the appropriate control technology. Incineration is often selected, because it can control a wide variety of VOC with relative ease.

A preliminary cost analysis shows that, when compared to baseline control assuming use of an incinerator, a 98 percent efficient incinerator can cost-effectively control emissions from a coating operation equipped with a total enclosure. Incinerators were not considered cost effective at proposal, because they were considered a more stringent regulatory alternative, and the incremental cost compared to a carbon adsorber at 93 percent overall control was considered unreasonable. However, if conditions at a new or modified line prohibit the use of carbon adsorption, these same conditions would prohibit the use of carbon adsorption under baseline regulations. Therefore, the cost of incineration under the NSPS should more logically be compared to the cost of incineration under baseline regulations. The cost effectiveness of control is reasonable in all cases when analyzed using these assumptions.

A commenter presented data that, according to the commenter, indicated that only under ideal conditions could the plant (Grace) recover 93 percent of the VOC applied at the coating operation and that, on a day-to-day basis, recovering 93 percent is very unlikely. Over a 3-day continuous run, the operation achieved 93 percent recovery based on a liquid-liquid material balance. The average recovery efficiency over a month for this operation, also calculated using a liquid liquid material balance was 88 percent. The commenter stated that even though 93 percent is theoretically possible, 85 percent is the maximum practical recovery rate.

Followup contacts were made with the commenter to determine the

differences between the "ideal" conditions during the 3-day run when a 93 percent overall efficiency was measured and the "typical" operation during the remainder of the month when a monthly average of 85 percent was measured. The two major differences noted by the commenter were (1) More careful measurements were taken during the 3-day run and (2) there was a shorter carbon bed adsorption time during the 3-day run. The commenter emphasized the extensive effort and extreme care used in obtaining measurements for the 3-day material balance. The adsorption time was decreased to 75 percent of the normal adsorption time during the 3-day run to ensure that breakthrough would not occur. The commenter noted that this reduction in adsorption cycle time was not cost effective because of the increased steam requirements for desorption. However, the commenter added that the difference in cycle time would probably not have a significant effect on performance because the original cycled length is "very conservative." The commenter stated that the plant would prefer to use breakthrough monitors instead of timers to control adsorption/desorption cycles however, a reliable monitor has not been found.

Although it is not possible to determine quantitatively the cause of the difference between the two data sets because separate control and capture efficiency are not provided in either case, comparison of the short-term and long-term performance data indicates that the measured differences may largely be due to accounting for mix room losses, retained VOC in the web, and waste VOC in the short-term calculations. These losses were not taken into account in the monthly efficiency calculations. When the short-term efficiency is recalculated without accounting for these losses, the value is consistent with the typical monthly efficiencies reported by the source. Thus, it is reasonable to expect that, if these types of losses were taken into account during the long-term measurements, the measured overall efficiency would approximate the short-term results. This indicates that short-term data may be reasonably representative of long-term performance if measured on the same basis. Furthermore, the short-term measurement techniques reflect the control system's efficiency in accordance with the procedures required for a liquid material balance in the final regulation. Thus, EPA believes that rather than discredit the level of the standards, these test data support the standards.

The information from the commenter does indicate that performing a monthly material balance in some cases (i.e., when multiple coatings are used) may require more resources than are reasonable to spend on compliance demonstrations. However, alternative methods of demonstrating compliance with the standards are available such as the alternative standard, gas-phase test, and short-term (3- to 7-day) liquid material balance. In any case, the monthly liquid material balance compliance provision has limited applicability and would not be an appropriate compliance method for the situation described by the commenter because multiple emission sources are ducted to the same control device.

A commenter recommended adding a requirement for 90 percent control for facilities using less than 110 m^3/yr of VOC if the incremental cost effectiveness is less than $1,100/Mg. The commenter stated that 90 percent control appears to be cost effective below 110 m^3/yr of VOC and suggested evaluating this option by using model operation(s) below 95 m^3/yr of VOC usage.

With the decision to reduce the overall level of control required by the standards from 93 to 90 percent, EPA reevaluated the VOC use cutoff level for this industry. This analysis focused on the same basic question as that raised by the commenter, e.g., would cost-effective control be possible for facilities that qualify for the lower cutoff level. As discussed in the promulgation BID, cost effective control of such facilities at a 90 percent (or lower) overall control level is theoretically possible. However, it is expected that the environmental impact of the change would be relatively small. According to the economic impact analysis conducted at proposal, it is expected that growth in this industry will occur in lines with annual VOC usage greater than 95 Mg/yr (110 m^3/yr). Therefore, the promulgation of a lower VOC use cutoff will not affect the costs and emission reductions projected as a result of the standards, and the cutoff level has been retained as proposed. Furthermore, it is expected that most facilities will choose to comply with the alternative standard, thus achieving at least 93 percent overall control. For these facilities, the analysis that determined the proposed cutoff is still applicable. In any case, EPA will reconsider the cutoff level at the 4-year review of the standards if additional data indicate that there is an environmental benefit to use of a lower cutoff.

Commenters believed that EPA's model plants do not adequately reflect the diversity in the polymeric coating industry and disagreed with several assumptions used in the analysis. The model plants are based on operations that use one solvent on one substrate and use equipment dedicated to one method of coating. However, according to the comments, coating operations use several solvents or solvent blends; substrates of several types, thicknesses, and widths; and various impregnating and coating head configurations. Also, because of the specialized properties of coated fabrics, long, efficient runs are rare, and batch processing is typical. Thus, models that base control efficiency only on size and solvent use fail to consider adequately major differences in process operations that affect both efficiencies and costs.

A commenter questioned the following assumptions that were used in the analysis: (1) Characterizing magnetic tape coating operations as similar to polymeric coating operations; (2) including a model plant controlled by an air-atmosphere condenser, a control device that has not been demonstrated for the polymeric coating industry, while not considering an inert-atmosphere condenser; and (3) setting the solvent concentration in the oven exhaust and control device inlet stream at 25 percent of the lower explosion limit (LEL), a level that, according to the commenter, is unsafe for oven operating and does not account for the lower concentrations in the air from solvent storage tanks, mixers, and flashoff areas, which would reduce control efficiency by lowering the overall inlet stream concentration.

The EPA believes that the range of practices typical in the polymeric coating industry have been adequately considered in the development of the standards and that the standards are achievable over the range of practices expected to occur. Based on contacts with and visits to a large number of polymeric coating plants over the course of standards development, four different types of "model lines" were developed to represent the diverse segments of the industry. To account for the range of sizes typically found in each sector of the industry, the impacts of the regulatory alternatives were analyzed for two or three annual VOC use rates within each type of model facility. In all, a total of nine different combinations of facility type and size were analyzed. In the judgment of EPA, these model plants cover the range of variables that affect VOC emissions, and these variables

have been given proper consideration in the development of the standards. In fact, after proposal EPA visited and requested detailed process information from representative plants in order to learn more about enclosure design and capture efficiency parameters as well as batch operations. This information confirmed the validity of EPA's approach.

The responses to the comments that questioned EPA's assumptions are as follows:

1. Although there are differences between the magnetic tape and polymeric coating operations, the basic configuration of unwind station, application/flashoff area, drying oven, and rewind station is common to both. Also, the VOC content of the coatings, the types of solvents, coating application techniques, and the mix equipment is often similar. As a result, the SLA streams generated by the processes are similar in composition, as are the applicable control technologies.

2. At least one air-atmosphere condenser has been used on a polymeric coating operation. A representative of the plant indicated that no major difficulties with the system had been encountered. However, it is unlikely that this control technology will be used at polymeric plants that are controlling mix equipment emissions as well as coating operation emissions because the operation of a fine-tuned, closed-loop condenser can be adversely affected by the moist, intermittent airflow from mix equipment. The use of an inert-atmosphere condenser was not analyzed because use of this system is incompatible with a process where oxygen in the application/flashoff area is essential for worker access.

3. The assumption that the SLA stream at the inlet of the control device has a concentration as high as 25 percent of the LEL is justified. The standards contain no requirement that emissions from solvent storage tanks be ducted to a control device. In any case, a more dilute SLA stream could be used as makeup air in the drying oven. Good design should ensure that emissions from mix equipment are ducted to the control device at a concentration of 25 percent or less of the LEL. In addition, the airflow from this source is quite small in comparison to that from the drying oven, so a reduced concentration would have little effect on the overall concentration of the inlet SLA stream. The air containing the emissions from the application/flashoff area is expected to be used as makeup air for the drying oven, not ducted directly to the control device. Drying ovens in this and other industries are operated safely at a concentration of 25 percent of the LEL. In fact, ovens equipped with appropriate safety features are allowed to operate at up to 50 percent of the LEL.

One commenter stated that there is no best demonstrated technology for a coating operation that uses both aqueous and organic solvent coating systems, nor is there a provision for handling this type of operation where a common mixer is used.

The commenter is correct. Use of the proposed control technologies may be incompatible with the use of waterborne coatings. Therefore, an exemption for waterborne coatings has been added in § 60.740, Applicability and Designation of Affected Facility, to specify that the coating operation or mix equipment may be vented directly to the atmosphere while waterborne coatings are used. A definition of waterborne coatings has been developed that sets the minimum water content (5 percent by weight of the volatile fraction) necessary to be considered a waterborne coating. Because "waterborne" coatings may actually contain organic solvent and generate VOC emissions, the exemption for their use provides a VOC content ceiling of 9 percent weight of the volatile fraction. This ceiling was developed based on a "worst-case" baseline coating that is 85 percent solvent (15 percent solids) by volume. The level specified in the exemption is equivalent to a 90 percent VOC reduction for this coating. The VOC in waterborne coatings is not to be included in the annual VOC usage rate when determining if a facility is below the VOC use cutoff. However, the amount of VOC in waterborne coatings reported by the industry is negligible (0 to 2 percent by weight) of coating applied, and the impact of this exclusion is expected to be minor.

2. Control of Coating Mix Preparation Equipment. A commenter recommended that coating mix preparation equipment include only mixers and not mills, holding tanks, or other equipment. The commenter observed that the only coating mix preparation equipment considered in developing the standards and demonstrating the feasibility of the standards was the mix tank. The feasibility of the proposed standard for mills, holding tanks, and other equipment, which are included in the definition for coating mix preparation equipment, was not considered. At the commenter's plant, portable containers are used to transport coating from the mixing area to subsequent coating preparation and application areas. These portable containers appear to be included in the definition as "holding tanks," but, according to the commenter, there is no feasible or practical way for these portable containers to comply with the requirement that all VOC emissions be vented to a control device. The commenter also questioned the feasibility of (1) Capturing and venting all VOC emissions from mills to a control device at a concentration range within which the control device is efficient or (2) installing a vapor-tight cover equipped with a conservation vent. The commenter said that only equipment that was specifically addressed in the development of the standard should be included in the definition of coating mix preparation equipment. The commenter recommended that "coating mix preparation equipment" be defined as "mix tanks in which solvent and polymer are blended to prepare polymeric coating formulations."

The final rule requires that only affected mixing vessels be covered and vented to a 95 percent efficient control device. The definition of "coating mix preparation equipment" has been changed to "all mixing vessels in which solvent and other materials are blended to prepare polymeric coatings."

Only mixing vessels were considered in the analysis of the cost and cost effectiveness of mix equipment control because essentially all mixing area emissions that were intended to be regulated are generated from the mixers. Mills in this industry are most frequently operated using dry ingredients alone and are often tightly sealed to contain the ingredients. Emissions from holding tanks are negligible compared to those from the mixers because both breathing and working losses are minimized. Breathing losses are minimized because holding tanks are generally located indoors at relatively constant temperatures and because the vessels typically are covered during storage to minimize coating composition changes through solvent loss and contamination. Working losses due to the filling of vessels are minimized because holding tanks typically are cleaned between uses; a clean, dry vessel does not have any vapor in the air space to be displaced as the coating is introduced. Emissions during the cleaning process are not regulated because of the inherent difficulties of control. Nevertheless, mills, holding tanks, and other equipment had been included in the proposed rule because it was determined that the controls mandated for the mixers could be easily applied to such equipment.

However, based on a reexamination of the information gathered during the development of the standards and on the information presented by the commenter, EPA has decided that the standards should be applied only to mixers because they are the primary source of mix room emissions and the costs of controlling emissions from mills were not demonstrated. The EPA also agrees with the commenter that it is infeasible to duct emissions from portable equipment to a controld device. However, during the actual mixing process, these portable containers are stationary, and ducting emissions to a control device is feasible. Thus, portable tanks, including holding tanks, are required to be covered and vented during those times that they are in use as mixing vessels. Covers alone are required when these tasks are in transit or at nonmixing locations.

Commenters questioned the technical feasibility of capturing and venting all VOC emissions from coating mix preparation equipment. One commenter noted that the need for access to the mixers makes sealed covers impractical. Also, according to the commenter, the total enclosure of and ducting emissions from all transfers from mixers to transfer containers, strainers, coaters, and other mixers is not feasible. Another commenter focused on the portable containers or "change cans" used specifically in the printing blanket industry for high-viscosity coatings that cannot readily be pumped beyond the shortest distances. According to the commenter, the change cans are generally covered during storage, movement, and mixing but because they are portable, cannot be ducted to a control device. Some VOC emissions from these containers are inevitable when covers are necessarily removed between the steps of the process.

A commenter pointed out that companies frequently use different sizes of mix equipment ranging from 5-gallon pails to 500-gallon portable tanks. Some are totally enclosed, while others are virtually impossible to enclose well enough to meet the proposed standard. The commenter maintained that companies would find it impossible to capture all emissions from mix equipment because of the nature of the process, cleanups, color changes, short runs, container handling, etc. The commenter also questioned the validity of EPA's contention that coating operations that apply urethane coatings, which are purchased premixed, do not use mix equipment. According to the commenter, all such operations use mix equipment either to adjust the specific properties of a batch of coating or to obtain the proper coating consistency.

A commenter pointed out that, while the proposal preamble states that BDT for mix equipment is the use of covers vented to a control device and that the format for the standard is an equipment format, the proposed standard does not mention equipment. The commenter stated that the requirement that all VOC emissions be captured and vented makes the proposed standard a performance standard, requiring a 100 percent capture efficiency. The commenter recommended that the performance standard language be deleted and that the standard (§ 60.742(a)(2) at proposal) be restated as an equipment standard.

The format of the standards for mix equipment was intended to be an equipment standard. But, as noted by the commenters, the use of the term "all" in the proposed standard implies 100 percent-capture, which has not been demonstrated in the polymeric coating industry. The standards for mixing vessels that serve coating operations that use at least 130 Mg/yr of VOC (and are associated with a coating operation with concurrent construction of a control device) have been revised to reflect actual workplace conditions. These mixing vessels are required to be covered during mixing and vented to a 95-percent efficient control device. The mixing vessles must be covered except when adding ingredients, withdrawing samples, transferring the contents, or making visual inspection if these activities cannot be carried out with the cover in place. Specifications for the covers have been added in § 60.743(c)(1).

The EPA does not believe that the use of portable containers or containers of varying sizes precludes the venting of emissions to a control device during the actual mixing process. In cases where portable tanks are used, the mixing apparatus remains stationary. Ductwork can be installed from this point to the control device. No evidence has been presented that small mixing vessels cannot be similarly equipped. The change to an equipment format with allowances for opening covers during periods of legitimate need addresses the concerns cited by the commenters.

The commenter's contention that sources applying urethane coatings employ mix equipment does not change the conclusions of the background study. Should these sources use mix equipment, the same cost factors that apply to mix equipment at other plants would apply. In fact, the higher value of the solvents saved by the application of control technology at this type of plant would improve the cost effectiveness of control beyond that calculated for other types of polymeric coating plants. Because of the direction of this change, the impacts of the standards were not recalculated. When such sources use mixers, the beneficial impacts of the standards will be obtained with reasonable cost effectiveness and will far outweigh the negative impacts.

One commenter said that EPA appears to have incorrectly applied information on emissions from solvent storage tanks to emissions from mix tanks. The resulting estimate that vapor-tight covers with conservation vents would reduce emissions by 40 percent significantly understates the emission reduction that would be obtained. The commenter presented results from a bench-scale experiment that showed a simple cover not equipped with vapor-tight seals or a conservation vent would reduce emissions 74 percent and 96 percent when covering 87 percent and 100 percent of the vessel, respectively. The commenter contended that economic analysis would show that the small gain in emissions control achieved by a vapor-tight cover with a conservation vent as opposed to a simple cover would not be cost effective. The commenter suggested that the standard for mix equipment using at least 110 m^3/yr but less than 150 m^3/yr of VOC (§ 60.742(a)(3) at proposal) be revised to require only a cover that encloses at least 95 percent of the opening and that must be closed at all times except when adding ingredients, withdrawing samples, transferring the contents, or making visual inspection when such activities cannot be carried out with the cover in place.

The EPA agrees that the improvement in control efficiency on mix equipment to be gained from a vapor-tight cover with a conservation vent compared to that from a simple tight-fitting cover is insignificant. The chief benefit to be gained from conservation vents is the control of "breathing losses" resulting from diurnal temperature changes. Because mix equipment is not normally exposed to such changes in this industry, the requirement that covers be sealed and equipped with conservation vents has been dropped. However, EPA does not agree that the emission reduction ascribed to covers is significantly underestimated. The experiment conducted by the commenter explored only evaporative losses during the mixing process. This treatment neglects the impact of the "working losses" that occur due to the filling and emptying of a vessel that contains a solvent-saturated air space. An analysis of cover efficiency was carried out for

mix equipment in the magnetic tape manufacturing industry, and the results of this analysis are considered representative of the polymeric coating industry as well. The efficiency of covers was determined by this analysis to be 40 percent.

The standards for mixing vessels that use at least 95 Mg/yr (110 m^3/yr) but less than 130 Mg/yr (150 m^3/yr) (§ 60.742(c)(3)) of VOC has been revised to require the equipment to be covered at all times except when adding ingredients, withdrawing samples, transferring the contents, or making visual inspection when such activities cannot be carried out with the cover in place. The same requirements have been extended to mix equipment at facilities using at least 130 Mg/yr of VOC that are associated with coating operations without concurrent construction of a control device. Specifications for the covers are the same as those listed under § 60.743(c)(1) for mix equipment serving coating operations that use at least 130 Mg/yr. The cost of compliance with the revised standard will be less than that associated with the use of covers and conservation vents, which were cost effective under the proposed standard. This is because the cost of covers is expected to be included in the purchase price of new equipment, so that there is no incremental cost associated with the emission reduction.

D. Control Costs

One commenter claimed that the cost of totally enclosing print blanket coating equipment was seriously underestimated. According to the commenter, the nature of these operations requires constant operator access to the coater; therefore, a small enclosure immediately around the coating application/flashoff area cannot be used. The commenter further stated that a total room enclosure is infeasible for existing plants because there are typically multiple lines in a single large room with many openings and ventilation systems. The remaining option is to enclose the equipment within a smaller room of sufficient size to allow the constant presence and mobility of equipment operators. The commenter stated that, for worker safety, the concentration of solvent within this enclosure must be limited to 100 parts per million by volume and that the only option for achieving this low solvent concentration would be to flush high volumes of air through the enclosure.

The commenter presented an analysis of the costs and cost effectiveness of this approach. The commenter's analysis was based on the assumption that the only way to protect workers within a total enclosure is to dilute the emissions to the level considered safe for personnel. The resulting airflow rate required an entirely new carbon adsorption system at a cost of $2.5 million to control the emissions. The capital cost of this system, coupled with the high operating costs associated with maintaining a high removal efficiency from such a dilute SLA steam, resulted in an unreasonable cost-effectiveness value.

The EPA believes that the commenter's assumption is unrealistic and erroneous. In practice, localized pickup points (hoods or other enclosures) should be placed within a total enclosure to both protect any workers that must be inside and reduce the ventilation rate to a level such that the air from the enclosure can be used as makeup air in the drying oven. Thus, a new carbon adsorption system would not be required, and the composition of the SLA stream ducted to the control device would be similar to that assumed in EPA's analyses.

The analysis presented by the commenter was reworked using more realistic assumptions. Using the commenter's values for annual solvent use, electricity and stream costs, and the value of reclaimed solvent and the factors from EPA's original analysis for adsorber steam and electricity demand, the cost effectiveness of moving from the source's current control level to the level required by the standards is less than $200 per ton of additional VOC recovered. The EPA considers this to be a reasonable value. Thus, EPA believes that the costs associated with totally enclosing equipment such as that operated by the commenter were not underestimated.

E. Compliance Provisions

One commenter sought confirmation that under the proposed regulations compliance could be demonstrated with an "approved" room enclosure around the coating equipment and data that indicate proper operation of collecting equipment. The commenter's interpretation is that the design of the room enclosure will be approved by EPA on a case-by-case basis and that the major requirement for approval is that the room be under negative pressure and the exhaust which produces this negative pressure be vented to a 95 percent efficient control device. Data to prove proper operation of the control device would be taken from continuous recordings of the pollutant concentration in the gas vented from the carbon beds.

The final standards have been revised to clarify that the use of certain equipment, i.e., a total enclosure and a 95 percent efficient control device is available as an alternative standard to the 90 percent emission reduction standard. In other words, the owner or operator may choose to comply with either the emission reduction standard or the alternative standard. The EPA also has revised the compliance provisions to include specifications for a total enclosure. Case-by-case approval by the Administrator is not required if these specifications are met. After the initial determination of compliance, an approved parameter (such as fan amperage or duct flow rates) shall be monitored to demonstrate proper operation of the vapor capture system. Also, the control device must be monitored in accordance with the same provisions that apply when the two-part gaseous emissions test is used to demonstrate compliance. If the control device is a carbon adsorber, monitoring of the pollutant concentration in either the control device outlet stream or both inlet and outlet streams is required.

In addition, the compliance provisions for coating operations meeting the emission reduction standard have been clarified and revised since proposal. In the final standards, one method of demonstrating compliance is to perform a two-part gaseous emissions test to measure both capture efficiency and control device efficiency. Compliance is demonstrated if the product of these two efficiencies is equal to or greater than 0.90. This compliance method is available to all affected facilities. An alternative to performing the gaseous emissions tests is performing a liquid-liquid material balance. However, this compliance provision has limited applicability. A liquid-liquid material balance can only be used when a single coating operation is vented to a dedicated control device (i.e., the control device may not be used to control emissions from any other emission source, including mix equipment.) This compliance provision is most likely to be applicable for facilities with mix equipment that is not required to be vented to the control device. The liquid-liquid material balance compliance provisions include two options. The first option requires that a liquid-liquid material balance be performed for each nominal 1-month period. When using this option, no monitoring is required beyond that necessary to perform the material balance. The second option, which has been added since proposal, requires performing a one-time material balance over 3 to 7 days followed by continuous monitoring. The number of days for the performance test is selected by the operator and shall provide data that represent the plant's typical coating practices. The monitoring requirements are the same as those specified for the two-part gaseous emissions test and alternative standard. This second option may be attractive for facilities that cannot or do not want to conduct the continuous, detailed monthly liquid material balance measurements that are required for an accurate balance (e.g., VOC applied at the coater, retained VOC [optional], VOC waste losses).

F. Test Methods and Monitoring

One commenter stated that the 93 percent reduction required of coating operations will be unattainable because of the inherent vagaries of the parameters that must be measured to perform the liquid material balance compliance test. The commenter noted that the method requires measurement techniques that are not currently used. The commenter also stated that the measurement techniques and formula for the control device efficiency in the gas balance compliance test are realistic but that the formula for capture efficiency appears to assume that all uncontrolled solvent vapors will be discharged through a measurable point and that there will be no "stray" fugitive emissions.

The EPA acknowledges that short-term variations in process conditions could affect a facility's ability to perform the measurements required to demonstrate compliance in the short term by means of a liquid material balance. For this reason, a relatively long averaging time (in this case, 1 month) is available to allow for a representative variety of coatings and products, as well as to reduce the impact of short-term variations due to process upsets, solvent spills, and variable amounts of solvent in use in the process. Facilities should already keep at least some of the required records as part of normal business practices and should be able to negotiate any specific problems faced by an individual facility with the enforcing agency. As stated in section E, facilities that find the recordkeeping and measurements burdensome may opt to conduct the short-term liquid balance or gas-phase test to demonstrate compliance. In any case, the alternative standard, use of a total enclosure and 95 percent efficient control device, is available to facilities that do not wish to perform the testing and measurements associated with the capture portion of the emission reduction standard. Because EPA has determined that facilities can conduct the measurements required for a liquid material balance and because several alternatives are available, the month-long liquid material balance has been retained in the final standards.

In response to the commenter's other concern, it appears that the commenter has misinterpreted the requirements of the gaseous emissions compliance test. The standard requires (not assumes) that all uncontrolled VOC emissions, including solvent vapors, will be passed through stacks suitable for measurement. To carry out the compliance test, the source must ensure that all VOC emissions will either be directed to the control device or be measured at the exit stack of a temporary enclosure or at all room exhaust points. In other words, there should be no "stray" fugitive emissions that are not accounted for in the compliance test.

One commenter recommended that the standards include a plant-wide VOC recovery of 85 percent as an alternative method of demonstrating compliance and that this is justified because of its simplicity, low expense, and effectiveness. The commenter said that the standards regulate some processes at different levels and leave other emissions, such as those from storage, cleaning, and transfers, unregulated. The commenter believes that enforcement officers would prefer a plant-wide material balance and said that enforcement officers routinely ask for this information along with the data required by a particular standard. According to the commenter, the solvent disbursed to the plant can be readily measured by metering withdrawals from the solvent tanks. Also, solvent purchases, which are always measured accurately, are a direct measure of emissions bcause recovered solvent is replaced into inventory. Thus, the plant's VOC recovery efficiency can be calculated as the difference between VOC used and VOC (including solvent) purchased, divided by VOC used. Because some emissions in the plant would be unregulated, the commenter concluded that the standards assume and accept a plant-wide recovery of less than 93 percent. The commenter suggested that EPA determine an appropriate recovery level under the final standard. Using several years of data from a modern facility that nearly conforms with the standard, the commenter concluded that a reasonable plant-wide recovery level for a new plant designed to comply with the standards would be 85 percent.

The option of demonstrating compliance using a plant-wide material balance has not been incorporated into the final standards. Section 111 of the Clean Air Act requires that the standard be based on BDT. Compliance methods must demonstrate that the affected facility meets the control efficiency set by BDT. If a plant-wide material balance were used to demonstrate compliance for polymeric coating operations, a plant-wide control efficiency that ensures 90 (formerly 93) percent control of VOC emissions from an affected coating operation(s) would be required. Without extensive testing to apportion emissions from all VOC sources in the plant, a plant-wide material balance demonstrating less than 90 percent control does not ensure that the affected facility initially achieves 90 percent control or maintains 90 percent control over each month of operation.

It is not feasible to select a plant-wide VOC recovery value because of the wide range of potential emission points that differ from plant to plant. These include existing coating operations and mix equipment, solvent storage tanks, and cleanup operations. With the variation in emissions from such sources, it is not possible to select a single plant-wide recovery efficiency value that would reflect BDT, yet be achievable in all cases. Even if such a level were established, it would be impossible to tell whether the affected facilities within the plant were in compliance with the standards applicable to them individually. For these reasons, a plant-wide material balance has not been added to the standards as an alternative method of demonstrating compliance.

One commenter noted the unreliability and the expense of maintaining a continuous monitoring device for a carbon adsorber. The commenter stated that these monitors work well for short-term measurements but are not reliable for continuous measurements because the high water content of the carbon adsorber exhaust immediately after desorption damages the monitors. Thus, the industry may have difficulty maintaining continuous monitoring over the long term as required in the proposed regulation.

The EPA must have some means to determine whether proper carbon adsorber operation and maintenance practices are being carried out. The monitoring of organic compounds is the only parameter that has been identified that adequately relates to adsorber performance. Without these monitors, sources are unable to detect when they may be operating out of compliance. Tests on existing systems show that the lack of proper monitoring is a major cause of poor performance of carbon

adsorber systems. Discussions with carbon adsorber experts indicated that continuous monitors are available that are reliable when the proper calibration and maintenance procedures are used.

G. Wording of the Regulation

One commenter recommended converting all references to m^3 to pounds. This would be consistent with the units normally used by the industry for recordkeeping, solvent purchases, and pollution control system and equipment specifications.

Consistent with U.S. government policy, EPA has chosen the International System of Units as the format for regulations. However, EPA has revised all references in the final standards of m^3 to Mg to be consistent with the mass reporting basis typically used by industry and enforcing agencies. Reporting emissions and VOC usage rates on a mass basis rather than a volume basis also avoids the need to select average or typical densities of materials when reporting general values.

One commenter suggested that the volumetric flow rate be stated on a wet basis rather than a dry basis because, according to a contact at EPA, Method 25A gives results in parts per million by volume on a wet basis.

The commenter is correct. Method 25A gives results in terms of parts per million by volume on a wet basis; therefore, the volumetric flow rate also should be stated on a wet basis when the method is used. The final standard has been corrected. However, volumetric flow rates used in conjunction with Method 25 concentration measurements are to be expressed in dry standard cubic meters per hour.

One commenter stated that, for consistency with other NSPS and State regulations, coating mix preparation equipment should not be included in the definition for a coating line and that the term "coating line" was unnecessary since "coating operations" and "coating mix preparation equipment" are described. The commenter suggested changing all references to "coating operations" to "coating lines" since these two terms, by his definition, are synonymous.

In the proposed standards, coating line is defined as "the coating operation(s) and coating mix preparation equipment that service the coating operation(s)." According to the commenter, the term coating line is commonly used interchangeably with coating operation. To avoid confusion, the term "coating line" is not used in the final standard. The term "coating operation" has been retained in order to maintain consistency with the proposal BID and preamble.

One commenter recommended eliminating references to baking, curing, and polymerizing from the definition for drying oven. Although the preamble makes clear that the curing oven is not covered by the standard, the proposed definition for "drying oven" suggests that the curing oven is included.

The definition of drying oven has been changed to "a chamber within which heat is used to dry a surface coating; drying may be the only process or one of multiple processes performed in the chamber." By eliminating references to baking, curing, and polymerizing, this revised definition makes it clear that the standard does not apply to chambers in which drying is not performed. The definition also makes it clear that the standard does apply to any chamber within which drying is performed, regardless of the other processes performed in the chamber. This change is consistent with the fact that cure volatiles resulting from separate curing ovens are expected to be minimal in this industry, or to occur offsite, and thus, are not available for control.

One commenter recommended changing the definition for solvent used from "the amount of solvent delivered to the coating mix preparation equipment of the affected facility" to "the net quantity consumed in the coating operation line." According to the commenter, coating mixes are typically prepared in greater quantities than required for a specific production run. The excess coating may be recycled, which would result in double counting, or disposed as a waste material.

"Solvent used" was defined at proposal as the amount of solvent delivered to the coating mix preparation equipment because: (1) This is the simplest and most direct measurement point, and (2) it reflects the quantity used in determining the cutoff. The commenter's suggested definition of "solvent used" would make accurate measurement considerably more difficult because sampling and analysis of the applied coating would be required. Also, the commenter's suggested definition does not take into account VOC emitted during mixing, which were included in the computation of the solvent-use cutoff. The cutoff was computed by determining the minimum quantity of applied VOC that could be cost-effectively controlled and then adjusting this volume to account for VOC emitted before the coating reaches the applicator of the affected coating operation.

The proposed definition was not intended to result in double counting. However, it may require the owner or operator to keep careful records of VOC use in cases where prepared coatings are not used immediately.

To clarify the meaning of this term, the definition has been changed to "VOC used." The amount of "VOC used" should be computed as the sum of: (1) The VOC delivered to the mix equipment from storage, (2) any VOC added after initial formulation is complete (e.g., dilution solvent added at the coating operation), and (3) the VOC content of any ingredients prepared off the plant site that are used in the preparation of coatings. When excess coating is recycled for use in a later coating run, the VOC it contains will not be counted a second time. When premixed coatings or ingredients are used in the formulation of coatings, only the VOC content of coatings prepared off the plant site must be included in the volume of VOC used. Should a source reclaim the VOC from excess coatings, the VOC will enter the recovery system just as if it were applied to a substrate. When this reclaimed VOC is reused, it will be properly counted toward the volume of VOC used. It is true that coatings disposed as waste materials were not considered when the annual VOC-use cutoff was calculated. However, EPA believes that such wastes should be minimized. Thus, to provide an incentive to minimize these wastes, no change has been made to this aspect of the definition.

A change has been made to the proposed definition to account for facilities that purchase premixed coatings or other ingredients that contain VOC. The new definition of "VOC used" reads "the amount of VOC delivered to the coating mix preparation equipment of the affected facility (including any contained in premixed coatings or other ingredients prepered off the plant site) for the formulation of polymeric coatings to be applied to supporting substrates at the coating operation, plus any VOC added after initial formulation is complete (e.g., dilution solvent added at the coating operation). If premixed coatings that require no mixing at the plant site are used, "VOC used" means the amount of VOC delivered to the coating applicator(s) of the affected facility.

A commenter suggested redefining the symbol M_r used in Equation 1 (as proposed) as the total VOC recovered before purification because the proposed definition does not allow for VOC losses during separation/purification.

As proposed, the definition of "M_r" does not specify whether the recovered

VOC is to be measured before or after separation/purification. The 93 percent recovery efficiency required to demonstrate compliance using Equation 1 was determined considering the total VOC recovered by the carbon adsorption system. It did not include any losses from separation/purification. Therefore, EPA requires that "M_r," be measured after adsorption. There may be cases, however, where it is more convenient to measure "M_r," after separation/purification. Thus, a measurement point for "M_r," has not been specified, but it is to be established when the compliance procedures are approved. This is explained in § 60.743(a)(3)(vi), which has been added to the compliance provisions.

A commenter suggested redefining the term RS_i in Equation 1 (as proposed) to include all VOC, not just the solvent, retained on the substrate. A portion of the VOC in some coating formulations is monomer that is retained in the substrate either as free monomer or polymer. The suggested definition change would make it clear that any monomer retained in the substrate would be included in the term RS_i. Another commenter recommended that the provisions of justifying the need for retained solvent be broadened to include economic and technical feasibility concerns.

In response to the commenter's suggestion, the definition of RS_i has been changed to "the total mass (kg) of VOC retained on the coated substrate after oven drying or contained in waste coating for a given combination of coating and substrate." Without this change, coatings that release reaction by-products when tested by Method 24 would indicate the presence of some VOC which may not be available for recovery by the VOC recovery system unless the coating is exposed to a similar temperature within the oven. If the amount of monomer retained on the substrate is significant, this may affect a source's ability to demonstrate compliance. By changing "solvent" to VOC in the definition of RS_i enables the source to account for the amount of VOC retained on the substrate. The source is responsible for demonstrating the quantity retained on the substrate.

In response to the other commenter, EPA notes that the intent of the retained solvent (now VOC) provision as proposed was to ensure that all facilities take steps to minimize uncontrolled emissions from retained VOC whenever possible. The exemption for retained VOC was written to permit the facility as much flexibility as possible in demonstrating to the Administrator the level of, and need for, retained VOC. However, EPA has revised this requirement to minimize the burden on both enforcement and plant personnel. The revised requirement eliminates the need for the plant to justify the need for retained VOC if the measured value of RS_i is less than or equal to 6 percent by weight of the liquid VOC applied. A limited survey of the industry indicated that 6 percent is a common breakpoint in retained VOC values and would encompass the majority of plants reporting retained VOC. Plants reporting RS_i values above 6 percent by weight of the liquid VOC applied would still be required to demonstrate to the satisfaction of the Administrator that the retained VOC is required for product quality or to meet product specifications. In all cases, plants would be required to submit for approval data on the specific measurement techniques used to determine RS_i.

VIII. Administrative

The docket is an organized and complete file of all the information considered by EPA in the development of this rulemaking. The docket is a dynamic file because material is added throughout the rulemaking development. The docketing system is intended to allow members of the public and industries involved to identify and locate documents readily so that they can intelligently and effectively participate in the rulemaking process. Along with the statement of basis and purpose of the proposed and promulgated standards and EPA responses to significant comments, the contents of the docket, except for interagency review materials, will serve as the record in case of judicial review (section 307(d)(7)(A)).

The effective date of this regulation is September 11, 1989. Section 111 of the Clean Air Act provides that standards of performance or revisions thereof become effective upon promulgation and apply to affected facilities, the construction or modification of which was commenced after April 30, 1987, the date of proposal.

As prescribed by section 111, the promulgation of these standards is based on the Administrator's determination (40 CFR 60.16, 44 FR 4922, dated August 21, 1979) that industrial fabric coating contributes significantly to air pollution which may reasonably be anticipated to endanger public health or welfare. The polymeric coating of supporting substrates category includes the fabric coating category. In accordance with Section 117 of the Act, publication of these promulgated standards was preceded by consultation with appropriate advisory committees, independent experts, and Federal departments and agencies.

This regulation will be reviewed 4 years from the date of promulgation as required by the Clean Air Act. This review will include an assessment of such factors as the need for integration with other programs, the existence of alternative methods, enforceability, improvements in emission control technology, and reporting requirements.

Section 317 of the Clean Air Act requires the Administrator to prepare an economic impact assessment for any new source standard of performance promulgated under section 111(b) of the Act. An economic impact assessment was prepared for this regulation and for other regulatory alternatives. All aspects of the assessment were considered in the formulation of the standards to ensure that cost was carefully considered in determining BDT. The economic impact assessment is included in the BID for the proposed standards.

The information collection requirements contained in this rule have been approved by the Office of Management and Budget (OMB) under the provisions of the Paperwork Reduction Act, 44 U.S.C. 3501 *et seq.* and have been assigned OMB control No. 2060–0181.

Public reporting burden for this collection of information is estimated to average 3 hours per response, including time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Initial performance testing is estimated to average 100 hours per occurrence.

Send comments regarding the burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to Chief, Information Policy Branch, PM–223, U.S. Environmental Protection Agency, 401 M St., SW., Washington, DC 20460; and to the Office of Information and Regulatory Affairs, Paperwork Reduction Project (2060–0181), Office of Management and Budget, Washington, DC 20503, marked "Attention: Desk Officer for EPA."

Under Executive Order 12291, EPA is required to judge whether a regulation is a "major rule" and, therefore, subject to the requirements of a regulatory impact analysis (RIA). The EPA has determined that this regulation would result in none of the adverse economic effects set forth in section 1 of the Order as grounds for finding a regulation to be a "major rule." The cost increases resulting from the

NSPS will be small and will have an insignificant impact on the industry. The EPA has concluded, therefore, that this regulation is not a "major rule" under Executive Order 12291.

The Regulatory Flexibility Act of 1980 requires the identification of potentially adverse impacts of Federal regulations upon small business entities. The Act specifically requires the completion of a Regulatory Flexibility Analysis in those instances where small business impacts are possible. Because these standards impose no adverse economic impacts, a Regulatory Flexibility Analysis has not been conducted.

Pursuant to the provisions of 5 U.S.C. 605(b), I hereby certify that this rule will not have a significant economic impact on a substantial number of small entities.

List of Subjects in 40 CFR Part 60

Air pollution control, Intergovernmental relations, Incorporation by reference, Polymeric coating of supporting substrates (SIC Codes 2295, 2296, 2394, 3041, 3069, and 3293), Reporting and recordkeeping requirements.

Dated: August 28, 1989.

F. Henry Habicht,

Acting Administrator.

40 CFR part 60 is amended as follows:

PART 60—[AMENDED]

1. The authority citation for part 60 continues to read as follows:

Authority: 42 U.S.C. 7401, 7411, 7414, 7416, 7601.

2. By adding a new subpart VVV to read as follows:

Subpart VVV—Standards of Performance for Polymeric Coating of Supporting Substrates Facilities

Sec.

60.740 Applicability and designation of affected facility.
60.741 Definitions, symbols, and cross-reference tables.
60.742 Standards for violatile organic compounds.
60.743 Compliance provisions.
60.744 Monitoring requirements.
60.745 Test methods and procedures.
60.746 Permission to use alternative means of emission limitation.
60.747 Reporting and recordkeeping requirements.
60.748 Delegation of authority.

Subpart VVV—Standards of Performance for Polymeric Coating of Supporting Substrates Facilities

§ 60.740 Applicability and designation of affected facility.

(a) The affected facility to which the provisions of this subpart apply is each coating operation and any onsite coating mix preparation equipment used to prepare coatings for the polymeric coating of supporting substrates.

(b) Any affected facility for which the amount of VOC used is less than 95 Mg per 12-month period is subject only to the requirements of § 60.744(b), § 60.747(b), and § 60.747(c). If the amount of VOC used is 95 Mg or greater per 12-month period, the facility is subject to all the requirements of this subpart. Once a facility has become subject to the requirements of this subpart, it will remain subject to those requirements regardless of changes in annual VOC use.

(c) This subpart applies to any affected facility for which construction, modification, or reconstruction begins after April 30, 1987, except for the facilities specified in paragraph (d) of this section.

(d) This subpart does not apply to the following:

(1) Coating mix preparation equipment used to manufacture coatings at one plant for shipment to another plant for use in an affected facility (coating operation) or for sale to another company for use in an affected facility (coating operation);

(2) Coating mix preparation equipment or coating operations during those times they are used to prepare or apply waterborne coatings so long as the VOC content of the coating does not exceed 9 percent by weight of the volatile fraction;

(3) Web coating operations that print an image on the surface of the substrate or any coating applied on the same printing line that applies the image.

§ 60.741 Definitions, symbols, and cross-reference tables.

(a) All terms used in this subpart not defined below have the meaning given to them in the Act and in subpart A of this part.

Coating applicator means any apparatus used to apply a coating to a continuous substrate.

Coating mix preparation equipment means all mixing vessels in which solvent and other materials are blended to prepare polymeric coatings.

Coating operation means any coating applicator(s), flashoff area(s), and drying oven(s) located between a substrate unwind station and a rewind station that coats a continuous web to produce a substrate with a polymeric coating. Should the coating process not employ a rewind station, the end of the coating operation is after the last drying oven in the process.

Common emission control device means a device controlling emissions from an affected coating operation as well as from any other emission source.

Concurrent means the period of time in which construction of an emission control device serving an affected facility is commenced or completed, beginning 6 months prior to the date that construction of the affected facility commences and ending 2 years after the date that construction of the affected facility is completed.

Control device means any apparatus that reduces the quantity of a pollutant emitted to the air.

Cover means, with respect to coating mix preparation equipment, a device that fits over the equipment opening to prevent emissions of volatile organic compounds (VOC) from escaping.

Drying oven means a chamber within which heat is used to dry a surface coating; drying may be the only process or one of multiple processes performed in the chamber.

Equivalent diameter means four times the area of an opening divided by its perimeter.

Flashoff area means the portion of a coating operation between the coating applicator and the drying oven where VOC begins to evaporate from the coated substrate.

Natural draft opening means any opening in a room, building, or total enclosure that remains open during operation of the facility and that is not connected to a duct in which a fan is installed. The rate and direction of the natural draft across such an opening is a consequence of the difference in pressures on either side of the wall or barrier containing the opening.

Nominal 1-month period means a calendar month or, if established prior to the performance test in a statement submitted with notification of anticipated startup pursuant to 40 CFR 60.7(a)(2), a similar monthly time period (e.g., 30-day month or accounting month).

Onsite coating mix preparation equipment means those pieces of coating mix preparation equipment located at the same plant as the coating operation they serve.

Polymeric coating of supporting substrates means a web coating process that applies elastomers, polymers, or prepolymers to a supporting web other than paper, plastic film, metallic foil, or metal coil.

Substrate means the surface to which a coating is applied.

Temporary enclosure means a total enclosure that is constructed for the sole purpose of measuring the fugitive VOC emissions from an affected facility.

Total enclosure means a structure that is constructed around a source of emissions and operated so that all VOC emissions are collected and exhausted through a stack or duct. With a total enclosure, there will be no fugitive emissions, only stack emissions. The drying oven itself may be part of the total enclosure.

Vapor capture system means any device or combination of devices designed to contain, collect, and route solvent vapors released from the coating mix preparation equipment or coating operation.

VOC in the applied coating means the product of Method 24 VOC analyses or formulation data (if those data are demonstrated to be equivalent to Method 24 results) and the total volume of coating fed to the coating applicator.

VOC used means the amount of VOC delivered to the coating mix preparation equipment of the affected facility (including any contained in premixed coatings or other coating ingredients prepared off the plant site) for the formulation of polymeric coatings to be applied to supporting substrates at the coating operation, plus any solvent added after initial formulation is complete (e.g., dilution solvent added at the coating operation). If premixed coatings that require no mixing at the plant site are used, "VOC used" means the amount of VOC delivered to the coating applicator(s) of the affected facility.

Volatile organic compounds or *VOC* means any organic compounds that participate in atmospheric photochemical reactions; or that are measured by a reference method, an equivalent method, an alternative method, or that are determined by procedures specified under any subpart.

Waterborne coating means a coating which contains more than 5 weight percent water in its volatile fraction.

Web coating means the coating of products, such as fabric, paper, plastic film, metallic foil, metal coil, cord, and yarn, that are flexible enough to be unrolled from a large roll; and coated as a continuous substrate by methods including, but not limited to, knife coating, roll coating, dip coating, impregnation, rotogravure, and extrusion.

(b) The nomenclature used in this subpart has the following meaning:

"A_k" means the area of each natural draft opening (k) in a total enclosure, in square meters.

"C_{aj}" means the concentration of VOC in each gas stream (j) exiting the emission control device, in parts per million by volume.

"C_{bi}" means the concentration of VOC in each gas stream (i) entering the emission control device, in parts per million by volume.

"C_{di}" means the concentration of VOC in each gas stream (i) entering the emission control device from the affected coating operation, in parts per million by volume.

"C_{fk}" means the concentration of VOC in each uncontrolled gas stream (k) emitted directly to the atmosphere from the affected coating operation, in parts per million by volume.

"C_{gv}" means the concentration of VOC in the gas stream entering each individual carbon adsorber vessel (v), in parts per million by volume. For purposes of calculating the efficiency of the individual adsorber vessel, C_{gv} may be measured in the carbon adsorption system's common inlet duct prior to the branching of individual inlet ducts.

"C_{hv}" means the concentration of VOC in the gas stream exiting each individual carbon adsorber vessel (v), in parts per million by volume.

"E" means the control device efficiency achieved for the duration of the emission test (expressed as a fraction).

"F" means the VOC emission capture efficiency of the vapor capture system achieved for the duration of the emission test (expressed as a fraction).

"FV" means the average inward face velocity across all natural draft openings in a total enclosure, in meters per hour.

"H_v" means the individual carbon adsorber vessel (v) efficiency achieved for the duration of the emission test (expressed as a fraction).

"H_{sys}" means the carbon adsorption system efficiency calculated when each adsorber vessel has an individual exhaust stack.

"M_{ci}" means the total mass (kg) of each coating (i) applied to the substrate at an affected coating operation during a nominal 1-month period as determined from facility records.

"M_r" means the total mass (kg) of VOC recovered for a nominal 1-month period.

"Q_{aj}" means the volumetric flow rate of each gas stream (j) exiting the emission control device, in dry standard cubic meters per hour when Method 18 or 25 is used to measure VOC concentration or in standard cubic meters per hour (wet basis) when Method 25A is used to measure VOC concentration.

"Q_{bi}" means the volumetric flow rate of each gas stream (i) entering the emission control device, in dry standard cubic meters per hour when Method 18 or 25 is used to measure VOC concentration or in standard cubic meters per hour (wet basis) when Method 25A is used to measure VOC concentration.

"Q_{di}" means the volumetric flow rate of each gas stream (i) entering the emission control device from the affected coating operation, in dry standard cubic meters per hour when Method 18 or 25 is used to measure VOC concentration or in standard cubic meters per hour (wet basis) when Method 25A is used to measure VOC concentration.

"Q_{fk}" means the volumetric flow rate of each uncontrolled gas stream (k) emitted directly to the atmosphere from the affected coating operation, in dry standard cubic meters per hour when Method 18 or 25 is used to measure VOC concentration or in standard cubic meters per hour (wet basis) when Method 25A is used to measure VOC concentration.

"Q_{gv}" means the volumetric flow rate of the gas stream entering each individual carbon adsorber vessel (v), in dry standard cubic meters per hour when Method 18 or 25 is used to measure VOC concentration or in standard cubic meters per hour (wet basis) when Method 25A is used to measure VOC concentration. For purposes of calculating the efficiency of the individual adsorber vessel, the value of Q_{gv} can be assumed to equal the value of Q_{hv} measured for that adsorber vessel.

"Q_{hv}" means the volumetric flow rate of the gas stream exiting each individual carbon adsorber vessel (v), in dry standard cubic meters per hour when Method 18 or 25 is used to measure VOC concentration or in standard cubic meters per hour (wet basis) when Method 25A is used to measure VOC concentration.

"Q_{ini}" means the volumetric flow rate of each gas stream (i) entering the total enclosure through a forced makeup air duct, in standard cubic meters per hour (wet basis).

"Q_{outj}" means the volumetric flow rate of each gas stream (j) exiting the total enclosure through an exhaust duct or hood, in standard cubic meters per hour (wet basis).

"R" means the overall VOC emission reduction achieved for the duration of the emission test (expressed as a fraction).

"RS_i" means the total mass (kg) of VOC retained on the coated substrate after oven drying or contained in waste coating for a given combination of coating and substrate.

"W_{oi}" means the weight fraction of VOC in each coating (i) applied at an affected coating operation during a nominal 1-month period as determined by Method 24.

(c) Tables 1a and 1b present a cross reference of the affected facility status and the relevant section(s) of the regulation.

TABLE 1A.—CROSS REFERENCE[a] [b]

Status	Standard	Compliance provisions § 60.743
A. Coating operation:		
1. If projected VOC use is <95 Mg/yr.	§ 60.740(b): Monitor VOC use	Not applicable.
2. If projected VOC use is >95 Mg/yr.	§ 60.742(b)(1): Reduce VOC emissions to the atmosphere from the coating operation by at least 90 percent; or. § 60.742(b)(2): Install, operate, and maintain a total enclosure around the coating operation and vent the captured VOC emissions from the total enclosure to a control device that is at least 95 percent efficient.	(a)(1), (a)(2), (a)(3), or (a)(4); (b), (e).
B. Coating mix preparation equipment:		
1. If projected VOC use is >95 Mg/yr but <130 Mg/yr.	§ 60.742(c)(3): (i) Install, operate, and maintain a cover on each piece of affected equipment; or (ii) install, operate, and maintain a cover on each piece of affected equipment and vent VOC emissions to a VOC control device.	(d), (e).
2. If projected VOC use is > 130 Mg/yr but there is no concurrent construction of a control device.	§ 60.742(c)(2): (i) Install, operate, and maintain a cover on each piece of affected equipment; or (ii) install, operate, and maintain a cover on each piece of affected equipment and vent VOC emissions to a VOC control device.	(d).
3. If projected VOC use is >130 Mg/yr and there is concurrent construction of a control device.	§ 60.742(c)(1): Install, operate, and maintain a cover on each piece of affected equipment and vent VOC emissions from the covered equipment to a 95 percent efficient control device while preparation of the coating is taking place within the vessel.	(c), (e).

[a] This table is presented for the convenience of the user and is not intended to supercede the language of the regulation. For the details of the requirements, refer to the text of the regulation.

[b] Refer to Table 1b to determine which subsections of §§ 60.744, 60.745, and 60.747 correspond to each compliance provision (§ 60.743).

TABLE 1B.—CROSS REFERENCE

Compliance provisions—§ 60.743	Test methods—§ 60.745	Category/equipment[a]	Monitoring requirements—§ 60.744	Reporting and recordkeeping requirements—§ 60.747
A. Coating operation:				
(a)(1)—Gaseous emission test for coating operations not using carbon adsorption beds with individual exhausts.	(b)–(g)	General, CA, CO, TI, CI, PE, TE.	(a), (i), (j), (k), (c)(1), (d), (e), (f), (g).	(a), (d)(7), (f), (g), (h), (d)(1)(i), (d)(2)(i), (d)(3), (d)(4), (d)(5), (d)(6).
(a)(2)—Gaseous emission test for coating operations using carbon adsorption beds with individual exhausts.	(b)–(g)	General, CA, PE, TE	(a), (i), (j), (k), (c)(2), (g)	(a), (d)(7), (f), (g), (h), (d)(1)(ii), (d)(2)(ii), (d)(6).
(a)(3)—Monthly liquid material balance—can be used only when a VOC recovery device controls only those emissions from one affected coating operation.	(a)	VOC recovery	(i), (k)	(e), (f), (g), (h).
(a)(4)—Short-term (3 to 7 day) liquid material balance—may be used as an alternative to (a)(3).	(a)	General, CA, CO, PE, TE	(a), (i), (j), (k), (c)(1), (c)(2), (d), (g).	(a), (d)(7), (f), (g), (h), (d)(1), (d)(2), (d)(3), (d)(6).
(b)—Alternative standard for coating operation—demonstrate use of approved total enclosure and emissions vented to a 95 percent efficient control device.	(b)–(g)	General, CA, CO, TI, CI, PE, TE.	(a), (i), (j), (k), (c)(1), (c)(2), (d), (e), (f), (h).	(a), (d)(7), (f), (g), (h), (d)(1), (d)(2), (d)(3), (d)(4), (d)(5), (d)(6).
B. Coating mix preparation equipment:				
(c)—Standard for equipment servicing a coating operation with concurrent construction of a control device that uses at least 130 Mg/yr of VOC—demonstrate that covers meeting specifications are installed and used properly; procedures detailing proper use are posted; the mix equipment is vented to a 95 percent efficient control device.	(b)–(g)	General, CA, TI, CI	(a), (i), (j), (k), (c)(1), (c)(2), (e), (f).	(a), (d)(7), (f), (g), (h), (d)(1), (d)(2), (d)(4), (d)(5).
(d)—Standard for equipment servicing a coating operation that does not have concurrent construction of a control device but uses at least 130 Mg/yr of VOC or for equipment servicing a coating operation that uses <130 Mg/yr but >95 Mg/yr of VOC—demonstrate that covers meeting specifications are installed and used properly; procedures detailing proper use are posted; the mix equipment is vented to a control device (optional).	No other requirements apply.			

[a] CA=carbon adsorber; CO=condenser; TI=thermal incinerator; CI=catalytic incinerator; PE=partial enclosure; TE=total enclosure.

§ 60.742 Standards for volatile organic compounds.

(a) Each owner or operator of an affected facility that is subject to the requirements of this subpart shall comply with the emissions limitations set forth in this section on and after the date on which the initial performance test required by § 60.8 is completed, but not later than 60 days after achieving the maximum production rate at which the affected facility will be operated or 180 days after initial startup, whichever date comes first.

(b) For the coating operation, each owner or operator of an affected facility shall either:

(1) Reduce VOC emissions to the atmosphere from the coating operation by at least 90 percent ("emission reduction" standard); or

(2) Install, operate, and maintain a total enclosure around the coating operation and vent the captured VOC emissions from the total enclosure to a control device that is at least 95 percent effecient (alternative standard).

(c) For the onsite coating mix preparation equipment of an affected facility, the owner or operator shall comply with the following requirements, as applicable:

(1) For an affected facility that has concurrent construction of a control device and uses at least 130 Mg of VOC per 12-month period, the owner or operator shall install, operate, and maintain a cover on each piece of affected coating mix preparation equipment and vent VOC emissions from the covered mix equipment to a 95 percent efficient control device while preparation of the coating is taking place within the vessel.

(2) For an affected facility that does not have concurrent construction of a control device but uses at least 130 Mg of VOC per 12-month period, the owner or operator shall either:

(i) Install, operate, and maintain a cover on each piece of affected coating mix preparation equipment; or

(ii) Install, operate, and maintain a cover on each piece of affected coating mix preparation equipment and vent VOC emissions to a VOC control device.

(3) For an affected facility that uses at least 95 Mg but less than 130 Mg of VOC per 12-month period, the owner or operator shall either.

(i) Install, operate, and maintain a cover on each piece of affected coating mix preparation equipment; or

(ii) Install, operate, and maintain a cover on each piece of affected coating mix preparation equipment and vent VOC emissions to a VOC control device.

§ 60.743 Compliance provisions.

(a) To demonstrate compliance with the emission reduction standard for coating operations specified in § 60.742(b)(1), the owner or operator of the affected facility shall use one of the following methods.

(1) *Gaseous emission test for coating operations not using carbon adsorption beds with individual exhausts.* This method is applicable when the emissions from any affected coating operation are controlled by a control device other than a fixed-bed carbon adsorption system with individual exhaust stacks for each adsorber vessel. The owner or operator using this method shall comply with the following procedures:

(i) Construct the vapor capture system and control device so that all gaseous volumetric flow rates and total VOC emissions can be accurately determined by the applicable test methods and procedures specified in § 60.745(b) through (g);

(ii) Determine capture efficiency from the coating operation by capturing, venting, and measuring all VOC emissions from the coating operation. During a performance test, the owner or operator of an affected coating operation located in an area with other sources of VOC shall isolate the coating operation emissions from all other sources of VOC by one of the following methods:

(A) Build a temporary enclosure, as defined in § 60.741(a) and conforming to the requirements of § 60.743(b)(1), around the affected coating operation. The temporary enclosure must be constructed and ventilated (through stacks suitable for testing) so that it has minimal impact on performance of the capture system; or

(B) Shut down all other sources of VOC and continue to exhaust fugitive emissions from the affected coating operation through any building ventilation system and other room exhausts such as those on drying ovens. All such ventilation air must be vented through stacks suitable for testing because the VOC content in each must be determined.

(iii) Operate the emission control device with all emission sources connected and operating.

(iv) Determine the efficiency (E) of the control device by Equation 1:

$$E = \frac{\sum_{i=1}^{n} Q_{bi}C_{bi} - \sum_{j=1}^{n} Q_{aj}C_{aj}}{\sum_{i=1}^{n} Q_{bi}C_{bi}} \qquad \text{(Equation 1)}$$

(v) Determine the efficiency (F) of the vapor capture system by Equation 2:

$$F = \frac{\sum_{i=1}^{n} Q_{di}C_{di}}{\sum_{i=1}^{n} Q_{di}C_{di} + \sum_{k=1}^{p} Q_{fk}C_{fk}} \qquad \text{(Equation 2)}$$

(vi) For each affected coating operation subject to § 60.742(b)(1) (emission reduction standard for coating operations), compliance is demonstrated if the product of (E)x(F) is equal to or greater than 0.90.

(2) *Gaseous emission test for coating operations using carbon adsorption beds with individual exhausts.* This method is applicable when emissions from any affected coating operation are controlled by a fixed-bed carbon adsorption system with individual exhaust stacks for each adsorber vessel. The owner or operator using this method shall comply with the following procedures:

(i) Construct the vapor capture system and control device so that each volumetric flow rate and the total VOC emissions can be accurately determined by the applicable test methods and procedures specified in § 60.745 (b) through (g);

(ii) Assure that all VOC emissions from the coating operation are segregated from other VOC sources and that the emissions can be captured for measurement, as described in § 60.743(a)(1)(ii) (A) and (B);

(iii) Operate the emission control device with all emission sources connected and operating;

(iv) Determine the efficiency (H_v) of each individual adsorber vessel (v) using Equation 3:

$$H_v = \frac{Q_{gv}C_{gv} - Q_{hv}C_{hv}}{Q_{gv}C_{gv}} \qquad \text{(Equation 3)}$$

(v) Determine the efficiency of the carbon adsorption system (H_{sys}) by computing the average efficiency of the adsorber vessels as weighted by the volumetric flow rate (Q_{hv}) of each individual adsorber vessel (v) using Equation 4:

$$H_{sys} = \frac{\sum_{v=1}^{q} H_v Q_{hv}}{\sum_{v=1}^{q} Q_{hv}} \qquad \text{(Equation 4)}$$

(vi) Determine the efficiency (F) of the vapor capture system using Equation (2).

(vii) For each affected coating operation subject to § 60.742(b)(1) (emission reduction standard for coating operations), compliance is demonstrated if the product of (H_{sys})x(F) is equal to or greater than 0.90.

(3) *Monthly liquid material balance.* This method can be used only when a VOC recovery device controls only those emissions from one affected coating operation. It may not be used if the VOC recovery device controls emissions from any other VOC emission sources. When demonstrating compliance by this method, § 60.8(f) (Performance Tests) of this part does not apply. The owner or operator using this method shall comply with the following procedures to determine the VOC emission reduction for each nominal 1-month period:

(i) Measure the amount of coating applied at the coating applicator. This quantity shall be determined at a time and location in the process after all ingredients (including any dilution solvent) have been added to the coating, or appropriate adjustments shall be made to account for any ingredients added after the amount of coating has been determined;

(ii) Determine the VOC content of all coatings applied using the test method specified in § 60.745(a). This value shall be determined at a time and location in the process after all ingredients (including any dilution solvent) have been added to the coating, or appropriate adjustments shall be made to account for any ingredients added after the VOC content in the coating has been determined;

(iii) Install, calibrate, maintain, and operate, according to the manufacturer's specifications, a device that indicates the cumulative amount of VOC recovered by the control device over each nominal 1-month period. The device shall be certified by the manufacturer to be accurate to within ±2.0 percent;

(iv) Measure the amount of VOC recovered; and

(v) Calculate the overall VOC emission reduction (R) for each and every nominal 1-month period using Equation 5. Emissions during startups and shutdowns are to be included when determining R because startups and shutdowns are part of normal operation for this source category.

$$R = \frac{M_r}{\sum_{i=1}^{n} [W_{oi}M_{ci} - RS_i]} \qquad \text{(Equation 5)}$$

If the value of R is equal to or greater than 0.90, compliance with § 60.742(b)(1) is demonstrated.

(A) The value of RS_i is zero unless the owner or operator submits the following information to the Administrator for approval of a measured value of RS_i that is greater than zero but less than or equal to 6 percent by weight of the liquid VOC applied:

(*1*) Measurement techniques; and

(*2*) Documentation that the measured value of RS_l exceeds zero but is less than or equal to 6 percent by weight of the liquid VOC applied.

(B) For those facilities not subject to paragraph (a)(3)(v)(A) of this section, the value of RS_l is zero unless the owner or operator submits the following information to the Administrator for approval of a measured value of RS_l that is greater than 6 percent by weight of the liquid VOC applied.

(*1*) Measurement techniques;

(*2*) Documentation that the measured value of RS_l exceeds 6 percent by weight of the liquid VOC applied; and

(*3*) Either documentation of customer specifications requiring higher values or documentation that the desired properties of the product make it necessary for RS_l to exceed 6 percent by weight of the liquid VOC applied and that such properties cannot be achieved by other means.

(C) The measurement techniques of paragraphs (a)(3)(v)(A)(*1*) and (a)(3)(v)(B)(*1*) of this section shall be submitted to the Administrator for approval with the notification of anticipated startup required under § 60.7(a)(2).

(vi) The point at which M_r is to be measured shall be established when the compliance procedures are approved. The presumptive point of measurement shall be prior to separation/purification; a point after separation/purification may be adopted for enhanced convenience or accuracy.

(4) *Short-term liquid material balance.* This method may be used as an alternative to the monthly liquid material balance described in paragraph (a)(3) of this section. The owner or operator using this method shall comply with the following procedures to determine VOC emission reduction for a 3- to 7-day period and shall continuously monitor VOC emissions as specified in § 60.744.

(i) Use the procedures described in paragraphs (a)(3) (i) through (vi) of this section to determine the overall emission reduction, R. Compliance is demonstrated if the value of R is equal to or greater than 0.90.

(ii) The number of days for the performance test (3 to 7) is to be based on the affected facility's representative performance consistent with the requirements of § 60.8(c). Data demonstrating that the chosen test period is representative shall be submitted to the Administrator for approval with the notification of anticipated startup required under § 60.7(a)(2).

(b) Each owner or operator of an affected coating operation subject to the standard specified in § 60.742(b)(2) (alternative standard for coating operations) shall:

(1) Demonstrate that a total enclosure is installed. The total enclosure shall either be approved by the Administrator in accordance with the provisions of § 60.746, or meet the requirements in paragraphs (b)(1) (i) through (vi) of this section, as follows:

(i) The only openings in the enclosure are forced makeup air and exhaust ducts and natural draft openings such as those through which raw materials enter and exist the coating operation;

(ii) Total area of all natural draft openings does not exceed 5 percent of the total surface area of the total enclosure's walls, floor, and ceiling;

(iii) All access doors and windows are closed during normal operation of the enclosed coating operation, except for brief, occasional openings to accommodate process equipment adjustments. If such openings are frequent, or if the access door or window remains open for a significant amount of time during the process operation, it must be considered a natural draft opening. Access doors used routinely by workers to enter and exit the enclosed area shall be equipped with automatic closure devices;

(iv) Average inward face velocity (FV) across all natural draft openings is a minimum of 3,600 meters per hour as determined by the following procedures:

(A) Construct all forced makeup air ducts and all exhaust ducts so that the volumetric flow rate in each can be accurately determined by the test methods and procedures specified in § 60.745 (c) and (d). Volumetric flow rates shall be calculated without the adjustment normally made for moisture content; and

(B) Determine FV by Equation 6:

$$FV = \frac{\sum_{j=1}^{n} Q_{out\ j} - \sum_{i=1}^{p} Q_{in\ i}}{\sum_{k=1}^{g} A_k} \qquad \text{(Equation 6)}$$

(v) The air passing through all natural draft openings flows into the enclosure continuously. If FV is less than or equal to 9,000 meters per hour, the continuous inward airflow shall be verified by continuous observation using smoke tubes, streamers, tracer gases, or other means approved by the Administrator over the period that the volumetric flow rate tests required to determine FV are carried out. If FV is greater than 9,000 meters per hour, the direction of airflow thourgh the natural draft openings shall be presumed to be inward at all times without verification.

(vi) All sources of emissions within the enclosure shall be a minimum of four equivalent diameters away from each natural draft opening.

(2) Determine the control device efficiency using Equation (1) or Equations (3) and (4), as applicable, and the test methods and procedures specified in § 60.745 (b) through (g).

(3) Compliance is demonstrated if the installation of a total enclosure is demonstrated and the value of E determined from Equation (1) or the value of H_{avg} determined from Equations (3) and (4), as applicable, is equal to or greater than 0.95.

(c) To demonstrate compliance with § 60.742(c)(1) (standard for coating mix preparation equipment servicing a coating operation with concurrent construction of a control device that uses at least 130 Mg per year of VOC), each owner or operator of affected coating mix preparation equipment shall demonstrate that:

(1) Covers meeting the following specifications have been installed and are being used properly:

(i) Cover shall be closed at all times except when adding ingredients, withdrawing samples, transferring the contents, or making visual inspection when such activities cannot be carried out with cover in place. Such activities shall be carried out through ports of the minimum practical size;

(ii) Cover shall extend at least 2 centimeters beyond the outer rim of the opening or shall be attached to the rim;

(iii) Cover shall be of such design and construction that contact is maintained between cover and rim along the entire perimeter;

(iv) Any breach in the cover (such as a slit for insertion of a mixer shaft or port for addition of ingredients) shall be covered consistent with paragraphs (c)(1) (i), (ii), and (iii) of this section when not actively in use. An opening sufficient to allow safe clearance for a mixer shaft is acceptable during those periods when the shaft is in place; and

(v) A polyehtylene or nonpermanent cover may be used provided it meets the requirements of paragraphs (c)(1) (ii), (iii), and (iv) of this section. Such a cover shall not be reused after once being removed.

(2) Procedures detailing the proper use of covers, as specified in paragraph (c)(1)(i) of this section, have been posted in all areas where affected coatings mix preparation equipment is used;

(3) The coating mix preparation equipment is vented to a control device while preparation of the coating is taking place within the vessel; and

(4) The control device efficiency (E or H_{avg}, as applicable) determined using Equation (1) or Equations (3) and (4), respectively, and the test methods and procedures specified in § 60.745 (b) through (g) is equal to or greater than 0.95.

(d) To demonstrate compliance with § 60.742(c)(2) (standard for coating mix preparation equipment servicing a coating operation that does not have concurrent construction of a control device but uses at least 130 Mg of VOC per year) or § 60.742(c)(3) (standard for coating mix preparation equipment servicing a coating operation that uses at least 95 Mg but less than 130 Mg of VOC per year), each owner or operator of affected coating mix preparation equipment shall demonstrate upon inspection that:

(1) Covers satisfying the specifications in paragraphs (c)(1) (i) through (v) of this section have been installed and are being properly operated and maintained; and

(2) Procedures detailing the proper use of covers, as specified in paragraph (c)(1)(i) of this section, have been posted in all areas where affected coating mix preparation equipment is used.

(3) Owners or operators meeting the standard specified in § 60.742 (c)(2)(ii) or (c)(3)(ii) shall also demonstrate that the coating mix preparation equipment is vented to a control device.

(e) If a control device other than a carbon adsorber, condenser, or incinerator is used to control emissions from an affected facility, the necessary operating specifications for that device must be approved by the Administrator. An example of such a device is a flare.

§ 60.744 Monitoring requirements.

(a) Each owner or operator of an affected facility shall install and calibrate all monitoring devices required under the provisions of this section according to the manufacturer's specifications, prior to the initial performance test in locations such that representative values of the monitored parameters will be obtained. The parameters to be monitored shall be continuously measured and recorded during each performance test.

(b) Each owner or operator of an affected facility that uses less than 95 Mg of VOC per year and each owner or operator of an affected facility subject to the provisions specified in § 60.742(c)(3) shall:

(1) Make semiannual estimates of the projected annual amount of VOC to be used for the manufacture of polymeric coated substrate at the affected coating operation in that year; and

(2) Maintain records of actual VOC use.

(c) Each owner or operator of an affected facility controlled by a carbon adsorption system and demonstrating compliance by the procedures described in § 60.743 (a)(1), (a)(2), (b), or (c) (which include control device efficiency determinations) or § 60.743(a)(4) (short-term liquid material balance) shall carry out the monitoring provisions of paragraph (c)(1) or (c)(2) of this section, as appropriate.

(1) For carbon adsorption systems with a common exhaust stack for all the individual adsorber vessels, install, calibrate, maintain, and operate, according to the manufacturer's specifications, a monitoring device that continuously indicates and records the concentration level of organic compounds in either the control device outlet gas stream or in both the control device inlet and outlet gas streams. The outlet gas stream shall be monitored if the percent increase in the concentration level of organic compounds is used as the basis for reporting, as described in § 60.747(d)(1)(i). The inlet and outlet gas streams shall be monitored if the percent control device efficiency is used as the basis for reporting, as described in § 60.747(d)(2)(i).

(2) For carbon adsorption systems with individual exhaust stacks for each adsorber vessel, install, calibrate, maintain, and operate, according to the manufacturer's specifications, a monitoring device that continuously indicates and records the concentration level of organic compounds in the outlet gas stream for a minimum of one complete adsorption cycle per day for each adsorber vessel. The owner or operator may also monitor and record the concentration level of organic compounds in the common carbon adsorption system inlet gas stream or in each individual carbon adsorber vessel inlet stream. The outlet gas streams shall be monitored if the percent increase in the concentration level of organic compounds is used as the basis for reporting, as described in § 60.747(d)(1)(ii). In this case, the owner or operator shall compute daily a 3-day rolling average concentration level of organics in the outlet gas stream from each individual adsorber vessel. The inlet and outlet gas streams shall be monitored if the percent control device efficiency is used as the basis for reporting, as described in § 60.747(d)(2)(ii). In this case, the owner or operator shall compute daily a 3-day rolling average efficiency for each individual adsorber vessel.

(d) Each owner or operator of an affected facility controlled by a condensation system and demonstrating compliance by the test methods described in § 60.743 (a)(1), (a)(2), (b), or (c) (which include control device efficiency determinations) or § 60.743(a)(4) (short-term liquid material balance) shall install, calibrate, maintain, and operate, according to the manufacturer's specifications, a monitoring device that continuously indicates and records the temperature of the condenser exhaust stream.

(e) Each owner or operator of an affected facility controlled by a thermal incinerator and demonstrating compliance by the test methods described in § 60.743 (a)(1), (a)(2), (b), or (c) (which include control device efficiency determinations) shall install, calibrate, maintain, and operate, according to the manufacturer's specifications, a monitoring device that continuously indicates and records the combustion temperature of the incinerator. The monitoring device shall have an accuracy within ±1 percent of the temperature being measured in Celsius degrees.

(f) Each owner or operator of an affected facility controlled by a catalytic incinerator and demonstrating compliance by the test methods described in § 60.743 (a)(1), (a)(2), (b), or (c) (which include control device efficiency determinations) shall install, calibrate, maintain, and operate, according to the manufacturer's specifications, a monitoring device that continuously indicates and records the gas temperature both upstream and downstream of the catalyst bed. The monitoring device shall have an accuracy within ±1 percent of the temperature being measured in Celsius degrees.

(g) Each owner or operator of an affected facility who demonstrates compliance by the test methods described in § 60.743(a) (1) or (2) (which include vapor capture system efficiency determinations) or § 60.743(a)(4) (short-term liquid material balance) shall submit a monitoring plan for the vapor capture system to the Administrator for approval with the notification of anticipated startup required under § 60.7(a)(2) of the General Provisions. This plan shall identify the parameter to be monitored as an indicator of vapor capture system performance (e.g., the amperage to the exhaust fans or duct flow rates) and the method for monitoring the chosen parameter. The owner or operator shall install, calibrate, maintain, and operate, according to the manufacturer's specifications, a monitoring device that continuously indicates and records the value of the chosen parameter.

(h) Each owner or operator of an affected facility who demonstrates compliance as described in § 60.743(b) shall follow the procedures described in paragraph (g) of this section to establish a monitoring system for the total enclosure.

(i) Each owner or operator of an affected facility shall record time periods of mixing or coating operations when the emission control device is malfunctioning or not in use.

(j) Each owner or operator of an affected facility shall record time periods of mixing or coating operations when each monitoring device is malfunctioning or not in use.

(k) Records of the measurements and calculations required in § 60.743 and § 60.744 must be retained for at least 2 years following the date of the measurements and calculations.

(Approved by the Office of Management and Budget under Control No. 2060-0181.)

§ 60.745 Test methods and procedures.

Methods in Appendix A of this part, except as provided under § 60.8(b), shall be used to determine compliance as follows:

(a) Method 24 is used to determine the VOC content in coatings. If it is demonstrated to the satisfaction of the Administrator that coating formulation data are equivalent to Method 24 results, formulation data may be used. In the event of any inconsistency between a Method 24 test and a facility's formulation data, the Method 24 test will govern. For Method 24, the coating sample must be a 1-liter sample collected in a 1-liter container at a point in the process where the sample will be representative of the coating applied to the substrate (i.e., the sample shall include any dilution solvent or other VOC added during the manufacturing process). The container must be tightly sealed immediately after the sample is collected. Any solvent or other VOC added after the sample is taken must be measured and accounted for in the calculations that use Method 24 results.

(b) Method 25 shall be used to determine VOC concentrations from incinerator gas streams. Alternative Methods (18 or 25A), may be used as explained in the applicability section of Method 25 in cases where use of Method 25 is demonstrated to be technically infeasible. The owner or operator shall submit notice of the intended test method to the Administrator for approval along with the notification of the performance test required under § 60.8(d) of the General Provisions. Except as indicated in paragraphs (b)(1) and (b)(2) of this section, the test shall consist of three separate runs, each lasting a minimum of 30 minutes.

(1) When the method is to be used in the determination of the efficiency of a fixed-bed carbon adsorption system with a common exhaust stack for all the individual adsorber vessels pursuant to § 60.743 (a)(1), (b), or (c), the test shall consist of three separate runs, each coinciding with one or more complete system rotations through the adsorption cycles of all the individual adsorber vessels.

(2) When the method is to be used in the determination of the efficiency of a fixed-bed carbon adsorption system with individual exhaust stacks for each adsorber vessel pursuant to § 60.743 (a)(2), (b), or (c), each adsorber vessel shall be tested individually. Each test shall consist of three separate runs, each coinciding with one or more complete adsorption cycles.

(c) Method 1 or 1A is used for sample and velocity traverses;

(d) Method 2, 2A, 2C, or 2D is used for velocity and volumetric flow rates;

(e) Method 3 is used for gas analysis;

(f) Method 4 is used for stack gas moisture;

(g) Methods 2, 2A, 2C, or 2D; 3; and 4 shall be performed, as applicable, at least twice during each test run.

§ 60.746 Permission to use alternative means of emission limitation.

(a) If, in the Administrator's judgment, an alternative means of emission limitation will achieve a reduction in emissions of VOC from any emission point subject to § 60.742(c) at least equivalent to that required by § 60.742(b)(2) or § 60.742(c), respectively, the Administrator will publish in the **Federal Register** a notice permitting the use of the alternative means. The Administrator may condition permission on requirements that may be necessary to ensure operation and maintenance to achieve the same emission reduction as specified in § 60.742(b)(2) or § 60.742(c), respectively.

(b) Any notice under paragraph (a) of this section shall be published only after public notice and an opportunity for a public hearing.

(c) Any person seeking permission under this section shall submit to the Administrator either results from an emission test that accurately collects and measures all VOC emissions from a given control device or an engineering evaluation that accurately determines such emissions.

§ 60.747 Reporting and recordkeeping requirements.

(a) For each affected facility subject to the requirements of § 60.742 (b) and (c), the owner or operator shall submit the performance test data and results to the Administrator as specified in § 60.8(a) of this part. In addition, the average values of the monitored parameters measured at least every 15 minutes and averaged over the period of the performance test shall be submitted with the results of all performance tests.

(b) Each owner or operator of an affected facility subject to the provisions specified in § 60.742(c)(3) and claiming to use less than 130 Mg of VOC in the first year of operation and each owner or operator of an affected facility claiming to use less than 95 Mg of VOC in the first year of operation shall submit to the Administrator, with the notification of anticipated startup required under § 60.7(a)(2) of the General Provisions, a material flow chart indicating projected VOC use. The owner or operator shall also submit

actual VOC use records at the end of the initial year.

(c) Each owner or operator of an affected facility subject to the provisions of § 60.742(c)(3) and initially using less than 130 Mg of VOC per year and each owner or operator of an affected facility initially using less than 95 Mg of VOC per year shall:

(1) Record semiannual estimates of projected VOC use and actual 12-month VOC use;

(2) Report the first semiannual estimate in which projected annual VOC use exceeds the applicable cutoff; and

(3) Report the first 12-month period in which the actual VOC use exceeds the applicable cutoff.

(d) Each owner or operator of an affected facility demonstrating compliance by the methods described in § 60.743 (a)(1), (a)(2), (a)(4), (b), or (c) shall maintain records and submit quarterly reports to the Administrator documenting the following:

(1) For those affected facilities monitoring only the carbon adsorption system outlet concentration levels of organic compounds, the periods (during actual coating operations) specified in paragraph (d)(1) (i) or (ii) of this section, as applicable.

(i) For carbon adsorption systems with a common exhaust stack for all the individual adsorber vessels, all periods of three consecutive system rotations through the adsorption cycles of all the individual adsorber vessels during which the average value of the concentration level of organic compounds in the common outlet gas stream is more than 20 percent greater than the average value measured during the most recent performance test that demonstrated compliance.

(ii) For carbon adsorption systems with individual exhaust stacks for each adsorber vessel, all 3-day rolling averages for each adsorber vessel when the concentration level of organic compounds in the individual outlet gas stream is more than 20 percent greater than the average value for that adsorber vessel measured during the most recent performance test that demonstrated compliance.

(2) For those affected facilities monitoring both the carbon adsorption system inlet and outlet concentration levels of organic compounds, the periods (during actual coating operations), specified in paragraph (d)(2) (i) or (ii) of this section, as applicable.

(i) For carbon adsorption systems with a common exhaust stack for all the individual adsorber vessels, all periods of three consecutive adsorption cycles of all the individual adsorber vessels during which the average carbon adsorption system efficiency falls below the applicable level as follows:

(A) For those affected facilities demonstrating compliance by the performance test method described in § 60.743(a)(1), the value of E determined using Equation (1) during the most recent performance test that demonstrated compliance.

(B) For those affected facilities demonstrating compliance by the performance test described in § 60.743(a)(4), the average value of the system efficiency measured with the monitor during the most recent performance test that demonstrated compliance.

(C) For those affected facilities demonstrating compliance pursuant to § 60.743 (b) or (c), 0.95.

(ii) For carbon adsorption systems with individual exhaust stacks for each adsorber vessel, all 3-day rolling averages for each adsorber vessel during which the average carbon adsorber vessel efficiency falls below the applicable level as follows:

(A) For those affected facilities demonstrating compliance by the performance test method described in § 60.743 (a)(2), (b), or (c), the value of H_v determined using Equation (3) during the most recent performance test that demonstrated compliance.

(B) For those affected facilities demonstrating compliance by the performance test described in § 60.743(a)(4), the average efficiency for that adsorber vessel measured with the monitor during the most recent performance test that demonstrated compliance.

(3) For those affected facilities monitoring condenser exhaust gas temperature, all 3-hour periods (during actual coating operations) during which the average exhaust temperature is 5 or more Celsius degrees above the average temperature measured during the most recent performance test that demonstrated compliance;

(4) For those affected facilities monitoring thermal incinerator combustion gas temperature, all 3-hour periods (during actual coating operations) during which the average combustion temperature of the device is more than 28 Celsius degrees below the average combustion temperature of the device during the most recent performance test that demonstrated compliance;

(5) For those affected facilities monitoring catalytic incinerator catalyst bed temperature, all 3-hour periods (during actual coating operations) during which the average gas temperature immediately before the catalyst bed is more than 28 Celsius degrees below the average gas temperature during the most recent performance test that demonstrated compliance and all 3-hour periods (during actual coating operations) during which the average gas temperature difference across the catalyst bed is less than 80 percent of the average gas temperature difference during the most recent performance test that demonstrated compliance;

(6) For each affected facility monitoring a total enclosure pursuant to § 60.744(h) or vapor capture system pursuant to § 60.744(g), all 3-hour periods (during actual coating operations) during which the average total enclosure or vapor capture system monitor readings vary by 5 percent or more from the average value measured during the most recent performance test that demonstrated compliance.

(7) Each owner or operator of an affected coating operation not required to submit reports under paragraphs (d) (1) through (6) of this section because no reportable periods have occurred shall submit semiannual statements clarifying this fact.

(e) Each owner or operator of an affected coating operation, demonstrating compliance by the test methods described in § 60.743(a)(3) (liquid-liquid material balance) shall submit the following:

(1) For months of compliance, semiannual reports to the Administrator stating that the affected coating operation was in compliance for each 1-month period; and

(2) For months of noncompliance, quarterly reports to the Administrator documenting the 1-month amount of VOC contained in the coatings, the 1-month amount of VOC recovered, and the percent emission reduction for each month.

(f) Each owner or operator of an affected coating operation, either by itself or with associated coating mix preparation equipment, shall submit the following with the reports required under paragraphs (d) and (e) of this section:

(1) All periods during actual mixing or coating operations when a required monitoring device (if any) was malfunctioning or not operating; and

(2) All periods during actual mixing or coating operations when the control device was malfunctioning or not operating.

(g) The reports required under paragraphs (b), (c), (d), and (e) of this section shall be postmarked within 30 days of the end of the reporting period.

(h) Records required in § 60.747 must be retained for at least 2 years.

(i) The requirements of this section remain in force until and unless EPA, in delegating enforcement authority to a State under section 111(c) of the Act, approves reporting requirements or an alternative means of compliance surveillance adopted by such States. In this event, affected sources within the State will be relieved of the obligation to comply with this subsectdion, provided that they comply with the requirements established by the State.

(Approved by the Office of Management and Budget under Control No. 2060-0181.)

§ 60.748 Delegation of authority.

(a) In delegating implementation and enforcement authority to a State under section 111(c) of the Act, the authorities contained in paragraph (b) of this section shall be retained by the Administrator and not transferred to a State.

(b) Authorities that will not be delegated to States: §§ 60.743(a)(3)(v)(A) and (B); 60.743(e); 60.745(a); 60.746.

[Docket No. 90374-9181]

RIN 0651-AA38

Amendments to Patent and Trademark Rules to Implement Trademark Law Revision Act; Miscellaneous Trademark Rule Amendments

AGENCY: Patent and Trademark Office, Commerce.

ACTION: Final rule.

SUMMARY: The Patent and Trademark Office (PTO) is amending the rules of practice in trademark cases, and the rules of practice in patent cases which are applicable to trademark cases, to implement the provisions of the Trademark Law Revision Act of 1988 (Title 1 of Pub. L. 100–667, 102 Stat. 3935 (15 U.S.C. 1051)), codify changes in practice resulting from a Trademark Trial and Appeal Board decision commonly known as the "Crocker" decision, and otherwise codify, clarify, and/or revise certain procedures for the examination of applications.

EFFECTIVE DATE: November 16, 1989.

FOR FURTHER INFORMATION CONTACT: Carlisle E. Walters by telephone at (703) 557–7464 or by mail marked to her attention and addressed to Box 5, Office of the Assistant Commissioner for Trademarks, Commissioner of Patents and Trademarks, Washington, DC 20231.

SUPPLEMENTARY INFORMATION: In a notice of proposed rulemaking published in the **Federal Register** on May 4, 1989, at 54 FR 19286, the Patent and Trademark Office "Official Gazette" of May 16, 1989, at 1102 O.G. 47–70, and the Bureau of National Affairs' "Patent, Trademark, & Copyright Journal", at 38 PTCJ 43–71, (May 11, 1989), the Patent and Trademark Office proposed to amend Parts 1 and 2 of title 37 of the Code of Federal Regulations by amending or revising §§ 1.1, 1.8, 2.6, 2.18, 2.21, 2.24, 2.31, 2.33, 2.38, 2.39, 2.41, 2.44, 2.45, 2.47, 2.51, 2.52, 2.53, 2.56, 2.57, 2.58, 2.61, 2.64, 2.65, 2.66, 2.69, 2.71, 2.72, 2.73, 2.75, 2.81, 2.82, 2.83, 2.84, 2.86, 2.87, 2.99, 2.101, 2.111, 2.129, 2.133, 2.161, 2.162, 2.181, 2.185 and 2.187; and adding §§ 2.2, 2.59, 2.76, 2.77, 2.88 and 2.89. The notice of proposed rulemaking was designed primarily to implement certain provisions of the Trademark Law Revision Act of 1988 (Title 1 of Pub. L. 100–667, 102 Stat. 3935 (15 U.S.C. 1051)) (hereinafter "Pub. L. 100–667"), which was enacted on November 16, 1988, and will become effective on November 16, 1989. The text of the law was published in the "Congressional Record", S. 1883, 100th Cong., 2d Sess., 134 Cong. Rec. 149, H10411 (daily ed. October 19, 1988), and in "BNA's Patent, Trademark & Copyright Journal", at 36 PTCJ 751 (October 27, 1988).

Written comments were submitted by one firm, eight individuals, and six organizations. Six individuals testified at the oral hearing. Four of those individuals testified on behalf of two organizations, both of which also submitted written comments. Of the two individuals who testified on their own behalf, one also submitted written comments.

The following includes a summary of the "intent-to-use" provisions of Pub. L. 100–667, a summary of the other provisions of Public Law 100–667 which are relevant to PTO practice, a list of rules being changed as a result of Public Law 100–667, a brief discussion of other rules being changed and the reasons for those changes, a detailed section-by-section analysis of the final rules, and an analysis of all comments received in response to the notice of proposed rulemaking.

Discussion of "Intent-to-Use" Provisions of Public Law 100–667

Pub. L. 100–667 substantially revises the Trademark Act of 1946 ("Act"). Previously, the Act permitted the filing of an application for Federal registration of a trademark based upon use of the mark in commerce in connection with goods or services, under section 1 of the Act; or, ownership of a foreign application or registration, under section 44 of the Act. The new law adds a third basis for the filing of an application, namely, a bona fide intention to use a mark in commerce in relation to specific goods or services. For these "intent-to-use" applications, actual use of the mark in commerce will be a prerequisite to the ultimate issuance of a registration.

Section 103, Public Law 100–667, 102 Stat. 3935, amends section 1 of the Act to permit the filing of an application for Federal registration of a trademark based upon either use of the mark in commerce or a bona fide intention to use the mark in commerce. Use-based applications will be governed by an amended and redesignated section 1(a) of the Act. A new section 1(b) of the Act authorizes the filing of "intent-to-use" applications and sets forth the filing requirements of such applications.

Section 113, Public Law 100–667, 102 Stat. 3940, amends section 12 of the Act, concerning examination of applications and publication, to provide that if the Trademark Examining Attorney examines an "intent-to-use" application and finds that the applicant would be entitled to registration upon the acceptance of a statement of use, the mark will be published in the "Official Gazette" for purposes of opposition.

Section 114, Public Law 100–667, 102 Stat. 3940, amends section 13 of the Act, concerning opposition to registration of marks on the Principal Register, to add a new section 13(b) to govern the handling of applications which are not successfully opposed. New section 13(b) provides that, unless registration is successfully opposed, a notice of allowance will be issued to the applicant in an "intent-to-use" application.

Section 103, Public Law 100–667, 102 Stat. 3935, further amends section 1 of the Act by adding a new section 1(c), which permits an "intent-to-use" applicant, at any time during examination, to amend the application to bring it into conformity with the requirements for an application based on use; and by adding a new section 1(d) which sets forth the registration requirements for an "intent-to-use" application following issuance of a notice of allowance.

Section 1(d)(1) of the Act requires that, within six months after the issuance of the notice of allowance, the applicant must file specimens evidencing use of the mark in commerce, the prescribed fee, and a verified statement which asserts that the mark is in use in commerce and contains certain averments related to that use.

Section 1(d)(2) provides that the time for filing the statement of use will be extended for a period of six months upon written request of the applicant, if the request is filed before expiration of the six-month period for filing a statement of use. The request must be accompanied by the prescribed fee and a verified statement that the applicant has a continued bona fide intention to use the mark in commerce, specifying those goods or services identified in the notice of allowance for which that intention exists.

Section 1(d)(2) provides that further extensions of time for filing a statement of use may be granted by the Commissioner, for periods aggregating not more than 24 months, upon a showing of good cause by the applicant. A written request must be filed before the expiration of the last granted extension and accompanied by the prescribed fee and by a verified statement (of continued bona fide intention to use the mark in commerce) as required for the first extension of time. The Commissioner is to issue regulations setting forth what

constitutes good cause for a further extension of time for filing a statement of use.

Section 1(d)(3) of the Act provides that any applicant who files a statement of use will be notified of the acceptance or refusal thereof and, if the statement is refused, of the reasons for the refusal, and that the statement of use may be amended.

Section 1(d)(4) of the Act provides that the failure of an applicant to timely file a statement of use, as required under section 1(d) of the Act, will result in the abandonment of the application.

Discussion of Other Provisions of Public Law 100–667

The new law includes certain other provisions which significantly affect practice in the PTO. Section 104, Public Law 100–667, 102 Stat. 3937, amends section 2(f) of the Act, pertaining to registration of a mark used by the applicant which has become distinctive of the applicant's goods in commerce. The amendment will permit the Commissioner to accept, as prima facie evidence that a mark has become distinctive, proof of substantially exclusive and continuous use as a mark by the applicant in commerce for "five years before the date on which the claim of distinctiveness is made." The Act previously permitted such a showing by the applicant to be only for "the five years next preceding the date of the filing of the application."

Section 109, Public Law 100–667, 102 Stat. 3938, adds a new section 7(c) to the Act to provide, *inter alia,* that contingent on the registration of a mark on the Principal Register, the filing of an application to register such mark on the Principal Register shall constitute constructive use of the mark and confer nationwide priority.

Section 110, Public Law 100–667, 102 Stat. 3939, amends section 8(a) of the Act to provide that each certificate of registration shall remain in force for ten (rather than twenty) years. Section 110 further amends section 8(a) of the Act to require that the affidavit, which must be filed during the sixth year after issuance of a registration, set forth "those goods or services recited in the registration on or in connection with which the mark is in use in commerce and attaching to the affidavit a specimen or facsimile showing current use of the mark, * * *" instead of the previous requirement for a "showing that said mark is in use in commerce * * *"

Section 111, Public Law 100–667, 102 Stat. 3939, amends section 9(a) of the Act to reduce the term for which a registration may be renewed from twenty years to ten years. Similarly, section 135, Public Law 100–667, 102 Stat. 3948, amends the Act by adding a new section, section 51, which provides that certificates of registration which issue from applications pending in the PTO on November 16, 1989, the effective date of the new law, shall remain in force for a period of ten years.

Section 118, Public Law 100–667, 102 Stat. 3941, amends section 18 of the Act to expand a portion of the description of the actions which may be taken by the Trademark Trial and Appeal Board ("Board"), in an inter partes proceeding, from "may refuse to register the opposed mark, may cancel or restrict the registration of a registered mark, or may refuse to register any or all of several interfering marks, * * *" to "may refuse to register the opposed mark, may cancel the registration, in whole or in part, may modify the application or registration by limiting the goods or services specified therein, may otherwise restrict or rectify with respect to the register the registration of a registered mark, may refuse to register any or all of several interfering marks, * * *" The same section of the new law further amends section 18 of the Act to provide, with respect to inter partes proceedings before the Board, that no final judgment shall be entered in favor of an intent-to-use applicant before the mark is registered, if such applicant cannot prevail without establishing constructive use pursuant to section 7(c) of the Act, as amended by section 109, Public Law 100–667, 102 Stat. 3938.

Section 121, Public Law 100–667, 102 Stat. 3942, amends section 23 of the Act, which governs applications for registration on the Supplemental Register, to delete the requirement that the mark must have been in lawful use in commerce for the year preceding the filing of the application; and to substitute a requirement that the mark must be in lawful use in commerce by the owner.

Section 122, Public Law 100–667, 102 Stat. 3943, amends section 24 of the Act, which governs petitions to cancel registrations on the Supplemental Register, to delete the requirement that such a petition be verified, and to add a provision that (in such a cancellation proceeding) no final judgment shall be entered in favor of an intent-to-use applicant before the mark is registered, if such applicant cannot prevail without establishing constructive use pursuant to section 7(c) of the Act, as amended.

Finally, section 133, Public Law 100–667, 102 Stat. 3946, amends section 44 of the Act to require that an application filed pursuant to section 44(d) or 44(e) of the Act include a statement that the applicant has a bona fide intention to use the mark in commerce. The new law further amends section 44(e) of the Act to specify that use in commerce shall not be required prior to registration in the case of an application under that section of the Act.

Specific Rules Changed or Added

The existing rules of practice in Parts 1 and 2 of Title 37 of the Code of Federal Regulations which are amended as a result of the enactment of Public Law 100–667 are §§ 1.1, 1.8, 2.6, 2.21, 2.33, 2.38, 2.39, 2.41, 2.44, 2.45, 2.47, 2.51, 2.52, 2.53, 2.56, 2.57, 2.61, 2.64, 2.65, 2.69, 2.71, 2.72, 2.73, 2.75, 2.81, 2.82, 2.84, 2.86, 2.87, 2.99, 2.101, 2.111, 2.129, 2.133, 2.161, and 2.162. In addition, new §§ 2.2, 2.59, 2.76, 2.77, 2.88, and 2.89 are added. The amendments made to existing rules, and the provisions of the new rules which are added, are described in detail hereafter.

Other changes are made in the rules of practice in trademark cases as a result of the decision of the Board in *Crocker National Bank* v. *Canadian Imperial Bank of Commerce,* 223 USPQ 909 (TTAB 1984) ("Crocker"). Prior to Crocker, an applicant applying under section 44 of the Act was allowed, under present § 2.39, to omit certain of the allegations required for an application based on use, namely, the allegation that the mark sought to be registered was in use in commerce, and the statements of the applicant's date of first use of the mark, and first use of the mark in commerce, on or in connection with the specified goods or services. Nevertheless, it was the practice of the PTO to require such an applicant to allege use of the mark (somewhere in the world) and to submit specimens of the mark as used on or in connection with the specified goods or services. The Board held in Crocker, however, that an applicant filing in accordance with section 44 need not allege use or submit specimens. The practice of the PTO was thereafter modified to bring it into accordance with the Board's decision. The rules of practice which are amended to codify the present practice are §§ 2.21, 2.33, 2.39, 2.41, 2.44, 2.45, 2.47, 2.51, 2.56, and 2.72. As indicated above, those rules are also amended to implement changes in practice required as a result of the enactment of Public Law 100–667.

Additionally, certain miscellaneous amendments are made to codify, clarify, and/or revise procedures for the examination of applications. Specifically, § 2.18 is amended to clarify the practice of the PTO regarding correspondence with foreign applicants.

Section 2.24 is amended to correct a cross-reference. Section 2.31 is amended to indicate that it is preferable that an application be on approximately "lettersize" (i.e., 8½ inches by 11 inches) rather than legal-size, paper. Section 2.52(e) is amended to simplify the drawing color linings for the colors orange and yellow or gold. Sections 2.56 and 2.57 are amended to reduce the number of specimens or facsimiles required to be filed, in those instances where specimens are necessary, from five to three, and to indicate that specimens or facsimiles may not exceed eleven inches in length. When specimens exceeding the size limitations are submitted, the applicant will be required to submit proper substitute specimens. Section 2.83, which governs procedure in the case of conflicting marks, is amended to delete a provision which does not conform to present PTO practice, namely, the provision that a notice will be sent, if practicable, to the applicants involved informing them of the publication or issuance of the earliest-filed mark (or, if the conflicting applications have the same effective filing date, of the publication or issuance of the application with the earliest date of execution). Finally, § 2.187 is amended to revise the conditions under which a certificate of registration will be issued in the name of an applicant's assignee, or in an applicant's new name.

Discussion of Specific Sections Changed or Added

In this discussion, "Patent and Trademark Office" is abbreviated as "PTO," "Trademark Trial and Appeal Board" is abbreviated as "Board," the Trademark Act of 1946 is abbreviated as "the Act," and all references to sections of the Act are as amended by Public Law 100–667, unless otherwise stated.

Section 1.1, which specifies the address to be used on communications intended for the PTO, and also provides special box designations which may be used on certain types of communications to the PTO, is amended to add new paragraph (h) which establishes a new separate receipt box for statements of use under section 1(d) of the Act and requests for extensions of time to file such statements. The new paragraph encourages, but does not require, applicants to use the designation "Box ITU" when submitting the identified papers. Use of the box designation will permit prompt and efficient processing of the identified papers. The proposed rule also included amendments to allege use under section 1(c) of the Act as papers which should be identified by the new "Box ITU" designation. However, as a result of a change in planned internal workflow, that proposal is withdrawn. Amendments to allege use under section 1(c) of the Act should not be identified with the "Box ITU" designation.

Section 1.8, which provides that certain papers will be considered filed in the PTO on the date the papers are certified as mailed, subject to specified conditions, is amended to add new paragraphs (a)(2)(xiv) through (a)(2)(xvi) to exclude the following papers from the "Certificate of Mailing" procedure established under the section: Statements of use under new § 2.88 (15 U.S.C. 1051(d)), requests for extensions of time to file such statements, and amendments to allege use under new § 2.76 (15 U.S.C. 1051(c)). The specified papers are excluded due to the nature and significance of the papers and the importance of their prompt receipt in the PTO. Before a registration can be issued in an application under section 1(b) of the Act, either an amendment to allege use or a statement of use must be filed and accepted. An amendment to allege use may be submitted only during the examination of an application prior to approval of the mark for publication for opposition in the Trademark "Official Gazette". After issuance of a notice of allowance in an application under section 1(b) of the Act, applicant must file either a statement of use or request a six-month extension of time to file a statement of use within six months thereafter (successive extension requests may not aggregate more than 36 months from the notice of allowance). Each of these papers is required to be filed within tight time frames and should be processed by the PTO expeditiously. Thus, to avoid problems related to mail delays, these papers are excluded from the "Certificate of Mailing" procedure.

Section 2.2 is added to establish a definitions section for part 2 of 37 CFR.

Section 2.2(a) is added to state that all references to "the Act" pertain to the Trademark Act of 1946, as amended.

Section 2.2(b) is added to state that all references, for example in §§ 2.101 and 2.111, to "entity" include both natural and juristic persons.

Section 2.6, which governs trademark fees, is amended to add paragraphs (u) and (v) to establish two new fees for the filing of papers required or permitted under section 1(c) or 1(d) of the Act. Section 2.6(a) establishes the fee for filing an application, per class, and it is applicable to all new applications filed in the PTO, regardless of the basis asserted for filing. Section 2.6(u) is added to establish a filing fee of $100.00 for an amendment to allege use under new § 2.76 (15 U.S.C. 1051(c)) or for a statement of use under new § 2.88 (15 U.S.C. 1051(d)). Section 2.6(v) is added to establish a filing fee of $100.00 for any request, under new § 2.89 (15 U.S.C. 1051(d)), for a six-month extension of time to file a statement of use.

The PTO is amending § 2.6 to establish new fees required under provisions of Public Law 100–667. A fee is required under section 1(b)(2) of the Act for the filing of an application under section 1(b) of the Act ("intent-to-use"). A fee is required under section 1(d)(1) of the Act for the filing of a statement of use in an application under section 1(b) of the Act; and a fee is required under section 1(d)(2) of the Act for the filing of a request for an extension of time to file a statement of use. A fee is being established for an amendment to allege use, which is filed under section 1(c) of the Act, to bring an application under section 1(b) of the Act into conformity with the requirements of section 1(a) of the Act ("use in commerce"). These actions are consistent with section 103(a) of Public Law 100–703 which governs the way fees established under section 31 of the Act may be adjusted.

Section 103(a) of Public Law 100–703 provides that the Commissioner cannot establish additional fees under section 31 of the Act during fiscal years 1989, 1990 and 1991. However, Public Law 100–667 requires that the fees for filing an application under section 1(b) of the Act, a statement of use, and a request for an extension of time to file a statement of use be established. Further, Congressman Kastenmeier has stated that "the Commissioner is not precluded from charging a new fee for a new service or material or from charging a different fee where a significant and material improvement in service or material, such as in promptness or quality is offered. Under any circumstances, augmented fees ought to be clearly justified and reported to the Congress." "Congressional Record," S. 1883, 100th Cong., 2d Sess., 134 Cong. Rec. 149, H9677 (daily ed. October 5, 1988). Amendments to allege use filed under section 1(c) of the Act create a new examination practice that was not contemplated when the fees were established for activities performed under the Act and this fee is clearly not an increase in an existing fee.

On February 15, 1989, a final rule was published in the **Federal Register** at 54 FR 6893 to adjust patent and trademark fees. Effective April 17, 1989, three trademark fees were reduced: The fee for filing an application for trademark registration was reduced from $200 to $175 per class, and two fees for recording trademark assignments or other papers relating to a registered mark or application for registration were reduced from $100 to $8.

In establishing the new fees related to Public Law 100–667, the PTO followed the fee methodology which was described in the February 15, 1989, **Federal Register** notice (54 FR 6893), and is summarized as follows:

Cost Calculations: The PTO calculated unit costs for the new fees based on OMB Circular A–25, "User Fees," and OMB Circular A–130, "Management of Federal Information Resources." Costs were determined from the best available records (for example, the FY 1987 end-of-year financial statements for the Office) and included direct and indirect costs to the PTO for carrying out the activity, as directed by OMB Circular A–25. To estimate costs for the three-year period from November 1989 to October 1992, the 1987 actual costs were adjusted by the Administration's inflation projection ("Budget of the United States Government, Fiscal Year 1990", Part 3, "The Economy and the Budget"). This methodology was utilized in conjunction with an analysis of the worksteps and procedures that will be involved in the processing of a new application to register a mark under section 1(b) of the Act. The PTO has determined that the processing and examination of an application under section 1(b) of the Act from the filing date through issuance of a notice of allowance is expected to cost the same as the processing and examination of an application under section 1(a) of the Act from the filing date through issuance of the certificate of registration. Therefore, the fee for applications filed under section 1(a) or 1(b) is the same.

Workload Projections: The PTO has estimated that there will be a one-time, twenty-five percent (25%) increase in trademark applications filed in FY 1990, bringing the estimated trademark application filings for FY 1990 to approximately 100,000. In FY 1991, the PTO estimates that approximately 86,700 trademark applications will be filed and that, thereafter, trademark application filing increases will drop to normal levels (approximately six percent (6%) over the previous year) for the remainder of the fee cycle. The PTO estimates that sixty percent (60%) of the total applications filed in FY 1990 and subsequent years in this fee cycle will be filed under section 1(b) of the Act.

The PTO estimates that, beginning in FY 1991, the first requests for extensions of time to file a statement of use will be filed; and that these requests will be filed in approximately ten percent (10%) of the section 1(b) applications filed in the prior year. In FY 1992, the filing of requests for extensions of time to file a statement of use will increase to sixteen percent (16%) of the new section 1(b) applications filed in the previous year and remain at that level during the remainder of the fee cycle.

The PTO estimates that approximately twenty-five percent (25%) of all applications filed under section 1(b) of the Act will be abandoned before the filing of either an amendment to allege use, under section 1(c) of the Act, or a statement of use, under section 1(d) of the Act.

The PTO estimates that twenty-five percent (25%) of all applications filed under section 1(b) of the Act will be amended to conform to the provisions of section 1(a) of the Act (by the filing of an amendment to allege use under new § 2.76) during the first examination of the application, before approval of the mark for publication for opposition; and that this filing will increase first examination processing by a factor of forty percent (40%).

The PTO estimates that a statement of use under new § 2.88 will be filed in fifty percent (50%) of all applications filed under section 1(b) of the Act; and that the second examination required under section 1(d)(1) of the Act will require additional processing time equal to forty percent of the processing time required for the first examination.

Fee Adjustment Methodology: Based on the fee methodology described in the February 15, 1989, **Federal Register** notice (54 FR 6893), the projected revenue from these fees, when coupled with the fees generated by all other trademark fees, does not exceed the costs associated with the filing and processing of an application for the registration of a trademark or other mark and for all other services performed by, and materials furnished by, the PTO related to trademarks and other marks.

The PTO has detailed cost calculation worksheets for each fee item, which are available for public inspection in Suite 914 of Building 2, Crystal Park at 2121 Crystal Drive, Arlington, Virginia.

Section 2.18, which specifies to whom correspondence will be sent by the PTO, is revised to add a new sentence to the section to clarify PTO policy regarding correspondence with foreign applicants. The new sentence provides that PTO correspondence will be sent to the domestic representative of a foreign applicant unless the application is being prosecuted by an attorney at law or other qualified person duly authorized, in which event correspondence will be sent to the attorney at law or other qualified person duly authorized. The section, as amended, conforms to present § 2.24.

Section 2.21(a), which governs the requirements for receiving an application filing date, is amended by revising paragraphs (a)(5) and (a)(6) and adding new paragraphs (a)(5)(i), (a)(5)(ii), (a)(5)(iii), and (a)(5)(iv) to revise the minimum filing requirements for applications under section 1(a) or 44 of the Act, and to add minimum filing requirements for applications under section 1(b) of the Act. A requirement that an application be verified by the applicant in order to receive a filing date is added for all types of applications. The minimum filing requirements for an application under section 44 are revised to comply with the Crocker decision and to implement the provisions of Public Law 100–667.

Section 2.21(a)(5), which presently specifies the filing date requirement of at least one specimen or facsimile of the mark as actually used, is revised to delete that requirement from the paragraph and to indicate that the four new paragraphs added thereunder all relate to the assertion of a basis for filing.

Section 2.21(a)(5)(i) is added to specify all filing requirements which pertain only to the assertion of a basis for filing an application under section 1(a) of the Act, namely, the statement of a date of first use in commerce and at least one specimen or facsimile of the mark as actually used.

Section 2.21(a)(5)(ii) is added to specify all filing requirements which pertain only to the assertion of a basis for filing an application under section 44(e) of the Act, namely, a claim of a bona fide intention to use the mark in commerce and a certification or a certified copy of the foreign registration on which the application is based. In accordance with Crocker, the new paragraph contains no requirement for a statement of use of the mark anywhere or for the filing of a specimen or facsimile of the mark as used.

Section 2.21(a)(5)(iii) is added to specify all filing requirements which pertain only to the assertion of a basis for filing an application pursuant to section 44(d) of the Act, namely, a claim of a bona fide intention to use the mark in commerce and a claim of the benefit of a prior foreign application. In accordance with Crocker, the new paragraph contains no requirement for a statement of use of the mark anywhere or for the filing of a specimen or facsimile of the mark as used.

Section 2.21(a)(5)(iv) is added to specify all filing requirements which pertain only to an assertion of a basis for filing an application under section 1(b) of the Act, namely, a claim of a bona fide intention to use the mark in commerce.

Section 2.21(a)(6), which presently includes certain of the filing requirements incorporated in new paragraphs (a)(5)(i), (a)(5)(ii), and (a)(5)(iii), is revised to require that an application include a verification in accordance with § 2.33(b), signed by the applicant, as a condition for receiving a filing date. The proposed requirement is in accordance with sections 1 and 44 of the Act.

Section 2.24, which relates to the designation of a representative by a foreign applicant, is revised to clarify language concerning official communications from the PTO to indicate that such communications will be addressed to the domestic representative unless the application is being prosecuted by an attorney at law or other qualified person duly authorized, in which event the communication will be sent to the attorney at law or other qualified person duly authorized. Additionally, the section is revised to correct cross-references. Cross-references to § 10.14 of the subchapter, which now governs qualifications of individuals to practice before the PTO in trademark and other non-patent cases, are substituted for the cross-references to § 2.12, which has been removed.

Section 2.31, which presently states that it is preferable that an application be on legal or lettersize paper, is revised to state that it is preferable that an application be on lettersize (i.e., 8½ inches by 11 inches) paper. This amendment conforms generally to the standards of Federal court practice.

Section 2.33, which specifies the complete requirements for a written application, is amended by changing the section title from "Requirements for application." to "Requirements for written application.," revising certain existing paragraphs, redesignating and revising certain other existing paragraphs, and adding three new paragraphs to, *inter alia.*, incorporate in this section the requirements for an application under section 44 of the Act, and add the requirements for an application under section 1(b) of the Act. The application requirements for an application under section 44 of the Act are in accordance with the Crocker decision.

Section 2.33(a)(1)(ii), which requires a statement of applicant's citizenship, is revised to clarify the language of the section and to codify the requirement that an applicant which is a partnership must specify in the application the state or nation under the laws of which the partnership is organized.

Section 2.33(a)(1)(iv), which presently requires a statement that applicant has adopted and is using the mark shown in the accompanying drawing, is revised to limit this requirement to an application under section 1(a) of the Act; and to add, for an application under section 1(b) or 44 of the Act, a requirement for a statement that applicant has a bona fide intention to use the mark shown in the accompanying drawing in commerce.

Section 2.33(a)(1)(v), which presently requires an identification of the particular goods on or in connection with which the mark is used, is revised to include a reference to services, as well as goods; to limit the requirement to an application under section 1(a) of the Act; and to add, for an application under section 1(b) or 44 of the Act, the requirement for an identification of the particular goods or services on or in connection with which the applicant has a bona fide intention to use the mark. The paragraph is further amended to incorporate the provision, presently included in § 2.39, that the goods or services specified in an application under section 44 may not exceed the scope of the goods or services covered by the foreign application or registration.

Section 2.33(a)(1)(vi), which presently requires a statement of the class of merchandise according to the official classification, if known to the applicant, is revised to substitute the words "goods or services" for the word "merchandise."

Section 2.33(a)(1)(vii), which presently requires a statement of the date of applicant's first use of the mark as a trademark on or in connection with goods specified in the application, is revised to include references to a service mark, as well as a trademark, and to services, as well as goods; to limit the requirement to an application under section 1(a) of the Act; and to add for such an application the requirement, presently stated in paragraph (a)(1)(viii) of the section, for a statement of applicant's date of first use of the mark in commerce on or in connection with the goods or services listed in the application, specifying the nature of such commerce.

Section 2.33(a)(1)(viii), which presently requires a statement of the date of applicant's first use in commerce of the mark as a trademark on or in connection with goods specified in the application, specifying the nature of such commerce, is revised to remove this requirement, which is added to paragraph (a)(1)(vii); and to incorporate the requirements, presently stated in § 2.39(a), concerning submission, with an application under section 44(e) of the Act, of a certificate of the trademark office of the applicant's country of origin and, if the certificate is not in the English language, of a translation thereof.

Section 2.33(a)(1)(ix), which presently requires a statement of the mode, manner or method of applying, affixing or otherwise using the mark on or in connection with the goods specified, is redesignated as (a)(1)(x); revised to indicate that this requirement pertains only to an application under section 1(a) of the Act; and amended to include a requirement, for an application under section 1(b) of the Act, for a statement of the intended mode, manner or method of applying, affixing or otherwise using the mark on or in connection with the goods or services specified.

A new § 2.33(a)(1)(ix) is added to require, for an application claiming the benefit of a foreign application in accordance with section 44(d) of the Act, that the application comply with the requirements of § 2.39.

Section 2.33(a)(2), which presently provides that if more than one item of goods is specified in the application, the dates of use required in present paragraphs (a)(1)(vii) and (viii) of the section need be for only one of the items specified, provided the particular item to which the dates apply is designated, is revised to refer to services as well as goods and to delete the cross-reference to paragraph (a)(1)(viii), the present substance of which is incorporated in paragraph (a)(1)(vii).

Section 2.33(b), which presently states the requirement that an application include certain averments concerning ownership of the mark, use of the mark in commerce, and the truth of the statements contained in the application, is redesignated as (b)(1); revised to indicate that the requirement of the paragraph pertains only to an application under section 1(a) of the Act; and revised to clarify the language of the paragraph and to make such language gender neutral.

Section 2.33(b)(2) is added to specify, for an application under section 1(b) or 44 of the Act, a requirement that the application include certain averments concerning ownership of the mark, the truth of the statements contained in the application, and applicant's bona fide intention to use the mark in commerce on or in connection with the specified goods or services.

Section 2.33(c), which concerns the applicability of this section to an application for the registration of a mark for goods or services falling within multiple classes, is revised to correct a cross-reference which presently is correct but would be incorrect when the amendments to §§ 2.86 and 2.87 become effective. Specifically, § 2.33(c) is revised to refer to § 2.86 rather than § 2.87.

Section 2.33(d) is added to state that an applicant may not file under both sections 1(a) and 1(b) of the Act in a single application, nor may an applicant in an application under section 1(a) of the Act amend that application to seek registration under section 1(b) of the Act. An application which is filed under both sections 1(a) and 1(b) of the Act will not be accorded a filing date and will be returned to the applicant. The provision that an applicant under section 1(a) of the Act is precluded from amending the application to seek registration under section 1(b) of the Act is based upon the language of section 1(b) of the Act which requires that an application under the section include, upon filing, a verified statement of a bona fide intention to use the mark in commerce; however, an application filed under section 1(a) of the Act does not include such a statement and cannot be based on a bona fide intention to use a mark. There is no prohibition against amending the basis for an application from section 1(b) to section 1(a) of the Act because section 1(a) requires that an application assert use in commerce prior to the filing date of the application. This is a factual assertion that is verifiable at any time.

Section 2.38 is revised to change a cross-reference which presently is correct but would be incorrect when the amendments to § 2.33 become effective. Specifically, § 2.38 is revised to refer to § 2.33(a)(1)(vii) rather than § 2.33(a)(1)(vii) and (viii).

Section 2.39, which presently contains provisions concerning the omission of an allegation of use in commerce and statements of dates of first use in applications filed under Section 44 of the Act, as well as provisions specifying certain requirements for such applications, is amended by changing the section title from "Omission of allegation of use in commerce by foreign applicants." to "Priority claim based on foreign application.," and revising paragraphs (a) and (b). The purpose of the amendments is to delete the omission provisions and the provisions specifying requirements for applications under section 44(e) of the Act which are subsumed by § 2.33 as amended; and to add certain provisions concerning applications claiming the benefit of a prior foreign application in accordance with section 44(d) of the Act.

In the notice of proposed rulemaking, present paragraphs (a) and (b) of § 2.39 were proposed to be revised and a new paragraph (c) was proposed to be added. As the result of a written comment concerning proposed paragraph (a) (*see* "Response to Comments on the Rules"), paragraph (a) is withdrawn, and proposed paragraphs (b) and (c) are redesignated (a) and (b), respectively.

Section 2.39(a), Which presently contains provisions concerning the omission of an allegation of use in commerce and statements of dates of first use by applicants filing under section 44(e) of the Act, as well as provisions specifying requirements for such applications, is revised to delete those provisions, which are subsumed by § 2.33 as amended; to add requirements, presently specified in paragraph (b) of the section, for filing an application in accordance with section 44(d) of the Act.

Section 2.39(b), which presently contains provisions concerning the omission of an allegation of use in commerce and of statements of dates of first use by applicants filing under section 44(d) of the Act, and a statement of certain other requirements for an application in accordance with section 44(d) of the Act, is revised to delete the omission provisions, which are subsumed by § 2.33 as amended. The paragraph is further revised to provide that before an application filed in accordance with section 44(d) of the Act can be approved for publication, a basis for registration under section 1(a), 1(b) or 44(e) of the Act must be established.

Section 2.41(a), which relates to proof of distinctiveness of a mark, pursuant to section 2(f) of the Act, is revised to indicate that allegations and evidence of acquired distinctiveness must be based upon use of the mark on or in connection with goods or services "in commerce."

Section 2.41(b) is revised in the same manner as § 2.41(a) above, and is revised further to implement section 104 of Public Law 100–667. Section 2(f) of the Act presently requires an applicant relying upon an allegation of five years of substantially exclusive and continuous use of a mark in commerce in support of a claim of distinctiveness to assert that such use was made during the five years next preceding the filing date of the application. Section 104 of Public Law 100–667 amends section 2(f) of the Act to permit an applicant to rely upon such use made for the five years before the date on which the claim of distinctiveness is made.

Section 2.44, which presently requires that an application to register a collective mark include certain statements concerning the class of persons entitled to use the mark, their relationship to the applicant, and the nature of applicant's control over the use of the mark, is amended to redesignate the present paragraph as (a); revise redesignated paragraph (a) to indicate that it pertains only to applications under section 1(a) of the Act; and add a new paragraph (b) which requires, for collective mark applications under section 1(b) or 44 of the Act, that the application include certain statements concerning the class of persons entitled to use the mark, their relationship to the applicant, and the nature of applicant's control over the use of the mark.

Section 2.45, which presently requires that an application to register a certification mark include certain statements concerning the use of the mark, applicant's control thereover, and that applicant is not engaged in the production or marketing of the goods or services to which the mark is applied, is amended to redesignate the present paragraph as (a); revise redesignated paragraph (a) to indicate that it pertains only to applications under section 1(a) of the Act; and add a new paragraph (b) which requires, for certification mark applications under section 1(b) or 44 of the Act, that the application include certain statements concerning the intended use of the mark, applicant's intended control thereover, and that applicant will not engage in the production or marketing of the goods or services to which the mark is applied.

Section 2.47, which governs applications to register on the Supplemental Register, is amended to redesignate the present paragraph as (a); revise redesignated paragraph (a); and add new paragraphs (b), (c) and (d) to implement certain provisions of Public Law 100–667.

Section 2.47(a), as redesignated, is revised to implement section 23 of the Act by eliminating provisions pertaining to the requirement for one year of use of the mark for an application for registration on the Supplemental Register.

Section 2.47(b) is added to provide, in accordance with the Crocker decision, that in an application to register on the Supplemental Register under section 44 of the Act, the statement of lawful use in commerce may be omitted.

Section 2.47(c) is added to provide that a mark in an application to register on the Principal Register under section 1(b) of the Act is eligible for registration on the Supplemental Register only after an acceptable allegation of use under section 1 (c) or (d) of the Act has been timely filed. Section 23 of the Act requires lawful use in commerce as a prerequisite for an application for registration on the Supplemental Register. This requirement bars an application under section 1(b) of the Act from the Supplemental Register until an acceptable allegation of use has been submitted.

Section 2.47(d) is added to provide that an application for registration on the Supplemental Register must conform to the requirements for registration on the Principal Register under section 1(a) of the Act so far as applicable.

Section 2.51, which specifies certain general requirements for drawings, is amended by redesignating present paragraph (a) as (a)(1), revising paragraph (a)(1), adding new paragraphs (a)(2) and (a)(3), redesignating present paragraph (b) as (b)(1), revising paragraph (b)(1), adding new paragraphs (b)(2) and (b)(3), revising paragraph (c), redesignating and republishing present paragraph (d) as (e), and adding a new paragraph (d) to codify existing practice and to specify certain drawing requirements for applications under sections 1(b) of the Act and applications under section 44 of the Act.

Section 2.51(a), which presently requires that the drawing of a trademark be a substantially exact representation of the mark as used on or in connection with the goods, is redesignated as (a)(1) and revised to indicate that it pertains only to applications under section 1(a) of the Act.

Section 2.51(a)(2) is added to provide that, in an application under section 1(b) of the Act, the drawing of a trademark shall be a substantially exact representation of the mark as intended to be used on or in connection with the goods specified in the application and, that once an amendment to allege use under new § 2.76, or a statement of use under new § 2.88 has been filed, the drawing of the trademark shall be a substantially exact representation of the mark as used.

Section 2.51(a)(3) is added to provide that, in an application under section 44 of the Act, the drawing of the trademark shall be a substantially exact representation of the mark as it appears in the drawing in the registration certificate of a mark duly registered in the country of origin of the applicant.

Section 2.51(b), which presently specifies, for service marks, requirements similar to those specified in paragraph (a) for trademarks, is amended by redesignating the present paragraph as (b)(1) and adding paragraphs (b)(2) and (b)(3) to parallel, for service marks, the provisions of new paragraphs (a)(1), (a)(2) and (a)(3).

Section 2.51(c), which presently provides that, when appropriate and necessary, the drawing in an application for registration on the Supplemental Register may be the drawing of a package or configuration of goods, is revised to delete that provision, which is outdated, and to add a provision codifying the practice that the drawing of a service mark may be dispensed with in the case of a mark not capable of representation by a drawing, but in any such case the application must contain an adequate description.

Section 2.51(d) is redesignated as (e) and a new paragraph (d) is added to provide that broken lines should be used in the drawing of a mark to show placement of the mark on the goods, or on the packaging, or to show matter not claimed as part of the mark, or both, as appropriate, and to provide further that, in an application to register a mark with three-dimensional features, the drawing shall depict the mark in perspective in a single rendition. These proposed provisions codify existing practice.

Section 2.52(a), which pertains to the character of drawings, is revised to correct a cross-reference which presently is correct but would be incorrect when the amendments made herein to § 2.51 become effective. Specifically, § 2.52(a) is amended to refer to paragraph (e), rather than (d), of § 2.51.

Section 2.52(d), which pertains to drawing headings and which presently includes, *inter alia*, a requirement that the heading of a drawing (except for a drawing in an application under section 44 of the Act) not exceed one-fourth of the sheet and specify dates of use, is revised to indicate that the heading should not exceed one-third of the sheet and that the dates of use requirement pertains only to an application under 1(a) of the Act; to add a requirement that the heading of a drawing in an application filed in accordance with section 44(d) of the Act specify the priority filing date of the relevant foreign application; and to add a provision that, if a drawing is in special form, the heading of the drawing should include a description of the essential elements of the mark.

Section 2.52(e), which pertains to drawing linings for color, is revised to simplify the conventional color linings for orange and yellow or gold.

Section 2.53 is revised to change a cross-reference which presently is correct but would be incorrect when the amendments made herein to § 2.51 become effective. Specifically, § 2.53 is amended to refer to paragraph (e), rather than (d), of § 2.51.

Section 2.56, which concerns specimens for trademarks, is revised to indicate that the requirement for the filing of specimens pertains only to an application under section 1(a) of the Act, an amendment to allege use under new § 2.76, and a statement of use under new § 2.88; remove the redundant word "actually," in accordance with section 1(a)(1)(C) of the Act; add a provision, in accordance with section 45 of the Act, that if placement of the mark on labels, tags, containers or displays associated with the goods is impracticable, then specimens may be documents associated with the goods or their sale; and reduce the maximum size limit for specimens (the proposed maximum size limit parallels the preferable size of paper for a trademark application as specified in amended § 2.31). When specimens exceeding the size limitations are submitted, the applicant will be required to submit proper substitute specimens. The paragraph is revised further to reduce the number of specimens required from five to three. The present requirement for five specimens was adopted to permit members of the public to obtain specimens directly from the application file. Advances in copying technology have rendered the requirement for five specimens unnecessary because members of the public may now obtain quality photocopies of the specimens in the file, making removal of specimens unnecessary in most cases. The requirement for three specimens will provide one specimen for the file and make two specimens available for removal by third parties.

Section 2.57, which pertains to facsimiles in the case of a trademark, is amended to revise paragraph (a) to reduce the number of facsimiles required from five to three, and to reduce the maximum size limit for specimens (the maximum size limit parallels the preferable size of paper for a trademark application as specified in amended § 2.31); and to revise paragraph (b) by removing the redundant word "actually," in accordance with section 1(a)(1)(C) of the Act. When facsimiles exceeding the size limitations are submitted, the applicant will be required to submit proper substitute specimens.

Section 2.58, which concerns the filing of audio cassette tape recordings as specimens for service marks not used in written or printed form, was proposed to be amended to reduce the number of audio tapes required from three to two. As a result of comments received with

respect to this proposal, it has been withdrawn.

Section 2.59, entitled "Filing substitute specimens," is added to specify the requirements related to the filing of substitute specimens for applications under section 1(a) or 1(b) of the Act. The new section codifies existing practice with respect to applications under section 1(a) of the Act and sets forth the requirements which will apply to applications under section 1(b) of the Act.

Section 2.59(a) is added to provide that, in an application based upon use in commerce, the applicant may submit substitute specimens of the mark as used on or in connection with the goods, or in the sale or advertising of the services, provided that any substitute specimens are properly verified as to their use in commerce at least as early as the filing date of the application; and that the verification requirement shall not apply if the specimens are duplicates or facsimiles, such as photographs, of specimens already of record in the application. The new provision is in accordance with section 1(a) of the Act, which requires use in commerce, evidenced by specimens, as a prerequisite to the filing of an application thereunder.

Section 2.59(b) is added to provide that, after filing either an amendment to allege use under new § 2.76 or a statement of use under new § 2.88, in an application under section 1(b) of the Act, the applicant may submit substitute specimens of the mark as used on or in connection with the goods, or in the sale or advertising of the services, provided that the use in commerce of any substitute specimens submitted is supported by applicant's affidavit or declaration in accordance with § 2.20; and to provide further that, in the case of a statement of use under new § 2.88, the applicant must verify that the substitute specimens were in use in commerce prior to the filing of the statement of use or prior to the expiration of the time allowed to applicant for filing a statement of use. Since use in commerce is not required before filing an application under section 1(b) of the Act, there is no requirement that a substitute specimen have been in use at the time of the filing of the application. Furthermore, because an applicant may file a statement of use at any time during the six-month period following the notice of allowance, or at any time during any extension of time for filing a statement of use, a substitute specimen need not be in use any earlier than the expiration of the relevant period.

Section 2.61, which concerns the examination of an application, is amended to provide also for the examination of amendments to allege use under section 1(c) of the Act and statements of use under section 1(d) of the Act.

Section 2.61(a) is revised to indicate that not only applications for registration, but also amendments to allege use under section 1(c) of the Act and statements of use under section 1(d) of the Act will be examined.

Section 2.61(c) is revised to clarify the language.

Section 2.64, which relates to final action by the Trademark Examining Attorney and the applicant's permissible responses thereto, is amended by adding new paragraphs (c)(1), (c)(2), and (c)(3) concerning examination of an amendment to allege use under new § 2.76, filed during the six-month response period after issuance of a final action.

Section 2.64(c)(1) is added to provide that if an amendment to allege use under new § 2.76 is filed during the six-month response period after issuance of a final action, the Trademark Examining Attorney shall examine the amendment, but that the filing of such an amendment will not extend the time for filing an appeal or petitioning the Commissioner.

Section 2.64(c)(2) is added to provide that if the amendment to allege use under new § 2.76 is acceptable in all respects, the applicant will be notified of its acceptance.

Section 2.64(c)(3) is added to provide that if a new refusal or requirement is necessary as a result of the examination of the amendment to allege use under new § 2.76, the final action will be withdrawn and all unresolved refusals or requirements will be stated in a new non-final action.

Section 2.65(c) is added to provide that if an applicant in an application under section 1(b) of the Act fails to timely file a statement of use under new § 2.88, the application shall be deemed to be abandoned. The new paragraph is in conformity with section 1(d)(4) of the Act.

Section 2.66, which governs the revival of abandoned applications, is amended by redesignating the present paragraph as (a), and revising redesignated paragraph (a), which presently provides for the filing of a petition to revive an application abandoned for failure to respond, to pertain also to an application abandoned for failure to timely file a statement of use under new § 2.88, in an application under section 1(b) of the Act. Section 2.66 is further amended by transferring the last sentence of paragraph (a), which states the requirements for a petition to revive for failure to respond, to new paragraph (b), and by adding new paragraphs (c) and (d).

Section 2.66(c) is added to state the requirements for a petition to revive an application abandoned for failure to timely file a statement of use under new § 2.88, in an application under section 1(b) of the Act. The requirements parallel those stated in present § 2.66 and new paragraph (b).

Section 2.66(d) is added to provide that a petition to revive must be filed promptly, but that no petition to revive will be granted in an application under section 1(b) of the Act if granting the petition would permit the filing of a statement of use more than 36 months after the issuance of a notice of allowance under section 13(b)(2) of the Act. The 36-month limit for the filing of a statement of use is in accordance with the provisions of section 1(d) of the Act. Usually a petition to revive will be considered filed promptly if it is filed within two months of the date the application was abandoned for failure to respond.

Section 2.69, which pertains to inquiry by a Trademark Examining Attorney as to the applicant's compliance with other laws, is revised to delete the words "before allowance." The word "allowance," as presently used in the section, signifies approval of a mark for publication. The purpose of the deletion is to prevent confusion between this word and the new "notice of allowance" provided in section 13(b)(2) of the Act.

Section 2.71, which concerns amendments to correct informalities in applications, is amended by changing the section title from "Amendments to application." to "Amendments to correct informalities."; revising paragraphs (a), (b), and (c); and adding new paragraphs (d)(1), (d)(2), and (d)(3) to govern amendments to the dates of use.

Section 2.71(a), which presently provides for the amendment of applications to correct informalities and for other reasons, and also contains a provision concerning amendments to dates of use, is revised by deleting the provision concerning dates of use, which is transferred to a new paragraph designated as (d)(1).

Section 2.71(b), which presently provides that additions to the identification of goods or services will not be permitted unless certain specified conditions are met, is revised to provide that the identification of goods or services may be amended to clarify or limit the identification, but that additions thereto will not be permitted. The purposes of the requirement for the identification of goods or services are to give notice to third parties of the scope of the rights claimed by the applicant and to permit an accurate search for conflicting marks. Addition of goods or services to the identification, after the filing of an application, would frustrate these purposes. Moreover, section 7(c) of the Act provides that, contingent on the registration of a mark on the Principal Register, the filing of the application to register such mark shall constitute constructive use of such mark on or in connection with the goods or services specified in the registration.

Section 2.71(c), which presently provides, in essence, that a defect in the verification or declaration may be corrected only by filing a substitute or supplemental verification or declaration, is revised to clarify the language. The paragraph is further revised to provide that a verification or declaration required under §§ 2.21(a)(6), 2.76(e)(3) or 2.88(e)(3), to be properly signed, must be signed by the applicant, a member of the applicant firm, or an officer of the applicant corporation or association; that a verification or declaration which is signed by a person having color of authority to sign is acceptable for the purpose of determining the timely filing of the paper; but that a properly signed substitute verification or declaration must be submitted before the application will be approved for publication or registration, as the case may be. Persons having color of authority to sign are those who have first-hand knowledge of the truth of the statements in the verification or declaration and who also have actual or implied authority to act on behalf of the applicant. In the case of a corporate applicant, a person having color of authority might include, within the contemplation of the amended section, managers or similar persons who are in positions of authority, although not actually officers, if they have first-hand knowledge of the truth of the statements in the application and actual or implied authority to act on behalf of the applicant. However, an applicant's attorney ordinarily will not be considered a person having color of authority to sign.

Section 2.71(d)(1) is added to provide that no amendment to the dates of use will be permitted unless the amendment is supported by applicant's affidavit or declaration in accordance with § 2.20 and by such showing as may be required. This provision, which is the second sentence of present § 2.71(a), is transferred to new paragraph (d)(1) to be grouped with two other new paragraphs, designated (d)(2) and (d)(3), relating to amendments to the dates of use.

Section 2.71(d)(2) is added to codify the practice that, in an application under section 1(a) of the Act, no amendment to specify a date of use which is subsequent to the filing date of the application will be permitted. The new provision is in accordance with section 1(a) of the Act, which requires use in commerce as a prerequisite to the filing of an application thereunder.

Section 2.71(d)(3) is added to provide that after the filing of a statement of use under new § 2.88, in an application under section 1(b) of the Act, no amendment will be permitted to the statement of use to recite dates of use which are subsequent to the expiration of the time allowed to applicant for filing a statement of use. The reason for this limitation is that section 1(d) of the Act requires use of the mark in commerce, in an application under section 1(b) of the Act, within a specified period of time and imposes certain absolute limitations on extensions of that period. Any use later than the time permitted would not comply with the requirements of section 1(d) of the Act.

Section 2.72, which governs amendments to the description or drawing of a mark, is amended by redesignating the present paragraph as (b), revising redesignated paragraph (b), and adding new paragraphs (a), (c), and (d).

Section 2.72(a) is added to provide that amendments may not be made to the description or drawing of the mark if the character of the mark is materially altered, and that the Trademark Examining Attorney will determine whether a proposed amendment materially alters the character of the mark by comparing the proposed amendment with the description or drawing of the mark as originally filed. Concerning material alteration of a mark *see Torres* v. *Cantine Torresella S.r.l.*, 808 F.2d 46, 1 USPQ 2d 1483 (Fed. Cir. 1986); In re Holland American Wafer Co., 737 F.2d 1015, 222 USPQ 273 (Fed. Cir. 1984); *United Rum Merchants, Ltd.* v. *Distillers Corp.(S.A.) Ltd.*, 9 USPQ 2d 1481 (TTAB 1988); *Visa International Service Assn.* v. *Life-Code Systems, Inc.*, 220 USPQ 740 (TTAB 1983). The first of these two provisions is the last sentence of present § 2.72. The second provision is added to codify present practice, the purpose of which is to prevent an applicant from repeatedly amending the mark sought to be registered until it bears little resemblance to the mark as originally filed.

Section 2.72(b), as redesignated, is revised to transfer the last sentence, which specifies the general rule concerning amendments to marks, to new paragraph 2.72(a). The remainder of the paragraph, which presently provides that amendments to the description or drawing of the mark may be permitted only if warranted by the specimens (or facsimiles) as originally filed, or supported by additional specimens (or facsimiles) verified as to their use prior to the filing date of the application, is further revised to indicate that the provisions of the paragraph pertain only to applications under section 1(a) of the Act. The amendment is in accordance with section 1(a) of the Act, which requires use in commerce as a prerequisite to the filing of an application thereunder.

Section 2.72(c) is added to provide that, in applications under section 1(b) of the Act, amendments to the description or drawing of the mark, which are filed after submission of an amendment to allege use under new § 2.76 or a statement of use under new § 2.88, may be permitted only if warranted by the specimens (or facsimiles) filed, or supported by additional specimens (or facsimiles) and a supplemental affidavit or declaration in accordance with § 2.20 alleging that the mark shown in the amended drawing is in use in commerce; and that in the case of a statement of use under new § 2.88, applicant must verify that the mark shown in the amended drawing was in use in commerce prior to the filing of the statement of use or prior to the expiration of the time allowed to applicant for filing a statement of use. The reason for the latter requirement, in the case of a statement of use, is that section 1(d) of the Act requires use of the mark in commerce, in an application under section 1(b) of the Act, within a specified period of time and imposes certain absolute limitations on extensions of that period. Any use later than the time permitted would not comply with the requirements of section 1(d) of the Act.

Section 2.72(d) is added to codify the practice that in applications under section 44 of the Act, amendments to the description or drawing of the mark may be permitted only if warranted by the description or drawing of the mark in the foreign registration certificate.

Section 2.73, which governs amendments to recite concurrent use, is amended by redesignating the present paragraph as (a), revising redesignated

paragraph (a), and adding new paragraph (b).

Section 2.73(a), as redesignated, which presently provides that an application may be amended so as to be treated as an application for a concurrent registration, provided the application as amended satisfies the requirements of § 2.42, is revised to indicate that this provision pertains only to an application under section 1(a) of the Act. The Trademark Examining Attorney will determine whether the application, as amended, is acceptable.

Section 2.73(b) is added to provide that an application under section 1(b) of the Act may not be amended so as to be treated as an application for a concurrent registration until an acceptable amendment to allege use under new § 2.76 or statement of use under new § 2.88 has been filed in the application, after which time such an amendment may be made, provided the application as amended satisfies the requirements of § 2.42. To provide otherwise would be to permit an application for concurrent registration based on an intent to use concurrently, which would be in conflict with the well-established legal principle that an applicant for concurrent registration must have adopted and used the mark in good faith without knowledge of the prior right of another in the same or similar mark for the same or similar goods or services. The Trademark Examining Attorney will determine whether the application, as amended, is acceptable.

Section 2.75, which governs amendments to change register, is amended to redesignate the present paragraph as (a), revise redesignated paragraph (a), and add new paragraph (b).

Section 2.75(a), as redesignated, which presently provides for amendments to change applications from one register to another and also contains provisions relating to the effect of such an amendment on the filing date of an application, is revised to indicate that the paragraph pertains only to applications under section 1(a) or 44 of the Act; and to delete the provisions concerning the effect on the filing date. Prior to the enactment of Public Law 100–667, section 23 of the Act required that the mark in an application for registration on the Supplemental Register have been in use for one year prior to the filing of the application, whereas there is no such requirement for an application to register on the Principal Register. However, section 23, as amended, does not require use of a mark for one year prior to application on the Supplemental Register. Thus, under the Act, as amended, an amendment to change registers has no effect on the filing date of an application under section 1(a) or 44 of the Act.

Section 2.75(b) is added to provide that an application under section 1(b) of the Act may be amended to change the application to a different register only after submission of an acceptable amendment to allege use under new § 2.76 or statement of use under new § 2.88, and that when such an application is changed from the Principal Register to the Supplemental Register, the effective filing date of the application is the date of the filing of the allegation of use under section 1(c) or 1(d) of the Act. The amendment is in accordance with section 23 of the Act, both in its prior and amended forms, which requires use in commerce as a prerequisite to filing an application thereunder.

Section 2.76, entitled "Amendment to allege use.," is added to govern amendments to allege use under section 1(c) of the Act in an application under section 1(b) of the Act.

Section 2.76(a) is added to specify the time when such an amendment may be filed, namely, at any time between the filing of the application and the date the Trademark Examining Attorney approves the mark for publication or the date of expiration of the six-month response period after issuance of a final action, and to specify further that, thereafter, an allegation of use may be submitted only as a statement of use under new § 2.88 after the issuance of a notice of allowance under section 13(b)(2) of the Act. If an amendment to allege use is filed outside the time period specified, it will be returned to the applicant. The paragraph is in accordance with section 1(c) of the Act, which provides that an amendment to allege use may be filed at any time during examination of an application. The examination of an application extends from the filing of the application to the date the mark is approved for publication or the expiration of the six-month response period after issuance of a final action. The date a mark is approved for publication is the date the approval is entered into the TRAM (Trademark Reporting and Monitoring) System. The date of approval for publication is immediately available to the public through TRAM.

Section 2.76(b) is added to specify the elements of a complete amendment to allege use, namely, three specimens or facsimiles, conforming to the requirements of §§ 2.56, 2.57 and 2.58, of the mark as used in commerce; the fee prescribed in § 2.6; and a verified statement by the applicant containing certain averments concerning applicant's ownership of the mark and use of the mark in commerce, specifying the date of the applicant's first use of the mark and first use of the mark in commerce, the type of commerce, those goods or services specified in the application on or in connection with which the mark is in use in commerce and the mode or manner in which the mark is used on or in connection with such goods or services.

Section 2.76(c) is added to provide that an amendment to allege use may only be filed when the applicant has made use of the mark in commerce on or in connection with all of the goods or services, as specified in the application, for which applicant will seek registration in that application, unless the amendment is accompanied by a request, in accordance with amended § 2.87, to divide out from the application the goods or services to which the amendment pertains; and that if more than one item of goods or services is specified in the amendment to allege use, the dates of use required in paragraph (b)(1) of the section need be for only one of the items specified in each class, provided the particular item to which the dates apply is designated. The first provision in the paragraph prevents piecemeal prosecution of an application. The second provision in the paragraph is in conformity with both present and amended § 2.33(a)(2).

Section 2.76(d) is added to provide that the title "Amendment to allege use under § 2.76." should appear at the top of the first page of the paper.

Section 2.76(e) is added to specify minimum requirements for an amendment to allege use, namely, that the amendment be filed within the time period specified in paragraph (a) of the section, and include the fee prescribed in § 2.6, at least one specimen or facsimile of the mark as used in commerce, and a verification or declaration signed by the applicant stating that the mark is in use in commerce. The paragraph corresponds in principle to § 2.21, which sets forth minimum requirements for the filing of an application.

Section 2.76(f) is added to provide that a timely filed amendment to allege use which meets the minimum requirements specified in paragraph (e) of this section will be examined in accordance with §§ 2.61 through 2.69. If, as a result of the examination of the amendment to allege use, applicant is found not entitled to registration for any reason not previously stated, applicant will be notified and advised of the reasons and of any formal requirements or refusals.

The notification shall incorporate all unresolved refusals or requirements previously stated. The amendment to allege use may be amended in accordance with §§ 2.59 and 2.71 through 2.75. If the amendment to allege use is acceptable in all respects, the applicant will be notified of its acceptance. The filing of such an amendment shall not constitute a response to any outstanding action by the Trademark Examining Attorney.

Section 2.76(g) is added to provide that if the amendment to allege use is filed within the permitted time period but does not meet the minimum requirements specified in paragraph (e) of this section, applicant will be notified of the deficiency. The deficiency may be corrected provided the mark has not been approved for publication or the six-month response period after issuance of a final action has not expired. If an acceptable amendment to correct the deficiency is not filed prior to approval of the mark for publication or prior to the expiration of the six-month response period after issuance of a final action, the amendment will not be examined.

Section 2.76(h) is added to provide that an amendment to allege use may be withdrawn for any reason prior to approval of a mark for publication or expiration of the six-month response period after issuance of a final action.

Section 2.77, entitled "Amendments between notice of allowance and statement of use.", is added to provide that an application under section 1(b) of the Act may not be amended during the period between the issue date of the notice of allowance under section 13(b)(2) of the Act and the filing of a statement of use under new § 2.88, except to delete specified goods or services. Other amendments filed during this period will be placed in the application file and considered when the statement of use is examined.

The heading entitled "Publication and Allowance," for §§ 2.80 through 2.84, is changed to "Publication and Post Publication." The amended heading more accurately reflects the scope of the sections which follow. The word "allowance," as presently used in the heading, signifies approval of a mark for registration. The purpose of the deletion is to prevent confusion between the word "allowance" and the new "notice of allowance" provided in section 13(b)(2) of the Act.

Section 2.81 is amended by changing the section title from "Allowance of application." to "Post publication."; redesignating the present paragraph as (a); revising redesignated paragraph (a), which presently concerns the preparation of an application for registration after publication, to indicate that it does not apply to applications under section 1(b) of the Act for which no amendment to allege use under new § 2.76 has been submitted and accepted; and adding new paragraph (b) concerning the post-publication processing of applications under section 1(b) of the Act for which no amendment to allege use under new § 2.76 has been submitted and accepted. The word "allowance," as presently used in the section title, signifies approval of a mark for registration. The purpose of the title change is to prevent confusion between this word and the new "notice of allowance" provided in section 13(b)(2) of the Act.

Section 2.81(b) is added to provide that, in an application under section 1(b) of the Act, for which no amendment to allege use under new § 2.76 has been submitted and accepted, if no opposition is filed within the time permitted or all oppositions filed are dismissed, and if no interference is declared, a notice of allowance will issue stating the serial number of the application, the name of the applicant, the correspondence address, the mark, the identification of goods or services, and the issue date of the notice of allowance; that the mailing date that appears on the notice of allowance will be the issue date of the notice of allowance; and that thereafter, the applicant shall submit a statement of use under new § 2.88. The paragraph is in accordance with the provisions of section 13(b)(2) of the Act.

Section 2.82, which concerns the processing of an application for registration on the Supplemental Register after the examiner has approved the application for issuance, is revised to clarify the language of the section.

Section 2.83, which concerns the processing of conflicting marks, is amended by revising paragraph (a) to delete a provision stating "a notice will be sent, if practicable, to the applicants involved informing them of the publication or issuance of the earliest filed mark," and by revising paragraph (b) to delete a provision stating "a notice will be sent, if practicable, to the applicants involved informing them of the publication or issuance of the application with the earliest date of execution." These provisions are deleted because they do not conform to present practice.

Section 2.84, which concerns jurisdiction over published applications, is amended by deleting the words "or allowed" from the section title, which presently reads "Jurisdiction over published or allowed applications."; and revising paragraphs (a) and (b) to clarify the provisions and to add provisions concerning jurisdiction over applications under section 1(b) of the Act which have been published. The words "allowed" and "allowance," as presently used in the section title and in paragraphs (a) and (b), signify approval of a mark for registration. The purpose of the amendments deleting these words is to prevent confusion between the words "allowed" and "allowance" and the new "notice of allowance" provided in section 13(b)(2) of the Act.

Section 2.86, which presently concerns applications with a plurality of goods or services comprised in a single class, is amended by changing the section title from "Plurality of goods or services comprised in single class may be covered by single application." to "Application may include multiple goods or services comprised in single class or multiple classes."; redesignating the present paragraph as (a); and adding new paragraphs (b) and (c).

Section 2.86(a), as redesignated, which presently provides that an application may recite a plurality of goods or services comprised in a single class provided the particular identification of goods or services is stated and the mark has actually been used in connection with all of the goods or services specified, is revised to clarify the language of the paragraph and to add, as an alternative to the requirement of use, a requirement that the applicant have a bona fide intention to use the mark on or in connection with all the goods or services specified.

Section 2.86(b) is added to incorporate in § 2.86 the provisions of the present § 2.87, which governs the filing of an application to register a mark for goods and/or services which fall within a plurality of classes; clarify the language of those provisions; and add certain requirements relating to multiple class applications under section 1(b) of the Act.

Section 2.86(c) is added to prohibit applicants from alleging use as to certain goods or services and a bona fide intention to use as to other goods or services in the same application, regardless of the number of classes contained therein.

Section 2.87, which presently governs the filing of an application to register a mark for goods and/or services which fall within a plurality of classes, is amended by changing the section title from "Combined applications." to "Dividing an application."; redesignating the present paragraph as (a); revising redesignated paragraph (a); and adding

new paragraphs (b) and (c), to govern the division of applications.

Section 2.87(a), as redesignated, is revised by deleting the existing paragraph, which is incorporated in revised form in new paragraph (b) of amended § 2.86, and adding the new provisions that an application may be physically divided into two or more separate applications upon submission by the applicant of a request therefor; that in the case of a request to divide out some, but not all, of the goods or services in a class, a fee for each new separate application to be created by the division must be submitted; and that any outstanding time period for action by the applicant in the original application at the time of the division will be applicable to each new separate application created by the division.

Section 2.87(b) is added to provide that an application may be divided at any time between the filing of the application and the date the Trademark Examining Attorney approves the mark for publication or the date of expiration of the six-month response period after issuance of a final action; or during an opposition, upon motion granted by the Board. The paragraph provides further that an application under section 1(b) of the Act also may be divided upon request filed with a statement of use under new § 2.88 or at any time between the filing of a statement of use and the date the Trademark Examining Attorney approves the mark for registration or the date of expiration of the six-month response period after issuance of a final action. The date a mark is approved for publication is the date the approval is entered into the TRAM (Trademark Reporting and Monitoring) System. The date of approval for publication is immediately available to the public through TRAM.

Section 2.87(c) is added to provide that a request to divide an application should be made in a separate paper from any other amendment or response in the application. The title "Request to divide application." should appear at the top of the first page of the paper. Failure to make the request to divide in a separate paper or to title it as a "Request to divide application" will delay action on the request.

A new heading, entitled "Post Notice of Allowance," and two new sections, designated §§ 2.88 and 2.89, are added to govern the filing of statements of use, and requests for extensions of time, under section 1(d) of the Act, in applications under section 1(b) of the Act, after issuance of a notice of allowance under section 13(b)(2) of the Act.

Section 2.88, entitled "Filing statement of use after notice of allowance.", is added to govern statements of use under section 1(d) of the Act in an application under section 1(b) of the Act.

Section 2.88(a) is added to specify the time when such an amendment may be filed, namely, within six months after the date on which the notice of allowance under section 13(b)(2) of the Act is issued to an applicant under section 1(d)(2) of the Act. A statement of use filed prior to the issue date of a notice of allowance is premature, will not be considered, and will be returned to the applicant.

Section 2.88(b) is added to specify the elements of a complete statement of use under section 1(d) of the Act, namely, three specimens or facsimiles, conforming to the requirements of §§ 2.56 and 2.57, as amended, and § 2.58, of the mark as used in commerce; the fee prescribed in amended § 2.6; and a verified statement by the applicant containing certain averments concerning applicant's ownership of the mark and use of the mark in commerce, specifying the date of the applicant's first use of the mark and first use of the mark in commerce, the type of commerce, those goods or services specified in the application on or in connection with which the mark is in use in commerce and the mode or manner in which the mark is used on or in connection with such goods or services.

Section 2.88(c) is added to provide that a statement of use under section 1(d) of the Act may only be filed when the applicant has made use of the mark in commerce on or in connection with all of the goods or services, as specified in the application, for which applicant will seek registration in that application, unless the statement of use is accompanied by a request in accordance with amended § 2.87 to divide out from the application the goods or services to which the statement of use pertains; and that if more than one item of goods or services is specified in the statement of use, the dates of use required in proposed paragraph (b)(1) of this section need be for only one of the items specified in each class, provided the particular item to which the dates apply is designated. The latter provision in the paragraph is in conformity with both present and amended § 2.33(a)(2).

Section 2.88(d) is added to provide that the title "Statement of use under § 2.88." should appear at the top of the first page of the paper.

Section 2.88(e) is added to specify minimum requirements for a statement of use, namely, that the statement be filed within the time period specified in paragraph (a) of the section, and include the fee prescribed in amended § 2.6, at least one specimen or facsimile of the mark as used in commerce, and a verification or declaration signed by the applicant stating that the mark is in use in commerce. The paragraph corresponds in principle to amended § 2.21, which sets forth minimum requirements for the filing of an application.

Section 2.88(f) is added to provide that a timely filed statement of use which meets, at least, the minimum requirements specified in paragraph (e) of this section will be examined in accordance with §§ 2.61 through 2.69. If, as a result of the examination of the statement of use, applicant is found not entitled to registration, applicant will be notified and advised of the reasons and of any formal requirements or refusals. The statement of use may be amended in accordance with §§ 2.59 and 2.71 through 2.75. If the statement of use is acceptable in all respects, the applicant will be notified of its acceptance. The provision of the new paragraph permitting amendment of the statement of use is in accordance with section 1(d)(3) of the Act, which specifically provides that an applicant may amend the statement of use.

Section 2.88(g) is added to provide that if the statement of use does not meet the minimum requirements specified in paragraph (e) of this section, applicant will be notified of the deficiency. If the time permitted for applicant to file a statement of use has not expired, applicant may correct the deficiency. After the filing of a statement of use during a permitted time period for such filing, the applicant may not withdraw the statement to return to the previous status of awaiting submission of a statement of use, regardless of whether the statement is in compliance with paragraph (e) of this section.

Section 2.88(h) is added to provide that the failure to timely file a statement of use which meets the minimum requirements specified in paragraph (e) of this section shall result in the abandonment of the application. The new paragraph is in conformity with section 1(d)(4) of the Act.

Section 2.88(i)(1) is added to provide that the goods or services specified in a statement of use must conform to those goods or services identified in the notice of allowance; and that an applicant may specify the goods or services by stating "those goods or services identified in the notice of allowance" or, if appropriate, "those goods or services identified in the notice of allowance except * * *" followed by an identification of the goods or services to be deleted. The requirement that the goods or services specified in the statement of use must conform to those goods or services identified in the notice of allowance is in accordance with section 1(d)(1) of the Act. The suggested format for specifying goods or services in the statement of use will prevent inadvertent errors in the applicant's recital of the goods or services and facilitate examination of statements of use by the PTO.

Section 2.88(i)(2) is added to provide that if any goods or services specified in the notice of allowance are omitted from the identification of goods or services in the statement of use, the Trademark Examining Attorney shall inquire about the discrepancy and permit the applicant to amend the statement of use to include any omitted goods or services, provided that the amendment is supported by a verification that the mark was in use in commerce, on or in connection with each of the goods or services sought to be included, prior to the expiration of the time allowed to applicant for filing a statement of use. The paragraph is in accordance with section 1(d)(3) of the Act, which specifically provides that the applicant may amend the statement of use.

Section 2.88(i)(3) is added to provide that the statement of use may be accompanied by a separate request to amend the identification of goods or services in the application, as stated in the notice of allowance, in accordance with amended § 2.71(b). The paragraph is in conformance with new § 2.77, which provides that an application under section 1(b) of the Act may not be amended during the period between issuance of the notice of allowance under section 13(b)(2) of the Act and the filing of a statement of use, except to delete specified goods or services. Other amendments filed during this period will be placed in the application file and considered when the statement of use is examined.

In the notice of proposed rulemaking, § 2.88(j) was proposed to be added to provide that the mark shown in the specimens submitted with the statement of use must be materially the same as the mark depicted in the drawing of record. However, because this provision duplicates requirements already stated in §§ 2.51 and 2.72, the provision is withdrawn. The provision that was proposed as § 2.88(k) is redesignated as § 2.88(j).

Section 2.88(j) is added to provide that the statement of use may be accompanied by a separate request to amend the drawing in the application in accordance with amended §§ 2.51 and 2.72.

Section 2.89, entitled "Extensions of time for filing a statement of use.", is added to govern the filing and examination of requests for extensions of time for filing statements of use under new § 2.88.

Section 2.89(a) is added to provide that an applicant may request a six-month extension of time to file the statement of use under new § 2.88 by submitting a written request, before the expiration of the six-month period following the issue date of a notice of allowance under section 13(b)(2) of the Act, accompanied by the fee prescribed in amended § 2.6 and a verified statement by the applicant that the applicant has a continued bona fide intention to use the mark in commerce, specifying those goods or services identified in the notice of allowance on or in connection with which the applicant has a continued bona fide intention to use the mark in commerce. The paragraph is in conformity with section 1(d)(2) of the Act.

Section 2.89(b) is added to provide that an applicant may request further six-month extensions of time for filing the statement of use by submitting a written request, prior to the expiration of a previously granted extension of time, accompanied by the fee prescribed in amended § 2.6; a verified statement by the applicant that the applicant has a continued bona fide intention to use the mark in commerce, specifying those goods or services identified in the notice of allowance on or in connection with which the applicant has a continued bona fide intention to use the mark in commerce; and a showing of good cause, as specified in paragraph (d) of this section.

Section 2.89(c) is added to provide that extensions of time, for good cause, under § 2.89(b) will be granted only in six-month increments and may not aggregate more than 24 months. The provision is in conformity with section 1(d)(2) of the Act.

Section 2.89(d) is added to provide that the showing of good cause which is required as part of a request for an extension of time under § 2.89(b) must include certain specified elements listed in paragraphs (d)(1) and (d)(2).

Section 2.89(d)(1) is added to require that the showing of good cause which is required as part of a request for an extension of time under § 2.89(b) must include, in part, an allegation that the applicant has not yet made use of the mark in commerce on all the goods or services specified in the notice of allowance on or in connection with which the applicant has a continued bona fide intention to use the mark in commerce.

Section 2.89(d)(2) is added to require that the showing of good cause which is required as part of a request for an extension of time under § 2.89(b) must include, in part, a statement of applicant's ongoing efforts to make use of the mark in commerce on or in connection with each of the goods or services specified in the verified statement of continued bona fide intention to use required under § 2.89(b); that the efforts may include, without limitation, product or service research or development, market research, manufacturing activities, promotional activities, steps to acquire distributors, steps to obtain required governmental approval, or other similar activities; and that, in the alternative, a satisfactory explanation for the failure to make such efforts must be submitted. The paragraph is in compliance with section 1(d)(2) of the Act, which requires the Commissioner to issue regulations setting forth what constitutes good cause for a request for an extension of time for filing a statement of use under section 1(d)(2) of the Act. The listing in the paragraph of examples of efforts to make use of the mark in commerce is intended to be illustrative rather than exhaustive. The inclusion in the examples of "steps to obtain required governmental approval" is not intended to imply that any use of a mark prior to such approval may not constitute "use in commerce" as that term is defined in section 45 of the Act.

Section 2.89(e)(1) is added to provide that at the time of the filing of a statement of use, or during any time remaining in the existing six-month period in which a statement of use is filed, the applicant may file one request, in accordance with paragraph (a) or (b) of the section, for a six-month extension of time for filing a statement of use, provided that the time requested would not extend beyond 36 months from the issue date of the notice of allowance; and that, thereafter, applicant may not request any further extension of time. This paragraph permits an applicant to obtain additional time to submit a substitute statement of use in case the original statement of use is rejected, as fatally defective, by the PTO near or after the expiration of the six-month period in which such original statement was filed.

Section 2.89(e)(2) is added to provide that a request for an extension of time that is filed at the time of the filing of a statement of use, or during any time remaining in the existing six-month

period in which a statement of use is filed, must comply with all the requirements of paragraph (a) of this section, if it is applicant's first extension request, or paragraph (b) of this section, if it is a second or subsequent extension request. The new rule further provides that in a request under paragraph (b), applicant may satisfy the requirement for a showing of good cause by asserting that applicant believes it has made valid use of the mark in commerce, as evidenced by the submitted statement of use, but that if the statement of use is found by the PTO to be fatally defective, applicant will need additional time in which to file a new statement of use.

Final § 2.89(e)(2) includes a provision which was not included in the proposed rule, namely, a request for an extension of time that is filed at the time of the filing of the statement of use, or during any time remaining in the existing six-month period in which a statement of use is filed, must comply with all of the requirements of paragraph (a) of this section if it is applicant's first extension request, or paragraph (b) of this section, if it is a second or subsequent extension request. The additional provision was included in the final rule in order to clarify the rule. It is not a material change since proposed and final paragraph (e)(1) of this section requires that an extension request be filed "in accordance with paragraph (a) or (b)" of the section.

Section 2.89(f) is added to provide that the goods or services specified in a request for an extension of time for filing a statement of use must conform to those goods or services identified in the notice of allowance. The requirement is in accordance with section 1(d)(2) of the Act. The paragraph also provides that any goods or services specified in the notice of allowance which are omitted from the identification of goods or services in the request for extension of time will be presumed to be deleted and the applicant may not thereafter request that the deleted goods or services be reinserted in the application. Finally, the paragraph provides that an applicant may specify the goods or services by stating "those goods or services identified in the notice of allowance" or, if appropriate, "those goods or services identified in the notice of allowance except * * *" followed by a list of the goods or services to be deleted. The format will prevent inadvertent errors in the applicant's recital of the goods or services and facilitate examination of such a request by the PTO.

Section 2.89(g) is added to provide that the applicant will be notified of the grant or denial of a request for an extension of time, and of the reasons for a denial; that failure to notify the applicant of the grant or denial of the request prior to the expiration of the existing or requested extension does not relieve the applicant of the responsibility of timely filing a statement of use under new § 2.88; that if, after denial of an extension request, there is time remaining in the existing six-month period for filing a statement of use, applicant may submit a substitute request for extension of time; that otherwise, the only recourse available after denial of a request for an extension of time is a petition to the Commissioner in accordance with amended § 2.66 or § 2.146; that a petition from the denial of a request for an extension of time to file a statement of use shall be filed within one month from the date of mailing of the denial of the request; and that if the petition is granted, the term of the requested six-month extension of time which was the subject of the petition will run from the date of the expiration of the previously existing six-month period for filing a statement of use. The paragraph parallels §§ 2.163 through 2.165, concerning affidavits and declarations under section 8 of the Act, except that the paragraph does not permit a request for reconsideration, but rather provides a petition to the Commissioner as the only recourse after a denial of a request for an extension of time.

Section 2.99(g), which presently lists the types of applications and registrations that are not subject to concurrent use registration proceedings, is revised to provide, additionally, that applications to register under section 1(b) of the Act are subject to concurrent use registration proceedings only after an acceptable amendment to allege use under new § 2.76 or statement of use under new § 2.88 has been filed.

Section 2.99(h) is added to provide that the Board will consider and determine concurrent use rights only in the context of a concurrent use registration proceeding. The amendment parallels an amendment to add § 2.133(c) to provide that geographic limitations will be considered and determined only in the context of a concurrent use registration proceeding.

Section 2.101(b), which pertains to the filing of an opposition, is amended to be gender neutral, and to specify that an opposition need not be verified and may be signed by the opposer or the opposer's attorney or other authorized representative. The amendment parallels an amendment to § 2.111(b) relating to petitions to cancel. At one time, sections 13, 14 and 24 of the Act required verification for oppositions, petitions to cancel registrations on the Principal Register, and petitions to cancel registrations on the Supplemental Register, respectively. The verification requirement was deleted from sections 13 and 14 of the Act by Public Law 97–247, enacted August 27, 1982. Through inadvertence, a provision deleting, from section 24 of the Act, the verification requirement for petitions to cancel registrations on the Supplemental Register was omitted from Public Law 97–247. The omitted provision was incorporated, however, in Public Law 100–667. Accordingly, it is now appropriate to amend §§ 2.101(b) and 2.111(b) to indicate that verification is not necessary.

Section 2.111(b), which pertains to the filing of a petition for cancellation, is amended to be gender neutral, and to specify that a petition to cancel need not be verified and may be signed by the petitioner or the petitioner's attorney or other authorized representative. This amendment parallels an amendment to § 2.101(b) relating to oppositions. The section is amended further to indicate that a petition may seek to cancel a registration in whole or in part. It has been the practice of the Board to entertain a petition which seeks to "partially cancel" a registration by restricting the identification of goods or services therein. *See Alberto-Culver Co.* v. *F.D.C. Wholesale Corp.*, 3 USPQ2d 1460 (TTAB 1987), and *U.S. Steel Corp.* v. *National Copper & Smelting Co.*, 131 USPQ 397 (TTAB 1961). *Cf. Stanspec Co.* v. *American Chain & Cable Co., Inc.*, 531 F.2d 563, 566 n.9, 189 USPQ 420, 423 n.9 (CCPA 1976), and *Pegasus Petroleum Corp.* v. *Mobil Oil Corp.*, 227 USPQ 1040, 1043–1044 (TTAB 1985). However, there has been some question as to the Board's authority, under section 18 of the Act, to "partially cancel" a registration in a cancellation proceeding. *See Selfway, Inc.* v. *Travelers Petroleum, Inc.*, 579 F.2d 75, 198 USPQ 271 (CCPA 1978). Section 118 of Public Law 100–667 resolves this question by amending section 18 of the Act (which specifies the actions that the Board, acting on behalf of the Commissioner, may take in inter partes proceedings) to provide that the Board may, *inter alia*, "cancel the registration, in whole or in part," "modify the application or registration by limiting the goods or services specified therein," and "otherwise restrict or rectify with respect to the register the registration of a registered mark." Accordingly, § 2.111(b) is amended to indicate the availability of a petition for "partial cancellation."

Section 2.129(d) is added to provide that when a party to an inter partes proceeding before the Board cannot prevail without establishing constructive use pursuant to section 7(c) of the Act in an application under section 1(b) of the Act, the Board will enter judgment in favor of that party, subject to the party's establishment of constructive use; and that the time for seeking judicial review under section 21 of the Act shall run from the date of the judgment.

Section 2.133, which governs the amendment of an application or registration involved in an inter partes proceeding before the Board, is amended to redesignate and republish the present paragraph as (a) and to add new paragraphs, designated (b), (c), and (d), to reflect the expanded authority granted to the Board under section 18 of the Act, as amended. At present, the Board, in determining an inter partes proceeding other than a concurrent use registration proceeding, is bound to determine the proceeding based on the defendant's application or registration as presented, including the identification of goods or services specified therein, and cannot consider restrictions or limitations to defendant's use (such as restrictions or limitations as to types of goods, trade channels, or classes of purchasers) which may exist although not incorporated in the identification of goods or services in the application or registration. *See,* for example, *Canadian Imperial Bank* v. *Wells Fargo Bank,* 811 F.2d 1490, 1 USPQ2d 1813 (Fed. Cir. 1987); *CTS Corp.* v. *Cronstoms Manufacturing, Inc.,* 515 F.2d 780, 185 USPQ 773 (CCPA 1975); USTA Trademark Review Commission, "Report and Recommendations on the United States Trademark System and the Lanham Act," 77 TMR 375, 452–453 (1987); and Daniel L. Skoler, "Trademark Identification—Much Ado About Something?", 76 TMR 224, 237–239 (1986). As a result, the Board must often decide, for example, the issue of likelihood of confusion on a hypothetical rather than "real world" basis. Section 118 of Public Law 100–667 remedies this situation by amending section 18 of the Act to confer upon the Board (acting on behalf of the Commissioner) the authority to "cancel the registration in whole or in part," "modify the application by limiting the goods or services specified therein," and "otherwise restrict or rectify with respect to the register the registration of a registered mark."

Section 2.133(b) is added to provide that if, in an inter partes proceeding, the Board finds that a defendant is not entitled to registration in the absence of a specified restriction to the defendant's involved application or registration, the Board will allow the defendant time in which to amend the application or registration to conform to the findings of the Board, failing which judgment will be entered against the defendant.

Section 2.133(c) is added to provide that geographic limitations will be considered and determined by the Board only in the context of a concurrent use registration proceeding. The amendment parallels an amendment to add § 2.99(h) to provide that the Board will consider and determine concurrent use rights only in the context of a concurrent use registration proceeding.

Section 2.133(d) is added to provide that a plaintiff's pleaded registration will not be restricted in the absence of a counterclaim or another proceeding between the same parties or their privies to cancel the registration in whole or in part.

Section 2.161, which concerns the cancellation of a registration for failure to file an affidavit or declaration during the sixth year of the registration pursuant to section 8 of the Act, is revised to clarify the language of the section and to implement the provisions of section 110 of Public Law 100–667. Section 8(a) of the Act presently requires, *inter alia,* that the registrant file in the PTO an affidavit "showing that said mark is in use in commerce, or showing that its nonuse is due to special circumstances * * *" Section 110 of Public Law 100–667 amends section 8(a) of the Act to require, *inter alia,* that the registrant file in the PTO an affidavit "setting forth those goods or services recited in the registration on or in connection with which the mark is in use in commerce and attaching to the affidavit a specimen or facsimile showing current use of the mark, or showing that any nonuse is due to special circumstances * * *"

Section 2.162, which concerns requirements for the affidavit or declaration which must be filed during the sixth year of a registration pursuant to section 8 of the Act, is amended by revising paragraphs (e) and (g) to implement the above-specified provisions of section 110 of Public Law 100–667, and by revising paragraph (f) to clarify the language of the paragraph.

Section 2.181, which concerns the terms of original registrations and renewals, is amended by redesignating present paragraph (a) as (a)(1), revising redesignated paragraph (a)(1), and adding new paragraph (a)(2) to implement the provisions of sections 110 and 111 of Public Law 100–667. Section 110 of Public Law 100–667 amends section 8(a) of the Act to reduce the term of a registration from twenty years to ten years, and section 111 of Public Law 100–667 amends section 9(a) of the Act to reduce the term of a renewal from twenty years to ten years.

Section 2.181(a)(1), as redesignated, is revised to indicate that registrations issued or renewed under the Act prior to November 16, 1989, Whether on the Principal Register or on the Supplemental Register, remain in force for twenty years from their date of issue or expiration, and may be renewed for periods of ten (rather than twenty) years from the expiring period unless previously cancelled or surrendered.

Section 2.181(a)(2) is added to indicate that registrations issued or renewed under the Act on or after November 16, 1989, whether on the Principal Register or on the Supplemental Register, remain in force for ten years from their date of issue or expiration, and may be renewed for periods of ten years from the expiring period unless previously cancelled or surrendered. The paragraph is in conformity with section 51 of the Act, added by section 135 of Public Law 100–667.

Section 2.187 presently provides that a certificate of registration will be issued to the assignee of an applicant, or in a new name of applicant, provided that an appropriate document is of record in the Assignment Search Room of the PTO no later than the time the notice of publication is mailed, or if such document is not of record, then if a statement that such document has been filed for recordation is in the application file by the time the application is being prepared for issuance of the certificate of registration; and that the address of the assignee must be made of record in the application file or in the recorded document. The paragraph is revised to provide that a certificate of registration will be issued to an assignee of an applicant, or in a new name of an applicant, provided that the party makes a written request in the application record by the time the application is being prepared for issuance of the certificate of registration, and the appropriate document is of record in the Assignment Search Room of the PTO, or if the assignment or name change document is not of record in the Assignment Search Room, the written request must state that the document has been filed for recordation. The purpose of the revision is to permit an assignee or an applicant whose name has been changed to ensure, by complying with the requirements of the paragraph, that the certificate of registration will be issued in the name of such party. The paragraph is revised further to provide that the address of the assignee must be made of record in both the application file and the recorded document. This revision will help to ensure that the certificate of registration, and any subsequent papers which the PTO may need to send to the owner of the registration, will be mailed to the proper address.

Response to Comments on the Rules

The comments received in response to the notice of proposed rulemaking have been given careful consideration, and a number of the suggested modifications have been adopted. The comments and responses are discussed below.

Comment: Section 1.8 was proposed to be amended to exclude three new papers from the certificate of mailing procedure established under the section, namely, statements of use under new § 2.88, requests for extensions of time to file such statements, and amendments to allege use under new § 2.76. The certificate of mailing procedure permits papers to be mailed later than they otherwise could be and still be considered timely filed.

Two organizations and one individual expressed concern that this proposal was too restrictive. They suggested that the certificate of mailing procedure should be extended to cover these new papers, if possible.

Response: An amendment to allege use may be submitted only during the examination of an application prior to approval of the mark for publication for opposition in the Trademark Official Gazette. An amendment to allege use which is filed immediately before approval of the mark for publication may not be received in the Law Office until after the application is in the publication cycle. In such a case, the mark would have to be withdrawn from publication. Withdrawal of a mark from publication is a significant administrative problem. Use of the certificate of mailing procedure to file amendments to allege use would result in an increase in the number of applications which would have to be withdrawn from the publication cycle.

Both statements of use and requests for an extension of time to file such a statement are required to be filed during specified six-month periods. If a statement of use or an extension request is not filed during the time allowed, the application stands abandoned as a matter of law and the PTO amends its public records to reflect the abandonment. A statement of use or an extension request which is filed immediately before the expiration of the six-month period for filing a statement of use may not be received by the ITU Unit, which processes such papers, until after the application has been "abandoned" by the PTO. In such a case, the application would have to be reinstated. Reinstatement of an application is a significant administrative problem. Use of the certificate of mailing procedure to file statements of use and extension requests would result in an increase in the number of applications which would have to be reinstated. Moreover, during the time prior to reinstatement, the public records of the PTO would incorrectly indicate that these applications stood abandoned.

Accordingly, the suggestion that the certificate of mailing procedure be extended to cover these three papers has not been adopted.

Comment: Section 2.6 was proposed to be amended to establish two new fees for the filing of papers required or permitted under section 1(c) or 1(d) of the Act, namely, a filing fee of $100.00 for an amendment to allege use under new § 2.76 or for a statement of use under new § 2.88, and a filing fee of $100.00 for any request, under new § 2.89, for a six-month extension of time to file a statement of use. In addition, § 2.6(a) establishes the fee for filing an application, per class, and it was proposed to be made applicable to all new applications filed in the PTO, regardless of the basis asserted for filing.

Two organizations commented that the proposed amendment favors foreign Convention "intent-to-use" applicants over domestic applicants because foreign Convention applicants who perfect a basis for registration under section 44 of the Act do not need to submit evidence of actual use to support an application and, hence, will not need to avail themselves of the "intent-to-use" process beyond the initial application filing fee; whereas, domestic "intent-to-use" applicants will have to pay not only the initial application filing fee, but also the fee for an amendment to allege use or a statement of use and for any extensions of time they may request. To ameliorate this perceived inequity, the organizations recommended that the basic filing fee for an application asserting "intent-to-use" as a basis for filing should be increased to approximately $400.00 for all applicants and that the fees for the other three new papers be reduced to truly token amounts. An alternative suggestion was to require foreign applicants pay an additional fee for reliance on a foreign registration without use in commerce.

Response: The proposed fee increase would be inconsistent with the trademark fee schedule that took effect on April 17, 1989 as described in the February 15, 1989 Federal Register notice (54 FR 6893). The PTO will review the trademark fee structure approximately 18 months from implementation and propose fee adjustments, if warranted. Neither the Act nor the Paris Convention permit the PTO to charge a section 44 applicant an additional fee to register without asserting use in commerce. Accordingly, the suggested fee modifications have not been adopted.

Comment: Section 2.21(a)(5)(ii) was proposed to be added to specify all the filing requirements which pertain only to the assertion of a basis for filing an application under section 44(e) of the Act, including a certification or certified copy of the foreign registration on which the application is based. Section 7(c) of the Act states, in part, that contingent upon registration of the mark on the Principal Register, the filing of the application to register such mark shall constitute constructive use of the mark, conferring a right of priority.

One individual commented that in view of the provisions of section 7(c) of the Act and the delay which is sometimes encountered in receiving a certified copy of a foreign registration from a foreign applicant, it would be more equitable to foreign applicants if they could obtain a filing date without the certified copy of the foreign registration.

Response: Section 44(e) of the Act specifically requires that an application filed thereunder "shall be *accompanied* (emphasis added) by a certification or a certified copy of the registration in the country of origin of the applicant." In view thereof, the PTO believes that the statute requires submission of a certification or certified copy of the foreign registration as a necessary condition for receipt of a filing date. Accordingly, the suggested modification has not been adopted.

Comment: Section 2.21(a)(6) was proposed to be revised to require that an application include the verification in accordance with § 2.33(b), signed by the applicant, as a condition for receiving a filing date. One organization and four individuals objected to the proposed requirement.

The organization suggested that the PTO reconsider the necessity for imposing this requirement in the case of use-based applications under section 1(a) of the Act, where the verification of the applicant's bona fide intent is not at issue.

One individual suggested that the proposed rule be modified to allow an applicant who seeks registration on the basis of foreign trademark rights, and/or on use of a mark in commerce, to receive a filing date for the application even without the applicant's personal signature. This individual stated that one can, in virtually any country of the world, file a trademark application through counsel and obtain an effective filing date; that this has been the practice in the United States for many decades; that no reason exists to change the current practice; and that the proposed practice would be more burdensome to foreign nationals.

One individual suggested that signature by applicant's attorney or agent should be sufficient to receive a filing date and that when the signature is by applicant's agent or attorney, a substitute verification or declaration signed by the applicant could be required thereafter. This individual expressed his belief that requiring signature by the applicant in order to obtain a filing date would frustrate one of the purposes of Public Law 100–667 (namely, to encourage the earliest possible filing of applications) by unnecessarily delaying the filing of applications, especially in the case of foreign applicants.

One individual noted that, at present, a trademark applicant is allowed to file an unsigned application and receive a filing date, and to submit the verification later. The individual expressed his belief that obtaining a filing date without signature is in accordance with sections 1 and 44 of the Act, and that no change has been made to the Act which would require this amendment to the rules.

Another individual also objected to the proposed requirement, noting that in dealing with foreign applicants there may be a delay in obtaining a signed declaration. This individual suggested that the proposed requirement be deleted or, in the alternative, that a filing date be allowed on the basis of a facsimile copy, to be ratified and confirmed subsequently by a paper copy.

Response: Section 7(c) of the Act provides, in part, that contingent upon registration of a mark on the Principal Register, the filing of the application to register the mark shall constitute constructive use of the mark, conferring a right of priority. Thus, upon registration, all registrants on the Principal Register obtain a new substantive right, effective from the filing date of the application. For this reason a verified assertion, signed by the applicant, of the basis for filing the application is believed to be essential. However, for the purpose of determining the timely filing of a paper which must contain applicant's verification or declaration, amended § 2.71(c) permits the verification or declaration to be signed by a person having color of authority to sign for the applicant.

Although the Trademark Operation cannot receive any documents by "fax," for filing date purposes, a "fax" copy of an appropriately signed written application statement will be accepted, provided that the original document is later submitted.

Accordingly, the suggested changes have not been adopted.

Comment: Section 2.31, which presently states that it is preferable that an application be on legal or lettersize paper, was proposed to be amended to delete the reference to legal-size paper. One individual questioned whether the PTO could also allow the use of A–4 size paper.

Response: It is understood that A–4 size paper is $8\frac{9}{32}$ inches by $11\frac{11}{16}$ inches. The processing of papers of differing sizes is an administrative problem for the PTO. However, it should be noted that the paper size is expressed in the rule as a preference rather than as a mandatory requirement. An application filed on paper of a different size will not be denied a filing date for that reason. Accordingly, the suggested change has not been adopted.

Comment: Section 2.33(a)(1)(vii) was proposed to be amended, and § 2.88(b) was proposed to be added, to require, in part, that an application under section 1(a) of the Act, and a statement of use under section 1(d) of the Act, respectively, include a statement of applicant's date of first use of the mark in commerce on or in connection with the applicant's goods or services, specifying the nature of such commerce.

One individual commented that the proposed rules could be improved by including acceptable descriptions of "such commerce." The descriptions suggested by the individual were "interstate, federal (in the case of commerce in the District of Columbia), territorial (in the case of Puerto Rico and similar geographic areas) or foreign (when the nature of the commerce on the date of first use is of more than one type, than any of such types may be specified)."

Response: Section 45 of the Act defines commerce as "all commerce which may lawfully be regulated by Congress." The types of commerce which fall within this definition are many and varied, and are the subject of a large body of case law. Any attempt to include descriptions of such commerce in the rules could be perceived as limiting the types of commerce falling within the definition, and would also make the rules unduly lengthy. Accordingly, the suggested change has not been adopted.

Comment: Section 2.33(d) was proposed to be added to provide, in part, that an applicant in an application under section 1(a) of the Act may not amend that application to seek registration under section 1(b) of the Act.

Two organizations objected to this proposed provision. The organizations commented that a bona fide intention to use a mark in commerce is manifested clearly by the filing of an application based upon use of that mark in commerce; that the proposed provision would result in a loss of the application filing date (and the constructive use priority which would attach thereto, pursuant to section 7(c) of the Act, upon registration) if the use forming the basis for an application under section 1(a) proves to be defective; and that this provision discriminates against domestic applicants.

Response: Section 1(b) of the Act provides, in part, that a person who has a bona fide intention to use a mark in commerce may apply to register the mark on the Principal Register by filing in the PTO a written application, verified by the applicant and specifying, *inter alia,* applicant's bona fide intention to use the mark in commerce. Since the statement of a bona fide intention to use the mark in commerce is the sole statutory basis for filing an application under section 1(b) of the Act, the statement must be included in the application at the time of its filing. An application filed pursuant to section 1(a), based upon use of a mark in commerce, does not include such a statement and, hence, does not meet the requirements for an application under section 1(b) of the Act.

If an applicant has any doubt concerning the sufficiency of its use of a mark in commerce, the applicant may file its application under section 1(b) of the Act. Thereafter, the applicant may submit an amendment to allege use under section 1(c) of the Act, claiming use prior to the application filing date.

Accordingly, the suggested changes have not been adopted.

Comment: One individual commented, with respect to proposed §§ 2.33(a)(1)(ix) and 2.39(a), that the two rules contain cross-references to each other which are confusing.

Response: Upon further consideration, it is believed that the cross-reference in proposed § 2.39(a) to § 2.33 is

unnecessary. The cross-reference to § 2.33 has been deleted from § 2.39(a).

Comment: Section 2.39(b) (redesignated in the final rule as § 2.39(a)) was proposed to be revised to provide, in part, that an application claiming the benefit of a foreign application in accordance with section 44(d) of the Act shall specify the foreign application upon which it is based. One organization suggested that the rule should specify that the foreign application must be for a substantially identical mark and include the same goods or services as set forth in the U.S. application.

Response: The requirements concerning conformance of mark and goods in a U.S. application to its underlying foreign application are addressed in the rules. Section 2.33(a)(1)(v) provides, in part, that the goods or services asserted in an application under section 44 may not exceed the scope of the goods or services covered by the foreign application or registration. Sections 2.51 (a)(3) and (b)(3) provide that, in an application under section 44 of the Act, the drawing of a mark shall be a substantially exact representation of the mark as it appears in the drawing in the registration certificate of a mark duly registered in the country of origin of applicant. Accordingly, the suggested changes have not been adopted.

Comment: Section 2.39(c) (redesignated in the final rule as § 2.39(b)) was proposed to be added to provide that before an application filed in accordance with section 44(d) of the Act can be approved for publication, a basis for registration under section 1(a), 1(b) or 44(e) of the Act must be established; that the PTO will assume that basis to be section 44(e) unless otherwise stated in the application within six months of the filing date of the foreign application forming the basis of the section 44(d) claim; and that the filing of a paper, which claims a different basis for registration, more than six months after the filing date of the foreign application will result in a loss of priority under section 44(d).

One individual commented that the proposed paragraph is inconsistent with Public Law 100–667 "in requiring that U.S. applications claiming the priority of a foreign application, must forfeit the claim of priority in the event that registration is based on anything other than a foreign registration issuing on the priority application," and that it is also inconsistent with the Paris Convention. The individual expressed his belief that the basis for receiving a filing date under the Act can be separated into two categories, namely, use of a mark in commerce under section 1(a) of the Act and a bona fide intention to use a mark in commerce under section 1(b) of the Act; and that the second category includes applications under section 44 of the Act.

One individual commented that the assertion of a different basis might destroy not only the priority claim, but also the jurisdictional basis of the application as of the filing date; and that even if a different basis is asserted within six months of the filing date of the foreign application, a different basis might result in the loss of a priority claim. The individual suggested that the paragraph be revised to indicate that the loss of priority is not the only possible consequence that might follow from assertion of a different basis for registration.

One individual commented (without reference to a specific proposed rule) that "since section 44 applications are now required to include a statement of a bona fide intention to use a mark, it would appear equitable to permit such applicants to convert section 44 applications to section 1(b) applications." The individual noted that "this is especially true where the applicant may begin to use the mark prior to the date on which a registration from its home country issues."

Response: The proposed paragraph did not require "that U.S. applications claiming the priority of a foreign application must forfeit the claim of priority in the event that registration is based on anything other than a foreign registration issuing on the priority application." Rather, the proposed paragraph provided only that assertion of a different basis for registration, including reliance on a different registration under section 44(e) of the Act, more than six months after the filing date of the foreign application would result in a loss of priority. This provision was intended to apply to applications which, at the time of their filing, contained only a claim of priority pursuant to section 44(d), and no other asserted basis for filing under section 1(a), 1(b) or 44(e) of the Act. There is no provision in either Public Law 100–667 or the Paris Convention which prohibits the PTO from requiring an applicant, who filed an application in the U.S. asserting only a claim of priority under section 44(d) of the Act, to assert a basis for registration (i.e., under section 1(a), 1(b) or 44(e) of the Act) within a certain period of time after the filing date of the foreign priority application. Thus, this provision is not contrary to either Public Law 100–667 or the Paris Convention.

The PTO believes that the subject matter of these sentences may be addressed more appropriately in the "Trademark Manual of Examining Procedure". Accordingly, the proposal to add these two sentences to § 2.39 is withdrawn.

It should be noted that although an application filed under section 44 of the Act is required to include a statement that the applicant has a bona fide intention to use the mark in commerce, the PTO will not construe such an application to be an application filed also under section 1(b) of the Act unless the applicant specifically asserts section 1(b) as a basis for filing. An application asserting only a claim of priority under section 44(d) may not be amended to assert section 1(b) of the Act as a basis for filing without loss of the foreign priority date unless the amendment is submitted within six months of the filing date of the foreign application. *Cf. In re Daiwa Seiko, Inc.,* 230 USPQ 794 (Comm'r Pats. 1983).

Comment: Section 2.44, which presently specifies the requirements for an application to register a collective mark, including the requirement that an applicant state the nature of applicant's control over the use of the mark, was proposed to be amended to indicate that the present paragraph pertains only to applications under section 1(a) of the Act, and to add a new paragraph specifying the requirements for an application to register a collective mark under section 1(b) or 44 of the Act, including the requirement that an applicant state the nature of the control applicant intends to exercise over the use of the mark.

One individual commented that there are some types of collective organizations, such as a university alumni association, which cannot reasonably be expected to exercise control over use of their indicia of membership once it has been given to a new member upon enrollment. The individual suggested that § 2.44 should be amended "so that only in appropriate cases would it be necessary for the applicant to show the exercise of control."

Response: Proposed new paragraph (b) requires only that the applicant specify, *inter alia,* "the nature of the control applicant intends to exercise over the use of the mark." Thus, the rule does not require that a particular degree of control be exercised, or intended to be exercised, over the use of a mark. This reflects the requirement under section 4 of the Act that an applicant exercise legitimate control over the use of the mark that it seeks to register. Accordingly, the suggested modification has not been adopted.

Comment: One individual commented (without reference to a specific proposed rule) that the proposed rules do not specify the procedure for filing a statement of use if the applicant amends to the Supplemental Register.

Response: Section 2.47(c) was proposed to be added to provide that a mark in an application to register on the Principal Register under section 1(b) of the Act is eligible for registration on the Supplemental Register only after an acceptable amendment to allege use under § 2.76 or statement of use under § 2.88 has been timely filed. Section 23 of the Act requires lawful use in commerce as a prerequisite for an application for registration on the Supplemental Register. This requirement bars an application under section 1(b) of the Act from the Supplemental Register until an acceptable allegation of use has been submitted. Moreover, section 1(b) of the Act only provides for filing an application based upon a bona fide intention to use a mark in commerce on the Principal Register. Accordingly, no modification of the rules is necessary.

Comment: Section 2.51(d) was proposed to be revised to provide that broken lines should be used in the drawing of a mark to show placement of the mark on the goods, or on packaging, or to show matter not claimed as part of the mark, or both, as appropriate, and to provide further that, in an application to register a mark with three-dimensional features, the drawing shall depict the mark in perspective in a single rendition. One individual commented that when a mark is three-dimensional, or when placement of the mark on the goods or packaging is significant, multiple drawings should be permitted; each drawing should be labeled with figure numbers as in the case of utility and design patent applications; and the trademark application should include a description of the figures.

Response: A drawing with multiple renditions, although suitable for a patent application, is not satisfactory for trademark purposes. The drawing of a trademark should depict the mark as it is seen by the consumer; the consumer does not see the mark in multiple renditions or from more than one perspective at a time. For the same reason, the labeling of a trademark drawing with figure numbers would be inappropriate. It has been the experience of the PTO that a three-dimensional mark can be adequately depicted in a single rendition, particularly when the application includes an appropriate description of the mark. *Cf.* In re Weber-Stephen Products Co., 3 USPQ2d 1659, 1661 (TTAB 1987); In re Vico Products Mfg. Co., Inc., 229 USPQ 364, 366 (TTAB 1985); In re Pierre Faber S.A., 221 USPQ 1210, 1211 (TTAB 1984); In re Ovation Instruments, Inc., 201 USPQ 116, 123 (TTAB 1978). Accordingly, the suggested modification has not been adopted. If an applicant believes that its mark is incapable of being depicted in a single rendition, it may file a petition to the Commissioner, pursuant to § 2.146(a)(5), to waive the requirement of the rule.

Comment: Section 2.52(d), which pertains to drawing headings and which presently includes, *inter alia,* a requirement that the heading of a drawing (except for a drawing in an application under section 44 of the Act) specify dates of use, was proposed to be revised to indicate that the requirement pertains only to an application under section 1(a) of the Act; and to add a requirement that the heading of a drawing in an application filed in accordance with section 44(d) of the Act specify the priority filing date of the relevant foreign application.

One individual commented that proposed § 2.52(d) does not reflect current practice because it continues the existing requirement that the heading must not exceed one fourth of the sheet; whereas, in the individual's experience, the PTO routinely accepts drawings when the heading occupies one-half or, in some cases, even two-thirds of the sheet. The individual suggested that the paragraph be modified to enlarge the heading size limit from one-fourth to one-half of the sheet.

One organization suggested that § 2.52(d) be amended to provide that when a significant element of a special form drawing is unclear or ambiguous, the heading should include a brief description of the mark in the drawing. The organization noted that such a description would provide more accurate information in the paper search file and facilitate accurate coding of marks for entry into the computer search system. The organization emphasized, however, that the suggested provision should be encouraging rather than mandatory in nature.

Response: The suggested modifications have been adopted, except that the heading size limit has been enlarged only to one-third of the sheet instead of the suggested one-half of the sheet. If a drawing had a heading of one-half of the sheet and a special form depiction of the mark which was four inches by four inches in size, there would not be enough room remaining for the required margins.

Comment: Sections 2.56, 2.57 and 2.58, which pertain to the specimens of use in an application, were proposed to be amended to reduce the number of specimens required from five to two in §§ 2.56 and 2.57 and from three to two in § 2.58. Similarly, the PTO proposed to require that two specimens be filed in connection with an amendment to allege use under proposed § 2.76 and a statement of use under proposed § 2.88.

Four organizations objected to the reduction in the required number of specimens from five to two. They commented that original specimens show color and detail more effectively than photocopies and provide valuable information enabling practitioners to better evaluate potential conflicts. One of the organizations recommended requiring at least three specimens, while the other three organizations favored maintaining the present requirement for five specimens.

Response: Having five specimens in an application or registration file increases the amount of storage space required for these files. Moreover, it is unusual for more than one party to ask to remove a specimen from the same application or registration file. A requirement for three specimens would provide one specimen to remain in the file and make two specimens available for removal by third parties. The PTO believes that this number requirement will meet the needs of both the public and the PTO. Since § 2.58(b) presently requires three audio cassettes, no change to that rule is required and the proposed amendment is withdrawn. Accordingly, the suggestion that the PTO require three specimens has been adopted in the final rules.

Comment: Section 2.59(a) was proposed to be added to provide that, in an application based upon use in commerce, the applicant may submit substitute specimens of the mark as used on or in connection with the goods, or in the sale or advertising of the services, provided that any substitute specimens are properly verified as to their use in commerce at least as early as the filing date of the application.

One individual commented that there should be no need to submit a verification in support of substitute specimens which are, in fact, "faithful photographic reproductions" of the specimens already of record and recommended that proposed § 2.59(a) be modified to indicate that a verification will not be required in such circumstances.

Response: This suggestion codifies present practice set out in section 808.10 of the "Trademark Manual of Examining Procedure" and has been adopted.

Comment: Section 2.66(d) was proposed to be added to provide that a petition to revive an abandoned application must be filed promptly, but that no petition to revive will be granted in an application under section 1(b) of the Act if granting the petition would permit the filing of a statement of use more than 36 months after the issuance of a notice of allowance under section 13(b)(2) of the Act.

One organization commented that "in view of the constructive use awarded applications under the new law, it will be more important than ever for practitioners to be able to rely on the fact that an application uncovered in a search has truly been abandoned in the PTO without the specter of its revival after an indeterminate period of time." The organization recommended that "the rules should place an outside limit of six months or one year on petitions to revive either 1(a) or 1(b) applications."

Response: Usually a petition to revive will be considered filed promptly if it is filed within two months of the date the application was abandoned for failure to respond. Section 12(b) of the Act provides, in part, that an application "shall be deemed to have been abandoned, unless it can be shown to the satisfaction of the Commissioner that the delay in responding was unavoidable, whereupon such time may be extended." The Commissioner cannot determine in advance that facts asserted beyond a certain time limit cannot show unavoidable delay. Accordingly, the suggested modification has not been adopted.

Comment: Section 2.71(b), which presently provides that additions to the identification of goods or services will not be permitted unless certain specified conditions are met, was proposed to be revised to provide that the identification of goods or services may be amended to clarify or limit the identification, but that additions will not be permitted. It was indicated in the notice of proposed rulemaking that the purposes of the requirement for the identification of goods or services are to give notice to third parties of the scope of the rights claimed by the applicant and to permit an accurate search for conflicting marks; and that addition of goods or services to the identification, after the filing of an application, would frustrate these purposes. It was also noted that section 7(c) of the Act provides that, contingent on the registration of a mark on the Principal Register, the filing of the application to register such mark shall constitute constructive use of such mark on or in connection with the goods or services specified in the registration.

One individual commented that he agreed in principle with the proposed rule and the reasoning offered, but that the PTO should not apply the proposed amendment without some flexibility that allows an applicant to minimally enlarge the scope of the initially claimed goods or services in an application. The individual expressed his belief that such flexibility would not defeat either of the two legitimate reasons cited for the proposal and that "strict adherence to the proposed change would result in additional workload due to refiled or additional applications to comprehensively cover goods or services that the applicant inadvertently failed to claim." The individual suggested that the rule be modified to provide that the identification of goods or services may be amended to clarify or limit the identification, but that "substantive additions" will not be permitted.

Response: For the reasons stated in the notice of proposed rulemaking, the PTO believes that it would be inappropriate to allow any additions to the identification of goods or services in an application. Accordingly, the suggested modification has not been adopted.

Comment: Section 2.71(c), which presently provides that a defect in the verification or declaration may be corrected only by filing a substitute or supplemental verification or declaration, was proposed to be revised to clarify the language. The paragraph was proposed to be further revised to provide that a verification or declaration required under §§ 2.21(a)(6), 2.76(e)(3) or 2.88(e)(3), to be properly signed, must be signed by the applicant, a member of the applicant firm, or an officer of the applicant corporation or association; that a verification or declaration which is signed by a person having color of authority to sign, is acceptable for the purpose of determining the timely filing of the paper; but that a properly signed substitute verification or declaration must be submitted before the application will be approved for publication or registration, as the case may be. It was indicated in the notice of proposed rulemaking that persons having color of authority to sign are those having first-hand knowledge of the truth of the statements in the verification or declaration; that in the case of a corporate applicant, a person having color of authority might include, within the contemplation of the amended section, managers or similar persons who are in positions of authority, although not actually officers, if they have first-hand knowledge of the truth of the statements in the application; and that an applicant's attorney ordinarily will not be considered a person having color of authority to sign, unless he/she is an officer.

One individual expressed his belief that the language "amendment of the verification or declaration will not be permitted" in the present and proposed rule could lead some people to believe that there is no way in which an amendment of a declaration or verification can be effected when, in fact, it can be effected by the submission of a substitute document. The individual suggested that the rule be revised to state that changes may not be made in the verification of declaration document already in the PTO file, but that any amendment would have to be made by the filing of a substitute or supplemental amendment.

Three organizations commented that the definition in the proposed rule of persons having color of authority to sign a verification or declaration could include many persons not authorized to act on behalf of the applicant. One of the organizations suggested that the proposed definition ("those having first-hand knowledge of the truth of the statements in the verification or declaration") should be clarified by adding "and who are authorized to act on behalf of the applicant."

Response: In response to the comment by the individual, the beginning of the final rule has been modified to read: "If the verification or declaration filed with the application is defective, the defect may be corrected only by the submission of a substitute or supplemental verification or declaration in accordance with § 2.20."

In response to the comments of the organizations, the definition of persons having color of authority to sign has been modified in the final rule to read: "Persons having color of authority to sign are those who have first-hand knowledge of the truth of the statements in the verification or declaration and who also have actual or implied authority to act on behalf of the applicant."

Comment: Section 2.77 was proposed to be added to provide, in part, that an application under section 1(b) of the Act may not be amended during the period between the issue date of the notice of allowance under section 13(b)(2) of the Act and the filing of the statement of use under § 2.88, except to delete specified goods or services.

Four organizations expressed their concern that the word "delete" may be unnecessarily limiting and may restrict

BEST COPY AVAILABLE

the ability of parties to negotiate settlement of potential conflicts. The organizations suggested that the rule be modified to allow amendments "to delete or restrict" the specified goods or services during this time period.

Response: An amendment seeking to restrict the specified goods or services would require examination by the Trademark Examining Attorney. However, the application file will not be in the possession of the Examining Attorney during the time between issuance of the notice of allowance and submission of the statement of use. Inasmuch as this rule applies only to the specified time period, it will not affect the settlement of oppositions or potential oppositions, which take place prior to issuance of the notice of allowance. Moreover, the last sentence of new § 2.77, which in the notice of proposed rulemaking read: "Other amendments filed during this period will not be considered. unless resubmitted at, or after, the time of filing the statement of use," has been modified to read: "Other amendments filed during this period will be placed in the application file and considered when the statement of use is examined." This change has been made so that the applicant will not have to resubmit the proposed amendment at the time of filing the statement of use. Thus, during the period covered by the rule, amendments restricting the goods may be filed for later consideration by the Trademark Examining Attorney at the time of examination of the statement of use. Accordingly, the proposed modification has not been adopted.

Comment: Section 2.83, which concerns the processing of conflicting marks, was proposed to be amended by revising paragraph (a) to delete a provision stating "a notice will be sent, if practicable, to the applicants involved informing them of the publication or issuance of the earliest filed mark," and by revising paragraph (b) to delete a provision stating "a notice will be sent, if practicable, to the applicants involved informing them of the publication or issuance of the application with the earliest date of execution."

One individual commented that interferences are sometimes declared, and that the rule ought to make provision for interferences so that the declaration of an interference cannot be challenged on the ground that there is no provision for interferences in the rules.

One individual commented that the rule should not be amended to delete the notice provisions presently set forth in paragraphs (a) and (b). The individual expressed his belief that such notice is helpful to applicants who do not subscribe to the "Official Gazette" and that "providing notice does not in any way inconvenience the PTO or add to the workload of Examiners who are aware of the conflicting applications and, as a matter of good practice, have both files before them when they act on either one."

Response: Provision is made in § 2.91 for the declaration of interferences.

The provisions concerning notice were proposed to be deleted because they do not conform to present practice. The Trademark Examining Attorney notifies applicants of conflicting applications during examination. To provide a second notice upon publication of the earlier filed, or earlier executed, application would require that a system be developed for monitoring the progress of that application and for sending the second notice. Thus, sending second notices would be unduly burdensome to the PTO.

Accordingly, the suggestion has not been adopted.

Comment: Section 2.84, which governs jurisdiction over published applications, was proposed to be revised to provide, in part, that after publication of an application under section 1(b) of the Act, the examiner may exercise jurisdiction over the application after issuance of the notice of allowance under section 13(b)(2) of the Act.

One individual suggested that the phrase "the examiner may exercise jurisdiction" be modified to read "the examiner must exercise jurisdiction." In this regard, the individual noted that after the issuance of the notice of allowance the examiner must exercise jurisdiction over the application to examine the statement of use, and that jurisdiction must also be exercised over requests for extensions of time to file a statement of use.

Response: The purpose of both present and proposed § 2.84 is to specify when an examiner is allowed to exercise jurisdiction over an application, not to specify when an examiner must exercise jurisdiction over an application. Accordingly, the proposed modification has not been adopted.

Comment: Section 2.86, which presently provides that an application may recite a plurality of goods or services comprised in a single class, provided the goods or services are specifically identified and the mark has actually been used in connection with all of the specified goods or services, was proposed to be amended by, *inter alia,* redesignating the present paragraph as (a); and to add, as an alternative to the requirement of use, a requirement that the applicant have a bona fide intention to use the mark on or in connection with all the specified goods or services.

Two organizations expressed their concern about the requirement that applicants state a bona fide intention to use the mark on all goods recited in the application. The organizations noted that registration will be granted to domestic applicants only for those goods for which actual use in commerce is made, but that foreign applicants could specify overly extensive lists of goods, secure registration for them, and, if no use occurs during the first six years of registration, simply re-file for these same goods to circumvent the requirements of section 8 of the Act. The organizations recommended that the PTO "require use at least somewhere for all goods specified prior to granting registrations to section 44 applicants."

One organization recommended that the beginning of the proposed paragraph, which states "an application may recite more than one item of goods, or more than one service comprised in a single class provided the goods or services are specifically identified and * * *," be revised by inserting thereafter the phrase "and in accordance with subsection (c) of this rule." Proposed subsection (c) provides that the applicant may not allege use as to certain goods or services and a bona fide intention to use as to other goods or services in the same application, regardless of the number of classes contained therein.

Response: To require "use at least somewhere for all goods specified prior to granting registration to section 44 foreign applicants" would be inconsistent both with the Act and the Paris Convention.

The PTO believes that the suggested modification of proposed paragraph (a) to include a reference to proposed paragraph (c) would not further clarify the rule and is unnecessary.

Accordingly, the suggested modifications have not been adopted.

Comment: Section 2.86(b), which governs multiple class applications, provides, in part, that "A single certificate of registration for the mark shall be issued."

One organization suggested that the phrase "unless the application is divided pursuant to Rule 2.87" be added to the provision.

Response: The suggested modification is adopted.

Comment: Sections 2.76 and 2.88 were proposed to be added to govern amendments to allege use under section 1(c) of the Act and statements of use under section 1(d) of the Act, respectively. Proposed paragraphs (d)

and (e) of the new sections required that an amendment to allege use and a statement of use be made in a separate paper from any other filing.

Three organizations and one individual expressed their belief that the proposed requirement would be unduly harsh since violation could result in the abandonment of the application.

Response: The proposed requirement has been withdrawn.

Comment: Sections 2.76(c) and 2.88(c) were proposed to be added to provide, *inter alia,* that if more than one item of goods or services is specified in an amendment to allege use or a statement of use, the dates of use required to be specified need be for only one of the items specified, provided the particular item to which the dates apply is designated.

One individual commented that under the proposed paragraphs dates of use are apparently not required to be stated for each class of goods or services. The individual questioned whether this was an inadvertent omission.

Response: The PTO did not intend to imply that dates of use did not need to be specified for each class of goods or services. A requirement for a specification of dates of use for each class has been included in the final rules.

Comment: Section 2.88(f) was proposed to be added to provide, in part, that if a statement of use does not comply with all of the requirements specified in paragraph (e) of the proposed section, applicant will be notified of the deficiency.

One organization recommended that the proposed paragraph be modified to require that applicant be given "a statement of reasons for finding a statement of use to be defective."

Response: The proposed paragraph specifically provides that "applicant will be notified of the deficiency." A "notification of a deficiency" is a description of the nature of the deficiency, i.e., of the reason why the statement of use was found to be defective. Accordingly, the suggested modification has not been adopted.

Comment: Section 2.88(e) was proposed to be added to specify minimum requirements (in addition to timeliness) for a statement of use, namely, the prescribed fee, one specimen or facsimile of the mark as used in commerce, and a verification or declaration signed by the applicant stating that the mark is in use in commerce, and specifying the date of the applicant's first use of the mark in commerce and the goods or services on or in connection with which the mark is used in commerce. Proposed § 2.88(f) provided, in part, that if a statement of use does not comply with the requirements of proposed paragraph (e), applicant may correct the deficiency only if the time permitted for applicant to file a statement of use has not expired; and that after the filing of a statement of use during a permitted time period for such filing, the applicant may not withdraw the statement to return to the previous status of awaiting submission of a statement of use.

Section 2.89, governing extensions of time for filing a statement of use, was proposed to be added to, *inter alia,* specify the requirements for a request for an extension of time for filing a statement of use; permit an applicant to file, during the six-month period in which a statement of use is filed, one last request for a six-month extension of time; and provide that any defect in an extension request may be corrected only if there is time remaining in the six-month period for filing a statement of use.

Comments relating to these proposed provisions and their interrelationship were submitted by six organizations, one firm and three individuals.

One organization commented that the proposed sections require an applicant to remedy defects in a statement of use or a request for an extension of time to file a statement of use "within the original or an extended six-month period" for filing a statement of use; and that failure to remedy a defect within the specified period causes the application to become abandoned in the case of a statement of use, or requires the applicant to file a petition to the Commissioner in the case of a request for extension of time. The organization expressed its concern that "an applicant's valuable trademark rights will be destroyed or jeopardized for minor informalities in a statement of use or request for an extension of time." The organization recommended that a new § 2.65(d) be added to provide, in effect, that when a timely filed statement of use "is a bona fide attempt to respond to a notice of allowance, and is substantially complete, but compliance with some requirement has been inadvertently omitted, opportunity to explain and supply the omission should be given before the question of abandonment is considered."

Another organization and a firm offered comments to the same effect and also expressed their belief that the provision in proposed § 2.89 for the filing of one last extension request during the six-month period in which a statement of use is filed is not "an acceptable solution" because, *inter alia,* an applicant would have to submit a fee for such a request which might otherwise not be needed, and because the extension request might be rejected as informal and, therefore, be useless.

Three other organizations and one individual recommended that the applicant be afforded an automatic one or two-month period to respond to a notice of a deficiency in a statement of use. One of these organizations commented that an applicant should not be forced to either risk abandonment, or undergo the inconvenience and expense of filing an additional and probably unnecessary request for an extension of time. This organization expressed its belief that the plain language of the Act "requires that the PTO permit the applicant to amend the statement of use regardless of the expiration of any extension period, including the last one;" and that section 1(d)(2) of the Act provides for an aggregate of 36 months for an applicant to file a statement of use.

One individual commented with respect to proposed § 2.88(g), that "it is not clear what will happen in cases where the statement of use is filed near the end of the total 36 months from the notice of allowance if the statement of use is deficient but does include the fee, a specimen and a verification or declaration of use."

One individual commented, in effect, that it is not clear why requirements for amendments to allege use and statements of use are specified in both paragraphs (b) and (e) of proposed §§ 2.76 and 2.88, respectively, and why the specified requirements vary.

One organization expressed its belief "that an intent-to-use applicant should be allowed to withdraw a statement of use and restore the application to its prior status;" that "such withdrawal, while prohibited by proposed § 2.88(f), is not prohibited by the statute;" and that allowance of such a withdrawal would parallel the permissible withdrawal of an amendment to allege use.

Response: Paragraphs (b) of proposed §§ 2.76 and 2.88 specify the requirements for a complete amendment to allege use and statement of use, respectively. Paragraphs (e) of the proposed sections specify the minimum requirements for such papers. The provisions of the proposed rules have been modified in the final rules to clarify this distinction. Moreover, the minimum requirements specified in proposed §§ 2.76(e) and 2.88(e) have been reduced in the final rule to the prescribed fee, at least one specimen or facsimile of the mark as used in commerce, and a verification or declaration signed by the

989
UMI

applicant stating that the mark is in use in commerce.

Section 1(d) of the Act sets forth certain minimum requirements for a statement of use. In view of the statutory requirements, § 2.88 provides that a timely statement of use which does not meet the minimum requirements specified in paragraph (e) may be corrected only if the time permitted for applicant to file a statement of use has not expired.

Further, section 1(d) of the Act requires that a statement of use be filed within six months after the issuance of the notice of allowance, and provides that the time for filing the statement of use may be further extended upon proper request, but that such time may not be extended beyond 36 months after the issuance of the notice of allowance. The Act, as amended, does not allow every applicant a period of 36 months from the notice of allowance in which to make use of its mark in commerce and file a statement of use; rather, only those applicants who file proper requests for five successive extensions of time, and are able to meet the specified requirements for such extensions, will have the benefit of the full 36-month period. Nor does the Act provide that an applicant may file a statement of use, then withdraw the statement of use and ask for an extension of time for filing a statement of use.

In view of the statutory requirements in section 1(d) of the Act, a statement of use must be filed within the six months after the issuance of a notice of allowance, or within an extension of time granted to applicant for filing a statement of use. Use of the mark in commerce must be made during such period. If the use upon which a statement of use is based is not valid trademark use, applicant may make a new use, and amend the statement of use to rely upon the new use, only if the new use is made prior to the expiration of applicant's time for filing a statement of use. Once a statement of use has been filed, applicant may not withdraw the statement of use and request an extension or a further extension of time for filing a statement of use. Section 1(d) of the Act permits amendment of the statement of use, but does not provide for withdrawal of the statement of use once it is filed.

The fears of some commenters that, under proposed § 2.88, an applicant's trademark rights would be destroyed or jeopardized for minor informalities in a statement of use, are not well-founded. The intent of § 2.88 is to permit a timely statement of use which meets the minimum requirements specified in paragraph (e) to be amended, in accordance with §§ 2.59 and 2.71 through 2.75, at any time during examination to meet any of the remaining requirements for a complete statement of use specified in paragraph (b) of the section or to overcome other refusals or requirements which may be raised by the examiner. See proposed §§ 2.88 (g) and (h) and final § 2.88(f). The time period for filing a statement of use and the right to amend a statement of use are independent of each other.

For example, under final § 2.88, a timely statement of use which meets the specified minimum requirements may be amended to, *inter alia:*

(1) Add or correct dates of use (provided that the amendment is in accordance with § 2.71(d), i.e., that it is properly verified and the amended dates are not subsequent to the expiration of the time allowed to applicant for the filing of a statement of use);

(2) Specify the type of commerce in which the mark is used;

(3) State the goods or services specified in the notice of allowance on or in connection with which the mark is in use (provided that the amendment is in accordance with § 2.88(i)(2), i.e., that it is supported by a verification that the mark was in use in commerce, on or in connection with each of the goods or services sought to be included, prior to the expiration of the time allowed to applicant for filing a statement of use);

(4) State the mode or manner in which the mark is used on or in connection with the goods or services;

(5) Substitute a statement of use verification signed by the applicant for a verification signed by a person having color of authority (see § 2.71(c)); and

(6) Submit substitute specimens (provided that the amendment is in accordance with § 2.59(b), i.e., that the use in commerce of any substitute specimen submitted is supported by applicant's verification that the substitute specimens were in use in commerce prior to the filing of the statement of use or prior to the time allowed to applicant for filing a statement of use).

Once the minimum requirements are met, the rules allowing amendment to a statement of use, in accordance with §§ 2.59 and 2.71 through 2.75, are more liberal than the proposal by several commenters suggesting an applicant should receive an automatic one to two-month period to respond to a notice of deficiency in a statement of use.

For the foregoing reasons, the modifications suggested by the commenters have not been adopted in § 2.88. The rule was revised to clarify the rule and reduce the minimum requirements for a statement of use.

Section 2.76, concerning amendments to allege use, has been revised to be consistent with § 2.88 as appropriate.

Comment: One individual questioned why, in a verification for an amendment to allege use or a statement of use, the applicant is required, under proposed §§ 2.76(b)(1) and 2.88(b)(1), respectively, to state that it believes it is the owner of the mark sought to be registered. The individual noted that there is no such requirement "for other types of applications provided for in the Act or the rules."

Response: Section 22 of the Act provides that registration on the Principal Register "shall be constructive notice of the registrant's claim of ownership [of the mark]." Therefore, the PTO believes that each application must contain a claim of ownership, and that ownership should be reaffirmed upon the filing of an allegation of use under § 2.76 or § 2.88.

Comments: Section 2.89(d)(2) was proposed to be added to provide that a showing of good cause for a request for an extension of time for filing a statement of use must include, in part, a statement of facts demonstrating ongoing efforts to make use of the mark in commerce on or in connection with each of the goods or services specified in applicant's verified statement of continued bona fide intention to use the mark in commerce. The proposed paragraph further provides that those efforts may include, without limitation, product or service research or development, market research, manufacturing activities, promotional activities, steps to acquire distributors, steps to obtain required governmental approval, or other similar activities.

One organization expressed its concern that this rule may be administered by the PTO to require an applicant to disclose details of highly sensitive or confidential market research or business plans. The organization noted that section 1(d)(2) of the Act requires only that applicant provide "a showing of good cause" to support a request for an extension of time. The organization suggested "facts demonstrating ongoing efforts to make use of the mark" could be sensitive or confidential market research or business information. It recommended that the first sentence of proposed § 2.89(d)(2) be amended to substitute the word "applicants" for the words "facts demonstrating." One individual submitted comments to the same general effect.

Response: The rule does not require a particular showing to establish good cause for a request for an extension of

time to file a statement of use. The suggested modification has been adopted in the final rule.

Comment: Section 2.89(f) was proposed to be added to provide, in part, that the goods or services specified in a request for an extension of time for filing a statement of use must conform to those goods or services identified in the notice of allowance; and that any goods or services specified in the notice of allowance which are omitted from the identification of goods or services in the request for extension of time will be presumed to be deleted and the applicant may not thereafter request that the deleted goods or services be reinserted in the application.

Section 2.89(g) was proposed to be added to provide, in part, that the applicant will be notified of the grant or denial of a request for an extension of time; that if, after denial of an extension request, there is time remaining in the existing six-month period for filing a statement of use, applicant may submit a substitute request for extension of time; and that otherwise, the only recourse available after denial of a request for an extension of time is a petition to the Commissioner in accordance with §§ 2.66 or 2.146.

One individual pointed out that proposed § 2.88(i)(2) provides that if any goods or services specified in the notice of allowance are omitted from the identification of goods or services in the statement of use, the examiner shall inquire about the discrepancy and permit the applicant to amend the statement of use to include any omitted goods or services, provided that the amendment is supported by a verification that the mark was in use in commerce, on or in connection with each of the goods or services sought to be included, prior to the expiration of the time allowed to applicant for filing a statement of use. The individual noted that there is no comparable provision in proposed § 2.89 relating to requests for extensions of time to file a statement of use. The individual commented that "an applicant could unwittingly forfeit rights by failing to specify all goods and services for which the extension is sought," and that "if Examiners can ask about the completeness of statements of use, they can ask about the completeness of extensions to file such statements."

Two organizations commented, with respect to proposed § 2.89(g), that it is unduly harsh and time consuming for the PTO to permit the only recourse from a denial of an extension request to be a petition to the Commissioner. The organizations recommended that the examiner should be required to state what is needed for acceptance of the extension request and reasonable time should be allowed for response. The organizations also recommended that the filing of a petition concerning the denial of an extension request should allow an automatic extension of time in connection with the application (subject to the caveat that the Act "appears to provide 36 month maximum pendency permitted for an 'intent to use' application regardless of the difficulty encountered in prosecution").

Response: Although § 2.88 includes certain provisions relating to the amendment of timely statements of use, § 2.89 includes no analogous provisions with respect to a request for an extension of time to file a statement of use. This is because the Act, as amended, specifically provides that a statement of use may be amended, but makes no provision for the amendment of an extension request. Moreover, the inclusion in § 2.89 of amendment provisions similar to those in § 2.88 would require that the PTO track not only extension period deadlines, but also deadlines for responding to PTO notifications of extension request deficiencies. This would create a serious administrative problem.

Furthermore, to avoid inadvertently omitting goods or services from a request for an extension of time to file a statement of use, the PTO permits and encourages applicants to identify goods or services in an extension request by incorporating by reference the goods or services listed in the notice of allowance.

The Act permits extension of the time for filing a statement of use only upon proper written request. The Act does not provide for an automatic extension of time upon the filing of a petition, pursuant to § 2.89(g), from the denial of an extension request.

Accordingly, the suggested modifications have not been adopted.

Comment: One organization recommended that the first sentence of proposed § 2.89(g), which provides that the applicant will be notified of the grant or denial of a request for an extension of time to file a statement of use, be modified by inserting at the end of the sentence the words "and if denied, the reasons for denial." The organization also noted that the rule fails to clarify when the new extension period will begin when a petition to the Commissioner from a denial of an extension request is granted.

Response: The organization's suggestion for modification of the first sentence of proposed § 2.89(g) has been adopted. It is understood that a denial would include the reasons for denial.

A six-month extension of time in which to file a statement of use will always run from the expiration of the preceding six-month period, regardless of whether applicant has been notified of the grant or denial of the request, or of a petition to the Commissioner relating thereto, prior to the expiration of the existing period. Accordingly, final § 2.89(g) includes the following new sentence: "If the petition is granted, the term of the requested six-month extension which was the subject of the petition will run from the date of the expiration of the previously existing six-month period for filing a statement of use."

Comment: Section 2.111(a), which pertains to the filing of petitions for cancellation, was proposed to be amended to provide, in part, for the filing of a petition to cancel a registration "in whole or in part." One individual expressed his concern that the phrase "in whole or in part" could perhaps be interpreted as a reference to a geographical cancellation. The individual suggested that it might be helpful to revise the paragraph to provide for cancelling the registration "for all or part of the goods or services."

The individual also suggested that § 2.101(b), which pertains to the filing of oppositions, should be amended to provide for opposing an application for "all or part of the goods or services."

Response: The language "in whole or in part" parallels the language of section 18 of the Act. Further, § 2.99(h) provides that the Board will consider and determine concurrent use rights only in the context of a concurrent use proceeding, and § 2.133(c) provides that geographic limitations will be considered and determined by the Board only in the context of a concurrent use proceeding. Accordingly, the suggestion pertaining to § 2.111(b) has not been adopted.

The language of § 2.101(a) parallels the language of section 13(a) of the Act. Modification of the section to provide for opposing an application for "all or part of the goods or services" is unnecessary in view of the Board's authority, under section 18 of the Act, to modify the application by limiting the goods or services specified therein. Accordingly, the suggestion pertaining to § 2.101(b) has not been adopted.

Comment: Section 2.129(d) was proposed to be added to provide that when a party to an inter partes proceeding before the Board cannot prevail without establishing constructive use pursuant to section 7(c) of the Act in an application under section 1(b) of the Act, the Board will enter a "declaratory judgment" in favor of that party, subject to the party's establishment of constructive use; and that the time for filing an appeal or for commencing a civil action under section 21 of the Act shall run from the date of the declaratory judgment.

Four organizations and one individual commented variously that "declaratory judgment" is a term of art for a different type of proceeding; that use of the term "declaratory" is inconsistent with the language of sections 18 and 21(a)(4) of the Act, which refers only to "judgments"; and that a phrase such as "conditional judgment," "contingent judgment," or "judgment" should be substituted for the phrase "declaratory judgment."

One individual commented that the better procedure would be for the Board to acknowledge the rights of the intent-to-use applicant, but then suspend proceedings until after the intent-to-use applicant has established its right to a constructive date of first use, following which a final judgment could be issued.

One individual suggested that the language of the proposed paragraph should be clarified by inserting the phrase "but will prevail in whole or in part upon establishing constructive use" after the opening phrase "When a party to an inter partes proceeding before the Trademark Trial and Appeal Board cannot prevail without establishing constructive use pursuant to section 7(c) of the Act in an application under section 1(b) of the Act, * * *"

One individual expressed a belief that where a situation of the type described in the proposed paragraph arises in a cancellation or an interference proceeding, the opinion of the Board might be advisory, but that in an opposition proceeding it would not, because in such a proceeding there is "a case or controversy involving present rights of two parties." The individual suggested that the last sentence of the proposed paragraph be amended to read:

> The time for filing an appeal or for commencing a civil action under section 21 of the Act shall run from the date of the entry of the declaratory judgment in an opposition proceeding, and from the date of acceptance of a statement of use in all other inter partes proceedings.

Response: The PTO believes that the use of the term "judgment" is more appropriate in this situation. Accordingly, the word "declaratory" has been omitted from the final rule.

Sections 18 and 21(a)(4) of the Act prohibit the entry of a final judgment in favor of an applicant under section 1(b) of the Act before the applicant's mark is registered in those cases where an applicant cannot prevail without establishing constructive use under section 7(c). If possible, the time for appeal should not be deferred until use has been established. If the time for appeal is deferred until after acceptance of the statement of use, appellant would be deprived of a speedy determination of the issues on appeal. Accordingly, the suggestions to defer the time for seeking judicial review have not been adopted.

The purpose of "intent-to-use" would be best accomplished if judicial review can occur promptly after entry of a judgment by the Board. Nevertheless, the PTO recognizes, as have other commentators, that there is an issue whether a Board decision is "ripe" for judicial review prior to the time an applicant under section 1(b) of the Act establishes its right to register its mark. This issue was called to the public's attention in the notice of proposed rulemaking. 54 FR at 19300. The PTO also published a notice in the Official Gazette calling attention to the issue and asking for comments. 1102 OG 58 (May 16, 1989). The Subcommittee on Courts, Civil Liberties and the Administration of Justice expressed concern with respect to any provision which permitted an intent-to-use applicant to sue before it made use of the mark and the mark was granted registration. "Permitting a plaintiff to sue before use occurs * * * raises serious questions about whether Federal jurisdiction and a case or controversy exists, and about whether such a case is 'ripe.'" See H.R. Rep. 1028, 100th Cong., 2d Sess., at 4 (1988).

Ultimately, the issue will be resolved by Federal courts. In order to permit early resolution of the issue, it has been decided to provide in § 2.129(d) that the 60-day time period for seeking judicial review runs from the date the Board enters its judgment.

With respect to the suggestion that the phrase "but will prevail in whole or in part upon establishing constructive use" be inserted in the rule, the PTO does not believe that the phrase is necessary or would serve to clarify the rule. Accordingly, the suggested modification has not been adopted.

Comment: One individual suggested that § 2.162, which governs the requirements for an affidavit or declaration during the sixth year after registration, should be amended to require that each affidavit or declaration include the current street address of the person submitting the declaration. The individual commented that "while many registrants currently do this, the fact remains that it is not required, and it should be mandatory."

Response: While the PTO encourages registrants to state their current address in a section 8 affidavit, it is not a statutory requirement for an acceptable affidavit and it would be an administrative burden to process substitute affidavits. Accordingly, the suggested modification has not been adopted. However, the "Trademark Manual of Examining Procedure" will be amended to recommend that this useful information be included in an affidavit or declaration under section 8 of the Act.

Comment: Section 2.162(f), which specifies certain of the requirements for an affidavit or declaration during the sixth year, was proposed to be revised to provide, in part, that if the registered mark is not in use in commerce on or in connection with the goods or services recited in the registration, the affidavit or declaration must recite facts to show that nonuse as to those goods or services is due to special circumstances which excuse such nonuse and is not due to any intention to abandon the mark as to those goods or services.

One organization suggested that after the phrase "on or in connection with," the phrase "any or all" should be substituted for the word "the."

Response: The suggested language could be construed to imply that an allegation of use on less than all of the goods or services will suffice to maintain the registration for all of the goods or services; or that if the affidavit or declaration does not include an allegation of use or excusable nonuse as to all of the goods or services, the affidavit or declaration will not be accepted and the registration will be cancelled in its entirety. In fact, in the latter situation, the affidavit or declaration would be accepted and those goods or services not included in the allegation of use or excusable nonuse would be deleted from the registration. Accordingly, the suggested modification has not been adopted.

Comments: Section 2.181, which concerns the terms of original registrations and renewals, was proposed to be amended by redesignating present paragraph (a) as (a)(1); revising redesignated paragraph (a)(1) to provide that registrations issued under the Act prior to November 16, 1989, whether on the Principal Register or on the Supplemental Register, remain in force for twenty years from their date of issue or renewal, if that date is prior to November 16, 1989, and may be renewed for periods of ten (rather than twenty) years from the expiring period unless previously cancelled or surrendered; and adding new paragraph

(a)(2) to provide that registrations issued under the Act on or after November 16, 1989, whether on the Principal Register or on the Supplemental Register, remain in force for ten years, and may be renewed for periods of ten years from the expiring period unless previously cancelled or surrendered.

Four organizations and two individuals commented that the renewal term provisions in the proposed rule are ambiguous because "renewal" may be deemed to take place either (a) on the twentieth anniversary of the registration's issuance, or (b) when a proper renewal application is filed, or (c) when the renewal application is processed and a renewal certificate is issued. They recommended that the rule be revised and clarified to provide that the anniversary of the date of the original registration will control the length of the renewal term.

One organization recommended that, if the rule is not amended to reflect the aforesaid comments, the words "or renewed" should be inserted in proposed paragraphs (a) (1) and (2) of the rule after the words "Registrations issued."

Response: The PTO believes that the date of the grant of the renewal application controls whether the term of renewal of a registration is 20 years or ten years. Accordingly, the recommendation that the rule be modified to provide that the anniversary of the date of the original registration will control the length of the renewal term, has not been adopted. However, with respect to registrations due to expire before November 16, 1989, the PTO will do everything possible to maximize the chance that the renewal will be granted prior to November 16, 1989, so that the term of renewal will be twenty years. Registrations due to expire on or after November 16, 1989, will be renewed, on or after that date, for periods of ten years from the date of expiration, regardless of the filing date of the renewal application.

The recommendation that the words "or renewed" be inserted at the beginning of paragraphs (a) (1) and (2) after the words "Registrations issued" has been adopted and the paragraphs have been further modified for purposes of clarity. Specifically, the word "expiration" has been substituted in paragraph (a)(1) for the words "renewal, if that date is prior to November 16, 1989" and the phrase "from their date of issue or expiration" has been inserted in paragraph (a)(2) after the words "remain in force for ten years."

Comment: Section 2.185(a)(1) was proposed to be revised to liberalize certain requirements for the recordation in the PTO of assignments.

One organization recommended that, since any documents affecting title to registrations and applications are recorded pursuant to this rule, the words "and other documents affecting title" should be added to the section title. The organization also recommended that the proposed rule be revised and reorganized to eliminate lengthy, confusing and redundant wording. The organization submitted a suggested substitute draft of the rule.

Response: To permit further review of the language of this section, the proposal is withdrawn.

Comment: Several comments were submitted which do not relate to any rule amendment proposed in the notice of proposed rulemaking.

Response: To the extent that the comments suggest changes to existing rules, the changes cannot be made without affording members of the public an opportunity to comment.

Environmental, Energy, and Other Considerations

The rule change will not have a significant impact on the quality of the human environment or the conservation of energy resources.

The rule change is in conformity with the requirements of the Regulatory Flexibility Act (Pub. L. 96–354), Executive Orders 12291 and 12612, and the Paperwork Reduction Act of 1980, 44 U.S.C. 3501 et seq.

The General Counsel of the Department of Commerce has certified to the Chief Counsel for Advocacy, Small Business Administration, that the rule change will not have a significant adverse economic impact on a substantial number of small entities (Regulatory Flexibility Act, Pub. L. 96–354) because the rule change includes no additional or increased fees for existing filings. Public Law 100–667 creates a new statutory right to file an application based upon a bona fide intention to use a mark in commerce ("intent-to-use"). The rule change includes fees for intent-to-use applications. However, filing an intent-to-use application under the new law is permissive. Such a filing will reduce the substantial burden of securing and protecting trademark rights by enabling small entities to obtain trademark rights prior to the use of a mark and the expending of funds in relation thereto. Thus, substantive rights to use valuable trademarks are not adversely affected and, in some instances, can be established prior to the expenditure of large amounts of funds.

The Patent and Trademark Office has determined that this rule change is not a major rule under Executive Order 12291. The annual effect to the economy will be less than $100 million. There will be no major increase in costs or prices for consumers, individual industries, federal, state or local government agencies, or geographic regions. There will be no significant adverse effects on competition, employment, investment, productivity, innovation, or on the ability of United States-based enterprises to compete with foreign-based enterprises in domestic or export markets.

The PTO has also determined that this notice has no Federalism implications affecting the relationship between the National Government and the States as outlined in Executive Order 12612.

The rule change will not impose any additional burden under the Paperwork Reduction Act of 1980, 44 U.S.C. 3501 et seq. in relation to any existing filings. However, Public Law 100–667 creates a new additional basis for filing an application, as well as certain other new filings in relation thereto, namely, an amendment to allege use under section 1(c) of the Act, a statement of use under section 1(d) of the Act, and requests for extensions of time, under section 1(d) of the Act, to file a statement of use. The public reporting burden for these new collections of information is estimated to vary from .25 hours to .50 hours per filing, with an average of .35 hours per filing, including time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collections of information. Send comments regarding the burden estimate or any other aspect of these collections of information, including suggestions for reducing this burden, to the Commissioner of Patents and Trademarks, Office of Management and Organization, Washington, DC 20231; and to the Office of Information and Regulatory Affairs, Office of Management and Budget, Washington, DC 20503, Attention: Paperwork Reduction Project 0651–0023.

List of Subjects

37 CFR Part 1

Administrative practice and procedure, Courts, Freedom of information, Inventions and patents, Reporting and recordkeeping requirements, Small businesses.

37 CFR Part 2

Administrative practice and procedure, Courts, Lawyers, Trademarks.

For the reasons set forth in the preamble and pursuant to the authority contained in section 41 of the Act (15 U.S.C. 1123), parts 1 and 2 of title 37 of the Code of Federal Regulations are amended as set forth below.

PART 1—RULES OF PRACTICE IN PATENT CASES

1. The authority citation for part 1 continues to read as follows:

Authority: 35 U.S.C. 6, unless otherwise noted.

2. Section 1.1 is amended by adding new paragraph (h) to read as follows:

§ 1.1 All communications to be addressed to Commissioner of Patents and Trademarks.

* * * * *

(h) In applications under section 1(b) of the Trademark Act, 15 U.S.C. 1051(b), all statements of use filed under section 1(d) of the Act, and requests for extensions of time therefor, should be additionally marked "Box ITU."

3. Section 1.8 is amended by adding new paragraphs (a)(2)(xiv) through (a)(2)(xvi) to read as follows:

§ 1.8 Certificate of Mailing.

(a) * * *

(2) * * *

(xiv) In an application under section 1(b) of the Trademark Act (15 U.S.C. 1051(b)), the filing of a statement of use under § 2.88 (15 U.S.C. 1051(d)).

(xv) In an application under section 1(b) of the Trademark Act (15 U.S.C. 1051(b)), the filing of a request, under § 2.89 (15 U.S.C. 1051(d)), for an extension of time to file a statement of use under § 2.88 (15 U.S.C. 1051(d)).

(xvi) In an application under section 1(b) of the Trademark Act (15 U.S.C. 1051(b)), the filing of an amendment to allege use in commerce under § 2.76 (15 U.S.C. 1051(c)).

* * * * *

PART 2—RULES OF PRACTICE IN TRADEMARK CASES

4. The authority citation for part 2 continues to read as follows:

Authority: 15 U.S.C. 1123; 35 U.S.C. 6, unless otherwise noted.

5. Section 2.2 is added to read as follows:

§ 2.2 Definitions.

(a) *The Act* as used in this part means the Trademark Act of 1946, 60 Stat. 427, as amended, codified in 15 U.S.C. 1051 et seq.

(b) *Entity* as used in this part includes both natural and juristic persons.

6. In section 2.6 the introductory text is republished and new paragraphs (u) and (v) are added to read as follows:

§ 2.6 Trademark fees.

The following fees and charges are established by the Patent and Trademark Office for trademark cases:

* * * * *

(u) For filing an amendment to allege use under section 1(c) of the Act or a statement of use under section 1(d)(1) of the Act, per class—100.00

(v) For filing a request under section 1(d)(2) of the Act for a six-month extension of time for filing a statement of use under section 1(d)(1) of the Act, per class—100.00

7. Section 2.18 is revised to read as follows:

§ 2.18 Correspondence, with whom held.

Correspondence will be sent to the applicant or a party to a proceeding at its address unless papers are transmitted by an attorney at law, or a written power of attorney is filed, or written authorization of other person entitled to be recognized is filed, or the applicant or party designates in writing another address to which correspondence is to be sent, in which event correspondence will be sent to the attorney at law transmitting the papers, or to the attorney at law designated in the power of attorney, or to the other person designated in the written authorization, or to the address designated by the applicant or party for correspondence. Correspondence will continue to be sent to such address until the applicant or party, or the attorney at law or other authorized representative of the applicant or party, indicates in writing that correspondence is to be sent to another address. Correspondence will be sent to the domestic representative of a foreign applicant unless the application is being prosecuted by an attorney at law or other qualified person duly authorized, in which event correspondence will be sent to the attorney at law or other qualified person duly authorized. Double correspondence will not be undertaken by the Patent and Trademark Office, and if more than one attorney at law or other authorized representative appears or signs a paper, the Office reply will be sent to the address already established in the file until another correspondence address is specified by the applicant or party or by the attorney or other authorized representative of the applicant or party. .

8. Section 2.21 is amended by revising paragraphs (a)(5) and (a)(6) to read as follows:

§ 2.21 Requirements for receiving a filing date.

(a) * * *

(5) A basis for filing:

(i) A date of first use of the mark in commerce, and at least one specimen or facsimile of the mark as used, in an application under section 1(a) of the Act, or

(ii) A claim of a bona fide intention to use the mark in commerce and a certification or certified copy of the foreign registration on which the application is based in an application under section 44(e) of the Act, or

(iii) A claim of a bona fide intention to use the mark in commerce and a claim of the benefit of a prior foreign application in an application filed in accordance with section 44(d) of the Act, or

(iv) A claim of a bona fide intention to use the mark in commerce in an application under section 1(b) of the Act;

(6) A verification or declaration in accordance with § 2.33(b) signed by the applicant;

* * * * *

9. Section 2.24 is revised to read as follows:

§ 2.24 Designation of representative by foreign applicant.

If an applicant is not domiciled in the United States, the applicant must designate by a written document filed in the Patent and Trademark Office the name and address of some person resident in the United States on whom may be served notices or process in proceedings affecting the mark. If this document does not accompany or form part of the application, it will be required and registration refused unless it is supplied. Official communications of the Patent and Trademark Office will be addressed to the domestic representative unless the application is being prosecuted by an attorney at law or other qualified person duly authorized, in which event Official communications will be sent to the attorney at law or other qualified person duly authorized. The mere designation of a domestic representative does not authorize the person designated to prosecute the application unless qualified under paragraph (a), (b) or (c) of § 10.14 of this subchapter and authorized under § 2.17(b).

10. Section 2.31 is revised to read as follows:

§ 2.31 Application must be in English.

The application must be in the English language and plainly written on but one side of the paper. It is preferable that the application be on lettersize (i.e., 8½ inches, 21.6 cm., by 11 inches, 27.9 cm.) paper, typewritten double spaced, with at least a one and one-half inch (3.8 cm.) margin on the left-hand side and top of the page.

11. Section 2.33 is amended by revising the section title, revising paragraphs (a)(1)(ii), (a)(1)(iv), (a)(1)(v), (a)(1)(vi), (a)(1)(vii), and (a)(1)(viii), redesignating paragraph (a)(1)(ix) as (a)(1)(x), revising redesignated paragraph (a)(1)(x), adding a new paragraph (a)(1)(ix), revising paragraphs (a)(2), (b), and (c), and adding new paragraph (d) to read as follows:

§ 2.33 Requirements for written application.

(a)(1) The application shall include a request for registration and shall specify:

* * * * *

(ii) The citizenship of the applicant; if the applicant is a partnership, the state or nation under the laws of which the partnership is organized and the names and citizenship of the general partners or, if the applicant is a corporation or association, the state or nation under the laws of which the corporation or association is organized;

* * * * *

(iv) In an application under section 1(a) of the Act, that the applicant has adopted and is using the mark shown in the accompanying drawing, or, in an application under section 1(b) or 44 of the Act, that the applicant has a bona fide intention to use the mark shown in the accompanying drawing in commerce;

(v) In an application under section 1(a) of the Act, the particular goods or services on or in connection with which the mark is used or, in an application under section 1(b) or 44 of the Act, the particular goods or services on or in connection with which the applicant has a bona fide intention to use the mark, which in an application under section 44 may not exceed the scope of the goods or services covered by the foreign application or registration;

(vi) The class of goods or services according to the official classification, if known to the applicant;

(vii) In an application under section 1(a) of the Act, the date of applicant's first use of the mark as a trademark or service mark on or in connection with goods or services specified in the application and the date of applicant's first use in commerce of the mark as a trademark or service mark on or in connection with goods or services specified in the application, specifying the nature of such commerce (see § 2.38);

(viii) In an application under section 44(e) of the Act for registration of a mark duly registered in the applicant's country of origin, as that term is defined in section 44(c), accompanying the application, a certificate of the trademark office of the applicant's country of origin showing that the mark has been registered in such country and also showing the mark, the goods or services for which the mark is registered, the date of filing of the application on the basis of which registration was granted and that said registration is in full force and effect and, if the certificate is not in the English language, a translation thereof;

(ix) In an application claiming the benefit of a foreign application in accordance with section 44(d) of the Act, compliance with the requirements of § 2.39;

(x) In an application under section 1(a) of the Act, the mode, manner or method of applying, affixing or otherwise using the mark on or in connection with the goods or services specified or, in an application under section 1(b) of the Act, the intended mode, manner or method of applying, affixing or otherwise using the mark on or in connection with the goods or services specified.

(2) If more than one item of goods or services is specified in the application, the dates of use required in paragraph (a)(1)(vii) of this section need be for only one of the items specified, provided the particular item to which the dates apply is designated.

* * * * *

(b)(1) In an application under section 1(a) of the Act, the application must include averments to the effect that the applicant is believed to be the owner of the mark sought to be registered; that the mark is in use in commerce, specifying the nature of such commerce; that no other entity to the best of the declarant's knowledge and belief, has the right to use such mark in commerce, either in the identical form or in such near resemblance as to be likely, when applied to the goods or services of such other entity, to cause confusion, or to cause mistake, or to deceive; that the specimens or facsimiles show the mark as used on or in connection with the goods or services; and that the facts set forth in the application are true; or

(2) In an application under section 1(b) or 44 of the Act, the application must include averments to the effect that the applicant is believed to be the owner of the mark sought to be registered; that the applicant has a bona fide intention to use the mark in commerce on or in connection with the specified goods or services; that no other entity, to the best of the declarant's knowledge and belief, has the right to use such mark in commerce, either in the identical form or in such near resemblance as to be likely, when applied to the goods or services of such other entity, to cause confusion, or to cause mistake, or to deceive; and that the facts set forth in the application are true.

(c) For an application for the registration of a mark for goods or services falling within multiple classes, see § 2.86.

(d) An applicant may not file under both sections 1(a) and 1(b) of the Act in a single application, nor may an applicant in an application under section 1(a) of the Act amend that application to seek registration under section 1(b) of the Act.

12. Section 2.38(a) is revised to read as follows:

§ 2.38 Use by predecessor or by related companies.

(a) If the first use, the date of which is required by paragraph (a)(1)(vii) of § 2.33, was by a predecessor in title, or by a related company (sections 5 and 45 of the Act), and such use inures to the benefit of the applicant, the date of such first use may be asserted with a statement that such first use was by the predecessor in title or by the related company as the case may be.

* * * * *

13. Section 2.39 is revised to read as follows:

§ 2.39 Priority claim based on foreign application.

(a) An application claiming the benefit of a foreign application in accordance with section 44(d) of the Act shall specify the filing date and country of the first regularly filed foreign application or, if the application is based upon a subsequent regularly filed application in the same foreign country, the application shall so state and shall show that any prior filed application has been withdrawn, abandoned or otherwise disposed of, without having been laid open to public inspection and without having any rights outstanding, and has not served as a basis for claiming a right of priority.

(b) Before the application can be approved for publication, a basis for registration under section 1(a), 1(b) or 44(e) of the Act must be established.

14. Section 2.41 is revised to read as follows:

§ 2.41 Proof of distinctiveness under section 2(f).

(a) When registration is sought of a mark which would be unregistrable by reason of section 2(e) of the Act but which is said by applicant to have become distinctive in commerce of the goods or services set forth in the application, applicant may, in support of registrability, submit with the application, or in response to a request for evidence or to a refusal to register, affidavits, or declarations in accordance with § 2.20, depositions, or other appropriate evidence showing duration, extent and nature of use in commerce and advertising expenditures in connection therewith (identifying types of media and attaching typical advertisements), and affidavits, or declarations in accordance with § 2.20, letters or statements from the trade or public, or both, or other appropriate evidence tending to show that the mark distinguishes such goods.

(b) In appropriate cases, ownership of one or more prior registrations on the Principal Register or under the Act of 1905 of the same mark may be accepted as prima facie evidence of distinctiveness. Also, if the mark is said to have become distinctive of applicant's goods by reason of substantially exclusive and continuous use in commerce thereof by applicant for the five years before the date on which the claim of distinctiveness is made, a showing by way of statements which are verified or which include declarations in accordance with § 2.20, in the application may, in appropriate cases, be accepted as prima facie evidence of distinctiveness. In each of these situations, however, further evidence may be required.

15. Section 2.44 is revised to read as follows:

§ 2.44 Collective mark.

(a) In an application to register a collective mark under section 1(a) of the Act, the application shall specify and contain all applicable elements required by the preceding sections for trademarks, but shall, in addition, specify the class of persons entitled to use the mark, indicating their relationship to the applicant, and the nature of the applicant's control over the use of the mark.

(b) In an application to register a collective mark under section 1(b) or 44 of the Act, the application shall specify and contain all applicable elements required by the preceding sections for trademarks, but shall, in addition, specify the class of persons intended to be entitled to use the mark, indicating what their relationship to the applicant will be, and the nature of the control applicant intends to exercise over the use of the mark.

16. Section 2.45 is revised to read as follows:

§ 2.45 Certification mark.

(a) In an application to register a certification mark under section 1(a) of the Act, the application shall specify and contain all applicable elements required by the preceding sections for trademarks. It shall, in addition, specify the manner in which and the conditions under which the certification mark is used; it shall allege that the applicant exercises legitimate control over the use of the mark and that the applicant is not engaged in the production or marketing of the goods or services to which the mark is applied.

(b) In an application to register a certification mark under section 1(b) or 44 of the Act, the application shall specify and contain all applicable elements required by the preceding sections for trademarks. It shall, in addition, specify the manner in which and the conditions under which the certification mark is intended to be used; it shall allege that the applicant intends to exercise legitimate control over the use of the mark and that the applicant will not engage in the production or marketing of the goods or services to which the mark is applied.

17. Section 2.47 is revised to read as follows:

§ 2.47 Supplemental Register.

(a) In an application to register on the Supplemental Register under section 23 of the Act, the application shall so indicate and shall specify that the mark has been in lawful use in commerce, specifying the nature of such commerce, by the applicant.

(b) In an application to register on the Supplemental Register under section 44 of the Act, the application shall so indicate. The statement of lawful use in commerce may be omitted.

(c) A mark in an application to register on the Principal Register under section 1(b) of the Act is eligible for registration on the Supplemental Register only after an acceptable amendment to allege use under § 2.76 or statement of use under § 2.88 has been timely filed.

(d) An application for registration on the Supplemental Register must conform to the requirements for registration on the Principal Register under section 1(a) of the Act, so far as applicable.

18. Section 2.51 is revised to read as follows:

§ 2.51 Drawing required.

(a)(1) In an application under section 1(a) of the Act, the drawing of the trademark shall be a substantially exact representation of the mark as used on or in connection with the goods; or

(2) In an application under section 1(b) of the Act, the drawing of the trademark shall be a substantially exact representation of the mark as intended to be used on or in connection with the goods specified in the application, and once an amendment to allege use under § 2.76 or a statement of use under § 2.88 has been filed, the drawing of the trademark shall be a substantially exact representation of the mark as used on or in connection with the goods; or

(3) In an application under section 44 of the Act, the drawing of the trademark shall be a substantially exact representation of the mark as it appears in the drawing in the registration certificate of a mark duly registered in the country of origin of the applicant.

(b)(1) In an application under section 1(a) of the Act, the drawing of a service mark shall be a substantially exact representation of the mark as used in the sale or advertising of the services; or

(2) In an application under section 1(b) of the Act, the drawing of a service mark shall be a substantially exact representation of the mark as intended to be used in the sale or advertising of the services specified in the application and, once an amendment to allege use under § 2.76 or a statement of use under § 2.88 has been filed, the drawing of the service mark shall be a substantially exact representation of the mark as used in the sale or advertising of the services; or

(3) In an application under section 44 of the Act, the drawing of a service mark shall be a substantially exact representation of the mark as it appears in the drawing in the registration certificate of a mark duly registered in the country of origin of applicant.

(c) The drawing of a mark may be dispensed with in the case of a mark not capable of representation by a drawing, but in any such case the application must contain an adequate description of the mark.

(d) Broken lines should be used in the drawing of a mark to show placement of the mark on the goods, or on the packaging, or to show matter not claimed as part of the mark, or both, as appropriate. In an application to register a mark with three-dimensional features, the drawing shall depict the mark in perspective in a single rendition.

(e) If the application is for the registration of only a word, letter or numeral, or any combination thereof, not depicted in special form, the drawing may be the mark typed in capital letters on paper, otherwise complying with the requirements of § 2.52.

19. Section 2.52 is amended by revising paragraphs (a), (d) and (e) to read as follows:

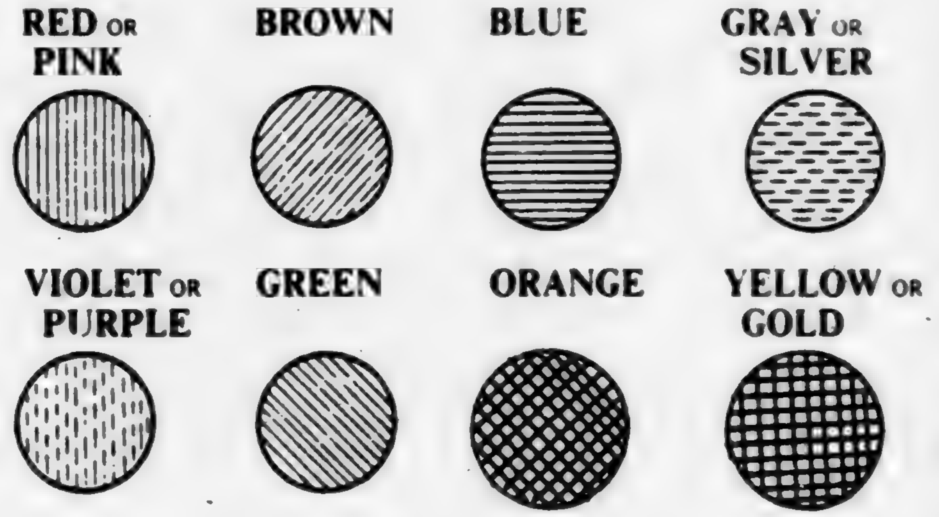
§ 2.52 Requirements for drawings.

(a) *Character of drawing.* All drawings, except as otherwise provided, must be made with the pen or by a process which will provide high definition upon reproduction. A photolithographic reproduction or printer's proof copy may be used if otherwise suitable. Every line and letter, including color lining and lines used for shading, must be black. All lines must be clean, sharp, and solid, and must not be fine or crowded. Gray tones or tints may not be used for surface shading or any other purpose. The requirements of this paragraph are not necessary in the case of drawings permitted and filed in accordance with paragraph (e) of § 2.51.

* * * * *

(d) *Heading.* Across the top of the drawing, beginning one inch (2.5 cm.) from the top edge and not exceeding one third of the sheet, there must be placed a heading, listing in separate lines, applicant's complete name; applicant's post office address; the dates of first use of the mark and first use of the mark in commerce in an application under section 1(a) of the Act; the priority filing date of the relevant foreign application in an application claiming the benefit of a prior foreign application in accordance with section 44(d) of the Act; and the goods or services recited in the application or a typical item of the goods or services if a number of items are recited in the application. This heading should be typewritten. If the drawing is in special form, the heading should include a description of the essential elements of the mark.

(e) *Linings for color.* Where color is a feature of a mark, the color or colors employed may be designated by means of conventional linings as shown in the following color chart:



20. Section 2.53 is revised to read as follows:

§ 2.53 Transmission of drawings.

Drawings transmitted to the Patent and Trademark Office, other than those typed in accordance with § 2.51(e), should be sent flat, protected by a sheet of heavy binder's board, or should be rolled for transmission in a suitable mailing tube to prevent mutilation or folding.

21. Section 2.56 is revised to read as follows:

§ 2.56 Specimens.

An application under section 1(a) of the Act, an amendment to allege use under § 2.76, and a statement of use under § 2.88 must each include three specimens of the trademark as used on or in connection with the goods in commerce. The specimens shall be duplicates of the labels, tags, or containers bearing the trademark, or the displays associated with the goods and bearing the trademark (or if the nature of the goods makes use of such specimens impracticable then on documents associated with the goods or their sale), when made of suitable flat material and of a size not to exceed 8½ inches (21.6 cm.) wide and 11 inches (27.9 cm.) long.

22. Section 2.57 is revised to read as follows:

§ 2.57 Facsimiles.

(a) When, due to the mode of applying or affixing the trademark to the goods, or to the manner of using the mark on the goods, or to the nature of the mark, specimens as above stated cannot be furnished, three copies of a suitable photograph or other acceptable reproduction, not to exceed 8½ inches (21.6 cm.) wide and 11 inches (27.9 cm.) long, and clearly and legibly showing the mark and all matter used in connection therewith, shall be furnished.

(b) A purported facsimile which is merely a reproduction of the drawing submitted to comply with § 2.51 will not be considered to be a facsimile depicting the mark as used on or in connection with the goods or in connection with the services.

23. Section 2.59 is added to read as follows:

§ 2.59 Filing substitute specimens.

(a) In an application under section 1(a) of the Act, the applicant may submit substitute specimens of the mark as used on or in connection with the goods, or in the sale or advertising of the services, provided that any substitute specimens submitted are supported by applicant's affidavit or declaration in accordance with § 2.20 verifying that the substitute specimens were in use in commerce at least as early as the filing date of the application. The verification requirement shall not apply if the specimens are duplicates or facsimiles, such as photographs, of specimens already of record in the application.

(b) In an application under section 1(b) of the Act, after filing either an amendment to allege use under § 2.76 or a statement of use under § 2.88, the applicant may submit substitute specimens of the mark as used on or in connection with the goods, or in the sale or advertising of the services, provided that the use in commerce of any substitute specimens submitted is supported by applicant's affidavit or declaration in accordance with § 2.20. In the case of a statement of use under § 2.88, the applicant must verify that the substitute specimens were in use in commerce prior to the filing of the statement of use or prior to the expiration of the time allowed to applicant for filing a statement of use.

24. Section 2.61 is amended by revising paragraphs (a) and (c) to read as follows:

§ 2.61 Action by examiner.

(a) Applications for registration, including amendments to allege use under section 1(c) of the Act, and statements of use under section 1(d) of the Act, will be examined and, if the applicant is found not entitled to registration for any reason, applicant will be notified and advised of the reasons therefor and of any formal requirements or objections.

* * * * *

(c) Whenever it shall be found that two or more parties whose interests are in conflict are represented by the same attorney, each party and also the attorney shall be notified of this fact.

25. Section 2.64 is amended by adding new paragraph (c) to read as follows:

§ 2.64 Final action.

* * * * *

(c)(1) If an applicant in an application under section 1(b) of the Act files an amendment to allege use under § 2.76 during the six-month response period after issuance of a final action, the examiner shall examine the amendment. The filing of such an amendment will not extend the time for filing an appeal or petitioning the Commissioner.

(2) If the amendment to allege use under § 2.76 is acceptable in all respects, the applicant will be notified of its acceptance.

(3) If, as a result of the examination of the amendment to allege use under § 2.76, the applicant is found not entitled to registration for any reason not previously stated, applicant will be notified and advised of the reasons and of any formal requirements or refusals. The Trademark Examining Attorney shall withdraw the final action previously issued and shall incorporate all unresolved refusals or requirements previously stated in the new non-final action.

26. Section 2.65 is amended by adding new paragraph (c) to read as follows:

§ 2.65 Abandonment.

* * * * *

(c) If an applicant in an application under section 1(b) of the Act fails to timely file a statement of use under § 2.88, the application shall be deemed to be abandoned.

27. Section 2.66 is revised to read as follows:

§ 2.66 Revival of abandoned applications.

(a) An application abandoned for failure to timely respond, or for failure to timely file a statement of use under § 2.88 in an application under section 1(b) of the Act, may be revived as a pending application if it is shown to the satisfaction of the Commissioner that the delay was unavoidable.

(b) A petition to revive an application abandoned for failure to timely respond must be accompanied by:

(1) The required fee,

(2) A showing which is verified or which includes a declaration in accordance with § 2.20 of the causes of the delay, and

(3) The proposed response, unless a response has been previously filed.

(c) A petition to revive an application abandoned for failure to timely file a statement of use under § 2.88 in an application under section 1(b) of the Act must be accompanied by:

(1) The required petition fee,

(2) A showing which is verified or which includes a declaration in accordance with § 2.20 of the causes of the delay,

(3) The required fees for the number of requests (in accordance with § 2.89 for extensions of time to file a statement of use) which should have been filed if the application had not been abandoned, and

(4) Either a statement of use in accordance with § 2.88 (unless the same has been previously filed) or a request in accordance with § 2.89 for an extension of time to file a statement of use.

(d) The petition must be filed promptly. No petition to revive will be granted in an application under section 1(b) of the Act if granting the petition would permit the filing of a statement of use more than 36 months after the issuance of a notice of allowance under section 13(b)(2) of the Act.

28. Section 2.69 is revised to read as follows:

§ 2.69 Compliance with other laws.

When the sale or transportation of any product for which registration of a trademark is sought is regulated under an Act of Congress, the Patent and Trademark Office may make appropriate inquiry as to compliance with such Act for the sole purpose of determining lawfulness of the commerce recited in the application.

29. Section 2.71 is revised to read as follows:

§ 2.71 Amendments to correct informalities.

(a) The application may be amended to correct informalities, or to avoid objections made by the Patent and Trademark Office, or for other reasons arising in the course of examination.

(b) The identification of goods or services may be amended to clarify or limit the identification, but additions will not be permitted.

(c) If the verification or declaration filed with the application is defective, the defect may be corrected only by the submission of a substitute or supplemental verification or declaration in accordance with § 2.20. A verification or declaration required under §§ 2.21(a)(6), 2.76(e)(3) or 2.88(e)(3), to be properly signed, must be signed by the applicant, a member of the applicant firm, or an officer of the applicant corporation or association. A verification or declaration which is signed by a person having color of authority to sign, is acceptable for the purpose of determining the timely filing of the paper. Persons having color of authority to sign are those who have first-hand knowledge of the truth of the statements in the verification or declaration and who also have actual or implied authority to act on behalf of the applicant. However, a properly signed substitute verification or declaration must be submitted before the application will be approved for publication or registration, as the case may be.

(d)(1) No amendment to the dates of use will be permitted unless the amendment is supported by applicant's affidavit or declaration in accordance with § 2.20 and by such showing as may be required.

(2) In an application under section 1(a) of the Act, no amendment to specify a date of use which is subsequent to the filing date of the application will be permitted.

(3) In an application under section 1(b) of the Act, after the filing of a statement of use under § 2.88, no amendment will be permitted to the statement of use to recite dates of use which are subsequent to the expiration of the time allowed to applicant for filing a statement of use.

30. Section 2.72 is revised to read as follows:

§ 2.72 Amendments to description or drawing of the mark.

(a) Amendments may not be made to the description or drawing of the mark if the character of the mark is materially altered. The determination of whether a proposed amendment materially alters the character of the mark will be made by comparing the proposed amendment with the description or drawing of the mark as originally filed.

(b) In applications under section 1(a) of the Act, amendments to the description or drawing of the mark may be permitted only if warranted by the specimens (or facsimiles) as originally filed, or supported by additional specimens (or facsimiles) and a supplemental affidavit or declaration in accordance with § 2.20 alleging that the mark shown in the amended drawing was in use prior to the filing date of the application.

(c) In applications under section 1(b) of the Act, amendments to the description or drawing of the mark, which are filed after submission of an amendment to allege use under § 2.76 or a statement of use under § 2.88, may be permitted only if warranted by the specimens (or facsimiles) filed, or supported by additional specimens (or facsimiles) and a supplemental affidavit or declaration in accordance with § 2.20 alleging that the mark shown in the amended drawing is in use in commerce. In the case of a statement of use under § 2.88, applicant must verify that the mark shown in the amended drawing was in use in commerce prior to the filing of the statement of use or prior to the expiration of the time allowed to applicant for filing a statement of use.

(d) In applications under section 44 of the Act, amendments to the description or drawing of the mark may be permitted only if warranted by the description or drawing of the mark in the foreign registration certificate.

31. Section 2.73 is revised to read as follows:

§ 2.73 Amendment to recite concurrent use.

(a) An application under section 1(a) of the Act may be amended so as to be treated as an application for a concurrent registration, provided the application as amended satisfies the requirements of § 2.42. The examiner will determine whether the application, as amended, is acceptable.

(b) An application under section 1(b) of the Act may not be amended so as to be treated as an application for a concurrent registration until an acceptable amendment to allege use under § 2.76 or statement of use under § 2.88 has been filed in the application, after which time such an amendment may be made, provided the application as amended satisfies the requirements of § 2.42. The examiner will determine whether the application, as amended, is acceptable.

32. Section 2.75 is revised to read as follows:

§ 2.75 Amendment to change application to different register.

(a) An application for registration on the Principal Register under section 1(a) or 44 of the Act may be changed to an application for registration on the Supplemental Register and vice versa by amending the application to comply with the rules relating to the appropriate register, as the case may be.

(b) An application under section 1(b) of the Act may be amended to change the application to a different register only after submission of an acceptable amendment to allege use under § 2.76 or statement of use under § 2.88. When such an application is changed from the Principal Register to the Supplemental Register, the effective filing date of the application is the date of the filing of the allegation of use under section 1(c) or 1(d) of the Act.

33. Section 2.76 is added to read as follows:

§ 2.76 Amendment to allege use.

(a) An application under section 1(b) of the Act may be amended to allege use of the mark in commerce under section 1(c) of the Act at any time between the filing of the application and the date the examiner approves the mark for publication or the date of expiration of the six-month response period after issuance of a final action. Thereafter, an allegation of use may be submitted only as a statement of use under § 2.88 after the issuance of a notice of allowance under section 13(b)(2) of the Act. If an amendment to allege use is filed outside the time period specified in this paragraph, it will be returned to the applicant.

(b) A complete amendment to allege use must include:

(1) A verified statement that the applicant is believed to be the owner of the mark sought to be registered and that the mark is in use in commerce, specifying the date of the applicant's first use of the mark and first use of the mark in commerce, the type of commerce, those goods or services specified in the application on or in connection with which the mark is in use in commerce and the mode or manner in which the mark is used on or in connection with such goods or services;

(2) Three specimens or facsimiles, conforming to the requirements of §§ 2.56, 2.57 and 2.58, of the mark as used in commerce; and

(3) The fee prescribed in § 2.6.

(c) An amendment to allege use may be filed only when the applicant has made use of the mark in commerce on or in connection with all of the goods or services, as specified in the application, for which applicant will seek registration in that application unless the amendment to allege use is accompanied by a request in accordance with § 2.87 to divide out from the application the goods or services to which the amendment pertains. If more than one item of goods or services is specified in the amendment to allege use, the dates of use required in paragraph (b)(1) of this section need be for only one of the items specified in each class, provided the particular item to which the dates apply is designated.

(d) The title "Amendment to allege use under § 2.76" should appear at the top of the first page of the paper.

(e) The Office will review a timely filed amendment to allege use to determine whether it meets the following minimum requirements:

(1) The fee prescribed in § 2.6;

(2) At least one specimen or facsimile of the mark as used in commerce; and

(3) A verification or declaration signed by the applicant stating that the mark is in use in commerce.

(f) A timely filed amendment to allege use which meets the minimum requirements specified in paragraph (e) of this section will be examined in accordance with §§ 2.61 through 2.69. If, as a result of the examination of the amendment to allege use, applicant is found not entitled to registration for any reason not previously stated, applicant will be so notified and advised of the reasons and of any formal requirements or refusals. The notification shall restate or incorporate by reference all unresolved refusals or requirements previously stated. The amendment to allege use may be amended in accordance with §§ 2.59 and 2.71 through 2.75. If the amendment to allege use is acceptable in all respects, the applicant will be notified of its acceptance. The filing of such an amendment shall not constitute a response to any outstanding action by the Trademark Examining Attorney.

(g) If the amendment to allege use is filed within the permitted time period but does not meet the minimum requirements specified in paragraph (e) of this section, applicant will be notified of the deficiency. The deficiency may be corrected provided the mark has not been approved for publication or the six-month response period after issuance of a final action has not expired. If an acceptable amendment to correct the deficiency is not filed prior to approval of the mark for publication or prior to the expiration of the six-month response period after issuance of a final action, the amendment will not be examined.

(h) An amendment to allege use may be withdrawn for any reason prior to approval of a mark for publication or expiration of the six-month response period after issuance of a final action.

34. Section 2.77 is added to read as follows:

§ 2.77 Amendments between notice of allowance and statement of use.

An application under section 1(b) of the Act may not be amended during the period between the issuance of the notice of allowance under section 13(b)(2) of the Act and the filing of a statement of use under § 2.88, except to delete specified goods or services. Other amendments filed during this period will be placed in the application file and considered when the statement of use is examined.

35. The undesignated center heading for §§ 2.80 through 2.84 is revised to read as follows:

Publication and Post Publication

36. Section 2.81 is amended by revising the section title, redesignating the present paragraph as (a), revising redesignated paragraph (a), and adding new paragraph (b) to read as follows:

§ 2.81 Post publication.

(a) Except in an application under section 1(b) of the Act for which no amendment to allege use under § 2.76 has been submitted and accepted, if no opposition is filed within the time permitted or all oppositions filed are dismissed, and if no interference is declared and no concurrent use proceeding is instituted, the application will be prepared for issuance of the certificate of registration as provided in § 2.151.

(b) In an application under section 1(b) of the Act for which no amendment to allege use under § 2.76 has been submitted and accepted, if no opposition is filed within the time permitted or all oppositions filed are dismissed, and if no interference is declared, a notice of allowance will issue. The notice of allowance will state the serial number of the application, the name of the applicant, the correspondence address, the mark, the identification of goods or services, and the issue date of the notice of allowance. The mailing date that appears on the notice of allowance will be the issue date of the notice of allowance. Thereafter, the applicant shall submit a statement of use as provided in § 2.88.

37. Section 2.82 is revised to read as follows:

§ 2.82 Marks on Supplemental Register published only upon registration.

In the case of an application for registration on the Supplemental Register the mark will not be published for opposition but if it appears, after examination or reexamination, that the applicant is entitled to have the mark registered, a certificate of registration will issue as provided in § 2.151. The mark will be published in the "Official Gazette" when registered.

38. Section 2.83 is amended by revising paragraphs (a) and (b) to read as follows:

§ 2.83 Conflicting marks.

(a) Whenever an application is made for registration of a mark which so resembles another mark or marks pending registration as to be likely to cause confusion or mistake or to deceive, the mark with the earliest effective filing date will be published in the "Official Gazette" for opposition if eligible for the Principal Register, or issued a certificate of registration if eligible for the Supplemental Register.

(b) In situations in which conflicting applications have the same effective filing date, the application with the earliest date of execution will be published in the "Official Gazette" for opposition or issued on the Supplemental Register.

* * * * *

39. Section 2.84 is revised to read as follows:

§ 2.84 Jurisdiction over published applications.

(a) The examiner may exercise jurisdiction over an application up to the date the mark is published in the "Official Gazette." After publication of an application under section 1(a) or 44 of the Act the examiner may, with the permission of the Commissioner, exercise jurisdiction over the application. After publication of an application under section 1(b) of the Act, the examiner may exercise jurisdiction over the application after the issuance of the notice of allowance under section 13(b)(2) of the Act. After publication, and prior to issuance of a notice of allowance in an application under section 1(b), the examiner may, with the permission of the Commissioner, exercise jurisdiction over the application.

(b) After publication, but before the printing of the certificate of registration in an application under section 1(a) or 44 of the Act, or before the printing of the notice of allowance in an application under section 1(b) of the Act, an application which is not the subject of an *inter partes* proceeding before the Trademark Trial and Appeal Board may be amended if the amendment does not necessitate republication of the mark or issuance of an Office action. Otherwise, an amendment to such an application may be submitted only upon petition to the Commissioner to restore jurisdiction of the application to the examiner for consideration of the amendment and further examination. The amendment of an application which is the subject of an *inter partes* proceeding before the Trademark Trial and Appeal Board is governed by § 2.133.

40. Section 2.86 is revised to read as follows:

§ 2.86 Application may include multiple goods or services comprised in single class or multiple classes.

(a) An application may recite more than one item of goods, or more than one service, comprised in a single class, provided the goods or services are specifically identified and the applicant either has used the mark on or in connection with all of the specified goods or services, or has a bona fide intention to use the mark on or in connection with all of the specified goods or services.

(b) An application also may be filed to register the same mark for goods and/or services comprised in multiple classes, provided the goods or services are specifically identified; a fee equaling the sum of the fees for filing an application in each class is submitted; and the application includes either dates of use and three specimens for each class, or a statement of a bona fide intention to use the mark on or in connection with all of the goods or services specified in each class. An amendment to allege use under § 2.76 or a statement of use under § 2.88, filed in a multiple class application under section 1(b) of the Act, must include, for each class, the required fee, dates of use and three specimens. A single certificate of

registration for the mark shall be issued, unless the application is divided pursuant to § 2.87.

(c) The applicant may not allege use as to certain goods or services and a bona fide intention to use as to other goods or services in the same application, regardless of the number of classes contained therein.

41. Section 2.87 is revised to read as follows:

§ 2.87 Dividing an application.

(a) An application may be physically divided into two or more separate applications upon submission by the applicant of a request therefor, in accordance with paragraph (c) of this section. In the case of a request to divide out some, but not all, of the goods or services in a class, a fee for each new separate application to be created by the division must be submitted. Any outstanding time period for action by the applicant in the original application at the time of the division will be applicable to each new separate application created by the division.

(b) A request to divide an application may be filed at any time between the filing of the application and the date the Trademark Examining Attorney approves the mark for publication or the date of expiration of the six-month response period after issuance of a final action; or during an opposition, upon motion granted by the Trademark Trial and Appeal Board. Additionally, a request to divide an application under section 1(b) of the Act may be filed with a statement of use under § 2.88 or at any time between the filing of a statement of use and the date the Trademark Examining Attorney approves the mark for registration or the date of expiration of the six-month response period after issuance of a final action.

(c) A request to divide an application should be made in a separate paper from any other amendment or response in the application. The title "Request to divide application." should appear at the top of the first page of the paper.

42. A new undesignated center heading, and two new sections, designated §§ 2.88 and 2.89, are added to read as follows:

Post Notice of Allowance

§ 2.88 Filing statement of use after notice of allowance.

(a) In an application under section 1(b) of the Act, a statement of use, required under section 1(d) of the Act, must be filed within six months after issuance of a notice of allowance under section 13(b)(2) of the Act, or within an extension of time granted under § 2.89. A statement of use that is filed prior to issuance of a notice of allowance is premature, will not be considered, and will be returned to the applicant.

(b) A complete statement of use must include:

(1) A verified statement that the applicant is believed to be the owner of the mark sought to be registered and that the mark is in use in commerce, specifying the date of the applicant's first use of the mark and first use of the mark in commerce, the type of commerce, those goods or services specified in the notice of allowance on or in connection with which the mark is in use in commerce and the mode or manner in which the mark is used on or in connection with such goods or services;

(2) Three specimens or facsimiles, conforming to the requirements of §§ 2.56, 2.57 and 2.58, of the mark as used in commerce; and

(3) The fee prescribed in § 2.6.

(c) The statement of use may be filed only when the applicant has made use of the mark in commerce on or in connection with all of the goods or services, as specified in the notice of allowance, for which applicant will seek registration in that application, unless the statement of use is accompanied by a request in accordance with § 2.87 to divide out from the application the goods or services to which the statement of use pertains. If more than one item of goods or services is specified in the statement of use, the dates of use required in paragraph (b)(1) of this section need be for only one of the items specified in each class, provided the particular item to which the dates apply is designated.

(d) The title "Statement of use under § 2.88." should appear at the top of the first page of the paper.

(e) The Office will review a timely filed statement of use to determine whether it meets the following minimum requirements:

(1) The fee prescribed in § 2.6;

(2) At least one specimen or facsimile of the mark as used in commerce;

(3) A verification or declaration signed by the applicant stating that the mark is in use in commerce.

(f) A timely filed statement of use which meets the minimum requirements specified in paragraph (e) of this section will be examined in accordance with §§ 2.61 through 2.69. If, as a result of the examination of the statement of use, applicant is found not entitled to registration, applicant will be notified and advised of the reasons and of any formal requirements or refusals. The statement of use may be amended in accordance with §§ 2.59 and 2.71 through 2.75. If the statement of use is acceptable in all respects, the applicant will be notified of its acceptance.

(g) If the statement of use does not meet the minimum requirements specified in paragraph (e) of this section, applicant will be notified of the deficiency. If the time permitted for applicant to file a statement of use has not expired, applicant may correct the deficiency. After the filing of a statement of use during a permitted time period for such filing, the applicant may not withdraw the statement to return to the previous status of awaiting submission of a statement of use, regardless of whether it is in compliance with paragraph (e) of this section.

(h) The failure to timely file a statement of use which meets the minimum requirements specified in paragraph (e) of this section shall result in the abandonment of the application.

(i)(1) The goods or services specified in a statement of use must conform to those goods or services identified in the notice of allowance. An applicant may specify the goods or services by stating "those goods or services identified in the notice of allowance" or, if appropriate, "those goods or services identified in the notice of allowance except * * *" followed by an identification of the goods or services to be deleted.

(2) If any goods or services specified in the notice of allowance are omitted from the identification of goods or services in the statement of use, the Trademark Examining Attorney shall inquire about the discrepancy and permit the applicant to amend the statement of use to include any omitted goods or services, provided that the amendment is supported by a verification that the mark was in use in commerce, on or in connection with each of the goods or services sought to be included, prior to the expiration of the time allowed to applicant for filing a statement of use.

(3) The statement of use may be accompanied by a separate request to amend the identification of goods or services in the application, as stated in the notice of allowance, in accordance with § 2.71(b).

(j) The statement of use may be accompanied by a separate request to amend the drawing in the application, in accordance with §§ 2.51 and 2.72.

§ 2.89 Extensions of time for filing a statement of use.

(a) The applicant may request a six-month extension of time to file the statement of use required under § 2.88 by submitting:

(1) A written request, before the expiration of the six-month period following the issuance of a notice of allowance under section 13(b)(2) of the Act;

(2) The fee prescribed in § 2.6; and

(3) A verified statement by the applicant that the applicant has a continued bona fide intention to use the mark in commerce, specifying those goods or services identified in the notice of allowance on or in connection with which the applicant has a continued bona fide intention to use the mark in commerce.

(b) The applicant may request further six-month extensions of time for filing the statement of use by submitting:

(1) A written request, prior to the expiration of a previously granted extension of time;

(2) The fee prescribed in § 2.6;

(3) A verified statement by the applicant that the applicant has a continued bona fide intention to use the mark in commerce, specifying those goods or services identified in the notice of allowance on or in connection with which the applicant has a continued bona fide intention to use the mark in commerce; and

(4) A showing of good cause, as specified in paragraph (d) of this section.

(c) Extensions of time under paragraph (b) of this section will be granted only in six-month increments and may not aggregate more than 24 months.

(d) The showing required by paragraph (b)(4) of this section must include:

(1) An allegation that the applicant has not yet made use of the mark in commerce on all the goods or services specified in the notice of allowance on or in connection with which the applicant has a continued bona fide intention to use the mark in commerce, and

(2) A statement of applicant's ongoing efforts to make use of the mark in commerce on or in connection with each of the goods or services specified in the verified statement of continued bona fide intention to use required under paragraph (b) of this section. Those efforts may include, without limitation, product or service research or development, market research, manufacturing activities, promotional activities, steps to acquire distributors, steps to obtain required governmental approval, or other similar activities. In the alternative, a satisfactory explanation for the failure to make such efforts must be submitted.

(e)(1) At the time of the filing of a statement of use, or during any time remaining in the existing six-month period in which a statement of use is filed, applicant may file one request, in accordance with paragraph (a) or (b) of this section, for a six-month extension of time for filing a statement of use, provided that the time requested would not extend beyond 36 months from the issuance of the notice of allowance. Thereafter, applicant may not request any further extensions of time.

(2) A request for an extension of time that is filed at the time of the filing of a statement of use, or during any time remaining in the existing six-month period in which a statement of use is filed, must comply with all the requirements of paragraph (a) of this section, if it is applicant's first extension request, or paragraph (b) of this section, if it is a second or subsequent extension request. However, in a request under paragraph (b) of this section, applicant may satisfy the requirement for a showing of good cause by asserting that applicant believes that it has made valid use of the mark in commerce, as evidenced by the submitted statement of use, but that if the statement of use is found by the Patent and Trademark Office to be fatally defective, applicant will need additional time in which to file a new statement of use.

(f) The goods or services specified in a request for an extension of time for filing a statement of use must conform to those goods or services identified in the notice of allowance. Any goods or services specified in the notice of allowance which are omitted from the identification of goods or services in the request for extension of time will be presumed to be deleted and the applicant may not thereafter request that the deleted goods or services be reinserted in the application. If appropriate, an applicant may specify the goods or services by stating "those goods or services identified in the notice of allowance" or "those goods or services identified in the notice of allowance except * * *" followed by an identification of the goods or services to be deleted.

(g) The applicant will be notified of the grant or denial of a request for an extension of time, and of the reasons for a denial. Failure to notify the applicant of the grant or denial of the request prior to the expiration of the existing period or requested extension does not relieve the applicant of the responsibility of timely filing a statement of use under § 2.88. If, after denial of an extension request, there is time remaining in the existing six-month period for filing a statement of use, applicant may submit a substitute request for extension of time. Otherwise, the only recourse available after denial of a request for an extension of time is a petition to the Commissioner in accordance with §§ 2.66 or 2.146. A petition from the denial of a request for an extension of time to file a statement of use shall be filed within one month from the date of mailing of the denial of the request. If the petition is granted, the term of the requested six-month extension which was the subject of the petition will run from the date of the expiration of the previously existing six-month period for filing a statement of use.

43. Section 2.99 is amended by revising paragraph (g) and adding new paragraph (h) to read as follows:

§ 2.99 Application to register as concurrent user.

* * * * *

(g) Registrations and applications to register on the Supplemental Register and registrations under the Act of 1920 are not subject to concurrent use registration proceedings. Applications to register under section 1(b) of the Act of 1946 are subject to concurrent use registration proceedings only after an acceptable amendment to allege use under § 2.76 or statement of use under § 2.88 has been filed.

(h) The Trademark Trial and Appeal Board will consider and determine concurrent use rights only in the context of a concurrent use registration proceeding.

44. Section 2.101 is amended by revising paragraph (b) to read as follows:

§ 2.101 Filing an opposition.

* * * * *

(b) Any entity which believes that it would be damaged by the registration of a mark on the Principal Register may oppose the same by filing an opposition, which should be addressed to the Trademark Trial and Appeal Board. The opposition need not be verified, and may be signed by the opposer or the opposer's attorney or other authorized representative.

* * * * *

45. Section 2.111 is amended by revising paragraph (b) to read as follows:

§ 2.111 Filing petition for cancellation.

* * * * *

(b) Any entity which believes that it is or will be damaged by a registration may file a petition, which should be addressed to the Trademark Trial and Appeal Board, to cancel the registration in whole or in part. The petition need not be verified, and may be signed by the petitioner or the petitioner's attorney

---

or other authorized representative. The petition may be filed at any time in the case of registrations on the Supplemental Register or under the Act of 1920, or registrations under the Act of 1881 or the Act of 1905 which have not been published under section 12(c) of the Act, or on any ground specified in section 14 (c) or (e) of the Act. In all other cases the petition and the required fee must be filed within five years from the date of registration of the mark under the Act or from the date of publication under section 12(c) of the Act.

* * * * *

46. Section 2.129 is amended by adding new paragraph (d) to read as follows:

§ 2.129 Oral argument; reconsideration.

* * * * *

(d) When a party to an inter partes proceeding before the Trademark Trial and Appeal Board cannot prevail without establishing constructive use pursuant to section 7(c) of the Act in an application under section 1(b) of the Act, the Trademark Trial and Appeal Board will enter a judgment in favor of that party, subject to the party's establishment of constructive use. The time for filing an appeal or for commencing a civil action under section 21 of the Act shall run from the date of the entry of the judgment.

47. Section 2.133 is revised to read as follows:

§ 2.133 Amendment of application or registration during proceedings.

(a) An application involved in a proceeding may not be amended in substance nor may a registration be amended or disclaimed in part, except with the consent of the other party or parties and the approval of the Trademark Trial and Appeal Board, or except upon motion.

(b) If, in an inter partes proceeding, the Trademark Trial and Appeal Board finds that a party whose application or registration is the subject of the proceeding is not entitled to registration in the absence of a specified restriction to the involved application or registration, the Trademark Trial and Appeal Board will allow the party time in which to file a request that the application or registration be amended to conform to the findings of the Trademark Trial and Appeal Board, failing which judgment will be entered against the party.

(c) Geographic limitations will be considered and determined by the Trademark Trial and Appeal Board only in the context of a concurrent use registration proceeding.

(d) A plaintiff's pleaded registration will not be restricted in the absence of a counterclaim to cancel the registration in whole or in part, except that a counterclaim need not be filed if the registration is the subject of another proceeding between the same parties or anyone in privity therewith.

48. Section 2.161 is revised to read as follows:

§ 2.161 Cancellation for failure to file affidavit or declaration during sixth year.

Any registration under the provisions of the Act and any registration published under the provisions of section 12(c) of the Act (§ 2.153) shall be cancelled as to any goods or services recited in the registration at the end of six years following the date of registration or the date of such publication, unless within one year next preceding the expiration of such six years the registrant shall file in the Patent and Trademark Office an affidavit or declaration in accordance with § 2.20 setting forth those goods or services recited in the registration on or in connection with which the mark is in use in commerce and attaching a specimen or facsimile showing current use of the mark, or an affidavit or declaration under § 2.20 showing that its nonuse as to any goods or services recited in the registration is due to special circumstances which excuse such nonuse and is not due to any intention to abandon the mark as to those goods or services.

49. Section 2.162 is amended by revising paragraphs (e), (f), and (g) to read as follows:

§ 2.162 Requirements for affidavit or declaration during sixth year.

* * * * *

(e) State that the registered mark is in use in commerce, list the goods or services recited in the registration on or in connection with which the mark is in use in commerce, and specify the nature of such commerce (except under paragraph (f) of this section). The statement must be accompanied by a specimen or facsimile, for each class of goods or services, showing current use of the mark. If the specimen or facsimile is found to be deficient, a substitute specimen or facsimile may be submitted and considered even though filed after the sixth year has expired, provided it is supported by an affidavit or declaration pursuant to § 2.20 verifying that the specimen or facsimile was in use in commerce prior to the expiration of the sixth year;

(f) If the registered mark is not in use in commerce on or in connection with the goods or services recited in the registration, recite facts to show that nonuse as to those goods or services is due to special circumstances which excuse such nonuse and is not due to any intention to abandon the mark as to those goods or services. If the facts recited are found insufficient, further evidence or explanation may be submitted and considered even though filed after the sixth year has expired; and

(g) Contain the statement of use in commerce or statement as to nonuse and appropriate specimen or facsimile, as required in paragraphs (e) and (f) of this section, for each class to which the affidavit or declaration pertains in this registration.

50. Section 2.181(a) is revised to read as follows:

§ 2.181 Term of original registrations and renewals.

(a)(1) Registrations issued or renewed under the Act, prior to November 16, 1989, whether on the Principal Register or on the Supplemental Register, remain in force for twenty years from their date of issue or expiration, and may be renewed for periods of ten years from the expiring period unless previously cancelled or surrendered.

(2) Registrations issued or renewed under the Act on or after November 16, 1989, whether on the Principal Register or on the Supplemental Register, remain in force for ten years from their date of issue or expiration, and may be renewed for periods of ten years from the expiring period unless previously cancelled or surrendered.

* * * * *

51. Section 2.187 is revised to read as follows:

---

§ 2.187 Certificate of registration may issue to assignee.

The certificate of registration may be issued to the assignee of the applicant, or in a new name of applicant, provided that the party makes a written request in the application record, by the time the application is being prepared for issuance of the certificate of registration, and an appropriate document is of record in the Assignment Search Room of the Patent and Trademark Office. If the assignment or name change document is not of record in the Assignment Search Room, then the written request must state that the document has been filed for recordation. The address of the assignee must be made of record in the application file and in the recorded document.

Dated: August 2, 1989.

Donald J. Quigg,

Assistant Secretary and Commissioner of Patents and Trademarks.

[T.D. 89–86]

Seizure of Property for Possession of Controlled Substances

AGENCY: U.S. Customs Service, Treasury.

ACTION: Final rule.

SUMMARY: This document amends the Customs Regulations to provide certain expedited procedures when property is seized due to violations involving the possession of personal use quantities of controlled substances. The procedures comply with the requirements of the Anti-Drug Abuse Act of 1988. The regulations set forth procedures allowing an owner or interested party whose property was seized due to a violation involving possession of a personal use quantity of a controlled substance to have the property returned promptly if he can establish his innocence. The regulations also require, when a violation involving the possession of personal use quantities of a controlled substance is committed on a commercial fishing industry vessel that is proceeding to or from a fishing area or intermediate port of call or is actively engaged in fishing operations, that a summons to appear be issued in lieu of seizure of the vessel. These regulations have been prepared in conjunction with the Attorney General and the Secretary of Transportation; regulations from these Departments on this subject area also appear in today's **Federal Register**.

EFFECTIVE DATE: October 11, 1989.

FOR FURTHER INFORMATION CONTACT: Harriett D. Blank, Regulatory Procedures and Penalties Division, (202) 566–8317.

SUPPLEMENTARY INFORMATION:

Background

Section 6079 of the Anti-Drug Abuse Act of 1988 (Pub. L. 100–690, title VI) (the Act) requires the Attorney General and the Secretary of the Treasury to prescribe regulations to minimize the adverse impact caused by prolonged detention of property seized for civil forfeiture for violations involving the possession of personal use quantities of a controlled substance pursuant to section 596 of the Tariff Act of 1930 (19 U.S.C. 1595a(a)), section 511(a) of the Controlled Substance Act (21 U.S.C. 881(a)), or section 2 of the Act of August 9, 1939 (53 Stat. 1291; 49 U.S.C. App. 782). Pursuant to section 6079, such seized property shall be promptly returned where an owner can establish: (1) A valid, good faith interest in the property; (2) that he did not know of or consent to the violation; and (3) that he had no knowledge or reason to believe that the property was being or would be used in violation of law, or that if he at any time had, or should have had knowledge that the property would be used in a violation, that he did what reasonably could be expected to prevent the violation.

Section 6079 also provides that the Attorney General, Secretary of the Treasury and the Secretary of Transportation shall provide joint regulations providing for issuance of a summons to appear in lieu of seizure of a commercial fishing industry vessel for violations involving the possession of personal use quantities of a controlled substance. These regulations are to apply when the violation is committed on a commercial fishing industry vessel that is proceeding to or from a fishing area or intermediate port of call or is actually engaged in fishing operations.

Representatives of the Department of Justice on behalf of the Attorney General, the U.S. Coast Guard on behalf of the Secretary of Transportation and the U.S. Customs Service on behalf of the Secretary of the Treasury developed, in accordance with section 6079 of the Act, proposed regulations which were published in the **Federal Register** (54 FR 14242) on April 10, 1989.

Eleven comments were received by Customs in response to its Notice of Proposed Rulemaking. Customs exchanged the comments it received with the Coast Guard and the Department of Justice. A discussion of the comments and our responses follows:

Discussion of Comments

Comment: Proposed § 171.53 provided that Customs will attempt to make a final administrative determination regarding the disposition of property seized for particular statutory violations involving the possession of personal use quantities of a controlled substance within 21 days of the seizure. If such a determination is not made within 21 days, Customs shall determine, within 20 days after receiving a timely submitted petition for expedited procedures, whether a petitioner established his right to have the property returned or whether Customs should proceed with the administrative forfeiture action. Several commenters stated that this proposed procedure is contrary to the purpose of section 6079, which is to require Customs to make a final determination in 21 days or release the property. The commenters stated that § 171.53 actually provides Customs with 40 days during which to make a final determination.

Response: We do not agree. Customs is unable to make a final determination until it receives a petition for expedited procedures establishing the elements required by the Act. The regulations provide that Customs will attempt to make a final determination within 21 days, but this is entirely dependent upon the receipt of petitions. Because the names and addresses of interested parties who should be notified of a seizure are not always known to Customs immediately, and because interested parties who are not in possession of their conveyances at the time of seizure do not always petition promptly, there are frequent delays in the administrative process which are entirely outside of Customs control. If Customs were required to make a final determination 21 days after seizure, it would be forced to deny relief when petitions are not received shortly after seizure. Parties submitting petitions which may otherwise have been granted would be forced to submit supplemental petitions or to unnecessarily file claim and cost bonds requesting judicial determinations. The procedure proposed by Customs is more flexible giving the petitioner a reasonable period of time in which to submit his petition. Further, if the petitioner does submit his petition on the same day of the seizure, Customs will make a final determination within 20 days.

Comment: A commenter stated that "personal use quantity" should be defined as that quantity which can be easily concealed upon the body or personal effects of an individual rather than a quantity that is based on weight.

Response: We do not agree. It is possible to conceal on a person or in personal effects amounts of controlled substances which are clearly for non-personal use. We believe that the use of weight as a criterion while, at the same time, allowing certain other variables to be taken into consideration is a preferable way to determine whether an amount of controlled substance possessed by an individual is a personal use quantity.

Comment: Some commenters complained that the proposed procedures are harsh in that a seizure may be imposed upon an innocent owner. They also took issue with the proposed regulations assuming guilt and requiring an owner to prove his innocence before a conveyance is returned.

Response: When a conveyance is seized because of a violation involving

the possession of a personal use quantity of a controlled substance, long-standing statutory authority specifies that the burden of proof is upon the claimant to prove his innocence. Section 1615 of title 19, United States Code (19 U.S.C. 1615), provides this unique allocation of the burden of proof in all forfeiture actions for drug-related offenses as it considers the property the "guilty" party. The purpose of the proposed procedures is to protect the interests of innocent owners by allowing them to prove their innocence as expeditiously as possible.

Comment: One commenter stated that the Anti-Drug Abuse Act required new alternative procedures to expedite release of seized property and the substitute res procedure set forth in proposed § 171.54 should not be considered a new procedure as it is already available. Further, the commenter indicated that proposed § 171.54 was a little unclear and specifically questioned under what circumstances could an offer to post a substitute res not be accepted.

Response: The substitute res procedure contained in proposed § 171.54 is distinct and separate from the expedited procedures. The alternative expedited procedures required by the statute were set forth in paragraphs (a) and (b) of proposed § 171.53. Release, pending a final determination, upon the deposit of the domestic value of seized merchandise, is well-established Customs procedure and is effected pursuant to 19 U.S.C. 1614. The substitute res is not mandatory. We included the substitute res procedures in these regulations for the convenience of innocent owners who may wish to consider all the ways they may obtain release of their property expeditiously. We believe, however, that some clarification is needed regarding the substitute res provision. The substitute res is not a bond; it is the actual payment of the appraised value of the property and it may be posted at any time up until a conveyance has been administratively forfeited. We stated in the proposal that the payment may be in the form of cash, irrevocable letter of credit, or a traveler's check or money order made payable to U.S. Customs. We now believe that an additional category of payment, certified funds such as a certified check, should be added. Finally, we are changing the language in § 171.54 to more clearly reflect that an offer to post a substitute res may not be accepted by Customs when the seized conveyance that is in Customs custody is evidence of violation of law or has other characteristics that particularly suit it for use in illegal activities.

Comment: A commenter suggested that, in the case of commercial vessels appraised at very high values, the substitution of substantial bonds, rather than the equivalent of the domestic value of the vessel, be permitted to obtain release of the vessel prior to a final determination.

Response: The Act does not require such a provision. However, Customs may choose, as it has in some past cases, to release such large vessels, pending a final determination, upon the execution of a constructive seizure agreement which requires no deposit, or upon other terms which protect the government's interest.

Comment: One commenter suggested that a demonstration of company compliance with Federal mandatory drug testing regulations be specified to constitute prima facie evidence that a company established the element set forth in proposed § 171.52(c)(3)—that it did not know or consent to the illegal use of the property or, in the event that it knew or should have known of the illegal use, it did what reasonably could be expected to prevent the violation.

Response: We do not agree. However, compliance with federal mandatory drug-testing regulations may be considered in determining whether § 171.52(c)(3) has been satisfied.

Comment: Some commenters were concerned that Customs will consider arrest and/or conviction records of persons in possession of controlled substances as evidence of possession for other than personal use. They stated that innocent owners may not know of the criminal records of all lessees, employees, and acquaintances who may be on board their conveyance.

Response: A determination of whether a controlled substance is possessed solely for purposes of personal use is a determination of subjective intent based upon the totality of the circumstances. Customs will take many factors into account, including the quantity of controlled substances possessed, in determining whether the possessor of the controlled substance intended to distribute. This operates both to the advantage of interested parties and the government. It must be stressed that a person's prior arrest or conviction record for drug offenses will not necessarily be determinative of whether the drugs were possessed for personal use; it is merely one factor Customs will consider. It should also be noted that one may still be found to be an innocent owner even though persons on the conveyance had drug-related criminal records.

Comment: A commenter questioned why hearsay (proposed § 171.52(b)(6)(ii)(C) and (F)) should be permitted to be introduced as a means of denying the right to an expedited proceeding.

Response: Hearsay is admissible in administrative proceedings. As noted earlier, the issue of whether a controlled substance is possessed solely for purposes of personal use involves a determination of subjective intent. Hearsay may be considered in determining that intent. Further, as stated earlier, many factors may be considered in determining whether the possessor of a controlled substance intended to use the controlled substance for personal use. The types of statements discussed in § 171.52(b)(6)(ii)(C) and (F) are just two of the factors that may be considered.

Comment: A commenter stated that proposed § 171.51(b)(5), by stating that holding primary and direct title to property may not constitute a sufficient beneficial interest in the property to support a petition, may be disqualifying some innocent lienholders.

Response: We agree. Accordingly, we are deleting the last sentence of § 171.51(b)(5).

Comment: A commenter stated that the definition of "normal and customary manner" in proposed § 171.51(b)(4) is too restrictive.

Response: We disagree. We believe that the reasonable and prudent standard combined with consideration of established norms, standards and customs is a broad definition permitting Customs to consider a large number of factors. What is "normal and customary" will vary with the circumstances of individual cases, and there may be cases in which mere compliance with an industry "norm" or customary industry practice, for example, would not be viewed by an objective person as reasonable, normal or customary under the circumstances.

Comment: A commenter suggested that the term "sweepings" as used in proposed § 171.51(b)(6)(ii) should be clarified so as to exclude substances other than controlled substances and to reflect a collective amount of sweepings.

Response: The term "sweepings" as used in both the Act and the proposed regulations has a clear meaning which does not include substances other than controlled substances. Further, the term "sweepings" clearly relates to small quantities which are actually evidence of larger quantities having been carried on board.

BEST COPY AVAILABLE

Comment: Some commenters wished to see the applicability of the provisions for issuance of a summons to appear expanded to different kinds of vessels other than those included within the definition of commercial fishing industry vessels set forth in proposed § 171.51(b)(2). One commenter stated that the term "commercial fishing industry vessel" meant to embrace private-for-hire and charter sport fishing vessels and headboats.

Response: Section 6079 of the Act specifies that the summons to appear in lieu of physical seizure is applicable to "a commercial fishing industry vessel as defined in § 2101(11a), (11b), and (11c) of title 46, United States Code." The definition set forth in proposed § 171.51(b)(2) is totally consistent with the definition in section 2101(11a), (11b) and (11c) of title 46, United States Code. The definition does not include sport-fishing vessels, headboats, or vessels in the barge and towing industry. Customs is not statutorily required to provide the summons to appear in lieu of seizure procedure to other vessels. However, Customs is not prohibited by the Act from expanding the procedures to other kinds of vessels. Any policy decisions to expand the summons to appear procedure to other vessels will be based on Customs experience under these regulations.

Comment: One commenter asked that the regulations include a definition of what constitutes "proceeding to or from a fishing area or intermediate port of call." It was also suggested that the definition include times when a vessel has been outfitted for a voyage whether or not it is still in port.

Response: The language at issue has been taken directly from the statute and is unambiguous on its face. There is no reason to give the terms "proceeding to or from" other than their literal meaning. The literal meaning cannot be said to include times when the vessel is in port.

Comment: One commenter suggested that the regulations clarify the provision in the summons that requires a commercial fishing industry vessel to report to the port designated in the summons to take into account unique geographic factors confronted in Alaska.

Response: We do not agree that such clarification belongs in the regulations. Local ports have been instructed to workout appropriate operational details in unique and/or unusual circumstances.

Comment: A commenter stated that the regulations should not specify, as they did in § 171.52(e)(3), that a statement of the facts and circumstances, supported by satisfactory evidence, should be included in a petition because § 171.52(c)(1)–(3) specifies the statutory elements of proof. The commenter stated that § 171.52(e)(3) requires more than section 6079 of the Act.

Response: We do not agree. The section, as written, makes it clear that a petitioning party may not obtain return of the seized conveyance by merely citing § 171.52(c)(1)–(3) verbatim. Evidence is required to support the assertions.

Comment: A commenter suggested that the regulations address the treatment of cargo carried on board a commercial vessel that is seized.

Response: We disagree. Cargo is not part of a vessel. It is, therefore, not subject to forfeiture and may be returned to its owner. Customs already has procedures for the disposition of cargo on seized vessels.

Other Changes

Based on a change being made to the Department of Justice regulations on this subject because of a comment, Customs has decided to modify § 171.52(c) to reflect that petitioners also may establish in their petition any statutory rights or defenses beyond those encompassed by the three elements specified in section 6079(b)(2) of the Act.

Conclusion

After careful consideration of all the comments received and further review of the matter, it has been determined that the amendments, with the modifications discussed above, should be adopted.

Regulatory Flexibility Act

It is hereby certified that this rule will not have a significant economic impact on a substantial number of small entities. Accordingly, the analysis requirements of the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*), are not applicable to these amendments.

Executive Order 12291

This document does not meet the criteria for a "major rule" as specified in section 1(b) of E.O. 12291. Accordingly, no regulatory impact analysis has been prepared.

Drafting Information

The principal author of this document was Harold M. Singer, Regulations and Disclosure Law Branch, U.S. Customs Service; however, personnel from other offices participated in its development.

List of Subjects in 19 CFR Parts 162 and 171

Administrative practice and procedures, Law enforcement, Penalties, Seizures and forfeiture.

Amendments to the Regulations

Parts 162 and 171, Customs Regulations (19 CFR parts 162 and 171), are amended as set forth below:

PART 162—RECORDKEEPING, INSPECTION, SEARCH AND SEIZURE

1. The general authority citation of part 162, Customs Regulations, and the specific authority citation for § 162.22, Customs Regulations are revised to read as follows:

Authority: 5 U.S.C. 301; 19 U.S.C. 66, 1624.

* * * * *

Section 162.22 also issued under 18 U.S.C. 546; 19 U.S.C. 1459, 1460, 1594, 1595a, 1701, 1703–1708.

* * * * *

2. Section 162.22(b) is revised to read as follows:

§ 162.22 Seizure of conveyances.

* * * * *

(b) *Facilitating importation contrary to law.* Except as provided in § 171.52(b), every vessel, vehicle, animal, aircraft, or other thing, which is being or has been used in, or to aid or facilitate, the importation, bringing in, unlading, landing, removal, concealing, harboring or subsequent transportation of any article which is being, or has been introduced or attempted to be introduced into the United States contrary to law, shall be seized and held subject to forfeiture. Any person who directs, assists financially or otherwise, or is in any way concerned in any such unlawful activity shall be liable to a penalty equal to the value of the article or articles involved.

* * * * *

3. Section 162.31(a) is amended by adding a sentence at the end of the paragraph to read as follows:

§ 162.31 Notice of fine, penalty, or forfeiture incurred.

(a) *Notice.* * * * For violations involving the possession of personal use quantities of a controlled substance, also see § 171.55.

* * * * *

PART 171—FINES, PENALTIES, AND FORFEITURES

1. The contents of part 171 are amended by adding the contents of subpart F to read as follows:

Subpart F—Expedited Petitioning Procedures

Sec.
171.51 Application and definitions.
171.52 Petition for expedited procedures in an administrative forfeiture proceeding.

Sec.
171.53 Ruling on petition of expedited procedures.
171.54 Substitute res in an administrative forfeiture action.
171.55 Notice provisions.

2. The general authority citation for part 171 is revised and a specific citation added for subpart F to read as follows:

Authority: 19 U.S.C. 66, 1592, 1618, 1624.

* * * * *

d. Subpart F also issued under 19 U.S.C. 1595a, 1605, 1614, Pub. L. 100–690.

3. Section 171.12(b) is revised to read as follows:

§ 171.12 Filing of petition.

* * * * *

(b) *When filed.* If a petitioner seeks expedited relief under subpart F of this part, a petition must be filed within the time frame stated in § 171.52(d). Otherwise, unless additional time has been authorized as provided in § 171.15, petitions for relief shall be filed within 30 days from the date of the mailing of notice of fine, penalty, or forfeiture incurred.

* * * * *

4. Part 171 is amended by adding a new subpart F consisting of §§ 171.51 through 171.55, to read as follows:

Subpart F—Expedited Petitioning Procedures

§ 171.51 Application and definitions.

(a) *Application.* The following definitions, regulations, and criteria are designed to establish and implement procedures required by section 6079 of the Anti-Drug Abuse Act of 1988, Public Law 100–690, title VI (102 Stat. 4181). They are intended to supplement existing law and procedures relative to the forfeiture or property under the identified statutory authority. The provisions of these regulations do not affect the existing legal and equitable rights and remedies of those with an interest in property seized for forfeiture, nor do these provisions relieve interested parties from their existing obligations and responsibilities in pursuing their interests through such courses of action. These regulations are intended to reflect the intent of Congress to minimize the adverse impact occasioned by the prolonged detention of property subject to forfeiture due to violations of law involving possession of personal use quantities of controlled substances. The definition of personal use quantities of controlled substance as contained herein is intended to distinguish between those quantities small in amount which are generally considered to be possessed for personal consumption and not for distribution, and those larger quantities generally considered to be subject to distribution.

(b) *Definitions.* As used in this subpart, the following terms shall have the meanings specified:

(1) *Appraised value.* "Appraised value" has the meaning given in § 162.43(a) of this chapter.

(2) *Commercial fishing industry vessel.* "Commercial fishing industry vessel" means a vessel that:

(i) Commercially engages in the catching, taking, or harvesting of fish or an activity that can reasonably be expected to result in the catching, taking, or harvesting of fish;

(ii) Commercially prepares fish or fish products other than by gutting, decapitating, gilling, skinning, shucking icing, freezing, or brine chilling; or

(iii) Commercially supplies, stores, refrigerates, or transports fish, fish products, or materials directly related to fishing or the preparation of fish to or from a fishing, fish processing, or fish tender vessel or fish processing facility.

(3) *Controlled substance.* "Controlled substance" has the meaning given in 21 U.S.C. 802.

(4) *Normal and customary manner.* "Normal and customary manner" means that inquiry suggested by particular facts and circumstances which would customarily be undertaken by a reasonably prudent individual in a like or similar situation. Actual knowledge of such facts and circumstances is unnecessary, and implied, imputed, or constructive knowledge is sufficient. An established norm, standard, or custom is persuasive but not conclusive or controlling in determining whether a petitioner acted in a normal and customary manner to ascertain how property would be used by another legally in possession of the property.

(5) *Owner or interested party.* "Owner or interested party" means one having a legal and possessory interest in the property seized for foreiture or one who was in legal possession of the property at the time of seizure and is entitled to legal possession at the time of granting the petition of expedited procedure. This includes a lienholder, to the extent of his interest in the property, whose claim is in writing (except for a maritime lien which need not be in writing), unless the collateral is in the possession of the secured party. The agreement securing such a lien must create or provide for a security interest in the collateral, describe the collateral and be signed by the debtor.

(6) *Personal use quantities.* "Personal use quantities" means possession of controlled substances in circumstances where there is no evidence of intent to distribute, or to facilitate the manufacturing, compounding, processing, delivering, importing or exporting of any controlled substance. A quantity of a controlled substance is presumed to be for personal use if the amounts possessed do not exceed the quantities set forth in paragraph (b)(6)(i) of this section if there is no evidence of illicit drug trafficking or distribution such as, but not limited to the factors set forth in paragraph (b)(6)(ii) of this section. The possession of a narcotic, a depressant, a stimulant, a hallucinogin or a cannabis-controlled substance will be considered in excess of personal use quantities if the dosage unit amount possessed provides the same or greater equivalent efficacy as described in paragraph (b)(6)(i) of this section.

(i) *Quantities presumed to be for personal use unless evidence of illicit drug trafficking of distribution exists.* (A) One gram of a mixture of substance containing a detectable amount of heroin;

(B) One gram of a mixture of substance containing a detectable amount of—

(*1*) Coca leaves, except coca leaves and extracts of coca leaves from which cocaine, ecgonine, and derivations of ecgonine or their salts have been removed;

(*2*) Cocaine, its salts, optional and geometric isomers, and salts of isomers;

(*3*) Ecgonine, its derivatives, their salts, isomers, and salts of isomers; or

(*4*) Any compound, mixture, or preparation which contains any quantity of any of the substances referred to in paragraphs (b)(6)(i)(B) (*1*) through (*3*) of this section;

(C) ⅒th gram of a mixture of substances described in paragraph (b)(6)(i)(B) of this section which contains cocaine base;

(D) ⅒th gram of mixture of substance containing a detectable amount of phencyclidine (PCP);

(E) 500 micrograms of a mixture of substance containing a detectable amount of lysergic acid diethylamide (LSD);

(F) One ounce of a mixture of substance containing a detectable amount of marihuana; or

(G) One gram of methamphetamine, its salts, isomers, and salts of its isomers, or one gram of a mixture of substances containing a detectable amount of methamphetamine, its salts, isomers, or salts of its isomers.

(ii) *Evidence of possession for other than personal use.* Quantities shall not be considered to be for personal use if sweepings are present or there is other evidence of possession for other than personal use such as:

(A) Evidence such as drug scales, drug distribution paraphernalia, drug records, drug packaging material, method of drug packaging, drug "cutting" agents and other equipment, that indicates an intent to process, package or distribute a controlled substance;

(B) Information from reliable sources indicating possession of a controlled substance with intent to distribute;

(C) The arrest and/or conviction record of the person or persons in actual or constructive possession of the controlled substance for offenses under Federal, State or local law that indicates an intent to distribute a controlled substance;

(D) The controlled substance is related to large amounts of cash or any amount of prerecorded government funds;

(E) The controlled substance is possessed under circumstances that indicate such a controlled substance is a sample intended for distribution in anticipation of a transaction involving large quantities, or is part of a larger delivery; or

(F) Statements by the possessor, or otherwise attributable to the possessor, including statements of conspirators, that indicate possession with intent to distribute.

(7) *Property.* "Property" means property subject to forfeiture under 21 U.S.C. 881(a) (4), (6), and (7); 19 U.S.C. 1595a, and 49 U.S.C. App. 782.

(8) *Seizing agency.* "Seizing agency" means the Federal agency which has seized the property or adopted the seizure of another agency, and has the responsibility for administratively forfeiting the property.

(9) *Sworn to.* "Sworn to" refers to the oath as provided by 28 U.S.C. 1746 or as notarized in accordance with state law.

§ 171.52 Petition for expedited procedures in an administrative forfeiture proceeding.

(a) *Procedures for violations involving possession of controlled substance in personal use quantities.* The usual procedures for petitions for relief when property is seized are set forth in subpart B of this part. However, where property is seized for administrative forfeiture pursuant to 21 U.S.C. 881(a) (4), (6) or (7), 19 U.S.C. 1595a and/or 49 U.S.C. App. 782 due to violations involving controlled substances in personal use quantities, a petition may be filed pursuant to paragraphs (c) and (d) of this section to seek expedited procedures for release of the property. A petition filed pursuant to this subpart shall also serve as a petition for relief filed under subpart B of this part. The petition may be filed by an owner or interested party.

(b) *Commercial fishing industry vessels.* Where a commercial fishing industry vessel proceeding to or from a fishing area or intermediate port of call or actually engaged in fishing operations is subject to seizure for administrative forfeiture for a violation of law involving controlled substances in personal use quantities, a summons to appear shall be issued in lieu of a physical seizure. The vessel shall report to the port designated in the summons no later than the date specified in the summons. When a commercial fishing industry vessel reports, the appropriate Customs officer shall, depending on the facts and circumstances, either issue another summons to appear at a time deemed appropriate, execute a constructive seizure agreement prusuant to 19 U.S.C. 1605, or take physical custody of the vessel. When a summons to appear has been issued, the seizing agency may be authorized to institute administrative forfeiture as if the vessel had been physically seized. When a summons to appear has been issued, the owner or interested party may file a petition for expedited procedures pursuant to subsection (a); the provisions of subsection (a) and other provisions in this subpart relating to a petition for expedited release shall apply as if the vessel had been physically seized.

(c) *Elements to be established in petition.* (1) The petition for expedited procedures shall establish that:

(i) The petitioner has a valid, good faith interest in the seized property as owner or otherwise;

(ii) The petitioner reasonably attempted to ascertain the use of the property in a normal and customary manner; and

(iii) The petitioner did not know or consent to the illegal use of the property or, in the event that the petitioner knew or should have known of the illegal use, the petitioner did what reasonably could be expected to prevent the violation.

(2) In addition, the petitioner may submit evidence to establish that he has statutory rights or defenses such that he would prevail in a judicial proceeding on the issue of forfeiture.

(d) *Manner of filing.* A petition for expedited procedures must be filed in a timely manner to be considered by Customs. To be filed in a timely manner, the petition must be received by Customs within 20 days from the date the notice of seizure was mailed, or in the case of a commercial fishing industry vessel for which a summons to appear is issued, 20 days from the original date when the vessel is required to report. The petition must be sworn to by the petitioner and signed by the petitioner or his attorney at law. If the petitioner is a corporation, the petition may be sworn to by an officer or responsible supervisory employee thereof and signed by that individual or an attorney at law representing the corporation. Both the envelope and the request must be clearly marked "PETITION FOR EXPEDITED PROCEDURES." The petition shall be addressed to the U.S. Customs Service and filed in triplicate with the district director for the district in which the property was seized, or for commercial fishing industry vessels, with the district director having jurisdiction over the port to which the vessel was required to report.

(e) *Contents of petition.* The petition shall include the following:

(1) A complete description of the property, including identification numbers, if any, and the date and place of the violation and seizure;

(2) A description of the petitioner's interest in the property, supported by the documentation, bills of sale, contracts, mortgages, or other satisfactory documentary evidence; and

(3) A statement of the facts and circumstances relied upon by the petitioner to justify expedited return of the seized property, supported by satisfactory evidence.

§ 171.53 Ruling on petition for expedited procedures.

(a) *Final administrative determination.* Upon receipt of a petition filed pursuant to § 171.52, Customs shall determine first whether a final administrative determination of the case can be made within 21 days of the seizure. If such a final administrative determination is made within 21 days, no further action need be taken under this subpart.

(b) *Determination within 20 days.* If no such final administrative determination is made within 21 days of the seizure, Customs shall within 20 days after the receipt of the petition make a determination as follows:

(1) If Customs determines that the factors listed in § 171.52(c) have been established, it shall terminate the administrative proceedings and release the property from seizure, or in the case of a commercial fishing industry vessel for which a summons has been issued, but not yet answered, dismiss the summons. The property shall not be returned if it is evidence of a violation of law.

(2) If Customs determines that the factors listed in § 171.52(c) have not been established, it shall proceed with the administrative forfeiture.

§ 171.54 Substitute res in an administrative forfeiture action.

(a) *Substitute res.* Where property is seized for administrative forfeiture for a violation involving controlled substances in personal use quantities, the owner or interested party may offer to post an amount equal to the appraised value of the property (the res) to obtain release of the property. The offer, which may be tended at any time subsequent to seizure and up until the completion of administrative forfeiture proceedings, must be in the form of cash, irrevocable letter of credit, certified funds such as a certified check, traveler's check(s), or money order made payable to U.S. Customs. Unless the property is evidence of a violation of law or has other characteristics that particularly suit it for use in illegal activities, it will be released to the owner or interested party subsequent to tender of the substitute res.

(b) *Forfeiture of res.* If a substitute res is posted and it is determined that the property should be administratively forfeited, the res will be forfeited in lieu of the property.

§ 171.55 Notice provisions.

(a) *Special notice provision.* At the time of seizure of property defined in § 171.51, written notice must be provided to the possessor of the property regarding applicable statutes and Federal regulations including the procedures established for the filing of a petition for expedited procedures as set forth in section 6079 of the Anti-Drug Abuse Act of 1988 and implementing regulations.

(b) *Notice provision.* The notice as required by section 1607 of Title 19, United States Code and applicable regulations shall be made at the earliest practicable opportunity after determining ownership of, or interest in, the seized property and shall include a statement of the applicable law under which the property is seized and a statement of the circumstances of the seizure sufficiently precise to enable an owner or interested party to identify the date, place and use of acquisition which makes the property subject to forfeiture.

William von Raab,

Commissioner of Customs.

BILLING CODE 4820–02–M

DEPARTMENT OF JUSTICE

Office of the Attorney General

Drug Enforcement Administration

21 CFR Part 1316

[Order No. 1363–89]

Anti-Drug Abuse Act of 1988; Expedited Forfeiture Procedures for Certain Property

AGENCY: Office of the Attorney General, Drug Enforcement Administration, Department of Justice.

ACTION: Final rule.

SUMMARY: Section 6079 of the Anti-Drug Abuse Act of 1988 (Pub. L. 100–690) requires the Attorney General and the Secretary of the Treasury to prescribe regulations for expedited administrative procedures for seizures under section 511(a)(4), (6) and (7) of the Controlled Substances Act (21 U.S.C. 881(a)(4), (6) and (7)); section 596 of the Tariff Act of 1930 (19 U.S.C. 1595a(a)); and section 2 of the Act of August 9, 1939 (53 Stat. 1291; 49 U.S.C. App. 782) for violations involving the possession of personal use quantities of a controlled substance. Section 6079 further requires that the Attorney General, the Secretary of the Treasury, and the Secretary of Transportation prescribe joint regulations providing for issuance of a summons to appear in lieu of seizure of a commercial fishing industry vessel as defined in section 2101(11a), (11b), and (11c) of title 46, United States Code, for violations involving the possession of personal use quantities of a controlled substance. These regulations would apply when a violation is committed on a commercial fishing industry vessel that is proceeding to or from a fishing area or intermediate port of call or is actively engaged in fishing operations.

The Department of Justice, on behalf of the Attorney General, has consulted with the U.S. Customs Service, acting on behalf of the Secretary of the Treasury, and the U.S. Coast Guard, acting on behalf of the Secretary of Transportation, in formulating consistent and compatible regulations to carry out section 6079.

Section 6080 of the Anti-Drug Abuse Act of 1988 requires the Attorney General to prescribe regulations providing for: (1) The expedited release, in certain cases, of conveyances seized for drug-related offenses during the pendency of civil judicial forfeiture proceedings against the conveyance; (2) the expedited filing of complaints against conveyances seized for drug-related offenses; and (3) the release, except in certain specified circumstances, of any such conveyance to any owner who provides security in the form of a bond in an amount equal to the value of the conveyance.

The Department of Justice, on behalf of the Attorney General and in consultation with the United States Customs Service and United States Coast Guard, published a Notice of Proposed Rulemaking in the **Federal Register** on April 10, 1989. (54 FR 14246). On that same date, the United States Customs Service and the United States Coast Guard published separate Notices of Proposed Rulemaking in the **Federal Register** to carry out their respective responsibilities under section 6079. (54 FR 14242 and 54 FR 14250).

Various comments have been received in response to these Notices of Proposed Rulemaking. The Department of Justice has reviewed the comments received by all of the agencies and is today responding to those comments and promulgating its Final Rule. The United States Customs Service and the United States Coast Guard are also responding to comments and promulgating Final Rules which are being published separately in today's **Federal Register**.

EFFECTIVE DATE: October 11, 1989.

SUPPLEMENTARY INFORMATION:

Drafting Information

The principal person involved in drafting this Final Rule is Harry S. Harbin, Associate Director, Asset Forfeiture Office, Criminal Division.

Discussion of Comments

Seven comments were received in response to the Notices of Proposed Rulemaking published by the Department of Justice, the United States Customs Service and the United States Coast Guard. Several of the comments were duplicates that were sent either to two or to all three agencies. Copies of all of the comments were exchanged by the three agencies.

Applicable Time Periods

Several comments complained that § 1316.93 of the Proposed Regulation allows the Department of Justice more time to make a decision on a petition filed in an administrative forfeiture action than section 6079 of the Anti-Drug Abuse Act of 1988 (ADAA) provides for. We disagree.

Section 6079 of the ADAA specifies that the regulations shall "provide for a final administrative determination of the case within 21 days of seizure, or provide a procedure by which the defendant can obtain release of the property pending a final determination of the case". It is virtually impossible in most cases for the Department of Justice to make a "final administrative determination" of a forfeiture case within 21 days of seizure. Title 19, United States Code, section 1607 requires the publication of notice of seizure and intention to forfeit for at least three successive weeks prior to issuance of a declaration of administrative forfeiture. Thus, in order to make a "final administrative determination of the case" within 21 days of seizure, publication of notice would have to commence on the day of seizure—a demand which is virtually impossible to meet given the realities of the newspaper publishing industry.

Moreover, notice by publication is the most minimal form of notice that will satisfy the requirements of due process. The Department of Justice makes every reasonable effort to identify the record owners of all property seized for forfeiture and to provide these owners with actual notice of seizure and intention to forfeit prior to issuance of a declaration of administrative forfeiture. In some cases (particularly those involving absentee owners), it is simply impossible to identify and provide actual notice to all record owners within 21 days of seizure. These owners would be foreclosed from filing petitions or challenging the administrative forfeiture if they did not receive notice via publication and failed to file their petitions prior to issuance of the determination of administrative forfeiture 21 days after seizure. The only recourse for such owners would be to file a petition for remission or mitigation pursuant to title 19, United States Code, section 161. We do not believe that Congress intended this result.

Even if the words were more loosely interpreted to mean that the seizing agency must rule on a petition for release within 21 days of seizure, the result would be untenable. First, as just explained, many owners would not receive notice in time to file their petitions within 21 days of seizure. These owners would be foreclosed from the expedited release procedures under section 6079 of the ADAA by virtue of the strict 21-day limit established in the statute. Second, this interpretation would leave the system open to abuse by non-innocent owners who could file their petitions on the 21st day after seizure and leave the government no time to investigate or determine the accuracy of their representations. Again, we do not believe that Congress intended either of these results.

It should be noted that the regulations nonetheless provide for a "final administrative determination of the case" within 21 days of seizure to allow for the rare case in which such determinations are possible without offending due process or opening the system to abuse. *See* § 1316.93(a). To avoid the foregoing problems, however, the Department of Justice also implemented the second alternative under section 6079(b)(2) of the ADAA by devising a "procedure by which a claimant can obtain release of the property", in an expedited manner, "pending a final determination of the case." This procedure allows an owner to file a petition for expedited release of the property at any time from the date of seizure through the twentieth day following first publication of the notice of seizure. *See* § 1316.92(d). This is more time than would be possible if the government were required to make a final administrative determination of the case within 21 days of seizure.

More importantly, the regulations require the seizing agency to make a decision on the petition within 20 days of the filing of the petition, regardless of when the petition is filed. *See* § 1316.93(b). Thus, an owner may file a petition on the day of seizure, even if notice of seizure has not been published, and the seizing agency must make a decision within 20 days. On the other hand, an owner may wait until the twentieth day following first publication of the notice of seizure to file the petition and the seizing agency must still make its decision within 20 days. It is the owner, not the government, who controls the timing of release under this procedure and, in no case, is the seizing agency allowed more than 20 days after filing to make its decision.

The procedure adopted by the Department of Justice provides greater safeguards to owners while, at the same time, limiting the decision-making period to twenty-days following filing of the petition. We feel that this procedure "minimize[s] the adverse impact caused by prolonged detention", while limiting the potential for abuse of the system by non-innocent owners.

It should be noted that these procedures differ somewhat from the procedures in the Final Rule being implemented by the United States Customs Service. Under the Final Rule of the Customs Service, a petition must be filed within 20 days from the date the notice of seizure was mailed, or in the case of a commercial fishing industry vessel for which a summons to appear is issued, 20 days from the original date when the vessel is required to report. Under the Justice Department regulations, the petition must be filed within 20 days from the date of the first publication of the notice of seizure. This difference reflects the differing administrative practices of the Customs Service and the seizing agencies of the Department of Justice.

Burden of Proof/"Presumption of Guilt"

Several comments complained that the regulations violated due process by imposing the burden of proof on the petitioning owner, instead of the seizing agency, with respect to the factors specified in §§ 1316.92(c) and 1316.95(b). Another comment objected to the requirement in § 1316.92(e)(3) that petitions contain a statement of facts and circumstances supporting the petition instead of a mere recitation of the elements specified in section 6079(b) of the ADAA. These comments simply misconceive the unique allocation of burden of proof in civil forfeiture actions. Title 19, United States Code, section 1615—which governs all forfeiture actions for drug-related offenses—specifies that the burden of proof in such actions shall lie upon the claimant. This is as it should be since the only issue of guilt in such *in rem* cases is the "guilt" of the property, which the government must establish by probable cause. *See* 19 U.S.C. 1615. The "innocent owner" defense is an affirmative statutory defense, under certain provisions of the drug statutes, which the owner must establish by a preponderance of the evidence.

It should be noted that several provisions of section 6079(b) of the ADAA consistently reflect this historical allocation of the burden of proof. Thus, subsection 6072(b)(2)(B) expressly states that the owner must establish a valid, good faith interest in the property as owner or otherwise. Similarly, subsection 6079(b)(2)(C) states that the owner must establish the factors identified therein. More importantly, northing on the face of either section 6079 or 6080 even remotely suggests a congressional intent to reverse or modify the traditional allocation of burden of proof in civil forfeiture cases for drug-related offenses.

Summons in Lieu of Seizure

Section 1316.92(b) implements section 6079(d) of the ADAA which specifically provides for the promulgation of joint regulations "providing for issuance of a summons to appear in lieu of seizure of a commercial fishing industry vessel as defined in section 2101 (11a), (11b) and (11c) of title 46, United States Code, for violations involving personal use quantities of a controlled substance." Section 1316.91(b) defines the term "commercial fishing industry vessel" consistent with its definition in section 2101 (11a), (11b) and (11c) of title 46, United States Code.

Several comments urged that this definition be expanded to include vessels that are not "commercial fishing industry vessels" as defined in the statute. We disagree. Section 6079(d) clearly specifies the scope of applicability for issuance of a summons in lieu of seizure: To "a commercial fishing industry vessel as defined in section 2101 (11a), (11b) and (11c) of title 46, United States Code". There is no ambiguity in the terms of the statute and the statute does not extend its provisions to any other kinds of vessels. Moreover, section 6079(d) specifically provides that the *in rem* jurisdiction of the district court "shall not be affected by the use of a summons under this section". It does not appear from the face of the statute that this jurisdictional safeguard would apply in cases involving any other kinds of vessels. Thus, we have decided not to amend the regulations in question.

One comment suggested including a definition of what constitutes "proceeding to or from a fishing area or intermediate port of call". It was also suggested that the definition include the time when a vessel has been outfitted for a voyage whether or not it is still in port. We disagree. The language at issue is taken directly from the statute and is unambiguous on its face. There is no reason to give the term "proceeding to or from" any meaning other than its literal meaning. That literal meaning cannot be said to include the time when the vessel is in port.

Normal and Customary Manner

Several comments objected to that part of the definition of "Normal and Customary Manner" in § 1316.91(h) which states that "[a]n established norm, standard, or custom is persuasive but not conclusive or controlling in determining whether an owner acted in a normal and customary manner to ascertain how property would be used by another legally in possession of the property" as too restrictive. We disagree.

The thrust of the statute is to grant certain rights to owners who acted reasonably in ascertaining how their property would be used by another in possession. The statutory provision in question merely provides that the property shall not be returned to the owner in any case in which the owner did not act in a normal or customary manner to ascertain how the property will be used. What is "normal and customary" will vary with the circumstances of the individual case, and there may be cases in which mere compliance with an industry "norm" or customary industry practice, for example, would not be viewed by an objective person as resonable, normal or customary under the circumstances. Thus, we have decided to retain this provision which states that compliance with an established norm, custom or standard will be deemed persuasive, but not controlling, in determining whether a person acted in a normal or customary manner.

Substitute Res Bond

Section 6080 of the ADAA created a new Federal statute codified at 21 U.S.C. 881–1. Subsection (d) of this statute provides that, except in certain specified instances, any owner of a conveyance seized for a drug-related offense may obtain release of the conveyance pending judicial forfeiture by providing security in the form of a bond to the Attorney General in an amount equal to the value of the conveyance. This requirement is reflected in § 1316.98. A decision was made to extend this alternative release procedure to owners facing administrative forfeiture actions in the circumstances specified in section 6079 of the ADAA as well. The availability of this alternative release procedure for administrative forfeitures is reflected in § 1316.94. This provision merely formalizes an existing practice among the seizing agencies.

Several comments were recieved which appear to interpret § 1316.94 not as an alternative to the petition procedures specified in §§ 1316.92 and 1316.93, but as a precondition to use of those procedures. This is simply not the case. An owner of property described in title 21, United States Code, section 881(a) (4), (6) and (7), which has been seized for a drug-related offense involving personal use quantities of a controlled substance, may seek expedited release of the property through two alternative procedures. First, the owner may file a timely petition under §§ 1316.92 and 1316.93 and seek return of the property based upon the owner's innocence. This procedure does not require the posting of a bond of any kind. Second, the owner may, at any time prior to issuance of the declaration of administrative forfeiture, post a substitute res bond in an amount equal to the value of the property and obtain its release pursuant to § 1316.94. This latter alternative permits an owner to obtain release of the property immediately after seizure without filing a petition or making any showing of innocence. It is intended as an alternative to the petition procedures in §§ 1316.92 and 1316.93, not as a prerequisite to those procedures.

One comment advocated that the regulations be amended to provide for return of the substitute res bond if the seizing agency fails to decide a petition within twenty-one days. The substitute res bond is intended to be a true substitute for the property seized. Thus, when the owner of property posts a substitute res bond to obtain release of the property immediately after seizure and also files a timely petition under the procedures set forth in § 1316.92, a ruling will be made on the petition within twenty days and the substitute res bond shall be returned to the owner or retained for administrative forfeiture in accordance with § 1316.93. When the owner posts a substitute res bond to obtain release of the property immediately after seizure and also files a claim and cost bond and petition pursuant to § 1316.95, the substitute res bond shall be returned to the owner if the United States Attorney does not rule on the petition within twenty days in accordance with § 1316.96(b).

Sections 1316.94(a) and 1316.98(a), as originally proposed, specified that the substitute res bond must be in the form of a traveler's check or money order. Several comments advocated that other forms of payment be authorized. After reviewing these comments, we have decided to amend §§ 1316.94(a) and 1316.98(a) to allow for posting of the bond in the form of a cashier's check or an irrevocable letter of credit. In order to provide security to the seizing agency and to prevent abuse of the substitute res bond procedure, a sentence has been added to §§ 1316.94(a) and 1316.98(a) specifying that a bond in the form of a cashier's check will be considered as paid once the check has been accepted for payment by the financial institution which furnished the check. Other suggested means for posting the substitute res bond were rejected because of security concerns.

"Personal Use Quantities"

Several comments were directed at the proposed regulatory definition of the term "personal use quantities". Before addressing these comments, we wish to note that section 6079(e) of the ADAA specifically provides that "personal use quantities of a controlled substance shall not include sweepings or other evidence of non-personal use amounts".

The regulatory definition of the term "personal use quantities" is set forth in § 1316.91(j). This definition specifically provides that the term "personal use quantities" shall not include "sweepings" and it sets forth a list of "other evidence" which may be considered in determining whether or not a controlled substance is possessed for personal use only. *See* § 1316.91(j)(1). It also formulates a presumption that the possession of controlled substances is for personal use only when the amounts possessed do not exceed a certain specified quantity and there are no other indicia of illicit drug trafficking or distribution. *See* § 1316.91(j)(2).

Several comments complained of the inclusion of "[t]he arrest and/or conviction record of the person or persons in * * * possession of the controlled substance for offenses * * * that [indicate] an intent to distribute a controlled substance" as "other evidence" which may be considered in determining whether a controlled substance is possessed solely for purposes of personal use in any given case. *See* § 1316.91(j)(1)(iii). After considering these comments, we have decided to retain this provision in the Final Rule. First, it must be emphasized that a determination of whether a controlled substance is possessed solely for purposes of personal use is a determination of subjective intent based upon the totality of the circumstances. Among the more reliable indicia of a person's intent is his or her past record with respect to the illegal distribution of controlled substances. Second, a person's prior arrest or conviction record for drug offenses is not necessarily determinative of whether a controlled substance is possessed solely for purposes of personal use. It is but one of several factors which may be considered in determining a person's subjective intent.

Several comments noted that it is difficult for the owner of a conveyance to know the arrest and/or conviction records of all employees, lessees, acquaintances or other persons who may be on or in possession of a conveyance at any given time. This observation confuses the issue of an owner's innocence with the issue of whether a controlled substance is possessed solely for purposes of personal use. The knowledge of the owner as to the arrest and/or conviction record of the person in possession of a controlled substance is simply irrelevant to an administrative determination of whether the controlled substance is possessed for personal use only. Moreover, a determination that a controlled substance was possessed solely for purposes of personal use does not foreclose the owner from seeking expedited release of the conveyance pursuant to the procedures specified in §§ 1316.95 and 1316.96 or through the substitute res bond procedures specified in §§ 1316.94 and 1316.98. Finally, the owner's lack of knowledge as to the arrest and/or conviction record of the person in possession of the controlled substance is not necessarily determinative of the owner's innocence under the criteria specified in § 1316.95(b) nor is it necessarily determinative of any rights or defenses that the owner may assert in a judicial forfeiture action.

Several comments objected to the fact that the criteria specified in § 1316.91(j)(1) allow for use of various forms of hearsay in determining whether, in a particular case, the controlled substance was possessed solely for purposes of personal use. These forms of hearsay include "[i]nformation from reliable sources indicating possession of a controlled substance with intent to distribute" and "statements attributable to the possessor, including statements of conspirators, that indicate possession with intent to distribute". However, section 6079 of the ADAA merely requires an administrative determination as to whether an owner is entitled to the expedited release procedures specified thereunder. Hearsay is freely admissible in administrative proceedings. *See Richardson* v. *Perales*, 402 U.S. 389, 407–08 (1971). As noted earlier, the issue of whether a controlled substance is possessed solely for purposes of personal use involves a determination of subjective intent. We believe that hearsay evidence may properly be considered in determining that intent. And it is worth reiterating that a determination that a controlled substance was not possessed solely for purposes of personal use—whether based upon information from reliable sources or upon hearsay statements attributable to the possessor—does not foreclose the owner from seeking expedited release of the property under either the procedures specified in §§ 1316.94 and 1316.95 or the substitute res bond procedures specified in §§ 1316.94 and 1316.98.

One comment suggested that the definition of "personal use quantities" be defined as quantities that can be easily concealed upon the body or personal effects of an individual. We disagree. Enormous quantities of controlled substances can easily be concealed upon the person, or in the personal effects, of an individual. In one very recent decision, two defendants were discovered with six and one-half pounds of cocaine concealed in tightly wrapped packages taped to the small of their backs; the bundles were inconspicuous and the defendants were stopped only because one of them engaged in suspicious behavior. *See United States* v. *Charleus*, 871 F.2d 265 (2d Cir. 1989). This is but one recent example; many cases of "personal concealment" involve far larger quantities of controlled substances. The quantities specified in § 1316.91(j)(2)(i)–(vii) are quantities which, in the experience of the Drug Enforcement Administration, are generally consistent with possession of a controlled substance for purposes of personal use.

Section 6079(e) of the ADAA specifically provides that the term "personal use quantities" shall not include "sweepings". One comment suggested that only when the "sweepings" exceed the "personal use" amounts specified in § 1316.91(j)(2)(i)–(vii) should the owner be barred from utilizing the expedited release procedures under section 6079. We disagree. It is not unusual for a conveyance, which has been used to transport significant quantities of a controlled substance, to contain only "sweepings" of the controlled substance after the illicit cargo has been unloaded or the controlled substances have been destroyed in an effort to avoid seizure or arrest. *See generally United States* v. *"Monkey"*, 725 F.2d 1007 (5th Cir. 1984) (ship involved in major marijuana smuggling operation contained only "sweepings" at time of seizure). We feel that the owners of such conveyances should not be eligible for the expedited release procedures under section 6079 even where the aggregate amount of the sweepings is less than the presumptive "personal use quantity" specified for the substance in § 1316.91(j)(2).

"Owner"

One comment criticized the definition of "owner" in § 1316.91(i) as one having a legal and possessory interest in the property seized for forfeiture on the ground that this definition would exclude many innocent lienholders from obtaining prompt release of seized property. We disagree. Lienholders with an immediate right to possession of the seized property would qualify as an "owner" under this definition. The definition necessarily excludes other lienholders in order to avoid problems in which multiple petitions are filed with respect to a single asset by persons

claiming a property interest in the asset. Section 1316.91(i) goes on to provide that "[e]ven though one may hold primary and direct title to the property seized, such person may not have sufficient actual beneficial interest in the property to support a petition as owner if the facts indicate that another person had dominion and control over the property" (emphasis supplied). The purpose of this limitation is not to exclude innocent lienholders with immediate possessory interests in the property seized; it is to exclude "straw owners" from obtaining expedited release of the property. The limitation is discretionary and will be applied on a case-by-case basis. It is not the intent of the Department of Justice to disqualify any bona fide lienholder with an immediate right to possession of the seized asset from filing a petition under these regulations.

Section 1316.92(c)(2)

Several comments noted that § 1316.92(c)(2) of the Proposed Rule appeared to require proof of a factor not provided for in the statutory language of section 6079(b)(2) of the ADAA: That the petitioner had statutory rights or defenses, that would show to a substantial probability that the owner would prevail on the issue of forfeiture. By adding this factor, the Department did not intend to add to the burden of persons filing petitions for expedited release under § 1316.92. Rather, this factor was inserted to provide certain petitioners with an additional basis for obtaining expedited release of their property.

In order to clarify this intent, the factor in question has been removed from the provisions of § 1316.92(c) and a new paragraph (d) has been added which allows petitioners the opportunity to establish statutory rights or defenses beyond those encompassed by the criteria specified in section 6079(b)(2) of the ADAA.

Section 1316.95(b)(3)

One comment complained that the requirement in § 1316.95(b)(3)—that an owner demonstrate that he/she "reasonably attempted to ascertain the use of the conveyance in a normal and customary manner"—constitutes an improper attempt to "lift" a requirement out of section 6079(b)(2) and include it as a requirement in petitions filed pursuant to section 6080 of the ADAA. We agree that the requirement in question constitutes a statutory element applicable to petitions filed pursuant to section 6079(b)(2) of the ADAA but we disagree that inclusion of this element as a requirement for petitions filed pursuant to section 6080 is in any way improper.

Section 6080 of the ADAA requires the Attorney General, *inter alia*, "to make a determination on a petition [for release of a conveyance seized for a drug-related offense] expeditiously, including a determination of any rights or defenses available to a petitioner." *See* 21 U.S.C. 881–1(a)(1). The statute is silent as to what must be included in a petition filed thereunder and does not confine the discretion of the Attorney General in any way. It merely specifies that "[t]he Attorney General shall prescribe regulations to carry out this section." *See* 21 U.S.C. 881–1(a)(4). Thus, the Attorney General has broad discretion to determine the requirements for petitions filed under the statute.

It is not unreasonable to include, as a requirement for petitions filed under section 6080, a provision that the owner establish that he/she "reasonably attempted to ascertain the use of the conveyance in a normal and customary manner." It seems logical to impose, as to owners of conveyances seized for *any* drug-related offenses, the same threshold requirement which must be met by owners seeking release of property seized for drug-related offenses involving only personal use quantities of a controlled substance.

Moreover, a demonstration that the owner reasonably attempted to ascertain the use of the conveyance in a normal and customary manner is directly relevant to the "determination of [the] rights or defenses available to the [owner]" as required by section 6080. One's "conscious indifference" to the use of a conveyance is sufficient, without more, to negate any common law "innocent owner" defense. *See, e.g., United States* v. *1966 Beechcraft Aircraft Model King Air*, 777 F.2d 947, 952 (4th Cir. 1985). Similarly, one who avoids knowledge concerning the illegal use of a conveyance by "sticking his head in the sand" cannot prevail on a statutory innocent owner defense. *See United States* v. *1980 Red Ferrari*, 827 F.2d 477, 480 (9th Cir. 1987) (rejecting "innocent owner" defense under 21 U.S.C. 881(a)(6)). The requirement in question is certainly relevant to the issue, under 21 U.S.C. 881(a)(4)(C), of whether the owner acted with knowledge or willful blindness as to the illegal use of the conveyance and it clearly may be relevant in determining whether a common carrier either consented or was privy to the illegal use of a conveyance. Because the requirement specified in § 1316.95(b)(3) is not barred by the language of section 6080 and because it is clearly relevant to the determination of rights or defenses which may be available to the petitioner, we feel that its inclusion in the regulations is both rational and proper.

Section 1316.96(d)

One comment noted that § 1316.96(d), as set forth in the Proposed Rule, specified that "[i]f, within 20 days, the United States Attorney * * * advises the petitioner that there is not enough available information to make a decision on the petition, the Government shall retain possession of the conveyance until the owner provides a substitute res bond * * * or until the forfeiture is finalized". This comment correctly noted that this provision directly contradicts that part of section 6080 of the ADAA which provides that "[i]f the Attorney General does not grant or deny a petition * * * within 20 days after the date on which the petition is filed, the conveyance shall be returned to the owner pending further forfeiture proceedings". Section 1316.96(d) has been amended to conform with the statutory language.

Seizure of Cargo

One comment advocated that there be a specific provision in the Final Rule for release of any cargo carried on board a conveyance that is seized for forfeiture. The relevant statutes do not require inclusion of such a provision. The release of cargo from seized conveyances is currently handled by the seizing agencies on a case-by-case basis. This will continue to be the case after the Final Rule becomes effective.

Notice Provisions

Due to a typing error, § 1316.99 was misnumbered in the Proposed Rule as § 1316.19. This error has been corrected. The first sentence of § 1316.99(a) has also been amended to reflect the distinction between the expedited release procedures under section 6079 of the ADAA, which apply to property identified in § 1316.91 that is seized for violations involving personal use quantities of a controlled substance, and the procedures under section 6080 of the ADAA, which apply to conveyances seized for drug-related offenses. This amendment is consistent with the intent of Congress and states more precisely the categories of cases to which the "special notice provision" applies.

An erroneous reference was made to a "petition for substitute res bond" in this section as published in the Proposed Rule. There are no "petitions" for substitute res bonds. Rather, the owner of property seeking its expedited release pursuant to § 1316.94 or § 1316.98 need only establish his identity as owner of the property, post a bond satisfactory in form, and the property will be released to the owner as provided therein unless the property is evidence of violation of law or has design or other characteristics that particularly suit it for use in illegal activities.

Technical Amendments

A citation to section 1316.92(e) was inadvertently omitted from the definition of "Sworn to" in § 1316.91(n) of the Proposed Rule. The word "industry" was inadvertantly omitted from the phrase "commercial fishing industry vessel" in § 1316.93(b)(1) of the Proposed Rule. These omissions are corrected in the Final Rule. A reference to "property" was added to the phrase "property or conveyance" in § 1316.99(b) to more clearly specify the scope of the standard notice provisions.

Conclusion

After due consideration of the comments noted above, the Department of Justice has adopted the proposal as originally set forth, except for the amendments noted above.

Regulatory Flexibility Act/Executive Order 12281

As required by the Regulatory Flexibility Act, it is hereby certified that this rule will not have a substantial impact on small business entities. 5 U.S.C. 604(B). It is not a major rule within the meaning of Executive Order No. 12291 of February 17, 1981.

List of Subjects in 21 CFR Part 1316

Administrative practice and procedure, Drug traffic control, Seizures and forfeitures.

Amendment

By virtue of the authority vested in me by law, including 28 U.S.C. 509, 510 and sections 6079 and 6080 of the Anti-Drug Abuse Act of 1988, Public Law No. 100–690, 102 Stat. 4181, title 21, chapter II, of the Code of Federal Regulations is amended as follows:

PART 1316—[AMENDED]

1. The authority citation for part 1316 is revised to read as follows:

Authority: 21 U.S.C. 822, 871, 872, 880, 881, 881–1, 883, 958, 965; 19 U.S.C. 1606, 1607, 1608, 1610, 1613, 1618; 28 U.S.C. 509, 510; Pub. L. No. 100–690, sec. 6079, 6080.

2. A new subpart F is added to part 1316 to read as follows:

Subpart F—Expedited Forfeiture Proceedings for Certain Property

Sec.
1316.90 Purpose and scope.
1316.91 Definitions.
1316.92 Petition for expedited release in an administrative forfeiture action.
1316.93 Ruling on petition for expedited release in an administrative forfeiture action.
1316.94 Posting of substitute res in an administrative forfeiture action.
1316.95 Petition for expedited release of a conveyance in a judicial forfeiture action.
1316.96 Ruling on a petition for expedited release of a conveyance in a judicial forfeiture action.
1316.97 Initiating judicial forfeiture proceeding against a conveyance within 60 days of the filing of a claim and cost bond.
1316.98 Substitute res bond in a judicial forfeiture action against a conveyance.
1316.99 Notice provisions.

Subpart F—Expedited Forfeiture Proceedings for Certain Property

§ 1316.90 Purpose and scope.

(a) The following definitions, regulations, and criteria are designed to establish and implement procedures required by sections 6079 and 6080 of the Anti-Drug Abuse Act of 1988, Public Law No. 100–690 (102 Stat. 4181). They are intended to supplement existing law and procedures relative to the forfeiture of property under the identified statutory authority. The provisions of these regulations do not affect the existing legal and equitable rights and remedies of those with an interest in property seized for forfeiture, nor do these provisions relieve interested parties from their existing obligations and responsibilities in pursuing their interests through such courses of action. These regulations are intended to reflect the intent of Congress to minimize the adverse impact on those entitled to legal or equitable relief occasioned by the prolonged detention of property subject to forfeiture due to violations of law involving personal use quantities of controlled substances, and conveyances seized for drug-related offenses. The definition of personal use quantities of a controlled substance as contained herein is intended to distinguish between those quantities small in amount which are generally considered to be possessed for personal consumption and not for further distribution, and those larger quantities generally considered to be subject to further distribution.

(b) In this regard, for violations involving the possession of personal use quantities of a controlled substance, section 6079(b)(2) requires either that administrative forfeiture be completed within 21 days of the seizure of the property, or alternatively, that procedures are established that provide a means by which an individual entitled to relief may initiate an expedited administrative review of the legal and factual basis of the seizure for forfeiture. Should an individual request relief pursuant to these regulations and be entitled to the return of the seized property, such property shall be returned immediately following that determination, and the administrative forfeiture process shall cease. Should the individual not be entitled to the return of the seized property, however, the administrative forfeiture of that property shall proceed. The owner may, in any event, obtain release of property pending the administrative forfeiture by submitting to the agency making the determination, property sufficient to preserve the government's vested interest for purposes of the administrative forfeiture.

(c) Section 6080 requires a similar expedited review by the Attorney General or his representative in those instances where a conveyance is being forfeited in a civil judicial proceeding following its seizure for a drug-related offense.

§ 1316.91 Definitions.

As used in this subpart, the following terms shall have the meanings specified:

(a) The term "Appraised Value" means the estimated domestic price at the time of seizure at which such or similar property is freely offered for sale.

(b) The term "Commercial Fishing Industry Vessel" means a vessel that:

(1) Commercially engages in the catching, taking, or harvesting of fish or an activity that can reasonably be expected to result in the catching, taking, or harvesting of fish;

(2) Commercially prepares fish or fish products other than by gutting, decapitating, gilling, skinning, shucking, icing, freezing, or brine chilling; or

(3) Commercially supplies, stores, refrigerates, or transports fish, fish products, or materials directly related to fishing or the preparation of fish to or from a fishing, fish processing, or fish tender vessel or fish processing facility.

(c) The term "Controlled Substance" has the meaning given in section 802 of title 21, United States Code (U.S.C.).

(d) The term "Drug-Related Offense" means any proscribed offense which involves the possession, distribution, manufacture, cultivation, sale, transfer, or the attempt or conspiracy to possess, distribute, manufacture, cultivate, sell or

transfer any substance the possession of which is prohibited by Title 21, U.S.C.

(e) The term "Immediately" means within 20 days of the filing of a petition for expedited release by an owner.

(f) The term "Interested Party" means one who was in legal possession of the property at the time of seizure and is entitled to legal possession at the time of the granting of the petition for expedited release. This includes a lienholder (to the extent of his interest in the property) whose claim is in writing (except for a maritime lien which need not be in writing), unless the collateral is in the possession of the secured party. The agreement securing such lien must create or provide for a security interest in the collateral, describe the collateral, and be signed by the debtor.

(g) The term "Legal and Factual Basis of the Seizure" means a statement of the applicable law under which the property is seized, and a statement of the circumstances of the seizure sufficiently precise to enable an owner or other interested party to identify the date, place, and use or acquisition which makes the property subject to forfeiture.

(h) The term "Normal and Customary Manner" means that inquiry suggested by particular facts and circumstances which would customarily be undertaken by a reasonably prudent individual in a like or similar situation. Actual knowledge of such facts and circumstances is unnecessary, and implied, imputed, or constructive knowledge is sufficient. An established norm, standard, or custom is persuasive but not conclusive or controlling in determining whether an owner acted in a normal and customary manner to ascertain how property would be used by another legally in possession of the property. The failure to act in a normal and customary manner as defined herein will result in the denial of a petition for expedited release of the property and is intended to have the desirable effect of inducing owners of the property to exercise greater care in transferring possession of their property.

(i) The term "Owner" means one having a legal and possessory interest in the property seized for forfeiture. Even though one may hold primary and direct title to the property seized, such person may not have sufficient actual beneficial interest in the property to support a petition as owner if the facts indicate that another person had dominion and control over the property.

(j) The term "Personal Use Quantities" means possession of controlled substances in circumstances where there is no other evidence of an intent to distribute, of to facilitate the manufacturing, compounding, processing, delivering, importing or exporting of any controlled substance. Evidence of personal use quantities shall not include sweepings or other evidence of possession of quantities of a controlled substance for other than personal use.

(1) Such other evidence shall include:

(i) Evidence, such as drug scales, drug distribution paraphernalia, drug records, drug packaging material, method of drug packaging, drug "cutting" agents and other equipment, that indicates an intent to process, package or distribute a controlled substance;

(ii) Information from reliable sources indicating possession of a controlled substance with intent to distribute;

(iii) The arrest and/or conviction record of the person or persons in actual or constructive possession of the controlled substance for offenses under Federal, State or local law that indicates an intent to distribute a controlled substance;

(iv) The controlled substance is related to large amounts of cash or any amount of prerecorded government funds;

(v) The controlled substance is possessed under circumstances that indicate such a controlled substance is a sample intended for distribution in anticipation of a transaction involving large quantities, or is part of a larger delivery; or

(vi) Statements by the possessor, or otherwise attributable to the possessor, including statements of conspirators, that indicate possession with intent to distribute.

(2) Possession of a controlled substance shall be presumed to be for personal use when there are no indicia of illicit drug trafficking or distribution such as, but not limited to, the factors listed above and the amounts do not exceed the following quantities:

(i) One gram of a mixture of substance containing a detectable amount of heroin;

(ii) One gram of a mixture or substance containing a detectable amount of—

(A) Coca leaves, except coca leaves and extracts of coca leaves from which cocaine, ecgonine, and derivations of ecgonine or their salts have been removed;

(B) Cocaine, its salts, optical and geometric isomers, and salts of isomers;

(C) Ecgonine, its derivatives, their salts, isomers, and salts of isomers; or

(D) Any compound, mixture or preparation which contains any quantity of any of the substances referred to in paragraphs (j)(2)(ii)(A) through (j)(2)(ii)(C) of this section;

(iii) 1/10th gram of a mixture or substance described in paragraph (j)(2)(ii) of this section which contains cocaine base;

(iv) 1/10th gram of a mixture or substance containing a detectable amount of phencyclidine (PCP);

(v) 500 micrograms of a mixture or substance containing a detectable amount of lysergic acid diethylamide (LSD);

(vi) One ounce of a mixture of substance containing a detectable amount of marihuana;

(vii) One gram of methamphetamine, its salts, isomers, and salts of its isomers, or one gram of a mixture or substance containing a detectable amount of methamphetamine, its salts, isomers, or salts of its isomers.

(3) The possession of a narcotic, a depressant, a stimulant, a hallucinogen or cannabis-controlled substance will be considered in excess of personal use quantities if the dosage unit amount possessed provides the same or greater equivalent efficacy as described in paragraph (j)(2) of this section.

(k) The term "Property" means property subject to forfeiture under title 21, U.S.C., sections 881(a) (4), (6), and (7); title 19, U.S.C., section 1595a, and; title 49, U.S.C. App., section 782.

(l) The term "Seizing Agency" means the Federal agency which has seized the property or adopted the seizure of another agency, and has the responsibility for administratively forfeiting the property;

(m) The term "Statutory Rights or Defenses to the Forfeiture" means all legal and equitable rights and remedies available to a claimant of property seized for forfeiture.

(n) The term "Sworn to" as used in §§1316.92(e) and 1316.95(c) refers to the oath as provided by Title 28, U.S.C., section 1746.

§ 1316.92 Petition for expedited release in an administrative forfeiture action.

(a) Where property is seized for administrative forfeiture involving controlled substances in personal use quantities the owner may petition the seizing agency for expedited release of the property.

(b) Where property described in paragraph (a) of this section is a commercial fishing industry vessel proceeding to or from a fishing area or intermediate port of call or actually engaged in fishing operations, which would be subject to seizure for administrative forfeiture for a violation of law involving controlled substances in personal use quantities, a summons to appear shall be issued in lieu of a physical seizure. The vessel shall report to the port designated in the summons. The seizing agency shall be authorized to effect administrative forfeiture as if the vessel had been physically seized. Upon answering the summons to appear on or prior to the last reporting date specified in the summons, the owner of the vessel may file a petition for expedited release pursuant to paragraph (a) of this section and the provisions of paragraph (a) of this section and other provisions in this subpart pertaining to a petition for expedited release shall apply as if the vessel had been physically seized.

(c) The owner filing the petition for expedited release shall establish the following:

(1) The owner has a valid, good faith interest in the seized property as owner or otherwise;

(2) The owner reasonably attempted to ascertain the use of the property in a normal and customary manner; and

(3) The owner did not know or consent to the illegal use of the property, or in the event that the owner knew or should have known of the illegal use, the owner did what reasonably could be expected to prevent the violation.

(d) In addition to those factors listed in paragraph (c) of this section, if an owner can demonstrate that the owner has other statutory rights or defenses that would cause the owner to prevail on the issue of forfeiture, such factors shall also be considered in ruling on the petition for expedited release.

(e) A petition for expedited release must be filed in a timely manner to be considered by the seizing agency. In order to be filed in a timely manner, the petition must be received by the appropriate seizing agency within 20 days from the date of the first publication of the notice of seizure. The petition must be executed and sworn to by the owner and both the envelope and the request must be clearly marked "PETITION FOR EXPEDITED RELEASE." Such petition shall be filed in triplicate with the Special Agent in Charge of the Drug Enforcement Administration (DEA) or Federal Bureau of Investigation (FBI) field office in the judicial district in which the property was seized, depending upon which agency seized the property. The petition shall be addressed to the Director of the FBI or to the Administrator of the DEA, depending upon which agency seized the property.

(f) The petition shall include the following:

(1) A complete description of the property, including identification numbers, if any, and the date and place of seizure;

(2) The petitioner's interest in the property, which shall be supported by title documentation, bills of sale, contracts, mortgages, or other satisfactory documentary evidence; and

(3) A statement of the facts and circumstances, to be established by satisfactory proof, relied upon by the petitioner to justify expedited release of the seized property.

§ 1316.93 Ruling on petition for expedited release in an administrative forfeiture action.

(a) Upon receipt of a petition for expedited release filed pursuant to § 1316.92(a), the seizing agency shall determine first whether a final administrative determination of the case, without regard to the provisions of this subpart, can be made within 21 days of the seizure. If such a final administrative determination is made within 21 days, no further action need be taken under this subpart.

(b) If no such final administrative determination is made within 21 days of the seizure, the following procedure shall apply. The seizing agency shall, within 20 days after the receipt of the petition for expedited release, determine whether the petition filed by the owner has established the factors listed in § 1316.92(c) and:

(1) If the seizing agency determines that those factors have been established, it shall terminate the administrative proceedings and return the property to the owner (or in the case of a commercial fishing industry vessel for which a summons has been issued shall dismiss the summons), except where it is evidence of a violation of law; or

(2) If the seizing agency determines that those factors have not been established, the agency shall proceed with the administrative forfeiture.

§ 1316.94 Posting of substitute res in an administrative forfeiture action.

(a) Where property is seized for administrative forfeiture involving controlled substances in personal use quantities, the owner may obtain release of the property by posting a substitute res with the seizing agency. The property will be released to the owner upon the payment of an amount equal to the appraised value of the property if it is not evidence of a violation of law or has design or other characteristics that particularly suit it for use in illegal activities. This payment must be in the form of a traveler's check, a money order, a cashier's check or an irrevocable letter of credit made payable to the seizing agency. A bond in the form of a cashier's check will be considered as paid once the check has been accepted for payment by the financial institution which issued the check.

(b) If a substitute res is posted and the property is administratively forfeited, the seizing agency will forfeit the substitute res in lieu of the property.

§ 1316.95 Petition for expedited release of a conveyance in a judicial forfeiture action.

(a) Where a conveyance has been seized and is being forfeited in a judicial proceeding for a drug-related offense, the owner may petition the United States Attorney for an expedited release of the conveyance.

(b) The owner filing the petition for expedited release shall establish the following:

(1) The owner has a valid, good faith interest in the seized conveyance as owner or otherwise;

(2) The owner has statutory rights or defenses that would show to a substantial probability that the owner would prevail on the issue of forfeiture;

(3) The owner reasonably attempted to ascertain the use of the conveyance in a normal and customary manner; and

(4) The owner did not know or consent to the illegal use of the conveyance; or in the event that the owner knew or should have known of the illegal use, the owner did what reasonably could be expected to prevent the violation.

(c) A petition for expedited release must be filed in a timely manner in order to be considered by the United States Attorney. To be considered as filed in a timely manner, the petition must be received by the appropriate United States Attorney within 20 days from the date of the first publication of the notice of the action and arrest of the property, or within 30 days after filing of the claim, whichever occurs later. The petition must be executed and sworn to by the owner, and both the envelope and the request must be clearly marked "PETITION FOR EXPEDITED RELEASE." Such petition shall be filed in triplicate and addressed to and filed with the United States Attorney prosecuting the conveyance for forfeiture with a copy to the seizing agency.

(d) The petition shall include the following:

(1) A complete description of the

conveyance, including the identification number, and the date and place of seizure;

(2) The petitioner's interest in the conveyance, which shall be supported by bills of sale, contracts, mortgages, or other satisfactory documentary evidence; and,

(3) The facts and circumstances, to be established by satisfactory proof, relied upon by the petitioner to justify expedited release of the seized conveyance.

§ 1316.96 Ruling on a petition for expedited release of a conveyance in a judicial forfeiture action.

(a) Upon receipt of a petition for expedited release filed pursuant to § 1316.95, the United States Attorney shall rule on the petition within 20 days of receipt. A petition shall be deemed filed on the date it is received by the United States Attorney.

(b) If the United States Attorney does not rule on the petition for expedited release within 20 days after the date on which it is filed, the conveyance shall be returned to the owner or interested party pending further forfeiture proceedings, except where it is evidence of a violation of law. Release of conveyance under provisions of this paragraph shall not affect the forfeiture action with respect to that conveyance.

(c) Upon a favorable ruling on the petition for expedited release, the United States Attorney shall, where necessary, move to terminate the judicial proceedings against the conveyance and immediately direct the return of the conveyance except where it is evidence of a violation of law.

(d) If, within 20 days, the United States Attorney denies the petition for expedited release, the government shall retain possession of the conveyance until the owner provides a substitute res bond pursuant to § 1316.98 or the forfeiture is finalized.

§ 1316.97 Initiating judicial forfeiture proceeding against a conveyance within 60 days of the filing of a claim and cost bond.

(a) The United States Attorney shall file a complaint for forfeiture of the conveyance within 60 days of the filing of the claim and cost bond.

(b) Upon the failure of the United States Attorney to file a complaint for forfeiture of a conveyance within 60 days unless the court extends the 60-day period following a showing of good cause, or unless the owner and the United States Attorney agree to such an extension, the court shall order the return of the conveyance and the return of any bond.

§ 1316.98 Substitute res bond in a judicial forfeiture action against a conveyance.

(a) Where a conveyance is being forfeited in a judicial proceeding for a drug-related offense, the owner may obtain release of the property by filing a substitute res bond with the seizing agency. The conveyance will be released to the owner upon the payment of a bond in the amount of the appraised value of the conveyance if it is not evidence of a violation of law or has design or other characteristics that particularly suit it for use in illegal activities. This bond must be in the form of a traveler's check, a money order, a cashier's check or an irrevocable letter of credit made payable to the Department of Justice or to the United States Customs Service depending on which agency seized the conveyance. A bond in the form of a cashier's check will be considered as paid once the check has been accepted for payment by the financial institution which issued the check.

(b) If a substitute res bond is filed and the conveyance is judicially forfeited, the court will forfeit the bond in lieu of the property.

§ 1316.99 Notice provisions.

(a) *Special notice provision.* At the time of seizure of property defined in § 1316.91 for violations involving the possession of personal use quantities of a controlled substance and conveyances seized pursuant to § 1316.95, written notice must be provided to the possessor of the property regarding applicable statutes and Federal regulations including the procedures established for the filing of a petition for expedited release and for the posting of a substitute res bond as set forth in sections 6079 and 6080 of the Anti-Drug Abuse Act of 1988 and implementing regulations.

(b) *Standard notice provision.* The standard notice to the owner as required by title 19, U.S.C., section 1607 and applicable regulations, shall be made at the earliest practicable opportunity after determining ownership of the seized property or conveyance and shall include the legal and factual basis of the seizure.

Dated: August 18, 1989.

Dick Thornburgh,

Attorney General.

Coast Guard

33 CFR Part 1

[CGD 89-003]

RIN 2115-AO20

Summons in Lieu of Seizure of Commercial Fishing Industry Vessels

AGENCY: Coast Guard, DOT.

ACTION: Final rule.

SUMMARY: These regulations provide for issuance of a summons to appear in lieu of seizure of a commercial fishing industry vessel for violations involving the possession of personal use quantities of a controlled substance. The Anti-Drug Abuse Amendments Act of 1988 requires the Attorney General, the Secretary of the Treasury, and the Secretary of Transportation to issue such regulations. These regulations require, when a violation involving the possession of personal use quantities of a controlled substance is committed on a commercial fishing industry vessel that is proceeding to or from a fishing area or intermediate port of call or is actively engaged in fishing operations, that a summons to appear be issued in lieu of seizure of the vessel.

EFFECTIVE DATE: October 11, 1989.

FOR FURTHER INFORMATION CONTACT: Commander Gerald A. Gallion, Office of the Chief Counsel, (202) 267-1534.

SUPPLEMENTARY INFORMATION:

Drafting Information

The principal person involved in the drafting of this final rule is Commander Gerald A. Gallion, Office of the Chief Counsel.

Background

Section 6079 of the Anti-Drug Amendments Act of 1988 (Pub. L. 100-690) requires the Attorney General and the Secretary of the Treasury to prescribe regulations for expedited administrative procedures for seizures under section 511(a) (4), (6), and (7) of the Controlled Substances Act (21 U.S.C. 881(a) (4), (6), and (7)); section 596 of the Tariff Act of 1930 (19 U.S.C. 1595a(a)); and section 2 of the Act of August 9, 1939 (53 Stat. 1291; 49 U.S.C. App. 782) for violations involving the possession of personal use quantities of a controlled substance. Section 6079 further requires that the Attorney General, the Secretary of the Treasury, and the Secretary of Transportation prescribe joint regulations providing for issuance of a summons to appear in lieu of seizure of a commercial fishing industry vessel, as defined in section

2101 (11a), (11b), and (11c) of title 46, United States Code, for violations involving the possession of personal use quantities of a controlled substance. These regulations are to apply when a violation is committed on a commercial fishing industry vessel that is proceeding to or from a fishing area or intermediate port of call or is actively engaged in fishing operations. Section 6079 further provides that these regulations shall not interfere with existing authority to arrest an individual for drug-related offenses or to release that individual into the custody of the master.

The Coast Guard, on behalf of the Secretary of Transportation, has consulted with the U.S. Customs Service, acting on behalf of the Secretary of the Treasury, and the Department of Justice, acting on behalf of the Attorney General, in formulating consistent and compatible regulations to carry out section 6079. Customs Service and Department of Justice final rules are published separately in this **Federal Register** issue.

The Coast Guard exercises broad authority under 14 U.S.C. 89 on the high seas and waters over which the United States has jurisdiction to prevent, detect and suppress violations of the laws of the United States. That authority includes searches, seizures, and arrests for violations of the laws cited in section 6079 of the Anti-Drug Abuse Amendments Act of 1988. Coast Guard law enforcement action, then, may include the seizure of a commercial fishing industry vessel for a violation involving the possession of personal use quantities of a controlled substance.

These regulations apply to commercial fishing industry vessels, as defined in section 2101 (11a), (11b), and (11c) of title 46, United States Code. These definitions address fishing vessels, fish processing vessels, and fish tender vessels, all of which are commercially engaged in activities related to the catching, processing, transporting, or storing of fish. Sport fishermen are not affected by the provisions of these regulations.

These regulations provide, when a commercial fishing industry vessel is subject to seizure for a violation involving the possession of a personal use quantity of a controlled substance, that the Coast Guard will issue a summons to appear in lieu of seizing the vessel, if that vessel is proceeding to or from a fishing area or intermediate port of call or is actively engaged in fishing operations. What constitutes a "personal use quantity" for determining whether or not a summons should be issued is defined in Customs Service regulations (19 CFR part 171). That definition and a parallel one in Department of Justice regulations (21 CFR 1316.91) govern all regulations developed to implement section 6079 of the Anti-Drug Abuse Amendments Act of 1988. In that the Coast Guard, after escorting a seized vessel into U.S. waters, routinely transfers custody of the vessel to the Customs Service for appropriate disposition, including forfeiture to the United States, the summons to be issued in lieu of seizure will be that prescribed in Customs regulations (19 CFR 171.52).

Discussion of Comments

On April 10, 1989, the Coast Guard published a Notice of Proposed Rulemaking for the issuance of a summons in lieu of seizure (54 FR 14250). Proposed Customs Service and Department of Justice regulations for expedited administrative procedures for seizures, including provisions for the issuance of a summons in lieu of seizure, were published separately in the same issue of the **Federal Register** (54 FR 14242 and 14246). Three comments were received on the Coast Guard proposal.

Two comments recommended extending the coverage of the regulations to provide for issuance of a summons in lieu of seizure to vessels other than commercial fishing industry vessels. One advocated expansion to include sport fishing vessels and headboats; another encouraged extension to vessels in the barge and towing industry. We disagree. These regulations implement the requirements of section 6079 of the Anti-Drug Abuse Amendments Act of 1988. That statute clearly specifies the scope of applicability of the requirement for issuance of a summons in lieu of seizure: to "a commercial fishing industry vessel as defined in section 2101 (11a), (11b), and (11c) of title 46, United States Code." There is no ambiguity in the terms of the statute, and those terms do not encompass sport fishing vessels, headboats, or vessels in the barge and towing industry. To expand the applicability of the summons in lieu of seizure requirement would exceed the legislative mandate.

One comment suggested including a definition of what constitutes "proceeding to or from a fishing area or intermediate port of call." It was also suggested that the definition include times when a vessel has been outfitted for a voyage whether or not it is still in port. The Coast Guard disagrees. Again, the language at issue has been taken directly from the statute and is unambiguous on its face. There is no reason to give the terms "proceeding to or from" other than their literal meaning. That literal meaning cannot be said to include times when the vessel is in port.

In view of the above, the Coast Guard is adopting the proposed rule as a final rule, without change.

E.O. 12291

This final rule is considered to be non-major under Executive Order 12291 and non-significant under the DOT regulatory policies and procedures (44 FR 11034, February 26, 1979). The economic impact of this rule has been found to be so minimal that further evaluation is unnecessary.

Regulatory Flexibility Act

The final rule affects the owners of commercial fishing industry vessels. In that the rule provides for issuance of a summons in lieu of seizing such a vessel engaged in fishing or in transit to or from a fishing area, it bestows a financial benefit on the owner of a vessel subject to seizure because of a violation of law involving a personal use quantity of a controlled substance. Rather than seizing the vessel as it currently has the authority to do, and thus depriving its owner of the income associated with its voyage, the Coast Guard will issue a summons to appear. Accordingly, the Coast Guard certifies that the final rule will not have a significant economic impact on a substantial number of small entities.

Federalism

This action has been analyzed in accordance with the principles and criteria contained in Executive Order 12612, and it has been determined that this rulemaking does not have sufficient federalism implications to warrant the preparation of a Federalism Assessment.

List of Subjects in 33 CFR Part 1

Administrative practice and procedure, Authority delegations (Government agencies), Drug traffic control, Freedom of information, Penalties.

For the reasons set forth in the preamble, part 1 of title 33 of the Code of Federal Regulations is amended as set forth below:

PART 1—GENERAL PROVISIONS

1. The authority citation for part 1 is revised to read as follows:

Authority: 14 U.S.C. 633; 49 U.S.C. 322; Sec. 6079(d), Pub. L. 100-690, 102 Stat. 4181; 49 CFR 1.45(b), 1.46; section 1.01-70 also issued under the authority of E.O. 12316, 46 FR 42237.

2. Section 1.07-100 is added to read as follows:

§ 1.07-100 Summons in lieu of seizure of commercial fishing industry vessels.

(a) As used in this section, the following terms have the meanings specified:

(1) *Commercial fishing industry vessel* means a fishing vessel, a fish processing vessel, or a fish tender vessel as defined in 46 U.S.C. 2101 (11a), (11b), or (11c), respectively.

(2) *Personal use quantity* means a quantity of a controlled substance as specified in 19 CFR 171.51.

(b) When a commercial fishing industry vessel is subject to seizure for a violation of 21 U.S.C. 881(a)(4), (6), or (7); of 19 U.S.C. 1595a(a); or of 49 U.S.C. App. 782 and the violation involves the possession of a personal use quantity of a controlled substance, the vessel shall be issued a summons to appear as prescribed in subpart F of 19 CFR part 171 in lieu of seizure, provided that the vessel is:

(1) Proceeding to or from a fishing area or intermediate port of call; or

(2) Actively engaged in fishing operations.

Dated: August 4, 1989.

W. T. Leland,

Chief, Office of Law Enforcement and Defense Operations.

Department of Health and Human Services

Agency for Toxic Substances and Disease Registry

Decision Guide for Identifying Substance-Specific Data Needs Related to Toxicological Profiles; Notice

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Agency for Toxic Substances and Disease Registry

[ATSDR–11]

Decision Guide for Identifying Substance-Specific Data Needs Related to Toxicological Profiles

AGENCY: Agency for Toxic Substances and Disease Registry (ATSDR), Public Health Service (PHS), Department of Health and Human Services (HHS).

ACTION: Request for Public Comment on the Decision Guide for Identifying Substance-Specific Data Needs Related to Toxicological Profiles.

SUMMARY: This notice announces the Decision Guide for Identifying Substance-Specific Data Needs Related to Toxicological Profiles. Section 104(i)(2) of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA or Superfund), as amended by the Superfund Amendments and Reauthorization Act (SARA) (Pub. L. 99–499), requires that ATSDR prepare (1) a list of hazardous substances found at NPL sites (in order of priority), (2) toxicological profiles of those substances, and (3) a research program to fill data gaps associated with the substances. The priority list of substances was published in the **Federal Register** on April 17, 1987 and October 20, 1988 (52 FR 12866 and 53 FR 41280). The availability of the first 10 final toxicological profiles was published in the **Federal Register** on April 6, 1989 and June 23, 1989 (54 FR 14037 and 54 FR 26417). As the first step in preparing a research program, ATSDR has developed a Decision Guide. This Decision Guide, as approved by the Agency's Board of Scientific Counselors, is published below. Public comment is invited.

DATE: Comments concerning this notice must be received by October 26, 1989.

ADDRESSES: Comments on this notice should bear the docket control number ATSDR–11 and should be submitted to Mr. Edward Skowronski, Research Analysis Branch, Agency for Toxic Substances and Disease Registry, Mailstop E–29, 1600 Clifton Road, NE., Atlanta, Georgia 30333.

Comments on this notice will be available for public inspection at the Agency for Toxic Substances and Disease Registry, Building 37, Executive Park Drive, Atlanta, Georgia 30329, from 8 a.m. until 4:30 p.m., Monday through Friday, except for legal holidays.

FOR FURTHER INFORMATION CONTACT: Mr. Edward Skowronski, Research Analysis Branch, Agency for Toxic Substances and Disease Registry, Mailstop E–29, 1600 Clifton Road, NE., Atlanta, Georgia 30333. *Telephone:* 404–639–0730.

SUPPLEMENTARY INFORMATION:

Administrative Record: ATSDR has established a public version of this record with materials pertaining to this notice (ATSDR docket control number–11). The public file is available for inspection during the times and at the address given in the section entitled Address of this notice.

Decision Guide for Identifying Substance-Specific Data Needs Related to Toxicological Profiles

I. Background

Created by the original Comprehensive Environmental Response Compensation and Liability Act of 1980 (CERCLA or Superfund), the Agency for Toxic Substances and Disease Registry (ATSDR) of the Public Health Service (PHS) is responsible for implementing health related authorities of Superfund. Among the original responsibilities delegated to ATSDR by this Act was to establish and maintain an inventory of literature, research, and studies on the health effects of toxic substances.

It was the sense of Congress that more complete toxicological and health effects data were needed to determine the potential threat to human health due to exposure to hazardous substances. Toward that end, Congress expanded ATSDR's mandates with several significant new responsibilities in the Superfund Amendments and Reauthorization Act of 1986 (SARA) including: (A) listings of hazardous substances, (B) preparation of toxicological profiles, and (C) initiation of research to fill research needs. The legislative mandates in CERCLA as amended underlying these three responsibilities are discussed below.

A. Listings of Hazardous Substances

Section 104(i)(2)(A). This section directs ATSDR and the Environmental Protection Agency (EPA) to jointly prepare a list of the substances most commonly found at sites on the National Priorities List and that pose the most significant risk to human health. The statute requires:

- First list of 100 priority substances to be prepared by April 17, 1987;
- Second List of 100 priority substances to be prepared by October 17, 1988;
- An additional 25 priority substances to be added annually.

B. Preparation of Toxicological Profiles

Section 104(i)(2)(A). ATSDR is directed to prepare a toxicological profile for each substance on these lists of priority substances in accordance with a given schedule. In addition, this section of CERCLA requires ATSDR to:

- Update each profile, at a minimum, every 3 years;
- Determine whether adequate information on health effects is available for each substance or in the process of development and, where appropriate, identify the toxicological testing needs for each substance.

C. Research

Section 104(i)(5)(A). For each substance on the list, ATSDR should consult with EPA and other PHS agencies to assess whether adequate information on the health effects of each substance is available.

For any substance for which adequate information is not available, ATSDR, in conjunction with National Toxicology Program (NTP) is required to assure the initiation of a program of research designed to determine the health effects (and techniques for developing methods to determine such health effects) for each substance. Where possible, the program should develop methods to determine the health effects of such a substance in combination with other substances with which it is commonly found.

> Such a program shall include, to the extent necessary to supplement existing information, but shall not be limited to—
> (i) Laboratory and other studies to determine short, intermediate, and long-term health effects;
> (ii) Laboratory and other studies to determine organ-specific, site-specific, and system-specific acute and chronic toxicity;
> (iii) Laboratory and other studies to determine the manner in which such substances are metabolized or to otherwise develop an understanding of the biokinetics of such substances; and
> (iv) Where there is possibility of obtaining human data, the collection of such information.

Section 104(i)(5)(C). In developing and implementing a research program, ATSDR is required to coordinate with EPA and NTP to avoid duplicating research being conducted in other programs and under other authorities. In addition ATSDR is directed to consider the recommendations of the Interagency Testing Committee (ITC).

Section 104(i)(5)(D).

> It is the sense of the Congress that the costs of research programs under this paragraph be borne by the manufacturers and processors of the hazardous substance in question, as required in programs of toxicological testing under the Toxic Substances Control Act. Within 1 year after the enactment of the Superfund Amendments and Reauthorization Act of 1986, the Administrator of EPA shall promulgate regulations which provide, where appropriate, for payment of such costs by manufacturers and processors under the Toxic Substances Control Act, and registrants under the Federal Insecticide, Fungicide, and Rodenticide Act, and recovery of such costs from responsible parties under this Act.

The mission of ATSDR is to prevent or mitigate adverse human health effects or diminished quality of life that result from exposure to hazardous substances in the environment. To meet its mission, ATSDR must base its public health concerns, programs, activities, and actions on the application of contemporary science and resulting scientific findings. Sound science provides the cement for sound risk-management decisions. Bad or inadequate science provides a poor foundation for these decisions.

No matter how toxic a substance may be, people must come in contact with it (exposure) for harmful human health effects to result. Exposure may occur either by direct contact with the substance or indirect contact in the environment through breathing air, eating, or drinking material that contains the substance.

The scientific literature on the human health effects of hazardous substances in the environment clearly indicates hazard to human health from exposure to some substances. The literature base consists of relevant occupational studies, laboratory animal toxicology studies, and some community health studies. Regarding community health studies, a small body of literature indicates adverse human health effects in persons exposed to drinking water containing halomethanes and hydrocarbons (Grisham, 1986). Other hazardous substances that have been investigated for adverse effects on human health include some pesticides, metals, and organic compounds (Buffler *et al.*, 1985). However, most of the human epidemiologic investigations cited in these reviews suffer from poorly documented exposure data. In general, there is a paucity of exposure data in relevant human populations exposed to hazardous substances of concern.

II. Tenets for Decision Making in Research

Given the pivotal importance of scientific knowledge for public health actions on hazardous substances in the environment, ATSDR sponsors an applied research program authorized by provisions in the Superfund Act, as amended. The program is based on tenets that ATSDR has developed from the expertise of the Agency's staff, reports in the scientific literature, and from discussions with public health officials in Federal, State, and local agencies.

The tenets presented below will serve as a guide to ATSDR's decision making. To the extent that others may find them useful, ATSDR encourages their consideration.

- Because there is a paucity of human exposure data, a need exists for research programs directed toward filling the gaps with sound scientific data.
- Exposure data from appropriately selected human populations are vital for risk assessment and risk management.
- Validation of human exposure models with actual exposure data is essential.
- Scientific findings from occupational health studies are relevant to exposure of community residents to hazardous substances, but great caution must be used when making extrapolations from worker populations to populations that include children and other critical populations in the community setting.
- Toxicologic studies using laboratory animals are important for identifying potential human health effects but extrapolations between species must be made carefully and based on commonly accepted scientific principles.
- Well-designated and -conducted epidemiologic studies of relevant human health outcomes are the best source of data for decision-making on hazardous substances. In particular, longitudinal studies of carefully chosen cohorts are encouraged for evaluating health consequences of long-term exposure to low levels of hazardous substances. Exposure registries will be a vital resource to the conduct of such studies.
- A pressing need exists both for improving health surveillance systems and for linking them to environmental data systems.
- Community populations should be examined for evidence of health outcomes in addition to cancer and reproductive sequelae, e.g., effects on immune function, effects on the nervous system, and effects on skin.
- The effects of environmental hazardous substances on the health of children, the elderly, minorities, persons with infirmities, and other potentially impacted subpopulations need to be addressed through appropriate research and health surveillance.
- Better environmental health science will improve risk assessment and risk management.

III. Proposed Decision Guide

A. Background

An instrument is essential to guide ATSDR in identifying the substance-specific information that conforms to ATSDR's tenets for decision making. This key information is termed substance-specific data needs. Such an instrument would aid the Agency's scientific staff and its contractors in preparing toxicological profiles, specifically in identifying of substance-specific data needs and ultimately ATSDR's substance-specific research agenda.

An important consideration in the identification of data needs is the informational needs of the Agency regarding health assessments. A health assessment requires the following kinds of information.

- Background—Evaluation of information on the site's physical, geographical, historical, and operational setting;
- Environmental contamination and physical hazards;
- Potential environmental (air, water, soil, biota) and human exposure pathways (inhalation, ingestion, contact);
- Demographics—Populations at risk;
- Evaluation of human exposure—Comparison of contaminant levels relative to existing health standards;
- Public health implications;
- Conclusions/Recommendations—Determination of public health implications based on available medical and toxicologic information.

It is apparent from the Health Assessment process that data needs in both the areas of exposure assessment and substance toxicity affect ATSDR's ability to assess the impact of hazardous substances from Superfund sites on human health. The lack of sound scientific data on human health implications from exposure to hazardous substances produces uncertainties in the resulting conclusions and recommendations in a health assessment.

B. Attributes of the Decision Guide

The investment would guide the scientific staff to identify the exposure, toxicity, and substance-specific data needs while meeting the mandates of CERCLA in the following manner:

> Determining . . . whether adequate information of the health effects of each substance is available or in the process of development to determine levels of exposure

which present a significant risk to human health of acute, subacute, and chronic health effects.

Identifying . . . toxicological testing needed to identify the types of levels of exposure that may present significant risk of adverse health effects in humans.

The ATSDR's Research Agenda for Priority Substances must possess the following characteristics:

- It should facilitate the progressive accumulation of priority data while containing cost.
- It should strike a balance in developing both exposure and toxicity data to evaluate public health concerns.
- It must be flexible and tailored to the data needs for each individual substance rather than using an automatic fill-in-the-blank approach.
- It must allow simultaneous research efforts in more than one area of investigation for a given substance.

Ultimately, the data from ATSDR's Research Agenda for Priority Substances would reduce or eliminate the uncertainties of health assessments.

C. Substance-Specific Research

The first step in identifying substance-specific research is the detailed examination of existing substance-specific data on exposure and toxicity. This requires a judgment on the quality of the existing information.

ATSDR has adopted the National Research Council's (NRC) "Guidelines for Assessing the Quality of Individual Studies" in "Toxicity Testing: Strategies to Determine Needs and Priorities" (NRC, 1984). ATSDR also agrees with the NRC that judging the quality of past and future studies solely by standards of today is not appropriate. The NRC guidelines suggest that a report of scientific findings will be considered adequate for use in health hazard assessment if it meets the following basic criteria:

- All elements of exposure are clearly described.
- Results in test subjects are predictive of human response and test subjects are sensitive to the effects of the substance.
- Controls are comparable with test subjects in all respects except the treatment variable.
- End points answer the specific questions addressed in the study and observed effects are sufficient in number or degree to establish a dose-response relationship that can be used in estimating the hazard to the target species.
- Due consideration in both the design and the interpretation of studies must be given for appropriate statistical analysis of the data.

The ATSDR subscribes to the NRC guidelines. To the extent that they are appropriate, they should also be applied to judgments on the quality of data from epidemiological investigations and other scientific studies of relevance to ATSDR's substance-specific research program. In addition, the reliability of epidemiological data in hazard identification is increased when the results are obtained from studies that have the following assets (Johnson, 1988; Houk, 1989):

- Are derived from well-designed and well-executed case control or cohort studies that are free from bias;
- Display a strong association unlikely to be due to chance variation;
- Follow a logical, temporal sequence of exposure-response;
- Have been replicated in a variety of settings;
- Exhibit a dose-response relationship, using valid estimates of exposure and dose;
- Are toxicologically plausible;
- Where possible, include an examination of causality.

In addition, ATSDR recognizes the following desirable factors of studies or reports of scientific findings as set forth in the NRC guidelines:

- Subjective elements should be minimized.
- Peer review of scientific papers and of reports is desirable. (Note: CERCLA mandates that toxicologic testing results used by ATSDR be peer reviewed.)
- Results reported have increased credibility if they are supported by findings from other investigations.
- Similarity of results to those of tests and conducted on structurally related compounds increases scientific confidence.
- Evidence of adherence to good laboratory practices improves confidence in results.

The types of information that ATSDR requires to identify data needs fall into three levels and these are defined below and depicted in Figure 1.

Level I—A base set of exposure and toxicity information for *identifying* basic exposure and toxicity characteristics of each substance. This information would be used to *identify* further research needs.

Level II—A set of tests and research for *confirming* the toxicity and exposure indicated by Level I data. These data would be used to evaluate further research needs.

Level III—Research to improve the *application* to humans of the results of Level II research.

BILLING CODE 4160-70-M

Categories of Data Needs

Approach for ATSDR's Data Needs

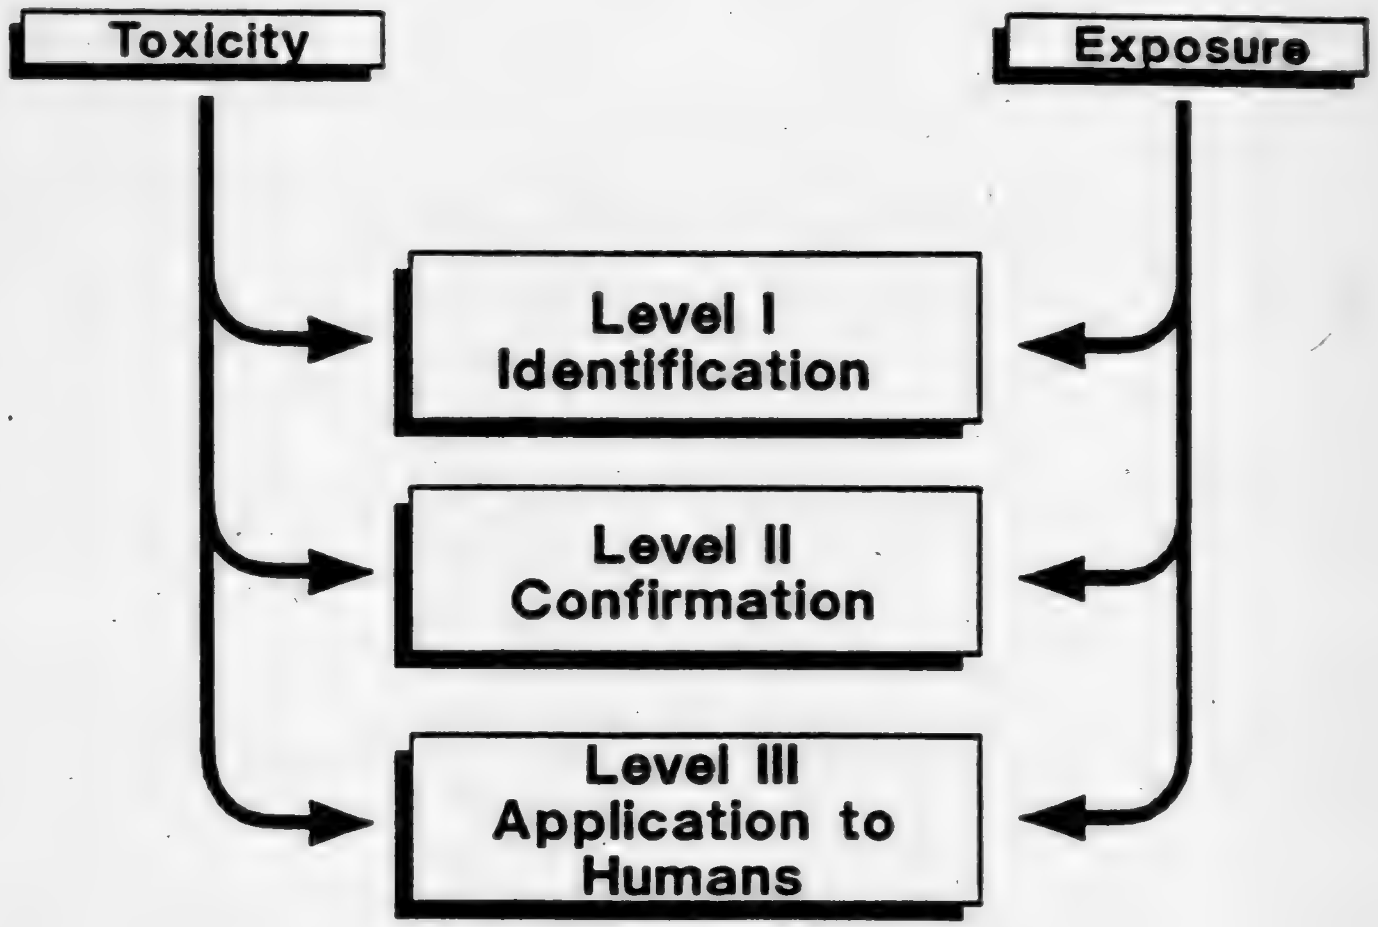

Figure 1

BILLING CODE 4160-70-C

BEST COPY AVAILABLE

As the initial stage of the overall guide for developing and evaluating data and information on exposure and toxicity, Level I is designed to be:

- Broad enough across subcategories to support decisions on the need for further studies in exposure and toxicity;
- Extensive enough within subcategories to support reasoned judgments concerning further studies in each major aspect of exposure and toxicity; and
- Sufficient as a *guide* to organize substance-by-substance scientific judgment on additional research needs, not a rigid recipe.

Data needs are categorized as exposure or toxicity and are then subcategorized (Tables 1 and 2). The subcategories of exposure reflect ATSDR's need for data that would allow evaluation of humans exposed to substances in the environment and consist of analytical methods, physical/chemical properties, environmental fate, and bioavailability. Toxicity is divided into ten subgroups relating either to duration of exposure or type of effect. These subcategories are single-dose exposure, repeated-dose exposure, chronic exposure, genotoxicity, reproduction, development, immunotoxicity, neurotoxicity, sensitization, and carcinogenicity.

Neurotoxicity	Neuropath in Subchronic Demeanor in Subchronic	Neurotox Battery	
Sensitization	Dermal Sensitization		
Carcinogenicity	(Use Muta & subchronic results)	2-year Bioassay	

BILLING CODE 4160-70-C

In each subcategory the guide begins with the basic information needed to make scientific judgment on more complex research (Level I). It then proceeds through intermediate types of information that confirm information either found or apparent in Level I (Level II). Finally it deals with the most complex, i.e., information that applies to humans and which, when available, would allow identification of the types of levels of exposure that may present significant risk of adverse health effects in humans (Level III). Given the data available at any one time, data needs for a particular chemical could fall in Level I for certain subcategories, in Level II for others, and in Level III for still others. In fact, in exceptional situations, the data needs for a given substance could require studies (for different subcategories) in all three levels simultaneously.

Final Toxicological Profile with Chemical Specific Data Needs

Figure 2

At the end of each level a decision would be made whether further research is needed for the subcategory. The use of the decision guide would provide a substance-by-substance scientific judgment of data needs. The results of applying the decision guide, i.e. the data needs for each chemical, would appear in the toxicological profile. The profile would be peer reviewed and subsequently released for public comment. These two steps allow for review, critique, and comment on the data needs. The scientific staff would revise the data needs in the profile as appropriate. Paramount to the program design is:

(1) The survey of international and national ongoing studies, and

(2) The periodic reconsideration of data needs—inherent in the triennial profile update process—based upon acquisition and review of new data.

ATSDR is mandated to initiate a program of research for each substance, and the data needs identified by the above process would be the first step toward the identifying the substance-specific research agenda. The other steps, setting substance-specific and cross-substance priorities of data needs are discussed below (section IV, A and B).

D. Application of the Decision Guide

1. *Sample Exercise for Di(2-ethylhexyl) phthalate—DEHP.* The results of applying the decision guide are presented for DEHP.

This is a sample exercise and the data needs identified in this exercise have not been developed beyond identification, nor have they been evaluated for the feasibility or potential of being filled by other research sources. A discussion of the basis for identifying data needs for the exposure and toxicity categories follow (Tables 3 and 4).

A review and evaluation of the DEHP literature was made to determine the presence and acceptability of key information in the decision guide. Special considerations were made for the application to Superfund sites; e.g., common routes of exposure and the availability of analytical methods sensitive enough for environmental exposure conditions.

2. *DEHP—Discussion of exposure Data Needs.* Phthalic acid esters (PAE) represent a class of compounds with large production volume and potential for environmental release. Because of their low solubility in water and persistence in the environment, the potential for bioconcentration is recognized. Di(2-ethylhexyl) phthalate (DEHP), a representative PAE, is a commonly used plasticizer that has become widely distributed in the environment and has recognized toxicity in animal models. Because of usage patterns, PAEs occur as mixtures in the environment, but at this time ATSDR is dealing only with DEHP. It is apparent that we must consider DEHP as a sentinel for other PAEs with an eye toward addressing the issues that arise from the following statements on environmental PAE mixtures:

- In general, phthalate solubilities in water decrease with increasing molecular weight. High molecular weight phthalates are practically insoluble, making detection in water extremely difficult.
- Vapor pressure decreases with increasing molecular weight; PAE vapor pressures are essentially nil at ambient temperatures. It is generally accepted that low levels of phthalates occur in the atmosphere and higher levels occur near release sources, e.g. incinerators.
- Data on octanol-water partitioning verify the tendency of phthalates to partition to organic matter and to soil or sediment.
- Biodegradation half-lives generally correlate with the length of alkyl sidechains.

BILLING CODE 4160-70-M

Table 3
Exposure Data

Exposure	Level I	Level II	Level III
Analytical	Methods for parent compound in REM*	Methods for degradation products in REM*	**Registries of Exposed Persons** **Human dosimetry studies** **Epidemiology** **Disease Registries**
	Analytical Method to Separate Homologs/Isomers

	Determine which phthalate esters and their amounts around sites		
Environment Fate	Aerobic/anaerobic Biodegradation in H_2O Oxidation Hydrolysis Aerosolization Photoreactivity Volatilization Soil adsorption/desorption	Small field plot studies Monitoring for products in REM* **Determine aerobic and anaerobic degradation of homologs/isomers**	
Bioavailability		Food chain Bioaccumulation Availability from REM* (analytical or toxicity) emphasize in vivo	

*REM = Relevant Environmental Media

BILLING CODE 4160-70-C

Analytical methods consisting of GC/MS and HPLC/UV are available and adequate for detecting DEPH. However, methods for separating, identifying, and quantifying PAEs are not available. Use of the Decision Guide identified a need' for developing such analytic methods to address the enrivonmental situation, i.e. mixtures of PAEs. This class of chemicals is recognized as having differing abilities to induce toxic responses and this problem must be addressed from the analytic standpoint before one can ascertain to what and to how much human populations are being exposed. This need must also be filled before one can assess the *in situ* degradation potential of PAEs and the resultant levels of human exposure.

BILLING CODE 4160-70-M

Table 4
DEHP Toxicity Data

Toxicity	Level I	Level II	Level III
Single Dose Exposure	Single Dose Disposition Skin/Eye Irritation Acute Toxicity		
Repeated Dose Exposure	14-day by Relevant Route 90-day Subchronic	Comparative Toxicokinetics	Epidemiology
		Physiologically based Pharmacokinetics	**Cohort Study Medical Devises (DEHP only) Peroxisome proliferation?**
Chronic Exposure	SAR **Determine Additivity of phthalates via SAR: Is DEHP a prototype for phthalates?**	2-year Bioassay	**Epi Study Occupational Exposure M/F reproductive toxicity?** Mechanism of Toxic Action **Mechanism of peroxisome proliferation**
Genotoxicity	Ames Micronucleus	Additional Genotoxicity	Biomarkers of disease
Reproductive	Extended Repro workup in Subchronic	2-Generation or Continuous Breeding	Clinical Methods for Mitigating Toxicity
Developmental	Short term in vivo screen	2-species Developmental	
Immunotoxicity	(Use subchronic results)	Immunotox Battery	
Neurotoxicity	Neuropath in subchronic Demeanor in subchronic	Neurotox Battery	
Sensitization	Dermal sensitization		
Carcinogenicity	(Use Muta & subchronic results)	2-year Bioassay

---

3. *DEHP—Discussion of Toxicity Data Needs.* Most toxicity data for DEHP has been derived from gavage studies. DEHP has been shown to be a carcinogen in an NTP bioassay. Using the Decision Guide, questions arise as to species differences in the route of exposure, metabolism, and endpoints, i.e., mechanisms producing peroxisome proliferation. In addition, reproductive and developmental toxicity appear to be a possibility for DEHP. Because populations exist that have had high levels of exposure both to DEHP alone (medical device users) and to mixtures of PAEs (occupational), a research need was identified to assess these two populations for toxicity related to DEHP. Specifically, the study should address the potential of DEHP to produce peroxisome proliferation in humans (medical device users) and alterations in reproductive function (occupation). The data needs are shown in their respective levels in Table 4.

IV. Setting Priorities

Once the data needs have been identified in the profile, the needs for substance-specific data must then undergo further scientific evaluation leading to priorities and ultimately to ATSDR's Research Agenda for Priority Substances (Figure 3). The scientists from the ATSDR, EPA and NTP as well as the profile author from the contractor will use the tenets previously set forth (section II) and the following criteria for setting priorities for substance-specific data needs. Once priorities have been set for these data needs, each substance's data needs will be submitted for public comment and subsequently revised where appropriate. The revised data needs are termed substance-specific research needs. These procedures will take place as the three agencies progress from identifying information gaps and data needs to determining substance-specific research needs and eventually to creating ATSDR's Research Agenda for Priority Substances. This process involves setting first substance-specific and then cross-substance priorities (Figure 3).

Figure 3

BILLING CODE 4160-70-C

A. Substance-Specific Priorities

In the process of setting substance-specific priorities data needs, some general principles must be recognized.

- Not all information gaps are data needs.
- All data needs are not of the same priority.
- Substance should be considered individually but may be grouped because of structural similarity or other relevant factors.
- ATSDR's Tenets for Decision Making in Research should be used.

Once the data needs have been identified in the toxicological profile, a technical panel composed of scientists from the three agencies and the contractor will convene. This group will have the responsibility for setting priorities for substance-specific data needs. The technical panel will consider the following:

- All levels of data should be considered in selecting priority data needs.
- Level I gaps are not automatically in the priority grouping. In general, Level I data have priority when there are no higher level data and when data are insufficient to make higher level priority testing decisions.
- Priority for either exposure or toxicity data requires thorough evaluation of research needs in other areas to help achieve a balanced research program for each substance.

Because the hazardous substances have varying amounts of existing exposure and toxicity data, there is an inherent need to build on a sound basic data foundation (Level I and II). Doing otherwise would usually not justify higher level research. In general, the data needs for individual hazardous substances listed below will be considered research priorities, usually in the following descending order:

- Development and/or confirmation of appropriate analytic methods.
- Determination of environmental and human exposure levels when analytic methods are available.
- Bioavailability studies for substances of known significant toxicity and exposure.
- Studies available for all toxicological profile substances to characterize target organs and dose response.
- Disposition studies and comparative physiological-based pharmacokinetics when a toxic endpoint has been determined and differences in species response have been noted.
- Mechanistic studies on substances with significant toxicity and substantial human exposure.
- Investigation of methods for mitigation of toxicity for substances where enough is known about mode of action to guide research.
- Epidemiologic studies that will provide a direct answer on human disease for a substance of known significant toxicity.

B. Cross-Substance Priorities

Considering ATSDR's Tenets for Decision Making in Research, the substance-specific priorities (substance-specific research needs) will undergo a process to set cross-substance priorities with the following considerations.

- The aggregate of prioritized data needs for individual hazardous substances will form the information base for determining priority research needs across a set of hazardous substances. In general, Level III research will be given priority over Levels I and II when prioritizing across substances.
- As ATSDR's Listings of Hazardous Substances take into account the known toxicity, occurrence at NPL sites, and potential for human exposure, the position of a substance on those lists should be considered in setting cross-substance priority research needs. In general, greater weight will be given to higher ranking substances.
- As stated in many of ATSDR's Tenets for Decision Making for Research (Section II), human exposure considerations are vital to health assessments. Thus the size of the human population exposed to the substance should be considered in setting cross-substance priority research needs. In general, greater weight will be given to research that is relevant to the greatest number of persons in populations of concern.
- As the effects of hazardous environmental substances on the health of children, the elderly, minorities, persons with infirmities, and other potentially impacted subpopulations need to be addressed. The existence and size of susceptible subpopulations exposed to the substance should be considered in setting cross-substance priority research needs.
- CERCLA mandates that the research program identify types of exposure that may present significant risk of adverse health effects in humans. Thus, consideration of the use of such data, i.e. data that is key to making a judgment as to levels of significant human exposure, is a matter of priority. This would enhance the ability of public health officials to implement appropriate health protective actions.
- Where possible, priority will be given to research that can be generalized to other substances or areas of science.
- Other things being equal, priority will be given to studies of substances that will provide insight on multiple substances rather than on a single substance.

V. Definitions

Adequate Data: A substance-specific information base that is complete enough to permit performance of an ATSDR Health Assessment; judged on sound scientific basis.

ATSDR's Registry of Data Needs for Superfund Substances: Collection of needs that have been identified, and subsequently peer reviewed, for any of the Superfund Hazardous Substances.

Data Gap: Phrase used in first 25 profiles indicating lack of information in current knowledge relevent to stated criteria listed in the profile.

Data Needs: Substance-specific information need identified via decision guide; information required to perform health assessments.

Decision Guide: ATSDR's proposed categories of data that, if available, would support the preparation of a health assessment by reducing the uncertainties that are inherent to the process.

Exposure: Direct contact with the substance or indirect contact in the environment through breathing air, eating, or drinking material that contains the substance.

Health Assessment: ATSDR's evaluation of data and information on the release of hazardous substances into the environment, performed to assess any current or future impacts on public health, develop health advisories or other health recommendations, and identify studies or actions needed to evaluate and mitigate or prevent human health effects.

Research Needs: Substance-specific data needs identified as priority via a technical evaluation and subject to public comment.

Research Program: Substance-specific research needs identified as priority across chemicals and directed toward reducing the uncertainty of health assessments. The program will permit determination of the types or levels of exposure that may present significant risk of adverse health effects in humans.

Sufficient Information: Phrase used in the first 25 toxicological profiles to indicate when information available on a specific substance fulfilled stated criteria listed in the profile.

VI. List of Abbreviations

ATSDR: Agency for Toxic Substances and Disease Registry
CERCLA: The Comprehensive Environmental Response, Compensation, and Liability Act of 1980 (Superfund)
DEHP: Di(2-ethylhexyl) phthalate
EPA: Environmental Protection Agency
FIFRA: Federal Insecticide, Fungicide and Rodenticide Act
ITC: Interagency Testing Committee
NTP: National Toxicity Program
PAE: Phthalic acid esters
PHS: Public Health Service
SAR: Structure-Activity Relationship
SARA: Superfund Amendments and Reauthorization Act of 1986
TSCA: Toxic Substances Control Act

LIST OF PUBLIC LAWS

Note: No public bills which have become law were received by the Office of the Federal Register for inclusion in today's **List of Public Laws.**

Last List August 22, 1989

CFR CHECKLIST

This checklist, prepared by the Office of the Federal Register, is published weekly. It is arranged in the order of CFR titles, prices, and revision dates.

An asterisk (*) precedes each entry that has been issued since last week and which is now available for sale at the Government Printing Office.

New units issued during the week are announced on the back cover of the daily **Federal Register** as they become available.

A checklist of current CFR volumes comprising a complete CFR set, also appears in the latest issue of the LSA (List of CFR Sections Affected), which is revised monthly.

The annual rate for subscription to all revised volumes is $620.00 domestic, $155.00 additional for foreign mailing.

Order from Superintendent of Documents, Government Printing Office, Washington, DC 20402. Charge orders (VISA, MasterCard, or GPO Deposit Account) may be telephoned to the GPO order desk at **(202) 783–3238** from 8:00 a.m. to 4:00 p.m. eastern time, Monday—Friday (except holidays).

[1] Because Title 3 is an annual compilation, this volume and all previous volumes should be retained as a permanent reference source.

[2] No amendments to this volume were promulgated during the period Jan.1, 1988 to Dec.31, 1988. The CFR volume issued January 1, 1988, should be retained.

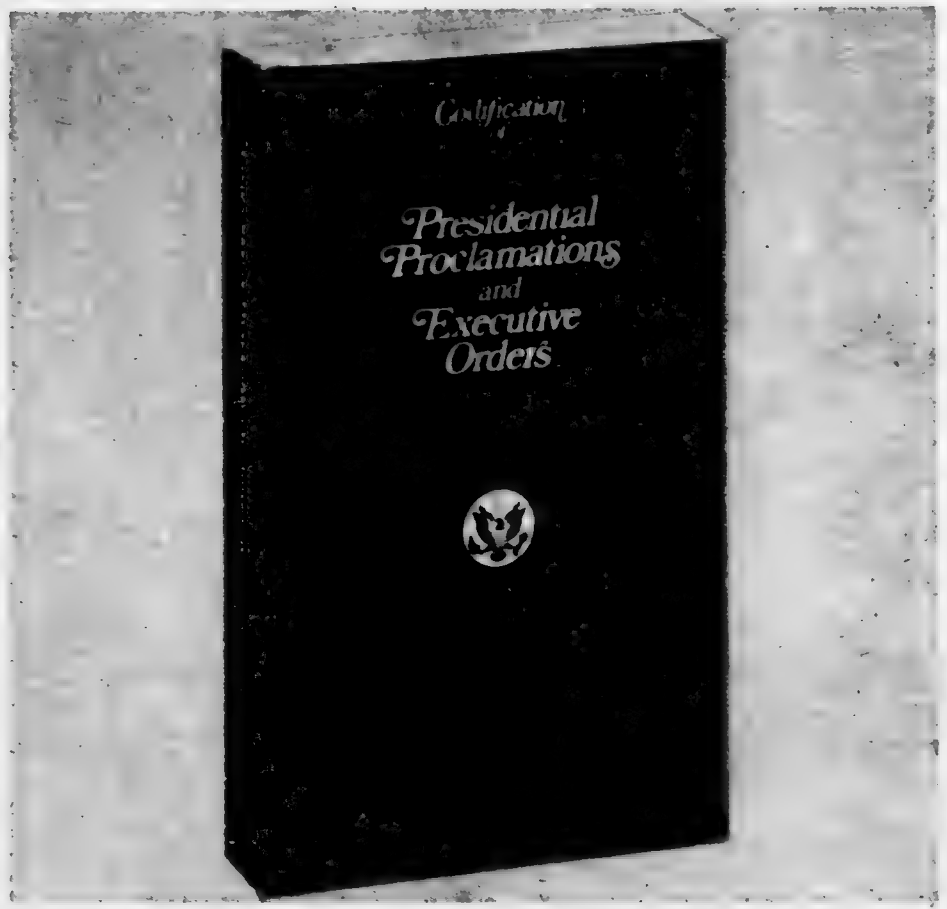
[3] No amendments to this volume were promulgated during the period Jan. 1, 1987 to Dec. 31, 1988. The CFR volume issued January 1, 1987, should be retained.

[4] The July 1, 1985 edition of 32 CFR Parts 1–189 contains a note only for Parts 1–39 inclusive. For the full text of the Defense Acquisition Regulations in Parts 1–39, consult the three CFR volumes issued as of July 1, 1984, containing those parts.

[5] No amendments to this volume were promulgated during the period July 1, 1986 to June 30, 1988. The CFR volume issued as of July 1, 1986, should be retained.

[6] The July 1, 1985 edition of 41 CFR Chapters 1–100 contains a note only for Chapters 1 to 49 inclusive. For the full text of procurement regulations in Chapters 1 to 49, consult the eleven CFR volumes issued as of July 1, 1984 containing those chapters.

New edition .... Order now !



For those of you who must keep informed about **Presidential Proclamations and Executive Orders,** there is a convenient reference source that will make researching these documents much easier.

Arranged by subject matter, this edition of the *Codification* contains proclamations and Executive orders that were issued or amended during the period April 13, 1945, through January 20, 1989, and which have a continuing effect on the public. For those documents that have been affected by other proclamations or Executive orders, the codified text presents the amended version. Therefore, a reader can use the *Codification* to determine the latest text of a document without having to "reconstruct" it through extensive research.

Special features include a comprehensive index and a table listing each proclamation and Executive order issued during the 1945–1989 period—along with any amendments—an indication of its current status, and, where applicable, its location in this volume.

Contents

FEDERAL REGISTER Published daily, Monday through Friday, (not published on Saturdays, Sundays, or on official holidays), by the Office of the Federal Register, National Archives and Records Administration, Washington, DC 20408, under the Federal Register Act (49 Stat. 500, as amended; 44 U.S.C. Ch. 15) and the regulations of the Administrative Committee of the Federal Register (1 CFR Ch. I). Distribution is made only by the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402.

The **Federal Register** provides a uniform system for making available to the public regulations and legal notices issued by Federal agencies. These include Presidential proclamations and Executive Orders and Federal agency documents having general applicability and legal effect, documents required to be published by act of Congress and other Federal agency documents of public interest. Documents are on file for public inspection in the Office of the Federal Register the day before they are published, unless earlier filing is requested by the issuing agency.

The **Federal Register** will be furnished by mail to subscribers for $340 per year in paper form; $195 per year in microfiche form; or $37,500 per year for the magnetic tape. Six-month subscriptions are also available at one-half the annual rate. The charge for individual copies in paper or microfiche form is $1.50 for each issue, or $1.50 for each group of pages as actually bound, or $175.00 per magnetic tape. Remit check or money order, made payable to the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402, or charge to your GPO Deposit Account or VISA or Mastercard.

There are no restrictions on the republication of material appearing in the **Federal Register**.

How To Cite This Publication: Use the volume number and the page number. Example: 54 FR 12345.

THE FEDERAL REGISTER
WHAT IT IS AND HOW TO USE IT

FOR: Any person who uses the Federal Register and Code of Federal Regulations.

WHO: The Office of the Federal Register.

WHAT: Free public briefings (approximately 3 hours) to present:
1. The regulatory process, with a focus on the Federal Register system and the public's role in the development of regulations.
2. The relationship between the Federal Register and Code of Federal Regulations.
3. The important elements of typical Federal Register documents.
4. An introduction to the finding aids of the FR/CFR system.

WHY: To provide the public with access to information necessary to research Federal agency regulations which directly affect them. There will be no discussion of specific agency regulations.

Rules and Regulations

Federal Register
Vol. 54, No. 175
Tuesday, September 12, 1989

This section of the FEDERAL REGISTER contains regulatory documents having general applicability and legal effect, most of which are keyed to and codified in the Code of Federal Regulations, which is published under 50 titles pursuant to 44 U.S.C. 1510.
The Code of Federal Regulations is sold by the Superintendent of Documents. Prices of new books are listed in the first FEDERAL REGISTER issue of each week.

DEPARTMENT OF AGRICULTURE

Agricultural Marketing Service

7 CFR Part 967

[FV-89-062FR]

Final Handling Regulation for Celery Grown in Florida

AGENCY: Agricultural Marketing Service, USDA.

ACTION: Final rule.

SUMMARY: This action establishes the quantity of Florida celery which handlers may ship to fresh markets during the 1989–90 marketing season at 6,789,738 crates or 100 percent of producers' base quantities. This final rule is intended to lend stability to the industry and, thus, help to provide consumers with an adequate supply of the product. As in past marketing seasons, the limitation on the quantity of Florida celery handled for fresh shipment is not expected to restrict the quantity of Florida celery actually produced or shipped to fresh markets, since production and shipments are anticipated to be less than the allotment. This action was recommended by the Florida Celery Committee (Committee), which is responsible for local administration of the order.

EFFECTIVE DATE: September 12, 1989.

FOR FURTHER INFORMATION CONTACT: Beatriz Rodriguez, Marketing Specialist, Marketing Order Administration Branch, Fruit and Vegetable Divison, AMS, USDA, Room 2525–S, P.O. Box 96456, Washington, DC 20090–6456; telephone: (202) 475–3861.

SUPPLEMENTARY INFORMATION: This final rule is issued under Marketing Agreement and Order No. 967 (7 CFR part 967), both as amended, regulating the handling of celery grown in Florida. The order is effective under the Agricultural Marketing Agreement Act of 1937, as amended (7 U.S.C. 601–674), hereinafter referred to as the Act.

This final rule has been reviewed under Executive Order 12291 and Departmental Regulation No. 1512–1 and has been determined to be a "non-major" rule under criteria contained therein.

Pursuant to requirements set forth in the Regulatory Flexibility Act (RFA), the Administrator of the Agricultural Marketing Service (AMS) has considered the economic impact of this final rule on small entities.

The purpose of the RFA is to fit regulatory actions to the scale of business subject to such actions in order that small businesses will not be unduly or disproportionately burdened. Marketing orders issued pursuant to the Act, and rules issued thereunder, are unique in that they are brought about through group action of essentially small entities acting on their own behalf. Thus, both statues have small entity orientation and compatibility.

There are approximately seven handlers of celery grown in Florida subject to regulation under the celery marketing order and approximately 13 producers of celery in the production area. Small agricultural producers have been defined by the Small Business Administration (13 CFR 121.2) as those having average annual gross revenues for the last three years of less than $500,000, and small agricultural service firms are defined as those whose gross annual receipts are less than $3,500,000. The majority of celery handlers and producers may be classified as small entities.

This final rule is based upon the recommendation of and information submitted by the Committee and upon other available information. The Committee met on May 24, 1989, and recommended a marketable quantity of 6,789,738 crates of fresh celery for the 1989–90 marketing season beginning August 1, 1989. Additionally, a uniform percentage of 100 percent was recommended which would allow each producer registered pursuant to § 967.37(f) of the order to market 100 percent of such producer's base quantity. These recommendations were based on an appraisal of expected 1989–90 supplies and prospective demand.

As required by § 967.37(d)(1) of the order, a reserve of 6 percent (407,384 crates) of the 1988–89 total base quantities is authorized for new producers and for increases by existing producers.

The final rule will limit the quantity of Florida celery which handlers may purchase from producers and ship to fresh markets during the 1989–90 marketing season to 6,789,738 crates. This marketable quantity is identical to the 1988–89 marketable quantity and is about 20 percent more than the average number of crates marketed fresh during the 1982–83 through 1986–87 seasons. It is expected that the 6,789,738-crate marketable quantity will be above actual shipments for the 1989–90 season. Thus, the 6,789,738-crate marketable quantity is not expected to restrict the amount of Florida celery which growers produce or the amount of celery which handlers ship. For these reasons, the final rule will lend stability to the industry and, thus, help to provide consumers with an adequate supply of the product.

Based on available information, the Administrator of the AMS has determined that this final rule will not have a significant economic impact on a substantial number of small entities.

This action was proposed in the August 2, 1989, issue of the **Federal Register** (54 FR 31845). Comments on the proposed rule were invited from interested persons until August 14, 1989. No comments were received.

After consideration of the information and recommendations submitted by the Committee and other available information, it is found that this final rule will tend to effectuate the declared policy of the Act.

Pursuant to 5 U.S.C. 553, it is hereby found and determined that good cause exists for not postponing the effective date of this action until 30 days after publication in the **Federal Register** because: (1) This action applies to all Florida celery handled by handlers during the 1989–90 crop year, which began August 1, 1989, and (2) handlers are aware of this action, which was recommended by the Committee at a public meeting, and need no additional time to comply with the requirements.

List of Subjects in 7 CFR Part 967

Celery, Florida, Marketing agreements and orders.

For the reasons set forth in the preamble, 7 CFR part 967 is revised as follows:

PART 967—CELERY GROWN IN FLORIDA

1. The authority citation for 7 CFR part 967 continues to read as follows:

Authority: Secs. 1–19, 48 Stat. 31, as amended; 7 U.S.C. 601–674.

Subpart—Administrative Rules and Regulations

2. A new § 967.325 is added to read as follows:

Note: This section will not appear in the Code of Federal Regulations.

§ 967.325 Handling regulation, marketable quantity, and uniform percentage for the 1989–90 season beginning August 1, 1989.

(a) The marketable quantity established under § 967.36(a) is 6,789,738 crates of celery.

(b) As provided in § 967.38(a), the uniform percentage shall be 100 percent.

(c) Pursuant to § 967.36(b), no handler shall handle any harvested celery unless it is within the marketable allotment of a producer who has a base quantity and such producer authorizes the first handler thereof to handle it.

(d) As required by § 967.37(d)(1), a reserve of six percent of the total base quantities is hereby authorized for:

(1) New producers and

(2) Increases for existing base quantity holders.

(e) Terms used herein shall have the same meaning as when used in the said marketing agreement and order.

Dated: September 6, 1989.

William J. Doyle,

Acting Deputy Director, Fruit and Vegetable Division.

[FR Doc. 89–21396 Filed 9–11–89; 8:45 am]

BILLING CODE 3410–02–M

SMALL BUSINESS ADMINISTRATION

13 CFR Part 124

RIN 3245–AB76

Minority Small Business and Capital Ownership Development Program; Correction

AGENCY: Small Business Administration.

ACTION: Final rule; correction.

SUMMARY: The Small Business Administration (SBA) is correcting a typographical error in the effective dates of the Minority Small Business and Capital Ownership Development Program regulations which appeared in the **Federal Register** on August 21, 1989. (54 FR 34692.)

FOR FURTHER INFORMATION CONTACT: Associate Administrator for Minority Small Business and Capital Ownership Development (202) 653–6407, Jane P. Butler, (202) 653–6813, or Rodney A. Lewis, (202) 653–6549.

SUPPLEMENTARY INFORMATION: On August 21, 1989 SBA published in the **Federal Register** a final rule to amend the Minority Small Business and Capital Ownership Development Program. (54 FR 34692.) A typographical error in the effective dates was discovered which SBA is now correcting. The October 1, 1989 effective date applies to §§ 124.306 and 124.311 respectively, not §§ 124.311 and 124.312 as published.

The following corrections are made to part 124 of title 13, Code of Federal Regulations, Minority Small Business and Capital Ownership Development Program, published in the **Federal Register** on August 21, 1989 (54 FR 34692):

In the first column, following the caption EFFECTIVE DATES in the first sentence, "Except for §§ 124.311 and 124.312," should read "Except for §§ 124.306 and 124.311," and in the second sentence, "Sections 124.311 and 124.312" should read "Sections 124.306 and 124.311".

Dated: August 31, 1989.

Susan Engeleiter,

Administrator.

Revision of General Operating and Flight Rules; Correction

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule; correction.

SUMMARY: In the August 18, 1989, issue of the **Federal Register** (54 FR 34284) the FAA published a final rule reorganizing and realigning the general operating and flight rules to make them more understandable and easier to use. Also, several changes were made to provide more flexibility for certain operations.

FAA is correcting editorial errors that appeared in the listing of amendment numbers and in the preamble. Amendment number "99–11" should read "99–15" and amendment number "141–11" should read "141–2".

On page 34287, second column, first complete paragraph, fifth line: The repeated "91.165" should read "91.169".

On page 34288, first column, second complete paragraph, sixth line: "91.91.90(c)(1)" should read "91.90(c)(1)".

Additional corrections to this document are published elsewhere in the Corrections Section of this issue.

FOR FURTHER INFORMATION CONTACT: William T. Cook (202) 267–3840.

Issued in Washington, DC, on September 5, 1989.

Clara Thieling,

Editor, Program Management Staff, Office of the Chief Counsel.

BILLING CODE 4910–13–M

COMMODITY FUTURES TRADING COMMISSION

17 CFR Part 30

Foreign Option Transactions

AGENCY: Commodity Futures Trading Commission.

ACTION: Order.

SUMMARY: The Commodity Futures Trading Commission ("Commission") is authorizing certain option contracts traded on the London International Financial Futures Exchange ("LIFFE") to be offered or sold to persons located in the United States. This order is issued pursuant to Commission Rule 30.3(a), 17 CFR 30.3(a) (1988), which makes it unlawful for any person to engage in the offer or sale of a foreign option product until the Commission, by order, authorizes such foreign option to be offered in the United States.[1]

EFFECTIVE DATE: October 12, 1989.

FOR FURTHER INFORMATION CONTACT: Jane C. Kang, Esq. or Victoria R. Hartke, Esq., Division of Trading and Markets, Commodity Futures Trading Commission, 2033 K Street, NW.,

---

[1] *See* 52 FR 28980, 28998 (August 5, 1987). Notwithstanding the prohibition in Commission Rule 30.3(a), non-domestic exchange-traded options which are traded pursuant to the trade option exemption in Commission Rule 32.4(a), 17 CFR 32.4(a) (1988), may continue to be offered or sold.

Washington, DC 20581.[2] Telephone: (202) 254–6955.

SUPPLEMENTARY INFORMATION: The Commission has issued the following Order:

United States of America Before the Commodity Futures Trading Commission

Order Under CFTC Rule 30.3(a) Permitting Option Contracts Traded on the London International Financial Futures Exchange To Be Offered or Sold in the United States Thirty Days After Notice to the Commission and Publication in the **Federal Register** *of the Option Contracts To Be Traded*

On July 23, 1987, the Commission adopted final rules governing the domestic offer or sale of commodity futures and option contracts traded on or subject to the rules of a foreign board of trade. 52 FR 28980 (August 5, 1987). These rules, which became effective on February 1, 1988, establish, among other things, a regulatory framework for the offer or sale of foreign options to persons located in the United States.[3] Specifically, Rule 30.3(a) provides that:

> [N]otwithstanding any other provisions of this part, it shall be unlawful for any person to engage in the offer or sale of any foreign option until the Commission, by order, authorizes such foreign option to be offered in the United States. * * * 52 FR 28998.

In view of the history of abuses in the options markets prior to the imposition of the options ban,[4] the Commission determined to phase in foreign options on a market-by-market basis through particularized review of applications submitted by individual markets and issuance of an authorization order, as appropriate, by the Commission. In adopting the final rules which implement that procedure, the Commission stated that notwithstanding Part 30, which provides a regulatory framework to govern transactions in both foreign futures *and* foreign options, and which has been the subject of extensive notice and comment, it would be unlawful for any person to engage in the offer or sale of a particular foreign option product until the Commission specifically authorizes such foreign option to be offered or sold in the United States.[5] As a consequence, Rule 30.3(a) permits the Commission, as stated in the release accompanying the proposed rules, to consider, among other things, its ability to determine whether or not a particular trade has been transmitted to and executed on a foreign exchange as part of its decision to authorize transactions in specific foreign exchange-traded options.[6]

By letter dated May 24, 1989, the London International Financial Futures Exchange ("LIFFE"), a recognized investment exchange ("RIE") which is subject to regulatory oversight by the United Kingdom Securities and Investments Board ("SIB"), requested that the Commission authorize the offer or sale of option contracts traded on LIFFE to persons located in the United States under Commission Rule 30.3(a).

In issuing this Order, the Commission has considered: (1) The existence of information sharing arrangements relevant to preventing abuses in the trading of option contracts on LIFFE; [7] (2) the arrangements in place for assuring that sales practice abuses in such options do not occur, including that sales practice compliance audits commensurate with those which apply to domestic products will be conducted with respect to firms engaged in the offer or sale of its foreign option products in the United States; (3) the arrangements for United States customers to redress grievances with respect to matters directly pertaining to the conduct of trading or other activities relevant to the offer or sale of such products occurring within the jurisdiction where the option is traded; and (4) the regulatory environment in which such foreign options are traded, including, among other things, the determination by the Commission under Rule 30.10, 17 CFR 30.10 (1988), to exempt specified firms in the United Kingdom from the application of certain of the Commission's rules governing foreign futures and option transactions based on the existence of a generally comparable regulatory system in effect in the United Kingdom.[8]

In determining that LIFFE's showing with respect to the foregoing matters is sufficient to warrant the issuance of the Order herein, the Commission notes that as it acquires further experience it may determine that other considerations are also relevant. To this end, the Commission expects to continue to monitor the offer or sale of the products subject to this Order.[9]

Based upon the representations of LIFFE contained in its letter dated May 24, 1989, as supplemented, SIB's letter dated July 28, 1989 in which SIB confirms that it monitors LIFFE for compliance with its obligations as an RIE,[10] the existence of information sharing arrangements with SIB and other relevant United Kingdom authorities,[11] the determination of the

---

[2] In considering requests under Rule 30.3(a), the Commission notes that it has received a significant number of comments that the offer or sale of foreign options should be permitted. *See* advance notice of proposed rulemaking, 49 FR (July 25, 1984), proposed rules, 51 FR 12104 (April 8, 1986) and final rules, 52 FR 28980 (August 5, 1987). The Commission continues to welcome comments on this process. On July 20, 1988, the Commission issued orders authorizing certain option contracts traded on the Montreal Exchange, the Singapore International Monetary Exchange and the Sydney Futures Exchange to be offered or sold in the United States.

[3] Rule 30.1(b), 17 CFR 30.1(b) (1988), defines a foreign option as any transaction or agreement which is or is held out to be of the character of, or is commonly known to the trade as, an "option," "privilege," "indemnity," "bid," "offer," "put," "call," "advance guaranty" or "decline guaranty," made or to be made on or subject to the rules of a foreign board of trade.

[4] Although the statutory prohibition on the offer or sale of foreign options formerly contained in section 4c(c) of the Commodity Exchange Act ("Act") has been removed, *see* Futures Trading Act of 1986, Pub. L. No. 99–641, section 102, 100 Stat. 3556 (1986), the regulatory prohibition in Commission Rule 32.11, 17 CFR 32.11 (1988), adopted pursuant to section 4c(b) of the Act, remains in effect.

[5] 52 FR 28980, 28998.

[6] 51 FR 12104, 12105.

[7] *See* 51 FR 12104, 12105 (April 8, 1986). The pattern of abuses that was characteristic of option sales practices in the past, and which contributed to the Commission's decision to suspend all option sales in 1978, included the unavailability of data necessary to permit a determination whether orders for options had in fact been executed. *See* 43 FR 16156 (April 17, 1978).

[8] *See* Orders of the Commission dated May 15, 1989 granting Rule 30.10 relief to the Securities and Investments Board, the Association of Futures Brokers and Dealers, The Securities Association and the Investment Management Regulatory Organisation. 54 FR 21599 (May 19, 1989). In issuing such Orders, the Commission determined that the requirements in Appendix A to Part 30, "Interpretative Statement with Respect to the Commission's Exemptive Authority Under § 30.10 of its Rules," which sets forth the elements the Commission will evaluate in determining whether a particular regulatory program may be found to be comparable for purposes of exemptive relief pursuant to Rule 30.10, had generally been satisfied. *Id.*

[9] The Commission has not sought to analyse the individual option contracts under the requirements which apply to the designation of an option contract proposed to be traded on a United States contract market. In particular, the Commission has not analysed whether these instruments would meet the Commission's economic purpose test, 17 CFR § 33.4(a)(5)(i) (1988), or other criteria relating to the specific terms and conditions of such foreign option contract. *See* 17 CFR 33.4. The Commission, however, has plenary authority with respect to option products. *See* section 4c of the Act.

[10] *See* letter from M.B. Gittins, SIB, to Andrea M. Corcoran, Commission, dated July 28, 1989.

[11] *See, e.g.,* "Memorandum of Understanding on Exchange of Information between the United States Securities and Exchange Commission and the United Kingdom Department of Trade and Industry in Matters Relating to Securities and Between the United States Commody Futures Trading Commission and the United Kingdom Department of Trade and Industry in Matters Relating to Futures" signed on September 23, 1988, as supplemented by

Continued

Commission to grant Rule 30.10 relief to specified firms in the United Kingdom by Orders dated May 15, 1989, the memorandum from the Division of Trading and Markets to the Commission dated August 30, 1989 ("Staff Memorandum") recommending the approval of the Order herein, and pursuant to Commission Rule 30.3(a), the Commission hereby authorizes the offer or sale in the United States of options traded on LIFFE subject to the following conditions:

(1) Except as otherwise permitted under the Commodity Exchange Act and regulations thereunder, that no offer or sale of any LIFFE option product in the United States shall be made until thirty days after publication in the **Federal Register** of notice specifying the particular option(s) to be offered or sold pursuant to this Order;

(2) That SIB and LIFFE represent that LIFFE is an RIF under the Financial Services Act and, as such, is subject to regulatory obligations under that Act, that transactions on LIFFE in the LIFFE option(s) referenced in such notice [12] will be subject to the rules of LIFFE and that SIB and/or LIFFE provide the Commission with information as to all material changes thereto promptly;

(3) That options on futures on stock indices [13] and options on futures on foreign government debt securities [14] will not be permitted to be offered or sold hereunder absent certain additional procedures;

(4) That options trade pursuant to this Order may only be offset on LIFFE or another market with respect to which the Commission has issued an order under Commission Rule 30.3(a) authorizing its option products to be offered or sold in the United States;

(5) That options traded pursuant to the Order herein may only be offered or sold by persons registered in the appropriate capacity under the Commodity Exchange Act or by persons who have been granted an exemption from registration under Rule 30.10 based on comparability of regulation, provided such persons also provide customers resident in the United States with the options risk disclosure statement in Commission Rule 33.7, 17 CFR 33.7 (1988), and, if the persons elect not to collect the full premium for the contract as margin from the customer at the time of purchase, the Addendum thereto attached hereto as Exhibit B, but may not be offered or sold by persons doing business in the United States pursuant to interim relief granted and extended by the Commission (*See* 53 FR 3338 (February 5, 1988) and subsequent orders and letters of the Commission); and

(6) If experience demonstrates that the continued effectiveness of this Order would be contrary to public policy or the public interest or that the operation or execution of the systems and arrangements in place for the trading of the option products subject hereto, or the exchange of information with respect to such products, do not warrant continuation of the authorization granted herein, the Commission may modify, suspend, terminate or otherwise restrict the authorization granted in this Order, as appropriate, on its own motion. In such event, appropriate arrangements to service existing positions will be made.

This Order is issued based on the information provided to the Commission and its staff as set forth herein and in the Staff Memorandum. Any changes or material omissions might require the Commission to reconsider the autorization granted in this Order.

Issued in Washington, DC on September 5, 1989.

Jean A. Webb,

Secretary of the Commission.

Exhibit A

Options on Futures—Interest Rate

[Option on Long Gilt Future]

Unit of Trading	1 Long Gilt futures contract.
Delivery/Expiry Months.	March, June, September, December.
Delivery Day/ Exercise Day/ Expiry Day.	Exercise by 17.00 on any business day, extended to 18.00 on last trading day. Delivery on the first business day after the exercise day. Expiry at 18.00 on the last trading day.
Last Trading Day	16.15. Six business days prior to the first delivery day of the Long Gilt Futures contract.
Quotation	Multiples of 1/64.
Minimum Price Movement.	1/64.
(Tick size & value)	(£7.8125).
Initial Margin (Straddle Margin).	See footnotes.
Trading Hours	09.02–16.15.

Note.—Option on Long Gilt Future:

Contract Standard: Assignment of 1 Long Gilt futures contract for the delivery month at the exercise price.

Exercise Price Intervals: £1 e.g. £96–00, £97–00 etc.]

Introduction of New Exercise Prices: 13 exercise prices will be listed for new series. Additional prices will be introduced on the business day after the Long Gilt futures contract settlement price is within £16/32 of the sixth highest or lowest existing exercise price.

Initial Margin: Initial margin charged by clearing house for long and short options positions is calculated with reference to daily published risk factors and the level of initial margin for the related futures contract which it cannot exceed. Initial margin is reduced for all options and option-futures combinations which include offsetting positions.

Option Price: The contract price is payable by the buyer to the seller on exercise or expiry of the option, not at the time of purchase. Positions are marked to market daily.

Options on Futures—Interest Rate

[Option on US Treasury Bond Future]

Unit of Trading	1 US Treasury Bond futures contract.
Delivery/Expiry Months.	March, June, September, December.
Delivery Day/ Exercise Day/ Expiry Day.	Exercise by 17.00 on any business day; extended to 20.30 on last trading day. Delivery on the first business day after the exercise day. Expiry at 20.30 on the last trading day.
Last Trading Day	16.10 First Friday preceding by at least six CBOT working days the first delivery day of the US Treasruy Bond futures contract.
Quotation	Multiples of 1/64.
Minimum Price Movement.	1/64.
(Tick size & value)	($15.625).
Initial Margin (Straddle Margin).	See footnotes.
Trading Hours	08.17–16.10.

Note.—Option on U.S Treasury Bond Future:

Contract Standard: Assignment of 1 US Treasury Bond futures contract for the delivery month at the exercise price.

Exercise Price Intervals: $1 e.g. 86–00, 87–00 etc.

Introduction of New Exercise Prices: 13 exercise prices will be listed for new series. Additional prices will be introduced on the business day after the U.S. Treasury Bond futures contract settlement price is within $16/32 of the sixth highest or lowest existing price.

Initial Margin: Initial margin charged by clearing house for long and short options positions is calculated with reference to darily published risk factors and the level of initial margin for the related futures contract which it cannot exceed. Initial margin is reduced for all options and option-futures combinations which include offsetting positions.

Option Price: The contract price is payable by the buyer to the seller on exercise or expiry of the option, not on purchase. Positions are marked to market daily.

Last Trading Day: The last trading day is defined to coincide with the last trading day for the Chicago Board of Trade Option on US Treasury Bond futures, where this is a LIFFE trading day.

Options on Futures—Interest Rate

[Option on German Government Bond (Bund) Future]

Unit of Trading	1 Bond futures contract.
Delivery Months	March, June, September, December.
Delivery Day/ Exercise Day/ Expiry Day.	Exercise by 17.00 on any business day, extended to 18.00 on last trading day. Delivery on the first business day after the exercise day. Expiry at 18.00 on the last trading day.
Last Trading Day	16.00 Six business days prior to the first day of the delivery month.
Quotation	Multiples of DM 0.01.
Minimum Price Movement.	DM 0.01.
(Tick size and value).	(DM 25).

"Memorandum Relating to UK/US MOU" signed on November 22, 1988 adding the SIB as a signatory to the MOU (hereinafter collectively referred to as "UK/US MOU"), and the "Side Letter Relating to UK/US MOU" signed on May 15, 1989.

[12] The option contracts which will initially be offered or sold pursuant to this Order, the terms and conditions for which are attached hereto as Exhibit A, are options on Long Gilt, U.S. Treasury Bond, German Government Bond, Three-Month Sterling Interest Rate and Three-Month Eurodollar Interest Rate contracts and on Sterling Currency and Dollar-Mark Currency.

[13] *See* 52 FR 28980, 28982 n.6 and section 2a(1) of the Act.

[14] *See* section 2a(1) of the Act, section 3(a)(12) of the Securities Exchange Act of 1934 and Rule 3a12–8 promulgated thereunder. The Securities and Exchange Commission has designated the government debt securities issued by the United Kingdom and West Germany as exempted securities. *See* Securities Exchange Act Release No. 20708, March 2, 1984, and 53 FR 43860 (October 31, 1988).

Exhibit A—Continued

Options on Futures—Interest Rate—Continued

[Option on German Government Bond (Bund) Future]

Initial Margin (Straddle Margin).	See footnotes.
Trading Hours	08.07–16.00 London time.

Note.—Option on German Government Bond Future:

Contract Standard: Assignment of 1 Bond futures contract for the delivery month at the exercise price.

Exercise Price Intervals: DM 0.05, e.g. 94.00, 95.50, etc.

Introduction of New Exercise Prices: 9 exercise prices will be listed for new series. Additional prices will be introduced on the business day after the Bond futures contract settlement price is within DM 0.25 of the fourth highest or lowest existing price.

Initial Margin: Initial margin charged by the clearing house for long and short options positions is calculated with reference to daily published risk factors and the level of initial margin for the related futures contract which it cannot exceed. Initial margin is reduced for all options and options futures combinations which include offsetting positions.

Option Price: The contract price is payable by the buyer to the seller on exercise or expiry of the option, not at the time of purchase. Positions are marked to market daily.

Options on Futures—Interest Rate

[Option on Three Month Sterling Interest Rate Future]

Unit of Trading	1 Three Month Sterling futures contract.
Delivery/Expiry Months.	March, June, September, December.
Delivery Day/ Exercise Day/ Expiry Day.	Exercise by 17.00 on any business day. Delivery on the first business day after the exercise day. Expiry at 17.00 on last trading day. Fully automatic exercise of in-the-money options on last trading day.
Last Trading Day	11.00 Last trading day of Three Months Sterling futures contract.
Quotation	Multiples of 0.01 (i.e. 0.01%).
Minimum Price Movement.	0.01.
(Tick size & value)	(£12.50).
Initial Margin (Straddle Margin).	See footnotes.
Trading Hours	08.22–16.02.

Note.—Option on Three Month Sterling Interest Rate Future:

Contract Standard: Assignment of 1 Three Month Sterling futures contract for the delivery month at the exercise price.

Exercise Price Intervals: 0.25 (i.e. 0.25%) e.g. 90.50, 90.75, 91.00 etc.

Introduction of New Exercise Prices: 13 exercise prices will be listed for new series. Additional prices will be introduced on the business day after the Three Month Sterling futures contract settlement price is within 0.12 of the sixth highest or lowest existing exercise price.

Initial Margin: Initial margin charged by the clearing house for long and short options positions is calculated with reference to daily published risk factors and the level of initial margin for the related futures contract which it cannot exceed. Initial margin is reduced for all options and options-futures combinations which include offsetting positions.

Option Price: The contract price is payable by the buyer to the seller on exercise or expiry of the option, not at the time of purchase. Positions are marked to market daily.

Options on Futures—Interest Rate

[Option on Three Month Eurodollar Interest Rate Future]

Unit of Trading	1 Eurodollar futures contract.
Delivery/Expiry Months.	March, June, September, December.
Delivery Day/ Exercise Day/ Expiry Day.	Exercise by 17.00 on any business day. Delivery on the first business day after the exercise day. Expiry at 17.00 on last trading day. Automatic exercise of in-the-money options on last trading day.
Last Trading Day	11.00 Last trading day of Eurodollar futures contract.
Quotation	Multiples of 0.01 (i.e. 0.01%).
Minimum Price Movement.	0.01.
(Tick size & value)	($25.00).
Initial Margin (Straddle Margin).	See footnotes.
Trading Hours	08.32–16.00.

Note.—Option on Three Month Eurodollar Interest Rate Future:

Contract Standard: Assignment of 1 Eurodollar futures contract for the delivery month at the exercise price.

Exercise Price Intervals: 0.25 (i.e. 0.25%) e.g. 89.50, 89.75, 90.00.

Introduction of New Exercise Prices: 13 exercise prices will be listed for new series. Additional prices will be introduced on the business day after the Eurodollar futures contract settlement price is within 0.12 of the third highest or lowest existing exercise price.

Initial Margin: Initial margin charged by the clearing house for long and short options positions is calculated with reference to daily published risk factors and the level of initial margin for the related futures contract which it cannot exceed. Initial margin is reduced for all options and options-futures combinations which include offsetting positions.

Option Price: The contract price is payable by the buyer to the seller on exercise or expiry of the option, not at the time of purchase. Positions are marked to market daily.

Options on Cash

[Option on Sterling Currency]

Unit of Trading	£25,000 traded against US$.
Delivery/Expiry Months.	March, June, September, December with three nearby months (See footnotes).
Delivery Day/ Exercise Day/ Expiry Day.	Exercise by 17.00 on any business day. Delivery on the third business day after the exercise day. Expiry at 17.00 on last trading day.
Last Trading Day	16.02 Three business days before third Wednesday of expiry month.
Quotation	US cents per £.
Minimum Price Movement.	0.01 cents per £.
(Tick size & value)	($2.50).
Initial Margin (Straddle Margin).	See Footnotes.
Trading Hours	08.34–16.02.

Note.—Option on Sterling Currency:

Expiry Months: For example, in early November the following expiry months would be available for trading: November, December, January plus other months on the Mar/Jun/Sep/Dec cycle.

Contract Standard: Delivery of the currency at the exercise price.

Exercise Price Intervals: 5 cents per £ e.g. $1.15, $1.20, $1.25 per £.

Introduction of New Exercise Prices: At least 5 exercise prices will be listed for new series. Additional prices will be introduced on the business day after the Sterling Currency futures contract settlement price, spot sterling exchange rate (at 16.02) or sterling-dollar forward price (at 16.02) is within 2.5 cents of the second highest or lowest exercise price.

Initial Margin: Initial margin charged by the clearing house for long and short options positions is calculated with reference to daily published risk factors and the level of initial margin for the related futures contract which it cannot exceed. Initial margin is reduced for all options and options-futures combinations which include offsetting positions.

Option Price: The contract price is payable by the buyer to the seller on exercise or expiry of the option, not at the time of purchase. Positions are marked to market daily.

Options on Cash

[Option on Dollar-Mark Currency]

Unit of Trading	$50,000 traded against DM.
Delivery/Expiry Months.	March, June, September, December with three nearby months (See footnotes).
Delivery Day/ Exercise Day/ Expiry Day.	Exercise by 17.00 on any business day up to Expiry Day; by 10.00 on Expiry Day. Delivery on third business day after exercise, except for options exercised on Expiry Day, for which delivery is on second business day after exercise. Expiry at 10.00 two business days before third Wednesday of expiry month.
Last Trading Day	16.04 Three business days before third Wednesday of expiry month.
Quotation	pfennigs per $US.
Minimum Price Movement.	0.01 pfennigs per $US.
(Tick size & value)	(DM 5.00).
Initial Margin (Straddle Margin).	See footnotes.
Trading Hours	08.36–16.04.

Note.—Option on Dollar-Mark Currency:

Expiry Months: For example, in early November the following expiry months would be available for trading: November, December, January plus other months on the Mar/Jun/Sep/Dec cycle.

Contract Standard: Delivery of the currency at the exercise price.

Exercise Price Intervals: 5 pfennigs per $US eg DM 2.45, DM 2.50, DM 2.55.

Introduction of New Exercise Prices: At least 5 exercise prices will be listed for new series. Additional prices will be introduced on the business day after the Dollar-Mark futures contract settlement price, spot dollar-mark exchange rate (at 16.04) or dollar-mark forward price (at 16.04) is within 2.5 pfennigs of the second highest or lowest existing price.

Initial Margin: Initial margin charged by the clearing house for long and short options positions is calculated with reference to daily published risk factors and the level of initial margin for the related futures contract which it cannot exceed. Initial margin is reduced for all options-futures combinations which include offsetting positions.

Option Price: The contract price is payable by the buyer to the seller on exercise or expiry of the option, not at the time of purchase. Positions are marked to market daily.

Exhibit B—Addendum to CFTC Options Disclosure Statement

(CFTC Rule 33.7)

The CFTC "Options Disclosure Statement," a copy of which is attached, is modified as set forth below to reflect some particular futures of LIFFE options:

(i) LIFFE is a board of trade (exchange) located *outside* the United States on which certain options are authorized by the CFTC for sale in the United States;

(ii) LIFFE option contracts have provision for deferred payment of the option premium, are marked-to-market and are subject to initial margin requirements. Consequently, the futures commission merchant ("FCM") or a firm granted an exemption from the FCM registration requirement might not require the purchaser of a LIFFE option to put up the full premium at purchase.

Although there is provision for deferred payment of premium, the purchaser of an option is still subject to the risk of losing the entire purchase price of the option, that is, the option premium plus all tansaction costs. Consequently, before purchasing an option, an individual should fully understand the applicable margin requirements, and particularly should be aware of the obligation to pay variation margin in the case of adverse market movement. Although the purchaser may receive some accruing profit during the life of the option, he should be aware that in order to realize and retain any value from the option, it will be necessary either to offset the option position or to exercise the option.

August 30, 1989.

Memorandum

To: The Commission.

From: The Division of Trading and Markets.

Subject: Order Under Commission Rule 30.3(a) Permitting Certain Option Contracts Traded on the London International Financial Futures Exchange to be Offered or Sold in the United States.

Recommendation: That the Commission publish in the **Federal Register** this memorandum and approve and publish the attached order permitting option contracts traded on the London International Financial Futures Exchange to be offered or sold in the United States upon thirty days notice.

Other Divisions and Offices Consulted: Division of Economic Analysis, Division of Enforcement, Office of the Executive Director, Office of the General Counsel.

I. Introduction

On July 23, 1987, the Commission adopted final rules governing the domestic offer or sale of commodity futures and option contracts traded on or subject to the rules of a foreign board of trade. 52 FR 28980 (August 5, 1987). These rules, which became effective on February 1, 1988, establish, among other things, a regulatory framework for the offer or sale of foreign option products to persons located in the United States.[1] Specifically, Rule 30.3(a) provides that:

> [N]otwithstanding any other provision of this part, it shall be unlawful for any person to engage in the offer or sale of any foreign option until the Commission, by order, authorizes such foreign option to be offered in the United States. * * * 52 FR 28988.

In this regard, in view of the history of abuses in the options markets prior to the imposition of the options ban,[2] the Commission determined to phase in foreign options on a market-by-market basis through particularized review of applications submitted by individual markets and issuance of an authorization order, as appropriate, by the Commission.[3] In adopting the final rules which implement that procedure, the Commission stated that notwithstanding Part 30, which provides a regulatory framework to govern transactions in both foreign futures *and* foreign options, and which has been the subject of extensive notice and comment, it would be unlawful for any person to engage in the offer or sale of a particular foreign option product to a customer resident in the United States until the Commission specifically authorizes such foreign option to be offered or sold in the United States.[4] As a consequence, Rule 30.3(a) permits the Commission, as stated in the release accompanying the proposed rules, to consider, among other things, its ability to determine whether or not a particular trade has been transmitted to and executed on a foreign exchange in determining whether to authorize transactions in specific foreign exchange-traded options.[5]

By letter dated May 24, 1989, the London International Financial Futures Exchange ("LIFFE"), a recognized investment exchange ("RIE") which is subject to regulatory oversight by the United Kingdom Securities and Investments Board ("SIB"),[6] requested that the Commission authorize the offer or sale of option contracts traded on LIFFE to persons located in the United States.

II. Recommendation

The Division of Trading and Markets ("Division") has carefully reviewed and considered the application of LIFFE to offer or sell option products traded on LIFFE in the United States, in particular addressing: (1) The availability of certain information relevant to preventing abuses in the trading of such contracts; (2) the arrangements in place for monitoring compliance with sales practice obligations; (3) the ability of United States customers to redress grievances with respect to the conduct of trading and other offshore activities relevant to the offer or sale of LIFFE option products; and (4) the regulatory environment in which such options are traded. In particular, the review of LIFFE's petition under Commission Rule 30.3(a) has been facilitated by the Commission's determination by Orders issued on May 15, 1989, under Rule 30.10, 17 CFR 30.10 (1988), to exempt specified firms in the United Kingdom from the application of certain of the Commission's rules governing foreign futures and option transactions based on the existence of a generally comparable regulatory system in effect in the United Kingdom. Specifically, on May 15, 1989, the Commission granted the Rule 30.10 petitions of the SIB and of certain self-regulating organizations ("SROs"), *i.e.*, the Association of Futures Brokers and Dealers ("AFBD"), The Securities Association ("TSA") and the

---

[1] Rule 30.1(b), 17 CFR 30.1(b) (1988), defines a foreign option as any transaction or agreement which is or is held out to be of the character of, or is commonly known to the trade as, an "option," "privilege," "indemnity," "bid," "offer," "put," "call," "advance guaranty" or "decline guaranty," made or to be made on or subject to the rules of a foreign board of trade.

[2] *See* 51 FR 12104, 12105 (April 8, 1986). The pattern of abuses that was characteristic of option sales practices in the past, and which contributed to the Commission's decision to suspend all option sales in 1978, included the unavailability of data necessary to permit a determination whether orders for options had in fact been executed. *See* 43 FR 16155 (April 17, 1978).

[3] Although the statutory prohibition on the offer or sale of foreign options formerly contained in section 4c(c) of the Commodity Exchange Act ("Act") has been removed, *see* Futures Trading Act of 1986, Pub. L. No. 99–641, section 102, 100 Stat. 3556 (1987), the regulatory prohibition in Commission Rule 32.11, 17 CFR 32.11 (1988), adopted pursuant to section 4c(b) of the Act, remains in effect.

[4] 52 FR 28980, 28998. Notwithstanding the prohibition in Commission Rule 30.3(a), non-domestic exchange-traded options which are traded pursuant to the trade option exemption in Commission Rule 32.4(a), 17 CFR 32.4(a) (1988), may continue to be offered or sold.

[5] 51 FR 12104, 12105.

[6] *See* Section 37 of the Financial Services Act ("FSA") and Order of SIB dated April 25, 1988 declaring LIFFE to be an RIE attached as Appendix 6 to the May 24, 1989 Petition of LIFFE.

SIB has confirmed that it monitors all RIEs, including LIFFE, for compliance with their obligations as RIEs. *See* letter from M.B. Gittins, SIB, to Andrea M. Corcoran, Commission, dated July 28, 1989.

Investment Management Regulatory Organisation ("IMRO"), which are responsible for regulating the investment business activities of firms which they designate. In granting such petitions, the Commission determined that the requirements in Appendix A to Part 30, "Interpretative Statement with Respect to the Commission's Exemptive Authority Under § 30.10 of its Rules,"[7] generally had been satisfied and that compliance with the rules of the SIB and/or the equivalent rules of the relevant SRO may be substituted, subject to certain conditions, for compliance with specified sections of the Commodity Exchange Act.

As discussed more fully below, based upon its determinations with respect to the foregoing matters, and subject to the terms and conditions specified herein, the Division recommends that the Commission publish in the **Federal Register** this memorandum and approve and publish the attached Order permitting certain option contracts traded on LIFFE to be offered or sold in the United States.[8]

III. Discussion

Information Sharing

Prior to the imposition of the options ban in 1978, the ability of the Commission to address problems which occurred with respect to the offer or sale of certain ostensibly foreign options in the United States was impeded by the inaccessibility of information from their purported jurisdiction of origin. As a consequence, in determining to lift the options ban with respect to foreign products, the Commission indicated that a primary consideration would be the availability of transaction information.[9]

Information sharing arrangements have been the subject of extensive discussion between the Commission and the United Kingdom regulatory bodies in connection with the execution of the "Memorandum of Understanding between the United States Securities and Exchange Commission and the United Kingdom Department of Trade and Industry in matters relating to Securities and between the United States Commodity Futures Trading Commission and the United Kingdom Department of Trade and Industry in matters related to Futures" signed on September 23, 1986, as supplemented by the "Memorandum Relating to UK/US MOU" signed on November 22, 1988 adding the SIB as a signatory to that document, (hereinafter collectively referred to as "UK/US MOU") and the Side Letter Relating to UK/US MOU ("Side Letter") entered into on May 15, 1989 by the SIB and the Commission. In particular, the Side Letter provides for information sharing necessary to monitor compliance with applicable Part 30 rules and the terms and conditions of any order issued by the Commission under Part 30, including any foreign option order issued pursuant to Commission Rule 30.3(a). In addition, the Financial Information Sharing Memorandum of Understanding ("FISMOU") entered into on September 1, 1988 by, among others, the SIB, the Commission and United Kingdom and United States SROs and the Addendum to the FISMOU signed on May 15, 1989 provides for routine and "as needed" information sharing in connection with the financial condition of firms which are exempt from compliance with certain financial requirements pursuant to the FISMOU and the Addendum thereto.

Further, in its May 24, 1989 Petition, LIFFE has represented that it is committed to cooperating with United Kingdom regulatory authorities by sharing information with such authorities and that, as an RIE, LIFFE is obligated to do so under the FSA.[10]

Sales Practice Audits

In developing its pilot program for domestic exchange-traded options, the Commission specifically required as a condition of designation that the contract market seeking approval of an option adequately provide for the monitoring and detection of sales practice abuses.[11] As such abuses ultimately contributed to the banning of options trading altogether in 1978, the Commission has indicated that any options offered in the United States must be subject to an adequate sales practice audit program.[12] In this connection, LIFFE represents that under the FSA, SIB or the SRO to which a specific firm belongs is responsible for establishing sales practice rules and monitoring compliance with such rules. Specifically, LIFFE represents, and the Commission staff determined in connection with its review of the relevant Rule 30.10 petitions, that SIB, AFBD, TSA and IMRO each has sales practice rules which address, without limitation, customer complaints, supervision of employees and accounts, solicitation, notification of disciplinary actions, risk disclosure, contents of customer accounts, discretionary accounts and misleading advertising.[13] Further, SIB and the SROs have rules relating to "best execution." These rules are intended to prevent a firm from taking advantage of a customer's order, whether for its own account or for that of another customer. For example, SIB Conduct of Business Rule 5.15 establishes the priorities to be given to customers' orders in instances where a firm also is trading for its own account.

Additionally, the SIB and United Kingdom SROs have procedures for conducting sales practice audits of firms in the United Kingdom selling LIFFE options into the United States.[14] In particular, under Part 15 of SIB's Conduct of Business Rules, firms are required to establish and maintain written rules and compliance procedures to ensure compliance with the requirements of the FSA and the rules or regulations made by SIB under the FSA. SIB has established a direct regulation division to maintain continuous oversight with respect to firms which it has authorized. As a condition of recognition by SIB as an SRO, the SRO must demonstrate to SIB that it has rules relating to, among other things, protection of investors, the monitoring and enforcement of compliance with its rules and the promotion and maintenance of high standards of integrity and fair dealing which provide protection to investors "at least equivalent" to that provided by SIB under its rules. Also, the National Futures Association ("NFA") has confirmed by letter dated August 16, 1989 that the sales practices of firms located in the United States engaged in such activities will be audited.[15]

---

[7] Appendix A sets forth the elements the Commission will evaluate in determining whether a particular regulatory program may be found to be comparable for purposes of exemptive relief pursuant to Rule 30.10.

[8] *See* Exhibit A of the Order recommended herein which contains the list of option contracts and their terms and conditions. Additional LIFFE option contracts may be offered or sold thirty days after publication of the terms and conditions of the specific option contract in the **Federal Register**. The Division believes that review of the individual foreign option contracts should be limited at this time to the regulatory issues discussed above and should not include an analysis of whether these foreign option contracts would meet the Commission's economic purpose test, 17 CFR 33.4(a)(5)(i) (1988), or other criteria relating to the specific terms and conditions of the option contract. *See* 17 CFR 33.4.

[15] On January 14, 1988, the Commission approved amendments to NFA's Bylaws and the adoption of

Continued

In conjunction with the SROs' sales practice programs, LIFFE's Market Supervision Department ("MSD") conducts surveillance on a daily basis to monitor members' compliance with LIFFE rules and to ensure that an orderly and secure market is maintained.[16] LIFFE has represented that MSD's surveillance function encompasses:

(i) *Trading Surveillance*—MSD works with the [LIFFE's] Floor Trading Department of approximately 30 pit observers * * * [During normal market conditions, the pit observer] report[s] [all] bid, offer, and traded price levels for input to the price reporting system, and * * * ensure[s] compliance with floor trading procedures and maintain[s] an orderly market within the pit * * *. The surveillance of the market floor has been enhanced by the introduction of video recording of all futures and option pits [which assists in] * * * the reconstruction of a sequence of events in the pit for both dispute resolution and disciplinary purposes.

* * * * *

[LIFFE also has a real-time matching system and a requirement that all telephone lines onto the LIFFE floor be audio logged]. The real-time matching system is designed to ensure that transaction details are input, matched and processed promptly throughout the trading day and forms an integral part of LIFFE's Trade Registration System ("TRS"). MSD has real-time enquiry access to TRS during the trading day. This facility enables MSD to closely monitor trading activity; enquiry selection parameters used include trader, member, contract month, price and counterparty.

The audio logging of telephone lines to the market floor has been utilized by many brokers for several years. [LIFFE represents that its] [m]embers find that this facility often enables them to resolve amicably occasional disputes with their clients * * *.

(ii) *Market Surveillance*—MSD monitors the trades and positions of all Exchange members to detect the possible buildup of large positions or unusual trading activity. MSD has the right to require members to disclose for whom they are dealing [and] * * * also monitors the relationship between futures, options and cash market prices, their convergence at expiry, and the determination of [LIFFE] Delivery Settlement Prices.

On a daily basis, MSD is in close liaison with the clearing house [the International Commodities Clearing House, Ltd. ("ICCH")]. On a regular basis, MSD review[s] initial margin levels in conjunction with [ICCH] and, in response to a significant price movement or increase in volatility, MSD or [ICCH] may initiate an intraday margin call. Similarly, [ICCH] may apply differential margin requirements to specific clearing members in certain circumstances; perhaps where a single member holds a high percentage of open positions in a particular contract.

(iii) *Financial Surveillance*—MSD is responsible for ensuring members' compliance with [LIFFE's] net worth and financial requirements. These net worth requirements are independent from, although not inconsistent with, those of [ICCH] (for LIFFE clearing members) and of the various SRO's * * *.

Generally, MSD is authorized to investigate any suspected or alleged breach of LIFFE rules or trading procedures. Such an investigation may involve the interviewing of member staff, correspondence with the member, and analysis of documents and trading data. MSD has authority to visit the offices of LIFFE members and examine any records relating to their LIFFE business. Where sufficient evidence of an alleged breach of the rules is found, disciplinary proceedings will be initiated.[17]

Dispute Resolution

The availability of a forum to address complaints with respect to trade execution is relevant to any determination to lift the ban on foreign option products. This is because the provision of such a forum evidences the relevant foreign jurisdiction's intention to afford practical mechanisms to address complaints originating with customers not located in that jurisdiction and to assure a fair trading environment.

In recommending that the Commission grant the Rule 30.10 petition of SIB, AFBD, TSA and IMRO, the Staff Memoranda dated May 5, 1989 noted that SIB and each of the United Kingdom SROs have procedures for dispute resolution to redress customer complaints. However, to facilitate a customer's access to a dispute resolution forum, the Commission granted Rule 30.10 relief subject to the condition that each United Kingdom firm consent to participate in NFA's expanded arbitration program to cover disputes between United States customers and non-NFA member foreign firms in connection with transactions subject to part 30. Such consent, however, is subject to NFA's stated policy to reject any request for arbitration involving a claim arising primarily out of delivery, clearing, settlement or floor practices on any foreign exchange. Further, United Kingdom firms may require their United States customers to first exhaust certain mediation or conciliation procedures made available in the United Kingdom prior to initiating an NFA arbitration proceeding.[18]

Section 6 of LIFFE's Rules had required the compulsory referral of disputes arising out of any LIFFE contract to arbitration. In this regard, LIFFE has represented that its Board has approved amendments to section 6 of its Rules, the effects of which, according to LIFFE, will be as follows: [19]

(a) LIFFE will retain jurisdiction where the dispute arises primarily out of delivery, clearing, settlement or floor practices;

(b) In other areas of dispute, LIFFE will be able to decline jurisdiction if arbitration by some other body (*e.g.*, NFA and AFBD) seems more appropriate; and

(c) In the case of a United States customer, in disputes involving those matters referred to in paragraph (b) above, the customer may elect the forum in which he desires to arbitrate, NFA or United Kingdom arbitration.[20]

LIFFEs arbitration program is fully available to United States customers of LIFFE members. The rules envisage that the parties to the dispute may not be located in the United Kingdom and generally provide for written submissions by the parties. Although rule 6.8 provides for the possibility of a *viva voce* (that is, oral) hearing, paragraph (a) of rule 6.8 gives the arbitrators discretion to refuse such a hearing and to decide the case on the basis of written submissions. LIFFE generally would expect arbitrators to take into account the practicality and cost of attendance at a *viva voce* hearing by a party not located in the United Kingdom in deciding how to exercise their discretion in this regard.[21] In any event, a party need not appear at the hearing in person but may be represented by any agent engaged in the business of finance. *See* LIFFE rule 6.8(d).

---

new Bylaws to provide for the regulation of the foreign futures and option activities of NFA members and associates. By letter dated August 10, 1989, from Daniel A. Driscoll, Vice-President of NFA, to Andrea M. Corcoran, Commission, NFA confirmed that arrangements have been made to provide sales practice audits of firms in the United States selling LIFFE options.

[16] *See* Appendix 8 to May 24, 1989 Petition of LIFFE.

[17] *Id.*

[18] The United Kingdom mediation/conciliation and arbitration programs were examined in connection with the issuance of the Commission's Rule 30.10 Orders, and NFA's new international arbitration program was reviewed in connection with the Commission's approval of amendments to NFA's rules which became effective on June 12, 1989.

[19] *See* letters from J.L. Foyle and Nick Carew Hunt, LIFFE, to Andrea M. Corcoran and Jane C. Kang, Commission, dated June 28 and August 30, 1989.

[20] *See* letters from J.L. Foyle and Nick Carew Hunt, LIFFE, to Andrea M. Corcoran and Jane C. Kang, Commission, dated June 28 and August 30, 1989.

[21] *Id.*

Further, in an August 10, 1989 supplement to its May 24, 1989 Petition, LIFFE stated that its Board has approved further revisions to LIFFE's arbitration rules which clarify that *viva voce* hearings would, in the normal course of events, be held only if the arbitrators considered it necessary to avoid injustice or if, in the light of a request by one of the parties for a *viva voce* hearing, the arbitrators considered such a hearing necessary.[22]

Failure by a LIFFE member to refer or to participate in the reference of a dispute to arbitration or to comply with an award made against him is a disciplinary offense which may result in such member's suspension or expulsion from LIFFE. *See* LIFFE rule 6.13. The party obtaining an award in his favor may obtain a judgment in any court of competent jurisdiction to enforce the award. The decision of the arbitrators will be final, but a party may refer an issue to the High Court in England with the Court's leave on a point of law, on the grounds that the arbitrators engaged in improper conduct during the proceedings, the award was improperly procured or on certain other bases.

Regulatory Environment

When options were originally banned in the United States, they had not been subjected to a full regulatory program. It is appropriate, therefore, to inquire as to whether the market which proposes to offer option products in the United States has a regulatory structure which addresses market integrity and the sales practices of firms doing options business with United States firms or customers.[23] This review is for the purpose of establishing the existence of a supervised marketplace and does not constitute a comparability analysis of the nature required under Rule 30.10 for certain other relief the Commission may accord under its foreign futures and option rules.[24] The United Kingdom regulatory system under the Financial Services Act, however, was the subject of detailed scrutiny during the Commission's consideration of the petitions submitted by SIB, AFBD, TSA and IMRO on behalf of designated firms for relief from the application of certain Commission rules under Commission Rule 30.10. In reviewing such petitions, the Commission's staff examined, among other things, the regulation of United Kingdom RIEs, including LIFFE. In addition, in connection with this petition, SIB has confirmed that:

> In issuing any Order pursuant to section 37 of the Financial Services Act 1986 declaring an exchange to be a recognized investment exchange ("RIE"), the Securities and Investments Board ("SIB") must determine, among other things, that such an exchange has adequate arrangments and resources for the effective monitoring and enforcement of compliance with its rules.
>
> In connection with the foregoing, as the United Kingdom authority with supervisory responsibilities over RIEs, the SIB confirms to the Commodity Futures Trading Commission that it monitors all RIEs for compliance with their obligations as RIEs.[25]

Further, Commission staff analyzed the rules of SIB, AFBD, TSA and IMRO as they related to fitness review of qualifications of persons, minimum financial requirements, protection of customer funds, recordkeeping and reporting requirements and sales practice and compliance standards. The Staff Memoranda dated May 5, 1989 concluded that subject to the terms and conditions recommended therein, the systems and rules in effect in the United Kingdom afforded protections comparable to those in effect in the United States.

The only matter of note in connection with LIFFE's petition under Rule 30.3(a) which was not considered in the context of the Commission's consideration of the Rule 30.10 petitions of the SIB, AFBD, TSA and IMRO relates to the requirement that any firm which offers or sells any such LIFFE option product must provide the Commission's options risk disclosure statement in Rule 33.7.

The Commission stated in granting the Rule 30.10 petitions of SIB, AFBD, TSA and IMRO that in considering any petition requesting that United Kingdom option products subject to Part 30 be approved for offer or sale to customers resident in the United States, the Commission would assess the degree to which the United Kingdom's options risk disclosure statement addresses the same matters as those set forth in the Commission's options risk disclosure statement in determining whether the United Kingdom's statement may be substituted for the language in Commission Rule 33.7. The Division has reviewed the general risk disclosure statements required to be provided under the rules of SIB and the United Kingdom SROs [26] and believes that the risks addressed in such disclosure statements in connection with option transactions are not as comprehensive as the risk disclosures contained in Commission Rule 33.7. Accordingly, the Division recommends that the Commission require as a condition of granting LIFFE's petition that any firm, including a firm in the United Kingdom granted relief under Rule 30.10, provide customers resident in the United States with the options risk disclosure statement required by Rule 33.7.

However, all option contracts traded on LIFFE are designed with a provision for deferred payment (on exercise or expiry) of the option premium rather than payment at purchase.[27] In this connection, LIFFE has represented that in order to maintain prudent cover against the risk of loss in option positions, a system of margining supports the form of contract. This system is similar in principle and practice to that used for futures contracts, and involves three elements:

(i) Daily revaluation of positions (marking-to-market) resulting in positive or negative variation margin;

(ii) Initial margin calculated to provide protection against short term position risk;

(iii) Full integration with the margining of related futures contracts.

The form of the option contract and associated margining do not affect the "traditional" characteristic of purchased options in that the maximum potential loss is limited to the price of the option (*i.e.* premium).

In its June 28, 1989 supplement to its May 24, 1989 Petition, LIFFE has represented that the main benefits of LIFFE's option margining system may be summarized as follows:

> —Improved utilization of funds and cash flow.
>
> As for futures contracts, the buyer of the option contracts does not need to pay the full

---

[22] *See* letters from J.L. Foyle and Nick Carew Hunt, LIFFE, to Andrea M. Corcoran and Jane C. Kang, Commission, dated August 10, 16 and 30, 1989.

[23] Although the Commission has not indicated an intention to review the terms and conditions of foreign option products, *see* S. Rep. No. 384, 97th Cong., 2d Sess. 45–46 (1982), the Commission's authority with respect to options is plenary.

[24] 52 FR 28980, 29001.

[25] *See* letter from M.B. Gittins, SIB, to Andrea M. Corcoran, Commission, dated July 28, 1989.

[26] *See* SIB Conduct of Business Rules 4.15(3)(a) and 4.16(3) and AFBD Rules 5.45.1 and 5.45.4. In a supplemental filing dated June 28, 1989, LIFFE has represented that it is currently drafting the necessary changes to LIFFE Rules and a General Notice which will require LIFFE members to incorporate the Commission Rule 33.7 options risk disclosure statement into their customer agreements with customers resident in the United States. *See* letter from J.L. Foyle, LIFFE, to Andrea M. Corcoran, Commission, dated June 28, 1989.

[27] By letters dated July 11 and 27, 1989, the Chicago Board of Trade and the Chicago Mercantile Exchange, respectively, petitioned the Commission for repeal of Commission Regulation 33.4(a)(2), 17 CFR 33.4(a)(2) (1988), which requires the full payment of the premium in connection with the purchase of a domestic-exchange traded option. On March 14, 1989, the Commission published a Notice of Petition for Rulemaking and a Request for Comments to delete Commission Regulation 33.4(a)(2) in order to permit the development of "futures-style margining" of commodity options. 54 FR 11233 (March 17, 1989).

DEPARTMENT OF HOUSING AND

1. The authority citation for part 8

responsible for the improvement in air

price at the time of purchase, and the daily variation margin results in improved cash flow.

—Profits made available *without* the need for early exercise.

Cash-flow problems are reduced where options are used in hedging strategies, in conjunction with futures or other options. By making available profits through daily variation margin, there is less likely to be a need to liquidate a position for reasons of cash flow rather than risk—an important advantage at times of major market movements, such as occurred in October 1987.

—Encouragement of risk-management.

Major users have commented that daily variation margin assists them in monitoring profit and loss, and LIFFE believes that this has proved to be a significant benefit. This is consistent with what happens with futures contracts and builds on that experience.

—Appreciation by users of the risks involved in option trading.

A positive feature is that option margining discourages the naked writing of options * * * as the seller is prevented from using options to generate immediate cash in order to avoid problems elsewhere.

In connection with the foregoing, in order to ensure that customers in the United States solicited to trade a LIFFE option contract understand that LIFFE permits the deferred payment of premium on such product, the Division further recommends that the Commission require as a condition of issuing the Order attached hereto that firms provide the Addendum attached to that Order as Exhibit B if they elect not to collect the full premium as margin from customers at the time of purchase.

IV. Conclusion

Based upon the foregoing, the representations of LIFFE contained in its letter dated May 24, 1989, as supplemented, SIB's letter dated July 28, 1989 confirming tha tit monitors LIFFE for compliance with its obligations as an RIE, the issuance by the Commission of Rule 30.10 petitions to SIB, AFBD, TSA and IMRO on May 15, 1989, the existence of, among other things, information sharing arrangements as discussed above and pursuant to Commission Rule 30.3(a) the Division recommends that the Commission publish in the **Federal Register** this memorandum and approve and publish the attached order authorizing the offer or sale in the United States of options traded on LIFFE subject to the following terms and conditions:

(1) except as otherwise permitted under the Commodity Exchange Act and regulations thereunder, that no offer or sale of any LIFFE option product in the United States will be made until thirty days after publication in the **Federal Register** of notice specifying the particular option(s) to be offered or sold pursuant to the order;

(2) that SIB and LIFFE represent that LIFFE is an RIE under the FSA and, as such, is subject to regulatory obligations under that Act, that transactions on LIFFE in the LIFFE option(s) referenced in such notice will be subject to the rules of LIFFE and that SIB and/or LIFFE will provide the Commission with information as to all material changes thereto promptly;

(3) that options on futures on stock indices [28] and options on futures on foreign government debt securities [29] will not be permitted to be offered or sold absent certain additional procedures;

(4) that options traded pursuant to the Order may only be offset on LIFFE or another market with respect to which the Commission has issued an order under Commission Rule 30.3(a) authorizing its option products to be offered or sold in the United States;

(5) that options traded pursuant to the Order may only be offered or sold by persons registered in the appropriate capacity under the Commodity Exchange Act or by persons who have been granted an exemption from registration under Rule 30.10 based on comparability of regulation, provided such persons also provide customers resident in the United States with the options risk disclosure statement in Commission Rule 33.7 and, if the persons elect not to collect the full premium for the contract as margin from the customer at the time of purchase, the Addendum thereto attached to the Order as Exhibit B, but may not be offered or sold by persons doing business in the United States pursuant to interim relief granted and extended by the Commission (*see* 53 FR 3338 (Feb. 5, 1988) and subsequent orders and letters of the Commission); and

(6) if experience demonstrates that the continued effectiveness of the order would be contrary to public policy or the public interest or that the operation or execution of the systems and arrangements in place for the trading of the option products subject thereto, or the exchange of information with respect to such products, do not warrant continuation of the authorization granted therein, the Commission may modify, suspend, terminate or otherwise restrict the authorization granted in the order, as appropriate, on its own motion.

LIFFE has specified that the following option contracts, the terms and conditions for which are attached hereto, will initially be offered or sold in the United States: Options on Long Gilt, United States Treasury Bond, German Government Bond, Three-month Sterling Interest Rate and Three-month Eurodollar Interest Rate contracts and on Sterling Currency and Dollar-Mark Currency.[30] As noted in condition (6) above, the Division recommends that the Commission retain the authority to terminate the order granting authorization to offer or sell LIFFE options in the United States or to take such other steps as may be appropriate in light of the circumstances. In that connection, if the order is approved by the Commission, the Division intends to monitor the offer or sale of LIFFE options to persons in the United States pursuant to the terms of the recommended order and to make recommendations for further action to the Commission, as appropriate, in light of the operation of that program.

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

Office of the Secretary

24 CFR Part 8

[Docket No. R-89-528; FR-770]

Nondiscrimination Based on Handicap in Federally Assisted Programs and Activities of the Department of Housing and Urban Development

AGENCY: Office of the Secretary, HUD.

ACTION: Technical amendment.

SUMMARY: The Department of Housing and Urban Development's regulations, as implemented by section 504 of the Rehabilitation Act of 1973, as amended, assure against nondiscrimination based on handicap in programs and activities receiving Federal financial assistance from the Department. Certain sections of the Department's regulations contain information collection requirements and were submitted for approval to the Office of Management and Budget (OMB), in accordance with the Paperwork Reduction Act of 1980 (Pub. L. 96–511). The purpose of this document is to amend those regulations to include OMB control numbers at the places where current information collection requirements are described.

EFFECTIVE DATE: September 12, 1989.

FOR FURTHER INFORMATION CONTACT: Waite Madison, Acting section 504 Program Manager, Office of Fair Housing and Equal Opportunity, (202) 755–5404. This is not a toll-free number.

SUPPLEMENTARY INFORMATION:

Paperwork Reduction Act

The information collection requirements contained in the regulatory sections listed below were approved by the Office of Management and Budget on August 8, 1988, under the provisions of the Paperwork Reduction Act of 1980 (Pub. L. 96–511) and assigned the control number listed. The approval expires on January 31, 1991.

List of Subjects in 24 CFR Part 8

Administrative practice and procedure, Handicapped, Civil rights, Reporting and recordkeeping requirements, Equal employment opportunity, Loan programs: housing and community development, Grant programs: housing and community development.

Text of the Amendment

Accordingly, part 8 of title 24 of the Code of Federal Regulations is amended as follows:

1. The authority citation for part 8 continues to read as follows:

Authority: Sec. 504 of the Rehabilitation Act of 1973 (29 U.S.C. 794); sec. 109 of the Housing and Community Development Act of 1974 (42 U.S.C. 5309); sec. 7(d) of the Housing and Community Development Act (42 U.S.C. 3535(d)).

§§ 8.21, 8.24, 8.25, 8.51, 8.55 [Amended]

2. Sections 8.21, 8.24, 8.25, 8.51, and 8.55 are amended by adding at the end of each section, the following statement:

(Approved by the Office of Management and Budget under OMB Control Number 2529–0034)

Dated: September 6, 1989.

Grady J. Norris,

Assistant General Counsel for Regulations.

[FR Doc. 89-21364 Filed 9-11-89; 8:45 am]

BILLING CODE 4210-32-M

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 81

[FRL-3644-7]

Designation of Areas for Air Quality Planning Purposes; Attainment Status Designations; Wisconsin

AGENCY: United States Environmental Protection Agency (USEPA).

ACTION: Notice of final rulemaking.

SUMMARY: In a June 29, 1988 (53 FR 24454), notice, USEPA proposed to disapprove a request from the State of Wisconsin to revise the attainment status designation, at 40 Code of Federal Regulations (CFR) 81.350, for a sub-city area in the City of Kenosha, Kenosha County, Wisconsin, from secondary nonattainment to attainment relative to the former total suspended particulates (TSP) National Ambient Air Quality Standards (NAAQS). Under the Clean Air Act (CAA) and USEPA's transitional particulate matter policy (July 1, 1987, 52 FR 24682), TSP designations can continue to be changed if sufficient data are available to warrant such a change. USEPA continues to process TSP redesignation requests, because various regulatory provisions remain tied to the TSP attainment status.

USEPA is disapproving Wisconsin's redesignation request because the Wisconsin Department of Natural Resources (WDNR) failed to provide sufficient evidence that (1) the monitoring data were representative of worst-case ambient concentrations, (2) emission reductions must be federally approved, permanent, and resulted in the decrease in ambient concentrations, (3) dispersion techniques were not responsible for the improvement in air quality. These redesignation criteria are contained in an April 21, 1983, memorandum entitled "Section 107 Designation Policy Summary" from Sheldon Meyers, then Director, Office of Air Quality Planning and Standards (OAQPS), and a September 30, 1985, memorandum entitled "Total Suspended Particulate (TSP) Redesignations" from Gerald A. Emison, Director, OAQPS.

EFFECTIVE DATE: This final rulemaking becomes effective October 12, 1989.

ADDRESSES: Copies of the redesignation request, technical support documents and the supporting air quality data are available at the following addresses:

U.S. Environmental Protection Agency, Region V, Air and Radiation Branch (5AR-26), 230 South Dearborn Street, Chicago, Illinois 60604.

Wisconsin Department of Natural Resources, Bureau of Air Management, 101 South Webster, Madison, Wisconsin 53707.

FOR FURTHER INFORMATION CONTACT: Uylaine E. McMahan, (312) 886–6031.

SUPPLEMENTARY INFORMATION: Under section 107(d) of the CAA, the Administrator of USEPA has promulgated the NAAQS attainment status for all areas within each State. For Wisconsin, see 43 FR 8962 (March 3, 1978), 43 FR 45993 (October 5, 1978), and 40 CFR 81.350. These area designations are subject to revision whenever sufficient data become available to warrant a redesignation. A sub-city area of Kenosha, Wisconsin, was designated as not attaining the secondary TSP standard. On July 23, 1987, pursuant to section 107(d)(5) of the CAA, the WDNR requested that the sub-city nonattainment area of Kenosha[1] be redesignated to attainment of the TSP NAAQS.

For areas designated nonattainment for TSP, a TSP State Implementation Plan (SIP) was required which satisfied the requirements of section 110(a) and Part D of the CAA, including assuring the attainment and maintenance of the TSP NAAQS. USEPA revised the particulate matter standard on July 1, 1987, (52 FR 24634) and eliminated the TSP ambient air quality standard. The revised standard is expressed in terms of particulate matter with nominal diameter of 10 micrometers or less

---

[1] The Kenosha sub-city secondary TSP nonattainment area is defined as follows:

North: 52nd Street east from 39th Avenue to Lake Michigan.

West: 39th Avenue south from 52nd Street to 67th Street.

South: 67th from 39th Avenue to Lake Avenue.

East: Lake Michigan.

(PM$_{10}$). USEPA will continue to process redesignations of areas from nonattainment to attainment for TSP in keeping with past policy, because various regulatory provisions such as new source review and prevention of significant deterioration are keyed to the attainment status of areas. The July 1, 1987, notice (page 24682, column 1) described USEPA's transition policy. TSP redesignation requests are to be reviewed for compliance with USEPA's redesignation policies issued in memoranda on April 21, 1983, and September 30, 1985. These are: (1) The monitoring data must be representative of worst-case ambient concentrations, (2) emission reductions must be federally approved, must be permanent, and must have resulted in the decrease in ambient concentrations, (3) dispersion techniques must not be responsible for the improvement in air quality.

USEPA proposed to disapprove Wisconsin's redesignation request on June 29, 1988. Comments on this notice of proposed rulemaking were received from WDNR. Comments and USEPA's responses are provided below:

The WDNR comments addressed three basic points: (1) Applicable requirements for approvable TSP redesignations, (2) the implementation of Reasonably Available Control Technology (RACT) for TSP in 1983, and (3) a request to act promptly on the Wisconsin PM$_{10}$ SIP. A discussion of each item follows.

Applicable Requirements—As technical support for Wisconsin's redesignation requests, WDNR only submitted the Kenosha County monitoring data. WDNR believed that the monitoring data were all that were necessary based on their understanding of a July 1987 conference call between USEPA Region V and the Region V States. However, other requirements do apply. The PM$_{10}$ regulations published on July 1, 1987 (52 FR 24682) clearly state that "[redesignation] requests will continue to be reviewed during the transition period for compliance with USEPA's redesignation policies as issued in memoranda from the Director of the Office of Air Quality Planning and Standards, April 21, 1983, and September 30, 1985."

Implementation of RACT—According to WDNR, the requirement for a USEPA control strategy which has been fully implemented is fulfilled by the Wisconsin TSP RACT rules as approved by USEPA in 1983. USEPA disagrees because the RACT rules apply only in primary nonattainment areas. In the March 9, 1983, **Federal Register** notice (48 FR 9860), USEPA took no action on the RACT rules for secondary nonattainment areas in Brown (Green Bay), Dane (Madison), Douglas, Kenosha (Kenosha), Manitowoc (Manitowoc), Marathon, Racine, Winnebago, and Wood Counties, because WDNR did not submit a plan for the RACT rules for secondary nonattainment areas in Brown (Green Bay), Dane (Madison), Douglas, Kenosha (Kenosha), Manitowoc (Manitowoc), Marathon, Racine, Winnebago, and Wood Counties, because WDNR did not submit a plan for attainment and maintenance of the TSP NAAQS in these areas. The WDNR would have had to state specifically that all sources are in compliance with the 1972 SIP and note those specific federally enforceable emission decreases from mid-1970 emission levels which resulted in the change to attainment.

Wisconsin PM$_{10}$ Committal SIP—WDNR urged prompt action on their PM$_{10}$ committal SIP. An approved commital SIP would allow the redesignation of Kenosha without the information currently required under the transition policy. This is because the transition policy applies to areas which are in transition from TSP to PM$_{10}$ regulations. Once the committal SIP is approved, the PM$_{10}$ Group Three Areas, of which Kenosha is a part, are no longer in transition. WDNR submitted their PM$_{10}$ committal SIP on April 30, 1988. USEPA is proceeding with rulemaking. WDNR may formally request that USEPA redesignate Kenosha (and other Group Three Areas) concurrent with approval of the committal SIP.

Conclusion

USEPA is disapproving the redesignation request for a sub-city nonattainment area of Kenosha, Wisconsin, because the WDNR did not demonstrate that (1) the monitors indicating attainment were placed at the points of expected maximum TSP impact, (2) an USEPA-approved control strategy had been implemented, (3) emission reductions and the improvement in air quality were not merely the result of economic downturn or temporary, and (4) dispersion techniques were not responsible for the improvement in air quality.

Under section 307(b)(1) of the Act, petitions for judicial review of this action must be filed in the United States Court of Appeals for the appropriate circuit by November 13, 1989. This action may not be challenged later in the proceedings to enforce its requirements. (See 307(b)(2).)

The Office of Management and Budget has exempted this rule from the requirements of section 3 of Executive Order 12291.

40 CFR Part 81

[FRL–3644–6]

Designation of Areas for Air Quality Planning Purposes; Attainment Status Designations; Wisconsin

AGENCY: United States Environmental Protection Agency (USEPA).

ACTION: Notice of final rulemaking.

SUMMARY: In a June 29, 1988 (53 FR 24454), notice, USEPA proposed to disapprove a request from the State of Wisconsin to revise the attainment status designation, at 40 Code of Federal Regulations (CFR) 81.350, for a sub-city area in the City of Manitowoc, Manitowoc County, Wisconsin, from secondary nonattainment to attainment relative to the former total suspended particulates (TSP) National Ambient Air Quality Standards (NAAQS). Under the Clean Air Act (CAA) and USEPA's transitional particulate matter policy (July 1, 1987, 52 FR 24682), TSP designations can continue to be changed if sufficient data are available to warrant such a change. USEPA continues to process TSP redesignation requests, because various regulatory provisions remain tied to the TSP attainment status.

USEPA is disapproving Wisconsin's redesignation request because the Wisconsin Department of Natural Resources (WDNR) failed to provide sufficient evidence that (1) the monitoring data were representative of worst-case ambient concentrations, (2) emission reductions were federally approved, were permanent, and resulted in the decrease in ambient concentrations, (3) dispersion techniques were not responsible for the improvement in air quality. These redesignation criteria are contained in an April 21, 1983, memorandum entitled "Section 107 Designation Policy Summary" from Sheldon Meyers, then Director, Office of Air Quality Planning and Standards (OAQPS), and a September 30, 1985, memorandum entitled "Total Suspended Particulate (TSP) Redesignations" from Gerald A. Emison, Director, OAQPS.

EFFECTIVE DATE: This final rulemaking becomes effective October 12, 1989.

ADDRESSES: Copies of the redesignation request, technical support documents and the supporting air quality data are available at the following addresses:

U.S. Environmental Protection Agency, Region V, Air and Radiation Branch (5AR–26), 230 South Dearborn Street, Chicago, Illinois 60604.

Wisconsin Department of Natural Resources, Bureau of Air Management, 101 South Webster, Madison, Wisconsin 53707.

FOR FURTHER INFORMATION CONTACT: Uylaine E. McMahan, (312) 886–6031.

SUPPLEMENTARY INFORMATION: Under section 107(d) of the CAA, the Administrator of USEPA has promulgated the NAAQS attainment status for all areas within each State. For Wisconsin, see 43 FR 8962 (March 3, 1978), 43 FR 45993 (October 5, 1978), and 40 CFR 81.350. These area designations are subject to revision whenever sufficient data become available to warrant a redesignation. A sub-city area of Manitowoc, Wisconsin, was designated as not attaining the secondary TSP standard. On July 23, 1987, pursuant to section 107(d)(5) of the CAA, the WDNR requested that the sub-city nonattainment area of Manitowoc[1] be redesignated to attainment of the TSP NAAQS.

For areas designated nonattainment for TSP, a TSP State Implementation Plan (SIP) was required which satisfied the requirements of section 110(a) and part D of the CAA, including assuring the attainment and maintenance of the TSP NAAQS. USEPA revised the particulate matter standard on July 1, 1987 (52 FR 24634), and eliminated the TSP ambient air quality standard. The revised standard is expressed in terms of particulate matter with nominal diameter of 10 micrometers or less (PM$_{10}$). USEPA will continue to process redesignations of areas from nonattainment to attainment for TSP in keeping with past policy, because various regulatory provisions such as new source review and prevention of significant deterioration are keyed to the attainment status of areas. The July 1, 1987, notice (page 24682, column 1) described USEPA's transition policy regarding TSP redesignations. According to USEPA's transition policy, TSP redesignation requests are to be reviewed for compliance with USEPA's redesignation policies issued in memoranda on April 21, 1983, and September 30, 1985. These are: (1) The monitoring data must be representative of worst-case ambient concentrations, (2) emission reductions must be federally approved, must be permanent, and must have resulted in the decrease in ambient concentrations, (3) dispersion techniques must not be responsible for the improvement in air quality.

USEPA proposed to disapprove Wisconsin's redesignation request on June 29, 1988. Comments on this notice of proposed rulemaking were received from WDNR. Comments and USEPA's responses are provided below:

The WDNR comments addressed three basic points: (1) Applicable requirements for approvable TSP redesignations, (2) the implementation of Reasonably Available Control Technology (RACT) for TSP in 1983, and (3) a request to act promptly on the Wisconsin PM$_{10}$ SIP. A discussion of each item follows.

Applicable Requirements—As technical support for Wisconsin's redesignation requests, WDNR only submitted the Manitowoc County monitoring data. WDNR believed that the monitoring data were all that were necessary based on their understanding of a July 1987 conference call between USEPA Region V and the Region V States. However, other requirements do apply. The PM$_{10}$ regulations published on July 1, 1987 (52 FR 24682) clearly state that "[redesignation] requests will continue to be reviewed during the transition period for compliance with USEPA's redesignation policies as issued in memoranda from the Director of the Office of Air Quality Planning and Standards, April 21, 1983, and September 30, 1985."

Implementation of RACT—According to WDNR, the requirement for a USEPA control strategy which has been fully implemented is fulfilled by the Wisconsin TSP RACT rules as approved by USEPA in 1983. USEPA disagrees because the RACT rules apply only in primary nonattainment areas. In the March 9, 1983, **Federal Register** notice (48 FR 9860), USEPA took no action on the RACT rules for secondary nonattainment areas in Brown (Green Bay), Dane (Madison), Douglas, Kenosha (Kenosha), Manitowoc (Manitowoc), Marathon, Racine, Winnebago, and Wood Counties, because WDNR did not submit a plan for attainment and maintenance of the TSP NAAQS in these areas. The WDNR would have had to state specifically that all sources are in compliance with the 1972 SIP and note those specific federally enforceable emission decreases from mid-1970 emission levels which resulted in the change to attainment.

Wisconsin PM$_{10}$ Committal SIP—WDNR urged prompt action on their PM$_{10}$ committal SIP. An approved committal SIP would allow the redesignation of Manitowoc without the information currently required under the transition policy. This is because the transition policy applies to areas which are in transition from TSP to PM$_{10}$ regulations. Once the committal SIP is approved, the PM$_{10}$ Group Three Areas, of which Manitowoc is a part, are longer in transition. WDNR submitted their PM$_{10}$ committal SIP on April 30, 1988. USEPA is proceeding with rulemaking. WDNR may formally request that USEPA redesignate Manitowoc (and other Group Three Areas) concurrent with approval of the committal SIP.

Conclusion

USEPA is disapproving the redesignation request for a sub-city nonattainment area of Manitowoc, Wisconsin, because the WDNR did not submit sufficient documentation to demonstrate that (1) the monitoring data were representative of worst-case ambient concentrations, (2) emission reductions were federally approved, were permanent, and resulted in the decrease in ambient concentrations, and (3) dispersion techniques were not responsible for the improvement in air quality.

Nothing in this action should be construed as permitting or allowing or establishing a precedent for any future request for revision to any SIP. Each request for revision to the SIP shall be considered separately in light of specific technical, economic, and environmental factors and in relation to relevant statutory and regulatory requirements.

Under section 307(b)(1) of the Act, petitions for judicial review of this action must be filed in the United States Court of Appeals for the appropriate circuit by November 13, 1989. This action may not be challenged later in the proceedings to enforce its requirements. (See 307(b)(2).)

The Office of Management and Budget has exempted this rule from the requirements of section 3 of Executive Order 12291.

---

[1] The Manitowoc sub-city secondary TSP nonattainment area is defined as follows:

North: East from Manitowoc River to York St. to Lake Michigan.

West: 14th St. south from Wollmer St. to Hamilton St.

South: Hamilton St. east from 14th St. to Lake Michigan.

East: Lake Michigan.

40 CFR Part 81

[FRL-3644-4]

Designation of Areas for Air Quality Planning Purposes; Attainment Status Designations; Wisconsin

AGENCY: United States Environmental Protection Agency (USEPA).

ACTION: Notice of Final Rulemaking.

SUMMARY: In a June 29, 1988 (53 FR 24454), notice, USEPA proposed to disapprove a request from the State of Wisconsin to revise the attainment status designation, at 40 Code of Federal Regulations (CFR) 81.350, for a sub-city area in the City of Madison, Dane County, Wisconsin, from secondary nonattainment to attainment relative to the former total suspended particulates (TSP) National Ambient Air Quality Standards (NAAQS). Under the Clean Air Act (CAA) and USEPA's transitional particulate matter policy (July 1, 1987, 52 FR 24682), TSP designations can continue to be changed if sufficient data are available to warrant such a change. USEPA will continue to process TSP redesignation requests, because various regulatory provisions remain tied to the TSP attainment status.

USEPA is disapproving Wisconsin's redesignation request because the Wisconsin Department of Natural Resources (WDNR) failed to demonstrate that (1) an USEPA-approved control strategy had been implemented, (2) emission reductions and the improvement in air quality were not merely the result of economic downturn or temporary, and (3) dispersion techniques were not responsible for the improvement in air quality. In addition, although WDNR did submit eight consecutive quarters of quality-assured data, they failed to demonstrate that the monitors indicating attainment were placed at the points of expected maximum TSP impact. These redesignation criteria are contained in an April 21, 1983, memorandum entitled "Section 107 Designation Policy Summary" from Sheldon Meyers, then Director, Office of Air Quality Planning and Standards (OAQPS), and a September 30, 1985, memorandum entitled "Total Suspended Particulate (TSP) Redesignations" from Gerald A. Emison, Director, OAQPS.

EFFECTIVE DATE: This final rulemaking becomes effective October 12, 1989.

ADDRESSES: Copies of the redesignation request, technical support documents and the supporting air quality data are available at the following addresses:

U.S. Environmental Protection Agency, Region V, Air and Radiation Branch (5AR-26), 230 South Dearborn Street, Chicago, Illinois 60604.

Wisconsin Department of Natural Resources, Bureau of Air Management, 101 South Webster, Madison, Wisconsin 53707.

FOR FURTHER INFORMATION CONTACT: Uylaine E. McMahan, (312) 886–6031.

SUPPLEMENTARY INFORMATION: Under section 107(d) of the CAA, the Administrator of USEPA has promulgated the NAAQS attainment status for all areas within each State. For Wisconsin, see 43 FR 8962 (March 3, 1978), 43 FR 45993 (October 5, 1978), and 40 CFR 81.350. These area designations are subject to revision whenever sufficient data become available to warrant a redesignation. A sub-city area of Madison, Wisconsin, was designated as not attaining the secondary TSP standard. On July 23, 1987, pursuant to section 107(d)(5) of the CAA, the WDNR requested that the sub-city nonattainment area of Madison [1] be redesignated to attainment of the TSP NAAQS.

For areas designated nonattainment for TSP, a TSP State Implementation Plan (SIP) was required which satisfied the requirements of section 110(a) and Part D of the CAA, including assuring the attainment and maintenance of the TSP NAAQS. USEPA revised the particulate matter standard on July 1, 1987, (52 FR 24634) and eliminated the TSP ambient air quality standard. The revised standard is expressed in terms of particulate matter with nominal diameter of 10 micrometers or less (PM_{10}). USEPA will continue to process redesignations of areas from nonattainment to attainment for TSP in keeping with past policy, because various regulatory provisions such as new source review and prevention of significant deterioration are keyed to the attainment status of areas. The July 1, 1987, notice (page 24682, column 1) described USEPA's transition policy regarding TSP redesignations. According to USEPA's transition policy, TSP redesignation requests are to be reviewed for compliance with USEPA's redesignation policies issued in memoranda on April 21, 1983, and September 30, 1985. These are: (1) The monitoring data must be representative of worst-case ambient concentrations, (2) emission reductions must be federally approved, must be permanent, and must have resulted in the decrease in ambient concentrations, (3) dispersion techniques must not be responsible for the improvement in air quality.

Based on these criteria, USEPA proposed to disapprove Wisconsin's redesignation request on June 29, 1988 (53 FR 24454). Comments on this notice of proposed rulemaking were received from WDNR. Comments and USEPA's responses are provided below:

The WDNR comments addressed three basic points: (1) Applicable requirements for approvable TSP redesignations, (2) the implementation of Reasonably Available Control Technology (RACT) for TSP in 1983, and (3) a request to act promptly on the Wisconsin PM_{10} SIP. A discussion of each item follows.

Applicable Requirements—As technical support for Wisconsin's redesignation requests, WDNR only submitted the Dane County monitoring data. WDNR believed that the monitoring data were all that were necessary based on this understanding of a July 1987 conference call between the USEPA Region V and the Region V States. However, other requirements do apply. The PM_{10} regulations published on July 1, 1987, (52 FR 24682) clearly state that "[redesignation] requests will continue to be reviewed during the transition period for compliance with USEPA's redesignation policies as issued in memoranda from the Director of the Office of Air Quality Planning and Standards, April 21, 1983, and September 30, 1985."

Implementation of RACT—According to WDNR, the requirement for a USEPA control strategy which has been fully implemented is fulfilled by the Wisconsin TSP RACT rules as approved by USEPA in 1983. USEPA disagrees because the RACT rules apply only in primary nonattainment areas. In the March 9, 1983, **Federal Register** notice (48 FR 9860), USEPA took no action on the RACT rules for secondary nonattainment areas in Brown (Green Day), Dane (Madison), Douglas, Kenosha (Kenosha), Manitowoc (Manitowoc), Marathon, Racine, Winnebago, and Wood Counties, because WDNR did not submit a plan for attainment and maintenance of the TSP NAAQS in these areas. The WDNR would have had to state specifically that all sources are in compliance with the 1972 SIP and note those specific federally enforceable emission decreases from mid-1970 emission levels which resulted in the change to attainment.

Wisconsin PM_{10} Committal SIP—WDNR urged prompt action on their PM_{10} commital SIP. An approved commital SIP would allow the redesignation of Madison without the information currently required under the transition policy. This is because the transition policy applies to areas which are in transition from TSP to PM_{10} regulations. Once the committal SIP is approved, the PM_{10} Group Three Areas, of which Madison is a part, are no longer in transition. WDNR submitted their PM_{10} committal SIP on April 30, 1988. USEPA is proceeding with rulemaking. WDNR may formally request that USEPA redesignate Madison (and other Group Three Areas) concurrent with approval of the committal SIP.

Conclusion

USEPA is disapproving the redesignation request for a sub-city nonattainment area of Madison, Wisconsin, because the WDNR did not demonstrate that (1) the monitors indicating attainment were placed at the points of expected maximum TSP impact, (2) an USEPA-approved control strategy had been implemented, (3) emission reductions and the improvement in air quality were not merely the result of economic downturn or temporary, and (4) dispersion techniques were not responsible for the improvement in air quality.

Under Section 307(b)(1) of the Act, petitions for judicial review of this action must be filed in the United States Court of Appeals for the appropriate circuit by November 13, 1989. This action may not be challenged later in the proceedings to enforce its requirements. (See 307(b)(2).)

The Office of Management and Budget has exempted this rule from the requirements of section 3 of Executive Order 12291.

40 CFR Part 272

[FRL-3643-7]

Hazardous Waste Management Program Codification of Approved State Hazardous Waste Program for Illinois

AGENCY: Environmental Protection Agency.

ACTION: Immediate final rule and request for comments.

SUMMARY: The Resource Conservation and Recovery Act of 1976 as amended (RCRA) authorizes the United States Environmental Protection Agency (EPA) to grant Final Authorization to States to operate their hazardous waste management programs in lieu of the Federal program. 40 CFR Part 272 codifies EPA's prior authorization of State programs and incorporates by reference those provisions of the State statutes and regulations that EPA will enforce under RCRA Section 3008. Thus, EPA is codifying the Illinois authorized State program in Part 272.

DATES: The codification of Illinois' authorized hazardous waste program shall be effective November 13, 1989 unless EPA publishes a prior Federal Register action withdrawing this immediate final rule. All comments on Illinois' codification must be received by the close of business October 12, 1989. The incorporation of certain publications listed in the regulations is approved by the Director of the Federal Register as of November 13, 1989.

ADDRESSES: Written comments should be sent to Gary Westefer, Illinois Regulatory Specialist, Office of RCRA, U.S. EPA Region V, 230 South Dearborn Street, 5HR–JCK–13, Chicago, Illinois 60604, (312) 886–7450, (FTS: 8–886–7450).

FOR FURTHER INFORMATION CONTACT: Gary Westefer, Illinois Regulatory Specialist, Office of RCRA, U.S. EPA Region V, 230 South Dearborn Street, 5HR–JCK–13, Chicago, Illinois, 60604, (312) 886–7450, (FTS: 8–886–7450).

SUPPLEMENTARY INFORMATION:

Background

Section 3006 of the Resource Conservation and Recovery Act of 1976, as amended (RCRA) 42 U.S.C. 6926 *et seq.*, allows the U.S. Environmental Protection Agency (EPA) to authorize State hazardous waste programs to operate in the State in lieu of the Federal hazardous waste program. The purpose of today's **Federal Register** notice is to codify EPA's approval of Illinois' base hazardous waste management program and its revisions to that program.

On January 30, 1986, EPA published a **Federal Register** notice announcing its decision to grant final authorization to Illinois (see 51 FR 3778, January 30, 1986). On January 5, 1988, EPA published a **Federal Register** notice announcing its decision to grant Illinois final authorization for program revisions to its hazardous waste management program (see 53 FR 126, January 5, 1988).

The January 5, 1988, **Federal Register** announced EPA's approval of Illinois equivalent rules for the following Federal hazardous waste regulatory amendments:

- Warfarin and Zinc Phosphide (49 FR 19923, May 10, 1984);
- Lime Stabilized Pickle Liquor Sludge (49 FR 23287, June 5, 1984);
- Exclusion of Household Waste (49 FR 44980, November 13, 1984);
- Interim Status Standards Applicability (49 FR 46095, November 21, 1984);
- Corrections to the Test Methods Manual (49 FR 47391, December 4, 1984);
- Satellite Accumulation (49 FR 47391, December 20, 1984);
- Redefinition of Solid Waste (50 FR 614, January 4, 1985);
- Dioxin Waste Listing and Management Standards (50 FR 1978, January 14, 1985);
- Interim Status Standards for Landfill Cover (50 FR 16044, April 23, 1985);
- Design Standards (50 FR 16044, April 23, 1985);
- Availability of Information (RCRA Section 3006(f)).

Illinois submitted an application requesting approval of these rule changes on August 7, 1986. That application contained a description of the rule changes, a revised Memorandum of Agreement, an Attorney General's Statement certifying the equivalence of the State rules and a copy of the rules. EPA approved of the rule changes and the State application in the January 5, 1988, Federal Register. The final authorization for this program revision became effective on March 5, 1988.

EPA has decided to codify its approval of State programs in Part 272 of Title 40, Code of Federal Regulations (CFR) and to incorporate by reference therein the State statutes and regulations that EPA will enforce under section 3008 of RCRA. The codification reflects the State program that was in effect when EPA granted Illinois final authorization under Section 3006(b) for its revised hazardous waste program (see 53 FR 126, January 5, 1988).

This effort will provide clearer notice to the public of the scope of the authorized program in each State. Such notice is particularly important in light of the Hazardous and Solid Waste Act Amendments of 1984 (HSWA), Pub. L. 98–616. Revisions to State hazardous waste programs are necessary when Federal statutory or regulatory authority is modified. Because HSWA extensively amended RCRA, State programs must be modified to reflect those amendments. By codifying the authorized Illinois program and by amending the Code of Federal Regulations whenever a new or different set of requirements is authorized in Illinois, the status of Federally approved requirements of the Illinois program will be readily discernible.

The Agency will only codify for enforcement purposes those provisions of the Illinois hazardous waste management program for which authorization approval has been granted by EPA. Concerning HSWA, some State requirements may be similar to HSWA requirements that are in effect under Federal statutory authority in that State. However, a State's HSWA-type requirements are not authorized and will not be codified into the CFR until the Regional Administrator publishes his final decision to authorize the State for specific HSWA requirements. Until such time, EPA will enforce the HSWA requirements and not the State analogues.

To codify Illinois' authorized hazardous waste program, EPA will add Subpart O to Part 272 of Title 40 of the CFR. Subpart O has previously been reserved for Illinois. Sections 272.701(a)(1)–(2), and 272.701(b)–(d) intend to codify for enforcement purposes, the State statutes and regulations, the Memorandum of Agreement, the Attorney General's Statements, and the Program Descriptions, which are authorized and made part of the hazardous waste management program under Subtitle C of RCRA.

The Agency retains the authority under Sections 3007, 3008, 3013 and 7003 of RCRA to undertake enforcement actions in authorized States. With respect to such enforcement action, the Agency will rely on Federal sanctions, Federal inspection authorities, and the Federal Administrative Procedure Act rather than the authorized State analogues to these requirements. Therefore, the Agency does not intend to codify for purposes of enforcement such particular, authorized Illinois enforcement authorities. Section 272.701(a)(2) lists those authorized Illinois authorities that would fall into this category.

The public also needs to be aware that some provisions of the State's hazardous waste management program are not part of the Federally authorized State program. These non-authorized provisions are not part of the RCRA Subtitle C program because they are "broader in scope" than RCRA Subtitle C (see 40 CFR 271.1(i)). As a result, State provisions which are "broader in scope" than the Federal program are not codified for purposes of enforcement in part 272. Section 272.701(a)(3) of the intended codification simply lists for reference and clarity the Illinois statutory and regulatory provisions which are "broader in scope" than the Federal program and which are not, therefore, part of the authorized program being codified. "Broader in scope" provisions will not be enforced by EPA; the State, however, will continue to enforce such provisions.

As noted above, the Agency is not amending Part 272 to include HSWA requirements and prohibitions that are immediately effective in Illinois and other States. Section 3006(g) of RCRA provides that any requirement or prohibition of HSWA (including implementing regulations) takes effect in authorized States at the same time that it takes effect in non-authorized States. Thus, EPA has immediate authority to implement a HSWA requirement or prohibition once it is effective. A HSWA requirement or prohibition supersedes any less stringent or inconsistent State provision which may have been previously authorized by EPA (See 50 FR 28702, July 15, 1985).

Because of the vast number of HSWA statutory and regulatory requirements taking effect over the next few years, EPA expects that many previously authorized and codified State provisions will be affected. The States are required to revise their programs to adopt the HSWA requirements and prohibitions by the deadlines set forth in 40 CFR 271.21, and then to seek authorization for those revisions pursuant to Part 271. EPA expects that the States will be modifying their programs substantially and repeatedly. Instead of amending the Part 272 codification every time a new HSWA provision takes effect under the authority of RCRA 3006(g), EPA will wait until the State receives authorization for its analog to the new HSWA provision before amending the State's Part 272 codification. In the interim, persons wanting to know whether a HSWA requirement or prohibition is in effect should refer to 40 CFR 271.1(j), as amended, which lists each such provision.

The codification of State authorized programs in the CFR should substantially enhance the public's ability to discern the current status of the authorized State program and clarify the extent of Federal enforcement authority. This will be particularly true as more State program revisions to adopt HSWA provisions are authorized.

Certification Under The Regulatory Flexibility Act

Pursuant to the provisions of 5 U.S.C. 605(b), I hereby certify that this action will not have a significant economic impact on a substantial number of small entities. It intends to codify the decisions already made to authorize Illinois's program and has no separate effect on handlers of hazardous waste in the State or upon small entities. This rule, therefore, does not require a regulatory flexibility analysis.

Compliance With Executive Order 12291

The Office of Management and Budget has exempted this rule from the requirements of section 3 of Executive Order 12291.

Paperwork Reduction Act

Under the Paperwork Reduction Act, 44 U.S.C. 3501 *et seq.*, Federal agencies must consider the paperwork burden imposed by any information request contained in a proposed rule or a final rule. This rule will not impose any information requirements upon the regulated community.

List of Subjects in 40 CFR Part 272

Administrative practice and procedure, Confidential business information, Hazardous waste transportation, Hazardous waste, Incorporation by reference, Indian lands, Intergovernmental relations, Penalties, Reporting and recordkeeping requirements, Water pollution control, Water supply.

Dated: July 21, 1989.

Robert Springer,

Acting Regional Administrator.

For the reasons set forth in the preamble, 40 CFR Part 272 is amended as follows:

PART 272—APPROVED STATE HAZARDOUS WASTE MANAGEMENT PROGRAMS

1. The authority citation for Part 272 continues to read as follows:

Authority: Secs. 2002(a), 3006, and 7004(b) of the Solid Waste Disposal Act, as amended by the Resource Conservation and Recovery Act of 1976, as amended, 42 U.S.C. 6912(a), 6926, and 6974(b).

2. 40 CFR part 272, Subpart O is amended by adding §§ 272.700 and 272.701 and by reserving §§ 272.702 through 272.749 to read as follows:

§ 272.700 State authorization.

(a) The State of Illinois is authorized to administer and enforce a hazardous waste management program in lieu of the Federal program under Subtitle C of the Resource Conservation and Recovery Act of 1976 (RCRA), 42 U.S.C. 6921 *et seq.*, subject to the Hazardous and Solid Waste Amendments of 1984 (HSWA), (Pub. L. 98–616, Nov. 8, 1984), 42 U.S.C. 6926(c) and (g). The Federal program for which a State may receive authorization is defined in 40 CFR Part 71. The State's base program and revisions to that program, as administered by the Illinois Environmental Protection Agency, were approved by EPA pursuant to 42 U.S.C. 6926(b) and Part 271 of this Chapter. EPA's approval of Illinois' base program was effective on January 31, 1986 (51 FR 3778, January 30, 1986). EPA's approval of revisions to Illinois' base program was effective on March 5, 1988 (53 FR 126, January 5, 1988).

(b) Illinois is authorized to implement certain HSWA requirements in lieu of EPA. EPA has explicitly indicated its intent to allow such action in a **Federal Register** notice granting Illinois authorization on January 5, 1988 (see FR 126, January 5, 1988).

(c) Illinois has primary responsibility for enforcing its hazardous waste program. However, EPA retains the authority to exercise its enforcement authorities under Sections 3007, 3008, 3013, and 7003 of RCRA, 42 U.S.C. 6927, 6928, 6934, and 6973, as well as under other Federal laws and regulations.

(d) Illinois must revise its approved program to adopt new changes to the Federal Subtitle C program in accordance with Section 3006(b) of RCRA and 40 CFR Part 271, Subpart A. Illinois must seek final authorization for all program revisions pursuant to Section 30069b) of RCRA but, on a temporary basis, may seek interim authorization for revisions required by HSWA pursuant to section 3006(g) of RCRA, 42 U.S.C. 6926(g). If Illinois obtains final authorization for the revised requirements pursuant to Section 3006(g), the newly authorized provisions will be listed in § 272.701 of this Subpart. If Illinois obtains interim authorization for the revised requirements pursuant to Section 3006(g), the newly authorized provisions will be listed in § 272.702.

Section 272.701 State-Administered Program: Final Authorization, Pursuant to section 3006(b) of RCRA, 42 U.S.C. 6926(b), Illinois has final authorization for the following elements submitted to EPA in Illinois' base program and its revision application for final authorization approved by EPA effective on January 31, 1986, and March 5, 1988, respectively.

(a) *State Regulations.* (1) The following Illinois regulations are incorporated by reference and codified as part of the hazardous waste management program under Subtitle C of RCRA, 42 U.S.C. 6921 *et seq.:* Illinois Administrative Code, Title 35, Part 702, Sections 702.101–702.104, 702.110–720.187; Part 703, Sections 703.100–703.246, Part 709, Sections 709.102–709.603; Part 720, Sections 720.101–720.122, Appendix A; Part 721, Sections 721.101–721.133, Appendices A, B, C, G, H, I; Part 722, Sections 722.110–722.151; Part 723, Sections 723.110–723.131; Part 724, Sections 724.101–724.451, Appendices A, D, E; Part 725, Sections 725.101–725.530, Appendices A, D, E; and Part 729, Sections 729.100–729.321 (January 1, 1985, as amended January 1, 1986). This incorporation by reference was approved by the Director of the **Federal Register** in accordance with 5 U.S.C. 552(a). Copies of the Illinois regulations that are incorporated by reference in this paragraph are available from the Office of the Secretary of State, Index Division, 111 East Monroe Street, Springfield, Illinois 62756.

(2) The following statutes and regulations concerning State enforcement and procedures, although not codified herein, are part of the authorized State program:

(i) Illinois Revised Statutes, Chapter 111½, sections 1–5.1, sections 7–7.1, sections 20–22, sections 22.3–22.6, sections 30–34, and section 39, subsections a, d, g, k; Chapter 116, sections 201–211; and Chapter 127, sections 1001–1021 (1986).

(ii) Illinois Administrative Code, Title 35 Part 700, sections 700.101–700.504; Part 702, sections 702.105–702.109; Part 705, sections 705.101–705.212 (January 1, 1985, as amended January 1, 1986). The following statutory and regulatory provisions of the Illinois Administrative Code are broader in scope than the Federal program, are not part of the authorized program, and are not codified herein for enforcement purposes.

(A) Illinois Revised Statutes, chapter 111½, sections 22.01–22.2, section 22.8, section 39, subsections h and i, and section 39.2 (1986).

(B) Illinois Administrative Code, Title 35, Part 700, sections 700.601–700.605; Part 704, sections 704.201–704.240; Part 730, sections 730.101–730.152; and Part 731, sections 731.101–731.901.

(b) *Memorandum of Agreement.* The Memorandum of Agreement between EPA Region V and the Illinois Environmental Protection Agency, signed by the EPA Regional Administrator on January 21, 1986, is codified as part of the authorized hazardous waste management program under Subtitle C of RCRA, 42 U.S.C. 6921, *et seq.*

(c) *Statements of Legal Authority.* The Illinois Attorney General's Statements for final authorization signed by the Attorney General of Illinois on June 4, 1985, and July 15, 1986, are codified as part of the authorized hazardous waste management program under Subtitle C of RCRA 42 U.S.C. 6921 *et seq.*

(d) *Program Description.* Program Descriptions dated July 26, 1985, and August 7, 1986, and any other materials submitted as part of, or as supplements to, the original application or revision applications are codified as part of the authorized hazardous waste management program under Subtitle C of RCRA, 42 U.S.C. 6921 *et seq.*

BILLING CODE 6560-50-M

GENERAL SERVICES ADMINISTRATION

41 CFR Part 101

[FPMR Amdt. A–46]

Regulation System

AGENCY: General Services Administration.

ACTION: Final rule.

SUMMARY: This regulation deletes some outdated references and revises some references to reflect the current Federal Property Management Regulations (FPMR) system. This regulation also establishes a more flexible policy for granting deviations from the requirements of the FPMR.

EFFECTIVE DATE: September 12, 1989.

FOR FURTHER INFORMATION CONTACT: Rodney P. Lantier, Directives and Correspondence Management Branch, 202–566–0666.

SUPPLEMENTARY INFORMATION: The proposed rule for the deviations granting process was published in the **Federal Register** on August 1, 1988 (53 FR 28895).

GSA has determined that this rule is not a major rule for the purpose of Executive Order 12291 of February 17, 1981, because it is not likely to result in an annual effect on the economy of $100 million or more; a major increase in costs to consumers or others; or significant adverse effects. GSA has based all administrative decisions underlying this rule on adequate information concerning the need for and consequences of this rule; has determined that the potential benefits to society from this rule outweigh the potential costs and has maximized the net benefits; and has chosen the alternate approach involving the least net cost to society.

List of Subjects in 41 CFR 101–1

Government property management.

Title 41 Part 101–1 of the Code of Federal Regulations is amended as follows:

PART 101–1—INTRODUCTION

1. The authority citation for 41 CFR Part 101–1 continues to read as follows:

Authority: Sec. 205(c), 63 Stat. 390 (40 U.S.C. 486(c)).

Subpart 101–1.1—Regulation System

2. Section 101–1.101 is revised to read as follows:

§ 101–1.101 Federal Property Management Regulations System.

The Federal Property Management Regulations System described in this subpart is established and shall be used by General Services Administration (GSA) officials and, as provided in this subpart, by other executive agency officials, in prescribing regulations, policies, procedures, and delegations of authority pertaining to the management of property, and other programs and activities of the type administered by GSA, except procurement and contract matters contained in the Federal Acquisition Regulations (FAR).

3. Section 101–1.103 is revised to read as follows:

§ 101–1.103 FPMR temporary regulations.

(a) FPMR temporary regulations are authorized for publication when time or exceptional circumstances will not permit promulgation of an amendment to the Code of Federal Regulations and if the regulation will be effective for a period of 12 months or less except as provided in § 101–1.103(b), below. These temporary regulations will be codified before the designated expiration date or their effective date will be extended if it is determined that conversion to permanent form cannot be accomplished within the specified timeframe.

(b) FPMR temporary regulations may have an effective period of up to 2 years when codification is not anticipated or is not considered practical.

4. Section 101–1.108 is revised to read as follows:

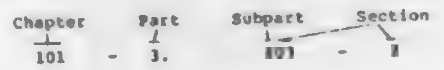
§ 101–1.108 Agency implementation and supplementation of FPMR.

Chapters 102 through 150 of this title are available for agency implementation and supplementation of FPMR contained in Chapter 101 of this title. Supplementation pertains to agency regulations in the subject matter of FPMR but not yet issued in Chapter 101.

5. Section 101–1.109 is revised to read as follows:

§ 101–1.109 Numbering in FPMR system.

(a) In the numbering system, all FPMR material is preceded by the digits 101–. This means that it is Chapter 101 in Title 41 of the Code of Federal Regulations. It has no other significance. The digit(s) before the decimal point indicates the part; the digits after the decimal point indicate, without separation, the subpart and section. For example:



(b) At the bottom of each page appears the number and date (month and year) of the FPMR amendment which transmitted it.

(c) Agency implementing regulations should conform to the FPMR section numbers, except for the substitution of the chapter designation of the agency. Agency supplementing regulations should be numbered "50" or higher for section, subpart, or part as may be involved.

6. Section 101–1.110 is revised to read as follows:

§ 101–1.110 Deviation.

(a) In the interest of establishing and maintaining uniformity to the greatest extent feasible, deviations; i.e., the use of any policy or procedure in any manner that is inconsistent with a policy or procedure prescribed in the Federal Property Management Regulations, are prohibited unless such deviations have been requested from the approved by the Administrator of General Services or his authorized designee. Deviations may be authorized by the Administrator of General Services or his authorized designee when so doing will be in the best interest of the Government. Request for deviations shall clearly state the nature of the deviation and the reasons for such special action.

(b) Requests for deviations from the FPMR shall be sent to the General Services Administration for consideration in accordance with the following:

(1) For onetime (individual) deviations, requests shall be sent to the address provided in the applicable regulation. Lacking such direction, requests shall be sent to the Administrator of General Services, Washington, DC 20405.

(2) For class deviations, requests shall be sent to only the Administrator of General Services.

7. Section 101–1.112 is revised to read as follows:

§ 101–1.112 Change lines.

(a) Single-column format: Vertical lines in the right margin of a page indicate material changed, deleted, or added by the FPMR amendment cited at the bottom of that page. Where insertion of new material results in shifting of unchanged material on following pages, no vertical lines will appear on such pages but the FPMR amendment transmitting such new pages will be cited at the bottom of each page.

(b) Double-column format: Arrows printed in the margin of a page indicated material changed, deleted, or added by the FPMR amendment cited at the bottom of that page.

Dated: June 28, 1989.

Richard G. Austin,

Acting Administrator of General Services

[FR Doc. 89–21371 Filed 9–11–89; 8:45 am]

BILLING CODE 6820–34–M

DEPARTMENT OF TRANSPORTATION

Coast Guard

46 CFR Part 69

[CGD 87–015b]

RIN 2115–AC67

Tonnage Measurement of Vessels

AGENCY: Coast Guard, DOT.

ACTION: Final rule.

SUMMARY: This action revises the Coast Guard's vessel tonnage measurement regulations. This revision incorporates the system of measurement established under the International Convention on Tonnage Measurement of Ships, 1969, and provides a framework for phasing in the Convention Measurement System as the method of measuring ships domestically to establish uniformity in vessel measurement. The availability of the alternate domestic measurement systems is continued for regulatory purposes so that the application of the laws of the United States are preserved in order that vessels engaged in domestic and international commerce are not adversely affected.

This revision is necessary to implement the statutory mandate calling for these changes. In the process of incorporating these changes into the regulations, the Coast Guard rearranged and renumbered the regulations in a more current and readable format.

This revision should carry out the intent of Congress, while facilitating the use of these complex regulations by the maritime industry.

EFFECTIVE DATE: This rule is effective on October 12, 1989.

FOR FURTHER INFORMATION CONTACT: Mr. Dennis A. Lamont, Tonnage Survey Branch, (202) 267–2992.

SUPPLEMENTARY INFORMATION: On April 26, 1989, a notice of proposed rulemaking (NPRM), entitled "Tonnage Measurement of Vessels", was published in the **Federal Register** (54 FR 17966). On May 12, 1989, the Office of the Federal Register published a notice correcting its misprint of the telephone number under "**FOR FURTHER INFORMATION CONTACT**" in the NPRM to read "(202) 267–2992" instead of "(202) 267–2292". The Coast Guard received seven letters commenting on the proposed rulemaking. A public hearing was not requested and one was not held.

Drafting Information

The principal persons involved in drafting this document are Mr. Dennis A. Lamont, Project Manager, and Mr. Stephen H. Barber, Project Counsel, Office of Chief Counsel.

Background

Public Law 99–509 (the Omnibus Budget Reconciliation Act of 1986) made major revisions to the vessel tonnage measurement laws and consolidated them into a new part J of 46 U.S.C. subtitle II. Part J authorized the Secretary of Transportation (Coast Guard) to promulgate regulations—

(a) For phasing in the system of measurement under the International Convention on Tonnage Measurement of Ships, 1969, (Convention) as the method for measuring ships domestically in order to establish uniformity in measurement; and

(b) For retaining the existing domestic systems (i.e. the standard, Dual, and Simplified Measurement Systems) as alternative systems for use in applying domestic laws based on tonnage, in order that the vessels engaged in domestic activities will not be adversely affected.

These regulations—

(a) Implement the Convention Measurement System and other tonnage measurement requirements of Public Law 99–509; and

(b) Reorganize and clarify the regulations in part 69 of title 46 of the Code of Federal Regulations (46 CFR part 69) concerning the Standard, Dual, and Simplified Measurement Systems, without substantive change not called for under Public Law 99–509.

Discussion of Comments and Changes to the Regulation

1. One comment endorsed the proposed regulations and recommended that the Coast Guard retain the language and content of the Convention Measurement System as set forth in the proposed rule.

2. Two comments proposed that a study of the possibility of entirely eliminating regulatory tonnage be performed and addressed in the preamble to the final rule.

Such a study is not within the scope of this regulatory project. However, as provided for in Public Law 99–509, a Congressionally mandated study of this type is presently being performed by the Coast Guard. Public input to this study was solicited by a notice in the **Federal Register** (54 FR 30625; July 21, 1989).

3. One comment emphasized the importance of regulatory tonnage for determining future domestic fees and assessments. It suggested that the rule specify that, when a vessel is measured under the Convention Measurement System and also under a regulatory measurement system, the tonnage certificate issued for the vessel must recite the regulatory tonnages of the vessel, as well as its Convention tonnages.

As in the past, this rule does not require a vessel that is not operating internationally to carry any tonnage certificate. However, as in the past, the owner of a vessel assigned regulatory tonnages may, at the owner's request, obtain a copy of the vessel's tonnage certificate used internally by the Coast Guard for documentation purposes. This certificate will be similar to the present "Certificate of Admeasurement", recite all tonnages that are assigned to the vessel, and indicate for what purpose each tonnage is to be used.

4. One comment suggested that the term, "Convention Measurement System", be changed to "International Measurement System", and the term, "Standard, Dual, and Simplified Measurement Systems", be changed to "U.S. Traditional Measurement System" throughout the regulations.

The word, "Convention", is used throughout these regulations to align them with the terminology used in Public Law 99–509, the legislation which this rule implements. The word, "International", is avoided because it tends to suggest that the only vessels required to be measured under the Convention System are those that are engaged on an international voyage. The word, "Traditional", is not used because it is time-related and would begin to lose its suggested meaning as the Convention System becomes more and more the "tranditional" system.

5. One comment suggested that the definition in § 69.9 of the word, "tonnage", as calculated under the Convention Measurement System, be change to read "enclosed volume in cubic meters modified by a logarithmic function", instead of "tons of 100 cubic feet modified by a logarithmic function".

The definition of "tonnage" in § 69.9 of "subpart A—General", is intended to indicate the basic differences between the methods used to calculate tonnages under each measurement system. The terms, "gross tonnage" and "net tonnage" as calculated under the Convention Measurement System, are more completely defined in "subpart B—Convention Measurement System" at §§ 69.53, 69.57, and 69.63.

6. Two comments questioned why proposed § 69.11 would require barges 79 feet or more in overall length not engaged on a foreign voyage to be measured under the Convention Measurement System. The comments point out that such a requirement deviates from the existing Coast Guard regulations in 46 CFR 69.05–1(a)(2) that allows barges to be measured under the Simplified Measurement System. The comments contend that Simplified measurement is less costly than Convention measurement and, therefore, is favored by domestic barge owners.

Though the proposed rule differs from the existing Coast Guard regulation in 46 CFR 69.05–1(a)(2), the difference results from Congressional mandate in Public Law 99–509 (46 U.S.C. 14301), rather than from Coast Guard discretion. Therefore, the existing Coast Guard applicability regulations are being amended by this rulemaking to conform them to the requirements of the Public Law.

In preparing the response to these comments, it was noted that two other classes of vessels permitted under Public Law 99–509 to be Simplified measured were omitted inadvertently from proposed § 69.11(d) on applicability of the Simplified Measurement System. Therefore, these two classes (i.e. vessels that are non-self-propelled and operated only on the Great Lakes and vessels that are operated only for pleasure and operated only on the Great Lakes) have been added, as permitted under Public Law 99–509, to § 69.11(d) in this final rule.

7. One comment suggested that §§ 69.11(a)(2)(iii) and 69.11(a)(2)(iv) indicate the date upon which "a change that the Commandant finds substantially affects the vessel's gross tonnage" is effective.

The deadline in 46 U.S.C. 14301(b)(4), "on or after January 1, 1986", has been inserted in § 69.11(a)(2)(iii) in the final rule. The deadline in 46 U.S.C. 14301(d), "on or after July 18, 1982", has been inserted in § 69.11(a)(2)(iv) in the final rule.

8. One comment suggested that a definition of "existing vessel" as used in proposed § 69.11(a)(2)(iv) be included in the regulations.

The definition of "existing vessel" in 46 U.S.C. 14101(2), that is, "a vessel the keel of which was laid or that was at a similar stage of construction before July 18, 1982", has been inserted in § 69.11(a)(2)(iv) in the final rule.

9. One comment stated that § 69.13(b) prohibited a vessel measured under subpart C, D, or E from being remeasured interchangeably under subpart C, D, and E, even though the provisions of the separate systems are not combined.

Section 69.13(b) is not an applicability section and does not specify the subpart under which a vessel is required to be measured or remeasured. It is intended only to assure that the measurement of a vessel under one system complies with the requirements for that system and that requirements under other systems are not used in the process of measuring that vessel.

10. One comment questioned why proposed § 69.27 continues in force a 1988 amendment that would authorize delegation of authority to foreign classification societies to perform tonnage measurement of U.S. vessels. The comment contends that this program is wasteful and should be rescinded.

Section 69.27 does not differ from the existing Coast Guard regulation in 46 CFR 69.01–20 and conforms with Public Law 99–509 (46 U.S.C. 14301). The provisions of this section were thoroughly considered when the amendment was promulgated (53 FR 20619; June 6, 1988). Although no foreign classification society has qualified under these provisions, the Coast Guard considers it appropriate to have the requirements in the regulations for the benefit of future applicants.

11. One comment stated that linear measurements in proposed subpart B (Convention) are in fact foot-inch units, while the formulas for calculating gross and net tonnages in proposed §§ 69.57 and 69.63 call for volumes expressed in cubic meters. The comment recommended that both foot-inch and metric units be specified throughout the regulations, as is done in the text of the Convention.

The metric equivalents of foot-inch units stated in the Convention are not precise. For example, there is more than a three inch difference between the critical applicability dimensions of 79 feet and Convention's equivalent of 24 meters. The Coast Guard selected a single system in its regulations for the purpose of preciseness. The foot-inch system was chosen because it is used throughout 46 CFR part 69 for each of the measurement systems. However, application information, such as drawings and calculations that are required to be submitted by the owner under subpart B, will be accepted even if metric units are used.

Though foot-inch dimensions are used throughout the regulatory text in the existing and proposed regulations, there are two exceptions in subpart B. As noted in the comment, §§ 69.57 and 69.63 on the formulas for calculating gross tonnage and net tonnage, respectively, call for volume in cubic meters. As the Convention sets forth these formulas only in cubic meters, rather than both in cubic feet and cubic meters, the Coast Guard decided to restate the formulas as they appear in the Convention to avoid confusion.

12. One comment suggested that proposed § 69.65(b) on the methods for calculating the volume of the hull below the upper deck be expanded to add "any acceptable method or combinations of methods".

Existing regulations for the Standard Measurement System and the Dual Measurement System require that Simpson's first rule be used when calculating hull tonnages. Because this method is commonly used by naval architects, it was selected by the Coast Guard in 1983 as the method for calculating hull tonnages under the Convention Measurement System. Both Coast Guard and American Bureau of Shipping computer programs that are used to calculate hull tonnages require input information in this format. Although other methods may produce equally accurate hull volumes, our research indicates that most vessels are designed about an equal number of equally-spaced increments to which Simpson's first rule is easily applied. Although information furnished under other formats is acceptable, it will have to be converted to the computer-acceptable format by the organization calculating the vessel tonnage.

13. One comment questioned the definition of "double bottom" in proposed § 69.103. The comment points out that this definition deviates from the existing Coast Guard definition in 46 CFR 69.13–41 that allows a double bottom to include tanks for other than water ballast.

Though the proposed definition of "double bottom" differs from the existing definition, the method of determining depth measurements to double bottoms and bottom framing is not changed. The existing procedure is to terminate depths on a double bottom only when that double bottom meets the definition in the proposed rule. This procedure is not subject to the discretion of the Coast Guard but is required in 46 U.S.C. 14512(a), which provides for tonnages comparable to tonnages formerly assigned under section 4153 of the Revised Statutes. (See former 46 U.S.C. 77.)

14. One comment stated that the term, "registered length", as defined in § 69.103 appears to serve no useful purpose and is extremely difficult to measure on smaller craft, where drawings usually are not available. The comment suggested that the registered length be taken as the molded length on the upper deck to the hull.

Section 69.103 defines "registered length" using the same definition as used for vessels measured under the Convention Measurement System (§ 69.53). This allows vessels assigned tonnages under both the Convention Measurement System and the Standard or Dual Measurement Systems to be assigned one length. Most smaller vessels (i.e. vessels of less than 79′ in overall length) are assigned a registered length based on the vessel's overall length.

15. One comment stated that § 69.117(f)(4) appears to require a water ballast justification when a ballast

exemption exceeds 30% of the vessel's gross tonnage after the water ballast exemption. The comment suggests that "the vessel's gross tonnage (excluding the water ballast spaces)" be changed to "the vessel's gross tonnage (exclusive of the water ballast spaces)".

For clarity, the proposed wording has been changed in the final rule to read "the vessel's gross tonnage (as calculated under this subpart without any allowance for water ballast)".

16. One comment suggested that proposed subpart E (Simplified Measurement System) be changed to permit a metric alternative for furnishing vessel dimensions to be used in calculating tonnages under the Simplified Measurement System.

Section 69.207 requires measurements in feet and inches or in feet and tenths of a foot because the Coast Guard computer program used to calculate tonnages from the applicant's information requires a foot-inch or foot-tenths unit input. The actual formula coefficients that are indicated in foot-inch units are not required to be used by the owner. If the owner submits vessel dimensions in metric measurements, the dimensions will require conversion to foot-inch units by the Coast Guard and possibly delay application processing.

17. One comment asked that § 69.207 specify dimension accuracy.

As suggested, § 69.207(a) has been changed to specify dimension accuracy. Dimensions must be expressed in feet and inches "to the nearest half inch" or in feet and tenths of a foot "to the nearest .05 of a foot".

Derivation and Distribution Tables

The material in part 69 is entirely rearranged and renumbered using the current regulatory format. The following tables should assist the reader in locating the source of or Congressional authority for the material in this rulemaking.

Derivation Table

New section	Old section
69.1	69.01–1.
69.3	69.01–3(a).
69.5	69.01–3(a), 69.01–5.
69.7	69.01–3(b), 69.01–9(a).
69.9	69.01–7.
69.11	69.01–9, 69.05–1.
69.13	69.01–9(b).
69.15	69.01–3(c), 69.01–11.
69.17	69.01–13.
69.19	69.01–15, 69.05–9.
69.21	69.01–17.
69.23	69.01–19.

69.183	69.15–19 figure 54, 55, 56.
69.201	69.05–1.
69.203	69.05–3.
69.205	69.05–5.
69.207	69.05–5.
69.209	69.05–7.

Distribution Table

Old section	New section
69.01–01	69.1.
69.01–03(a)	69.3.
69.01–03(b)	69.7.
69.01–03(c)	69.15(d).
69.01–05	69.5.
69.01–07	69.9.
69.01–09 (a)–(a)(4)	69.11.
69.01–09 (a)(5)–(a)(6)	69.7.
69.01–09(b)	69.13(b).
69.01–09(c)	Unnecessary.
69.01–09(d)	Unnecessary—all new vessels are measured under the Convention Measurement System.
69.01–11	69.15.
69.01–13	69.17, 69.105.
69.01–15	69.19.
69.01–17	69.21.
69.01–19	69.23.
69.01–20	69.27.
69.01–21	69.29.
69.03–1	Unnecessary.
69.03–3	Unnecessary.
69.03–5	Unnecessary.
69.03–7	Unnecessary.
69.03–9	Unnecessary.
69.03–11	69.103, 69.109(j).
69.03–13	Unnecessary—the Convention Measurement System registered length in 69.53 and 69.103 is the only length required to be recorded.
69.03–15	Unnecessary—the Convention Measurement System registered breadth in 69.53 and 69.103 is the only breadth required to be recorded.
69.03–17	Unnecessary—the Convention Measurement System molded depth in 69.53 and 69.103 is the only breadth required to be recorded.
69.03–19	69.103, 69.109(d).
69.03–21	69.109(d).
69.03–23	Unnecessary.
69.03–25	Redundant—69.103 and 69.109(h)(1) are adequate.
69.03–27	Redundant—69.103 and 69.109(h)(1) are adequate.
69.03–29(a)	69.103 and 69.109(c).
69.03–29(b)	69.103 and 69.109(e).
69.03–29(c)	69.109(d).
69.03–31	69.109(f).
69.03–33(a)	69.109(h).
69.03–33(b)	Redundant—69.103 and 69.109(j) are adequate.
69.03–33(c)	69.109(j).
69.03–33 (d)–(f)	69.109 (h) (2)–(3).
69.03–35	69.109(h)(4).
69.03–37	69.109(i).
69.03–39	69.109(f).
69.03–41	69.109(g).
69.03–43	Unnecessary.
69.03–45(a)	69.109(k).
69.03–45(b)	69.109(l).
69.03–47	69.109(m).
69.03–49	Unnecessary.
69.03–51	69.109(n)—the procedures and mathematical formula indicated for a particular shaped shaft tunnel is not considered necessary.
69.03–53	69.109(f)(2).
69.03–55	69.111.
69.03–57	69.113.
69.03–59	69.115.
69.03–61	Unnecessary—this information is no longer required to be listed on vessel document.
69.03–63 (a)–(f)	69.117 (a)–(b).
69.03–63(g)	69.117(f).
69.03–63(h)	69.117(b)(8).
69.03–63(i)	69.117(b)(9).
69.03–65	69.117(c).
69.03–67	69.117(d).
69.03–69	69.117(e).

69.15-41	69.179.

E.O. 12291 and DOT Regulatory Policies and Procedures

This rule is considered to be nonmajor under Executive Order 12291 and nonsignificant under Department of Transportation (DOT) regulatory policies and procedures (44 FR 11034; February 26, 1979). The economic impact of this rule has been found to be so minimal that further evaluation is unnecessary.

As required by Public Law 99–509, this rule changes the measurement system under which some vessels are measured and is administrative in nature. This rule affects barges and recreational vessels of 79 feet or more in length by eliminating the option of having these vessels measured under the Simplified Measurement System. However, measurement of these vessels, if they will not engage on a foreign voyage, is and will continue to be at the owner's option. Measurement is usually a one-time expenditure that is insignificant in terms of the overall cost of owning and operating the vessel. Further, it is noted that this rule will not affect vessels presently measured and documented under laws of the United States until those vessels are altered.

The potential impacts that this rule might have on States and local governments with laws or regulations based on federally-assigned tonnage result from statutory mandate, as discussed under "Federalism Implications" in this preamble.

Regulatory Flexibility Act

The economic impact of this rule is expected to be minimal. This rule will affect the measurement requirements for certain larger vessels and will limit the option of measurement under the Simplified Measurement System to smaller vessels. No new application costs, burdens, or procedures are imposed and the larger vessels previously required to be measured under two systems will be required to be measured under only one system.

Therefore, the Coast Guard certifies under 5 U.S.C. 605(b) that this rule will not have a significant economic impact on a substantial number of small entities.

Paperwork Reduction Act

This rulemaking contains no new information collection or recordkeeping requirements. However, several previous provisions already assigned Office of Management and Budget (OMB) control numbers are restated in this rulemaking. As discussed in the preamble to the NPRM, the Coast Guard requested that OMB consolidate all of the Control Numbers assigned to the restated provisions into a single Control Number. OMB has approved this request and assigned OMB Control Number 2115–0086 to §§69.17, 69.19, 69.21, 69.27, 69.55, 69.105, 69.121(d), 69.159, 69.179, and 69.205.

One comment was received on the "Paperwork Reduction Act" section in the preamble to the NPRM. The comment questioned the adequacy of the quantity "34" in the sentence that states: "This proposal might cause an estimated 34 additional vessels per year to be measured under the Convention, Standard, or Dual Measurement Systems, rather than under the Simplified Measurement System". The comment believes the figure to be low on average because of the abnormally low levels of barge construction since 1982.

The Coast Guard agrees that construction levels have been low and recognizes that they may increase. However, regardless of the number of barges that will be constructed in future years, two things remain unchanged. One is that domestic barges not engaged on a foreign voyage are not required to be documented and, therefore, not required to be measured under any system. The second is that when the owner of a barge that is 79 feet on more in length and not operated only on the Great Lakes elects to have the barge measured, Public Law 99–509 prevents its measurement under the less costly Simplified measurement procedure.

Federalism Implications

This action has been analyzed in accordance with the principles and criteria contained in Executive Order 12612, and it has been determined that this rulemaking does not have sufficient federalism implications to warrant the preparation of a Federalism Assessment.

The regulations will have a minimal effect on State or local laws and regulations based on federally-assigned tonnages by requiring or permitting vessels presently eligible to be measured under one system to be measured under another system. Measurement under another system would produce a different tonnage. However, this rule and its resulting effect on the States and local governments is due to specific statutory mandate under Public Law 99–509 and not to discretionary action by the Coast Guard. Any effect on State or local governments most likely will be temporary because they can amend their laws or regulations as necessary to maintain the status quo.

The NPRM specifically requested public comment on federalism implications and no comments were received.

Environmental Assessment

The Coast Guard has considered the environmental impact of the regulations and concluded that, under section 2.B.2.1. of Commandant Instruction M16475.1B, the regulations are categorically excluded from further environmental documentation. The regulations are administrative and procedural in nature and concern the procedures for measuring vessels. They clearly have no environmental impact.

List of Subjects in 46 CFR Part 69

Measurement standards, Reporting and recordkeeping requirements, Vessels.

For the reasons set out in the preamble, 46 CFR (chapter I is amended by revising part 69 to read as follows:

PART 69—MEASUREMENT OF VESSELS

Subpart A—General

Sec.
69.1 Purpose.
69.3 Applicability.
69.5 Vessels required or eligible to be measured.
69.7 Vessels transiting the Panama and Suez Canals.
69.9 Definitions.
69.11 Determining the measurement system or systems for a particular vessel.
69.13 Deviating from the provisions of a measurement system.
69.15 Organizations authorized to measure vessels.
69.17 Application for measurement services.
69.19 Remeasurement and adjustment of tonnage.
69.21 Appeals.
69.23 Fees.
69.25 Penalties.
69.27 Delegation of authority to measure vessels.
69.29 OMB control numbers assigned under the Paperwork Reduction Act.

Subpart B—Convention Measurement System

69.51 Purpose.
69.53 Definitions.
69.55 Application for measurement services.
69.57 Gross tonnage.
69.59 Enclosed spaces.
69.61 Excluded spaces.
69.63 Net tonnage.
69.65 Calculation of volumes.
69.67 Marking of cargo spaces.
69.69 Issuance of an International Tonnage Certificate (1969).
69.71 Change of net tonnage.
69.73 Variance from the prescribed method of measurement.
69.75 Figures.

Subpart C—Standard Measurement System

69.101 Purpose.
69.103 Definitions.
69.105 Application for measurement services.
69.107 Gross and net tonnages.
69.109 Under-deck tonnage.
69.111 Between-deck tonnage.
69.113 Superstructure tonnage.
69.115 Excess hatchway tonnage.
69.117 Spaces exempt from inclusion in gross tonnage.
69.119 Spaces deducted from gross tonnage.
69.121 Engine room deduction.
69.123 Figures.

Subpart D—Dual Measurement System

69.151 Purpose.
69.153 Application of other laws.
69.155 Measurement requirements.
69.157 Definitions.
69.159 Application for measurement services.
69.161 Gross and net tonnages.
69.163 Under-deck tonnage.
69.165 Between-deck tonnage.
69.167 Superstructure tonnage.
69.169 Spaces exempt from inclusion in gross tonnage.
69.171 When the tonnage mark is considered submerged.
69.173 Tonnage assignments for vessels with only one deck.
69.175 Tonnage assignments for vessels with a second deck.
69.177 Markings.
69.179 Certification of markings.
69.181 Locating the line of the second deck.
69.183 Figures.

Subpart E—Simplified Measurement System

69.201 Purpose.
69.203 Definitions.
69.205 Application for measurement services.
69.207 Measurements.
69.209 Calculation of tonnages.

Authority: 46 U.S.C. 14102, 14103; 49 CFR 1.46. Sec. 69.27 issued under 44 U.S.C. 3507; 49 CFR 1.45.

Subpart A—General

§ 69.1 Purpose.

This part implements legislation concerning the measurement of vessels to determine their tonnage (part J of 46 U.S.C. subtitle II). Tonnages are required before a vessel may be documented as a vessel of the United States. Also, tonnages are used to apply commercial vessel safety regulations based on tonnage, to meet the requirements of the International Convention on Tonnage Measurement of Ships, 1969, and to determine Federal and State regulatory fees and private operational charges based on tonnage. Tonnages are determined by the physical measurement of a vessel (Convention, Standard, and Dual Measurement Systems) or by application of a formula based on the vessel's dimensions provided by the owner (Simplified Measurement System). This part indicates the particular measurement system or systems under which the vessel is required or eligible to be measured, describes the application and measurement procedures for each system, identifies the organizations authorized to measure vessels under this part, and provides for the appeal of measurement organizations' decisions.

§ 69.3 Applicability.

This part applies to vessels of the United States over five net tons (as that tonnage is determined under this part) which are required or eligible to be measured under this part, a Federal law, or an international agreement or which are subject to a Federal law or international agreement based on the vessel's tonnage.

§ 69.5 Vessels required or eligible to be measured.

(a) The following vessels (including public vessels) are required to be measured under this part:

(1) Vessels that are to be documented as a vessel of the United States.

(2) Vessels of 79 feet or more in overall length that engage on a foreign voyage.

(3) Vessels subject to a Federal law or regulation based on vessel tonnage.

(4) Vessels determined by the Commandment to require measurement under this part.

(b) The following vessels are not required to be measured under this part but are eligible to be measured, if the owner requests:

(1) Public vessels that are not to be documented and will not engage on a foreign voyage.

(2) Vessels of war.

§ 69.7 Vessels transiting the Panama and Suez Canals.

(a) All vessels intending to transit the Panama Canal, other than vessels of war, must be measured and certificated under the system prescribed in 35 CFR part 135.

(b) All vessels intending to transit the Suez Canal must be measured and certificated under the Arab Republic of Egypt Suez Canal Authority Rules of Navigation, Part IV.

(c) Panama Canal and Suez Canal tonnage certificates are in addition to tonnage certificates issued under this part.

(d) Tonnage measurement services for Panama Canal and Suez Canal certificates are provided by measurement organizations authorized by the respective canal authority.

---

§ 69.9 Definitions.

As used in this part—

Commandant means Commandant of the Coast Guard at the following address: Commandant (G–MVI), U.S. Coast Guard, 2100 Second St. SW., Washington, DC 20593–0001.

Convention means the International Convention on Tonnage Measurement of Ships, 1969.

Convention Measurement System means the system under subpart B of this part.

Dual Measurement System means the system under subpart D of this part.

Great Lakes means the Great Lakes of North America and the St. Lawrence River west of a rhumb line drawn from Cap des Rosiers to West Point, Anticosti Island, and, on the north side of Anticosti Island, the meridian of longitude 63 degrees west.

Gross tonnage means a vessel's approximate volume. Under the Convention Measurement System, it means the total volume of all enclosed spaces modified by a coefficient. Under the Standard and Dual Measurement System, it means the total volume of all enclosed spaces less certain exempt spaces. Under the Simplified Measurement System, it means the product of a vessel's length, depth, and breadth modified by a coefficient.

Net tonnage means a measure of a vessel's earning capacity. Under the Convention Measurement System, it means the volume of the actual cargo and passenger spaces modified by a formula based on the vessel's volume. Under the Standard and Dual Measurement Systems, it means the gross tonnage less certain deducted spaces. Under the Simplified Measurement System, it means the gross tonnage modified by a coefficient.

Overall length means the horizontal distance between the foremost part of a vessel's stem to the aftermost part of its stern, excluding fittings and attachments.

Simplified Measurement System means the system under subpart E of this part.

Standard Measurement System means the system under subpart C of this part.

Tonnage means the volume of a vessel's enclosed spaces as calculated under a measurement system in this part. Tonnage calculated under the Standard, Dual, or Simplified Measurement System is based on tons of 100 cubic feet each. Tonnage calculated under the Convention Measurement System is based on tons of 100 cubic feed modified by a logarithmic function.

Vessel engaged on a foreign voyage means a vessel—

(a) Arriving at a place under the jurisdiction of the United States from a place in a foreign country;

(b) Making a voyage between places outside of the United States;

(c) Departing from a place under the jurisdiction of the United States for a place in a foreign country; or

(d) Making a voyage between a place within a territory or possession of the United States and another place under the jurisdiction of the United States not within that territory or possession.

Vessel of war means "vessel of war" as defined in 46 U.S.C. 2101.

§ 69.11 Determining the measurement system or systems for a particular vessel.

(a) *Convention Measurement System (subpart B).* (1) Except as otherwise provided in this section, this system applies to a vessel documented or to be documented under part 67 of this chapter and to a vessel engaged on a foreign voyage.

(2) This system does not apply to the following vessels:

(i) A vessel of less than 79 feet in overall length.

(ii) A vessel operating only on the Great Lakes, unless the owner requests measurement under this system.

(iii) A vessel that is not engaged on a foreign voyage and that had its keel laid or was at a similar stage of construction before January 1, 1986, unless the owner requests measurement under the Convention Measurement System or unless, on or after January 1, 1986, the vessel undergoes a change that the Commandant finds substantially affects the vessel's gross tonnage.

(iv) Before July 19, 1994, a vessel the keel of which was laid or that was at a similar stage of construction before July 18, 1982, unless the owner requests or unless, on or after July 18, 1982, the vessel undergoes a change that the Commandant finds substantially affects the vessel's gross tonnage.

(v) A vessel of war.

(3) A vessel made subject to this system at the request of the owner may be remeasured only under this system.

(4) For the purpose of vessel documentation, a vessel measured under this system is not required to be measured under another system.

(5) After July 18, 1994, a vessel the keel of which was laid or that was at a similar stage of construction before July 18, 1982, (except vessel measured under this system at the request of the owner or because of a change that substantially affects the vessel's gross tonnage) may retain its tonnage in effect on July 18, 1994, for the application of relevant requirements under an international agreement (except the Convention) or other laws of the United States. However, if the vessel undergoes a change after July 18, 1994, that the Commandant finds substantially affects the vessel's gross tonnage, the vessel must be remeasured only under this system.

(6) A tonnage assignment under this system does not affect the applicability to the vessel of international agreements to which the United States Government is a party that are not in conflict with the Convention or with the application of International Maritime Organization (IMO) Resolutions A.494(XII) of November 19, 1981, A.540(XIII) of November 17, 1983, and A.541(XIII) of November 17, 1983. When applicable to the vessel, these Resolutions provide interim schemes for using the vessel's existing gross tonnage, instead of the gross tonnage under the Convention Measurement System, for applying the International Convention for the Safety of Life at Sea (SOLAS), the International Convention on Standards of Training, Certification, and Watchkeeping for Seafarers, 1978, (STCW), and the International Convention for the Prevention of Pollution from Ships, 1973, (MARPOL), respectively.

(b) *Standard Measurement System (subpart C).* This system applies to a vessel not required to be measured under the Convention Measurement System if the vessel is to be documented or if the application of a law of the United States to the vessel depends on the vessel's tonnage. Upon request of the owner, this system also applies to a documented vessel measured under the Convention Measurement System when Standard Measurement System tonnages are to be used in applying the provisions of a law under 46 U.S.C. 14305.

(c) *Dual Measurement System (subpart D).* This system may be applied, at the owner's option, instead of the Standard Measurement System, to a vessel eligible or required to be measured under the Standard Measurement System.

(d) *Simplified Measurement System (subpart E).* This system may be applied, at the owner's option, instead of the Standard Measurement System to the following vessels:

(1) A vessel that is under 79 feet in overall length.

(2) A vessel that is non-self-propelled and operated only on the Great Lakes.

(3) A vessel that is operated only for pleasure and operated only on the Great Lakes.

§ 69.13 Deviating from the provisions of a measurement system.

(a) In measuring a vessel under a measurement system in this part, all provisions of that system applicable to the vessel must be observed.

(b) The provisions of more than one measurement system may not be applied interchangeably or combined.

§ 69.15 Organizations authorized to measure vessels.

(a) Except as under paragraphs (c) and (d) of this section, all U.S. vessels to be measured or remeasured under the Convention, Standard, or Dual Measurement Systems must be measured by the American Bureau of Shipping (ABS). Applications for measurement must be directed to the American Bureau of Shipping, P.O. Box 910 (45 Eisenhower Drive), Paramus, New Jersey 07653–0910, (201) 712–5092.

(b) All vessels to be measured or remeasured under the Simplified Measurement System must be measured by the Coast Guard. Applications for measurement under the Simplified Measurement System are obtainable from any Coast Guard documentation office.

(c) All U.S. Coast Guard vessels and all U.S. Navy vessels of war to be measured or remeasured under any measurement system must be measured by the Coast Guard.

(d) At the option of the Commandant, the Coast Guard may measure any vessel to determine its tonnage.

(e) The appropriate certificate of measurement is issued by the measuring organization as evidence of the vessel's measurement under this part.

§ 69.17 Application for measurement services.

(a) Applications for measurement are available from and, once completed, are submitted to the measurement organization listed in § 69.15 that will perform the service. The contents of the application are described in this part under the requirements for each system.

(b) Applications for measurement under more than one system may be combined.

(c) For vessels under construction, the application must be submitted before the vessel is advanced in construction. Usually, this means as soon as the decks are laid, holds cleared of encumbrances, engine and boilers installed, and accommodations partitioned.

§ 69.19 Remeasurement and adjustment of tonnage.

(a) If a vessel that is already measured is to undergo a structural alteration or if the use of a space within that vessel is to be changed, a remeasurement may be required. Vessel owners shall report immediately to a measurement organization listed in § 69.15 any intent to structurally alter the vessel or to change the use of a space within the vessel. The organization advises the owner if remeasurement is necessary. Spaces not affected by the alteration or change need not be remeasured.

(b) When there is a perceived error in the application of a regulation or in the tonnage calculations, the vessel owner should contact the responsible measurement organization. If the error is verified, the tonnage is adjusted as necessary.

(c) If a remeasurement or adjustment of tonnage is required, the organization will issue a new tonnage certificate. If the vessel is documented, the vessel's owner must surrender the Certificate of Documentation as required under part 67, subpart 67.25, of this chapter.

(d) A vessel of less than 79 feet in overall length measured under the Standard or Dual Measurement Systems may be remeasured at the owner's request under the Simplified Measurement System.

§ 69.21 Appeals.

(a) The Commandant determines the appropriate application and interpretation of U.S. laws and regulations and international agreements as they are applied to vessels under this part.

(b) Appeals of decisions made by a measurement organization listed in § 69.15 must be submitted in writing with all supporting data to the measurement organization. The measurement organization then forwards the submittals to the Commandant for consideration of the appeal.

(c) While an appeal is in progress, the decision upon which the appeal is based remains in effect. The decision of the Commandant is final agency action.

§ 69.23 Fees.

Organizations listed in § 69.15(a) are authorized to charge a fee for measurement services. Information on fees is available directly from the organizations.

§ 69.25 Penalties.

(a) *General violation.* The owner, charterer, managing operator, agent, master, and individual in charge of a vessel in violation of a regulation in this part are each liable to the United States Government for a civil penalty of not more than $20,000. Each day of a continuing violation is a separate violation. The vessel also is liable in rem for the penalty.

(b) *False Statements.* A person knowingly making a false statement or representation in a matter in which a statement or representation is required by this part is liable to the United States Government for a civil penalty of not more than $20,000 for each false statement or representation. The vessel also is liable in rem for the penalty.

§ 69.27 Delegation of authority to measure vessels.

(a) Under 46 U.S.C. 14103 and 49 CFR 1.46, the Coast Guard is authorized to delegate to a "qualified person" the authority to measure vessels and to issue appropriate certificates of measurement for U.S. vessels that are required or eligible to be measured as vessels of the United States.

(b) Authority to measure and certify U.S. vessels under the Convention, Standard, and Dual Measurement Systems may be delegated to an organization that—

(1) Is a full member of the International Association of Classification Societies (IACS);

(2) Is incorporated under the laws of the United States, a State of the United States, or the District of Columbia;

(3) Is capable of providing all measurement services under the Convention, Standard, and Dual Measurement Systems for vessels domestically and internationally;

(4) Maintains a tonnage measurement staff that has practical experience in measuring U.S. vessels under the Convention, Standard, and Dual Measurement Systems; and

(5) Enters into a Memorandum of Agreement, as described in paragraph (d) of this section.

(c) Applications for delegation of authority under this section must be forwarded to the Commandant and include the following information on the organization:

(1) Its name and address.

(2) Its organizational rules and structure.

(3) The location of its offices that are available to provide measurement services under the Convention, Standard, and Dual Measurement Systems.

(4) The name, qualifications, experience, and job title of each full-time or part-time employee or independent contractor specifically designated by the organization to provide measurement services under the Convention, Standard, or Dual Measurement Systems.

(5) Its tonnage measurement training procedures.

(d) If, after reviewing the application, the Coast Guard determines that the organization is qualified to measure and certify U.S. vessels on behalf of the Coast Guard, the organization must enter into a Memorandum of Agreement with the Coast Guard which—

(1) Defines the procedures for administering and implementing the tonnage measurement and certification processes, including the roles and responsibilities of each party;

(2) Outlines the Coast Guard's oversight role;

(3) Prohibits the organization from using an employee or contractor of the organization to measure and certify the tonnage of a vessel if that employee or contractor is acting or has acted as a tonnage consultant for that same vessel; and

(4) Requires the organization to—

(i) Accept all requests to perform delegated services without discrimination and without regard to the vessel's location, unless prohibited from doing so under the laws of the United States or under the laws of the jurisdiction in which the vessel is located;

(ii) Physically inspect each vessel before issuing a tonnage certificate;

(iii) Provide the Coast Guard with current schedules of measurement fees and related charges;

(iv) Maintain a tonnage measurement file for each U.S. vessel that the organization measures and permit access to the file by any person authorized by the Commandant;

(v) Permit observer status representation by the Coast Guard at all formal discussions that may take place between the organization and other vessel tonnage measurement organizations pertaining to tonnage measurement of U.S. vessels or to the systems under which U.S. vessels are measured;

(vi) Comply with and apply all laws and regulations relating to tonnage measurement of U.S. vessels within the scope of authority delegated; and

(vii) Comply with all other provisions, if any, of the Memorandum of Agreement.

(e) Upon delegation of authority, the organization is listed in § 69.15(a), Organizations authorized to measure vessels.

§ 69.29 OMB control numbers assigned under the Paperwork Reduction Act.

(a) *Purpose.* This section collects and displays the control numbers assigned to information collection and record keeping requirements in this part by the Office of Management and Budget (OMB) pursuant to the Paperwork Reduction Act of 1980 (44 U.S.C. 3501 *et seq.*). The Coast Guard intends that this part comply with 44 U.S.C. 3507(f), which requires that agencies display the current control number assigned by the Director of OMB for each approved agency information collection requirement.

(b) *Display*—

Section of 46 CFR part 69	Currently assigned OMB control No.

Subpart B—Convention Measurement System

§ 69.51 Purpose.

This subpart prescribes the requirements for measuring a vessel in order to comply with the International Convention on Tonnage Measurement of Ships, 1969 (Convention), and 46 U.S.C. chapter 143.

§ 69.53 Definitions.

As used in this subpart—

Amidships means the midpoint of the registered length, as "registered length" is defined in this section.

Cargo space means an enclosed space appropriated for the transport of cargo which is to be discharged from the vessel. The term does not include a space which qualifies as an excluded space under § 69.61.

Enclosed space is defined in § 69.59.

Excluded space is defined in § 69.61.

Gross tonnage or *GT* means the tonnage determined under § 69.57.

Line of the upper deck means a longitudinal line at the underside of the upper deck or, if that deck is stepped, the longitudinal line of the underside of the lowest portion of that deck parallel with the upper portions of that deck.

Molded depth means the vertical distance amidships between the following points:

(a) From the line of the upper deck at the vessel's side or, if the vessel has rounded gunwales, from the intersection of the line of the upper deck extended to the molded line of the shell plating as though the gunwales were of angular design.

(b) To the top of the flat keel, to the lower edge of the keel rabbet if the vessel is of wood or composite structure, or to the point where the line of the flat of the bottom extended inward cuts the side of the keel if the vessel's lower part is hollow or has thick garboards.

Molded draft means—

(a) For vessels assigned a load line under part 42, 44, 45, or 47 of this chapter, the draft corresponding to the Summer Load Line (other than a timber load line);

(b) For passenger vessels assigned a load line under part 46 of this chapter, the draft corresponding to the deepest subdivision load line assigned;

(c) For vessels to which part 42, 44, 45, 46, or 47 of this chapter do not apply but which otherwise have been assigned a load line, the draft corresponding to the Summer Load Line so assigned;

(d) For vessels to which no load line has been assigned but the draft of which is restricted under any Coast Guard requirement, the maximum draft permitted under the restriction; and

(e) For other vessels, 75 per cent of the molded depth.

Net tonnage or *NT* means tonnage determined under § 69.63.

Passenger means a person on board a vessel other than—

(a) The master, a member of the crew, or other person employed or engaged in any capacity in the business of the vessel; and

(b) A child under one year of age.

Registered breadth means the maximum breadth of a vessel measured amidships to the molded line of the frame in a vessel with a metal shell and to the outer surface of the hull in all other vessels.

Registered length means either 96 percent of the length on a waterline at 85 percent of the least molded depth measured from the top of the flat keel or the length from the fore side of the stem to the axis of the rudder stock on that waterline, whichever is greater. In vessels designed with a rake of keel, this length is measured on a waterline parallel to the design waterline.

Upper deck means the uppermost complete deck exposed to weather and sea, which has permanent means of weathertight closing of all openings in the weather part of the deck, and below which all openings in the sides of the vessel are fitted with permanent means of watertight closing.

Weathertight means secure against penetration of water into the vessel in any sea condition.

§ 69.55 Application for measurement services.

Applications for measurement under this subpart must include the following information and plans:

(a) Type of vessel.

(b) Vessel's name, official number (if assigned), and intended port of documentation.

(c) Builder's name and the vessel hull number assigned by builder.

(d) Place and year built.

(e) Date keel was laid.

(f) Overall length, breadth, and depth of vessel.

(g) Lines plan.

(h) Booklet of offsets at stations.

(i) Capacity plans for tanks and cargo compartments.

(j) Hydrostatic curves.

(k) Construction plans showing measurements and scantlings of deck structures, hatches, appendages, recesses, and other enclosed spaces.

(l) Arrangement plans.

§ 69.57 Gross tonnage.

Gross tonnage (GT) is determined by the following formula $GT=K_1V$, in which V=total volume of all enclosed spaces in cubic meters and $K_1=0.2+0.02 \log_{10}V$.

§ 69.59 Enclosed spaces.

Enclosed space means a space which is bounded by the vessel's hull, by fixed or portable partitions or bulkheads, or by decks or coverings other than permanent or movable awnings. No break in a deck, nor any opening in the vessel's hull, in a deck or in a covering of a space, or in the partitions or bulkheads of a space, nor the absence of a partition or bulkhead precludes the space from being included in the enclosed space.

§ 69.61 Excluded spaces.

(a) *Excluded space* means an enclosed space which is excluded from volume (V) in calculating gross tonnage. Except as under paragraph (g) of this section, this section lists the excluded spaces.

(b) A space that is within a structure and that is opposite an end opening extending from deck to deck (except for a curtain plate of a height not exceeding by more than one inch the depth of the adjoining deck beams) and having a breadth equal to or greater than 90 percent of the breadth of the deck at the line of the opening is an excluded space, subject to the following:

(1) Only the space between the actual end opening and a line drawn parallel to the line or face of the opening at a distance from the opening equal to one-half of the breadth of the deck at the line of the opening is excluded. (See § 69.75, Figure 1.)

(2) If, because of any arrangement (except convergence of the outside plating as shown in § 69.75, figure 3), the breadth of the space is less than 90 percent of the breadth of the deck, only the space between the line of the opening and a parallel line drawn through the point where the athwartship breadth of the space is equal to 90 percent or less of the breadth of the deck is excluded. (See § 69.75, figures 2 and 4.)

(3) When any two spaces, either of which is excluded under paragraphs (b)(1) or (b)(2) of this section, are separated by an area that is completely open except for bulwarks or open rails, these two spaces must not be excluded if the separation between the two spaces is less than the least half breadth of the deck in way of the separation. (See § 69.75, figures 5 and 6.)

(4) When the deck at the line of an opening has rounded gunwales, the breadth of the deck is the distance between the tangent points indicated in § 69.75, figure 11.

(c) A space that is open to the weather and that is under an overhead deck covering with no connection on the space's exposed sides between the covering and the deck other than the stanchions necessary for the covering's support is an excluded space. An open rail or bulwark fitted at the vessel's side does not disqualify the space from being an excluded space if the height between the top of the rail or bulwark and the overhead structure or curtain plate (if fitted) is not less than 2.5 feet or one-third of the height of the space, whichever is greater. (See § 69.75, figure 7.)

(d) A space in a side-to-side structure directly in way of opposite side openings not less than 2.5 feet in height or one-third of the height of the structure, whichever is greater, is an excluded space. If the opening is only on one side of the structure, the space to be excluded is limited inboard from the opening to a maximum of one-half of the breadth of the deck in way of the opening. (See § 69.75, figure 8.)

(e) A space in a structure immediately below an uncovered opening in the deck overhead is an excluded space, if the opening is exposed to the weather and the space to be excluded is limited to the area of the opening. (See § 69.75, figure 9.)

(f) A recess in the boundary bulkhead of a structure which is exposed to the weather and which has an opening that extends from deck to deck without a means of closing is an excluded space, if the interior width of the space is not greater than the width of the opening and extension of the space into the structure is not greater than twice the width of the opening. (See § 69.75, figure 10.)

(g) Any space described in paragraphs (b) through (f) of this section which fulfills at least one of the following conditions is not an excluded space:

(1) The space is fitted with shelves or other means designed for securing cargo or stores.

(2) The opening that would otherwise permit the space to be excluded space is fitted with a means of closure.

(3) Other features of the space make it possible for the space to be closed.

§ 69.63 Net tonnage.

Net tonnage (NT) is determined by the formula:

$$NT=K_2V_c\left(\frac{4d}{3D}\right)^2+K_3\left(N_1+\frac{N_2}{10}\right)$$

in which:

V_c=total volume of cargo spaces in cubic meters.

$K_2=0.2+0.02 \log_{10} V_c$

$$K_3=1.25\left(\frac{GT+10{,}000}{10{,}000}\right)$$

D=molded depth amidships in meters, as "molded depth" is defined in § 69.53.

d=molded draft amidships in meters, as "molded draft" is defined in § 69.53.

N_1=number of passengers in cabins with not more than eight berths, as "passenger" is defined in § 69.53.

N_2=number of other passengers, as "passenger" is defined in § 69.53.

GT=gross tonnage as determined under § 69.57.

N_1 plus N_2 must equal the total number of passengers the vessel is permitted to carry as indicated on the Ship's Passenger Certificate. If N_1 plus N_2 is less than 13, both N_1 and N_2 are zero.

$\left(\frac{4d}{3D}\right)^2$ must not be greater than unity.

$K_2V_c\left(\frac{4d}{3D}\right)^2$ must not be less than 0.25 GT.

NT must not be less than 0.30 GT.

§ 69.65 Calculation of volumes.

(a) Volumes V and V_c used in calculating gross and net tonnages, respectively, must be measured and calculated according to accepted naval architectural practices for the spaces concerned.

(b) The volume of the hull below the upper deck is determined as follows:

(1) If the number and location of sections originally used in making other calculations which relate to the form of the vessel (such as displacement volumes and center of buoyancy) are reasonably available, Simpson's first rule may be applied using those sections.

(2) If the number and location of stations originally used are not reasonably available or do not exist and the hull is of conventional design with faired lines, Simpson's first rule may be applied using a number and location of stations not less than those indicated in § 69.109(g)(1).

(3) If the hull is of standard geometric shape, a simple geometric formula that yields a more accurate volume may be used.

(4) If the lines of the hull are not fair, the volume may be measured by using a combination of methods under this section.

(c) The volume of structures above the upper deck may be measured by applying the superstructure provisions in § 69.113 or by any accepted method or combinations of methods.

(d) Measurements must be taken, regardless of the fitting of insulation or the like—

(1) To the inner side of the shell or structural boundary plating, in vessels constructed of metal; and

(2) To the outer surface of the shell or to the inner side of structural boundary surfaces, in all other vessels.

(e) When determining the volume of a cargo space, measurements must be taken without consideration for insulation, sparring, or ceiling fitted within the space.

(f) Measurements must be to the nearest one-twentieth of a foot.

(g) Calculations must be made on a worksheet and must be sufficiently detailed to permit easy review. The measurement procedures used must be identified on the worksheet.

§ 69.67 Marking of cargo spaces.

Cargo spaces used in determining volume (Vc) for calculating net tonnage must be permanently marked with the letters "CC" (cargo compartment) which are at least four inches in height and positioned so as to be visible at all times.

§ 69.69 Issuance of an International Tonnage Certificate (1969).

On request of the vessel owner, an International Tonnage Certificate (1969) is issued for a vessel measured under this subpart that is 79 feet or more in registered length and that will engage on a foreign voyage. The Certificate is issued to the vessel owner or master and must be maintained on board the vessel when it is engaged on a foreigh voyage.

§ 69.71 Change of net tonnage.

(a) When a vessel is altered so that the net tonnage is increased, the new net tonnage must be applied immediately.

(b) A vessel concurrently assigned load lines under both the International Convention on Load Lines (parts 42, 44, 45, or 47 of this chapter) and either the International Convention for the Safety of Life at Sea (SOLAS) (part 46 of this chapter) or other international agreement must be assigned only one net tonnage. The net tonnage assigned must be the net tonnage applicable to the load line assigned under the International Convention on Load Lines or SOLAS for the trade in which the vessel in engaged.

(c) When a vessel is altered so that the net tonnage is decreased or the vessel's trade is changed so that the load line assigned for that trade under paragraph (b) of this section is no longer appropriate and results in a decrease in its net tonnage, a new International Tonnage Certificate (1969) incorporating that net tonnage may not be issued until twelve months after the date on which the current Certificate was issued. However, if one of the following apply, a new Certificate may be issued immediately:

(1) The vessel is transferred to the flag of another nation.

(2) The vessel undergoes alterations or modifications which the Coast Guard deems to be of a major character, such as the removal of a superstructure which requires an alteration of the assigned load line.

§ 69.73 Variance from the prescribed method of measurement.

(a) When application of this supart to a novel type vessel produces unreasonable or impractical results, the Commandant may determine a more suitable method of measurement.

(b) Requests for a determination must be submitted to the Commandant, explain the problem, and include plans and sketches of the spaces in question.

§ 69.75 Figures.

0=excluded space.
C=enclosed space.
I=space to be considered as an enclosed space.
B=breadth of deck in way of the opening.

Subpart C—Standard Measurement System

§ 69.101 Purpose.

This supart prescribes the procedures for measuring a vessel under the Standard Measurement System described in 46 U.S.C. 14512.

§ 69.103 Definitions.

As used in this subpart—

Between-deck means the space above the line of the tonnage deck and below the line of the deck next above.

Break means the space between the line of a deck and the upper portion of that deck, in cases where that deck is stepped and continued at a higher elevation.

Camber means the perpendicular rise or crown of a deck at the centerline of the vessel measured above the skin of the vessel at the vessel's sides.

Ceiling means the permanent planking or plating fitted directly on the inboard side of frames, floors, or double bottom and includes cargo battens and refrigeration insulation but does not include false ceiling which stands off from the framing.

Coaming means both the vertical plating around a hatch or skylight and the sill below an opening in a bulkhead.

Deckhouse means a structure that is on or above the uppermost complete deck and that does not extend from side to side of the vessel. The term includes cabin trunks and closed-in spaces over the holds of vessels.

Depth of frame means the perpendicular depth of a bottom frame and the athwart distance between the inboard and outboard faces of a side frame.

Double bottom means a space at the bottom of a vessel between the inner and outer bottom plating and used solely for water ballast.

Floor means a vertical plate or timber extending from bilge to bilge in the bottom of a vessel. In a wooden vessel, "floor" means the lowermost timber connecting the main frames at the keel when that timber extends the full depth of the frames to which it is fastened. In a double bottom, floors usually extend from the outer to the inner bottom.

Gross tonnage is defined in § 69.107(a).

Hatch means an opening in a deck through which cargo is laden or discharged.

Line of tonnage deck means the line determined under § 69.109(e).

Line of uppermost complete deck means the line determined under § 69.111(b).

Net tonnage is defined in § 69.107(b).

Registered breadth is defined in § 69.53.

Registered depth means "molded depth" as defined in § 69.53.

Registered length is defined in § 69.53.

Shelter deck means the uppermost deck that would have qualified as the uppermost complete deck had it not been fitted with a middle line opening.

Step means a cutoff in a deck or in the bottom, top, or sides of a space resulting in varying heights of a deck or varying heights or widths of a space.

Superstructure means all permanent structures (such as forecastle, bridge, poop, deckhouse, and break) on or above the line of the uppermost complete deck or, if the vessel has a shelter deck, on or above the line of the shelter deck.

Tonnage deck is defined in § 69.109(c).

Tonnage length is defined in § 69.109(f).

Uppermost complete deck means the uppermost deck—

(a) Which extends from stem to stern and from side to side at all points of its length;

(b) The space below which is enclosed by the sides of the vessel;

(c) Through which there is no opening that would exempt the space below from being included in gross tonnage; and

(d) Below which there is no opening through the hull that would exempt the space below from being included in gross tonnage.

§ 69.105 Application for measurement services.

Applications for measurement services under this subpart must include the following information and plans:

(a) Type of vessel.

(b) Vessel name, official number, and intended port of documentation.

(c) Builder's name and the vessel hull number assigned by the builder.

(d) Place and year built.

(e) Date keel was laid.

(f) Overall length, breadth, and depth of vessel.

(g) Lines plan.

(h) Booklet of offsets.

(i) Capacity plans for tanks

(j) Construction plans showing measurements and scantlings of hull and superstructure.

(k) Tonnage drawing showing tonnage length in profile and tonnage sections.

(l) Arrangement plans.

§ 69.107 Gross and net tonnages.

(a) Gross tonnage is the sum of the following tonnages, less certain spaces exempt under § 69.117:

(1) Under-deck tonnage (§ 69.109).

(2) Between-deck tonnage (§ 69.111).

(3) Superstructure tonnage (§ 69.113).

(4) Excess hatchway tonnage (§ 69.115(c)).

(5) Tonnage of framed-in propelling machinery spaces included in calculating gross tonnage (§ 69.121(d)(1)).

(b) Net tonnage is gross tonnage less deductions under §§ 69.119 and 69.121.

§ 69.109 Under-deck tonnage.

(a) *Defined.* "Under-deck tonnage" means the tonnage of the space below the line of the tonnage deck, as that volume is calculated under this section.

(b) *Method of calculating tonnage.* Under-deck tonnage is calculated by applying Simpson's first rule using the tonnage length and the areas of the transverse sections prescribed by this section.

(c) *Identifying the tonnage deck.* In vessels with two or less decks, the tonnage deck is the uppermost complete deck. In vessels with more than two decks, the tonnage deck is the second deck from the keel as determined in paragraph (d) of this section.

(d) *Enumerating the decks to identify the second deck from the keel.* Only decks without openings that permit space below to be exempt from inclusion in under-deck tonnage are enumerated. Partial decks are not considered decks for the purpose of enumerating decks. However, the presence of engine and boiler casings, peak tanks, or cofferdams that penetrate a deck do not disqualify the deck from being enumerated.

(e) *Identifying the line of the tonnage deck.* (1) If the tonnage deck runs in a continuous line from stem to stern, the line of the tonnage deck is the longitudinal line at the underside of the tonnage deck.

(2) If the tonnage deck runs at different levels from stem to stern, the line of the tonnage deck is the longitudinal line of the underside of the lowest portion of that deck parallel with the upper portions of that deck. (See § 69.123, figures 1 and 2.) Spaces between the line of the tonnage deck and the higher portions of that deck are not included in under-deck tonnage.

(f) *Tonnage length.* (1) "Tonnage length" means the length of a horizontal straight line measured at the centerline of the vessel from the point forward where the line of the tonnage deck intersects the line of the inboard faces of the ordinary side frames to the point aft where the line of the tonnage deck intersects the inboard face of the transom frames or cant frames. (See § 69.123, figure 3.)

(2) For a vessel having a headblock or square end with framing which extends

---

---

except in vessels (such as barges) with

not an open vessel and that has a

from the tonnage deck to the bottom of the vessel, the tonnage length terminates on the inboard face of the head block or end framing. When a headblock extends inboard past the face of the end side frames or when the headblock plates are excessive in length, the tonnage length terminates at the extreme end of the vessel less a distance equal to the thickness of an ordinary side frame and shell plating. (See § 69.123, figure 4.)

(3) For a vessel having a square bow or stern and tonnage deck with camber, the effect of the camber on the tonnage length must be considered. The tonnage length must be measured below the tonnage deck at a distance equal to one-third of round camber an done-half of straight pitch camber.

(g) *Division of vessel into transverse sections.* (1) Except as under paragraph (m)(1)(iii) of this section, the tonnage length is divided into an even number of equal parts as indicated in the following table:

Class	Tonnage length	Divisions
1	50 ft. or less	6
2	Over 50 ft. but not exceeding 100 ft.	8
3	Over 100 ft. but not exceeding 150 ft.	10
4	Over 150 ft. but not exceeding 200 ft.	12
5	Over 200 ft. but not exceeding 250 ft.	14
6	Over 250 ft.	16

(2) Transverse sections are cut at each end of the tonnage length and at each point of division of the tonnage length. Intervals and one-third intervals between the points of division are measured to the nearest thousandth of a foot. (See § 69.123 figures 5 and 6.)

(h) *Depths of transverse sections.* (1) Transverse section depths are measured at each point of division of the tonnage length at the centerline of the vessel from a point below the line of the tonnage deck equal to one-third of the camber or to one-half of the pitch of the beam down to the upper side of the ordinary frames, floors, longitudinals, or tank top of a cellular double bottom, as the case may be.

(2) When a depth falls at a point where the tank top of a double bottom has a straight fall from centerline to the wings, the depth terminates at one-half of the height of fall. (See § 69.123 figure 8.)

(3) When a depth falls at a point where the tank top of a double bottom rises from the centerline to the wings, the depth terminates at one-half the dead rise. (See § 69.123, figure 9.)

(4) The depth at the midpoint of the tonnage length or, when a vessel is measured in parts, the depth at the midpoint of each part determines the number of equal parts into which each depth is divided, as follows:

(i) If the midpoint depth is 16 feet or less, each depth is divided into four equal parts. If the midpoint depth exceeds 16 feet, each depth is divided into six equal parts. (See § 69.123, figure 7.)

(ii) The interval between the points of division of a depth and one-third intervals are carried to the nearest hundredth of a foot.

(i) *Breadths of transverse sections.* (1) Transverse section breadths are measured horizontally at each point of division of each depth and also at the upper and lower points of each depth. Breadths are measured to the inboard face of the ordinary frames or to the line of the ordinary frames. Breadths are measured parallel to each other and at right angle to the vessel's centerline. (See § 69.123, figure 7.)

(2) Upper breadths are not reduced by measuring to deck-beam brackets. In cases of camber when an upper breadth passes through the deck (see § 69.123, figure 7), the breadth is measured to the line of the side frames at the under side of the deck projected vertically up to the height of the upper breadth.

(3) Bottom breadths are measured only as far as the flat of the floor extends. (See § 69.123, figures 7 and 10.) When bottom frames rise immediately from the flat keel, bottom breadths are equal to the breadth of the flat keel. Where there is no double bottom and where there is dead rise of the bottom out to the sides of the vessel, bottom breadths are equal to the part of the bottom plating not affected by dead rise.

(4) Bottom breadths falling in way of a double bottom, the top of which rises or falls from certerline to the wings, are measured between the inboard faces of the frame brackets which connect the double bottom with the frames. (See § 69.123, figures 8 and 9.)

(j) *Measuring spaces having ceiling.* The maximum allowance for terminating measurements on ceiling is three inches on the bottom frames or tank top and three inches on each side frame. When ceiling is less than three inches thick, only the actual thickness is allowed. When ceiling is fitted on a platform directly above the bottom frames, depths are measured down through the platform to the upper side of the frames and the allowable ceiling on the platform is then deducted.

(k) *Area of transverse sections.* (1) A transverse section at an end of the tonnage length may not yield area,

except in vessels (such as barges) with an upright bow or stern.

(2) The breadths of each transverse section are numbered from above, the upper being "1", the second down being "2", and so on to the lowest.

(3) Multiply the even numbered breadths by four and the odd numbered breadths by two, except for the first and last breadths, which are multiplied by one.

(4) Add together the products from paragraph (k)(3) of this section.

(5) Multiply the sum from paragraph (k)(4) of this section by one-third of the interval between the breadths. The product is the area of the transverse section.

(l) *Tonnage.* (1) Number the transverse sections successively "1", "2", and so forth, beginning at the bow.

(2) Multiply the area of the even numbered sections by four and the area of the odd numbered sections by two, except the first and last sections, which are multiplied by one.

(3) Add together the products from paragraph (l)(2) of this section and multiply the sum by one-third of the interval between the sections. The product is the volume under-deck.

(4) The volume under-deck is divided by 100 and is, subject to exemptions, the under-deck tonnage.

(m) *Steps in double bottom.* (1) The tonnage length of a vessel having a step exceeding six inches in height in its double bottom is divided into longitudinal parts at the step. Each part is subdivided as follows to determine the number of transverse sections:

(i) Parts 20 feet or under in length are divided into two equal parts.

(ii) Parts over 20 feet and under 40 feet in length are divided into four equal parts.

(iii) Parts 40 feet or over are divided as provided in paragraph (g)(1) of this section.

(2) The tonnage of each part is calculated separately. The sum of the tonnages of the parts is the under-deck tonnage.

(n) *Outside shaft tunnel exclusion.* Any portion of an outside shaft tunnel included in tonnage through the process of measurement is subtracted from the under-deck tonnage.

(o) *Open vessels.* (1) An open vessel is one of any length without a deck or with one or more partial decks, the total length of which is less than one-half the tonnage length.

(2) The line of the tonnage deck for an open vessel is the upper edge of the upper strake. Depths of transverse sections are taken from this line.

(3) Any vessel, other than one having a mechanically refrigerated hold, that is not an open vessel and that has a tonnage length of less than 50 feet is measured as an open vessel, if the distance between the line of its tonnage deck and the upper edge of the upper strake is more than one-sixth of the midship depth. "Midship depth" means the depth measured from the line of the upper edge of the upper strake to the point in the bottom used for measuring tonnage depths.

§ 69.111 Between-deck tonnage.

(a) *Defined.* "Between-deck tonnage" means the tonnage of the space above the line of the tonnage deck and below the line of the uppermost complete deck.

(b) *Identifying the line of the uppermost complete deck.* (1) If the uppermost complete deck runs in a continuous line from stem to stern, the line of the uppermost complete deck is the longitudinal line of the underside of the uppermost complete deck.

(2) If the uppermost complete deck runs at different levels from stem to stern, the line of the uppermost complete deck is the longitudinal line of the underside of the lowest portion of that deck parallel with the upper portions of that deck. Spaces between the line of the uppermost complete deck and the higher portions of the deck are included in superstructure tonnage.

(c) *Method for calculating tonnage.* The tonnage of each level of the between-deck space is calculated separately, as follows:

(1) The length of each level is measured at the mid-height between the line of the deck above and the line of the deck below. Measure from the point forward where the continuation of the line of the inboard face of the normal side frames intersects the center line of the vessel aft to the forward face of the normal transom framing.

(2) Divide the length under paragraph (c)(1) of this section into the same number of equal parts into which the tonnage length is divided under § 69.109(g)(1).

(3) Measure at mid-height between the faces of the normal side frames the inside breadth of the space at each end and at each point of division of the length. Number the breaths successively "1", "2", and so forth beginning at the bow.

(4) Multiply the even numbered breadths by four and the odd numbered breadths by two, except the first and last, which are multiplied by one.

(5) Add together the products under paragraph (c)(4) of this section and multiply the sum by one-third of the interval between the points at which the breadths are taken. The product is the square foot area of the space at mid-height.

(6) Multiply the area of the space at mid-height by the average of the heights taken each point of division of the space. The product divided by 100 is the tonnage of that space.

(7) The between-deck tonnage is the sum of the tonnage of each level within the between-deck space.

§ 69.113 Superstructure tonnage.

(a) *Defined.* "Superstructure tonnage" means the tonnage of all permanent structures, such as forecastle, bridge, poop, deckhouse, and break, on or above the line of the uppermost complete deck (or line of shelter deck, if applicable).

(b) *Method of calculating tonnage.* The tonnage of all structures on each level on or above the uppermost complete deck (or shelter deck, if applicable) is calculated separately as follows:

(1) The length of each structure is measured along its centerline at mid-height between the line of the inboard face of the framing on one end to the line of the inboard face of the framing on the other end. (See § 69.123, figure 11.)

(2) Divide the length under paragaph (b)(1) of this section into an even number of equal parts most nearly equal to those into which the tonnage length is divided under § 69.109.

(3) Measure at mid-height the inside breadth at each end and at each point of division of the length. Number the breadths successively "1", "2", and so forth, beginning at the extreme forward end of the structure. If an end of the structure is in the form of a continuous arc or curve, the breadth at that end is one-half the nearest breadth. If an end is in the form of an arc or curve having a decided flat, the breadth at the end is two-thirds of the nearest breadth.

(4) Multiply the even numbered breadths by four and the odd numbered by two, except the first and last breadth, which are multiplied by one.

(5) Add together the products under paragraph (b)(4) of this section and multiply the sum by one-third of the interval between the points at which the breadths are taken. The product is the square foot area of the structure at mid-height.

(6) Multiply this area by the average of the heights taken at each point of division of the structure between its decks or the line of its decks. The product divided by 100 is the tonnage of that structure.

(c) A structure having steps in its deck or side must be measured in parts.

BEST COPY AVAILABLE

(d) The superstructure tonnage is the sum of tonnages of each level above the line of the uppermost complete deck (or shelter deck, if applicable).

(e) When a structure is located over a cut-away portion of the tonnage deck, the structure's height is measured from the under side of its overhead deck to the line of the tonnage deck. If the tonnage deck has no camber, allow for camber in the overhead deck.

(f) For structures of a standard geometric shape, a simple geometric formula that yields an accurate volume may be used.

§ 69.115 Excess hatchway tonnage.

(a) Hatchways that are above the tonnage deck and are either open to the weather or within open structures are measured to determine excess hatchway tonnage. Hatchways that are in between-deck spaces, on decks within closed-in structures, or on open structures are not measured.

(b) The tonnage of a hatchway is its length times breadth times mean depth divided by 100. Mean depth is measured from the under side of the hatch cover to the top of the deck beam.

(c) From the sum of the tonnage of the hatchways under this section, subtract one-half of one percent of the vessel's gross tonnage exclusive of the hatchway tonnage. The remainder is added as excess hatchway tonnage in calculating gross tonnage.

§ 69.117 Spaces exempt from inclusion in gross tonnage.

(a) *Purpose.* This section lists spaces which are exempt from inclusion in gross tonnage.

(b) *Spaces on or above the line of the uppermost complete deck.* The following spaces or portions of spaces on or above the line of the uppermost complete deck are exempt if the spaces or portions are reasonable in extent and adapted and used exclusively for the purpose indicated:

(1) Spaces for anchor gear, including capstan, windlass, and chain locker, are exempt.

(2) Companions and booby-hatches protecting stairways or ladderways leading to spaces below are exempt, whether or not the spaces below are exempt.

(3) Galley or other spaces fitted with a range or oven for cooking food to be consumed onboard the vessel are exempt.

(4) Spaces designed to provide light or air to propelling machinery are exempt, as follows:

(i) When propelling machinery is located entirely on or above the line of the uppermost complete deck, the entire propelling machinery space and all fuel bunker spaces that are also located above that line are exempt as light or air spaces. (See exception in § 69.121(d)(1) for framed-in spaces.)

(ii) When part of the propelling machinery projects above the line of the uppermost complete deck into a space used exclusively to provide light or air to the propelling machinery, the entire space is exempt as light or air space. When any portion of this space is used for purposes other than providing light or air, only the portion of the space used for light or air, the space occupied by the propelling machinery itselt, and a propelling machinery working space allowance under § 69.121 limited to two feet, if available, on each side of the propelling machinery are exempt.

(iii) Any part of an escape shaft, or a companion sheltering an escape shaft, above the line of the uppermost complete deck is exempt as light or air space.

(iv) Space that would otherwise be exempt as a light or air space is not exempt when propelling machinery is boxed-in and does not extend above the line of the uppermost complete deck. Any portion of the boxed-in space above the line of the uppermost complete deck is exempt.

(5) Skylights affording light or air to a space below, other than to propelling machinery spaces. Space immediately below the line of the deck on which a skylight is located is exempt only when there is an opening in the next lower deck directly below the skylight to permit light or air to an even lower deck.

(6) Machinery spaces, other than for propelling machinery under § 169.121.

(7) Spaces for steering gear.

(8) Water closet spaces that are fitted with at least a toilet and are intended for use by more than one person.

(9) The space in a wheelhouse necessary for controlling the vessel.

(c) *Passenger spaces.* (1) As used in this section, the term "passenger" includes officers and enlisted men on military vessels who are not assigned ship's duties and not entered on the ship's articles.

(2) As used in this section, "passenger space" means a space reserved exclusively for the use of passengers and includes, but is not limited to, berthing areas, staterooms, bathrooms, toilets, libraries, writing rooms, lounges, dining rooms, saloons, smoking rooms, and recreational rooms. The space need not be part of or adjacent to a berthing area to be considered a passenger space.

(3) A passenger space located on or above the first deck above the uppermost complete deck is exempt from gross tonnage.

(4) A passenger space located on the uppermost complete deck is exempt from gross tonnage only when it has no berthing accommodations and is an open structure under paragraph (d) of this section.

(d) *Open structures.* (1) Structures that are located on or above the line of the uppermost complete deck that are under cover (sheltered) but open to the weather are exempt from gross tonnage.

(2) A structure is considered "open to the weather" under paragraph (d)(1) of this section when an exterior end bulkhead of the structure is open and, except as provided in paragraph (d)(4) of this section, is not fitted with any means of closing. To be considered "open to the weather", the end bulkhead must not have a coaming height of more than two feet in way of any required opening and have one of the following:

(i) Two openings, each at least three feet wide and at least four feet high in the clear, one on each side of the centerline of the structure.

(ii) One opening at least four feet wide and at least five feet high in the clear.

(iii) One opening at least 20 square feet in the clear with a breadth in excess of four feet and a height of not less than three feet.

(3) A compartment within an open structure is considered open to the weather only when an interior bulkhead of that compartment has an opening or openings that meet the requirements for end bulkheads under paragraphs (d)(2)(i) through (d)(2)(iii) of this section. Other compartments within the structure are not considered open to the weather.

(4) An interior or exterior opening that is temporarily closed by shifting boards dropped into channel sections at the sides of the opening or by plates or boards held in place by hook bolts is considered open to the weather—

(i) If the hook bolts are spaced at least one foot apart and hook over a stiffener bar around the perimeter of the opening;

(ii) If the cover plates fay against the bulkhead;

(iii) If battening, cawlking, or gaskets of any material are not used; and

(iv) If cleats, stud bolts, hinges, bolts through the bulkhead, or other attachments (other than hook bolts) that may be used in conjunction with the temporary cover as a means of closing the opening are not installed at the edge of opening. (See § 69.123, Figure 12.)

(5) A structure with its aft end entirely open from the under side of its overhead stiffeners down to the deck, to the line of the deck, or to a coaming not

---

exceeding three inches in height and open athwartship between the inboard faces of the side stiffeners is considered open to the weather. The opening may be covered by a wire mesh screen or temporarily closed by canvas secured at the top and lashed or buttoned in place.

(e) *Open space between the shelter deck and the next lower deck.* (1) Space that is between the shelter deck and the next lower deck and that is under cover (sheltered) but open to the weather is exempt from gross tonnage when all openings in the uppermost complete deck are provided with a watertight means of closing.

(2) A space is considered "open to the weather" under paragraph (e)(1) of this section when the shelter deck above the space has a middle line opening which conforms to the following:

(i) The middle line opening must be at least four feet long in the clear and at least as wide as the after cargo hatch on the shelter deck, but not less than one-half the width of the vessel at the midpoint of the length of the opening. The opening may have rounded corners not exceeding a nine inch radius. When a greater radius is required by the Coast Guard or a Coast Guard recognized classification society under § 42.05–60 of this chapter, notification of that requirement must be submitted to the Commandant.

(ii) The middle line openings must be located so that the distance between the aft edge of the middle line opening and the vessel's stern is not less than one-twentieth of the tonnage length of the vessel and the distance between the fore edge of the opening and the vessel's stem is not less than one-fifth of the tonnage of the vessel.

(iii) The middle line opening must not be within a structure of any type.

(iv) If the middle line opening is guarded by rails or stanchions, the rails and stanchions must not be used to secure or assist in securing a cover over the opening.

(v) The coaming of the middle line opening must not exceed one foot mean height above the shelter deck. Bolts must not pass through the stiffeners or flanges on the coaming, nor may there be any other attachments on the coaming for fastening a cover. Portable wood covers may be fitted over the middle line opening if held in place only by lashings fitted to the under side of the covers. Metal covers may be fitted if held in place only by hook bolts spaced not less than 18 inches apart that pass through the cover and hook over angle stiffeners or flanges fitted to the outside of the coaming.

(vi) The space below the middle line opening must have a minimum length of four feet throughout its entire breadth and height and be in the clear at all times.

(vii) A scupper having a five inch minimum inside diameter and fitted with a screw down non-return valve geared to and operated from the shelter deck must be fitted on each side of the upper deck in way of the middle line opening.

(3) When the shelter deck space forward or aft of the middle line opening is divided by interior bulkheads, only those compartments with at least two openings that progress to the middle line opening are considered "open to the weather" under paragraph (e)(1) of this section. Each required opening must be at least three feet wide and at least four feet high in the clear, must not have a coaming height or more than two feet, and must not be fitted (except as provided in paragraph (d)(4) of this section) with any means of closing. Other compartments within the shelter deck space are not considered "open to the weather" under paragraph (e)(1) of this section.

(f) *Water ballast spaces.* A space, regardless of location, adapted only for water ballast and not available for stores, supplies, fuel, or cargo (other than water to be used for underwater drilling, mining, and related purposes, including production), upon request, may be exempt from gross tonnage if the following are met:

(1) The space must be available at all times only for water ballast that is piped through a system independent of other systems (except fire fighting and bilge suction systems). Pumps, pipes, and other equipment for loading and unloading water ballast must be of a size suitable for the efficient handling of the water ballast within a reasonable time frame. All manholes providing access to a water ballast space must be oval or circular and not greater than 34 inches in diameter. Except for those on a deck exposed to the weather, the manholes may have a coaming not exceeding six inches in height. Existing hatches over spaces being converted to water ballast spaces must have a watertight cover plate welded to the hatch and a manhole, as described in this paragraph, fitted in the plating.

(2) The primary purpose of the water ballast must be to afford a means of maintaining the vessel's stability, immersion, trim, pre-loading conditions, or seakeeping capabilities.

(3) If the space is in a vessel that is subject to inspection under 46 U.S.C. 3301, the space must be considered when determining the adequacy of the vessel's stability under 46 CFR chapter I.

(4) If the total of all water ballast spaces to be exempted from gross tonnage exceeds 30% of the vessel's gross tonnage (as calculated under this subpart without any allowance for water ballast), a justification of the operating conditions that require the water ballast must be submitted to the measuring organization. The measuring organization reviews the submittal for completeness and, when complete, forwards the submittal to the Commandant for approval. Although a single condition may justify all water ballast spaces, several conditions may be necessary in other cases. However, a particular tank is not justified by a condition if another tank already justified by another condition could be used as effectively. The justification must—

(i) Designate the vessel's service;

(ii) Explain for what purpose under paragraph (f)(2) of this section the water ballast is being used;

(iii) Provide the calculations required in paragraphs (f)(4)(vi) through (f)(4)(ix) of this section for those uses on a form similar to Coast Guard Stability Test Form CG–993–9;

(iv) Include the capacity, tank arrangement, and piping plans for the vessel;

(v) Include a statement certifying that the space will be used exclusively for water ballast as prescribed by this section;

(vi) If water ballast is used for stability, describe each loading condition and the resultant metacentric height (GM) and include calculations;

(vii) If water ballast is used for immersion or trim, describe those conditions and include loading and trim calculations;

(viii) If water ballast is used for pre-loading, describe how it is used and include strength and weight calculations; and

(ix) If water ballast is used for seakeeping, describe each loading condition, GM, period of roll, and, if speed is involved, speed versus trim and draft and include calculations.

(5) If the water ballast space or its use, purpose, or piping are changed, the vessel owner or operator must report the change promptly to a measurement organization listed in § 69.15 for a determination as to whether a tonnage remeasurement is required.

(g) *Methods for measuring exempt spaces.* (1) If the exempt space is located within the superstructure, the exempt space is measured using the same procedures used to measure superstructure tonnage under § 69.113.

(2) If the exempt space is located between-deck, the space is measured using the same procedures used for

between-deck tonnage under § 69.111(c), except that the length of the exempt space is divided into the even number of spaces most equal to the number of spaces into which the between-deck was divided.

(3) If the exempt space is located under-deck, the space is measured using the same procedures used for under-deck tonnage under § 69.109, except that the length of the exempt space is divided into the even number of spaces most equal to the number of spaces into which the under-deck was divided.

§ 69.119 Spaces deducted from gross tonnage.

(a) *Purpose.* This section lists the requirements for spaces (other than propelling machinery spaces under § 69.121) which, though included in calculating gross tonnage (i.e., are not exempt under § 69.117), are deducted from gross tonnage in deriving net tonnage.

(b) *General.* (1) A deductible space must be used exclusively for, and be reasonable in size for, its intended purpose.

(2) When a space is larger than necessary for the safe and efficient operation of deductible equipment, only the space occupied by the equipment plus a two foot maximum working space on each side of the equipment, if available, is deductible.

(3) Space specified in this section may be located anywhere within the vessel, unless otherwise specified.

(c) *Anchor gear.* A space below the line of the uppermost complete deck occupied by the anchor gear, capstan, windlass, and chain locker is deductible. A fore peak used exclusively as chain locker is measured by the method prescribed under § 69.177(g)(3).

(d) *Boatswain's stores.* A space containing oils, blocks, hawsers, rigging, deck gear, or other boatswain's stores for daily use is deductible. The maximum deduction allowed for vessels less than 100 gross tons is one ton and, for vessels 100 gross tons or over, is one percent of the gross tonnage, not to exceed 100 tons.

(e) *Chart room.* A space for keeping charts and nautical instruments and for plotting the vessel's course is deductible. For a combined wheelhouse and chart room, that part not exempted as wheelhouse under § 69.117(b)(9) is deductible. For small vessels in which the only space for a chart room is in a cabin or saloon, one half the space not to exceed 1.5 tons is deductible as chart room.

(f) *Donkey engine and boiler.* Donkey engine and boiler space is deductible when connected with the main (non-cargo) pumps of the vessel, except as follows:

(1) If the space is within the engine room or within the casing above the engine room and if the donkey engine is an auxiliary to the main propelling machinery, the space is an engine room deduction under § 69.121(b).

(2) If the space is above the line of the uppermost complete deck and if the donkey engine is not an auxiliary to the main propelling machinery, the space is exempt under § 69.117(b).

(g) *Spaces for the exclusive use of officers or crew.* (1) The following spaces, regardless of their location (unless otherwise noted), are deductible if not used by passengers:

(i) Sleeping rooms.

(ii) Bathrooms with a bath tub or shower but without a water closet.

(iii) Water closets below the line of the uppermost complete deck serving more than one person, with or without a bath tub or shower. Water closets, regardless of location, that serve only one person or that are accessible only through a stateroom or bedroom serving one person are considered as part of the space they serve and are deductible only if that space is deductible.

(vi) Clothes drying rooms.

(v) Drinking water filtration or distilling plant below the line of the uppermost complete deck.

(vi) Hospitals.

(vii) Mess rooms.

(viii) Office of the chief engineer.

(ix) Oil skin lockers.

(x) Pantries.

(xi) Recreation rooms.

(xii) Smoking rooms.

(xiii) Galleys below the line of the uppermost complete deck.

(2) Shops for engineers, carpenters, plumbers, or butchers and offices for clerks, pursers, or postmasters are not deductible, wherever located.

(h) *Master's cabin.* The master's sleeping room, dressing room, bathroom, observation room, reception room, sitting room, water closet, and office are deductible.

(i) *Radio room.* Spaces in which radio apparatus is installed and messages are sent and received and which may provide off-duty operator accommodations are deductible.

(j) *Steering gear.* Spaces for steering gear below the line of the uppermost complete deck are deductible.

(k) *Generators.* Spaces for generators below the line of the uppermost complete deck are deductible regardless of what space the generators serve. These spaces may include other equipment necessary for the generator's operation.

(l) *Pump room.* Spaces below the line of the uppermost complete deck containing pumps that are not capable of handling cargo and that are not fuel oil transfer pumps considered part of the propelling machinery under § 69.121(b)(2)(v) are deductible.

(m) *Sail stowage.* A space for stowing sails on a vessel propelled only by sails is deductible up to two and one-half percent of the vessel's gross tonnage.

(n) *Waste material space.* (1) A tank or collection space, regardless of location, used for the carriage or collection of sewage, garbage, galley waste, trash, slop-oil mixture, tank cleaning residue, bilge residue, or other waste material generated aboard the vessel is deductible.

(2) Space below the line of the uppermost complete deck used exclusively to separate, clarify, purify, or otherwise process waste material generated aboard the vessel is deductible.

(o) *Passageways.* A passageway or companionway is deductible—

(1) If it serves deductible space only; or

(2) If it serves deductible space and is also the sole means of access to one of the following non-deductible spaces:

(i) Lockers of less than two tons each, containing medicine, linen, mops, or other items for the free use of the crew.

(ii) A ship's office.

(iii) Spare rooms (not exceeding two) used by a pilot, customs officer, reserve engineer, or employee or agent of the vessel's owner or operator.

(p) *Markings for deductible spaces.* (1) Each space deducted under this section must be marked with the words "Certified ______" (inserting the space designation, such as "Seaman", "Generator", Office of Chief Engineer", "Hospital", or "Anchor Gear"). If a deductible space berths more than one crew member, the marking must indicate the number of crew members berthed, such as "Certified ______ Seamen" (inserting the number of crew).

(2) The abbreviations "Cert." for "certified" and "W.C." for "water closet" may be used.

(3) The markings must be in Roman letters and Arabic numerals at least ½ inch in height, must be painted in a light color on a dark background, must be embossed, center-punched, carved, or permanently cut in a bulkhead or metal plate, and must be placed in a legible location over a doorway on the inside of the space. A metal plate, if used, must be permanently fastened in place by welding, riveting, lock screws, or a Coast Guard-approved bonding agent.

(q) *Method for measuring deductible spaces.* (1) A rectangular space must be measured by taking the product of its length, breadth, and height.

(2) A space with curved sides on or above the tonnage deck is measured according to § 69.109.

(3) Space less than 15 feet in length may be measured by any practical method.

(4) Spaces below the tonnage deck exceeding 15 feet in length and bounded by a curved surface conforming to the side of the vessel must be measured by the formula used for measuring the superstructure under § 69.113.

(5) The height of a space located on a platform in the hull must be measured from the top of the bottom hull frames, if the platform is used only to form a flat surface at the bottom of the space, if the platform is not more than one foot above the top of the bottom frames, and if the space below the platform is not usable.

(6) The height of a space is measured through any ceiling, paneling, false overhead, or other covering, to the space's structural boundary, unless the space enclosed by the covering is available for a non-deductible use.

§ 69.121 Engine room deduction.

(a) *General.* The engine room deduction is either a percentage of the vessel's total propelling machinery spaces or a percentage of the vessel's gross tonnage.

(b) *Propelling machinery spaces.* (1) Propelling machinery spaces are the spaces occupied by the main propelling machinery and auxiliary machinery and spaces reasonably necessary for the operation and maintenance of the machinery. Propelling machinery spaces do not include spaces for fuel tanks, spaces exempt from gross tonnage under § 69.117, and spaces not used or not available for use in connection with the propelling machinery.

(2) Propelling machinery spaces are—

(i) Space below the crown. The crown is the top of the main space of the engine room to which the heights of the main space are taken. The crown is either the underside of a deck or, if the side bulkheads are sloping, the uppermost point at which the slope terminates. (See § 69.123, figures 13 and 14.)

(ii) Framed-in space located between the crown and the uppermost complete deck and used for propelling machinery or for the admission of light or air to propelling machinery spaces. (See § 69.123, figures 13 and 14.)

(iii) Shaft tunnel space and thrust block recess space.

(iv) Space below the uppermost complete deck used for escape shafts or trunked ladderways leading from the aft end of the shaft tunnel to the deck above.

(v) Space containing a fuel oil transfer pump located in a separate space and not used for bunkering the vessel. When the pump serves both ballast and fuel oil, only one-half of the pump's space is considered a propelling machinery space.

(vi) Spaces containing fuel oil settling tanks used solely for the main boilers. The space must not exceed one percent of the vessel's gross tonnage.

(vii) Spaces for engineers' stores and workshops located below the uppermost complete deck and either open to a propelling machinery space or separated from a propelling machinery space only by a screen bulkhead. The space must not exceed three-quarters of one percent of the vessel's gross tonnage.

(viii) Framed-in space located above the line of the uppermost complete deck and used for propelling machinery or for the admission of light or air to a propelling machinery space, when requested under paragraph (d) of this section.

(ix) If the propelling machinery is boxed-in below the tonnage deck, the boxed-in space plus the spaces outside of the boxing for the shaft, auxiliary engines, and related propelling machinery. If a portion of the boxed-in space extends above a platform or partial deck that is below the uppermost complete deck, that portion is also considered part of the propelling machinery space.

(c) *Methods for measuring propelling machinery spaces.* (1) If the propelling machinery space is bulkheaded off or is not larger than necessary for the safe operation and maintenance of the propelling machinery, the entire space, or, if bulkheaded off, the portion bulkheaded off, is measured for the engine room deduction.

(2) If the propelling machinery space is not bulkheaded off or is larger than necessary for the safe operation and maintenance of the propelling machinery, only the space occupied by the propelling machinery itself plus a working space of two feet, if available, on each side of the propelling machinery is measured for the engine room deduction. If the working space overlaps another working space not related to the propelling machinery, only one-half of the overlapping working space is included in the propelling machinery space. The height of the working space is measured as provided in paragraph (c) of this section.

(3) If the propelling machinery is located in more than one space, each space must be measured separately.

(4) If the propelling machinery is located in a space with a step in the bottom or side lines, each stepped portion of the space must be measured separately.

(5) The length of a space under paragraph (c)(1) of this section is measured from the bulkhead just forward of the propelling machinery to the bulkhead just aft of the propelling machinery. The length of a space under paragraph (c)(2) of this section is measured from the forward edge of the working space to the aft edge of the working space.

(6) If the boundaries of the propelling machinery space form a rectangle, the product of the length, breadth, and height, divided by 100, is the tonnage of the space.

(7) If the boundaries of the propelling machinery space are continuous fair lines, heights are measured at the fore and aft ends and at the center of the space from the bottom frames, floors, or tank top of a double bottom up to the line of the crown. A breadth is measured at half-length of each height. The product of the length, mean breadth, and mean height, divided by 100, is the tonnage of the space.

(8) If the propelling machinery space is in the aft end of the hull, extends from side to side of the hull, and has a continuous bottom line, the length of the space is divided into the even number of equal parts most nearly equal to the number of parts that the tonnage length under § 69.109(g) was divided. The tonnage is then calculated by the same method used for calculating the under-deck tonnage in § 69.109(l).

(9) The tonnage of a framed-in space located between the crown and the uppermost complete deck and used for propelling machinery or for the admission of light or air to the propelling machinery space, is the product of its length, breadth, and height, divided by 100.

(10) The tonnage of a shaft tunnel, or a thrust block recess, having a flat top is the product of its length, breadth, and height, divided by 100. If the shaft tunnel or thrust block recess top is not flat, the space above must be calculated by using the appropriate geometrical formula. If the space aft of the shaft tunnel extends from side to side of the vessel, the tonnage of the space is found by the formula for measuring peak tanks in § 69.109(l).

(11) The length and breadth of the space for a shaft tunnel, or a thrust block recess, when not cased is that

which is necessary for maintenance of the shaft. The height allowed for thrust block recess space must not exceed seven feet. The mean height allowed for the shaft tunnel space must not exceed six feet. In a multi-screw vessel where the shaft tunnel or thrust block recess space is open from side to side, measure only the space used for purposes of propelling the vessel.

(12) When the propelling machinery is on a bed at the vessel's bottom, the height of the propelling machinery space is measured from the top of the bottom frames or floors.

(d) *Request to treat certain framed-in engine room spaces as part of a propelling machinery space.* (1) Under § 69.117(b)(4), framed-in spaces located above the line of the uppermost complete deck and used for propelling machinery or for admitting light or air to a propelling machinery space are exempt from inclusion in gross tonnage. However, upon written request to a measurement organization listed in § 69.15, the vessel owner may elect to have these spaces included in calculating gross tonnage, then deducted from gross tonnage as propelling machinery spaces under paragraph (b)(2)(viii) of this section.

(2) The framed-in space must be safe, seaworthy, and used only for propelling machinery or for the admission of light or air to the propelling machinery space. The length of the space must not exceed the length of the propelling machinery space and the breadth must not exceed one-half of the extreme inside midship breadth of the vessel. Portions of the framed-in space that are plated over are not included in the propelling machinery space.

(3) To exercise the option in paragraph (d)(1) of this section, all of the framed-in space need not be treated as propelling machinery space, but only that portion required to entitle the vessel to have 32 percent of its gross tonnage deducted as an engine room deduction under paragraph (e) of this section.

(e) *Calculating the engine room deduction.* (1) The engine room deduction is based on a percentage of the vessel's gross tonnage or a percentage of the total propelling machinery space.

(2) for vessels propelled in whole or in part by screw—

(i) If the total propelling machinery space is 13 percent or less of the vessel's gross tonnage, deduct $^{32}/_{13}$ times the total propelling machinery space;

(ii) If the total propelling machinery space is more than 13 but less than 20 percent of the vessel's gross tonnage, deduct 32 percent of the vessel's gross tonnage; or

(iii) If the total propelling machinery space is 20 percent or more of the vessel's gross tonnage, deduct either 32 percent of the vessel's gross tonnage or 1.75 times the total propelling machinery space, whichever the vessel's owner elects.

(3) For vessels propelled in whole or in part by paddle-wheel—

(i) If the total propelling machinery space is 20 percent or less of the vessel's gross tonnage, deduct $^{37}/_{20}$ times the total propelling machinery space;

(ii) If the total propelling machinery space is more than 20 but less than 30 percent of the vessel's gross tonnage, deduct 37 percent of the vessel's gross tonnage; or

(iii) If the total propelling machinery space is 30 percent or more of the vessel's gross tonnage, deduct either 37 percent of the vessel's gross tonnage or 1.5 times the total propelling machinery space, whichever the vessel's owner elects.

Subpart D—Dual Measurement System

§ 69.151 Purpose.

This subpart prescribes measurement requirements for the assignment of either one gross and one net tonnage or two gross and two net tonnages to vessels under the Dual Measurement System.

§ 69.153 Application of other laws.

(a) If a vessel is assigned two gross tonnages under § 69.175(b), the higher gross tonnage is the tonnage used when applying inspection, manning, and load line laws and regulations to the vessel.

(b) Tonnage marks are not to be construed as additional load line marks. Whether or not a tonnage mark is submerged under § 69.171 has no effect on the applicability of load line laws and regulations.

§ 69.155 Measurement requirements.

Except as otherwise required by this subpart, the measurement requirements under the Standard Measurement System in subpart C of this part apply to the measurement of vessels under the Dual Measurement System.

§ 69.157 Definitions.

Terms used in this subpart that are defined in § 69.103 have the same meaning as in § 69.103, except the terms listed below. As used in this subpart,—

Gross tonnage is defined in § 69.161(a).

Line for fresh and tropical waters means the line described in § 69.177(b)(2).

Line of the second deck means the line described in § 69.181.

Line of the uppermost complete deck means a longitudinal line at the underside of the uppermost compelte deck or, if that deck is stepped, the longitudinal line of the underside of the lowest portion of that deck parallel with the upper portions of that deck.

Net tonnage is defined in § 69.161(b).

Second deck means the next deck below the uppermost complete deck that meets the following:

(a) Is continuous athwartships and in a fore-and-aft direction at least between peak bulkheads, even though the deck may have interruptions or openings due to propelling machinery spaces, to hatch and ventilation trunks not extending longitudinally completely between main transverse bulkheads, to ladder and stairway openings, to chain lockers, or to cofferdams.

(b) Is fitted as an integral and permanent part of the vessel.

(c) Has proper covers to all main hatchways.

(d) Does not have steps the total of which exceed 48 inches in height.

Tonnage deck means, for a vessel with only one deck, the uppermost complete deck and, for a vessel with a second deck, the second deck.

Tonnage mark means the line described in § 69.177(a)(2).

§ 69.159 Application for measurement services.

Applications for measurement services under this subpart must include the application information and plans required for the Standard Measurement System under § 69.105. The application must indicate whether a line for fresh and tropical waters is requested under § 69.177(b) and, for vessels with more than one deck, indicate whether one or two sets of tonnages are desired under § 69.175.

§ 69.161 Gross and net tonnages.

(a) *Gross tonnage* means the tonnage of a vessel, less certain spaces exempt under § 69.169, and is the sum of the following:

(1) Under-deck tonnage (§ 69.163).

(2) Between-deck tonnage (§ 69.165)

(3) Superstructure tonnage (§ 69.167)

(4) Excess hatchway tonnage (§ 69.115)

(5) Tonnage of framed-in propelling machinery spaces included in calculating gross tonnage (§ 69.121(d)(1)).

(b) *Net tonnage* means gross tonnage less deductions under § 69.119 and § 69.121.

§ 69.163 Under-deck tonnage.

The under-deck tonnage provisions in § 69.109 apply; except that, under the Dual Measurement System, spaces between the line of the tonnage deck and the tonnage deck itself due to a stepped tonnage deck are included in under-deck tonnage.

§ 69.165 Between-deck tonnage.

The between-deck tonnage provisions in § 69.111 apply, except that, under the Dual Measurement System, between-deck space extends from the tonnage deck to the uppermost complete deck, rather than from the line of the tonnage deck to the line of the uppermost complete deck.

§ 69.167 Superstructure tonnage.

The superstructure tonnage provisions in § 69.113 apply; except that, under the Dual Measurement System, spaces between the line of the uppermost complete deck and the uppermost complete deck itself due to a stepped uppermost complete deck are not included in the superstructure tonnage.

§ 69.169 Spaces except from inclusion in gross tonnage.

The tonnage of the following spaces is exempt from inclusion in gross tonnage:

(a) Spaces listed in § 69.117(b) when located within the superstructure.

(b) Spaces listed in § 69.117(c)(1) through (c)(3) when located above, but not on, the uppermost complete deck.

(c) Spaces listed in § 69.117(f), regardless of locations.

(d) Spaces available for carrying dry cargo and stores when located on or above the uppermost complete deck.

(e) When a vessel is assigned a tonnage mark and the tonnage mark is not submerged,—

(1) Spaces listed in § 69.117(b) when located between the uppermost complete deck and the second deck;

(2) Spaces listed in § 69.117(c)(1) through (c)(3) when located on the uppermost complete deck; and

(3) Spaces available for carrying dry cargo and stores when located between the uppermost complete deck and the second deck.

§ 69.171 When the tonnage mark is considered submerged.

For the purpose of this subpart, a tonnage mark is considered submerged when—

(a) In salt or brackish water, the upper edge of the tonnage mark is submerged; and

(b) In fresh or tropical water, the upper edge of the line for fresh and tropical waters is submerged.

§ 69.173 Tonnage assignments for vessels with only one deck.

A vessel without a second deck is assigned only one gross and one net tonnage. In calculating the gross tonnage, only the exemptions in § 69.169 (a) through (d) are allowed. Markings under § 69.177 are not permitted on these vessels.

§ 69.175 Tonnage assignments for vessels with a second deck.

(a) At the option of the vessel owner, a vessel having a second deck is assigned either two gross and two net tonnages or one gross and one net tonnage.

(b) If two gross and two net tonnages are assigned, the higher tonnages (i.e. those based only on exemptions under §69.169 (a) through (d)) are applicable when the upper edge of the tonnage mark is submerged and the lower tonnages (i.e. those based only on all exemptions under §69.169) are applicable when the upper edge of the tonnage mark is not submerged.

(c) If only the low gross and low net tonnages, as calculated under paragraph

(b) of this section, are assigned, these tonnages are applicable at all times. On these vessels, the tonnage mark must be located in accordance with § 69.177(a)(6) at the level of the uppermost part of the load line grid.

§ 69.177 Markings.

(a) *Tonnage mark.* (1) All vessels with a second deck that are measured under the Dual Measurement System must have, on each side of the vessel, a tonnage mark, and an inverted triangle identifying the tonnage mark, as described and located under this section. (See the figure in § 69.183(a).) Vessels with only one deck are not assigned markings under this section.

(2) The tonnage mark is a horizontal line 15 inches long and one inch wide. The tonnage mark must be designated by a welded bead or other permanent mark 15 inches long placed along the top edge of the tonnage mark.

(3) Above the tonnage mark is placed an inverted equilateral triangle, each side of which is 12 inches long and one inch wide, with its apex touching the upper edge of the center of the tonnage mark.

(4) If the vessel has a load line mark, the longitudinal location of the center of the tonnage mark must be between 21 inches and six feet six inches aft of the vertical centerline of the load line ring. (See the figures in § 69.183 (b) and (c).) If the vessel does not have a load line mark, the center of the tonnage mark must be located amidships.

(5) Except as under paragraph (a)(6) of this section, the upper edge of the tonnage mark must be located below the line of the second deck at the distance indicated in Table 69.177(a)(5). (See the figure in § 69.183(b).)

790	165.1	149.9	136.9	125.6	115.7	107.0	99.2	92.3	86.1

EXAMPLE: (1)

TABLE 69.177(a)(5)—MINIMUM DISTANCE IN INCHES BETWEEN THE TONNAGE MARK AND THE LINE OF THE SECOND DECK—Continued

L (in feet)	L divided by D								
	12	13	14	15	16	17	18	19	20
800	167.5	152.1	138.9	127.4	117.4	108.6	100.6	93.8	87.4

L=the length in feet of the line of the second deck at the centerline of the vessel from the inner surface of the frames at the vessel's stem to the inner surface of the frames at the vessel's stern.

D=The vertical distance in feet from the top of the flat keel of the vessel to the line of the second deck.

EXAMPLE (1) For a vessel in which L=450 feet and L/D=15 feet, read down from the L/D column "15" and to the right on the column "450" to where the two columns intersect at 39.6. The tonnage mark must be located 39.6 inches below the line of the second deck.

EXAMPLE (2) If L or L/D is an intermediate number, the distance "a" between the tonnage mark and the line of the second deck must be obtained by linear interpolation. For a vessel in which L=424.80 feet and L/D=15.17:

L	Table L/D=15	Actual L/D=15.17	Table L/D=16
Table 420	30.4		25.2
Actual 424.80	r	a	s
Table 430	33.3		27.9

Interpolation:
$r=30.4+0.48\ (33.3-30.4)=31.79$
$s=25.2+0.48\ (27.9-25.2)=26.50$
$a=r-0.17\ (r-s)=31.79-0.17\ (31.79-26.50)=30.89$ inches

(6) For the following vessels with a load line mark, the upper edge of the tonnage mark must be located at the level of the uppermost part of the load line grid:

(i) Vessels assigned only one gross and one net tonnage under § 69.175(c).

(ii) Vessels for which a load line assigning authority certifies that the vessel's load line mark was located as though the second deck were the freeboard deck.

(b) *Line for fresh and tropical waters.* (1) Except as under paragraph (b)(4) of this section, a horizontal line for fresh and tropical waters may be assigned at the vessel owner's request.

(2) The line must be nine inches long and one inch wide and located above and to the left of the tonnage mark at a distance equal to one forty-eighth of the distance from the top of the flat keel to the tonnage mark. The tonnage mark and the line for fresh and tropical waters must be connected by a vertical line one inch wide. (See the figure in § 69.183(a).)

(3) The line for fresh and tropical waters must be designated by a welded bead or other permanent mark nine inches long placed along the upper edge of the line.

(4) For vessels with a load line mark, if the load line assigning authority certifies that the load line mark was located as though the second deck were the freeboard deck, a line for fresh and tropical waters must not be placed on the vessel.

(c) *Freeboard deck mark.* A vessel assigned two gross and two net tonnages which has more than one deck and no load line mark assigned must have a mark on each side of the vessel with the same dimensions and location as the freeboard deck line mark under § 42.13–20 of this chapter, except that the mark must be located directly above the tonnage mark.

(d) *The line of the second deck.* The line of the second deck must not be marked on the side of the vessel.

(e) *Color of markings.* All markings under this section must be maintained in either a light color on a dark background or a dark color on a light background.

§ 69.179 Certification of markings.

(a) Before a certificate of measurement is issued for a vessel requiring a tonnage mark, a certification by a measurement organization under § 69.15 that all markings meet the requirements of this subpart is required.

(b) The Coast Guard, at any time, may verify markings under this subpart.

§ 69.181 Locating the line of the second deck.

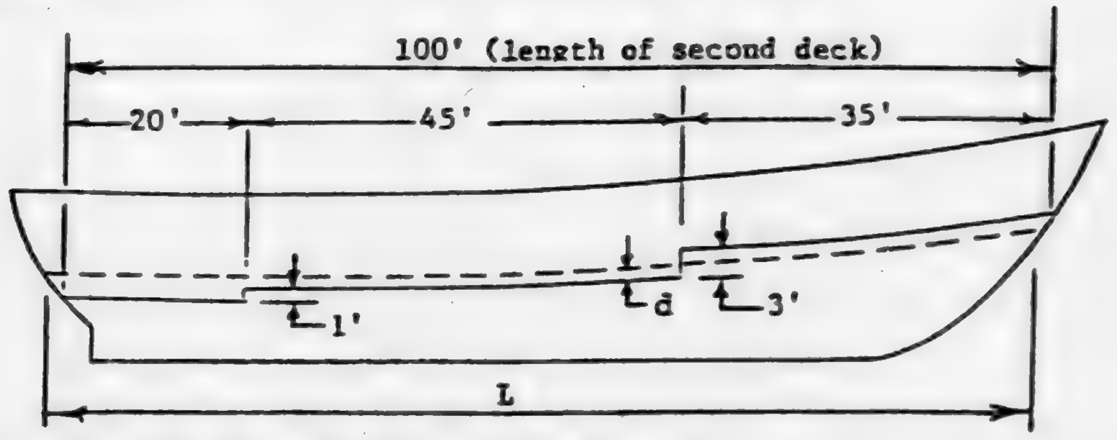
(a) If the second deck is not stepped, the line of the second deck is the longitudinal line of the underside of the second deck at the side of the hull.

(b) If the second deck is stepped (as in the examples following this paragraph), the line of the second deck is a longitudinal line extended parallel to each portion of the second deck and located at the height of the underside of the amidships portion of the second deck at the side of the hull—

(1) Plus, for each stepped portion of the second deck higher than the second deck at amidships, a distance equal to the length of the stepped portion divided by the total length of the second deck times the height that the step is above the height of the amidship portion of the second deck; and

(2) Minus, for each stepped portion of the second deck lower than the second deck at amidships, a distance equal to the length of the stepped portion divided by the total length of the second deck times the height that the amidship portion of the second deck is above the height of the step.

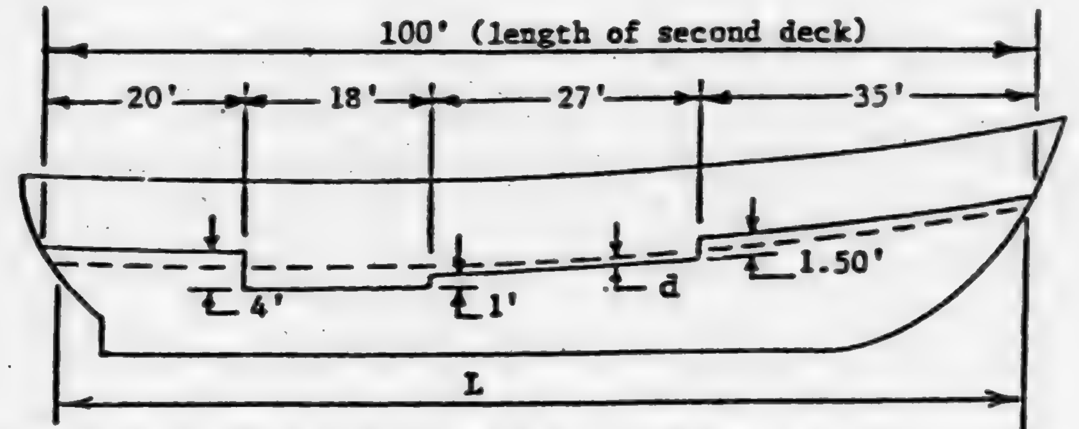
EXAMPLE: (1)



L = Length of the line of the second deck.
d = Distance from amidship portion of second deck to line of second deck.

$$d = \frac{35 \times 3}{100} - \frac{20 \times 1}{100} = +\ 0.85 \text{ feet.}$$

EXAMPLE: (2)

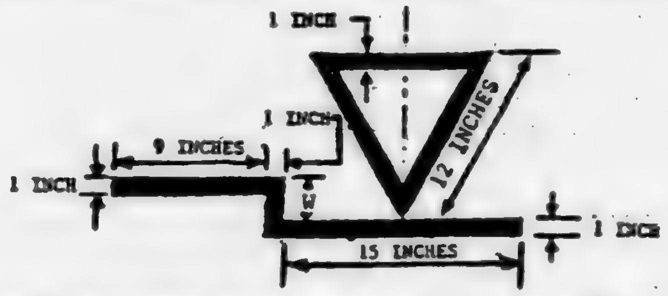


$$d = \frac{20 \times 3}{100} + \frac{35 \times 1.5}{100} - \frac{18 \times 1}{100} = +\ 0.945 \text{ feet.}$$

---

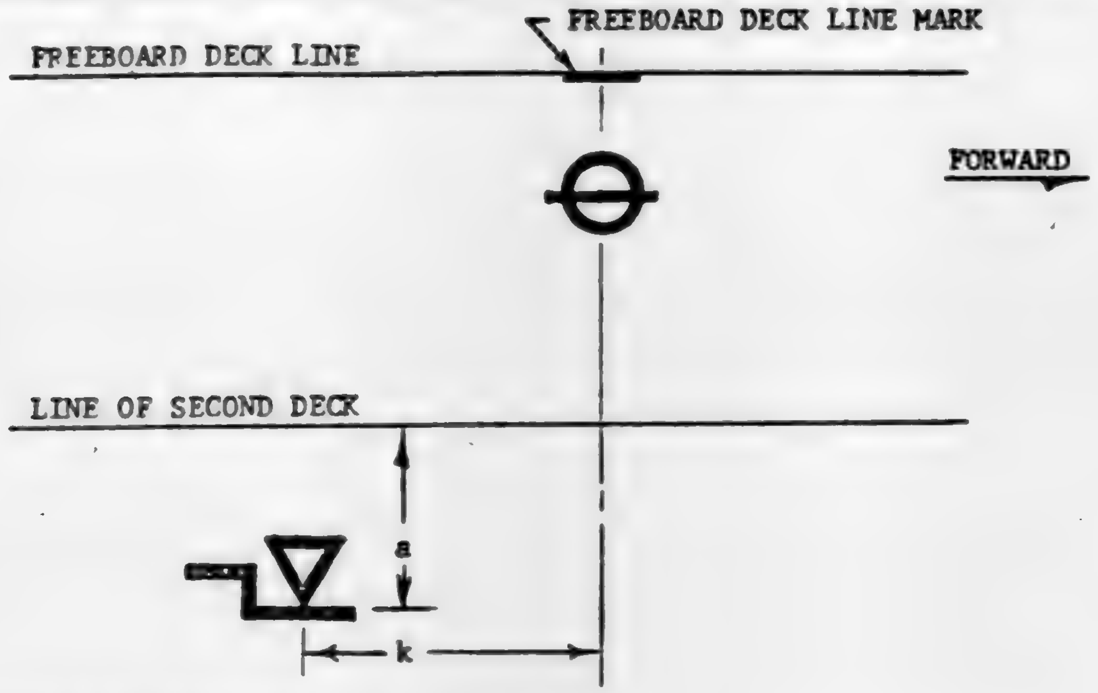
§ 69.183 Figures.

(a) *Tonnage mark with an equilateral triangle and a line for fresh and tropical waters.*



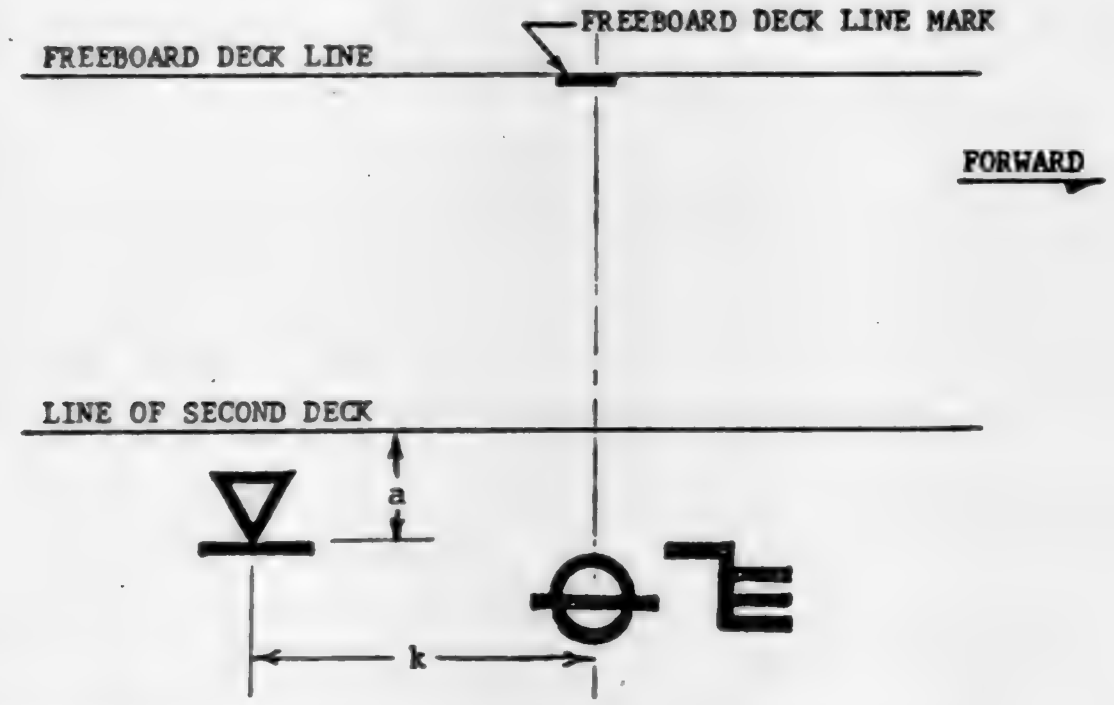
W=1/48 of the distance from the top of the flat keel to the tonnage mark. (See § 69.177(b)(2).)

(b) *Tonnage mark location if the load line mark is not placed as though the second deck were the freeboard deck.*



k=a distance between 21 inches and six feet six inches.
a=distance derived from Table 69.177(a)(5).

(c)—*Tonnage mark location if the load line mark is placed as though the second deck were the freeboard deck.*



k=a distance between 21 inches and six feet six inches.
a=the distance between the line of the second deck and the uppermost part of the load line grid.

Subpart E—Simplified Measurement System

§ 69.201 Purpose.

This subpart prescribes the procedures for measuring a vessel under the Simplified Measurement System described in 46 U.S.C. chapter 145, subchapter III.

§ 69.203 Definitions.

As used in this subpart and in Coast Guard Form CG–5397 under § 69.205—

Overall breadth means the horizontal distance taken at the widest part of the hull, excluding rub rails, from the outboard side of the skin (outside planking or plating) on one side of the hull to the outboard side of the skin on the other side of the hull.

Overall depth means the vertical distance taken at or near midships from a line drawn horizontally through the uppermost edges of the skin (outside planking or plating) at the sides of the hull (excluding the cap rail, trunks, cabins, and deckhouses) to the outboard face of the bottom skin of the hull, excluding the keel. For a vessel that is designed for sailing and has a keel faired to the hull, the keel is included in "overall depth" if the distance to the bottom skin of the hull cannot be determined reasonably.

Overall length means the horizontal distance between the outboard side of the foremost part of the aftermost part of the stem and the outboard side of the aftermost part of the stern, excluding rudders, outboard motor brackets, and other similar fittings and attachments.

Registered breadth means—

(a) For a single-hull vessel, the vessel's overall breadth; and

(b) For a multi-hull vessel, the horizontal distance taken at the widest part of the complete vessel between the outboard side of the skin (outside planking or plating) on the outboardmost side of one of the outboardmost hulls to the outboard side of the skin on the outboardmost side of the other outboardmost hull, excluding rubrails.

Registered depth means—

(a) For a single-hull vessel, the vessel's overall depth; and

(b) For a multi-hull vessel, the overall depth of the deepest hull.

Registered length means—

(a) For a single-hull vessel, the vessel's overall length; and

(b) For a multi-hull vessel, the horizontal distance between the outboard side of the foremost part of the stem of the foremost hull and the outboard side of the aftermost part of the stern of the aftermost hull, excluding fittings or attachments.

Vessel designed for sailing means a vessel which has the fine lines of a sailing craft and is capable of being propelled by sail, whether or not the vessel is equipped with an auxiliary motor, a decorative sail, or a sail designed only to steady the vessel.

§ 69.205 Application for measurement services.

To apply for measurement under the Simplified Measurement System, the owner of the vessel must complete the current issue of Coast Guard Form CG–5397 and submit the form to the Coast Guard Port of Documentation Office at the port where the vessel will be documented. (See part 67, appendix D, of this chapter for a list of these offices.)

§ 69.207 Measurements.

(a) All lengths and depths must be measured in a vertical plane at centerline and breadths must be measured in a line at right angles to that plane. All dimensions must be expressed in feet and inches to the nearest half inch or in feet and tenths of a foot to the nearest .05 of a foot.

(b) For a multi-hull vessel, each hull must be measured separately for overall length, breadth, and depth and the vessel as a whole must be measured for registered length, breadth, and depth.

(c) The Coast Guard may verify dimensions of vessels measured under this subpart.

§ 69.209 Calculation of tonnages.

(a) *Gross tonnage.* (1) Except as in paragraphs (a)(2) through (a)(5) of this section, the gross tonnage of a vessel designed for sailing is one-half of the product of its overall length, overall breadth, and overall depth (LBD) divided by one hundred (i.e., 0.50 LBD/100), and the gross tonnage of a vessel not designed for sailing is 0.67 LBD/100.

(2) The gross tonnage of a vessel with a hull that approximates in shape a rectangular geometric solid (barge-shape) is 0.84 LBD/100.

(3) The gross tonnage of a multi-hull vessel is the sum of all the hulls as calculated under this section.

(4) If the volume of the principal deck structure of a vessel that is indicated as a houseboat on Coast Guard Form CG–5397 is as large as, or larger than, the volume of the vessel's hull, the volume of the principal deck structure in tons of 100 cubic feet is added to the tonnage of the hull to establish the vessel's gross tonnage. The volume of the principal deck structure of a vessel is determined by the product of its average dimensions.

(5) If the overall depth of a vessel designed for sailing includes the keel, only 75 percent of that depth is used for gross tonnage calculations.

(b) *Net tonnage.* (1) For a vessel having propelling machinery in its hull—

(i) The net tonnage is 90 percent of its gross tonnage, if it is a vessel designed for sailing; or

(ii) The net tonnage is 80 percent of its gross tonnage, if it is not a vessel designed for sailing.

(2) For a vessel having no propelling machinery in its hull, the net tonnage is the same as its gross tonnage.

Dated: August 21, 1989.

J.D. Sipes,

Rear Admiral, U.S. Coast Guard Chief, Office of Marine Safety, Security and Environmental Protection.

BILLING CODE 4910-14-M

FEDERAL COMMUNICATIONS COMMISSION

47 CFR Part 1

[DA 89–773]

Administrative Practice and Procedure

AGENCY: Federal Communications Commission.

ACTION: Final rule; technical amendment.

SUMMARY: This order amends § 1.45(d) of the Commission's rules to reflect that § 1.4(g), which provides three additional days when service is by mail, was re-designated § 1.4(h). This change occurred in December 1987 when the Commission amended its rules regarding computation of time.

EFFECTIVE DATE: September 12, 1989.

ADDRESS: Federal Communications Commission, 1919 M Street NW., Washington, DC 20554.

FOR FURTHER INFORMATION CONTACT: Donna Viert, Office of General Counsel, (202) 632–6990.

SUPPLEMENTARY INFORMATION: On July 7, 1989, the Commission released an Order in the matter of amendment of § 1.45(d) of the Commission's rules. 4 FCC Rcd 5585.

List of Subjects in 47 CFR Part 1

Administrative practice and procedure.

Managing Director.

Rule Change

PART 1—[AMENDED]

Part 1 of title 47 of the CFR is amended as follows:

1. The authority citation for part 1 continues to read:

Authority: Secs. 4, 303, 48 Stat. 1066, 1082, as amended; 47 U.S.C. 154, 303; implement, 5 U.S.C. 552, unless othewise noted.

2. 47 CFR 1.45(d) is amended by substituting "§ 1.4(h)" for "§ 1.4(g)" in the last sentence thereof.

47 CFR Part 73

[MM Docket No. 88-417]

Radio Broadcasting Services; Idalia; CO

AGENCY: Federal Communications Commission.

ACTION: Final rule.

SUMMARY: This document allots Channel 231A to Idalia, Colorado, as a first local broadcast service, in response to a petition filed by Virginia K. Cutforth. Coordinates for Channel 231A to Idalia, Colorado, are 39-42-06 and 102-17-30. With this action the proceeding is terminated.

DATES: Effective October 20, 1989; The window period for filing applications on Channel 231A at Idalia, Colorado, will open on October 23, 1989, and close on November 22, 1989.

FOR FURTHER INFORMATION CONTACT: Ordee Pearson, (202) 634-6530. Questions related to the window application filing process at Idalia, Colorado, should be addressed to the Audio Service Division, FM Branch, Mass Media Bureau, (202) 632-0394.

SUPPLEMENTARY INFORMATION: This is a synopsis of the Commission's Report and Order MM Docket 88-417, adopted August 15, 1989, and released September 5, 1989. The full text of this Commission decision is available for inspection and copying during normal business hours in the FCC Dockets Branch (Room 230), 1919 M Street NW., Washington, DC. The complete text of this decision may also be purchased from the Commission's copy contractors, International Transcription Service (202) 857-3800, 2100 M Street NW., Suite 140, Washington, DC 20037.

AGENCY: National Marine Fisheries Service (NMFS), NOAA, Commerce.

ACTION: Notice of finding of conformance.

SUMMARY: The Assistant Administrator for Fisheries, NMFS, announces that the Government of Mexico has submitted information which demonstrates that Mexico and the tuna purse seine fishing vessels under its control are in conformance with United States marine mammal regulations. As a result of this finding, yellowfin tuna from Mexico may continue to be imported into the United States through 1990.

EFFECTIVE DATES: This finding is effective September 11, 1987, and remains in effect until December 31, 1990 or until superseded.

FOR FURTHER INFORMATION CONTACT: E. Charles Fullerton, Regional Director, or J. Gary Smith, Deputy Regional Director, Southwest Region, National Marine Fisheries Service, NOAA, 300 South Ferry Street, Terminal Island, CA 90731, Phone: (213) 514–6196. Copies of the NMFS decision memorandum and analysis of Mexico's 1988 Annual Report are available upon request.

SUPPLEMENTARY INFORMATION: On March 18, 1988 (53 FR 8910), the NMFS promulgated an interim rule within 50 CFR 216.24 concerning the importation of yellowfin tuna caught by purse seines in the eastern tropical Pacific Ocean (ETP). Under this rule, in order to import yellowfin tuna into the United States, any nation which has purse seine vessels greater than 400 tons carrying capacity operating in the ETP must supply documentary evidence that it has a regulatory program governing the incidental taking of marine mammals in the tuna fishery and a comparable marine mammal mortality rate to that of the United States.

On July 31, 1989 the Government of Mexico submitted their 1988 Annual Report seeking a finding to export yellowfin tuna to the United States in 1990. The report contained publications relating to their marine mammal regulations (Circular No. 20 from the Directorate-General of Fisheries Regions, dated September 12, 1977; provisions from the "Official Register", dated June 29, 1987); a list of Mexican-flag purse seine vessels greater than 400 tons, their status from 1986 through 1989 in the ETP, and the performance date for same vessels; a description of the nation's regulatory and enforcement program governing incidental taking of marine mammals in the purse seine fishery for yellowfin tuna; and data relating to fleet performance during 1986, 1987, and 1988, obtained from the Inter-American Tropical Tuna Commission (IATTC) based on reports from observers placed aboard fishing vessles by the IATTC.

The Assistant Administrator, after consultation with the Department of State, finds that the Government of Mexico has met all of the current requirements for importing yellowfin tuna into the United States and may continue to do so through December 31, 1990, subject to the terms and conditions of the Marine Mammal Importation Regulations (**Federal Register** Vol. 54, No. 43, 7 March 1989).

Dated: September 6, 1989.

James W. Brennan,

Assistant Administrator for Fisheries, National Marine Fisheries Service.

Proposed Rules

Federal Register
Vol. 54, No. 175
Tuesday, September 12, 1989

This section of the FEDERAL REGISTER contains notices to the public of the proposed issuance of rules and regulations. The purpose of these notices is to give interested persons an opportunity to participate in the rule making prior to the adoption of the final rules.

OFFICE OF PERSONNEL MANAGEMENT

5 CFR Part 302

RIN 3206–AD73

Considering Candidates for Excepted Appointment

AGENCY: Office of Personnel Management.

ACTION: Proposed rule.

SUMMARY: The Office of Personnel Management (OPM) proposes to revise its regulations governing procedures used to refer and select candidates for appointments in the excepted service. The proposed regulations would distinguish between candidates who are legally entitled to priority consideration for reemployment and those who are considered for reemployment at the agency's discretion. This change would ensure that those candidates with statutory reemployment rights receive the full priority intended by applicable laws. The revised regulations would also eliminate the requirement that agencies establish delegation agreements with OPM in order to approve use of alternative plans for ranking and referring candidates for excepted appointment

DATE: Comments must be received on or before November 13, 1989.

ADDRESS: Send or deliver written comments to Curtis J. Smith, Associate Director for Career Entry and Employee Development, Office of Personnel Management, Room 6F0B, 1900 E Street, NW., Washington, DC 20415.

FOR FURTHER INFORMATION CONTACT: Tracy Spencer, (202) 632–6817.

SUPPLEMENTARY INFORMATION: In 1988, OPM revised the procedural requirements for ranking and referring candidates for excepted appointment (final regulations issued September 13, 1988, 53 FR 35291). Comments received on those regulations suggested the need for further revisions. However, since the issues raised did not relate directly to those for which we had solicited comments, it would not have been appropriate to adopt those suggestions in final regulations. Instead, the suggestions have been considered in developing these proposed regulations.

I. Priority on Reemployment Lists

The reemployment provisions of 5 CFR part 302 implement several statutory provisions including: 5 U.S.C. 3315 and 3316, which provide for reinstatement of veteran preference eligibles who have resigned or who have been separated or furloughed without delinquency or misconduct; 5 U.S.C. 7701, which provides for appeals of unjustified personnel actions to the Merit Systems Protection Board; and 5 U.S.C. 8151, which provides for reemployment of employees who recover from compensable injuries. Most of these laws afford the same reemployment or reinstatement eligibility to preference eligibles in the excepted service as to those in the competitive service.

In practice, however, reemployment provisions in the excepted service have not fully paralleled those in the competitive service because the excepted service lacks a uniform appointment authority. In the competitive service, career and career-conditional appointments are used to fill jobs in all agencies. Employees who receive such appointments may be considered for transfer or reinstatement to competitive positions in any agency without going through all the procedures required for new appointments. In the excepted service, however, jobs are filled under numerous appointing authorities, each of which covers specific positions in a specific agency. Employees appointed under those authorities gain eligibility only for movement to other positions which may be filled under the same authority, i.e., to other specified positions in the same agency. Movement to any position filled under a different appointing authority must necessarily be processed as a new appointment under that authority. Similarly, because excepted appointments confer no status or reinstatement eligibility comparable to that afforded by career or career-conditional appointments in the competitive service, reemployment following a break in service must be processed in the same manner as a new appointment.

To provide a mechanism similar to reinstatement, the regulations in 5 CFR part 302 permit agencies to include current or former employees on their reemployment lists. (Employees on the reemployment list are generally considered ahead of employees on the regular employment list.) Once on the reemployment list, however, these employees receive the same treatment as those who are entitled to priority consideration for reemployment, and who would generally be considered ahead of reinstatement candidates if the jobs were in the competitive service.

To correct this problem, we propose to establish a priority category within the reemployment list. Priority consideration for reemployment would be required for former employees legally entitled to such consideration and permitted for former employees who have no statutory entitlement but who would be eligible for inclusion on the agency's reemployment priority list if their positions were in the competitive service. All other reemployment candidates would be considered after candidates on the priority reemployment list, but would generally be considered ahead of candidates on the regular employment list, in accordance with the procedures currently prescribed by 5 CFR part 302.

II. Eligibility for Inclusion on Reemployment List

The current regulations in part 302 do not limit the types of former employees who may be considered for reemployment. From time to time, agencies have asked about their authority to extend reemployment eligibility to nonpermanent employees, to set time limits on reemployment eligibility, or to restrict reemployment eligibility to employees who previously served in the same occupation, grade level, geographical location, or organizational unit.

The revised regulations would effectively limit eligibility for inclusion on the priority reemployment list to former permanent employees because the laws and regulations on which eligibility would be based apply only to employees separated from appointments without time limit. Nonpermanent employees could be included on the reemployment list at an agency's discretion. However, the revised regulations would limit their eligibility to positions with tenure and work schedules comparable to the positions previously held. Eligibility of former employees who are preference eligibles to be reappointed without regard to lists would be limited to nontemporary employees. This would ensure that temporary and seasonal employees would not bypass other applicants, including preference eligibles, in consideration for permanent excepted employment. The revised regulations will also clarify agencies' authority to set additional conditions for reemployment eligibility.

III. Approval of Alternate Ranking Plans

Currently, 5 CFR part 302 requires agencies to refer applicants for employment consideration in one of two ways: in preference order without ranking; or under ranking and referral procedures comparable to those used in competitive examinations. Use of any alternative method, such as ranking by adjective categories, requires OPM approval unless the agency has established a delegation agreement. The proposed regulations would remove the requirement for agencies to have delegation agreements in order to approve special ranking plans, as long as the plans meet basic veteran preference requirements.

E.O. 12291, Federal Regulation

I have determined that this is not a major rule as defined under section 1(b) of E.O. 12291, Federal Regulation.

Regulatory Flexibility Act

I certify that this regulation will not have a significant economic impact on a substantial number of small entities because the regulation effects only the procedures used to appoint certain Federal employees.

Constance B. Newman,
Director,
Office of Personnel Management.

PART 302—[AMENDED]

Accordingly, OPM proposes to amend 5 CFR part 302 as follows:

1. The authority citation for Part 302 continues to read as follows:

Authority: 5 U.S.C. 1302, 3301, 3302, 8151, E.O. 10577 (3 CFR 1954–1958 Comp., p. 218); § 302.105 also issued under 5 U.S.C. 1104, Pub. L. 95–454, sec. 3(5); § 302.501 also issued under 5 U.S.C. 7701 *et seq.*

2. Section 302.105 is revised to read as follows:

§ 302.105 Special agency plans.

An agency having a position subject to this part may establish a system which will result in granting to eligible persons the preference or priority consideration referred to in sections 1302(c) or 8151 of title 5, United States Code, but which does not conform to all the procedural requirements set forth in this part. The agency establishing such a system must ensure that all eligible applicants entitled to veteran preference or priority consideration receive at least as much advantage in referral as they would receive under the procedures set forth in this part.

3. In § 302.303, paragraphs (b) and (c) are removed, paragraph (a) is redesignated paragraph (b), the introductory text to newly redesignated paragraph (b) is revised, and a new paragraph (a) is added to read as follows.

§ 302.303 Maintenance of employment lists.

(a) *Establishment.* An agency shall enter the names of all applicants rated eligible under § 302.302 on the priority reemployment list, the reemployment list, or the regular employment list, as appropriate. In establishing its lists, an agency may limit priority consideration of non-preference eligibles and reemployment consideration of current and former employees to applicants who meet specific conditions, but must make those conditions a matter of record and must apply its policy uniformly to all eligible employees. Generally, full-time employees may be considered only for full-time positions and other-than-full-time employees only for other-than-full-time positions. However, full-time employees may be considered for other-than-full-time positions if there are no other-than-full-time employees on the appropriate priority or reemployment list; and other-than-full-time employees may be considered for full-time positions if there are no full-time employees on the appropriate list.

(1) *The priority reemployment list* includes:

(i) The name of each former employee of the agency who is a preference eligible, has been furloughed or separated from a continuing appointment without delinquency or misconduct, and applies for reemployment;

(ii) The name of each former employee of the agency who is a preference eligible and who, as the result of an appeal under part 752 of this chapter, is found by the Merit Systems Protection Board to have been unjustifiably dismissed from the agency, but who is not entitled to immediate restoration under the Board's decision;

(iii) The name of each former employee of the agency who has been furloughed or separated due to compensable injury sustained under the provisions of 5 U.S.C. chapter 81, subchapter I, who is not entitled to immediate restoration, and who is eligible for priority consideration under this part; and

(iv) *At the agency's discretion,* the name of each former employee of the agency who is not a preference eligible, has been furloughed or involuntarily separated from a continuing appointment without delinquency or misconduct, and applies for reemployment.

(2) *The reemployment list* may include the names of current employees of the agency and of former employees of the agency who are to be considered for future employment and who are not eligible for inclusion on the priority reemployment list. Employees may be entered on the reemployment list only for positions in which tenure and/or work schedule is no greater than that of the position previously held.

(3) *The regular employment list* includes the names of applicants rated eligible under § 302.302 whose names are not included on either the priority reemployment list or the reemployment list.

(b) *Order of entry.* An agency shall enter the names of all applicants rated eligible under § 302.302 on the appropriate list (priority reemployment, reemployment, or regular employment) in the following order:

* * * * *

4. In § 302.304, paragraphs (b) through (e) are revised to read as follows:

§ 302.304 Arrangement of ratings.

* * * * *

(b) *Order A.* (1) The name of each qualified preference eligible who has a compensable service-connected disability of 10 percent or more and is entitled to 10-point preference under section 3309 of title 5, United States Code, and whose name appears on the agency's priority reemployment list, in the order of his/her numerical ranking.

(2) The name of each qualified preference eligible who has a compensable service-connected disability of 10 percent or more and is entitled to 10-point preference under section 3309 of title 5, United States Code, and whose name appears on the agency's reemployment list, in the order of his/her numerical ranking.

(3) The name of each qualified preference eligible who has a compensable service-connected disability of 10 percent or more and is entitled to 10-point preference under section 3309 of title 5, United States Code, and whose name appears on the agency's regular employment list, in the order of his/her numerical ranking.

(4) The name of each other qualified applicant on the agency's priority reemployment list, in the order of his/her numerical ranking.

(5) The name of each other qualified applicant on the agency's reemployment list, in the order of his/her numerical ranking.

(6) The name of each other qualified applicant on the agency's regular employment list, in the order of his/her numerical ranking.

(c) *Order B.* (1) The name of each qualified preference eligible who has a compensable service-connected disability of 10 percent or more and is entitled to 10-point preference under section 3309 of title 5, United States Code, and whose name appears on the agency's priority reemployment list, in the order of his/her numerical ranking.

(2) The name of each other qualified applicant on the agency's priority reemployment list, in the order of his/her numerical ranking.

(3) The name of each qualified preference eligible who has a compensable service-connected disability of 10 percent or more and is entitled to 10-point preference under section 3309 of title 5, United States Code, and whose name appears on the agency's reemployment list, in the order of his/her numerical ranking.

(4) The name of each other qualified applicant on the agency's reemployment list, in the order of his/her numerical ranking.

(5) The name of each qualified preference eligible who has a compensable service-connected disability of 10 percent or more and is entitled to 10-point preference under section 3309 of title 5, United States Code, and whose name appears on the agency's regular employment list, in the order of his/her numerical ranking.

(6) The name of each other qualified applicant on the agency's regular employment list, in the order of his/her numerical ranking.

(d) *Professional order.* An agency shall consider applicants who have been assigned eligible ratings for professional and scientific positions at the GS–9 level and above, or equivalent, in the following order:

(1) *Applicants on the agency's priority reemployment list.* If numerical scores have been assigned, the applicants will be considered in the order of their augmented scores. If numerical scores have not been assigned, all preference eligibles will be considered together regardless of the type of preference, followed by all other priority reemployment candidates.

(2) *Applicants on the agency's reemployment list.* If numerical scores have been assigned, the applicants will be considered in the order of their augmented scores. If numerical scores have not been assigned, all preference eligibles will be considered together regardless of the type of preference, followed by all other reemployment candidates.

(3) *Applicants on the agency's regular employment list.* If numerical scores have been assigned, the applicants will be considered in the order of their augmented scores. If numerical scores have not been assigned, all preference eligibles will be considered together regardless of the type of preference, followed by all other candidates.

(e) *Unranked order.* When numerical scores are not assigned, the agency may consider applicants who have received eligible ratings for positions not covered by paragraph (d) of this section in either of the following orders:

(1) *By preference status.* Under this method, preference eligibles having a compensable service-connected disability of 10 percent or more are considered first, followed, second, by other 10-point preference eligibles, third, by 5-point preference eligibles, and, last, by nonpreference eligibles. Within each category, applicants from the priority reemployment list will be placed ahead of applicants from the reemployment list, and applicants from the reemployment list will be placed ahead of applicants from the regular employment list.

(2) *By reemployment/regular list status.* Under this method, all applicants on the priority reemployment list are considered before applicants on the reemployment list, and all applicants on the reemployment list are considered before applicants on the regular employment list. On each list, preference eligibles having a compensable service-connected disability of 10 percent or more are considered first, followed, second, by other 10-point preference eligibles, third, by 5-point preference eligibles, and, last, by nonpreference eligibles.

5. In § 302.401(a), the introductory text and paragraph (a)(1) are revised to read as follows:

§ 302.401 Selection and appointment.

(a) *Selection.* When making an appointment from a priority reemployment, reemployment, or regular list on which candidates have not received numerical scores, an agency must make its selection from the highest available preference category, as long as at least three candidates remain in that group. When fewer than three candidates remain in the highest category, consideration may be expanded to include the next category. When making an appointment from a list on which candidates have received numerical scores, the agency must make its selection for each vacancy from not more than the highest three names available for appointment in the order provided in § 302.304. Under either method, an agency is not required to—

(1) Accord an applicant on its priority reemployment or reemployment list the preference consideration required by § 302.304 if the list on which the applicant's name appears does not contain the names of at least three preference eligibles; or

* * * * *

6. Section 302.402 is revised to read as follows:

§ 302.402 Reappointment.

An agency may reappoint a current or former nontemporary employee of the executive branch of the Federal Government who is a preference eligible to a position covered by this part without regard to the names of qualified applicants on the agency's priority reemployment, reemployment, or regular employment list.

[FV 89–111 PR]

Navel Oranges Grown in Arizona and Designated Part of California; Valencia Oranges Grown in Arizona and Designated Part of California; Revision of the Administrative Rules and Regulations (Short Life Allotments)

AGENCY: Agricultural Marketing Service, USDA.

ACTION: Proposed rule.

SUMMARY: This proposed rule would revise procedures which are contained in the administrative rules and regulations of the California-Arizona navel and Valencia orange marketing orders. This proposal was recommended by the Navel and Valencia Orange

BEST COPY AVAILABLE

Administrative Committees (committees), the agencies responsible for local administration of the orders. The proposal would require handlers requesting short life allotments to submit additional information to the committees in order to aid the committees in administering the short life allotment provisions in the orders in an equitable manner.

DATES: Comments must be received by September 27, 1989.

ADDRESSES: Interested persons are invited to submit written comments concerning this proposal. Comments must be sent in triplicate to the Docket Clerk, Fruit and Vegetable Division, AMS, USDA, Room 2525–S, P.O. Box 96456, Washington, DC 20090–6456. All comments should reference the docket number and the date and page number of this issue of the **Federal Register** and will be made available for public inspection in the Office of the Docket Clerk during regular business hours.

FOR FURTHER INFORMATION CONTACT: Jacquelyn R. Schlatter, Marketing Specialist, Marketing Order Administration Branch, F&V, AMS, USDA, Room 2525–S, P.O. Box 96456, Washington, DC 20090–6456; telephone: (202) 447–5120.

SUPPLEMENTARY INFORMATION:

This proposed rule is issued under Marketing Order Nos. 907 and 908 (7 CFR parts 907 and 908), as amended, regulating the handling of navel and Valencia oranges grown in Arizona and designated parts of California. These orders are effective under the Agricultural Marketing Agreement Act of 1937, as amended (7 U.S.C. 601–674), hereinafter referred to as the Act.

This rule has been reviewed under Executive Order 12291 and Departmental Regulation 1512–1 and has been determined to be a "non-major" rule under criteria contained therein.

Pursuant to requirements set forth in the Regulatory Flexibility Act (RFA), the Administrator of the Agricultural Marketing Service (AMS) has considered the economic impact of this action on small entities.

The purpose of the RFA is to fit regulatory actions to the scale of business subject to such actions in order that small businesses will not be unduly or disproportionately burdened. Marketing orders issued pursuant to the Act, and rules issued thereunder, are unique in that they are brought about through group action of essentially small entities acting on their own behalf. Thus, both statutes have small entity orientation and compatibility.

There are approximately 125 handlers of navel oranges and 115 handlers of Valencia oranges subject to regulation under their respective orders, and approximately 4,065 producers of navel oranges and 3,500 producers of Valencia oranges in California and Arizona. Small agricultural producers have been defined by the Small Business Administration (13 CFR 121.2) as those having average gross annual revenues for the last three fiscal years of less than $500,000, and small agricultural service firms are defined as those whose gross annual receipts are less than $3,500,000. The majority of California-Arizona navel and Valencia orange producers and handlers may be classified as small entities.

This proposed rule invites comments on changes to the administrative rules and regulations of the navel and Valencia orange marketing orders. The proposed changes would require handlers requesting short life allotments to submit additional information to the committees in order to aid the committees in administering the short life allotment provisions of the orders in an equitable manner.

Paragraph (a) of §§ 907.50 and 908.50 of the navel and Valencia orange marketing orders, respectively, provide that, prior to recommendations for regulation for each prorate district, the committees shall submit to the Secretary their respective marketing policies for the ensuing season. These marketing policies include, among other information, the estimated utilization of the navel or Valencia orange crops, showing the quantity and percentages of those crops that will be marketed in domestic, export, and byproduct channels.

Paragraph (b) of §§ 907.51 and 908.51 of the orders provide that the committees shall provide equity of marketing opportunity to handlers in all districts. Paragraph (a) of §§ 907.110 and 908.110 of the administrative rules and regulations of the orders state that the committees shall establish an equity factor which is the same for all prorate districts. The equity factor is a percentage of the tree crop in each district and reflects a quantity of oranges (grown in each district) for which there will be equitable marketing opportunity under volume regulation each season. Paragraph (b) of the same sections provide that at the marketing policy meetings for each prorate district the committees shall formulate weekly shipping schedules for the ensuing season reflecting, insofar as practicable, the quantity or oranges grown in that district to be shipped under volume regulation each week. The quantity of oranges on such schedules is computed by application of the equity factor to the tree crop of the district. Paragraph (f) of §§ 907.110 and 908.110 give the committees authority to make such adjustments as they deem advisable in the equity factors, the weekly shipping schedules, and the percentage allocations to prorate districts, so as to reflect changing crop or market conditions.

Paragraph (h) of §§ 907.53 and 908.53 of the orders provide that during any week when volume regulation is likely to be recommended, the committees shall compute, with respect to each prorate district, the total quantity of oranges available for current shipment by each person who has applied for a prorate base and for allotments. On the basis of such computation, the committees fix a prorate base for each person who is entitled thereto. Based on such prorate bases, the committees calculate the quantity of oranges (allotment) which may be handled by each handler during each week in which volume regulations are issued.

Paragraph (g) of §§ 907.110 and 908.110 authorize the committees to calculate each season an estimated percentage of the total tree crop in the production areas which, in the judgment of the committees, will be handled under volume regulation and prepare a schedule of estimated weekly shipment based thereon, taking into account the purposes of the Act. Such percentages and schedules are used as references for determining adjustments in the prorate bases of handlers, for granting short life allotments, and for matters where it is necessary to consider utilization of the crop within a district.

Most navel and Valencia oranges are picked and packed as needed as they can be stored on the tree for an indefinite period without significant losses in fruit quality and condition. However, because of environmental conditions in separate producing localities, some oranges are produced which do not possess the keeping qualities of other oranges produced in the same prorate district. At the end of the shipping season, the fruit is puffy, soft, and deteriorates very quickly. These oranges are called short life oranges. The shipping life of such oranges, therefore, is shorter than the shipping life of other oranges in the same district and thus, they have a shorter marketing period. Under the orders, the normal marketing period for navel and Valencia oranges is that period in which the fruit is of such keeping quality that it can be shipped and will hold sufficiently well to be acceptable to consumers. The normal marketing period of short life oranges is

shorter than that of other oranges and can very not only between districts but between groves in the same district.

Sections 907.61 and 908.61 of the orders provide for the committees to withhold from the allotments of handlers, on a uniform proportionate basis for all handlers, an amount sufficient to permit handlers of short life oranges to handle during the normal marketing period of such short life oranges as large a proportion of oranges as the average which will be handled by all handlers. The committees determine, on the basis of all available information, the extent to which a handler needs short life allotment and allocate such allotment to such handler at a uniform weekly rate, insofar as practicable, during the normal marketing period of the handler's short life oranges. Thus, handlers who are granted short life allotments are permitted to handle during the shipping season of their short life oranges a quantity of short life oranges equal proportionately to the average to be handled by all handlers of navel or Valencia oranges within their prorate district. After a handler of short life oranges has received allotment sufficient to permit such total handling, allotment thereafter due such handler of short life oranges is allocated to handlers from whom allotment has been withheld.

Short life allotments are only applicable during the normal marketing period of such oranges. Thus, a handler whose oranges can only be marketed for a six-week period beginning in November could receive short life allotment only during that period, whereas a handler whose short life oranges can only be marketed for a six-week period beginning in January could receive short life allotment for those oranges only during that period.

To require handlers of short life oranges to market their oranges at the same rate as other handlers would result in handlers of short life oranges shipping a lower percentage of their crop of oranges to the fresh domestic market compared to other handlers in the district and industry because short life oranges shipped during the latter part of the shipping season could not be shipped to consuming markets in good condition.

There are handlers who ship both short and normal life oranges. Some of these handlers, because they have a low percentage of short life oranges, are able to adjust their picking and packing operations to allow the shipment of all of their short life oranges before they begin to deteriorate. Thus, they are able to handle their total supply of oranges without undue difficulty. However, there are other handlers who have a high percentage of short life oranges and, while under prorate limitations, might not be able to ship all their short life oranges prior to the time such oranges begin to deteriorate. Therefore, without short life allotments, they would be unable to ship the same percentage of oranges into the fresh domestic market which the industry and their district would move under regulation.

Short life allotment provisions in the navel and Valencia orange marketing orders state that short life allotments shall be allocated to handlers of short life oranges at a uniform weekly rate, insofar as practicable, during the normal fiscal year for navel oranges and the normal marketing year for Valencia oranges of the handler's short life oranges. The uniform weekly rate in calculated by comparing the total allotment a handler would have received under general maturity during that handler's shortened shipping season and the actual amount of allotment necessary for such handler to ship up to the industry equitable percentage during that same shipping season. The amount of extra allotment a handler must receive is expressed as a percentage uniformly applied, insofar as practicable, each week of the handler's short life shipping schedule. This percentage is derived by dividing the number of additional cartons the handler needs in order to ship up to the industry season average by the number of cartons the handler would receive under general maturity, and coverting that number to a percent.

The phrase in the regulation "insofar as practicable" gives the committees flexibility in setting percentages for short life allotments each week. This is necessary since the shipping schedules for navel and Valencia oranges are estimates, and it is impossible to arrive at an estimate that would be accurate for each week of the season. However, handlers who qualify for short life allotments must receive such allotment as uniformly as possible each week of their reduced shipping season. Thus, the allocation percentage for handlers with short life oranges must be adjusted each week that actual allotment levels established by the Secretary deviate from the shipping schedule. Such adjustments must continue in order to permit handlers of short life oranges to ship up to the equitable percent before the ending date of their short life season. The modifications to the administrative rules and regulations of the orders proposed herein would not alter this method of issuing short life allotments.

Sections 907.114 and 908.114 of the administrative rules and regulations of the orders require that handlers controlling short life oranges who desire to obtain short life allotments must file, with their respective committees, an application for such allotment on N.O.A.C./V.O.A.C. Forms No. 10. These applications request information which includes the following: (1) The location of each grove producing short life oranges; (2) a record covering the maximum number of years available, but not in excess of the 10 immediately preceding years, which shows the marketing period and total utilization of all oranges; (3) a suggested shortened marketing season which shows the final date when the the short life oranges covered by the application should be marketed; and (4) a showing satisfactory to the committees why the oranges covered by the application cannot be marketed during the normal marketing period for the applicable district through appropriate adjustments in the handler's packinghouse operations.

Recently, there has been growing concern among the orange industries that the current applications for short life allotments do not provide enough information for the committees to determine that short life allotments are necessary. Therefore, the committees have unanimously recommended amending §§ 907.114 and 908.114 to require that additional information be submitted by applicants for short life allotments. The additional reporting requirements would be reported on revised N.O.A.C./V.O.A.C. Forms No. 10 and new N.O.A.C./V.O.A.C. Forms No. 10A, which would request information on each grove producing short life oranges. The N.O.A.C./V.O.A.C. Forms No. 10 would be revised to require information on the percentage of grades of oranges packed out each year, the beginning and ending dates of the shipments in each year and the estimated quantity and the acreage of all general maturity and short life oranges controlled by the applicant.

New N.O.A.C./V.O.A.C. Forms No. 10A would require additional information such as: (1) The root stock and scion used, if known, of the trees in the short life producing grove; (2) a breakout of historical short life crop utilization for the past 10 years, if available, which includes the beginning and ending dates of shipments for each year; (3) a physical description of the fruit at the end of each of the previous 10 shipping seasons; (4) information regarding the application of materials to extend on-tree storage life of navel and Valencia oranges during the past 10 years; and (5) planned treatments to extend on-tree storage life of the upcoming crop.

Information regarding percentages of grades of fruit shipped to the domestic market each year would allow the committees to determine if "high grading" of fruit is being practiced by the handler. High grading is a practice whereby handlers choose to selectively pack and ship primarily high grade (i.e., high quality) fruit. This results in the handler harvesting a larger quantity of fruit each week in order to utilize such handler's prorate for only high grade fruit. Therefore, a lower percentage of such handler's fruit is shipped in fresh domestic channels than the average since the handler is selectively packing only high grade fruit and utilizing the remainder in our outlets. This shortens the handler's marketing season, as the handler can ship only as much high grade fruit as such handler has available, and, once that fruit is picked, the handler's shipments from that particular grove are complete.

Information on the rootstock and scion variety would aid the committees in determining if the applicant's trees are susceptible to producing short life fruit. Certain varieties and combinations of rootstock and scion varieties are known to be susceptible to the production of short life fruit.

Information regarding historical crop utilization would allow the comittees to determine if the handler applying for short life allotment has been able to market the same proportionate share of fruit to fresh domestic markets in relation to the average of all handlers in that district.

A description of the fruit at the ending date of the shipments would help the committees determine if the fruit is actually in a less marketable condition than is normal for fruit in that district at that point of the general shipping season.

Use of materials such as growth regulators to extend on-tree fruit life is a common practice in the orange industries. Information regarding the use of such materials used to extend on-tree fruit life would aid in the committees' review and decision process to determine if the applicant's fruit is actually short life fruit. Information on planned treatments to extend on-tree storage life of the upcoming crop would help the committees determine if the handler has planned to take appropriate measures to extend the on-tree life of the short life oranges.

This action would require handlers to submit additional information on their short life oranges in order to qualify for short life allotments. It is estimated that the additional information would take less than ten minutes per form to complete and thus would present no significant burden to handlers.

This additional information would aid the committees in determining that short life fruit genuinely exists, that the shortened marketing season is not a result of marketing patterns and handler decisions, and that the handler cannot adequately intermingle such handler's short life and normal life oranges to be able to ship up to the industry's average. The committees consider the additional information necessary so that they can consider short life requests in as equitable a manner as possible. Therefore, the committees recommended amending §§ 907.114 and 908.114 by revising paragraphs (b) of those sections and adding new paragraphs (c). In addition, changes to paragraphs (a) of §§ 907.114 and 908.114 are made to provide gender neutral language.

This proposed rule would require navel orange handlers to file applications for short life allotments by August 31 prior to the fiscal year for navel oranges in Districts 1, 3, and 4 and by September 30 for handlers in District 2. However, for the 1989–90 fiscal year, navel orange handlers in all districts would be required to file applications for short life allotments prior to October 31 in order to give handlers sufficient time to file such applications during this fiscal year. Valencia orange handlers would be required to file applications for short life allotments by December 31 prior to the marketing year for Valencia oranges in District 3 and January 31 for handlers in Districts 1 and 2. The different dates for the districts reflect their different growing seasons. Applications received by these dates would give the committees adequate time to include considerations for short life allotments in their respective marketing policies and shipping schedules. Once the handlers have provided the committees with adequate information in order for the committees to determine the validity of the short life applications, the committees would give written notice to the applicants before general maturity allotments are issued for the prorate district in which the short life oranges are grown. Since short life allotments would be issued during each week of the handler's short life shipping season, the committee could not delay its decision. In addition, once the committees approve short life allotments for a handler, such allotments would be issued from the beginning of the handler's shipping season for such oranges at a uniform weekly rate, insofar as practicable.

Based on available information, the Administrator of the AMS has determined that issuance of this proposed rule would not have a significant economic impact on a substantial number of small entities.

In accordance with the Paperwork Reduction Act of 1980 (44 U.S.C. 3504) the information collection provisions that are included in §§ 907.114 and 908.114 of this proposed rule have been submitted to the Office of Management and Budget (OMB). They will not be made effective until OMB approval has been obtained.

Interested persons are invited to submit their views and comments on this proposal. A 15-day comment period is considered appropriate because the fiscal year for navel oranges begins on November 1 and applications for short life allotments for navel orange handlers should be filed no later than October 31 for all districts for this season.

List of Subjects

7 CFR Part 907

Arizona, California, Marketing agreements and orders, Navels, and Oranges.

7 CFR Part 908

Arizona, California, Marketing agreements and orders, Oranges, and Valencias.

For the reasons set forth in the preamble, 7 CFR parts 907 and 908 are proposed to be amended as follows:

1. The authority citation for 7 CFR Parts 907 and 908 continues to read as follows:

Authority: Secs. 1–19, 48 Stat. 31, as amended; 7 U.S.C. 601–674.

PART 907—NAVEL ORANGES GROWN IN ARIZONA AND DESIGNATED PART OF CALIFORNIA

2. Section 907.114 is revised to read as follows:

Subpart—Rules and Regulations

§ 907.114 Short life allotments.

(a) *Qualification for short life allotment.* A handler shall be considered to have short life oranges when such handler has oranges which historically are known to lack keeping qualities which will permit such handler to handle, during the normal marketing period for the oranges grown in the handler's prorate district, the same proportion of such oranges as the average which will be handled by all handlers pursuant to § 907.110(g).

(b)(1) *Application to be filed.* Each handler controlling short life oranges who desires to obtain short life allotments shall file with the committee, prior to the crop year for which an application for a Prorate Base and Allotments is filed by such handler, a signed application for such allotments on N.O.A.C. Form No. 10. The deadline for the filing of such application shall be August 31 for handlers in Districts 1, 3, and 4 and September 30 for handlers in District 2: *Provided,* That for the 1989–90 fiscal year, handlers in all districts must file applications for short life allotments no later than October 31. The application shall contain the following information: Name and address of the handler applicant; location of each grove producing short life oranges; the estimated quantity and the acreage of all general maturity and short life oranges controlled by the applicant; a record covering the maximum number of years available, but not in excess of the 10 immediately preceding years, which shows the utilization of all oranges; the percentage pack-out of fruit by grade; the beginning and ending dates of the shipments in each year; a suggested shortened marketing season showing the beginning date of the normal marketing period of such fruit and the ending date which is the final date when the short life oranges covered by the application could be marketed; and a showing satisfactory to the committee why the oranges covered by the application cannot be marketed during the normal marketing period for the applicable district through appropriate adjustments in the handler's packinghouse operations.

(2) *Application supplement.* At the time handlers file applications for allotment for short life oranges they shall file, for each grove having short life oranges included in the application, a signed application information supplement on N.O.A.C. Form No. 10A. The application supplement shall include the following information: Name of the applicant handler; the location of the grove; the acreage in the grove; the year it was planted; the rootstock and scion of the trees, if known; a record covering the maximum number of years available, but not in excess of the 10 immediately preceding years, which shows the utilization of the oranges produced in the grove and the beginning and ending dates of the shipments of the short life oranges for each year in which utilization is listed in the application, a description of the condition of the short life oranges at the ending date of shipments; a description of any methods or materials used by the grower to extend the on-tree storage life of the short life oranges; and any planned treatments to extend the on-tree storage life of the short life oranges in the upcoming year.

(c) Using the information furnished on the forms referred to in subsection (b) above, along with such other relevant information as is available, the committee shall determine which applicants are entitled to receive short life allotments, the amount of the allotments, and the specific time span (which includes the beginning and ending dates of the normal marketing season of such fruit) over which they will be given. Action shall be taken for each applicant as soon as is practicable after the application is received, but in no event later than the time when general maturity allotments are issued for the prorate district in which the short life oranges are grown: *Provided,* That such application provided the committee with adequate information to allow the committee to determine the validity of such application. Each applicant shall be given written notice of the committee's action as soon as it is taken.

PART 908—VALENCIA ORANGES GROWN IN ARIZONA AND DESIGNATED PART OF CALIFORNIA

3. Section 908.114 is revised to read as follows:

Subpart—Rules and Regulations

§ 908.114 Short life allotments.

(a) *Qualification for short life allotment.* A handler shall be considered to have short life oranges when such handler has oranges which historically are known to lack keeping qualities which will permit such handler to handle, during the normal marketing period for the oranges grown in the handler's prorate district, the same proportion of such oranges as the average which will be handled by all handlers pursuant to § 908.110(g).

(b)(1) *Application to be filed.* Each handler controlling short life oranges who desires to obtain short life allotments shall file with the committee, prior to the crop year for which an application for a Prorate Base and Allotments is filed by such handler, a signed application for such allotments on V.O.A.C. Form No. 10. The deadline for the filing of such application shall be December 31 for handlers in District 3 and January 31 for handlers in Districts 1 and 2. The application shall contain the following information: Name and address of the handler applicant; location of each grove producing short life oranges; the estimated quantity and the acreage of all general maturity and short life oranges controlled by the applicant; a record covering the maximum number of years available, but not in excess of the 10 immediately preceding years, which shows the utilization of all oranges; the percentage pack-out of fruit by grade; the beginning and ending dates of the shipments in each year; a suggested shortened marketing season showing the beginning date of the normal marketing period of such fruit and the ending date which is the final date when the short life oranges covered by the application could be marketed; and a showing satisfactory to the committee why the oranges covered by the application cannot be marketed during the normal marketing period for the applicable district through appropriate adjustments in the handler's packinghouse operations.

(2) *Application supplement.* At the time handlers file applications for allotment for short life oranges they shall file, for each grove having short life oranges included in the application, a signed application information supplement on V.O.A.C. Form No. 10A. The application supplement shall include the following information: Name of the applicant handler; the location of the grove; the acreage in the grove; the year it was planted; the rootstock and scion of the trees, if known; a record covering the maximum number of years available, but not in excess of the 10 immediately preceding years, which shows the utilization of the oranges produced in the grove and the beginning and ending dates of the shipments of the short life oranges for each year in which utilization is listed in the application, a description of the condition of the short life oranges at the ending date of shipments; a description of any methods or materials used by the grower to extend the on-tree storage life of the short life oranges; and any planned treatments to extend the on-tree storage life of the short life oranges in the upcoming year.

(c) Using the information furnished on the forms referred to in subsection (b) above, along with such other relevant information as is available, the committee shall determine which applicants are entitled to receive short life allotments, the amount of the allotments, and the specific time span (which includes the beginning and ending dates of the normal marketing season of such fruit) over which they will be given. Action shall be taken for each applicant as soon as is practicable after the application is received, but in no event later than the time when general maturity allotments are issued for the prorate district in which the short life oranges are grown: *Provided,* That such application provided the committee with adequate information to allow the committee to determine the validity of such application. Each applicant shall be given written notice of the committee's action as soon as it is taken.

Dated: September 7, 1989.

William J. Doyle,

Acting Deputy Director, Fruit and Vegetable Division.

BILLING CODE 3410–02–M

DEPARTMENT OF THE INTERIOR

Office of Surface Mining Reclamation and Enforcement

30 CFR Part 935

Ohio Permanent Regulatory Program; Remining

AGENCY: Office of Surface Mining Reclamation and Enforcement (OSMRE), Interior.

ACTION: Proposed rule; reopening of public comment period.

SUMMARY: OSMRE is reopening the public comment period on Revised Program Amendment No. 37 to the Ohio permanent regulatory program (hereinafter referred to as the Ohio program) under the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The amendments proposed in Revised Program Amendment No. 37 are intended to respond to OSMRE questions about proposed Program Amendment No. 37 concerning the remining of previously affected areas. The proposed changes in Revised Program Amendment No. 37 are also intended to adopt revisions to chapter 1513 of the Ohio Revised Code (ORC) enacted through House Bill No. 399 of the Ohio General Assembly.

This notice sets forth the times and locations that the Ohio program and proposed amendments to that program will be available for public inspection, the comment period during which interested persons may submit written comments on the proposed amendments, and the procedures that will be followed regarding the public hearing, if one is requested.

DATES: Written comments must be received on or before 4:00 p.m. on October 12, 1989. If requested, a public hearing on the proposed amendments will be held at 1:00 p.m. on October 10, 1989. Requests to present oral testimony at the hearing must be received on or before 4:00 p.m. on September 27, 1989.

ADDRESSES: Written comments and requests to testify at the hearing should be mailed or hand-delivered to Ms. Nina Rose Hatfield, Director, Columbus Field Office, at the address listed below. Copies of the Ohio program, the proposed amendments, and all written comments received in response to this notice will be available for public review at the addresses listed below during normal business hours, Monday through Friday, excluding holidays. Each requester may receive, free of charge, one copy of the proposed amendments by contacting OSMRE's Columbus Field Office.

Office of Surface Mining Reclamation and Enforcement, Columbus Field Office, 2242 South Hamilton Road, Room 202, Columbus, Ohio 43232, Telephone: (614) 866–0578

Ohio Department of Natural Resources, Division of Reclamation, Fountain Square, Building B–3, Columbus, Ohio 43224, Telephone: (614) 265–6675

FOR FURTHER INFORMATION CONTACT: Ms. Nina Rose Hatfield, Director, Columbus Field Office, (614) 866–0578.

SUPPLEMENTARY INFORMATION:

I. Background

On August 16, 1982, the Secretary of the Interior conditionally approved the Ohio program. Information on the general background of the Ohio program submission, including the Secretary's findings, the disposition of comments, and a detailed explanation of the conditions of approval of the Ohio program, can be found in the August 10, 1982 **Federal Register** (47 FR 34688). Subsequent actions concerning the conditions of approval and program amendments are identified at 30 CFR 935.11, 935.12, 935.15, and 935.16.

II. Discussion of the Proposed Amendments

By letter dated January 20, 1989 (Administrative Record No. OH–1131), the Ohio Department of Natural Resources, Division of Reclamation (Ohio) submitted proposed Program Amendment No. 37 to the Ohio program. The proposed amendments were initiated by Ohio to take advantage of the increased flexibility afforded to the Ohio Environmental Protection Agency (OEPA) under the amended Clean Water Act. Ohio's proposed amendments were intended to create incentives for mine operators to enter, mine, and reclaim areas that were previously affected by mining and which, as a result, have continuing water pollution.

On February 7, 1989, OSMRE published a notice in the **Federal Register** (54 FR 5940) announcing receipt of proposed Program Amendment No. 37 and inviting public comment on its adequacy. The public comment period ended on March 9, 1989. The public hearing scheduled for March 6, 1989 was not held because no one requested an opportunity to testify.

By letter dated July 26, 1989 (Administrative Record No. OH–1203), OSMRE requested additional information from Ohio concerning several aspects of the proposed amendment.

By letter dated August 16, 1989 (Administrative Record No. OH–1201) Ohio submitted responses to OSMRE's questions about proposed Program Amendment No. 37. With its responses, Ohio submitted Revised Program Amendment No. 37 incorporating changes resulting from OSMRE's questions and from revisions to Chapter 1513 of the Ohio Revised Code (ORC) enacted through House Bill No. 399 of the Ohio General Assembly.

The changes proposed by Ohio in Revised Program Amendment No. 37 are briefly discussed below. In addition to the specific changes discussed below, numerous other nonsubstantive changes are being made throughout these statutes and rules to correct grammar, punctuation, and paragraph number and letter notations.

(1) ORC section 1513.07(B)(2)(s): The previous version of this paragraph proposed in Program Amendment No. 37 is being rewritten to clarify that "previously mined areas" means areas that were affected by coal mining operations before August 3, 1977; to include the authorization of reclamation as well as mining operations; to delete reference to "pollution abatement areas" in this paragraph; and to clarify that the pollution abatement plan may improve water quality with respect to pH, iron, and manganese.

(2) ORC section 1513.07(E)(7): The previous version of this paragraph proposed in Program Amendment No. 37 is being rewritten to clarify the conditions which an applicant must demonstrate in order for the Chief of the Ohio Department of Natural Resources, Division of Reclamation (the Chief) to authorize coal mining and reclamation operations in previously mined areas. Paragraph (E)(7)(f) is being rewritten to clarify that the partners and corporate officers of the applicant must not have any existing legal responsibilities to reclaim or treat water discharge from the area of proposed remining, must not have had any mining permits revoked or suspended with respect to water quality within eighteen months prior to the

application, and must not have forfeited a reclamation bond or similar security within the United States.

(3) ORC section 1513.16(F)(1): This paragraph is being rewritten to include a description of the operator's pollution abatement plan, if applicable, in the newspaper advertisement announcing the operator's filing of a request for bond release.

(4) ORC section 1513.16(F)(3)(a), (b), and (c): The previous versions of these paragraphs proposed in Program Amendment No. 37 are being rewritten to specify that remining areas being considered for bond release under this paragraph are those authorized by the Chief under ORC 1513.07(E)(7); to include the requirement that the operator comply with the approved pollution abatement plan for bond release; and to specify that additional bond release requirements for pollution abatement areas are established by the Chief in ORC section 1513.02.

(5) ORC section 1513.16(H)(2)(b) and (H)(3)(b): These paragraphs are being rewritten to delete the mining license number from the information provided by the operator when requesting an inspection of the permit area.

(6) ORC section 1513.16(H)(2)(d) and (H)(3)(d): These paragraphs are being rewritten to delete the presumption of reclamation approval by the Chief if the Chief does not notify the operator within the prescribed period following a request for inspection that the reclamation is not approved. These changes were previously approved by OSMRE in Program Amendment No. 25 and have been enacted in Ohio House Bill No. 399.

(7) OAC section 1501:13–4–15: The version of this new rule proposed in Program Amendment No. 37 is being rewritten as follows:

Paragraph (B)(6): The reference to 33 U.S.C. Section 1311(p) is being corrected.

Paragraph (E)(1)(a): References are being added to include partners of the applicant, if the applicant is a partnership, and the director and controlling officers, if the applicant is a corporation.

Paragraphs (E)(1)(a)(i) and (ii): Reference is being added to the water treatment and reclamation responsibilities under ORC Chapter 1513.

Paragraph (E)(1)(a)(iv): Reference is being added to coal or surface mining bond or security deposited in lieu of bond in this or any other State or within the United States.

Paragraph (E)(5): This new criterion for authorization of remining is being added. No authorization may be granted by the Chief until a remining NPDES permit has been issued by the Ohio Environmental Protection Agency and a copy of the remining NPDES permit has been provided to the Chief.

Paragraph (G)(1): The phrase "which are not encountered during mining or the implementation of the abatement plan" is being deleted.

Paragraph (G)(2): The phrase "which are encountered during mining or the implementation of the abatement plan" is being deleted.

Paragraph (G)(3): This paragraph explaining the term "encountered" is being deleted. Subsequent paragraphs are being renumbered.

Paragraph (G)(5): This paragraph is being rewritten to delete statements about the operator's compliance with the effluent limitations established in the remining NPDES permit and limitations for settleable and suspended solids pursuant to 40 CFR Part 434.

III. Public Comment Procedures

In accordance with the provisions of 30 CFR 732.17(h), OSMRE is now seeking comment on whether the amendments proposed by Ohio satisfy the applicable program approval criteria of 30 CFR 732.15. If the amendments are deemed adequate, they will become part of the Ohio program.

Written Comments

Written comments should be specific, pertain only to the issues proposed in this rulemaking, and include explanations in support of the commenter's recommendations. Comments received after the time indicated under "**DATES**" or at locations other than the Columbus Field Office will not necessarily be considered in the final rulemaking or included in the Administrative Record.

Public Hearing

Persons wishing to comment at the public hearing should contact the person listed under "**FOR MORE INFORMATION CONTACT**" by 4:00 p.m. by September 27, 1989. If no one requests an opportunity to comment at a public hearing, the hearing will not be held.

Filing of a written statement at the time of the hearing is requested as it will greatly assist the transcriber. Submission of written statements in advance of the hearing will allow OSMRE officials to prepare adequate responses and appropriate questions.

The public hearing will continue on the specified date until all persons scheduled to comment have been heard. Persons in the audience who have not been scheduled to comment and who wish to do so will be heard following those scheduled. The hearing will end after all persons scheduled to comment and persons present in the audience who wish to comment have been heard.

Public Meeting

If only one person requests an opportunity to comment at a hearing, a public meeting, rather than a public hearing, may be held. Persons wishing to meet with OSMRE representatives to discuss the proposed amendments may request a meeting at the Columbus Field Office by contacting the person listed under "**FOR FURTHER INFORMATION CONTACT.**" All such meetings shall be open to the public and, if possible, notices of the meetings will be posted at the locations listed under "**ADDRESSES.**" A written summary of each public meeting will be made a part of the Administrative Record.

BILLING CODE 4310–05–M

NATIONAL ARCHIVES AND RECORDS ADMINISTRATION

36 CFR Part 1230

RIN 3095–AA22

Micrographics Records Management

AGENCY: National Archives and Records Administration.

ACTION: Notice of proposed rulemaking.

SUMMARY: The National Archives and Records Administration (NARA) proposes to revise regulations relating to microfilming Federal records and to the maintenance, use, and disposition of microform records. The proposed rule would update references to Federal and industry micrographics standards. It would also provide separate standards for microfilming and storing permanent records and temporary records and would revise requirements relating to the inspection of microforms making the standards for temporary records less stringent than those for permanent records. The proposed rule would affect Federal agencies and private contractors tht microfilm records for Federal agencies.

DATES: Comments must be received by November 13, 1989.

ADDRESSES: Comments should be sent to Director, Policy and Program Analysis Division, National Archives and Records Administration (NAA), Washington, DC 20408.

FOR FURTHER INFORMATION CONTACT: John A. Constance or Nancy Allard at 202–523–3214 (FTS 523–3214).

SUPPLEMENTARY INFORMATION: The industry micrographics standards cited in the current 36 CFR part 1230 require updating to reflect the latest editions of the standards. These standards will be incorporated by reference in the final rule.

In addition, NARA proposes to provide separate filming and storage requirements for unscheduled records and records designated as permanent in a NARA approved records disposition schedule and for records of temporary value. Current § 1230.14 is revised to cover film and image requirements for permanent records and unscheduled records. New § 1230.16 is added to provide guidance on film and image requirements for temporary records, duplicates, and user copies.

The proposed rule makes a number of changes in the inspection requirements in § 1230.22. Currently, agencies must inspect master films of permanent microform records every 2 years, even after the records have been transferred to a Federal records center operated by NARA. The inspection requirement is based on ANSI PH1.43–1985 and is intended to ensure the degradation of film is found and corrected before the permanent record images on the film are completely lost.

The proposed rule would require agencies to conduct inspections when the records are 2 years old and every 2 years thereafter until transferred to a Federal records center or to the National Archives. Film cannot be transferred to the National Archives until the first inspection has been performed. Permanent microforms may be transferred to a Federal records center only after the agency has performed the first inspection or has certified that the microform will be inspected by the agency, an agency contractor, or the Federal records center (on a reimbursable basis) when the records become 2 years old. NARA will assume responsibility for inspecting the microforms after they are transferred to NARA custody (after the initial 2-year inspection).

The proposed rule simplifies the sampling technique to require a randomly selected sample of 1,000 microform units (rolls of film, single microfiche, or similar appropriate unit) or 1 percent of the total number of microform units in the collection. At least one microform unit must be inspected in collections of less than 100 units.

Under the proposed rule, agencies would no longer be required to send inspection reports to the NARA Office of Records Administration (NI) within 30 days after the inspection was completed. Instead, the proposed rule requires results of inspections conducted by the creating agency to be documented and attached to the SF 135 when permanent microforms are transferred to a Federal records center for storage or to the SF 258 if the permanent microforms are transferred directly to the National Archives.

This rule is not a major rule for the purposes of Executive Order 12291 of February 17, 1981. As required by the Regulatory Flexibility Act, it is hereby certified that this proposed rule will not have a significant impact on small business entities.

List of Subjects in 36 CFR Part 1230

Archives and records; Incorporation by reference; Micrographics.

For the reasons set forth in the preamble, NARA proposes to amend part 1230 of title 36 of the Code of Federal Regulations as follows:

PART 1230—MICROGRAPHICS

1. The authority statement for part 1230 continues to read as follows:

Authority: 44 U.S.C. 2907, 3302 and 3312.

2. Section 1230.1 is revised to read as follows:

§ 1230.1 Scope of part.

This part provides standards for using micrographic technology in the creation, use, storage, retrieval, preservation, and disposition of Federal records. Agencies should also consult 41 CFR subpart 201–45.1 for General Services Administration (GSA) requirements relating to micrographics management for Federal records.

3. Section 1230.2 is revised to read as follows:

§ 1230.2 Authority.

As provided in 44 U.S.C. chapters 29 and 33, the Archivist of the United States is authorized to establish standards for the photographic and microphotographic production and reproduction of records by Federal agencies for the purpose of destroying the original records; to establish uniform standards within the Government for the creation, storage, use, and disposition of processed microform records; and to establish, maintain, and operate centralized microfilming services for Federal agencies.

4. Section 1230.3 is added to read as follows:

§ 1230.3 Publications incorporated by reference.

(a) The following publications cited in this part are hereby incorporated by reference. They are available from the issuing organization at the addresses listed in this section. They are also available for inspection at the Office of the Federal Register Information Center, Room 8301, 1100 L Street NW., Washington, DC 20408. This incorporation by reference was approved by the Director of the Federal Register in accordance with 5 USC 552(a) and 1 CFR part 51. These materials are incorporated as they exist on the date of the approval, and a notice of any change in these materials will be published in the **Federal Register**.

(b) *American National Standard Institute (ANSI) and International (ISO) Standards.* ANSI and ISO standards cited in this part are available from the American National Standards Institute, 1430 Broadway, New York City, NY 10018.

ANSI IT9.1–1988, American National Standard for Imaging Media (Film)—Silver-Gelatin Type—Specifications for Stability.

ANSI PH1.43–1985, American National Standard for Photography (film)—Processed Safety Film—Storage.

ANSI IT9.2–1988, American National Standard for Imaging Media—Processed Films, Plates, and Papers—Filing Enclosures and Containers for Storage.

ANSI/ISO 5/2–1985, ANSI PH2.19–1986, International Standard for Photography (Sensitometry)—Density Measurements—Geometric Conditions for Transmission Density.

ANSI/ISO 5/3–1984, ANSI PH2.18–1985, International Standard for Photography (Sensitometry)—Density Measurements—Spectral Conditions.

ANSI/ISO 3334–1979, International Standard for Microcopying ISO Test Chart No. 2—Description and Use in Photographic Documentary Reproduction.

(c) *Association of Information and Image Management (AIIM) Standards.* The following AIIM standards are available from the Association for Information and Image Management, 1100 Wayne Avenue, Suite 1100, Silver Spring, MD 20910.

ANSI/AIIM (NMA) MS1–1981, Practice for Operational Practice/Inspection and Quality Control for Alphanumeric Computer-Output Microforms.

ANSI/AIIM MS5–1985, American National Standard for Micrographics—Microfiche.

ANSI/AIIM (NMA) MS14–1988, Specifications for 16 and 35mm in Roll Microfilm.

ANSI/AIIM (NMA) MS19–1987, Recommended Practice for Identification of Microforms.

ANSI/AIIM (NMA) MS23–1983, Practice for Operational Procedures/Inspection and Quality Control of First Generation, Silver-Gelatin Microfilm of Documents.

ANSI/MS 32–1967, Standard for Micrographics—Microrecording of Engineering Source Documents on 35mm Microfilm.

ANSI/AIIM MS41–1988, Unitized Microfilm Carriers (Aperture, Camera, Copy, and Image Cards).

ANSI/AIIM MS43–1988, Recommended Practice for Operational Procedures/Inspection and Quality Control of Duplicate Microforms of Documents and from COM.

ANSI/SIP34–1989, Microspots and Aging Blemishes. This is a republication of NBS HB96, Inspection of Processed Photographic Record Films for Aging Blemishes.

(d) *National Institute of Standards and Technology (NIST) publications.* The following publication is available from the National Institute of Standards and Technology (NIST was formerly the National Bureau of Standards (NBS).), Office of Standard Reference Materials, Rm. B311 Chemistry, Gaithersburg, MD 20899.

NBS–SRM 1010a-1982, Microcopy Resolution Test Chart.

5. Section 1230.4 is revised to read as follows:

§ 1230.4 Definitions.

For the purpose of this part the following definitions shall apply:

Archival microfilm. A photographic film that meets the standards described in § 1230.14 and that is suitable for the preservation of permanent records when stored in accordance with § 1230.20.

Archival storage conditions. Storage conditions, as specified in § 1230.20(a), that are suitable for the preservation of photographic film appraised as having permanent value. Archival storage conditions prolong the useful life of both permanent and temporary photographic records.

Computer Output Microfilm (COM). Microfilm containing data produced by a recorder from computer generated signals.

Facility. An area set aside for equipment and operations required in the production or reproduction of microforms either for internal use or for the use of other organizational elements of the Federal Government.

Microfilm. (a) Raw (unexposed and unprocessed) fine-grain, high resolution photographic film with characteristics that make it suitable for use in micrographics;

(b) The process of recording microimages on film; or

(c) A fine-grain, high resolution photographic film containing an image greatly reduced in size from the original.

Microform. A term used for any form containing microimages.

Microimage. A unit of information such as a page of text or a drawing, that has been made too small to be read without magnification.

Permanent record. Any record (see definition in 44 U.S.C. 3301) that has been determined by the Archivist of the United States to have sufficient historical or other value to warrant its continued preservation by the Government.

Temporary record. Any record determined by the Archivist of the United States to contain information of transient value in accordance with Part 1228 of this chapter. Temporary records may warrant microfilming for economies of storage and distribution.

Unscheduled record. Any record that has not been appraised by NARA, i.e., a record that has neither been approved for disposal nor designated as permanent by the Archivist of the United States in accordance with Part 1228 of this chapter.

Use or work copies. Duplicates of original film which are prepared for use as reference copies or as duplication masters for recurring or large-scale duplication. These copies are not to be confused with the preservation master copies which are stored under the conditions in § 1230.20 and which are not to be used for reference purposes.

6. Subpart A is revised to read as follows:

Subpart A—Standards for Microfilming Records

Sec.
1230.10 Authorization.
1230.12 Preparatory steps prior to filming.
1230.14 Film and image requirements for permanent records or unscheduled records.
1230.16 Film and image requirements for temporary records, duplicates, and user copies.

Subpart A—Standards for Microfilming Records

§ 1230.10 Authorization.

(a) Agencies proposing to microfilm permanent records or unscheduled records shall submit Standard Form (SF) 115, Request for Records Disposition Authority, in accordance with part 1228 of this chapter. The SF 115 shall provide for the disposition of original records and microforms.

(1) Agencies proposing microfilming methods and procedures meeting the standards in § 1230.14(a) shall include on the SF 115 the following certification: "This certifies that the records described on this form will be microfilmed in accordance with the standards set forth in 36 CFR part 1230."

(2) Agencies having proposed microfilming methods, materials and procedures that do not meet the standards in § 1230.14(a) shall include on the SF 115 a description of the system and standards proposed for use.

(b) The approved retention period for temporary records shall be applied to microform copies of such records; the original records shall be destroyed upon verification of the microfilm, unless legal requirements preclude early destruction of the originals. The agency, not the Federal Records Center, is responsible for carrying out the provisions of this paragraph for records stored in a Federal Records Center. NARA approval is not required prior to implementation of this paragraph.

(c) Agencies proposing to retain and store the silver original microforms of permanent records after disposal of the original records shall include on the SF 115 a statement that the agency's storage conditions shall comply with the standards of § 1230.20 and that the inspections required by § 1230.22 will be performed.

§ 1230.12 Preparatory steps prior to filming.

(a) The integrity of the original records authorized for disposal shall be maintained by ensuring that the microforms are adequate substitutes for the original records and serve the purpose for which such records were created or maintained. Copies shall be complete and contain all information shown on the originals.

(b) The records shall be arranged, identified, and indexed so that any particular document or component of the records can be located. Each microform roll or fiche shall include accurate titling information on a titling target or header. At a minimum, titling information shall include the name of the agency and organization; the title of the records; the number or identifier for each unit of film; the security classification, if any; and the inclusive dates, names, or other data identifying the records to be included on a unit of film.

(c) Each microform shall contain an identification target showing the date of filming. When possible, to give the film copy better legal standing, the target shall also show the signature of the person authorizing the microfilming and the dated signature(s) of the camera operator(s). When the microfilm is directly generated by a computer (COM), the target shall contain the names of the persons since signatures cannot be conveniently added. See ANSI/AIIM (NMA) MS19–1987 for standards for identification targets.

(d) The following formats are mandatory standards for microforms.

(1) *Roll film.* The formats described in ANSI/AIIM (NMA) MS14–1988 shall be used for microfilming source documents or computer generated information (COM) on 16mm and 35mm roll film. A reduction ratio of 1:24 shall be used whenever document size and quality permits. See § 1230.14 (d) for determining the appropriate reduction ratio and format for meeting the image quality requirements. When microfilming on 35mm film for aperture card applications, the format dimensions in AIIM/MSS 32–1987, Table 1 shall be mandatory and the aperture card format "D Aperture" shown in ANSI/AIIM MS41–1988, Figure 1 shall be used.

(2) *Microfiche.* For microfilming source documents or computer generated information (COM) on microfiche, the appropriate formats and reduction ratios prescribed in ANSI/AIIM MS 5–1985 shall be used as specified for the size and quality of the documents being filmed. See § 1230.14 (d) for determining the appropriate reduction ratio and format for meeting the image quality requirements.

(e) *Index placement.* When filming original (source) documents all indexes, registers, or other finding aids, if microfilmed, shall be placed in the first frames at the beginning of a roll of film or in the last frames of a microfiche or microfilm jacket. Computer-generated microforms shall have the indexes following the data on a roll of film or in the last frames of a microfiche or microform jacket. Other index locations may be used only if dictated by special system constraints.

§ 1230.14 Film and image requirements for permanent records or unscheduled records.

(a) *Application.* The following standards shall apply to the microfilming of permanent records where the original paper record will be destroyed. Systems that produce original permanent records on microfilm with no paper originals, such as computer output microfilm (COM), shall be designed so that they produce microfilm which meets the standards of this section. Unscheduled records from systems such as COM must also meet the standards of this section. Unscheduled paper records may not be destroyed after microfilming.

(b) *Film stock standards.* Only polyester-based film that conforms to ANSI IT9.1–1988 shall be used in all applications, except when generating film to be spliced to existing rolls of cellulose acetate film, when cellulose triacetate film that conforms to ANSI IT91–1988 shall be used. To ensure protection for permanent records, agencies using microfilm systems which do not produce silver gelatin originals meeting these standards shall submit with the Standard Form 115 required by § 1230.10 a schedule for the production of silver gelatin duplicates meeting the standards.

(c) *Processing standards.* Microforms shall be processed so that the residual thiosulfate ion concentration will not exceed 0.014 grams per square meter in accordance with ANSI IT9–1–1988. Processing shall be in accordance with processing procedures in ANSI/AIIM (NMA) MS1–1981 and MS23–1983.

(d) *Quality standards.*—(1) *Resolution.* The method for determining minimum resolution on microforms of source documents shall conform to the Quality Index Method for determining resolution and anticipated losses when duplicating as described in ANSI/AIIM MS23–1983 and MS43–198. Computer Output Microforms (COM) shall meet the requirements of ANSI/AIIM MS1–1981. Resolution tests shall be performed using a NBS–SRM 1010a–1982, Microcopy Resolution Test Chart (a calibrated and certified photographic reproduction) as specified in ANSI/ISO 3334–1979, (the standard practice for using the test chart) and the patterns will be read following the instructions of ANSI/ISO 3334–1979. The character used to determine the height used in the Quality Index formula shall be the smallest character used to display information. A Quality Index of five is required at the third generation level.

(2) *Background density of images.* The background ISO standard visual diffuse transmission density on microforms shall be appropriate to the type of documents being filmed. The procedure for density measurement is described in ANSI/AIIM MS23–1983 and the densitometer shall be in accordance with ANSI/ISO 5/3–1984, for spectral conditions and ANSI/ISO 5/2–1985, for geometric conditions for transmission density. Recommended visual diffuse transmission background densities for images of documents are as follows:

Classification	Description of document	Background density
Group 1	High-quality, high-contrast printed books, periodicals, and black typing	1.3–1.5
Group 2	Fine-line originals, black opaque pencil writing, and documents with small high-contrast printing	1.15–1.4
Group 3	Pencil and ink drawings, faded printing, and very small printing, such as footnotes at the bottom of a printed page	1.0–1.2
Group 4	Low-contrast manuscripts and drawings, graph paper with pale, fine-colored lines; letters typed with a worn ribbon; and poorly printed, faint documents.	0.8–1.0
Group 5	Poor-contrast documents (special exception)	0.7–0.85

Recommended visual diffuse transmission densities for computer generated images are as follows:

Film type	Process	Density measurement method	Min. Dmax*	Max. Dmin*	Minimum density difference
Silver gelatin	Conventional	Printing or diffuse	0.75	0.15	0.60
Silver gelatin	Full reversal	Printing	1.50	0.20	1.30

*Character or line density, measured with a microdensitometer or by comparing the film under a microscope with an image of a known density.

---

(3) *Line or Stroke Width.* Due to optical limitations in most photographic systems, film images of thin lines appearing in the original document will tend to fill in as a function of their width and density. Therefore, as the reduction ratio of a given system is increased, the background density shall be reduced as needed to ensure that the copies produced will contain legible characters.

§ 1230.16 Film and image requirements for temporary records, duplicates, and user copies.

(a) *Film stocks.* The preferred film stock for all microforms is specified in § 1230.14(b). However, for economic reasons and systems applications, other film types may be better suited for microforms containing temporary records, and for duplicates and user copies. Diazo, vesicular, electrophotographic, and thermographic type films may be used to microfilm temporary records.

(b) *Processing.* The films will be processed according to the manufacturers' instruction.

(c) *Quality Standards.*—(1) *Resolution.* See § 1230.14(d)(1) for method of determining resolution. A Quality Index of five is recommended at the level of the specific number of generations used in the system for temporary records, duplicates and user copies.

(2) *Background density of images.* The densities recommended in § 1230.14(d)(2) apply to microforms of temporary records, duplicates and user copies. However, a ten percent per generation wider range is acceptable.

(i) For diazo and electrophotographic films with ISO standard visual diffuse transmission density shall be measured in accordance with ANSI/ISO 5/3–1984, ANSI PH2.18–1985 for spectral conditions and ANSI/ISO 5/2–1985, for geometric conditions.

(ii) For vesicular and other light scattering films the ISO standard for f/4.5 projection transmission density shall be measured in accordance with ANSI/ISO 5/2–1985, for geometric conditions for transmission density.

7. Subpart B is revised to read as follows:

Subpart B—Standards for the Storage, Use and Disposition of Microform Records

Sec.
§ 1230.20 Storage.
§ 1230.22 Inspection.
§ 1230.24 Use of microform records.
§ 1230.26 Dispostion of microform records.

Subpart B—Standards for the Storage, Use and Disposition of Microform Records

§ 1230.20 Storage.

(a) *Permanent records.* The conditions specified in ANSI PH1.43–1985 and ANSI IT9.2–1988, are required for storing permanent record microforms.

(b) *Temporary records.* Temporary microform records can be safely stored under the same conditions as temporary paper records.

§ 1230.22 Inspection.

(a) *Permanent records.*

(1) Master films of permanent records microfilmed in order to dispose of the original record and master films of permanent records originally created on microfilm shall be inspected when 2 years old and, until they are transferred to a Federal records center or to the National Archives, every 2 years thereafter. The inspection shall be made on a randomly selected sample consisting of 1000 microform units, or 1 percent of the total number of microform units in the collection, whichever is smaller. At least one microform unit must be inspected in collections of less than 100 units. The term "microform unit" refers to a single roll of microfilm, a microfiche, or similar appropriate unit for inspection. The term "collection" refers to microform units which were processed on the same equipment within a short time span and which have been stored together in the same environment since their creation.

(2) Microforms cannot be accepted for deposit with the National Archives of the United States until the first inspection (occurring after it is 2 years old) has been performed. Permanent microforms may be transferred to a Federal records center only after the agency has performed the first inspection or has certified that the microforms will be inspected by the agency, an agnecy contractor, or the Federal records center (on a reimbursable basis) when they become 2 years old.

(3) To facilitate inspection, an inventory of microfilm must be maintained, listing each microform series/publication by production date, producer, processor, format, and results of previous inspections.

(4) The elements of the inspection shall consist of:

(i) An inspection for aging blemishes following the guidelines in the AIIM/SIP34–1989;

(ii) A rereading of resolution targets;

(iii) A remeasurement of density; and

(iv) A certification of the environmental conditions under which the microforms are stored, as specified in § 1230.20(a)

(5) An inspection log shall be maintained and furnished in hard copy form to NARA in accordance with § 1230.26(b). Information to be contained in the log shall include:

(i) A complete description of all records tested (title; number or identifier for each unit of film; security classification, if any; and inclusive dates, names, or other data identifying the records on the unit of film);

(ii) The date of inspection;

(iii) The elements of inspection;

(iv) Any defects uncovered; and

(v) The corrective action taken.

In addition, the log shall contain the results of all archival film tests required by § 1230.14.

(6) A copy of the inspection report shall be furnished to NARA in accordance with § 1230.26(b). The inspection report shall include:

(i) The quantity of microform records on hand, i.e., number of rolls and number of microfiche;

(ii) The quantity of microforms inspected;

(iii) The condition of the microforms;

(iv) A summary of any defects discovered; and

(v) A summary of corrective action taken.

(7) An agency having in its custody a master microform that is deteriorating, as shown by the inspection, shall prepare a silver duplicate in accordance with § 1230.14 to replace the deteriorating master. The duplicated film will be subject to the 2-year inspection required before transfer to a Federal Record Center or to the National Archives.

(8) Inspection should be performed in an environmentally controlled area which avoids pollutant gases and particulates, temperatures in excess of 70 °F (20 °C) or relative humidities above 55 percent.

(b) *Temporary records.* Inspection by sampling procedures described in § 1230.22(a) is recommended but not required.

§ 1230.24 Use of microform records.

(a) The master microform shall not be used for reference purposes. Duplicates shall be used for reference and for further duplication on a recurring basis or for large-scale duplication, as well as for distribution of records on microform. Agency procedures shall ensure that the master microforms remain clean and undamaged during the duplication process.

(b) Agencies retaining the original record in accordance with an approved records disposition schedule may apply agency standards for the use of microform records.

§ 1230.26 Disposition of microform records.

The disposition of microform records shall be carried out in the same manner prescribed for other types of records in part 1228 of this chapter with the following additional requirements:

(a) The silver gelatin original (or a silver gelatin duplicate negative microform record created in accordance with § 1230.14) plus one copy (silver, diazo, electrophotographic, or vesicular) of each permanent or unscheduled record microfilmed by an agency, shall be transferred to an aprpoved agency records center, the National Archives, or to a Federal records center, at the time that the records are to be retired in accordance with the approved records disposition schedule. Non-silver copies must be packaged separately and stored separately from silver originals.

(b) The microforms shall be accompanied by:

(1) Information identifying the agency and organization; the title of the records; the number or identifier for each unit of film; the security classification, if any; the inclusive dates, names, or other data identifying the records to be included on a unit of film;

(2) Any finding aids relevent to the microform that are not contained in the microform; and

(3) The inspection log forms and inspection reports required by § 1230.22(a) (5) and (6).

(c) The information required in this paragraph (b) shall be attached to the SF 135 when records are being transferred to a Federal records center and to the SF 258 when records are being transferred to the legal custody of the National Archives.

Dated: August 22, 1989.

Don W. Wilson,

Archivist of the United States.

BILLING CODE 7515–01–M

DEPARTMENT OF VETERANS AFFAIRS

38 CFR Part 4

RIN 2900–AD99

Definition of Marginal Employment in Consideration of Total Evaluations Based on Individual Unemployability

AGENCY: Department of Veterans Affairs.

ACTION: Correction; proposed regulations.

SUMMARY: On August 28, 1989, commencing on page 35507 (54 FR 35507–35508), the Department of Veterans Affairs (VA) published a proposed rule to amend the Schedule for Rating Disabilities to define marginal employment in consideration of total disability ratings based on unemployability of an individual. In § 4.16 a phrase was inadvertently left out of the published text. The portion left out currently appears in 38 CFR 4.16 and was to remain as published. VA is republishing that text to prevent any confusion over the changes being made. In addition, a typographical error in § 4.16(a) is being corrected. VA regrets the errors and hereby corrects them.

FOR FURTHER INFORMATION CONTACT: Mr. Joel Drebmus, Consultant, Regulations Staff (211B), Compensation and Pension Service, Veterans Benefits Administration, (202) 233–3005.

List of Subjects in 38 CFR Part 4

Handicapped, Pensions, Veterans.

Dated: September 6, 1989.

Donald R. Howell,

Acting Chief, Directives Management Division.

PART 4—[CORRECTED]

1. On page 35508, in the third column, in 38 CFR part 4, Schedule for Rating Disabilities, in § 4.16(a) the first sentence of the undesignated flush left paragraph is corrected to read as follows:

§ 4.16 [Corrected]

(a) *Total disability ratings for compensation based on unemployability of the individual.*

* * * * *

It is provided further that the existence or degree of nonservice-connected disabilities or previous unemployability status will be disagarded where the percentages referred to in this paragraph for the service-connected disability or disabilities are met and in the judgment of the rating agency such service-connected disabilities render the veteran unemployable.

* * * * *

2. On the same page, in the same column, in § 4.16(a), in the undesignated flush left paragraph remove the phrase "as the poverty threshold of one person." where is appears and add, in its place, the phrase "as the poverty threshold for one person.".

BILLING CODE 8320–01–M

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 761

[OPTS–66008G; FRL–3645–3]

Polychlorinated Biphenyls; Manufacturing, Processing, and Distribution in Commerce Exemptions; Reopening of Comment Period

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule and reopening of comment period.

SUMMARY: This notice reopens the comment period on an amendment to a petition in the proposed rule issued in the **Federal Register** of August 24, 1988. EPA has accepted for review an amendment to the exemption petition from the prohibition against the processing and distribution in commerce of polychlorinated biphenyls (PCBs). In this document, EPA proposes to grant the amendment exemption petition. EPA, thereby, reopens the comment period and solicits comment on the amendment to this petition only.

DATES: This document reopens the comment period only for the additional amendment to a petition as described herein until October 12, 1989. An informal hearing will be scheduled if requested.

ADDRESSES: All comments should reference the docket control number OPTS–66008G, and be sent in triplicate to: TSCA Public Docket Office (TS–793), Office of Toxic Substances, Environmental Protection Agency, Rm. G004 NE Mall, 401 M St. SW., Washington, DC 20460.

FOR FURTHER INFORMATION CONTACT: Michael M. Stahl, Director, Environmental Assistance Division (TS–799), Office of Toxic Substances, Environmental Protection Agency, Rm. EB–44, 401 M St. SW., Washington, DC 20460, Telephone: (202) 554–1404, TDD: (202) 554–0551.

SUPPLEMENTARY INFORMATION:

I. Background

For a discussion of the statutory authority for this rulemaking, the history of this rulemaking, and standards for granting an exemption, see the proposed rule issued in the **Federal Register** of August 24, 1988 (53 FR 32326).

II. Disposition of Pending Exemption Petitions

On July 26, 1988, Electrical Apparatus Service Association (EASA) submitted to EPA an amendment to their current

exemption petition to allow processing and distribution in commerce of PCB-contaminated fluid from component parts during activities of servicing and buying and selling of used transformers, while a double-rinse method for the non-porous components from PCB-contaminated transformers is being developed.

EASA also asserts both economic loss and detriment to society if reuse of the component parts is prohibited. Although EPA makes no judgment regarding this claim, EPA acknowledges that without stocks of component parts, there could be a severe detriment to equipment users as a result of the interruption of electrical services as well as the premature disposal of reusable units.

Therefore, due to the non-porous nature of these component parts and because of the relatively small amounts of PCBs involved (less than 10 percent of the original petition amount), EPA has determined that the activity of reusing non-porous component parts, does not pose an unreasonable risk under TSCA, section 6(e)(3)(B)(i).

To demonstrate compliance with the TSCA good faith efforts standard, EASA also submitted evidence to EPA that there may be no substitute for some components needed to repair or rebuild equipment, and that it is not feasible to sample the existing stockpiles of components for historic PCB contamination.

EASA submitted a substantial amount of evidence to indicate an effort to develop a double-rinse procedure similar to that in the spill clean-up policy. EASA maintains that the introduction of the double-rinsed, non-porous component parts back onto the PCB-contaminated transformers will not change the original parts per million PCB content of the transformer into which the component is incorporated.

EPA concludes that an exemption that is limited to processing and distribution in commerce of the PCB residues on non-porous transformer component parts meets both the no unreasonable risk and good faith efforts standards.

Therefore, EPA has determined to grant the petition for 1 year to continue processing and distribution in commerce of non-porous components that may have PCB residues. EPA has determined that the renewal of a class exemption for EASA members to reuse components, will be contingent upon EASA members showing further efforts to reduce their involvement with PCBs during buying and selling activities.

It shall be incumbent upon the petitioner, in future requests for renewal of their exemption, to show evidence of good faith efforts in eliminating their inventories of PCB-contaminated transformers in uncontained storage areas and, also, that establishing stockpiles of component parts can be effectively decontaminated.

III. Official Rulemaking Record

This proposed rule is a continuation of docket number OPTS–66008F and includes all information listed in the original proposed rule published in the **Federal Register** of August 24, 1988 (53 FR 32326).

IV. Other Regulatory Requirements

EPA discussed Executive Order 12291, the Regulatory Flexibility Act, and the Paperwork Reduction Act in detail in the August 24, 1988 proposal, and no changes are indicated for this document.

List of Subjects in 40 CFR Part 761

Environmental protection, Hazardous substances, Labeling, Polychlorinated biphenyls, Reporting and recordkeeping requirements.

Dated: August 24, 1989.

Michael Shapiro,

Acting Director, Office of Toxic Substances.

Therefore, it is proposed that 40 CFR part 761 be amended as follows:

PART 761—[AMENDED]

1. The authority citation for part 761 would continue to read as follows:

Authority: 15 U.S.C. 2605, 2607, and 2611; subpart G is also issued under 15 U.S.C. 2614 and 2616.

2. Section 761.80 is amended by adding paragraph (p) to read as follows:

§ 761.80 Manufacturing, processing, and distribution in commerce exemptions.

* * * * *

(p) The Administrator grants the following petitioner 1 year to continue to process and distribute in commerce non-porous components that may have PCB residues.

(1) Electrical Apparatus Service Association, St. Louis, MO 63132, provided the following conditions are met:

(i) Demonstration of the efficacy of a method to decontaminate existing stocks of non-porous components.

(ii) A list showing that the PCB-contaminated transformers in inventory have been identified and placed in PCB storage areas with proper containment as outlined in § 761.65(b).

(iii) Evidence that all future sources of the components, including inventories of PCB-contaminated transformers stored onsite for reuse, shall be properly identified and managed.

(2) [Reserved]

BILLING CODE 6560–50–M

FEDERAL COMMUNICATIONS COMMISSION

47 CFR Parts 2, 22, 90

[General Docket 86–96]

Amendment of the Commission's Rules Relative to Allocation of the 849–851/894–896 MHz Bands

AGENCY: Federal Communications Commission.

ACTION: Proposed rule; motion to accept late-filed comments.

SUMMARY: This action accepts late-filed comments filed by the Goeken Group Corporation (Goeken Group) to the *Notice of Proposed Rule Making* in this proceeding. Further, it provides for reply comments to the Goeken Group comments to be filed until October 9, 1989. This action is in response to a *Motion To Accept Late Filed Comments,* filed by the Goeken Group. The Goeken Group requested that the comments be accepted since they provide new information that could not have been filed in a timely manner due to Mr. John Goeken's affiliation at that time with the GTE Corporation.

DATES: Reply comments are due October 9, 1989.

ADDRESSES: Federal Communications Commission, Washington, DC 20554.

FOR FURTHER INFORMATION CONTACT: Rodney Small, telephone (202) 653–8116.

SUPPLEMENTARY INFORMATION: The Proposed Rule was published on May 13, 1988, 53 FR 17082.

Federal Communications Commission.

Thomas P. Stanley,

Chief Engineer.

BILLING CODE 6712–01–M

---

47 CFR Part 73

[MM Docket No. 89–384, RM–6884]

Radio Broadcasting Services; Epworth, IA

AGENCY: Federal Communications Commission.

ACTION: Proposed rule.

SUMMARY: The Commission requests comments on a petition by Margaret

Keefer seeking the allotment of Channel 247C3 to Epworth, Iowa, as the community's first local FM service. Channel 247C3 can be allotted to Epworth in compliance with the Commission's minimum distance separation requirements without the imposition of a site restriction. The coordinates for the allotment are North Latitude 42–26–42 and West Longitude 90–55–55.

DATES: Comments must be filed on or before October 27, 1989, and reply comments on or before November 13, 1989.

ADDRESSES: Federal Communications Commission, Washington, DC 20554. In addition to filing comments with the FCC, interested parties should serve the petitioner, or its counsel or consultant, as follows: Margaret Keefer, 811 Duke, Rice Lake, Wisconsin 54868 (Petitioner), Larry G. Fuss, P.O. Box 159, Fayetteville, Georgia 30214 (Consultant to petitioner).

FOR FURTHER INFORMATION CONTACT: Leslie K. Shapiro, Mass Media Bureau, (202) 634–6530.

SUPPLEMENTARY INFORMATION: This is a synopsis of the Commission's Notice of Proposed Rulemaking, MM Docket No. 89–384, adopted August 22, 1989, and released September 6, 1989. The full text of this Commission decision is available for inspection and copying during normal business hours in the FCC Dockets Branch (Room 230), 1919 M Street NW., Washington, DC. The complete text of this decision may also be purchased from the Commission's copy contractor, International Transcription Service, (202) 857–3800, 2100 M Street NW., Suite 140, Washington, DC 20037.

Provisions of the Regulatory Flexibility Act of 1980 do not apply to this proceeding.

Members of the public should note that from the time a Notice of Proposed Rulemaking is issued until the matter is no longer subject to Commission consideration or court review, all *ex parte* contacts are prohibited in Commission proceedings, such as this one, which involve channel allotments. See 47 CFR 1.1204(b) for rules governing permissible *ex parte* contacts.

For information regarding proper filing procedures for comments, see 47 CFR 1.415 and 1.420.

47 CFR Part 73

[MM Docket No. 89–385, RM–6892]

Radio Broadcasting Services; Glen Arbor and Scottsville, MI

AGENCY: Federal Communications Commission.

ACTION: Proposed rule.

SUMMARY: This document requests comments on a petition filed jointly by David Schaberg and West Shore Broadcasting. David Schaberg requests the substitution of FM Channel 240C2 for Channel 240A at Glen Arbor, Michigan, and modification of his construction permit for Channel 240A to specify operation on Channel 240C2. West Shore Broadcasting proposes the substitution of Channel 235C3 for Channel 240A at Scottsville, Michigan, and modification of the license for Station WKZC to the higher class channel. The coordinates for Channel 240C2 are 44–51–00 and 85–45–00 and the coordinates for Channel 235C3 are 44–04–40 and 86–25–00. Canadian concurrence will be obtained for the allotment of Channel 240C2 at Glen Arbor and Channel 235C3 at Scottsville.

DATES: Comments must be filed on or before October 27, 1989, and reply comments on or before November 13, 1989.

ADDRESSES: Federal Communications Commission, Washington, DC 20554. In addition to filing comments with the FCC, interested parties should serve the petitioner, or its counsel or consultant, as follows:

David C. Schaberg, P.O. Box 21055, Lansing, Michigan 48909–1055, (Permittee of Channel 240A, Glen Arbor)

Katheryn Ziehm, West Shore Broadcasting, P.O. Box 36, Scottsville, Michigan, (Licensee of Station WKZC, Channel 240A, Scottsville)

FOR FURTHER INFORMATION CONTACT: Kathleen Scheuerle, Mass Media Bureau, (202) 634–6530.

SUPPLEMENTARY INFORMATION: This is a synopsis of the Commission's Notice of Proposed Rulemaking, MM Docket No. 89–385 adopted August 21, 1989, and released September 6, 1989. 47 CFR Part 73

[MM Docket No. 89–388, RM–6580]

Radio Broadcasting Services; Orangeburg, SC

AGENCY: Federal Communications Commission.

ACTION: Proposed rule.

SUMMARY: The Commission requests comments on a petition by Wilkes-Posey Broadcasting Inc. seeking the substitution of Channel 280C3 for Channel 280A at Orangeburg, South Carolina, and the modification of its license for Station WKSO to specify operation on the higher powered channel. Channel 280C3 can be allotted to Orangeburg in compliance with the Commission's minimum distance separation requirements with a site restriction of 10.1 kilometers (6.3 miles) north to avoid a short-spacing to Station WGEC, Channel 280A, Springfield, Georgia, and to accommodate petitioner's desired transmitter site. The coordinates for this allotment are North Latitude 33–35–00 and West Longitude 80–50–00. In accordance with § 1.420(g) of the Commission's Rules, we will not accept competing expressions of interest in use of Channel 280C3 at Orangeburg or require the petitioner to demonstrate the availability of an additional equivalent class channel for use by such parties.

DATES: Comments must be filed on or before October 27, 1989, and reply comments on or before November 13, 1989.

ADDRESSES: Federal Communications Commission, Washington, DC 20554. In addition to filing comments with the FCC, interested parties should serve the petitioner, or its counsel or consultant, as follows: Wilkes-Posey Broadcasting, Inc., P.O. Box 430, Orangeburg, South Carolina 29115 (Petitioner).

FOR FURTHER INFORMATION CONTACT: Leslie K. Shapiro, Mass Media Bureau, (202) 634–6530.

DEPARTMENT OF TRANSPORTATION

National Highway Traffic Safety Administration

49 CFR Part 531

Intent To Prepare an Environmental Impact Statement for the Corporate Average Fuel Economy Program

AGENCY: National Highway Traffic Safety Administration (NHTSA), DOT.

ACTION: Notice of intent.

SUMMARY: NHTSA is issuing this Notice to advise the public that a programmatic Environmental Impact Statement (EIS) will be prepared to address the environmental impacts of the Corporate Average Fuel Economy (CAFE) program for passenger cars and light trucks. The EIS will address the potential environmental impacts which could arise from NHTSA's setting and amending CAFE standards for passenger cars, as well as the agency's actions in setting and amending CAFE standards for light trucks.

DATE: Comments on this notice must be received by the agency no later than November 13, 1989.

ADDRESS: Comments should refer to the docket number and notice number and be submitted in writing to: Docket Section, National Highway Traffic Safety Administration, Room 5109, 400 7th Street SW., Washington, DC, 20590. Docket hours are 8:00 a.m. to 4:00 p.m. Monday through Friday.

FOR FURTHER INFORMATION CONTACT: Mr. Orron Kee, Office of Market Incentives, National Highway Traffic Safety Administration, 400 7th Street SW., Washington, DC 20590 (202) 366–0846.

SUPPLEMENTARY INFORMATION: Title V of the Motor Vehicle Information and Cost Savings Act (15 U.S.C. 1901 *et seq.*, as amended) requires the Secretary of Transportation to administer a program for regulating the average fuel economy of new passenger cars and light trucks in the U.S. market. The authority to administer the program has been delegated by the Secretary to the Administrator of NHTSA.

NHTSA's general responsibilities with regard to fuel economy include (1) establishing and amending average fuel economy standards for manufacturers of passenger cars and light trucks, as appropriate, (2) promulgating regulations concerning procedures, definitions and reports necessary to administer the fuel economy standards, and (3) enforcing fuel economy standards and regulations.

Section 502 sets the CAFE standard for passenger cars at 27.5 mpg for model year (MY) 1985 and beyond. Section 502(a)(4) of the Act authorizes, but does not require, NHTSA to amend the 27.5 mpg standard for 1985 or any subsequent model year. If the standard is amended for a particular model year, it must be set at a level which is the maximum feasible average fuel economy for that year. In determining the maximum feasible average fuel economy level, the agency is required by section 502(e) of the Act to consider the following four factors: (1) Technological feasibility, (2) economic practicability, (3) the effect of other Federal motor vehicle standards on fuel economy, and (4) the need of the nation to conserve energy.

Pursuant to section 502(f)(2), any amendment that has the effect of making a CAFE standard more stringent must be promulgated at least 18 months prior to the beginning of the model year in question. The legislative history of the Act provides that amendments reducing a standard must be promulgated prior to the commencement of the model year in question.

The Act does not require absolute achievement of the standard by manufacturers for each model year. Instead, it allows a shortfall in one year (or years) to be offset if a manufacturer exceeds the standard for another year (or years). Credits for exceeding average fuel economy standards may be carried back for three model years, or carried forward for three model years. If a manufacturer still does not meet the standard after taking credits into account, it is liable to the Federal government for civil penalties under section 508.

Acting in accordance with the provisions discussed above, NHTSA has on several occasions reduced the statutory passenger car CAFE standard. It reduced the 27.5 mpg standard to 26.0 mpg for MY's 1986, 1987, and 1988, and to 26.5 mpg for MY 1989. Most recently, in May 1989, NHTSA issued a notice terminating a rulemaking that it had commenced to consider amending the standard for MY 1990. As a result, the standard for MY 1990 remains at the statutory level of 27.5 mpg. A detailed discussion of these rulemakings and the bases for the agency's decisions is found in the May 1989 termination notice (54 FR 21985, May 22, 1989).

Although NHTSA's authority to amend the statutory standard for passenger cars is discretionary, the agency is required by section 502(b) of the Cost Savings Act to set standards each model year for light trucks. Such standards must be prescribed at least 18 months prior to the beginning of the affected model year. Following the same statutory criteria as for passenger car standards regarding selection of the maximum feasible level, in recent years NHTSA set the light truck standard at 20.0 mpg for MY 1986, 20.5 mpg for MY 1987 through MY 1989, 20.0 mpg for MY 1990, and 20.2 mpg for MY 1991 (alternative standards for 2-wheel drive and 4-wheel drive light trucks are also provided for each of those years). In addition, the agency has twice reduced the standard for light trucks, once in MY 1985, and once in MY 1981, for two-wheel drive trucks. A comprehensive discussion of the agency's decisions with regard to light truck fuel economy standards is found in the April 1988 final rule setting light truck standards for MY's 1990 and 1991 (53 FR 11080, April 5, 1988).

In the May 1989 termination notice, NHTSA announced that it had determined that it would be appropriate at this time to prepare a programmatic EIS to address the possible cumulative environmental impacts of NHTSA's past and possible future actions relating to the amendment of passenger car standards. as well as those from setting or amending standards for light trucks. In recent years, NHTSA has not prepared an EIS in connection with the CAFE program. Instead, on the basis of environmental assessments and supplements addressing the potential impacts of each proposed action, it concluded that those actions would not have a significant environmental impact.

Under the Council on Environmental Quality (CEQ) regulations, the first step following an agency decision to prepare an EIS is to initiate the scoping process to identify significant issues and determine the scope of issues to be addressed. Comments are requested on the types of impacts which should be analyzed and their relative significance so that the detail of analysis may be geared to potential significance of impact. Among the environmental impacts suggested by the public in past CAFE rulemaking actions were those related to changes in petroleum consumption, emissions of pollutants and their impacts on large cities and non-attainment areas under the Clean Air Act, oil spills, and global warming. Comments are also requested on the extent to which any mitigation measures are available to NHTSA in light of its statutory mandate to set CAFE standards at the maximum feasible level.

Public involvement and interagency coordination will be maintained throughout the development of the EIS. Members of the public and interested Federal, state and local agencies are also invited to comment on evaluation criteria to be used to consider any significant environmental impacts associated with the agency's actions in implementing the CAFE program.

Finally, the commenters are requested to indicate whether they would be interested in attending a public scoping meeting later this year to discuss the issues identified in the comments. A notice announcing the number, date and location of the meeting or meetings will be published in the **Federal Register** within 30 days after the closing of the public comment period for this notice.

Issued September 6, 1989.

Jeffrey R. Miller,

Acting Administrator.

Notices

Federal Register
Vol. 54, No. 175
Tuesday, September 12, 1989

This section of the FEDERAL REGISTER contains documents other than rules or proposed rules that are applicable to the public. Notices of hearings and investigations, committee meetings, agency decisions and rulings, delegations of authority, filing of petitions and applications and agency statements of organization and functions are examples of documents appearing in this section.

DEPARTMENT OF AGRICULTURE

Forest Service

Bear Mountain Ski Area; Environmental Impact Statement

AGENCY: Forest Service, USDA.

ACTION: Notice of intent to prepare an environmental impact statement.

SUMMARY: The Forest Service will prepare an environmental impact statement for a proposal to permit the expanded development of Bear Mountain Ski Area on the Big Bear Ranger District, San Bernardino National Forest, San Bernadino County, California. The agency invites written comments and suggestions on the scope of the analysis. In addition, the agency gives notice of the full environmental analysis and decision-making process that will occur on the proposal so that interested and affected people are aware of how they may participate and contribute to the final decision.

DATE: Comments concerning the scope of the analysis must be received by October 27, 1989.

ADDRESSES: Submit written comments and suggestions concerning the scope of the analysis to Charles H. Irby, Forest Supervisor, San Bernardino National Forest, 1824 S. Commercenter Circle, San Bernadino, California 92408–3430.

FOR FURTHER INFORMATION CONTACT: Direct questions about the proposed action and environmental impact statement (EIS) to Marion Borrell, Recreation Officer, Big Bear Ranger District, P.O. Box 290, Fawnskin, California 92333, telephone: 714–866–3437.

SUPPLEMENTARY INFORMATION: The San Bernardino National Forest Land and Resource Management Plan was completed in January 1989. The management direction in the Plan called for the expansion of existing ski areas.

In preparing the EIS, the Forest Service will evaluate the Bear Mountain Ski Resort Winter Sports 1989 Development Plan and identify and consider a range of alternatives for this site, including those considered in the environmental assessment (EA) for which a Decision Notice and Finding of No Significant Impact was issued on June 29, 1989. This Decision and Finding of No Significant Impact was withdrawn and replaced with a new one on August 23, 1989, as a result of four appeals which indicated that not all issues had been adequately addressed nor were all issues resolved through the mitigation measures identified in the EA. Alternatives will consider development designs with capacities ranging from the existing 6,100 to approximately 10,000 skiers at one time. Alternative locations for new uphill facilities, ski runs, and support facilities also will be considered.

Charles H. Irby, Forest Supervisor, San Bernadino National Forest, San Bernardino, California, is the responsible federal official.

Public participation will be especially important at several points during the analysis. The first point is during the scoping process (40 CFR 1501.7). The Forest Service will be seeking information, comments, and assistance from Federal, State, and local agencies and other individuals or organizations who may be interested in or affected by the proposed action. This input will be used, in conjunction with the input received in response to the environmental assessment, in the preparation of the draft environmental impact statement (DEIS). The scoping process includes:

1. Identifying potential issues.
2. Identifying issues to be analyzed in depth.
3. Eliminating insignificant issues or those which have been covered by a relevant previous environmental analysis.
4. Exploring additional alternatives.
5. Identifying potential environmental effects of the proposed action and alternatives (i.e., direct, indirect, and cumulative effects and connected actions).
6. Determining potential cooperating agencies and task assignments.

The City of Big Bear Lake, California will be jointly preparing an environmental impact report (EIR) to evaluate potential impacts which would be created by implementation of the development plan.

Bear Mountain, Ltd. has retained the services of Michael Brandman Associates to develop the joint EIS/EIR. Public scoping meetings will be held at the City of Big Bear Lake City Hall, 39707 Big Bear Blvd., Big Bear Lake, CA at 7:00 p.m. on October 19, 1989 and 10:00 a.m. on October 21, 1989.

The DEIS/EIR is expected to be filed with the Environmental Protection Agency (EPA) and to be available for public review by January 1990. At that time EPA will publish a notice of availability of the DEIS in the **Federal Register**.

The comment period on the DEIS will be 45 days from the date the EPA's notice of availability appears in the **Federal Register**. It is very important that those interested in the management of the Bear Mountain Ski Area participate at that time. To be the most helpful, comments on the DEIS should be as specific as possible and may address the adequacy of the statement or the merits of the alternatives discussed (see The Council on Environmental Quality Regulations for implementing the procedural provisions of the National Environmental Policy) Act at 40 CFR 1503.3). In addition, Federal court decisions have established that reviewers of a DEIS must structure their participation in the environmental review of the proposal so that it is meaningful and alerts an agency to the reviewers' position and contentions, *Vermont Yankee Nuclear Power Corp.* v. *NRDC,* 435 U.S. 519, 553 (1978), and that environmental objections that could have been raised at the draft stage may be waived if not raised until after completion of the FEIS. *Wisconsin Heritages, Inc.* v. *Harris,* 490 F. Supp. 1334, 1338 (E.D. Wis. 1980). The reason for this is to ensure that substantive comments and objections are made available to the Forest Service at a time when it can meaningfully consider them and respond to them in the FEIS.

After the comment period ends on the DEIS, the comments will be analyzed and considered by the Forest Service in preparing the FEIS. The FEIS is scheduled to be completed by April 1990. In the FEIS, the Forest Service is required to respond to the comments received (40 CFR 1503.4). The responsible official will consider the comments, responses, environmental consequences discussed in the EIS, and applicable laws, regulations, and policies in making a decision regarding this proposal. The responsible official will document the decision and reasons for the decision in the Record of

Decision. That decision will be subject to appeal pursuant to 36 CFR 217.3 (**Federal Register**, Vol. 54, No. 13, January 23, 1989, pages 3357 to 3362).

Dated: September 1, 1989.

Charles H. Irby,

Forest Supervisor.

BILLING CODE 3410-11-M

DEPARTMENT OF COMMERCE

Agency Information Collection Under Review by the Office of Management and Budget (OMB)

DOC has submitted to OMB for clearance the following proposal for collection of information under the provisions of the Paperwork Reduction Act (44 U.S.C. Chapter 35).

Agency: Patent and Trademark Office (PTO).

Title: Rules for Patent Maintenance Fees.

Form Number: Agency—PTO–1536; OMB—0651–0016.

Type of Request: Extension of the expiration date.

Burden: 56,992 respondents; 4,560 reporting hours. Average hours per response is .08 hours.

Needs and Uses: The patent number and serial number of the patent on which maintenance fees are paid are required in order to insure proper crediting of such payments. Such payments are required to maintain a patent in effect.

Affected Public: Individuals, businesses or other for profit institutions, Federal agencies or employees.

Frequency: Once every four years.

Respondent's Obligation: Required to obtain or retain a benefit.

OMB Desk Officer: Robert Veeder, 395–3785.

Copies of the above information collection proposal can be obtained by calling or writing DOC Clearance Officer, Edward Michals, (202) 377–3271, Department of Commerce, Room 6622, 14th and Constitution Avenue, NW., Washington, DC 20230.

Written comments and recommendations for the proposed information collection should be sent to Robert Veeder, OMB Desk Officer, Room 3235, New Executive Office Building, Washington, DC 20503.

Dated: September 6, 1989

Edward Michals,

Departmental Clearance Officer, Office of Management and Organization.

[FR Doc. 89–21398 Filed 9–11–89; 8:45 am]

BILLING CODE 3510–CW–M

Agency Information Collection Under Review by the Office of Management and Budget (OMB)

DOC has submitted to OMB for clearance the following proposal for collection of information under the provisions of the Paperwork Reduction Act (44 U.S.C. Chapter 35).

Agency: Patent and Trademark Office (PTO).

Title: Patent Cooperation Treaty Chapter II.

Form Number: Agency—PCT/IPEA/409; OMB—0651–0021.

Type of Request: Extension of the expiration date.

Burden: 2,350 respondents; 2,350 reporting hours. Average hours per response is one hour.

Needs and Uses: PTO needs certain information from applicants using the preliminary examination procedures under Chapter II of the Patent Cooperation Treaty in order to meet the requirements of the Treaty.

Affected Public: Individuals, businesses or other for-profit institutions, Federal agencies or employees.

Frequency: On occasion.

Respondent's Obligation: Required to obtain or retain a benefit

OMB Desk Officer: Robert Veeder, 395–3785.

Copies of the above information collection proposal can be obtained by calling or writing DOC Clearance Officer, Edward Michals, (202) 377–3271, Department of Commerce, Room 6622, 14th and Constitution Avenue, NW., Washington, DC 20230.

Written comments and recommendations for the proposed information collection should be sent to Robert Veeder, OMB Desk Officer, Room 3235, New Executive Office Building, Washington, DC 20503.

Dated: September 6, 1989.

Edward Michals,

[FR Doc. 89–21399 Filed 9–11–89; 8:45 am]

BILLING CODE 3510–CW–M

Agency Form Under Review by the Office of Management and Budget (OMB)

DOC has submitted to OMB for clearance the following proposal for collection of information under the provisions of the Paperwork Reduction Act (44 U.S.C. Chapter 35).

Agency: Bureau of Economic Analysis.

Title: Benchmark Survey of U.S. Direct Investment Abroad–1989.

Form Number: Agency—BE–10; OMB 0608–0049.

Type of Request: Reinstatement of a previously approved collection for which approval has expired.

Burden: 2,500 respondents; 390,100 reporting hours.

Average Hours Per Response; 156 hours.

Needs and Uses: The purpose of the benchmark survey of U.S. direct investment abroad is to obtain universe data on the financial and operating characteristics of, and on positions and transactions between, U.S. parent companies and their foreign affiliates. The data from the survey will provide benchmarks for deriving current universe estimates of direct investment from sample data collected in other BEA surveys in nonbenchmark years. The data are needed to measure the size of U.S. direct investment abroad, monitor changes in such investment, assess its impact on the U.S. and foreign economies, and, based upon this assessment, make informed policy decisions regarding U.S. indrect investment abroad. They are required for compiling the balance of payments, international investment position, and national income and product accounts of the United States.

Affected Public: Businesses or other for-profit institutions.

Frequency: Quinquennial.

Respondent's Obligation: Mandatory.

OMB Desk Officer: Donald Arbuckle, 395–7340.

Copies of the above information collection proposal can be obtained by calling or writing DOC Clearance Officer, Edward Michals, (202) 377–3271, Department of Commerce, Room H6622, 14th and Constitution Avenue, NW., Washington, DC 20230.

Written comments and recommendations for the proposed information collection should be sent to Donald Arbuckle, OMB Desk Officer, Room 3208, New Executive Office Building, Washington, DC 20503.

Dated: September 6, 1989.

Edward Michals,

Departmental Clearance Officer, Office of Management and Organization.

Patent and Trademark Office

Public Advisory Committee for Trademark Affairs; Meeting

AGENCY: Patent and Trademark Office.

ACTION: Notice.

SUMMARY: In accordance with section 10(a)(2) of the Federal Advisory Committee Act (Pub. L. 92-463), announcement is made of the open meeting of the Public Advisory Committee for Trademark Affairs.

DATE: The Public Advisory Committee for Trademark Affairs will meet from 10:00 a.m. until 4:00 p.m. on October 17, 1989.

Place: Days Inn Crystal City, 2000 Jefferson Davis Highway, Arlington, Virginia.

Status: The meeting will be open to public observation; seating will be available for the public on a first-come-first-served basis. Members of the public will be permitted to make oral comments of three (3) minutes each. Written comments and suggestions will be accepted before or after the meeting on any of the matters discussed. Copies of the minutes will be available upon request.

Matters To Be Considered: The agenda for the meeting is as follows:

(1) Finance;
(2) Automation;
(3) Implementation of Intent-to-Use;
(4) Strategic Planning; and
(5) Trademark Examining Operation.

Contact Person for More Information: For further information, contact Carlisle E. Walters, Office of the Assistant Commissioner for Trademarks, Room CPK2-910, Patent and Trademark Office, Washington, DC 20231. Telephone: (703) 557-7464.

Donald J. Quigg,

Assistant Secretary and Commissioner of Patents and Trademarks.

BILLING CODE 3510-16-M

DEPARTMENT OF DEFENSE

Corps of Engineers, Department of the Army

Intent To Prepare a Draft Feasibility Report and Environmental Impact Statement on Flood Control Improvements Along the Petaluma River, City of Petaluma, Sonoma County, CA

AGENCY: U.S. Army Corps of Engineers (San Francisco District), Department of Defense.

ACTION: Notice of intent (NOI) to Prepare a Draft Feasibility Report and Environmental Impact Statement (EIS).

SUMMARY: The Corps of Engineers (Corps) is currently conducting a Feasibility Study of flood control improvements along the Petaluma River authorized for study under section 205 of the Flood Control Act of 1948, as amended. The primary objective of this study is to recommend a solution(s) to the highly flood prone Payran Street area from Lakeville Avenue to the Lynch Creek confluence, along with any recommendation for Federal participation in implementing a project.

The study will include analysis of flood control improvements along 3,500 feet of the Petaluma River adjacent to the Payran reach area. The purpose of the proposed project would be to reduce the severity of flooding on residential and commercial development, thereby reducing flood hazards and damages in the affected areas.

FOR FURTHER INFORMATION CONTACT: Questions regarding the preparation of the Feasibility Report should be directed to Don Hancock, Design Branch, U.S. Army Corps of Engineers, San Francisco District, 211 Main Street, San Francisco, California 94105-1905, (Telephone 415-974-0394). Questions regarding the scoping process or the EIS should be directed to Dave Hodges, Environmental Branch, U.S. Army Corps of Engineers, San Francisco District, 211 Main Street, San Francisco, California 94105-1905 (Telephone 415-974-0439).

SUPPLEMENTARY INFORMATION:

Petaluma River Flood Control Alternatives

The Reconnaissance Report for flood control improvements on the Petaluma River identified several plans to be carried forward for further study. The Corps will consider the following alternatives (which are subject to modification as updated information and data becomes available) in the draft Feasibility Report and EIS:

a. No-Action Plan

The no-action plan would result in the continued flooding of the Petaluma River in the city of Petaluma. This would result in continued damage during the winter seasons when flood discharges would exceed the existing carrying capacity of the Petaluma River. The most critical area affected by this flooding would be Lakeville Avenue to Payran Street reach.

b. Petaluma River Channel Improvements, 25-Year Plan

This alternative consists of a 3,500-foot long excavated trapezoidal channel with a bottom width of 50 feet and side slopes of 1 Vertical on 2.5 Horizontal. Because of the relatively low flow velocity, riprap bank protection is not considered necessary. Removal and replacement of several automobile and railroad bridges that cross the Petaluma River would be required. In addition, a sanitary sewer line which is presently an obstruction to flow, would be raised.

c. Petaluma River Channel Improvements, 50-Year Plan

This alternative is identical to the 25-year plan except that the channel bottom width is increased to 70 feet and would require the removal of one home.

d. Petaluma River Channel Improvements, 100-Year Plan

This plan is identical to the 25-year and the 50-year plan, except that the channel bottom width is increased to 90 feet and would require the removal of two homes, as well as two structures located on the east side of the Lakesville Avenue bridge, and three structures upstream of Lakeville Avenue before Edith Street. Additionally, this plan requires moderate improvements around the Washington Street bridge. These improvements would consist of clearing the silt from under the bridge and adding a 280-foot long sheet pile bulkhead wall to the north bank to ensure bank stabilization.

Additional alternatives identified during the course of the study will be considered in the draft Feasibility Report and EIS.

Corps Scoping Process

The scoping of the Petaluma River flood control improvements project will involve identifying the scope of issues to be addressed for in-depth analysis.

a. The scoping process will include public participation in order to integrate information regarding public needs and concerns into the draft EIS. A public involvement program has therefore been planned. A scoping meeting will be held on September 25, 1989, at the Petaluma City Council Chambers, 11 English Street, from 7:00 p.m. until 11:00 p.m. Written comments may be sent to the U.S. Army Corps of Engineers, San Francisco District, 211 Main Street, San Francisco, California 94105-1905, ATTN: Environmental Branch (Dave Hodges). Written comments should be received no later than 45 days after the date of NOI publication. Governmental agencies, public and private interests groups, and the public are invited to participate in the scoping process.

b. The Corps is planning to conduct in-depth studies of the following issues:

(1) Hydrology (including stream sedimentation and erosion);

(2) Fish and wildlife resources and habitat;

(3) Riparian habitat;

(4) Hazardous materials;

(5) Cultural resources;

(6) Recreation and public access;

(7) Aesthetic quality.

c. Environmental review and other consultation requirements applicable to EIS preparation include:

(1) National Environmental Policy Act, as amended;

(2) Clean Air Act, as amended;

(3) Clean Water Act, as amended;

(4) Archaeological and Historic Preservation Act;

(5) National Historic Preservation Act, as amended;

(6) Executive Order 11593—Protection and Enhancement of the Cultural Environment;

(7) Fish and Wildlife Coordination Act;

(8) Endangered Species Act, as amended;

(9) Executive Order 11988—Floodplain Management.

City and County plans and ordinances, as well as other applicable statues or regulations, will be addressed during the preparation of the draft EIS.

Availability of Report

The Corps expects to complete preparation of the draft Feasibility Report and EIS and have review copies of its available on or before September 1990.

Galen H. Yanagihara,

Colonel, Corps of Engineers, District Engineer.

DEPARTMENT OF EDUCATION

Office of Postsecondary Education

Minority Participation in Graduate Education Program

AGENCY: Department of Education.

ACTION: Notice changing the application deadline date for the grants to institutions to encourage minority participation in graduate education program.

On August 16, 1989, the Assistant Secretary for Postsecondary Education published in the **Federal Register** (54 FR 33816), a notice inviting applications for the Grants to Institutions to encourage minority participation in graduate education program. This document changes the application deadline date to October 10, 1989. The application deadline date which appeared in the notice of August 16, 1989 is October 9; October 9, 1989 is a Federal holiday.

FOR FURTHER INFORMATION CONTACT: Mr. Walter T. Lewis, Program Manager, or Mrs. Barbara J. Harvey, U.S. Department of Education, Division of Higher Education Incentive Programs, Mail Stop 5338, 400 Maryland Avenue SW., Room 3022, ROB-3, Washington, DC 20202-5251. Telephone (202) 732-4393 or 732-4863, respectively.

Dated: September 5, 1989.

Roberta B. Dunn,

Acting Assistant Secretary for Postsecondary Education.

(Catalog of Federal Domestic Assistance No. 84-202, Grants to Institutions to Encourage Minority Participation in Graduate Education Program)

BILLING CODE 4000-01-M

DEPARTMENT OF ENERGY

Office of Fossil Energy

[FE Docket No. 89-44-NG]

Conoco Inc.; Application to Import Natural Gas From Canada

AGENCY: Office of Fossil Energy, Department of Energy.

ACTION: Notice of Application for Blanket Authorization to Import Natural Gas from Canada.

SUMMARY: The Office of Fossil Energy (FE) of the Department of Energy (DOE) gives notice of receipt on July 17, 1989, of an application filed by Conoco Inc. (Conoco) for blanket authorization to import up to 20 Bcf of Canadian natural gas over a two-year period beginning on the date of the first delivery. The gas would be purchased from Conoco Canada Limited, a Conoco subsidiary, and other Canadian producers to fulfill potential customer needs. Conoco proposes to submit quarterly reports giving details of individual transactions.

The application was filed under section 3 of the Natural Gas Act and DOE Delegation Order Nos. 0204-111 and 0204-127. Protests, motions to intervene, notices of intervention and written comments are invited.

DATE: Protests, motions to intervene, or notices of intervention, as applicable, requests for additional procedures and written comments are to be filed no later than October 12, 1989.

FOR FURTHER INFORMATION CONTACT:

Perry Bolger, Office of Fuels Programs, Fossil Energy, U.S. Department of Energy, Forrestal Building, Room 3H-055B, 1000 Independence Avenue, SW., Washington, DC 20585, (202) 586-1789.

Diane Stubbs, Natural Gas and Mineral Leasing, Office of General Counsel, U.S. Department of Energy, Forrestal Building, Room 6E-042, 1000 Independence Avenue, SW., Washington, DC 20585, (202) 586-6667.

SUPPLEMENTARY INFORMATION: Conoco is a Delaware corporation with its petroleum operation headquarters in Houston, Texas. Under the blanket authority sought, Conoco intends to import gas from Canada on a short-term and spot basis for resale to or as agent for undesignated purchasers located primarily in the western United States. The specific terms of each import transaction would be negotiated on an individual basis in response to prevailing gas market conditions.

To the extent gas is imported by Conoco as agent, the specific location where the gas would enter the U.S. may vary for different transactions with delivery points to be established during sales contract negotiations. In support of its application, Conoco asserts that transactions negotiated under the authority requested would be competitive with other, domestic gas supply alternatives, and would be sufficiently flexible to remain competitive over the term. Conoco states that only existing pipeline

BEST COPY AVAILABLE

facilities will be utilized to transport the volumes proposed to be imported.

The decision on the application for import authority will be made consistent with the DOE's gas import policy guidelines, under which the competitiveness of an import arrangement in the markets served is the primary consideration in determining whether it is in the public interest (49 FR 6684, February 22, 1984). Parties that may oppose this application should comment in their responses on the issue of competitiveness as set forth in the policy guidelines for the requested import authority. The applicant asserts that imports made under this requested arrangement will be competitive. Parties opposing the arrangement bear the burden of overcoming this assertion.

NEPA Compliance

The DOE has determined that compliance with the National Environmental Policy Act (NEPA), 42 U.S.C. 4321 *et seq.*, can be accomplished by means of a categorical exclusion. On March 27, 1989, the DOE published in the **Federal Register** (54 FR 12474) a notice of amendments to its guidelines for compliance with NEPA. In that notice, the DOE added to its list of categorical exclusions the approval or disapproval of an import/export authorization for natural gas in cases not involving new construction. Application of the categorical exclusion in any particular case raises a rebuttable presumption that the DOE's action is not a major Federal action under NEPA. Unless the DOE receives comments indicating that the presumption does not or should not apply in this case, no further NEPA review will be conducted by the DOE.

Public Comment Procedures

In response to this notice, any person may file a protest, motion to intervene or notice of intervention, as applicable, and written comments. Any person wishing to become a party to the proceeding and to have the written comments considered as the basis for any decision on the application must however, file a motion to intervene or notice of intervention, as applicable. The filing of a protest with respect to this application will not serve to make the protestant a party to the proceeding, although protests and comments received from persons who are not parties will be considered in determining the appropriate procedural action to be taken on the application. All protests, motions to intervene, notices on intervention, and written comments must meet the requirements that are specified by the regulations in 10 CFR Part 590.

Protests, motions to intervene, notices of intervention, requests for additional procedures, and written comments should be filed with the Office of Fuels Programs, Fossil Energy, Room 3F-056, FE-50, Forrestal Building, 1000 Independence Avenue SW., Washington, DC 20585. They must be filed no later than 4:30 p.m., e.d.t., October 10, 1989.

A decisional record on the application will be developed through responses to this notice by parties, including the parties written comments and replies thereto. Additional procedures will be used as necessary to achieve a complete understanding of facts and issues. A party seeking intervention may request that additional procedures be provided, such as additional written comments, an oral presentation, a conference, or trial-type hearing. Any request to file additional written comments should explain why they are necessary. Any request for an oral presentation should identify the substantial question of fact, law, or policy at issue, show that it is material and relevant to a decision in the proceeding, and demonstrate why an oral presentation is needed. Any request for a conference should demonstrate why the conference would materially advance the proceeding. Any request for a trial-type hearing must show that there are factual issues genuinely in dispute that are relevant and material to a decision and that a trial-type hearing is necessary for a full and true disclosure of the facts.

If an additional procedure is scheduled, notice will be provided to all parties. If no party requests additional procedures, a final opinion and order may be issued based on the official record, including the application and responses filed by parties pursuant to this notice, in accordance with 10 CFR 590.316.

A copy of Conoco's application is available for inspection and copying in the Office of Fuels Programs Docket Room, 3F-056, at the above address. The docket room is open between the hours of 8:00 a.m., and 4:30 p.m., Monday through Friday, except Federal holidays.

Issued in Washington, DC, on September 5, 1989.

Constance L. Buckley,

Deputy Assistant Secretary for Fuels Programs, Office of Fossil Energy.

[FR Doc. 89-21422 Filed 9-11-89; 8:45 am]

[FE Docket No. 89-36-NG]

Northern Natural Gas Co., Division of Enron Corp; Order Granting Blanket Authorization To Import National Gas From Canada

AGENCY: Office of Fossil Energy, Department of Energy.

ACTION: Notice of Order Granting Blanket Authorization to Import Natural Gas from Canada.

SUMMARY: The Office of Fossil Energy (FE) of the Department of Energy gives notice that it has issued an order granting Northern Natural Gas Company, Division of Enron Corp. (Northern), blanket authorization to import natural gas from Canada. The order issued in FE Docket No. 89-36-NG authorizes Northern to import up to 219 Bcf of Canadian natural gas over a two-year period beginning on the date of first delivery.

A copy of the order is available for inspection and copying in the Office of Fuels Programs Docket Room, 3F-056, Forrestal Building, 1000 Independence Avenue, SW., Washington, DC, 20585, (202) 586-9478. The docket room is open between the hours of 8:00 a.m. and 4:30 p.m., Monday through Friday except on Federal holidays.

Issued in Washington, DC., September 5, 1989.

Constance L. Buckley,

Deputy Assistant Secretary for Fuels Programs, Office of Fossile Energy.

BILLING CODE 6450-01-M

[Docket No. FE C&E 89-17; Certification Notice—43]

Filing Certification of Compliance; Coal Capability of New Electric Powerplant Pursuant to Provisions of the Powerplant and Industrial Fuel Use Act, as Amended

AGENCY: Office of Fossil Energy, Department of Energy.

ACTION: Notice of filing.

SUMMARY: Title II of the Powerplant and Industrial Fuel Use Act of 1978, as amended, ("FUA" or "the Act") (42 U.S.C. 8301 *et seq.*) provides that no new electric powerplant may be constructed or operated as a base load powerplant without the capability to use coal or another alternate fuel as a primary energy source (section 201(a), 42 U.S.C.

8311(a), Supp. V. 1987). In order to meet the requirement of coal capability, the owner or operator of any new electric powerplant to be operated as a base load powerplant proposing to use natural gas or petroleum as its primary energy source may certify, pursuant to section 201(d), to the Secretary of Energy prior to construction, or prior to operation as a base load powerplant, that such powerplant has the capability to use coal or another alternate fuel. Such certification establishes compliance with section 201(a) as of the date it is filed with the Secretary. The Secretary is required to publish in the **Federal Register** a notice reciting that the certification has been filed. Three owners and operators of proposed new electric base load powerplants have filed self certifications in accordance with section 201(d). Further information is provided in the SUPPLEMENTARY INFORMATION section below.

SUPPLEMENTARY INFORMATION: The following companies have filed self certifications:

Name	Dated received	Type of Facility	Megawatt capacity	Location
Cogen Technologies, Inc., Houston, TX	06-21-89	Combined Cycle	229	Everett, MA
Cornerstone Energy Company, Miami, FL	06-21-89	Combined Cycle	45	Boulder City, NV
Masspower, Boston, MA	06-16-89	Combined Cycle	240	Springfield, MA

Amendments to the FUA on May 21, 1987, (Pub. L. 100-42) altered the general prohibitions to include only new electric base load powerplants and to provide for the self certification procedure.

Issued in Washington, DC on September 5, 1989.

Constance L. Buckley,

Deputy Assistant Secretary for Fuels Programs, Office of Fossil Energy.

Energy Information Administration

Agency Information Collections Under Review by the Office of Management and Budget

AGENCY: Energy Information Administration, DOE.

ACTION: Notice of requests submitted to the Office of Management and Budget for review.

SUMMARY: The Energy Information Administration (EIA) has submitted the energy information collection(s) listed at the end of this notice to the Office of Management and Budget (OMB) for review under provisions of the Paperwork Reduction Act (Public Law 96-511, 44 U.S.C. 3501 et seq.).

The listing does not include information collection requirements contained in new or revised regulations which are to be submitted under section 3504(h) of the Paperwork Reduction Act, nor management and procurement assistance requirements collected by the Department of Energy (DOE).

Each entry contains the following information: (1) The sponsor of the collection (the DOE component or Federal Energy Regulatory Commission (FERC)); (2) Collection number(s); (3) Current OMB docket number (if applicable); (4) Collection title; (5) Type of request, e.g., new, revision, or extension; (6) Frequency of collection; (7) Response obligation, i.e., mandatory, voluntary, or required to obtain or retain benefit; (8) Affected public; (9) An estimate of the number of respondents per report period; (10) An estimate of the number of responses annually; (11) An estimate of the average hours per response; (12) The estimated total annual respondent burden; and (13) A brief abstract describing the proposed collection and the respondents.

DATES: Comments must be filed on or before October 12, 1989. If you anticipate that you will be submitting comments, but find it difficult to do so within the period of time allowed by this notice, you should advise the OMB DOE Desk Officer listed below of your intention to do so as soon as possible. The Desk Officer may be telephoned at (202) 395-3084. (Also, please notify the EIA contact listed below.)

ADDRESSES: Address comments to the Department of Energy Desk Officer, Office of Information and Regulatory Affairs, Office of Management and Budget, 726 Jackson Place NW., Washington, DC 20503. (Comments should also be addressed to the Office of Statistical Standards at the address below.)

FOR FURTHER INFORMATION AND COPIES OF RELEVANT MATERIALS CONTACT: Jay Casselberry, Office of Statistical Standards (EI-70), Energy Information Administration, M.S. 1H-023, 1000 Independence Avenue SW., Washington, DC 20585. Mr. Casselberry may be telephoned at (202) 586-2171.

SUPPLEMENTARY INFORMATION: The energy information collection submitted to OMB for review was:

1. Federal Energy Regulatory Commission
2. FERC-557
3. 1902-0042
4. The Public Utilities Regulatory Policy Act of 1978, section 133 Cost of Service Data
5. Extension
6. Biennially
7. Mandatory
8. Businesses or other for profit, state or local governments, federal agencies or employees, non-profit institutions.
9. 8 respondents
10. 8 responses annually
11. The estimated average hours per response for each of the respondents is 2,700 burden hours.
12. The estimated total reporting hours are 21,600.
13. PURPA, section 133 requires electric utilities to gather and file information necessary to determine a utility's cost of providing retail electric service.

Authority: Sec. 5(a), 5(b), 13(b), and 52, Public Law No. 93-275, Federal Energy Administration Act of 1974, as amended, 15 U.S.C. 764(a), 764(b), 772(b), and 790a.

Yvonne M. Bishop,

Director, Statistical Standards, Energy Information Administration.

BILLING CODE 6450-01-M

Office of Energy Research

Pre-Freshman Engineering Program (PREP)

AGENCY: Department of Energy.

ACTION: Program Solicitation Announcement.

SUMMARY: The purpose of this notice is to announce the availability of the PREP solicitation, to identify the institutions which will be eligible for this grant program, and to inform potential applicants of the closing date and location for submission of applications for awards under this program.

SUPPLEMENTARY INFORMATION:

Background

The Department of Energy (DOE) is concerned with the supply of science and engineering professionals to perform its R&D mission and is authorized in the Energy Reorganization Act of 1974 to "* * * assure an adequate supply of manpower for the accomplishment of energy research and development programs by sponsoring and assisting in education and training activities in postsecondary institutions, vocational schools, and other institutions * * *", 42 U.S.C. 5813(11). Specifically, DOE's concern is based on the consideration that the future supply of engineering manpower is threatened by two factors: fewer students enrolling in science and mathematics courses in high school and fewer students available to join the science and engineering pool due to declining birth rates. Students who have completed the ninth grade in high school often decide not to take another science or mathematics course. Once the traditional math/science sequence is disrupted, it is too late for students to meet the minimum requirements for admission to college and university engineering programs.

The primary purpose of PREP is to alleviate manpower shortages in engineering by preparing and guiding high school students in the selection of college-preparatory courses in science and mathematics. In the past 16 years, 249 PREP projects have been funded. These projects have reached over 16,000 students, principally women and minorities who have been underrepresented in the field of engineering. Pending Congressional action, DOE intends to commit about $350,000 for the Pre-Freshman Engineering Program for fiscal year 1990. DOE invites all qualified institutions (see following section) to write for a copy of its Pre-Freshman Engineering Program solicitation, DOE/ER-0414, Notice of Program Announcement Number DE-PS05-90ER75525.

Eligibility and Limitations

The overall intent of the program is to increase the number of engineers who graduate from college, and who will continue to play critically important roles in the Nation's overall energy programs. Therefore, institutions which offer engineering degree programs are deemed most qualified.

Accordingly, pursuant to the DOE Financial Assistance Rules, 10 CFR 600.7 (b)(1), applications will be accepted only from colleges and universities which grant engineering degrees at the baccalaureate level, institutions which have articulation agreements with engineering degree-granting institutions and institutions which have formal dual-degree pre-engineering programs with institutions granting engineering degrees at the baccalaureate level. (If applying under the latter two categories, specific details should be given about the formal dual-degree program or articulation agreement). Other institutions interested in participating in PREP may do so through cooperative projects with engineering degree-granting institutions (in this case, the application must be submitted by the engineering degree-granting institution).

Application Forms: Program solicitations are ready for mailing. Applications must be prepared and submitted in accordance with the instructions and forms included in the program solicitation. Copies of this solicitation may be obtained by writing to: Division of University and Industry Programs, ER-44, Office of Field Operations Management, Office of Energy Research, Department of Energy, 1000 Independence Avenue, SW., Washington, DC 20585; Telephone Number: (202) 586-1634.

Closing Date for Submission of Applications: To be eligible, applications must be received by the Department of Energy by 4:30 p.m., October 30, 1989.

FOR FURTHER INFORMATION CONTACT: All communications or questions

regarding this program solicitation should be directed to: PREP Contracting Officer; Procurement and Contracts Division; Oak Ridge Operations; Department of Energy; Oak Ridge, Tennessee 37831; Telephone Number: (615) 576-7564.

(Catalog of Federal Domestic Assistance No. 81.047, Pre-Freshman Engineering Program.)

Issued in Washington, DC on July 25, 1989.

Robert O. Hunter, Jr.,

Director, Office of Energy Research.

[FR Doc. 89-21427 Filed 9-11-89; 8:45 am]

BILLING CODE 6450-01-M

Federal Energy Regulatory Commission

[Docket Nos. ER89-546-000, et al.]

Nevada Power Co. et al.; Electric Rate, Small Power Production, and Interlocking Directorate Filings

September 1, 1989.

Take notice that the following filings have been made with the Commission:

1. Nevada Power Co.

[Docket No. ER89-546-000]

Take notice that on August 21, 1989, Nevada Power Company (Nevada) tendered for amended filing a revised agreement entitled Agreement for Transmission Service Among Nevada Power Company and Overton Power District No. 5 (Overton) and Lincoln County Power District No. 1 (Lincoln) hereinafter "the Agreement." The purpose of the Agreement is to establish the terms and conditions for the transmission of Federal Power by Nevada to Overton and Lincoln.

Nevada requests that this Agreement become effective as of March 1, 1989, and therefore requests waiver of the Commission's notice requirements.

Nevada states that copies of the amended filing were served upon Overton and Lincoln.

Comment date: September 15, 1989, in accordance with Standard Paragraph E at the end of this notice.

2. New England Power Co.

[Docket Nos. ER88-630-005 and ER88-631-005 and ER89-38-005]

Take notice that on August 28, 1989, New England Power Company (NEP) tendered for filing its compliance refund report pursuant to the Commission's order issued on July 28, 1989.

Comment date: September 15, 1989, in accordance with Standard Paragraph E at the end of this notice.

3. Carolina Power & Light Co.

[Docket No. ER89-124-000]

Take notice that on August 30, 1989, Carolina Power & Light Company (CP&L) filed revised hourly transmission charges as directed by the FERC Staff in which daily transmission costs were spread over sixteen hours per day. The change affects CP&L's interchange service schedules with South Carolina Electric & Gas Company, South Carolina Public Services Authority, and Virginia Electric and Power Company. In addition, all the utilities are filing revised production demand and transmission use rates based on updated costs as set forth in the annual review process under the provisions of the various interchange agreements. The changes to the rates are requested to become effective on the date the FERC accepts this filing.

Comment date: September 15, 1989, in accordance with Standard Paragraph E at the end of this notice.

4. Puget Sound Power & Light Co.

[Docket No. ER89-624-000]

Take notice that on August 24, 1989, Puget Sound Power & Light Company (Puget) tendered for filing documents relating to the Residential Purchase and Sale Agreement between Puget and Bonneville Power Administration. Puget states that these documents relate to the calculation of the Average System Cost (ASC) for Puget for the exchange period effective February 1, 1989, through May 31, 1989.

Comment date: September 15, 1989, in accordance with Standard Paragraph E at the end of this notice.

5. Public Service Electric and Gas Co.

[Docket No. ER89-461-000]

Take notice that on August 28, 1989, Public Service Electric and Gas Company (PSO) submitted for filing additional information, regarding the basis for determination of the lump sum payment which restores parity between PSO and the Jersey Central Power & Light Company.

Comment date: September 15, 1989, in accordance with Standard Paragraph E at the end of this notice.

6. Canal Electric Company

[Docket No. ER89-626-000]

Take notice that on August 13, 1989, Canal Electric Company (Canal) tendered for filing a Notice of Termination of Supplement No. 10 to Rate Schedule FERC No. 21 and Rate Schedule FERC No. 28.

Canal requests an effective date of April 30, 1989.

Canal states that copies of this filing have been served upon Cambridge Electric Light Company and Commonwealth Electric Company.

Comment date: September 15, 1989, in accordance with Standard Paragraph E at the end of this notice.

7. Minnesota Power & Light Co.

[Docket No. ER89-625-000]

Take notice that on August 17, 1989, Minnesota Power & Light Company (MP&L) tendered for filing a Notice of Termination of Rate Schedule No. 115 between the City of Proctor and MP&L.

MP&L requests an effective date of December 31, 1989.

Comment date: September 15, 1989, in accordance with Standard Paragraph E at the end of this notice.

8. Wisconsin Power & Light Co.

[Docket No. ER89-628-000]

Take notice that on August 30, 1989, Wisconsin Power & Light Company (WPL) tendered for filing an amended wholesale power agreement dated August 9, 1989, between the City of Sheboygan and WPL. WPL states that this new wholesale power agreement revises the previous agreement between the two parties which was dated January 4, 1977, and designated Rate Schedule No. 115 by the Commission.

The purpose of this new agreement is to identify an additional delivery point. Terms of service for this customer will be on a similar basis to the terms of service for other W-3 wholesale customers.

WPL requests that an effective date concurrent with the contract effective date be assigned. WPL states that copies of the agreement and the filing have been provided to the City of Stoughton and the Wisconsin Public Service Commission.

Comment date: September 15, 1989, in accordance with Standard Paragraph E at the end of this notice.

Standard Paragraph

E. Any person desiring to be heard or to protest said filing should file a motion to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street NE., Washington, DC 20426, in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211 and 385.214). All such motions or protests should be filed on or before the comment date. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a motion to intervene. Copies of this filing are on file with the Commission and are available for public inspection.

Lois D. Cashell,

Secretary.

[FR Doc. 89–21337 Filed 9–11–89; 8:45 am]

BILLING CODE 6717–01–M

[Docket Nos. ER89–621–000 et al.]

Nevada Power Co. et al.; Electric Rate, Small Power Production, and Interlocking Directorate Filings

Take notice that the following filings have been made with the Commission:

1. Nevada Power Co.

[Docket No. ER89–621–000]

August 30, 1989.

Take notice that on August 25, 1989, Nevada Power Company (Nevada) tenderd for filing a Notice of Cancellation of Short Term Seasonal Power Agreements with Overton Power District No. 5 (Overton), FERC Rate Schedule No. 44.

The Agreement expired by its own terms on April 1, 1989. Therefore, Nevada requests waiver of the Commission's notice requirements and requests the cancellation be effective April 1, 1989.

Nevada states that copies of the filing were served upon Overton, the Public Service Commission of Nevada, and the Office of the Consumer Advocate.

Comment date: September 14, 1989, in accordance with Standard Paragraph E end of this notice.

2. Public Service Company of Oklahoma

[Docket No. ER89–476–001]

August 30, 1989.

Take notice that on August 28, 1989, Public Service Company of Oklahoma (PSO) tendered for filing a letter agreement (Letter Agreement), dated August 18, 1989, amending the Transmission Service Agreement, dated May 30, 1989, between KAMO Electric Cooperative, Inc. (KAMO) and PSO which PSO filed in this proceeding on June 1, 1989. PSO and KAMO have made various minor modifications to the earlier Agreement which produce a decrease in the proposed rates. PSO proposes that the Transmission Service Agreement, as amended, be made effective as of June 1, 1989 and, accordingly, seeks waiver of the Commission's notice requirements.

Copies of the filing have been sent to the Oklahoma Corporation Commission and to KAMO.

Comment date: September 14, 1989, in accordance with Standard Paragraph E end of this notice.

3. Public Service Company of New Mexico

[Docket No. ER89–622–000]

August 30, 1989.

Take notice that on August 28, 1989, Public Service Company of New Mexico (PNM) tendered for filing a Contract for Services by PNM to accept and simultaneously redeliver Western Area Power Administration power and energy to Kirtland Air Force Base (KAFB). The Services Contract provides for PNM to furnish certain services to KAFB so that KAFB can utilize its allocation of long-term firm power and energy from the Salt Lake City Area Integrated Projects. KAFB will pay a service charge of $4.33/kW-month which reflects the costs of providing such services, as well as a $1000/month fee for dispatch and administrative services.

PNM is requesting a waiver of the Commission's notice requirements and is requesting that the Services Contract be accepted for filing to be effective as of October 1, 1989.

Copies of the filing have been served upon KAFB and the New Mexico Public Service Commission.

Comment date: September 14, 1989, in accordance with Standard Paragraph E at the end of this notice.

4. American Electric Power Service Corp.

[Docket No. ER89–415–000]

August 30, 1989.

Take notice that American Electric Power Service Corp. on August 25, 1989, tendered for filing an amendment to Addendum IV, which was filed on May 5, 1989 (Docket No. ER89–415–000), on behalf of its affiliates, Appalachian Power Company, Columbus Southern Power Company, Indiana Michigan Power Company (I&M), Kentucky Power Company, and Ohio Power Company (AEP Parties), which are all affiliated operating subsidiaries of the American Electric Power Company (AEP).

The original filing has been amended pursuant to discussions with the Commission staff to establish a revenue cap for Short Term, Limited Term, and Non-Displacement transactions. This cap insures that the total charge for such transaction will not exceed a rate based on the investment costs and energy costs associated with I&M's Rockport Plant Unit No. 1. This amendment also revises the AEP demand charges to "up to" $3.70/kW-week for Short Term power and establishes commensurate rates for Limited Term and Non-Displacement.

Copies of the filing were served upon the Kentucky Public Service Commission, the Indiana Utility Regulatory Commission, the Michigan Public Service Commission, the Public Utilities Commission of Ohio, the State Corporation Commission of Virginia, the Public Service Commission of West Virginia, and the appropriate utilities interconnected with the AEP Parties.

Comment date: September 14, 1989, in accordance with Standard Paragraph E at the end of this notice.

5. El Paso Electric Co.

[Docket No. ER89–620–000]

August 30, 1989.

Take notice that on August 25, 1989 El Paso Electric Company (EPE) tendered for filing an executed amendment to its Power Sales Agreement with Imperial Irrigation District (IID) dated December 2, 1986. The amendment provides for a reduction in the demand charge for Firm Capacity and System Contingent Capacity and was agreed to by EPE and IID in accordance with section 12.3.1 and Exhibit A of the December 2, 1986 agreement.

EPE requests waiver of the notice requirement in order to permit the amendment to become effective at the point in time, which is projected to occur in December 1995.

EPE states that copies of the filing have been served on IID and the Public Utilities Commission of the State of California.

Comment date: September 14, 1989, in accordance with Standard Paragraph E at the end of this notice.

6. Montana Power Co.

[Docket No. ER89–530–000]

August 30, 1989.

Take notice that on August 16, 1989, Montana Power Company (Montana) tendered for filing supplemental background information requested by staff in the above referenced docket.

Comment dated: September 14, 1989, in accordance with Standard Paragraph E at the end of this notice.

7. Interstate Power Co.

[Docket No. ES89–33–000]

August 31, 1989.

Take notice that on August 28, 1989, Interstate Power Company (Applicant), filed an application with the Federal Energy Regulatory Commission (Commission), pursuant to section 204 of the Federal Power Act, seeking authorization to issue short-term promissory notes to lending banks and/

or commercial paper, not to exceed an aggregate of $50 million outstanding at any one time, said short-term promissory notes to be issued on or before December 31, 1990 and to mature not later than December 31, 1991 with not to exceed twelve-month maturities, and said commercial paper to be issued with not to exceed nine-month maturities and to mature on or before December 31, 1991.

Comment date: September 27, 1989, in accordance with Standard Paragraph E at the end of this notice.

8. Connecticut Light and Power Co.

[Docket No. ER89–586–000]

August 31, 1989.

Take notice that on August 25, 1989, Connecticut Light and Power Company (CL&P) supplemented its earlier filing in this docket. CL&P provided Table 1 to Appendix A of its earlier filing, which table may have been inadvertently omitted from its earlier filing.

Comment date: September 11, 1989, in accordance with Standard Paragraph E at the end of this notice.

9. Montana Power Co.

[Docket No. ER89–565–000]

August 31, 1989.

Take notice that on August 17, 1989, Montana Power Company supplemented its earlier filing in this docket by filing copies of exhibits to the General Transfer Agreement between Montana Power Company and Bonneville Power Administration. These exhibits were inadvertently omitted from the company's earlier filing.

Comment date: September 11, 1989, in accordance with Standard Paragraph E at the end of this notice.

10. Iowa Public Service Co.

[Docket No. ER89–430–000]

August 31, 1989.

Take notice that on Iowa Public Service Company (IPS) on August 29, 1989, tendered for filing an amended filing for its Electric Utility Services Agreement between IPS and the Municipal Electric Utility Services Agreement between IPS and the Interim Wheeling Letter Agreement whereby IPS will supply intermediate and peaking capacity to Waverly, as well as provide dispatch and transmission services. IPS has requested an effective date of May 1, 1989 for the initial rate, and accordingly seeks waiver of the notice requirements of the Commission's rules.

IPS states that copies of this filing were served on Waverly and the Iowa Utilities Board.

Comment date: September 15, 1989, in accordance with Standard Paragraph E end of this notice.

11. Mississippi Power & Light Co.

[Docket No. ER89–623–000]

August 31, 1989.

Take notice that Mississippi Power & Light Company (MP&L) on August 28, 1989 tendered for filing a replacement energy service schedule with, and three letter agreements for the sale of energy to, the Tennessee Valley Authority.

MP&L requests an effective date of August 16, 1989 for the service schedule; July 24, 1989 for the First Letter Agreement; August 1, 1989 for the Second Letter Agreement; and August 5, 1989 for the Third Letter Agreement. Energy Services requests waiver of the Commission's notice requirements under § 35.11 of the Commission's Regulations.

Comment date: September 15, 1989, in accordance with Standard Paragraph E at the end of this notice.

Standard Paragraph

E. Any person desiring to be heard or to protest said filing should file a motion to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street NE., Washington, DC 20426, in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211 and 385.214). All such motions or protests should be filed on or before the comment date. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a motion to intervene. Copies of this filing are on file with the Commission and are available for public inspection.

Lois D. Cashell,

Secretary.

[FR Doc. 89–21338 Filed 9–11–89; 8:45 am]

BILLING CODE 6717–01–M

[Project No. 3944–002, Illinois]

City of Rockdale; Availability of Environmental Assessment

September 5, 1989.

In accordance with the National Environmental Policy Act of 1969 and the Federal Energy Regulatory Commission's (Commission's) regulations, 18 CFR part 380 (Order No. 486, 52 FR 47897), the Office of Hydropower Licensing has reviewed the application for major license for the proposed Brandon Road Lock and Dam Hydroelectric Project on the Illinois River in Will County, Illinois, near Rockdale, Illinois, and has prepared a draft Environmental Assessment (EA) for the proposed project.

Copies of the EA are available for review in the Public Reference Branch, Room 1000, of the Commission's offices at 825 North Capitol Street NE., Washington, DC 20426.

Comments should be filed within 30 days from the date of this notice and should be addressed to Lois D. Cashell, Acting Secretary, Federal Energy Regulatory Commission, 825 North Capitol Street NE., Washington, DC 20426. Please affix Project No. 3943–003 to all comments. For further information, please contact Marc Zimmerman, Environmental Assessment Coordinator, at (202) 376–9052).

Lois D. Cashell,

Secretary.

[FR Doc. 89–21339 Filed 9–11–89; 8:45 am]

BILLING CODE 6717–01–M

[Docket Nos. CP89–1982–000 et al.]

Equitrans, Inc., et al; Natural Gas Certificate Filings

August 25, 1989.

Take notice that the following filings have been made with the Commission:

1. Equitrans, Inc.

[Docket No. CP89–1982–000]

Take notice that on August 21, 1989, Equitrans, Inc. (Equitrans), 4995 Steubenville Pike, Pittsburgh, PA 15205, filed in Docket No. CP89–1982–000 a request pursuant to §§ 157.205 and 284.223 of the Commission's Regulations under the Natural Gas Act for authorization to provide interruptible transportation service for Equitable Resources Marketing Company (ERMC), under the blanket certificate issued in Docket No. CP86–553–000, pursuant to section 7 of the Natural Gas Act, all as more fully set forth in the request that is on file with the Commission and open to public inspection.

Equitrans states that pursuant to a transportation service agreement dated April 1, 1989 under its Rate Schedule ITS, it proposes to transport up to 14,7000 Mcf per day of natural gas or ERMC. Equitrans states that it would transport the gas from various receipt points in Pennsylvania and West Virginia, and would redeliver the gas at the interconnect between Equitrans and Equitable Gas Company in Pennsylvania.

Equitrans advises that service under § 284.223 (a) commenced July 1, 1989, as reported in Docket No. ST89–4416–000. Equitrans further advises that it would transport 9,000 Mcf on an average day and 300,000 Mcf annually.

Comment date: October 10, 1989, in accordance with Standard Paragraph G at the end of this notice.

2. Northern Natural Gas Co., Division of Enron Corp.

[Docket No. CP89–1984–000]

Take notice that on August 23, 1989, Northern Natural Gas Company, Division of Enron Corp. (Northern), 1400 Smith Street, P.O. Box 1188, Houston, Texas 77251–1188, filed in Docket No. CP89–1984–000 a request pursuant to § 157.205 of the Commission's Regulations under the Natural Gas Act (18 CFR 157.205) for authorization to provide a firm transportation service for Enron Gas Marketing, Inc. (Enron), a marketer, under the blanket certificate issued in Docket No. CP86–435–000, pursuant to section 7 of the Natural Gas Act, all as more fully set forth in the request that is on file with the Commission and open to public inspection.

Northern states that pursuant to a transportation agreement dated July 20, 1989, as amended, under its Rate Schedule FT–1, it proposes to transport up to 15,000 MMBtu per day equivalent of natural gas for Enron. Northern states that it would transport the gas from receipt points in Beckham and Roger Mills Counties, Oklahoma, and would deliver the gas in Winkler County, Texas, as shown in Appendix "A" of the agreement.

Northern advises that service under § 284.223(a) commenced July 20, 1989, as reported in Docket No. ST89–4451–000 (filed August 11, 1989). Northern further advises that it would transport 11,250 MMBtu on an average day and 5,475,000 MMBtu annually.

Comment date: October 10, 1989, in accordance with Standard Paragraph G at the end of this notice.

3. Northern Natural Gas Co. Division of Enron Corporation

[Docket No. CP89–1985–000]

Take notice that on August 23, 1989, Northern Natural Gas Company, Division of Enron Corporation (Northern), 1400 Smith Street, P.O. Box 1188, Houston, Texas 77251–1188, filed in Docket No. 89–1985–000, a prior notice request pursuant to Sections 157.205 and 284.223 of the Commission's Regulations for authorization to transport natural gas for TranAm Energy, Inc., (TranAm), a marketer of natural gas, under the certificate issued in Docket No. CP86–435–000, all as more fully set forth in the request which is on file with the Commission and open to public inspection.

Northern requests authorization to transport up to 30,000 MMBtu of natural gas per day, pursuant to a July 25, 1989, agreement between Northern and TranAm from receipt points located in Oklahoma to a delivery point located in Texas. Northern would provide the srvice to TranAm under the provisions of its Rate Schedule FT–1, it is indicated. Northern further states that the average and annual quantities would be 22,5000 MMBtu and 10,950,000 MMBtu, respectively.

Northern states that the transportation of natural gas for TranAm commenced July 25, 1989, for a 120–day period pursuant to § 284.223(a) of the Commission's Regulations as reported in Docket No. ST89–4450–000.

Comment date: October 10, 1989, in accordance with Standard Paragraph G at the end of this notice.

G. Any person or the Commission's staff may, within 45 days after the issuance of the instant notice by the Commission, file pursuant to Rule 214 of the Commission's Procedural Rules (18 CFR 385.214) a motion to intervene or notice of intervention and pursuant to § 157.205 of the Regulations under the Natural Gas Act (18 CFR 157.205) a protest to the request. If no protest is filed within the time allowed therefore, the proposed activity shall be deemed to be authorized effective the day after the time allowed for filing a protest. If a protest is filed and not withdrawn within 30 days after the time allowed for filing a protest, the instant request shall be treated as an application for authorization pursuant to section 7 of the Natural Gas Act.

Lois D. Cashell,

Secretary.

[FR Doc. 89–21340 Filed 9–11–89; 8:45 am]

BILLING CODE 6717–01–M

[Docket Nos. CP89–1983–000, et al.]

Texas Gas Transmission Corp. et al.; Natural Gas Certificate Filings

Take notice that the following filings have been made with the Commission:

1. Texas Gas Transmission Corp.

[Docket No. CP89–1983–000]

August 28, 1989.

Take notice that on August 22, 1989, Texas Gas Transmission Corporation (Texas Gas), P.O. Box 1160, Owensboro, Kentucky 42302, filed in Docket No. CP89–1983–000, an application pursuant to section 7(b) of the Natural Gas Act requesting the authority necessary to abandon an interruptible transportation service performed by Texas Gas for Gulf Oil Corporation (Gulf), along with certain related facilities, all as more fully set forth in the Application which is on file with the Commission and open to public inspection.

Texas Gas is requesting authority to abandon a transportation service performed for Gulf for which Texas Gas received authority to render by an order issued on January 24, 1963, in Docket No. CP63–35. The service presently certificated involves the transportation by Texas Gas of up to 1,000 Mcf per day, on an interruptible basis, from points of receipt at the Claiborne Plant in Claiborne Parish, Louisiana, and the Church Point Field in Acadia Parish, Louisiana, for delivery to Gulf at its refinery in Cleves, Ohio. Texas Gas is also requesting authority to abandon the meter station constructed by Texas Gas in Hamilton County, Ohio to deliver such gas to the Cleves Refinery.

Texas Gas states that the Gulf refinery at Cleves has been non-operational for several years and that Gulf (now Chevron U.S.A.) has indicated it has no objection to the abandonment of the services or facilities requested by Texas Gas in the application.

Comment date: September 18, 1989, in accordance with Standard Paragraph F at the end of this notice.

2. El Paso Natural Gas Co.

[Docket No. CP89–2003–000]

August 29, 1989.

Take notice that on August 28, 1989, El Paso Natural Gas Company (El Paso), P.O. Box 1492, El Paso, Texas 79978, filed in Docket No. CP89–2003–000 a request pursuant to § 157.205 of the Commission's Regulations under the Natural Gas Act (18 CFR 157.205) for authorization to provide an interruptible transportation service for Mallon Oil Company (Mallon), under the blanket certificate issued in Docket No. CP88-433–000, pursuant to section 7 of the Natural Gas Act, all as more fully set forth in the request that is on file with the Commission and open to public inspection.

El Paso states that pursuant to a transportation service agreement dated June 21, 1989, under its Rate Schedule T–1, it proposes to transport up to 22,000 MMBtu per day equivalent of natural gas for Mallon. El Paso states that it would transport the gas from any receipt point on its system, as provided in Exhibit "A" of the transportation agreement, and would deliver the gas to delivery points at the borderline between the States of Arizona and

California near Topock, Arizona, and Blythe, California, as shown in Exhibit "B" of the agreement.

El Paso advises that service under § 284.223(a) commenced July 23, 1989, as reported in Docket No. ST89–4409–000. El Paso further advises that it would transport 10,550 MMBtu on an average day and 3,850,750 MMBtu annually.

Comment date: October 13, 1989, in accordance with Standard Paragraph G at the end of this notice.

3. Texas-Ohio Gas, Inc.

[Docket No. CP89–1998–000]

August 29, 1989.

Take notice that on August 23, 1989, Texas-Ohio Gas, Inc. (Texas Ohio), One Mineral City Plaza, 800 Gessner Suite #1030, Houston, Texas 77024, has filed a complaint against Equitrans, Inc. (Equitrans) alleging that Equitrans is violating the concept of open-access transportation by curtailing interruptible transportation service for Texas Ohio, all as more fully set forth in the complaint which is on file with the Commission and open to public inspection.

Texas Ohio states that during the past year it has contracted to sell natural gas to several end users served by Equitable Gas Company (Equitable), a local distribution company, in the Pittsburgh, Pennsylvania area. Texas Ohio indicates that the only way to transport gas to that distribution company is by means of Equitable's affiliated transmission line, Equitrans. Texas Ohio indicates that it has been notified for the third consecutive month by Equitrans that its interruptible transportation volumes have been curtailed, due to capacity constraints at the major interconnects with Tennessee Gas Pipeline Company and Texas Eastern Transmission Corporation. Texas Ohio alleges that in spite of the apparent difficulties related to transporting volumes to their system, Equitrans has managed to have surplus gas on its system that is being offered for sale to the curtailed companies like Texas Ohio, Texas Ohio concludes that Equitrans is clearly violating the concept of open-access transportation.

Comment date: September 18, 1989, in accordance with the first subparagraph of Standard Paragraph F at the end of this notice.

4. United Gas Pipe Line Co.

[Docket No. CP89–1992–000]

August 29, 1989.

Take notice that on August 24, 1989, United Gas Pipe Line Company (United), P.O. Box 1478, Houston, Texas 77251–1478, made a prior notice filing pursuant to §§ 157.205 and 284.223 in Docket No. CP89–1992–000, to provide interruptible transportation service on behalf of LaSER Marketing Company, a marketer of natural gas, under United's blanket certificate issued in Docket No. CP88–6–000, all as more fully set forth in the request on file with the Commission and open to public inspection.

United states that the Interruptible Gas Transportation Agreement T1–21–1857, dated October 1, 1988 as amended on June 13, 1989, June 29, 1989, July 5, 1989 and July 20, 1989, proposes to transport a maximum daily quantity of 626,240 MMBtu, and that service commenced June 23, 1989, as reported in Docket No. ST89–4472–000, pursuant to § 284.233(a) of the Commission's Regulations.

Comment date: October 13, 1989, in accordance with Standard Paragraph G at the end of this notice.

5. El Paso Natural Gas Co.

[Docket No. CP89–1987–000]

August 29, 1989.

Take notice that on August 24, 1989, El Paso Natural Gas Company (El Paso), Post Office Box 1492, El Paso, Texas 79978, filed in Docket No. CP89–1987–000 a request pursuant to §§ 157.205 and 284.223 of the Commission's Regulations under the Natural Gas Act (18 CFR 157.205 and 284.223) for authorization to provide interruptible transportation service for Western Gas Processors, Ltd. (Western Gas), under El Paso's blanket certificate issued by the Commission in Docket No. CP88–433–000 pursuant to section 7 of the Natural Gas Act, all as more fully set forth in the request on file with the Commission and open for public inspection.

El Paso requests authority to transport up to 55,000 MMBtu equivalent of natural gas per day for Western Gas from any point of receipt on El Paso's system to various delivery points at the borderline between the States of Arizona and California, and in the States of Colorado, New Mexico, and Texas. El Paso states that the estimated daily and annual quantities would be 27,500 MMBtu 10,073,500 MMBtu equivalent of natural gas, respectively. El Paso further states that transportation service under § 284.223(a) commenced on June 22, 1989, as reported in Docket No. ST89–4234–000.

Comment date: October 13, 1989, in accordance with Standard Paragraph G at the end of this notice.

6. Northwest Pipeline Corp.

[Docket No. CP89–1980–000]

August 29, 1989.

Take notice that on August 21, 1989, Northwest Pipeline Corporation (Northwest), P.O. Box 8900, Salt Lake City, Utah 84108–0899, filed in Docket No. CP89–1980–000 a request pursuant to §§ 157.205 and 284.223 of the Commission's Regulations under the Natural Gas Act (18 CFR 157.205 and 284.223) for authorization to perform an interruptible transportation service for Fuel Resources Development Co. (Fuel Resources), a marketer, under Northwest's blanket certificate issued in Docket No. CP86–578–000, pursuant to section 7(c) of the Natural Gas Act, all as more fully set forth in the request which is on file with the Commission and open to public inspection.

Northwest states that pursuant to a transportation agreement dated February 10, 1988, as amended on November 28, 1988, and December 5, 1988, it proposes to receive up to 32,608 million Btu of natural gas per day from Fuel Resources from all transportation receipt points on its system and redeliver the gas at any transportation delivery point on its system. Northwest estimates that the peak day volumes, average day volumes, and annual volumes would be 32,608 million Btu, 100 million Btu, and 36,500 million Btu, respectively. It is stated that on July 20, 1989, Northwest commenced a 120-day transportation service for Fuel Resources under § 284.223(a), as reported in Docket No. ST89–4486–000.

Northwest further states that no facilities need be constructed to implement the service. Northwest states that the agreement, as amended, provides for a primary term expiring February 10, 1993, but that the term would continue on a month to month basis until terminated by 30 days written notice. Northwest proposes to charge the rates and abide by the terms and conditions of its Rate Schedule IT–1.

Comment date: October 13, 1989, in accordance with Standard Paragraph G at the end of this notice.

7. Natural Gas Pipeline Co. of America

[Docket No. CP89–1990–000]

August 29, 1989.

Take notice that on August 24, 1989, Natural Gas Pipeline Company of America (Natural), 701 East 22nd Street, Lombard, Illinois 60148, filed in Docket No. CP89–1990–000 a request pursuant to §§ 157.205 and 284.223(b) of the Commission's Regulations under the Natural Gas Act for authorization to transport natural gas on an interruptible basis for Hadson Gas Systems, Inc. (Hadson), a marketer of natural gas, respectively, under its blanket certificate issued in Docket No. CP86–582–000 pursuant to section 7 of the Natural Gas Act, all as more fully set forth in the request on file with the Commission and open to public inspection.

Natural states that it proposes to transport natural gas for Hadson between receipt points in offshore Louisiana, Louisiana, offshore Texas, Texas, New Mexico, Oklahoma, Illinois, Arkansas, Kansas, Colorado, Iowa, Nebraska, and Wyoming and delivery points in Louisiana, Colorado, Texas, offshore Texas, Louisiana, offshore Louisiana, New Mexico and Oklahoma.

Natural further states that the maximum daily, average daily and annual quantities that it would transport for Hadson would be 500,000 MMBtu equivalent of natural gas (plus any additional volumes accepted pursuant to the overrun provisions of Natural's Rate Schedule ITS), 100,000 MMBtu equivalent of natural gas and 36,500,000 MMBtu equivalent of natural gas, respectively.

Natural indicates that in a filing made with the Commission on August 24, 1989, it reported in Docket No. ST89–4546 that transportation service for Hadson had begun on June 20, 1989 under the 120-day automatic authorization provisions of § 284.223(a).

Comment date: October 13, 1989, in accordance with Standard Paragraph G at the end of this notice.

8. Northern Natural Gas Co., Division of Enron Corp.

[Docket No. CP89–2009–000]

August 30, 1989.

Take notice that on August 28, 1989, Northern Natural Gas Company, Division of Enron Corp. (Northern), 1400 Smith Street, P.O. Box 1188, Houston, Texas 77251–1188, filed in Docket No. CP89–2009–000 a request pursuant to § 157.205 of the Commission's Regulations under the Natural Gas Act (18 CFR 157.205) for authorization to provide an interruptible transportation service for WTG Exploration, Inc. (WTG), a producer, under the blanket certificate issued in Docket No. CP86–435–000, pursuant to section 7 of the Natural Gas Act, all as more fully set forth in the request that is on file with the Commission and open to public inspection.

Northern states that pursuant to a transportation agreement dated August 1, 1989, under its Rate Schedule IT–1, it proposes to transport up to 2,000 MMBtu per day equivalent of natural gas for WTG. Northern states that it would transport the gas from receipt points in Crockett County, Texas, and would deliver the gas to multiple delivery points, as shown in Appendix "A" of the agreement.

Northern advises that service under § 284.223(a) commenced August 1, 1989, as reported in Docket No. ST89–4502 (filed August 18, 1989). Northern further advises that it would transport 1,500 MMBtu on an average day and 730,000 MMBtu annually.

Comment date: October 16, 1989, in accordance with Standard Paragraph G at the end of this notice.

9. Trunkline Gas Co.

[Docket No. CP89–2004–000]

August 30, 1989.

Take notice that on August 28, 1989, Trunkline Gas Company (Trunkline), P.O. Box 1642, Houston, Texas 77251–1642, filed in Docket No. CP89–2004–000 a request pursuant to § 284–223 of the Commission's Regulations under the Natural Gas Act (18 CFR 284.223) for authority to provide interruptible transportation service for Mobil Natural Gas, Inc. (Mobil), a marketer of natural gas, under Trunkline's blanket transportation certificate authority issued April 30, 1987, in Docket No. CP83–586–000, all as more fully set forth in the application which is on file with the Commission and open to public inspection.

Trunkline states it will receive the gas at various existing points on its system in the offshore areas of Texas and Louisiana and the states of Texas, Louisiana, Tennessee and Illinois and deliver the gas for the account of Mobil to Northern Indiana Public Service Company in the counties of Marshall, Pulaski, Elkhart and Jasper, Indiana.

Trunkline proposes to transport up to 100,000 dt of gas per peak and average day and approximately 36,500,000 dt of gas annually. Trunkline states that the transportation service commenced under the 120-day automatic authorization of § 284.223(a) of the Commission's Regulations on July 1, 1989, pursuant to a transportation agreement dated May 5, 1989. Trunkline notified the Commission of the commencement of the transportation service in Docket No. ST89–4351–000.

Comment date: October 16, 1989, in accordance with Standard Paragraph G at the end of this notice.

10. El Paso Natural Gas Co.

[Docket No. CP89–2014–000]

August 30, 1989.

Take notice that on August 29, 1989, El Paso Natural Gas Company (El Paso), P.O. Box 1492, El Paso, Texas 79978, filed in Docket No. CP 89–2014–000 a request pursuant to § 157.205 of the Commission's Regulations under the Natural Gas Act (18 CFR 157.205) for authorization to abandon by sale segments of certain sales laterals to the City of Mesa, Arizona, under the blanket abandonment authorization issued in Docket No. CP82–435–000, pursuant to section 7 of the Natural Gas Act, all as more fully set forth in the request that is on file with the Commission and open to public inspection.

El Paso proposes to abandon segments of certain facilities by sale to the City of Mesa, Arizona, an existing customer. El Paso states that the facilities are described as a 4½" O.D. sales lateral, known as the Mesa Line, and a 6⅝" O.D. sales lateral looping the Mesa Line, known as the Mesa Loop Line. El Paso would abandon 5.04 miles of the Mesa Line and 2.98 miles of the Mesa Loop Line by conveyance to the City of Mesa. El Paso states that the Mesa Line was constructed and operated under authorization issued in Docket No. G–1345 (10 FPC 644) on November 7, 1951, and the Mesa Loop Line was authorized by Commission order issued February 28, 1958, in Docket No. G–13107 (19 FPC 282).

El Paso states that as a result of the State of Arizona's Price Road Expressway Expansion Project, it has reached an agreement with the Arizona State Highway Department to disconnect segments of the Mesa Line and Mesa Loop Line from the remainder of the El Paso system. It is explained that a portion of these lines would be removed from the ground to allow for expansion of the Price Road Expressway. El Paso states that in order to continue natural gas service to the City of Mesa, El Paso would construct, in replacement thereof, a new 10¾" O.D. line 4.0 miles long to connect to its existing meter stations which provide service to the City of Mesa.

El Paso advises that it would no longer need to use the remaining segments of the Mesa Line and Mesa Loop Line which would be physically separated from its system. In this regard, El Paso states that it has entered into a December 16, 1988, letter agreement providing for the sale of the Mesa Line and Mesa Loop Line to the City of Mesa. El Paso states that the City of Mesa is the only customer served by these

pipeline facilities and the referenced letter agreement reflects the city's consent to the abandonment of such facilities. It is stated that the City of Mesa has indicated to El Paso that the Mesa Line and Mesa Loop Line would be an integrated part of its natural gas distribution system.

Comment date: October 16, 1989, in accordance with Standard Paragraph G at the end of this notice.

11. United Gas Pipe Line Co.

[Docket No. CP89–1996–000]

August 30, 1989.

Take notice that on August 24, 1989, United Gas Pipe Line Company (United), P.O. Box 1478, Houston, Texas 77251–1478, filed in Docket No. CP89–1996–000, a request pursuant to § 157.205 of the Commission's Regulations under the Natural Gas Act (18 CFR 157.205) for authorization to provide an interruptible transportation service on behalf of American Central Gas Companies, Inc. (American Central), a marketer of natural gas under United's blanket certificate issued in Docket No. CP88–6–000 pursuant to section 7 of the Natural Gas Act, all as more fully set forth in the request on file with the Commission and open to public inspection.

United states that it would transport a maximum daily quantity of 185,400 MMBtu for American Central pursuant to an Interruptible Gas Transportation Agreement, dated November 9, 1988, as amended on June 9, 1989, between United and American Central. United further states that it would receive the natural gas at existing points of receipt in offshore Louisiana and in the States of Alabama, Louisiana, Mississippi, and Texas and would redeliver the natural gas at existing points of delivery in the States of Alabama, Florida, Louisiana, Mississippi, and Texas. United indicates that the estimated average day and annual quantities to be transported for American Central would be 185,400 MMBtu and 67,671,000 MMBtu, respectively.

United states that it commenced the transportation of natural gas for American Central on June 27, 1989, as reported in Docket No. ST89–4263–000, for a 120-day period pursuant to § 284.223(a) of the Commission's Regulations (18 CFR 284.223(a)).

Comment date: October 16, 1989, in accordance with Standard Paragraph G at the end of this notice.

12. Trunkline Gas Co.

[Docket No. CP89–2006–000]

August 30, 1989.

Take notice that on August 28, 1989, Trunkline Gas Company (Trunkline), P.O. Box 1642, Houston, Texas 77251–1642, filed in Docket No. CP89–2006–000, a request pursuant to § 157.205 of the Commission's Regulations under the Natural Gas Act (18 CFR 157.205) for authorization to transport natural gas on behalf of American Central Gas Marketing Company (American Central), under the authorization issued in Docket No. CP86–586–000 pursuant to section 7 of the Natural Gas Act, all as more fully set forth in the request which is on file with the Commission and open to public inspection.

Trunkline would perform the proposed interruptible transportation service for American Central, a shipper and marketer of natural gas, pursuant to a transportation agreement dated September 14, 1988 (contract No. T–PLT–1222). The term of the transportation agreement is for a primary term of one month from the initial date for service, and shall continue in effect month-to-month thereafter unless terminated upon 30 days prior written notice by on party to the other party. Trunkline proposes to transport on a peak day up to 150,000 dekatherm; on an average day up to 20,000 dekatherm; and on an annual basis 7,300,000 dekatherm of natural gas for American Central. Trunkline proposes to receive the subject gas from various existing receipt points in the States of Illinois, Louisiana, Tennessee, and Texas, from the Panhandle receipt point at Douglas County, Illinois, and from the areas of Offshore Louisiana and Offshore Texas. Trunkline would then transport and redeliver the subject gas, less fuel and unaccounted for line loss, to Illinois Power Company in Douglas County, Illinois. It is alleged that American Central would pay Trunkline the effective rate contained in Trunkline's rate schedule PT, which is currently 30.41 cents, which includes the ACA and GRI surcharge. Trunkline avers that construction of facilities would not be required to provide the proposed service.

It is explained that the proposed service is currently being performed pursuant to the 120-day self-implementing provision of § 284.223(a)(1) of the Commission's regulations. Trunkline commenced such self-implementing service on July 13, 1989, as reported in Docket No. ST89–4352–000.

Comment date: October 16, 1989, in accordance with Standard Paragraph G at the end of this notice.

13. Transwestern Pipeline Co.

[Docket No. CP89–2012–000]

August 30, 1989.

Take notice that on August 28, 1989, Transwestern Pipeline Company (Transwestern), 1400 Smith Street, Houston, Texas, filed in Docket No. CP89–2012–000 a request pursuant to §§ 157.205 and 284.223 of the Commission's Regulations under the Natural Gas Act (18 CFR 157.205 and 284.223) for authorization to perform an interruptible transportation service for Union Pacific Resources Company (Union Pacific), a producer, under Transwestern's blanket certificate issued in Docket No. CP88–133–000, pursuant to section 7(c) of the Natural Gas Act, all as more fully set forth in the request which is on file with the Commission and open to public inspection.

Transwestern states that pursuant to a transportation service agreement dated April 20, 1989, it proposes to receive up to 50,000 dt equivalent of natural gas per day from Union Pacific at specified receipt points located in Texas, Oklahoma, and New Mexico and redeliver the gas at specified points located in Texas, Oklahoma, New Mexico, and Arizona. Transwestern estimates that the peak day volumes, average day volumes, and annual volumes would be 50,000 million Btu, 37,500 million Btu, and 18,250,000 million Btu, respectively. It is stated that on July 20, 1989, Transwestern commenced a 120-day transportation service for Union Pacific under § 284.223(a), as reported in Docket No. ST89–4436–000.

Transwestern further states that no facilities need be constructed to implement the service. Transwestern states that the agreement provides for a primary term of fifteen years but the term would continue on a month to month basis thereafter unless terminated at any time subsequent to the primary term by either party upon thirty days prior written notice to the other party. Transwestern proposes to charge rates and abide by the terms and conditions of its Rate Schedule ITS–1.

Comment date: October 16, 1989, in accordance with Standard Paragraph G at the end of this notice.

14. United Gas Pipe Line Co.

[Docket No. CP89–1995–000]

August 30, 1989.

Take notice that on August 24, 1989, United Gas Pipe Line Company (United), P.O. Box 1478, Houston, Texas 77251–1478, filed in Docket No. CP89–1995–000 a request pursuant to § 157.205 of the Commission's Regulations for authorization to transport natural gas on behalf of Seagull Marketing Services (Seagull), a marketer of natural gas, under the blanket certificate issued by the Commission's order No. 509, pursuant to section 7 of the Natural Gas Act, all as more fully set forth in the request which is on file with the Commission and open to public inspection.

United proposes to transport on an interruptible basis up to 25,750 MMBtu equivalent of natural gas on a peak day, 25,750 MMBtu equivalent on an average day, and 9,398,750,750 MMBtu equivalent on an annual basis. It is stated that United would receive the gas for Seagull's account at South Marsh Island, Block 160, offshore Louisiana, and would deliver equivalent volumes at South Marsh Island, Block 160, offshore Louisiana. It is asserted that the transportation service would be effected utilizing existing facilities and would not require any construction of additional facilities. It is explained that the transportation service commenced July 2, 1989, under the automatic authorization provisions of § 284.223(a) of the Commission's Regulations, as reported in Docket No. ST89-4280.

Comment date: October 16, 1989, in accordance with Standard Paragraph G at the end of this notice.

15. Trunkline Gas Co.

[Docket No. CP89-2016-000]

August 30, 1989.

Take notice that on August 29, 1989, Trunkline Gas Company (Trunkline), P.O. Box 1642, Houston, Texas 77251-1642, filed in Docket No. CP89-2016-000 a request pursuant to § 157.205 of the Commission's Regulations under the Natural Gas Act (18 CFR 157.205) for authorization to provide an interruptible transportation service for PPG Industries, Inc. (PPG), an end-user, under the blanket certificate issued in Docket No. CP86-586-000, pursuant to section 7 of the Natural Gas Act, all as more fully set forth in the request that is on file with the Commission and open to public inspection.

Trunkline states that pursuant to a transportation agreement dated July 6, 1989, under its Rate Schedule PT, it proposes to transport up to 10,000 dekatherms (dt) per day equivalent of natural gas for PPG. Trunkline states that it would transport the gas from receipt points in the states of Illinois, Louisiana, Tennessee, and Texas, from the Panhandle receipt at Douglas County, Illinois, and from the areas of offshore Louisiana and offshore Texas, as shown in Exhibit "A" of the transportation agreement and would deliver the gas, less fuel and unaccounted for line loss, to Illinois Power Company in Douglas County, Illinois.

Trunkline advises that service under § 284.223(a) commenced July 20, 1989, as reported in Docket No. ST89-4543-000. Trunkline further advises that it would transport 8,000 dt on an average day and 3,650,000 dt annually.

Comment date: October 16, 1989, in accordance with Standard Paragraph G at the end of this notice.

16. Texas Gas Transmission Corp.

[Docket No. CP89-1955-000]

August 30, 1989.

Take notice that on August 15, 1989, Texas Gas Transmission Corporation (Texas Gas), 3800 Frederica Street, Owensboro, Kentucky 42301, filed in Docket No. CP89-1955-000, as supplemented, August 29, 1989, a request pursuant to §§ 157.205 and 284.223 of the Commission's Regulations under the Natural Gas Act for authorization to provide an interruptible transportation service for American Central Gas Marketing Company (American Central), under Texas Gas' blanket certificate issued in Docket No. CP88-686-000 pursuant to section 7 of the Natural Gas Act, all as more fully set forth in the request on file with the Commission and open to public inspection.

Texas Gas requests authorization to transport on a peak day up to 100,000 MMBtu equivalent of natural gas for American Central, with an estimated average daily quantity of 50,000 MMBtu. It is stated that on an annual basis, American Central estimates a volume of 18,250,000 MMBtu equivalent of natural gas.

Texas Gas states that transportation service for American Central commenced July 1, 1989, under the 120-day automatic provisions of § 284.223(a) of the Commission's Regulations, as reported in Docket No. ST89-4203.

Comment date: October 16, 1989, in accordance with Standard Paragraph G at the end of this notice.

17. Mississippi River Transmission Corp.

[Docket No. CP89-1991-000]

August 31, 1989.

Take notice that on August 24, 1989, Mississippi River Transmission Corporation (MRT), 9900 Clayton Road, St. Louis Missouri 63124, filed in Docket No. CP89-1991-000 and application pursuant to section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing MRT to increase the currently authorized firm entitlement it provides to Laclede Gas Company (Laclede) under MRT's Rate Schedule CD-1, all as more fully set forth in the application which is on file with the Commission and open to public inspection.

MRT states that it currently provides firm sales service to Laclede pursuant to an existing service agreement that will terminate on October 31, 1989. MRT further states that a new service agreement will become effective November 1, 1989. MRT requests that the Commission approve the new service agreement between MRT and Laclede which would increase Laclede's contract demand from 608,480 Mcf per day to 675,00 MMBtu per day. MRT notes that the new service agreement contract demand is stated in BTU's rather than MCF's in order to be consistent with its pending open access filing in Docket No. CP89-1121-000. According to MRT, it will be required to restate all of its customers' contract demands at their thermal equivalents to be consistent with its pending filing in Docket No. CP89-1121-000, and that such a tariff filing will be made in the near future. Since MRT has not yet filed to convert its unit of measure from an Mcf to an MMBtu basis, it states that the pro forma tariff sheets contained in the application reflect the increased contract demand quantity requested by Laclede as 661,765 Mcf.[1]

MRT states that it will not install any new facilities to provide the service contemplated by the new service agreement, and that the new service agreement will have no effect on MRT's service to any of its existing firm customers, other than Laclede. In that regard, MRT states that it has total firm gas deliverability which will be more than sufficient to meet MRT's systemwide demands after the new service agreement takes effect. MRT adds that it has contracted for a substantial amount of firm transportation capacity with upstream pipelines and that it also has access to additional gas directly from producers through its West Line, which provides MRT direct access to a variety of gas producers in North Louisiana and East Texas. MRT adds that it has also contracted with United Gas Pipe Line Company for firm purchases of 50,000 Mcf per day. Finally, MRT states that its winter deliveries can be supplemented by withdrawals from its existing storage facilities.

According to MRT, the increase in contract demand proposed herein represents peak day requirements which Laclede has historically purchased

---

[1] 675.000 MMBtu divided by 1.020 Btu.

under a combination of MRT's Rate Schedule's CD-1, X-19 and occasionally PI-1, when available. MRT states that in Docket No. CP89-2001-000 it proposes to abandon service provided to Laclede under Rate Schedule X-19 concurrently with the implementation of the new service agreement. As such, MRT states that the effective increase in MRT's systemwide service obligation will only be 3.6 percent.

MRT requests expeditious consideration of its application so that the new service agreement may be approved by November 1, 1989, which is the commencement of the 1989 winter heating season. MRT avers that this date is also significant because service is scheduled to commence under the new service agreement, and MRT proposes to abandon its Rate Schedule X-19 service to Laclede on that date. According to MRT, the increased level of service is necessary to ensure that Laclede can adequately serve its system requirements in the current and subsequent heating seasons.

Comment date: September 21, 1989, in accordance with Standard Paragraph F at the end of this notice.

18. Panhandle Eastern Pipe Line Company

[Docket No. CP89-2015-000]

August 31, 1989.

Take notice that on August 29, 1989, Panhandle Eastern Pipe Line Company (Panhandle), P.O. Box 1642, Houston, Texas 77251-1642, filed in Docket No. CP89-2015-000 a request pursuant to §§ 157.205 and 284.223 of the Commission's Regulations under the Natural Gas Act for authorization to provide transportation service for Amgas, Inc. (Amgas), a shipper and marketer of natural gas, under Panhandle's blanket certificate issued in Docket No. CP86-585-000 pursuant to section 7 of the Natural Gas Act, all as more fully set forth in the request on file with the Commission and open for public inspection.

Panhandle requests authorization to transport, on an interruptible basis, up to a maximum of 1,000 dt equivalent of natural gas per day for Amgas pursuant to a transportation agreement dated June 22, 1989. Panhandle states that it would receive the gas from various existing points of receipt in Colorado, Kansas, Michigan, Ohio, Oklahoma, Texas and Wyoming and redeliver the gas, less fuel and unaccounted for line loss, to Union Electric-Columbia in Boone County, Missouri. Panhandle indicates that the total volume of gas to be transported for Amgas on a peak day would be 1,000 dt; on an average day would be 500 dt; and on an annual basis would be 365,000 dt.

Panhandle states that it commenced the transportation of natural gas for Amgas on July 22, 1989, at Docket No. ST89-4544-000 for a 120-day period pursuant to § 284.223(a)(1) of the Commission's Regulations. Panhandle indicates that it proposes no new facilities in order to provide this transportation service.

Comment date: Octber 16, 1989, in accordance with Standard Paragraph G at the end of this notice.

19. Mississippi River Transmission Corp.

[Docket No. CP89-2001-000]

August 31, 1989.

Take notice that on August 25, 1989, Mississippi River Transmission Corporation (MRT), 9900 Clayton Road, St. Louis Missouri 63124, filed in Docket No. CP89-2001-000 an application pursuant to section 7(b) of the Natural Gas Act for permission and approval to abandon a special winter sales service provided to Laclede Gas Company (Laclede) under MRT's Rate Schedule X-19, all as more fully set forth in the application which is on file with the Commission and open to public inspection.

MRT states that Laclede is its largest jurisdictional sales customer and purchases most of its gas supply requirements from MRT under MRT's Rate Schedule CD-1 contained in MRT's FERC Gas Tariff, Second Revised Volume No. 1. It is stated that pursuant to an April 16, 1989, contract between MRT and Laclede, as amended, MRT also provides Laclede a special winter sales service under rate Schedule X-19. MRT advises that the Rate Schedule X-19 service is provided to Laclede on 80 winter days, as selected by Laclede, during the 100-day winter period from November 21 through February 28. MRT sells Laclede up to 36,500 Mcf per day during this period to supplement Laclede's system supply. MRT states that it has restructured its use of outside storage and transportation services and that as part of this restructuring, MRT and Laclede have agreed to terminate the X-19 service. MRT states that it provides the X-19 service to Laclede through gas supplies stored in ANR Storage Company (ANR Storage) facilities in Michigan, and by transportation of certain field production to MRT's system.

MRT states that it has agreed with Laclede to terminate the X-19 service effective November 1, 1989, and that Laclede has advised MRT to abandon the transportation arrangements and ANR Storage service used to deliver the winter service gas and has declined to arrange for its injection into ANR Storage for the coming summer injection season. According to MRT, Laclede no longer has a need for the special winter sales service provided under Rate Schedule X-19. MRT adds that there will be no abandonment of facilities.

MRT states that while it will continue to receive storage service from ANR Storage (and storage-related transportation services from off-system transporters) through March 31, 1990, it has assigned its ANR Storage capacity and its storage-related transportation agreements to Panhandle Eastern Pipe Line Company effective April 1, 1990. MRT states that its actions in this regard were a part of an overall plan to restructure its outside storage and transportation services. MRT states that ANR Storage and the off-system transporters filed applications to effectuate such assignments on May 26, 1989.[2] The application herein to abandon the X-19 service is related to those applications but, according to MRT, is not contingent upon the receipt of regulatory approval for such applications. MRT further states that approval of the assignment of such services will benefit MRT and its customers through the removal of outside storage and transportation costs from MRT's cost of service, a portion of which costs are currently borne directly by Laclede under Rate Schedule X-19.

Under Rate Schedule X-19, MRT states that Laclede is charged for the cost of the field production and associated transportation charges under the transportation component of the rate schedule. MRT states that it separately identifies and determines the volumes and costs related to the field purchases in order to avoid a double collection of such costs through MRT's Purchased Gas Adjustment (PGA) account. Additionally, MRT states it pays storage component charges related to the ANR Storage fees and the storage-related transportation charges into and out of ANR Storage's facilities. Further, a special PGA calculation is made to recognize and account for the storage-related purchases of MRT's Rate Schedule CD-1 gas by Laclede under Rate Schedule X-19.

Upon abandonment of Rate Schedule X-19 service, MRT states it will file to cancel Rate Schedule X-19, and also modify its PGA tariff provisions to eliminate the special calculation for the CD–1 storage component gas sold to Laclede under Rate Schedule X–19.

---

[2] MRT states that applications were filed by ANR Storage in Docket No. CP78-432-000; ANR Pipeline Company in Docket No. CP78-545-006; and Michigan Consolidated Gas Company in Docket No. CP89-1523-000.

Comment date: September 21, 1989, in accordance with Standard Paragraph F at the end of the notice.

20. Northern Natural Gas Co.; Division of Enron Corp.

[Docket No. CP89-2010-000]

August 31, 1989.

Take notice that on August 28, 1989, Northern Natural Gas Company, Division of Enron Corporation (Northern) 1400 Smith Street, P.O. Box 1188, Houston, Texas 77251–1188, filed in Docket No. CP89–2010–000 a request pursuant to §§ 157.205 and 284.223 of the Commission's Regulations under the Natural Gas Act (18 CFR 157.205) and the Natural Gas Policy Act (18 CFR 284.223) for authorization to transport gas on behalf of Carnation Company (Carnation), an end-user of natural gas, under Northern's blanket certificate issued in Docket No. CP86–435–000 pursuant to section 7 of the Natural Gas Act, all as more fully set forth in the request on file with the Commission and open to public inspection.

Northern proposes to transport on an interruptible basis up to 2,000 MMBtu of natural gas equivalent per day on behalf of Carnation pursuant to a transportation agreement dated July 27, 1989, between Northern and Carnation. Northern would receive the gas at existing delivery points in Oklahoma, Kansas, Texas, Iowa and Minnesota and redeliver equivalent volumes, less fuel used, at an existing delivery point in Iowa.

Northern further states that the estimated average daily and annual quantities would be 1,500 MMBtu and 730,000 MMBtu, respectively. Service under § 284.223(a) commenced on August 18, 1989, as reported in Docket No. ST89–4501–000, it is stated.

Comment date: October 16, 1989, in accordance with Standard Paragraph G at the end of this notice.

21. United Gas Pipe Line Co.

[Docket No. CP89-1993-000]

August 31, 1989.

Take notice that on August 28, 1989, United Gas Pipe Line Company (United), P.O. Box 1478, Houston, Texas 77152–1478, filed in Docket No. CP89–1993–000 an application pursuant to § 157.205 of the Commission's Regulations under the Natural Gas Act (18 CFR 157.205) for authorization to transport natural gas on behalf of Texaco Gas Marketing (Texaco), a marketer of natural gas, under United's blanket certificate issued in Docket No. CP88–6–000 pursuant to section 7 of the Natural Gas Act, all as more fully set forth in the request on file with the Commission and open to public inspection.

United proposes to transport, on an interruptible basis, up to 360,500 MMBtu per day for Texaco. United states that construction of facilities would not be required to provide the proposed service.

United further states that the maximum day, average day, and annual transportation volumes would be approximately 360,500 MMBtu, 360,500 MMBtu and 131,582,500 MMBtu respectively.

United advises that service under § 284.223(a) commenced May 25, 1989, as reported in Docket No. ST89–4279.

Comment date: October 16, 1989, in accordance with Standard Paragraph G at the end of this notice.

22. United Gas Pipe Line Co.

[Docket No. CP89-1997-000]

August 31, 1989.

Take notice that on August 24, 1989, United Gas Pipe Line Company (United), P.O. Box 1478, Houston, Texas 77152–1478, filed in Docket No. CP89–1997–000 an application pursuant to § 157.205 of the Commission's Regulations under the Natural Gas Act (18 CFR 157.205) for authorization to transport natural gas on behalf of Conoco, Inc. (Conoco) as agent for E.I. duPont de Nemours and Company, an end user of natural gas, under United's blanket certificate issued in Docket No. CP88–6–000 pursuant to section 7 of the Natural Gas Act, all as more fully set forth in the request which is on file with the Commission and open to public inspection.

United proposes to transport, on an interruptible basis, up to 15,450 MMBtu per day for Conoco. United states that construction of facilities would not be required to provide the proposed service.

United further states that the maximum day, average day, and annual transportation volumes would be approximately 15,450 MMBtu, 15,450 MMBtu and 5,639,250 MMBtu respectively.

United advises that service under § 284.223(a) commenced June 1, 1989, as reported in Docket No. ST89–4207.

Comment date: October 16, 1989, in accordance with Standard Paragraph G at the end of this notice.

23. ANR Pipe Line Co.

[Docket No. CP89-2023-000]

August 31, 1989.

Take notice that on August 29, 1989, ANR Pipe Line Company (ANR), 500 Renaissance Center, Detroit, Michigan 48243, filed in Docket No. CP89–2023–000 an application pursuant to § 157.205 of the Commission's Regulations under the Natural Gas Act (18 CFR 157.205) for authorization to transport natural gas on behalf of Xebec Gas Co. (Xebec), a marketer of natural gas, under ANR's blanket certificate issued in Docket No. CP88–532–000 pursuant to section 7 of the Natural Gas Act, all as more fully set forth in the request which is on file with the Commission and open to public inspection.

ANR proposes to transport, on an interruptible basis, up to 7,463 MMBtu per day for Xebec. ANR states that construction of facilities would not be required to provide the proposed service.

ANR further states that the maximum day, average day, and annual transportation volumes would be approximately 7,463 MMBtu, 7,463 MMBtu and 2,724,000 MMBtu respectively.

ANR advises that service under § 284.223(a) commenced July 1, 1989, as reported in Docket No. ST89–4292.

Comment date: October 16, 1989, in accordance with Standard Paragraph G at the end of this notice.

24. Stingray Pipeline Co.

[Docket No. CP89-2018-000]

August 31, 1989.

Take notice that on August 29, 1989, Stingray Pipeline Company (Stingray), P.O. Box 1642, Houston, Texas 77251–1642, filed in Docket No. CP89–2018–000 a request pursuant to § 157.205 of the Commission's Regulations under the Natural Gas Act (18 CFR 157.205) for authorization to provide an interruptible transportation service for EnMark Gas Corporation (EnMark), a marketer, under the blanket certificate issued by the Commission's Order No. 509, pursuant to section 7 of the Natural Gas Act, corresponding to the rates, terms and conditions filed in Docket No. RP89–70–000, all as more fully set forth in the request on file with the Commission and open to public inspection.

Stingray states that pursuant to a transportation agreement dated April 3, 1989, under its Rate Schedule ITS, it proposes to transport up to 10,000 MMBtu per day equivalent of natural gas for EnMark. Stingray states that it would transport the gas from various receipt points on its system as shown in Exhibit "A" of the transportation agreement and would deliver the gas, less gas attributable to fuel used and unaccounted for line loss, in Louisiana and offshore Texas.

Stingray advises that service under § 284.223(a) commenced August 1, 1989, as reported in Docket No. ST89–4434. Stingray further advises that it would transport 7,000 MMBtu on an average day and 2,555,000 MMBtu annually.

Comment date: October 16, 1989, in accordance with Standard Paragraph G at the end of this notice.

25. Iowa Public Service Co.

[Docket No. CP89-2002-000]

August 31, 1989.

Take notice that on August 25, 1989, Iowa Public Service Company (IPS), 401 Douglas, P.O. Box 778, Sioux City, Iowa 51102, filed in Docket No. CP89–2002–000 an application requesting the Commission issue IPS a section 7(f) determination for a service area comprised of Union, Clay, Turner and Lincoln Counties of South Dakota, all as more fully set forth in the application which is on file with the Commission and open to public inspection.

IPS also requests that the Commission make a determination that IPS qualifies as a local distribution company (LDC) in the area proposed as a section 7(f) service area.

IPS states that it owns and operates a pipeline which extends from Sioux City, Iowa, across the South Dakota border (Big Sioux River) providing natural gas service at retail to the communities of North Sioux City and McCook Lake in South Dakota. All the gas transported serves both residential and commercial customers and is not for resale. IPS indicates that it has one arrangement to sell gas for resale off the ANR Pipeline Company (ANR) system whereby it purchases gas from ANR for resale to Great River Gas Company.

Comment date: September 21, 1989, in accordance with Standard Paragraph E at the end of this notice.

26. Northwest Pipeline Corp.

[Docket No. CP89-2030-000]

August 31, 1989.

Take notice that on August 29, 1989, Northwest Pipeline Corporation (Northwest) 295 Chipeta Way, Salt Lake City, Utah 84108 filed in Docket No. CP89–2030–000 a request pursuant to § 157.205 of the Commission's Regulations under the Natural Gas Act (18 CFR 157.205) for authorization to transport natural gas on behalf of GasMark, Inc. (GasMark), under its blanket authorization issued in Docket No. CP86–578–000 pursuant to section 7 of the Natural Gas Act, all as more fully set forth in the request which is on file with the Commission and open to public inspection.

Northwest would perform the proposed interruptible transportation service for GasMark, a marketer of natural gas, pursuant to a transportation agreement dated June 10, 1989, as amended June 10, 1989, and July 10, 1989, under its Rate Schedule TI–1 (contract number 5612D). The term of the transportation agreement is from the date of execution and shall remain in full force and effect for a term continuing on a month to month basis, subject to termination upon 30 business days written notice by either party. Northwest proposes to transport on a peak day up to 5,500 MMBtu; on an average day up to 1,700 MMBtu; and on an annual basis 620,000 MMBtu for GasMark. Northwest proposes to transport the subject gas through its transmission system from wells located in Grand County, Utah; La Plata County, Colorado and Rio Arriba and San Juan Counties, New Mexico to delivery points located in Grand County, Utah; La Plata County, Colorado and Rio Arriba County, New Mexico. It is stated that the natural gas transported under the transportation agreement may be received on behalf of GasMark by any local distribution company or affiliate of GasMark which has an appropriate contractual arrangement with GasMark. Northwest avers that no new facilities are required to provide the proposed service.

It is explained that the proposed service is currently being performed pursuant to the 120-day self implementing provision of § 284.223(a)(1) of the Commission's Regulations. Northwest commenced such self-implementing service on July 1, 1989, as reported in Docket No. ST89–4428–000.

Comment date: October 16, 1989, in accordance with Standard Paragraph G at the end of this notice.

27. United Gas Pipe Line Co.

[Docket No. CP89-1994-000]

August 31, 1989.

Take notice that on August 24, 1989, United Gas Pipe Line Company (United), P.O. Box 1478, Houston, Texas 77251–1478, filed in Docket No. CP89–1994–000 a request pursuant to § 157.205 and 284.223 of the Commission's Regulations under the Natural Gas Act (18 CFR 157.205) for authorization to transport natural gas on behalf of MidCon Marketing Company (MidCon), under the blanket certificate issued in Docket No. CP88–6–00 pursuant to section 7 of the Natural Gas Act, all as more fully set forth in the request on file with the Commission and open to public inspection.

United states that pursuant to a Transportation Agreement dated May 23, 1989, it proposes to transport, on an interruptible basis, up to a maximum of 41,200 MMBtu of natural gas for MidCon under Rate Schedule ITS.

United also states that it will transport approximately, 41,200 MMBtu on an average day and approximately 15,038,000 on an annual basis.

United further states it commenced on July 1, 1989, as reported in Docket No. ST89–4281–000.

Comment date: October 16, 1989, in accordance with Standard Paragraph G at the end of this notice.

28. Stingray Pipeline Co.

[Docket No. CP89-2019-000]

August 31, 1989.

Take notice that on August 29, 1989, Stingray Pipeline Company (Stingray), 701 East 22nd Street, Lombard, Illinois 60148, filed in Docket No. CP89–2019–000 a request pursuant to § 157.205 of the Commission's Regulations under the Natural Gas Act (18 CFR 157.205) for authorization to provide an interruptible transportation service for Phillips Petroleum Company (Phillips), a producer of natural gas, under the blanket certificate issued by the Commission's Order No. 509, pursuant to section 7 of the Natural Gas Act, corresponding to the rates, terms and conditions filed in Docket No. RP89–70–000, all as more fully set forth in the request that is on file with the Commission and open to public inspection.

Stingray requests authorization to transport, on an interruptible basis, up to a maximum of 10,000 MMBtu of natural gas per day for Phillips from receipt points located in Louisiana, Offshore Louisiana and Offshore Texas to a delivery point located in Cameron Parish, Louisiana. Stingray anticipates transporting 5,500 MMBtu of natural gas on an average day and an annual volume of 2,007,500 MMBtu. Stingray advises that service under § 284.223(a) commenced August 1, 1989, as reported in Docket No. ST89–4433–000.

Comment date: October 16, 1989, in accordance with Standard Paragraph G at the end of this notice.

29. Texas Gas Transmission Corp.

[Docket No. CP89-1986-000]

August 31, 1989.

Take notice that on August 24, 1989, Texas Gas Transmission Corporation (Texas Gas), 3800 Frederica Street, Owensboro, Kentucky 42301, filed a request with the Commission in Docket No. CP89–1986–000 pursuant to § 157.205 of the Commission's Regulations under the Natural Gas Act for authorization to add a delivery point for its service to

Citizens, Gas and Coke Utility (C, G & C), a local distribution company, under the blanket certificate issued in Docket No. CP82–407–000 pursuant to section 7 of the Natural Gas Act, all as more fully set forth in the request which is open to public inspection.

Specifically, Texas Gas requests authority to add the existing Worthington No. 2 meter station in Greene County, Indiana, as a delivery point to its proposed service agreement with C, G & C. Texas Gas states that it installed the Worthington No. 2 meter station in 1987 for the sole purpose of delivering natural gas volumes to C, G & C under section 311 of the Natural Gas Policy Act of 1978. Texas Gas now states that it needs this meter station as a jurisdictional delivery point for the sales service to C, G & C authorized January 11, 1989, in Docket No. CP87–205–001 (46 FERC ¶61,010).

Comment date: October 16, 1989, in accordance with Standard Paragraph G at the end of this notice.

30. ANR Pipeline Co.

[Docket No. CP89–2027–000]

August 31, 1989.

Take notice that on August 29, 1989, ANR Pipeline Company (ANR), 500 Renaissance Center Detroit, Michigan 48243, filed in Docket No. CP89–2027–000 a request pursuant to §§ 157.205 and 284.223 of the Commission's Regulations under the Natural Gas Act for authorization to transport natural gas under the blanket certificate issued in Docket No. CP88–532–000 pursuant to section 7(c) of the Natural Gas Act, all as more fully set forth in the request on file with the Commission and open to public inspection.

ANR proposes to transport natural gas on an interruptible basis for Coastal Gas Marketing Co. (Coastal). ANR explains that service commenced July 1, 1989 under § 284.223(a) of the Commission's Regulations, as reported in Docket No. ST89–4296. ANR further explains that the peak day quantity would be 900,000 dekatherms, the average daily quantity would be 900,000 dekatherms, and that the annual quantity would be 328,500,000 dekatherms. ANR explains that it would receive natural gas at existing points of receipt in the states of Kansas, Louisiana, Oklahoma, Texas and Wisconsin, and the Offshore Texas and Louisiana gathering areas. ANR states that it would deliver the gas to Coastal at existing interconnections located in the state of Michigan.

Comment date: October 16, 1989, in accordance with Standard Paragraph G at the end of this notice.

Standard Paragraphs

F. Any person desiring to be heard or make any protest with reference to said filing should on or before the comment date file with the Federal Energy Regulatory Commission, 825 North Capitol Street, NE., Washington, DC 20426, a motion to intervene or a protest in accordance with the requirements of the Commission's Rules of Practice and Procedure (18 CFR 385.211 and 385.214) and the Regulations under the Natural Gas Act (18 CFR 157.10). All protests filed with the Commission will be considered by it in determining the appropriate action to be taken but will not serve to make the protestants parties to the proceeding. Any person wishing to become a party to a proceeding or to participate as a party in any hearing therein must file a motion to intervene in accordance with the Commission's Rules.

Take further notice that, pursuant to the authority contained in and subject to jurisdiction conferred upon the Federal Energy Regulatory Commission by sections 7 and 15 of the Natural Gas Act and the Commission's Rules of Practice and Procedure, a hearing will be held without further notice before the Commission or its designee on this filing if no motion to intervene is filed within the time required herein, if the Commission on its own review of the matter finds that a grant of the certificate is required by the public convenience and necessity. If a motion for leave to intervene is timely filed, or if the Commission on its own motion believes that a formal hearing is required, further notice of such hearing will be duly given.

Under the procedure herein provided for, unless otherwise advised, it will be unnecessary for the applicant to appear or be represented at the hearing.

G. Any person or the Commission's staff may, within 45 days after the issuance of the instant notice by the Commission, file pursuant to Rule 214 of the Commission's Procedural Rules (18 CFR 385.214) a motion to intervene or notice of intervention and pursuant to § 157.205 of the Regulations under the Natural Gas Act (18 CFR 157.205) a protest to the request. If no protest is filed within the time allowed therefore, the proposed activity shall be deemed to be authorized effective the day after the time allowed for filing a protest. If a protest is filed and not withdrawn within 30 days after the time allowed for filing a protest, the instant request shall be treated as an application for authorization pursuant to section 7 of the Natural Gas Act.

Lois D. Cashell,

Secretary.

BILLING CODE 6717-01-M

[Docket No. TM90–1–61–000]

Bayou Interstate Pipeline System; Proposed Change in FERC Gas Tariff

September 5, 1989.

Take notice that on August 31, 1989, Bayou Interstate Pipeline System (Bayou) tendered for filing Twelfth Revised Sheet No. 4 to be a part of its FERC Gas Tariff.

The proposed tariff sheet provides a revised Annual Charges Adjustment (ACA) that the Federal Energy Regulatory Commission ("Commission") assesses Bayou under § 382.103 of the Commission's Regulations.

Bayou states that a copy of this filing was mailed to Bayou's jurisdictional customers and interested state regulatory agencies.

Any person desiring to be heard or to protest said filing should file a motion to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street, NE., Washington, DC 20426, in accordance with § 385.214 and 385.211. All such motions or protests must be filed on or before September 13, 1989. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a motion to intervene. Copies of this filing are on file with the Commission and are available for public inspection.

Lois D. Cashell,

Secretary.

BILLING CODE 6717-01-M

[Docket No. TM90–1–32–000]

Colorado Interstate Gas Co.; Filing

September 5, 1989.

Take that on August 31, 1989, Colorado Interstate Gas Company ("CIG") submitted for filing tariff sheets reflecting a decrease of 1.01¢ per Mcf in the ACA adjustment charge as filed on August 31, 1988 resulting in a new ACA rate of .17¢ per Mcf based on CIG's 1989 ACA billing.

Pursuant to section 25 of CIG's FERC Original Volume No. 1 Tariff and Article No. 20 of CIG's Volume No. 1–A Tariff, CIG will file at least thirty days prior to the proposed effective date to reflect any changes in the ACA billing charge.

CIG has received its 1989 ACA billing, and is making this filing to reflect the 0.01¢ reduction to be effective October 1, 1989.

CIG submits for filing six copies of the following tariff sheets to reflect the reduction in the Annual ACA billing charge rate:

Original Volume No. 1 Tariff:

Substitute Forty-First Revised Sheet No. 7
Substitute Forty-First Revised Sheet No. 8

Volume No. 1–A Tariff:

Fourth Revised Sheet No. 4

Original Volume No. 2 Tariff:

Ninth Revised Sheet No. 187
Eighth Revised Sheet No. 463
Sixth Revised Sheet No. 517A
Eighth Revised Sheet No. 544
Sixth Revised Sheet No. 593A
Seventh Revised Sheet No. 625
Seventh Revised Sheet No. 662
Seventh Revised Sheet No. 674
Sixth Revised Sheet No. 697
Sixth Revised Sheet No. 774
Sixth Revised Sheet No. 801A
Sixth Revised Sheet No. 862
Fifth Revised Sheet No. 885
Fifth Revised Sheet No. 911
Fifth Revised Sheet No. 934
Fifth Revised Sheet No. 904
Fifth Revised Sheet No. 995
Fifth Revised Sheet No. 2021
Fifth Revised Sheet No. 1046
Fifth Revised Sheet No. 1101
Fifth Revised Sheet No. 1182
Fifth Revised Sheet No. 1216
Fifth Revised Sheet No. 1248
Fifth Revised Sheet No. 1284
Fifth Revised Sheet No. 1335
Fifth Revised Sheet No. 1347
Fifth Revised Sheet No. 1370
Fourth Revised Sheet No. 1450
Fourth Revised Sheet No. 1483

CIG states that copies of this filing are being served on all jurisdictional customers and interested state commissions.

Any person desiring to be heard or to protest said filing should file a motion to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street, NE., Washington, DC 20426, in accordance with § 385.214 and 385.211 of the Commission's Rules and Regulations. All such motions or protests should be filed on or before September 13, 1989. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a motion to intervene. Copies of this filing are on file with the Commission and are available for public inspection in the Public Reference Room.

Lois D. Cashell,

Secretary.

[FR Doc. 89–21343 Filed 9–11–89; 8:45 am]

BILLING CODE 6717-01-M

[Docket No. SA89–9–000]

Corpus Christi Transmission Co.; Petition for Adjustment

September 5, 1989.

Take notice that on August 21, 1989, Corpus Christi Transmission Company (Corpus Christi) filed pursuant to section 502(c) of the Natural Gas Policy Act of 1978 (NGPA), a petition for adjustment from § 284.123(b)(ii) of the Commission's regulations to permit Corpus Christi to base its rates for NGPA section 311(a) transportation services on the rate contained in Tariff Sheet No. T–05 currently on file with the Railroad Commission of Texas (Texas). Corpus Christi states that the gas will be transported under transportation agreements providing for rates not greater than comparable intrastate service as reflected in rates filed with Texas. Corpus Christi further states that Tariff Sheet No. T–05 provides for a rate of $.30 per MMBtu.

Corpus Christi submits that since it does not render city gate service it is requesting this adjustment. Corpus Christi further submits that the adjustment it seeks is necessary to prevent special hardship and inequity that would otherwise result from requiring it to submit a § 284.123(b)(2) filing, and would avoid unnecessary dual agency review.

The procedures applicable to the conduct of this adjustment proceeding are found in subpart K of the Commission's Rules of Practice and Procedure. Any person desiring to participate in this adjustment proceeding must file a motion to intervene in accordance with the provisions of such subpart K. All motions to intervene must be filed within 15 days after publication of this notice in the **Federal Register**. The petition is on file with the Commission and is available for public inspection.

Lois D. Cashell,

Secretary.

BILLING CODE 6717-01-M

[Docket No. TM90–1–34–000]

Florida Gas Transmission Co.; Proposed Changes in FERC Gas Tariff

September 5, 1989.

Take notice that on August 31, 1989, Florida Gas Transmission Company (FGT) tendered for filing the following tariff sheets to its FERC Gas Tariff, to be effective October 1, 1989.

FERC Gas Tariff, First Revised Volume No. 1

Ninth Revised 37th Revised Sheet No. 8

FERC Gas Tariff, Original Volume No. 2

Eighth Revised 59th Revised Sheet No. 128

Reason for Filing

FGT states that above-referenced tariff sheets are being filed to revise the Annual Charge Adjustment (ACA) to .17¢/Mcf (.017¢/therm), as authorized by the Commission for the 1990 fiscal year.

FGT states that copy of its filing has been served on all customers receiving gas under its FERC Gas Tariff and interested state commissions.

Any person desiring to be heard or to protest said filing should file a motion to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street NE., Washington, DC 20426 in accordance with §§ 385.211 and 385.214 of the Commission's Rules and Regulations. All such motions or protests should be filed on or before September 13, 1989. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person whishing to become a party must file a motion to intervene.

Copies of this filing are on file with the Commission and are available for public inspection in the Public Reference Room.

Lois D. Cashell,

Secretary.

BILLING CODE 6717-01-M

[Docket No. TM90–1–27–000]

North Penn Gas Co.; Proposed Changes in FERC Gas Tariff

September 5, 1989.

Take notice that North Penn Gas Company (North Penn) on August 31, 1989 tendered for filing Ninety-Fifth Revised Sheet No. PGA–1 to its FERC Gas Tariff, First Revised Volume No. 1.

North Penn states that the filed tariff sheet reflects revision, pursuant to § 154.38(d)(6) of the Commission's regulations, of North Penn's Annual Charge Adjustment (ACA) surcharge to recover the Commission's annual charges billing. The new ACA surcharge rate is 0.17¢ per Mcf.

North Penn proposes an effective date of October 1, 1989.

North Penn states that copies of the filing have been served on the Company's jurisdictional customers and interested state commissions.

Any person desiring to be heard or to protest said filing should file a motion to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street NE., Washington, DC 20426, in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure. All such motions or protests should be filed on or before September 13, 1989. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a motion to intervene. Copies of North Penn's filing are on file with the Commission and are available for public inspection.

Lois D. Cashell,
Secretary.

BILLING CODE 6717-01-M

[Docket No. TM90-1-72-000]

Pelican Interstate Gas System; Proposed Changes in FERC Gas Tariff

September 5, 1989.

Take notice that on August 31, 1989, Pelican Interstate Gas Company (Pelican) tendered for filing Second Revised Sheet No. 2A to be a part of its FERC Gas Tariff.

The proposed tariff sheet provides a revised Annual Charges Adjustment (ACA) that the Commission assesses Pelican under Part 382.103 of the Commission's Regulations.

Pelican states that a copy of this filing was mailed to Pelican's jurisdictional customers and interested state regulatory agencies.

Any person desiring to be heard or to protest said filing should file a motion to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street NE., Washington, DC 20426, in accordance with §§ 385.214 and 385.211. All such motions or protests should be filed on or before September 13, 1989. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a motion to intervene. Copies of this filing are on file with the Commission and are available for public inspection.

Lois D. Cashell,
Secretary.

[Docket No. TM 90-1-80-000]

Tarpon Transmission Co.; Tariff Filing

September 5, 1989.

Take Notice that on August 21, 1989, Tarpon Transmission Company (Tarpon) tendered for filing the following revised tariff sheet to be effective October 1, 1989:

Original Volume No. 1

Second Revised Sheet No. 2-A

On July 14, 1989, the Commission notified Tarpon of a downward revision of 0.01 cents per Mcf to the unit rate of the Annual Charge Adjustment Clause (ACA) to be applied to interstate gas pipeline rates for recovery of 1989 Annual Charges, pursuant to Order 472. This revision, reflected in the above-described tariff sheet, authorizes Tarpon to collect 0.17 cents for each jurisdictional Mcf of natural gas transported to be applied to the 1989 Annual Charges assessed Tarpon by the Commission under Part 382 of the Commission Regulations.

Tarpon requests an effective for this revised tariff sheet of October 1, 1989.

Any person desiring to be heard or to protest said filing should file a Motion to Intervene or Protest with the Federal Energy Regulatory Commission, 825 North Capitol Street, NE., Washington, DC 20426, in such accordance with §§ 385.214 and 385.211 of the Commission's regulations. All such petitions of protest should be filed on or before September 13, 1989.

Protests will be considered by the Commission in determining appropriate action to be taken, but will not serve to make protestants parties to the proceedings. Any person wishing to become a party must file a Motion to Intervene. Copies of this filing are on file with the Commission and are available for public inspection.

Lois D. Cashell,
Secretary.

BILLING CODE 6717-01-M

[Docket No. TM 90-1-56-000]

Valero Interstate Transmission Co.; Proposed Change in Rates

September 5, 1989.

Take Notice that on August 31, 1989, Valero Interstate Transmission Company ("Vitco") tendered the following tariff sheets for filing containing changes to the ACA unit rate in each applicable rate schedule:

Original Volume No. 1

16th Revised Sheet No. 14.
14th Revised Sheet No. 14.2.
3rd Revised Sheet No. 21.12.
2nd Revised Sheet No. 29.9.

Original Volume No. 2

19th Revised Sheet No. 6.
3rd Revised Sheet No. 7.
2nd Revised Sheet No. 12.50.

The proposed effective date for the above filings is October 1, 1989. Vitco requests a waiver of any Commission regulations or orders which would prohibit implementation by October 1, 1989.

Any person desiring to be heard or to protest said filing should file a petition to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street, NE., Washington, DC., 20426, in such accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR 384.211 and 385.214). All such petitions or protests should be filed on or before September 13, 1989. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a petition to intervene. Copies of this filing are on file with the Commission and are available for public inspection.

BILLING CODE 6717-01-M

[Docket No. TM90-1-43-000]

Williams Natural Gas Co.; Proposed Changes in FERC Gas Tariff

September 5, 1989.

Take notice that Williams Natural Gas Company (WNG) on August 31, 1989, tendered for filing Fourteenth Revised Sheet No. 6 and Thirteenth Revised Sheet No. 7 to its FERC Gas Tariff, Original Volume No. 1. WNG states that pursuant to Article 24 of the General Terms and Conditions of such Tariff, it proposes to decrease its rates effective October 1, 1989, to reflect a decrease in the FERC Annual Charge Adjustment from $.0018 to $.0017 for the fiscal year beginning October 1, 1989, per the Commission's Annual Charges Billing issued July 14, 1989.

WNG states that copies of its filing were served on all jurisdictional

customers and interested state commissions.

Any person desiring to be heard or to protest said filing should file a motion to intervene or a protest with the Federal Energy Regulatory Commission, 825 North Capitol Street NE., Washington, DC 20426, in accordance with §§ 385.211 and 385.214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211, 385.214). All such motions or protests should be filed on or before September 13, 1989. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceedings. Any person wishing to become a party must file a motion to intervene. Copies of this filing are on file with the Commission and are available for public inspection.

Lois D. Cashell.
Secretary.

BILLING CODE 6717-01-M

[Docket No. TM90-1-76-000]

Wyoming Interstate Company, Ltd., Filing

September 5, 1989.

Take note that on August 31, 1989, Wyoming Interstate Company, Ltd., ("WIC") submitted for filing tariff sheets reflecting a decrease of 0.01¢ per Mcf in the ACA adjustment charge as filed on August 31, 1988 resulting in a new ACA rate of 0.17¢ per Mcf based on WIC's 1989 ACA billing.

Pursuant to section 20.3 of WIC's FERC Original Volume No. 1 tariff, WIC will file at least thirty days prior to the proposed effective date to reflect any changes in the ACA billing charge. WIC has received its 1989 ACA billing, and is making this filing to reflect the 0.01¢ reduction to be effective October 1, 1989.

WIC submits for filing six copies of Eighth Revised Sheet No. 5 to its FERC Gas Tariff, Original Volume No. 1, to reflect the reduction in the Annual ACA billing charge rate.

WIC states that copies of this filing are being served on all jurisdictional customers.

Any person desiring to be heard or to protest said filing should file a motion to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street NE., Washington, DC 20426, in accordance with §§ 385.214 and 385.211 of the Commission's Rules and Regulations. All such motions or protests should be filed on or before September 13, 1989. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a motion to intervene. Copies of this filing are on file with the Commission and are available for public inspection in the Public Reference Room.

ENVIRONMENTAL PROTECTION AGENCY

[FRL-3644-9]

Science Advisory Board Executive Committee; Open Meeting—October 23-24, 1989

Under Public Law 92-463, notice is hereby given that the Executive Committee of the Science Advisory Board (SAB) will meet on October 23 from 8:30 a.m. to 5:00 p.m. and on October 24 from 8:30 a.m. to 3:00 p.m. at the Holiday Inn, 550 C Street SW., Washington, DC 20024.

The purpose of the meeting is to enable the Executive Committee to act on reports from its subcommittees and standing committees that have been completed since the last meeting and receive status reports from each of the committees. Some action items include: SAB Report on "Dioxin Potency and Exposure"; SAB Report on Equilibrium Partitioning for Assessing Sediment Quality; SAB Review of Global Climate Change Research Plan; the SAB Review of Lead Carcinogenicity and Agency Science and Policy; and SAB Review of Products of Incomplete Combustion (PIC) of Hazardous Wastes. The Committee will receive a status report on the SAB Mission and Functioning Subcommittee and a status report on the Management and Organization Study of the SAB.

The meetings are open to the Public. Any member of the public wishing to attend should notify Joanna Foellmer or Dr. Donald G. Barnes, Staff Director, Science Advisory Board, at 202-382-4126 by October 18, 1989.

Dated: September 5, 1989.

Donald G. Barnes,
Staff Director, Science Advisory Board.

BILLING CODE 6560-50-M

[FRL-3646-2]

Establishment and Open Meeting of the Negotiated Rulemaking Advisory Committee for the Volatile Organic Chemical Equipment Leak Rule

As required by section 9(a)(2) of the Federal Advisory Committee Act (Pub. L. 92-463), we are giving notice of the establishment of an Advisory Committee to negotiate a rule to control fugitive emissions of toxic volatile organic compounds (VOCs) from chemical equipment leaks. We have determined that this is in the public interest and will assist the Agency in performing its duties prescribed in Sections 111 and 112 of the Clean Air Act, as amended.

Copies of the Committee Charter will be filed with the appropriate committees of Congress and the Library of Congress.

The committee's initial meeting will be held on September 27, 1989 from 9:00 am to 12:30 pm and on September 28 from 9:00 am to 5:00 pm at the Quality Hotel Capitol Hill, 415 New Jersey Avenue N.W., Washington, D.C. The Committee's facilitator has notified interested parties of the meeting dates. The purpose of the meeting is to complete outstanding procedural matters, determine how best to address the substantive issues and begin to address them.

An orientation for Committee members on September 27, 1989 at from 2:00 to 5:00 pm at the Quality Hotel Capitol Hill, Washington, DC.

Persons needing further information on the substantive matters of the rule should call Robert Ajax, Office of Air Quality Planning and Standards, EPA, (919) 541-5579. Persons needing further information on procedural matters should call Deborah Dalton, Regulatory Negotiation Project, EPA, at (202) 382-5495 or the Committee's facilitator, Philip Harter at (202) 887-1033.

SUPPLEMENTARY INFORMATION:

Background

Fugitive emissions of toxics and volatile organic compounds (VOCs) from equipment leaks (valves, etc.) contribute significantly to air quality problems. For example, some estimates indicate that fugitive emissions account for approximately one third of all routine (non-accidental) toxic air emissions. Recent reports completed under section 313 of the Superfund Amendments and Reauthorization Act (SARA) included 385,878 tons per year from fugitive sources. Moreover, becaue they are released near the ground, the impact from fugitive emissions is 10-40 times greater than equal releases from stacks.

Current regulations adopted under sections 111 and 112 of the Clean Air Act and in State Implementation Plans (SIPs) have been effective in heightening awareness of the significance of the source and in stimulating control efforts. The rules basically require that equipment in place be inspected quarterly for leaks with a portable hydrocarbon detector. If concentrations in excess of 10,000 ppm are found, the component is identified as a "leaker" and maintenance is required. This approach is known as "leak detection and repair" (LDAR).

EPA studies from the early 1980s indicated that typical uncontrolled chemical plants and refineries have a leak frequency of 11 to 12 percent. Maintenance studies indicate this can be reduced by about 60–70 percent with the current leak detection and repair program. The actual frequency rate, and associated emissions, varies widely, however, and is believed to be a function of: original design (e.g. number of valves), age of the process unit, equipment selected, quality of maintenance, standard operating procedures used by the company, training provided to employees, and motivation. Recent data for highly toxic chemicals demonstrate that leak frequencies in the 0.0 to 2 percent range can be achieved in some situations. But, no one is sure what combination of factors guarantees such results, nor how to require them through enforceable regulations.

Accurate quantification of fugitive emissions from chemical equipment leaks is becoming a high priority, yet regulatory approaches currently being used do not develop accurate profiles of emissions. Specific emission levels are necessary for baseline and residual risk assessments needed for making regulatory decisions. These include setting of new regulations, issuing permits for new facilities or establishing appropriate emission fees. Further, companies must report emissions under the Community Right to Know Act (Title III of the Superfund Amendments and Reauthorization Act (SARA)). These figures were widely publicized early this summer and sparked considerable public attention on the level of emissions of toxics and VOCs.

Under the current approach, and in the absence of comprehensive component by component testing, a company complying with the regulations is assumed by EPA to achieve an estimated percentage reduction in the baseline emissions. These, in turn, are based entirely on an uncontrolled plant using the technology that was prevalent at the time the regulations were written. The actual emission levels at many facilities are probably significantly different than these assumptions. The best controlled plants emit less than the typical plants using LDAR.

Theoretically, the actual emissions from chemical equipment leaks could be measured; however, it is expensive and impractical to do so. Indirect measurements have been used in relatively few plants thus far, but their use is increasing. The accuracy of these indirect approaches varies with the procedure, with the more expensive ones providing reasonable accuracy; interestingly, however, the accuracy of these measurements may be the poorest at the best controlled plants.

Not only does the current regulatory appraoch not achieve accurate estimates of the actual emissions, it does not provide incentives or credit to firms for establishing programs and facilities that achieve the best control. Nor does the approach ensure that emission rates are reduced to levels that are readily achievable with available technology.

Because of these shortcomings in the current regulatory approach to control of VOCs from equipment leaks, EPA decided that a new strategy is needed. The new method would provide a more accurate picture of the actual emissions from fugitive sources and would assure that emissions rates are reduced to levels achievable with best technology. New regulations could be based on performance and/or emissions and could give credit for original plant design. EPA has concluded, however, that developing such a regulation using traditional data gathering and analysis would be very difficult, costly, time consuming and controversial.

Scope of the Proposed Negotiation

On April 25, 1989, EPA announced its intention to form an Advisory Committee to Negotiate A New Approach for Control of Volatile Organic Chemical Equipment Leaks (54 FR 17944, 17945). This notice announced an informational meeting in May, 1989 with the start of committee deliberations in June or July 1989. As a result of information received during and after the informational meeting and from comments provided to the docket, the decision on whether to proceed with negotiating this rule was delayed to consider modification in the scope of the negotiation.

Discussions with many of the potential parties revealed that without addressing actual levels in some manner or another, the issue was not ripe for resolution: the level of control would not have been defined in the negotiations but rather would have been set in a subsequent EPA proceeding. Moreover, the nature of the approach might also be a function of the actual requirements. Further, without addressing the regulation itself, the parties would not be participating in the actual decision as to the critical aspect of the rule: what is to be required with respect to fugitive emissions.

Equally important, some parties were vitally interested in revising the emission factors while others were vitally interested in ensuring a reduced level of emissions; combining the two would make for more productive negotiations. Broadening the negotiations to encompass the minimum requirements of technology based controls would make the negotiations sufficiently tangible and ripe so that the committee could adequately address the issues.

In subsequent discussions, several parties agreed explicitly with the need to include technological stringency and requested EPA to include it in the negotiations. EPA and the parties believe that this negotiation is not the forum to decide the goals or limits of specific risk-based standards.

EPA has made the decision to focus the negotiation on the fugitive emissions from equipment leaks for source categories that would be affected by EPA's forthcoming HON (hazardous organic NESHAPS (National Emission Standards for Hazardous Air Pollutants)). The source categories and compounds expected to be affected by the HON regulation are listed below in Table 1.

The current objectives of the proposed regulatory negotiation are:

- Revise the emission factors for fugitive emissions of VOCs from equipment leaks, leading to a better quantification of the magnitude of the leaks;
- Develop a new standard for control of toxic fugitive organic emissions from equipment leaks at HON source categories based upon best technology and lowest achievable rates. This standard would be designed to reflect the maximum degree of reduction of emissions of toxic organic compounds as defined in the Administration's proposed amendments to section 112 of the Clean Air Act (House Bill—H.R. 3030 and Senate Bill—S. 1490).
- Develop a format that could be used to implement a risk based standard for toxic organic emissions from equipment leaks. Specific risk limits or goals will not be a topic for negotiation.

Parties to the Negotiation

The following parties have been identified as tentative committee members. Membership will be finalized at the initial meeting.

Robert Ajax, U.S. EPA, Office of Air Quality Planning & Standards, Research Triangle Park, NC
David Dunn, Sterling Chemical Corp., Texas City, TX
Thomas Kittleman, E.I. DuPont de Nemours & Co., Newark, DE, On Behalf of Chemical Manufacturers Assn.
David Doniger and Allen Hershkowitz, Natural Resources Defense Council, Washington, DC. and New York, NY
Anupom Ganguli, South Coast Air Quality Management District, El Monte, CA
Les Montgomery, Texas Air Control Board, Austin, TX
Gus Von Bodungen, Department of Environmental Quality, Baton Rouge, LA
Harvele Rogers, Air Pollution Control District, Louisville, KY
Bruce Bowers, Standard Chlorine, Delaware City, DE
John Prokop, Independent Liquid Terminals Assn., Washington, DC.
International Institute for Synthetic Rubber Producers, Houston, TX.

Several other parties have been contacted and are considering whether to participate. Organizations or individuals that believe these parties do not adequately represent their interests should contact the committee facilitator, Philip Harter, at (202) 887–1033 or attend the initial meeting.

Dated: September 8, 1989.

Terry Davies,

Assistant Administrator, Office of Policy, Planning and Evaluation.

TABLE 1—HON SOURCE CATEGORIES AND CHEMICAL COMPOUNDS

Source Category	Compounds
Butadiene Production	BD
SBR Production	BD
Polybutadiene	BD
Neoprene/Chloroprene	BD
Chlorine Production	CT
CFC Production	CT, CF, PCE
EDC Production	EDC
EO Production	EO
Pesticide Production	CT, EDC, MC
Chemical Plants (Chlorinated Compound Users).	CT, MC, PCE, CF, EDC

FEDERAL COMMUNICATIONS COMMISSION

August 31, 1989.

Public Information Collection Requirement Submitted to Office of Management and Budget for Review

The Federal Communications Commission has submitted the following information collection requirement to OMB for review and clearance under the Paperwork Reduction Act of 1980 (44 U.S.C. 3507).

Copies of this submission may be purchased from the Commission's copy contractor, International Transcription Service, (202) 857–3800, 2100 M Street NW., Suite 140, Washington, DC 20037. For further information on this submission contact Judy Boley, Federal Communications Commission, (202) 632–7513. Persons wishing to comment on this information collection should contact Eyvette Flynn, Office of Management and Budget, Room 3235 NEOB, Washington, DC 20503, (202) 395–3785.

OMB Number: 3060–0029.

Title: Application for New Broadcast Station License.

Form No.: FCC 302.

Action: Revision.

Respondents: Business or other for-profit, non-profit institutions, small businesses or organizations.

Frequency of Response: On occasion.

Estimated Annual Burden: 2,922 Responses; 283,856 Hours.

Needs and Uses: The FCC 302 is required to be filed by all AM, FM and TV stations to obtain a new or modified broadcast station license, and/or to notify the Commission of certain changes in the licensed facilities of these stations. Data is used by FCC staff to confirm that the station has been built to terms specified in the outstanding construction permit and to update FCC station files. Data is then extracted from the FCC 302 for inclusion in the license to operate the station.

Federal Communications Commission.

William F. Caton,

Acting Secretary.

BILLING CODE 6712-01-M

FEDERAL TRADE COMMISSION

Granting of Request for Early Termination of the Waiting Period Under the Premerger Notification Rules

Section 7A of the Clayton Act, 15 U.S.C. 18a, as added by Title II of the Hart-Scott-Rodino Antitrust Improvements Act of 1976, requires persons contemplating certain mergers or acquisitions to give the Federal Trade Commission and the Assistant Attorney General advance notice and to wait designated periods before consummation of such plans. Section 7A(b)(2) of the Act permits the agencies, in individual cases, to terminate this waiting period prior to its expiration and requires that notice of this action be published in the **Federal Register**.

The following transactions were granted early termination of the waiting period provided by law and the premerger notification rules. The grants were made by the Federal Trade Commission and the Assistant Attorney General for the Antitrust Division of the Department of Justice. Neither agency intends to take any action with respect to these proposed acquisitions during the applicable waiting period:

TRANSACTIONS GRANTED EARLY TERMINATION BETWEEN: 8–21–89 AND 9/1/89

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. 89D–0359]

Refusals by Institutional Review Boards; Compliance Policy Guide; Revocation

AGENCY: Food and Drug Administration.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA) is announcing the revocation of Compliance Policy Guide (CPG) 7150.09, "Refusals by Institutional Review Boards—October 1, 1980."

FOR FURTHER INFORMATION CONTACT: Paul W. Goebel, Jr., Center for Drug Evaluation and Research (HFD–343), Food and Drug Administration, 5600 Fishers Lane, Rockville, MD 20857, 301–295–8026.

SUPPLEMENTARY INFORMATION: CPG 7150.09, "Refusals by Institutional Review Boards—October 1, 1980" has been made unnecessary by regulation at §§ 56.115 and 56.120 (21 CFR 56.115 and 56.120) and is being revoked. The regulation at § 56.115(b) requires institutional review boards (IRB's) to make certain IRB records accessible for inspection and copying by FDA, and § 56.120 provides for administrative action for refusals of IRB's to permit inspection and/or copying of records by FDA. Therefore, CPG 7150.09 is being revoked because it is unnecessary.

Dated: September 1, 1989.

Alan L. Hoeting,

Acting Associate Commissioner for Regulatory Affairs.

BILLING CODE 4160–01–M

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

Office of Administration

[Docket No. N–89–2048]

Submission of Proposed Information Collection to OMB

AGENCY: Office of Administration, HUD.

ACTION: Notice.

SUMMARY: The proposed information collection requirement described below has been submitted to the Office of Management and Budget (OMB) for review, as required by the Paperwork Reduction Act. The Department is soliciting public commends on the subject proposal.

ADDRESS: Interested persons are invited to submit comments regarding this proposal. Comments should refer to the proposal by name and should be sent to: John Allison, OMB Desk Officer, Office of Management and Budget, New Executive Office Building, Washington, DC 20503.

FOR FURTHER INFORMATION CONTACT: David S. Cristy, Reports Management Officer, Department of Housing and Urban Development, 451 7th Street, Southwest, Washington, DC 20410, telephone (202) 755–6050. This is not a toll-free number. Copies of the proposed forms and other available documents submitted to OMB may be obtained from Mr. Cristy.

SUPPLEMENTARY INFORMATION: The Department has submitted the proposal for the collection of information, as described below, to OMB for review, as required by the Paperwork Reduction Act (44 U.S.C. chapter 35).

The Notice lists the following information: (1) The title of the information collection proposal; (2) the office of the agency to collect the information; (3) the description of the need for the information and its proposed use; (4) the agency form number, if applicable; (5) what members of the public will be affected by the proposal; (6) how frequently information submissions will be required; (7) an estimate of the total numbers of hours needed to prepare the information submission including number of respondents, frequency of response, and hours of response; (8) whether the proposal is new or an extension, reinstatement, or revision of an information collection requirement; and (9) the names and telephone numbers of an agency official familiar with the proposal and of the OMB Desk Officer for the Department.

Authority: Section 3507 of the Paperwork Reduction Act, 44 U.S.C. 3507; Section 7(d) of the Department of Housing and Urban Development Act, 42 U.S.C. 3535(d).

Dated: September 6, 1989.

John T. Murphy,

Information Policy and Management Division.

Proposal: Designation of Depository for Direct Deposit of Loan and/or Grant Fund.

Office: Administration.

Description of the Need for the Information and Its Proposed Use: The Department will use HUD–274 to request recipients of loan and grant funds being funded by requisition, to designate a depository that they wish to receive funds in connection with HUD programs. This will be an internal control system instituted to safeguard Federal funds as well as provide a service to recipients.

Form number: HUD–274.

Respondents: State or Local Governments.

Frequency of submission: On Occasion.

Reporting burden:

Number of Respondents	×	Frequency of Response	×	Hours per Response	=	Burden Hours
HUD–274 1,000		1		.08		83

Total Estimated Burden Hours: 63.
Status: Extension.
Contact: Donald C. Dispanet, HUD, (202) 755–5143, John Allison, OMB, (202) 395–6880.

Dated: September 6, 1989.

BILLING CODE 4210–01–M

DEPARTMENT OF THE INTERIOR

Fish and Wildlife Service

Receipt of Applications for Permits

The following applicants have applied for permits to conduct certain activities with endangered species. This notice is provided pursuant to section 10(c) of the Endangered Species Act of 1973, as amended (16 U.S.C. 1531, *et seq.*):

Applicant: E.G. & G. Energy Measurements, Goleta, CA, PRT 683011.

The applicant requests an amendment to their current endangered species permit to authorize an increase in the numbers of San Joaquin kit fox *(Vulpes macrotis mutica)* that may be radio-collared, from the presently-authorized 60 to 120, and to authorize the following activities with the gopher tortoise *(Gopherus agassizi)* in Nevada:

(1) Capture, handle, mark, attach transmitters and take blood samples;
(2) Modify tortoise habitat by building drift fences and underpasses at roads;
(3) Relocate up to 10 desert tortoises per year from their existing home ranges to a new area; and
(4) Salvage carcasses of desert tortoises.

The requested gopher tortoise activities are to be conducted in order to evaluate and monitor the effects of DOE activities on the desert tortoise population on the Nevada test site and elsewhere in south central Nevada.

Applicant: Helen Carpenter, Jefferson, TX, PRT 737979.

The applicant requests a permit to export and re-import four captive-bred male tigers *(Panthera tigris)* for the purpose of conservation education. In the future applicant may amend her permit to add animals captive-born at her facility and re-export and re-import these animals for the same purpose.

Applicant: Donald Kitchens, Utica, MS, PRT 738936.

The applicant requests a permit to import the sport-hunted trophy of one male bontebok *(Damaliscus dorcas dorcas)* to be culled from the captive herd maintained by Mr. J. D'Alton, Bredasdorp, Republic of South Africa, for the purpose of enhancement of the survival of the species.

Applicant: Priscilla Witherell, Las Vegas, NV, PRT 741186.

The applicant requests a permit to purchase in interstate commerce twelve scarlet-chested parakeets *(Neophema splendida)* from Ole Borreson of California, for the purpose of enhancement of propagation and survival of the species.

Applicant: New York Zoological Society, Bronx, NY, PRT 741444.

The applicant requests a permit to import internal organs removed from captive-hatched Orinoco crocodiles *(Crocodylus intermedius)* for necropsy purposes. The crocodiles were hatched at the Fundo Pecuario Masaguaral, Calabozo, Venezuela, for eventual reintroduction into the wild. However, they recently died of unknown causes. The applicant would like to import the internal organs in order to perform necropsies to attempt to determine the causes of death.

Applicant: Henry Doorly Zoo, Omaha, NE, PRT 741447.

The applicant requests a permit to export frozen semen collected from two captive-born male gaurs *(Bos gaurus)* to the Kunming Institute of Zoology Academia, Sinica Kunming, Yunnan, People's Republic of China. The Kunming Institute will use the semen samples to artificially inseminate two female gaur currently maintained at their facility.

Documents and other information submitted with this application are available to the public during normal business hours (7:45 am to 4:15 pm) Room 432, 4401 N. Fairfax Dr., Arlington, VA 22203, or by writing to the Director, U.S. Office of Management Authority, P.O. Box 3507, Arlington, Virginia 22203–3507.

Interested persons may comment on any of these applications within 30 days of the date of this duplication by submitting written views, arguments, or data to the Director at the above address. Please refer to the appropriate PRT number when submitting comments.

Dated: September 6, 1989.

Susan M. Lawrence,

Acting Chief, Branch of Permits, U.S. Office of Management Authority.

Battle Mountain District Grazing Advisory Board Meeting

AGENCY: Bureau of Land Mangement, Interior.

ACTION: Notice of Grazing Advisory Board Meeting.

SUMMARY: In accordance with Public Law 94–579 and section 3, Executive Order 12548 of February 14, 1986, a meeting of the Battle Mountain District Grazing Advisory Board will be held.

DATE: October 11, 1989, beginning at 1:00 p.m. in the Battle Mountain District Conference Room, N. Second and Scott Streets, Battle Mountain, Nevada.

SUPPLEMENTARY INFORMATION: The meeting agenda will include:

(1) Election of Chairperson and Vice Chairperson,
(2) Status of FY 89 range inprovements, and
(3) FY 90 range improvements—review and recommendations.

The meeting is open to the public. Interested persons may make oral statements to the board between 4:00 and 4:30 p.m. on October 11, 1989, or file written statements for the board's consideration. If you wish to make oral comments, please contact James D. Currivan by October 4, 1989.

FOR FURTHER INFORMATION CONTACT: James D. Currivan, District Manager, P.O. Box 1420, Battle Mountain, Nevada 89820 or phone [702] 635–5181.

Dated: August 31, 1989.

[CA–23065; CA–060–09–4212–14]

Noncompetitive Sale of Public Land in Kern County, CA; Realty Action

AGENCY: Bureau of Land Management, Department of the Interior.

ACTION: Notice of realty action: noncompetitive sale of public land in Kern County, California; CA–23065.

SUMMARY: The following public land in Kern County has been examined and determined suitable for disposal by direct sale pursuant to section 203 of the Federal Land Policy and Management Act of October 21, 1976 (90 stat. 2750, 43 U.S.C. 1713), at not less than the appraised fair market value:

Mount Diablo Meridian
T. 30S., R. 37E.,
Section 28, Lot 5
containing 0.19 acres, more or less.

SUPPLEMENTARY INFORMATION: The purpose of this sale is to resolve an unintentional occupancy trespass by Eugene S. and Lenora A. McKendry. A small portion of their primary residence was inadvertently constructed on public land due to a survey error. The lot proposed for sale was created by supplemental survey, and disposal will equitably resolve this trespass. Examination of the subject land has resulted in a determination that the sale would not result in land use conflicts or loss of significant resources and does not conflict with the California Desert Conservation Area Plan.

Sale will be at full fair market value as established by appraisal under applicable Federal standards. The parcel contains no known developable mineral values, and acceptance of this sale offer will also allow the purchaser to apply for mineral conveyance. The patent will be issued subject to the reservation to the United States of right of way for ditches and canals, pursuant to the Act of August 30, 1890 (43 U.S.C. 945). The patent shall also be subject to all prior existing rights.

Publication of this notice in the **Federal Register** segregates the subject land from appropriation under the public land laws, including the general mining laws, but not the mineral leasing laws. The segregative effect shall terminate on issuance of patent pursuant to this notice, or two years from the date of first publication of this notice, whichever occurs first. Mining claims of record may encumber the subject land on the date of this notice. No sale will be completed until any claims of record are relinquished.

DATES: For period of 45 days from the date of first publication of this notice, interested parties may submit comments to the Bureau of Land Management, Area Manager, Ridgecrest Resource Area, at the address below. Objections will be reviewed by the State Director, who may sustain, vacate, or modify this realty action. In the absence of objections, this action will become the final determination of the Department of the Interior. No transfer of public lands will occur sooner than 60 days from first publication of this notice in the Federal Register.

FOR FURTHER INFORMATION CONTACT: Joe Liebhauser, Ridgecrest Resource Area, 112 East Dolphin Avenue, Ridgecrest, California 93555, telephone (619) 375–7125. Detailed information, including the official casefile, is available for public review at this address.

Dated: August 31, 1989.

Gerald E. Hillier,

District Manager.

BILLING CODE 4310–40–M

Minerals Management Service

Alaska OCS Region; Outer Continental Shelf Advisory Board; Alaska Regional Technical Working Group Meeting

AGENCY: Minerals Management Service, Alaska OCS Region, Interior.

ACTION: Outer Continental Shelf Advisory Board, Alaska Regional Technical Working Group Committee; Notice for meeting.

This notice is issued in accordance with the provisions of the Federal Advisory Committee Act, Public Law 92–463.

The Alaska Regional Technical Working Group (RTWG) committee of the Outer Continental Shelf (OCS) Advisory Board is scheduled to meet from 9:00 a.m. to 4:00 p.m., September 27, 1989, in room 601 of the Minerals Management Service (MMS), Alaska OCS Region offices at 949 East 36th Avenue, Anchorage, Alaska. The Alaska RTWG is one of six such committees of the OCS Advisory Board that provides advice to the Director of MMS about technical matters of regional concern regarding OCS prelease and postlease sale activities.

Topics which may be addressed at the meeting are:

(a) Alaska OCS Region issues and activities.
(b) Prince William Sound oil spill—member roundtable discussion.
(c) Status of MMS review of oil-spill-contingency plans.
(d) Technology Assessment and Research Program for Offshore Minerals Operations.
(e) Report on and status of drilling activitiy on OCS leases in the Chukchi Sea.
(f) Oil-spill contingency plan and readiness for activity on OCS leases in the Chukchi Sea.

The Alaska RTWG meeting will be open to the public, although seating may be limited. Interested persons may make oral or written presentations to the committee. A request to make a presentation should be made no later than September 20, 1989, to Alan D. Powers, Regional Director, Alaska OCS Region, 949 East 36th Avenue, Room 110, Anchorage, Alaska 99508–4302, and should be accompanied by a written summary of the presentation.

Minutes of the meeting will be available 70 days after the meeting for public inspection and copying at the Alaska OCS Region Library, 949 East 36th Avenue, Anchorage, Alaska, and at the Office of OCS Advisory Board Support, MMS, Department of the Interior, 18th and C Streets, NW., Washington, DC.

Dated: September 1, 1989.

Alan D. Powers,

Regional Director, Alaska OCS Region.

Bureau of Mines

Information Collection Submitted to the Office of Management and Budget for Review Under the Paperwork Reduction Act

A request extending the collection of information listed below has been submitted to the Office of Management and Budget for approval under the provisions of the Paperwork Reduction Act (44 U.S.C. Chapter 35). Copies of the proposed collection of information and related forms and explanatory material may be obtained by contacting the Bureau's clearance officer at the phone number listed below. Comments and suggestions on the requirement should be made directly to the Bureau clearance officer and to the Office of Management and Budget, Paperwork Reduction Project (1032–0084), Washington, DC 20503, telephone 202–395–7340.

Title: Consolidated Consumers' Report.
OMB Approval Number: 1032–0084.
Abstract: Respondents supply the Bureau of Mines with domestic production and consumption data on nonfuel mineral commodities. This information is published in Bureau of Mines publications including the Mineral Industry Survey (MIS), Minerals Chapters, Mineral Facts and Problems, Mineral Commodity Summaries, Mineral Commodity Profiles, and Minerals and Materials/A Bimonthly Survey for use by private organizations and other Governmental agencies.
Bureau Form Number: 6–1109–MA.
Frequency: Monthly/Annually.
Description of Respondents: Operations that consume ferrous metals.
Estimated Completion Time: 1 Hour.
Annual Responses: 5,098.
Annual Burden Hours: 5,098.
Bureau clearance officer: James T. Hereford, 202–634–1125.

Dated: August 21, 1989.

National Park Service

National Register of Historic Places; Notification of Pending Nominations

Nominations for the following properties being considered for listing in the National Register were received by the National Park Service before September 2, 1989. Pursuant to § 60.13 of 36 CFR Part 60 written comments concerning the significance of these properties under the National Register criteria for evaluation may be forwarded to the National Register, National Park Service, P.O. Box 37127, Washington, DC 20013-7127. Written comments should be submitted by September 27, 1989.

AGENCY FOR INTERNATIONAL DEVELOPMENT

Public Information Collection Requirements Submitted to OMB for Review

The Agency for International Development (A.I.D.) submitted the following public information collection requirements to OMB for review and clearance under the Paperwork Reduction Act of 1980, Public Law 96-511. Comments regarding these information collections should be addressed to the OMB reviewer listed at the end of the entry no later than ten days after publication. Comments may also be addressed to, and copies of the submissions obtained from the Reports Management Officer, John H. Elgin, (703) 875-1608, IRM/PE, Room 1100B, SA-14, Washington, DC 20523.

Date Submitted: August 31, 1989.

Submitting Agency: Agency for International Development.

OMB Number: 0412-0014.

Form Number: AID 1550-6.

Type of Submission: Renewal.

Title: Collection of Information for the Ocean Freight Reimbursement Program.

Purpose: A.I.D.'s Ocean Freight program reimburses approved Private and Voluntary Organizations (PVOs) registered with the Agency for their transportation costs incurred when transporting donated goods overseas. To effectively monitor the program, A.I.D. has developed a proposal solicitation package and a monitoring document to collect necessary information from qualified and interested PVOs.

Respondents will have a submission burden of four responses per year.

Reviewer: Donald Arbuckle (202) 395-7340, Office of Management and Budget, Room 3201, New Executive Office Building, Washington, DC 20503.

Dated: August 31, 1989.

Wayne H. Van Vechten,

Planning and Evaluation Division.

BILLING CODE 6116-01-M

DEPARTMENT OF JUSTICE

Lodging of Consent Decree Pursuant to the Clean Air Act

In accordance with Departmental policy, 28 CFR 50.7, notice is hereby given that on September 5, 1989, a proposed Consent Decree in *United States* v. *Arkwright, Inc., et al.*, Civil No. 87-2009D, was lodged with the United States District Court for the District of New Hampshire. The proposed Consent Decree concerns the prevention of the discharge of volatile organic compounds ("VOCs") in violation of the Clean Air Act and the limits set forth in Regulation 19 of the Rhode Island State Implementation Plan. The proposed Consent Decree requires Arkwright to maintain compliance with the Act and the applicable emission limits for VOCs, to monitor and report on their compliance. Arkwright and its former parent company, Oce Van der Grinten, N.V. will also pay a civil penalty of $175,000.

The Department of Justice will receive for a period of thirty (30) days from the date of this publication comments relating to the proposed Consent Decree. Comments should be addressed to the Assistant Attorney General of the Land and Natural Resources Division, Department of Justice, Washington, DC 20530, and should refer to Arkwright, D.J. Ref. 90-5-2-1-960.

The proposed Consent Decree may be examined at the office of the United States Attorney, District of New Hampshire, 55 Pleasant Street, James Cleveland Federal Building and Courthouse, Concord, New Hampshire; the office of the United States Attorney, District of Rhode Island, Westminster Square Building, 10th Floor, 10 Dorrance Street, Providence, Rhode Island; and at the Region 1 Office of the Environmental Protection Agency, J.F.K. Federal Building, Boston, Massachusetts 02203. Copies of the Consent Decree may be examined at the Environmental Enforcement Section, Land and Natural Resources Division of the Department of Justice, Room 1647, Ninth Street and Pennsylvania Avenue NW., Washington, DC 20530. A copy of the proposed Consent Decree may be obtained in person or by mail from the Environmental Enforcement Section, Land and Natural Resources Division of the Department of Justice. In requesting a copy, please refer to the referenced case and enclose a check in the amount of $4.10 (10 cents per page reproduction cost) made payable to the Treasurer of the United States.

Richard B. Stewart,

Assistant Attorney General, Land and Natural Resources Divison.

BILLING CODE 4410-01-M

Antitrust Division

Proposed Termination of Final Judgment; N.P. Benson Optical Co.

Notice is hereby given that Benson Optical Co., Inc. ("Benson"), as successor in interest to N.P. Benson Optical Company and The House of Vision-Belgard-Spero, Inc., has filed with the United States District Court for the Northern District of Illinois a motion to terminate the final judgement in *United States* v. *N.P. Benson Optical Company,* Civil No. 89 C 18 and *United States* v. *The House of Vision-Belgard-Spero, Inc.,* Civil No. 48 C 607; and the Department of Justice ("Department"), in a stipulation also filed with the court, has consented to termination of the judgments, but has reserved the right to withdraw its consent based on public comments or for other reasons. The complaints in these cases (filed on May 4, 1948) alleged a rebating and price fixing conspiracy between the corporate defendants, which were wholesale optical goods supply companies, and a number of ophthalmologists who also are defendants in the cases. The judgments (entered on May 16, 1951) in each case enjoin: (1) The corporated defendant from making any payment to any ophthalmologist or other refractionist in connection with dispensing optical goods to patients; (2) the defendant physicians from accepting any payment from dispensers in connection with dispensing optical goods to their patients; and (3) all defendants from entering into price fixing agreements with any party.

The Department has filed with the court a memorandum setting forth the reasons why the Department believes that termination of the judgments would serve the public interest. Copies of the complaints and final judgments, Benson's motion papers, the stipulation containing the Government's consent, the Department's memorandum and all further papers filed with the court in connection with this motion will be available for inspection at Room 3233, Antitrust Division, Department of Justice, 10th Street and Pennsylvania Avenue, NW., Washington, DC. 20530 (telephone 202-633-2481), and at the Office of the Clerk of the United States District Court for the Northern District of Illinois, Eastern Division, 219 South Dearborn Street, Chicago, Illinois 60604. Copies of any of these materials may be obtained from the Antitrust Division upon request and payment of the copying fee set by Department of Justice regulations.

Interested persons may submit comments regarding the proposed termination of the decrees to the Department. Such comments must be received within the sixty-day period established by court order, and will be filed with the court by the Department. Comments should be addressed to Kent Brown, Chief, Midwest Field Office, Antitrust Division, Department of Justice, Chicago, Illinois 60604 (telephone 312-353-7530).

Joseph H. Widmar,

Director of Operations Antitrust Division.

NATIONAL SCIENCE FOUNDATION

Meeting of Advisory Committee for Astronomical Sciences

The dates, location, and times have been changed for the Subcommittee on Optical/Infrared Astronomy Meeting of the Advisory Committee for Astronomical Sciences.

The Subcommittee will meet in Denver, Colorado on September 28-29 rather than in Washington, DC on September 26-27.

Dates & Times: September 28, 1-5 p.m.; September 29, 9-5 p.m.

Place: Denver, Colorado

Type of Meeting: Open

Contact Person: Dr. G. Wayne van Citters, Jr., Program Director, Astronomical Instrumentation and Development, Division of Astronomical Sciences, Room 618, National Science Foundation, Washington, DC 20550 (202/357-9793)

Minutes: May be obtained from the contact person at the above address.

Purpose of Subcommittee: To provide advice and recommendations concerning research programs, proposals, and projects in NSF-funded astronomy with the objective of achieving the highest quality forefront research for the funds allocated. To provide advice and recommendations concerning short-range and long-range plans in astronomy, including a recommendation of relative priorities.

Meeting of Advisory Panel for

Contact Person: Dr. Fred W.

Meeting of Advisory Panel for

Agenda: Preparation of report on topics discussed at the Subcommittee meeting held on August 28, and 29, 1989.

The original meeting notice appeared in the **Federal Register** on September 8, 1989.

Dated: September 7, 1989.

M. Rebecca Winkler,

Committee Management Officer.

Meeting of Advisory Panel for Ecology

The National Science Foundation announces the following meeting:

Name: Advisory Panel for Ecology.

Date and Time: October 4-6, 1989—8:30 a.m.-5:00 p.m. each day.

Place: Room 1243, National Science Foundation, 1800 G Street NW., Washington, DC 20550.

Type of Meeting: Closed.

Contact Person: Dr. Patrick J. Webber, Program Director, Ecology (202) 357-9734, Room 215, National Science Foundation, Washington, DC 20550.

Minutes: May be obtained from the Contact Person at the above address.

Purpose of Meeting: To provide advice and recommendations concerning support for research in ecology.

Agenda: Review and evaluation of research proposals and projects as part of the selection process of awards.

Reason for Closing: The proposals being reviewed include information of a proprietary or confidential nature, including technical information; financial data, such as salaries; and personal information concerning individuals associated with the proposals. These matters are within exemptions (4) and (6) of 5 U.S.C. 552b(c), Government in the Sunshine Act.

Dated: September 7, 1989.

Meeting of Advisory Panel for Ecosystem Studies

The National Science Foundation announces the following meeting:

Name: Advisory Panel for Ecosystem Studies.

Date and Time: October 5 & 6, 1989—8:30 a.m.-5:00 p.m. each day.

Place: Room 6423, National Science Foundation, 1800 G Street NW., Washington, DC 20550.

Type of Meeting: Closed.

Contact Person: Dr. James E. Schindler, Program Director, Ecosystem Studies (202) 357-9596, Room 215, National Science Foundation, Washington, DC 20550.

Minutes: May be obtained from the Contact Person at the above address.

Purpose of Meeting: To provide advice and recommendations concerning support for research in ecosystem studies.

Agenda: Review and evaluation of research proposals and projects as part of the selection process of awards.

Reason for Closing: The proposals being reviewed include information of a proprietary or confidential nature, including technical information; financial data, such as salaries; and personal information concerning individuals associated with the proposals. These matters are within exemptions (4) and (6) of 5 U.S.C. 552b(c), Government in the Sunshine Act.

Dated: September 7, 1989.

BILLING CODE 7555-01-M

Meeting of Advisory Committee for Engineering

The National Science Foundation announces the following meeting:

Name: Advisory Committee for Engineering

Date and Time: October 5-6, 1989; 8:30 a.m.-5:00 p.m., October 5, 1989 (open), 8:00 a.m.-9:00 a.m., October 6, 1989 (closed), 9:00 a.m.-12:00 Noon, October 6, 1989 (open).

Place: National Science Foundation, 1800 "G" Street NW., Room 540, Washington, DC 20550.

Type of Meeting: Partially Closed.

Contact Person: Ms. Rose Szwast, Advisory Committee for Engineering, Room 537, National Science Foundation, Washington, DC 20550, Telephone: (202) 357-9832.

Minutes: Ms. Rose Szwast at the above address.

Purpose of Meeting: To provide advice, recommendations, and counsel on major goals and policies pertaining to Engineering programs and activities.

Reason for Closing: The personnel matters being discussed include information of a personal nature where disclosure would constitute unwarranted invasions of personal privacy. These matters are within exemption 6 of U.S.C. 552b(c), Government in the Sunshine Act.

Authority to Close Meeting: The determination made on September 6, 1989 by the Director of the National Science Foundation pursuant to the provisions of section 10(d) of Public Law 92-463.

Agenda: Friday, October 6, 1989, Room 540—8:00 a.m. to 9:00 a.m.—Closed. Discussion of personnel issues including candidates for vacancies. Thursday, October 5, 1989, Room 540—8:30 a.m. to 5:00 p.m., and Friday, October 6, 1989, Room 540—9:00 a.m. to 12:00 Noon—Open. Discussion on issues, opportunities and future directions for the Engineering Directorate; discussion of Engineering Directorate budget situation as well as other items.

Dated: September 7, 1989.

M. Rebecca Winkler,

Committee Management Officer.

BILLING CODE 7555-01-M

NUCLEAR REGULATORY COMMISSION

[Docket No. 50-155]

Consumers Power Co.; Environmental Assessment and Finding of No Significant Impact

The U.S. Nuclear Regulatory Commission (the Commission) is considering issuance of an amendment to Facility Operating License No. DPR-6 issued to the Consumers Power Company (the licensee), for the Big Rock Point Plant, located in Charlevoix County, Michigan.

Environmental Assessment

Identification of the Proposed Action

The proposed action would delete § 6.4.2(d) from the Big Rock Point Technical Specifications. This section

stated that the portable neutron or

radioactive and non-radioactive

assemblies and GE analyses and

The Notices of Consideration of

[Docket No. 50-029]

1988, and is due to expire on July 31,

stated that the portable neutron or gamma dose-rate measuring instruments provided for establishing permissible working limits be calibrated at least once every three months.

The proposed action is in accordance with the licensee's application for amendment dated October 24, 1988.

The Need for the Proposed Action

The proposed change would make the Big Rock Point Plant Technical Specifications consistent with industry practice and the Standard Technical Specifications. The plant has committed to follow ANSI N323–1978 including the performance of a source check daily or prior to use, whichever is less frequent, on each scale or decade normally used and perform a calibration semi-annually.

Environmental Impact of the Proposed Action

The Commission has completed its evaluation of the proposed revision to the Technical Specifications. Performance of a more complete source check (source checking each scale or decade normally used versus source check daily or prior to use) of portable gamma and neutron dose-rate measuring instruments will better assure instrument reliability and accuracy. The licensee feels that changing the calibration frequency from once every three months to once every six months will not result in less accurate instruments because of the more extensive source checks and because less than 5% of the instruments fail the pre-calibration checks. The Commission concludes that there are no measurable radiological or nonradiological environmental impacts associated with the proposed amendment.

The Notice of Consideration of Issuance of Amendment and Opportunity for Hearing in connection with this action was published in the **Federal Register** on March 29, 1989 (54 FR 12976). No request for hearing or petition for leave to intervene was filed following this notice.

Alternatives to the Proposed Action

It has been determined that there is no measurable impact associated with the proposed amendment; any alternatives to the amendment will have either no environmental impact or greater environmental impact.

The principal alternative would be to deny the requested amendment. The proposed dose-rate measuring instrument checking changes do not involve any increase in the release of radioactive and non-radioactive effluents from the plant.

Alternative Use of Resources

This action does not involve the use of any resources beyond the scope of resources used during normal operation.

Agencies and Persons Contacted

The Commission's staff reviewed the licensee's request and did not consult other agencies or persons.

Finding of No Significant Impact

Based upon the foregoing environmental assessment, the Commission concluded that the proposed action will not have a significant effect on the quality of the human environment. Accordingly, the Commission has determined not to prepare an environmental impact statement for the proposed amendment.

For further details with respect to this action, see the request for amendment dated October 24, 1988. This document is available for public inspection at the Commission's Public Document Room, Gelman Building, 2120 L Street NW., Washington, DC, and at North Central Michigan College, 1515 Howard Street, Petoskey, Michigan 49770.

Dated at Rockville, Maryland this 6th day of September 1989.

For The Nuclear Regulatory Commission.

John O. Thoma,

Acting Director, Project Directorate III–1, Division of Reactor Projects—III, IV V & Special Projects Office of Nuclear Reactor Regulation.

[FR Doc. 89–21401 Filed 9–11–89; 8:45 am]

BILLING CODE 7590-01-M

[Docket No. 50–341; FERMI–2]

Detroit Edison Co., Wolverine Power Supply Cooperative, Inc.; Environmental Assessment and Finding of No Significant Impact

The U.S. Nuclear Regulatory Commission (the Commission) is considering issuance of an amendment to Facility Operating License No. NPF–43, issued to the Detroit Edison Company (DECo) and the Wolverine Power Supply Cooperative, Incorporated (the licensees) for the operation of Fermi–2 located in Monroe County, Michigan.

Environmental Assessment

Identification of Proposed Action

The proposed amendment would revise provisions in the Fermi–2 Operating License and operation of Fermi–2 Cycle 2 with a reload of General Electric (GE) manufactured fuel assemblies and GE analyses and methodologies. In addition, TS changes are also proposed to allow operation of Fermi–2 with an Extended Load Line Limit Region (ELLLR).

The proposed action is in accordance with the licensees' applications dated April 3 and May 31, 1989, as supplemented by letter dated August 23, 1989.

The August 23, 1989 letter provided only additional information and clarifications which did not alter the substance or scope of the original applications.

The Need for the Proposed Action

The proposed changes to the TSs are required in order to provide appropriate TS requirements and limits related to cycle 2 operations and the analyzed operating domain for cycle 2.

Environmental Impacts of the Proposed Action

The Commission has completed its evaluation of the proposed revision to the Operating License and the TS. The proposed changes relate to Maximum Average Planar Linear Heat Generation Rate (MAPLHGR) and Linear Heat Generation Rate (LHGR) limits for the new fuel, Minimum Critical Power Ratio (MCPR) limits for all of the fuel using Cycle 2 core and transient parameters, extended operating regions and conditions, and editorial changes. The proposed change will not increase fuel burnup in excess of the levels evaluated on the "Final Environmental Statement related to operation of Fermi–2," dated August 1981.

Therefore, the proposed changes do not increase the probability of consequences of any accidents, no changes are being made in types of any effluents that may be released offsite, and there is no significant increase in the allowable individual or cumulative occupational radiation exposure. Accordingly, the Commission concludes that this proposed action would result in no significant radiological impact and could result in the reduction of the radiological impacts.

With regard to potential nonradiological impacts, the proposed changes to the TS involve systems located within the restricted area as defined in 10 CFR Part 20. They do not affect nonradiological plant effluents and have no other environmental impact. Therefore, the Commission concludes that there are no significant nonradiological environmental impacts associated with the proposed amendment.

The Notices of Consideration of Issuance of Amendment and Opportunity for Hearing in connection with this action were published in the **Federal Register** on July 11, 1989 (54 FR 29116 and 54 FR 29122). No request for hearing or petition for leave to intervene was filed following these notices.

Alternative to the Proposed Action

Because the Commission has concluded that there is no significant environment impact associated with the proposed amendment, any alternative would have either no or greater environmental impact. The principal alternative would be to deny the requested amendment. This would result in the TS not correctly reflecting the nuclear core design for Cycle 2 Operation.

Alternative Use of Resources

This action involves no use of resources not previously considered in connection with the "Final Environmental Statement Related to Operation of Fermi-2, dated August 1981.

Agencies and Persons Consulted

The Commission's staff reviewed the licensees' request and did not consult other agencies or persons.

Finding of No Significant Impact

The Commission has determined not to prepare an environmental impact statement for the proposed license amendments.

Based upon the foregoing environmental assessment, the Commission concludes that the proposed action will not have a significant effect on the quality of the human environment.

For further details with aspect to this action, see the applications for amendment dated April 3 and May 31, 1989 which are available for public inspection at the Commission's Public Document Room 2120 L Street, NW., Washington, DC, and at the Monroe County Library System, 3700 South Custer Road, Monroe, Michigan 48161.

Dated at Rockville, Maryland, this 7th day of September 1989.

For the Nuclear Regulatory Commission.

John O. Thoma,

Acting Director, Project Directorate III–1, Division of Reactor Projects—III, IV, V & Special Projects Office of Nuclear Reactor Regulation.

BILLING CODE 7590-01-M

[Docket No. 50–029]

Yankee Atomic Electric Co.; Yankee Nuclear Power Station; Withdrawal of Amendment to Facility Operating License

The U.S. Nuclear Regulatory Commission (the Commission) has granted a request by Yankee Atomic Electric Company to withdraw its March 21, 1989 and as supplemented on April 14, 1988 application for an amendment to Facility Operating License No. DPR–3 issued to the licensee for operation of the Yankee Nuclear Power Station. Notice of Consideration of Issuance of this amendment was published in the **Federal Register** on May 3, 1989 (54 FR 18965).

The purpose of the licensee's amendment request was to revise the Technical Specifications (TS) pertaining to snubber listing.

Subsequently, the licensee informed the staff that the amendment is no longer requested. Thus, the amendment application is considered to be withdrawn by the licensee.

For further details with respect to this action, see the application for amendment dated March 21, 1989 and as supplemented on April 14, 1988.

These documents are available for public inspection at the Commission's Public Document Room, the Gelman Building, 2120 L Street, NW., Washington, DC and at the Greenfield Community College, 1 College Drive, Greenfield, Massachusetts 02111.

Dated at Rockville, Maryland, this 1st day of September 1989.

For the Nuclear Regulatory Commission.

Patrick M. Sears,

Project Manager, Project Directorate I–3, Division of Reactor Projects I/II, Office of Nuclear Reactor Regulation.

[FR Doc. 89–21403 Filed 9–11–89; 8:45 am]

BILLING CODE 7590-01-M

[Docket No. 030–60017, License No. 45–23009–01, EA 89–44]

Lee County Community Hospital, Pennington Gap, VA; Order Imposing Civil Monetary Penalty

I

Lee County Community Hospital, Pennington Gap, Virginia (licensee), is the holder of License No. 45–23009–01 issued by the Nuclear Regulatory Commission (Commission or NRC), which authorizes the medical use of byproduct material by the licensee. The license was issued August 22, 1983, was most recently renewed on August 19, 1988, and is due to expire on July 31, 1993.

An NRC safety inspection of the licensee's activities under this license was conducted on August 11, 1988. During the inspection, the NRC inspector noted that the minutes of Radiation Safety Committee meetings dated May 28, 1987 and August 27, 1987 were identical, except for the date. A subsequent investigation conducted by the NRC Office of Investigations disclosed that the minutes for one of the Radiation Safety Committee meetings was falsified at the direction of a licensee official. A written Notice of Violation and Proposed Imposition of Civil Penalty (Notice) was served upon the licensee by letter dated April 18, 1989. The Notice stated the nature of the violation, the provisions of the Nuclear Regulatory Commission's requirements that the licensee had violated, and the civil penalty amount proposed for the violation. Responses dated May 18 and August 1, 1989, were received from the licensee in response to the Notice. In these responses, the licensee did not deny the violation but requested a reduction in the Severity Level of the violation and mitigation of the civil penalty.

III

After consideration of the licensee's responses and the statements of fact, explanation and argument for mitigation contained therein, the NRC staff has determined as set forth in the Appendix to this Order, that the penalty proposed in the Notice of Violation and Proposed Imposition of Civil Penalty should be imposed.

IV

In view of the foregoing and pursuant to section 234 of the Atomic Energy Act of 1954, as amended (Act), 42 U.S.C. 2282, and 10 CFR 2.205, *It is hereby Ordered That:*

The licensee pay a civil penalty in the amount of $2,500 within 30 days of the date of this Order, by check, draft, or money order, payable to the Treasurer of the United States and mailed to the Director, Office of Enforcement, U.S. Nuclear Regulatory Commission, ATTN: Document Control Desk, Washington DC 20555.

V

The licensee may request a hearing within 30 days of the date of this Order. A request for a hearing shall be clearly marked as a "Request for an Enforcement Hearing" and shall be addressed to the U.S. Nuclear Regulatory Commission, ATTN:

Document Control Desk, Washington, DC 20555, with a copy to the Assistant General Counsel for Hearings and Enforcement, Office of the General Counsel, U.S. Nuclear Regulatory Commission, Washington, DC 20555 and the Regional Administrator, U.S. NRC, Region II, 101 Marietta Street, NW., Suite 2900, Atlanta, Georgia 30323.

If a hearing is requested, the Commission will issue an Order designating the time and place of the hearing. If the licensee fails to request a hearing within 30 days of the date of this Order, the provisions of this Order shall be effective without further proceedings. If payment has not been made by that time, the matter may be referred to the Attorney General for collection.

In the event the licensee requests a hearing as provided above, the issues to be considered at such hearing shall be:

(a) Whether the licensee was in violation of the Commission's requirements as set forth in the Notice of Violation and Proposed Impostion of Civil Penalty referenced in Section II above, and (b) Whether, on the basis of such violation, this Order should be sustained.

Dated at Rockville, Maryland this 1st day of September 1989.

For the Nuclear Regulatory Commission.

James Liberman,

Director, Office of Enforcement.

Appendix—Evaluation and Conclusion

On April 18, 1989, a Notice of Violation and Proposed Imposition of Civil Penalty was issued to Lee County Community Hospital. The licensee responded to the Notice on May 18 and August 1, 1989, did not deny the violation, but requested a reduction in the severity level of the violation and mitigation of the civil penalty. The NRC's evaluation and conclusion regarding the licensee's responses is as follows:

Summary of Licensee's Request for Mitigation

The licensee's reasons for requesting reduction in the Severity Level of the violation and mitigation of the civil penalty can be summarized as follows: (1) the hospital stated that they have had no major deficiencies in their program which were identified by the NRC since the inception of the nuclear medicine program, (2) there was no intent to defraud or mislead the NRC but merely an attempt to document a meeting that was held but for which the minutes were lost, (3) the licensee physicist's agenda and findings discussed at the May and August quarterly meetings were basically the same, (4) the Chief Technologist's performance has been well above average, and (5) corrective action has been taken, including involving the hospital administrator in the quarterly radiation safety committee meetings and detailed reviews of all aspects of operations with the staff.

NRC Evaluation of Licensee's Request for Mitigation

The licensee requested a reduction of the severity level assigned to the violation. The NRC Enforcement Policy (10 CFR Part 2, Appendix C, 1989) classifies at Severity Level II violations involving inaccurate or incomplete information which is provided to the NRC by a licensee official because of careless disregard for the completeness or accuracy of the information. In deciding to downgrade the classification of this violation from Severity Level II to Severity Level III, NRC has already taken into account the information that the Radiation Safety Committee meeting was actually held and that the discussion that took place may have been similar to the previous meeting. However, the NRC maintains that when the Chief Radiation Technologist noted that the minutes for one meeting were missing, he directed that the date be substituted for the date on a copy of some minutes that presented a specific, detailed account of a previous meeting; and, thereafter, this falsified document, which is an NRC-required document, was maintained in the files and was available for NRC inspection. It is unacceptable for a licensee official to direct that an NRC-required document be falsified. Therefore, mitigation or further reduction in the severity level is not appropriate.

The appropriate way to document the missing meeting minutes would have been to acknowledge that the record was misplaced and to recreate the minutes from other records or discussions with those in attendance and to annotate in the minutes that the original record was lost and that the record had been reconstructed.

The licensee stated that no other major deficiencies have been identified by NRC inspections. NRC has, however, identified fourteen violations during the period covered by the last two inspections. Therefore, additional mitigation of the civil penalty based on past performance is not warranted.

NRC Conclusion

The NRC staff has carefully reviewed the licensee's responses and has concluded that the licensee has not provided adequate basis for reduction of the severity level or mitigation of the civil penalty. Therefore, the civil penalty in the amount of $2,500 should be imposed.

[FR Doc. 89-21405 Filed 9-11-89; 8:45 am]

BILLING CODE 7590-01-M

[Docket No. 50-390 and 50-391]

Tennessee Valley Authority, Watts Bar Nuclear Plant, Units 1 and 2;

Exemption I

The Tennessee Valley Authority (TVA) holds Special Nuclear Material License Nos. 70-02910 and 70-02928, which authorize the use of unirradiated fuel at the Watts Bar Nuclear Plant, Units 1 and 2 (the facility, Units 1 and 2). The licenses provide, among other things, that the facility is subject to all rules, regulations, and orders of the Nuclear Regulatory Commission (the Commission) now or hereafter in effect concerning Special Nuclear Material. The facility consists of two pressurized water reactors located on TVA's site in Rhea County, Tennessee.

II

Section 70.51(d) of 10 CFR part 70 requires, in part, that each licensee who is authorized to possess special nuclear material is a quantity totaling more than 350 grams of Uranium-235, Uranium-233, or plutonium, or any combination thereof, shall conduct a physical inventory of all special nuclear material in the licensee's possession at intervals not to exceed 12 months. TVA holds licenses to have special nuclear material in a quantity totaling greater than 350 grams at the facility site. The special nuclear material is unirradiated nuclear fuel for the nuclear power plant. The licenses are 70-02910 and 70-02928 for Units 1 and 2, respectively.

Pursuant to the above requirement, a physical inventory of the facility fuel was conducted by piece count and serial number verification in August 1988. The next inventory should have been conducted by August 9, 1989. In order to perform the inventory, removal of the spent fuel pit covers and the new fuel vault covers is required. However, the Auxiliary Building crane which is required to remove those covers is currently out of service. This crane was not returned to service in time to conduct the physical inventory before the required date. The spent fuel pit covers weight about 5,000 pounds each and the new fuel vault covers weight about 6,000 pounds each.

In order to comply with NRC requirements, TVA requested a temporary exemption from the time requirements in 10 CFR 70.71(d). TVA

stated it will perform the physical inventory of the nuclear fuel assemblies within 90 days of the original scheduled inventory date, which will be no later than November 7, 1989. The Auxiliary Building crane is expected to be returned to service within that time.

TVA has an approved facility security plan which has acceptable requirements to protect the fuel stored at the facility.

Based on the above, the staff finds that the temporary exemption is acceptable if the physical inventory of the fuel is conducted as soon as practical after the Auxiliary Building crane is returned to service but not later than November 7, 1989. TVA stated that the crane should be returned to service so that the inventory can be conducted by November 7, 1989.

III

Accordingly, the Commission has determined that, pursuant to 10 CFR 70.14(a), this temporary exemption is authorized by law and will not endanger life or property or the common defense and security and is otherwise in the public interest. The Commission further determines that special circumstances are present justifying the temporary exemption; namely; that the application of the regulation in the particular circumstances would result in undue hardship or other costs that are significantly in excess of those contemplated when the regulation was adopted. TVA can not conduct the inventory of the fuel at the Watts Bar site without the Auxiliary Building crane being able to remove the spent fuel pit covers and the new fuel vault covers.

Accordingly, the Commission hereby grants a temporary exemption from 10 CFR Part 70.51(d) for Watts Bar, Units 1 and 2 as described above, provided that the physical inventory of all special nuclear material is conducted as soon as practical after the Auxiliary Building crane is returned to service but not later than November 7, 1989.

Pursuant to 10 CFR 51.32, the Commission has determined that the granting of this temporary Exemption will have not significant impact on the environment. An Environment Assessment and Finding of No Significant Impact for this temporary exemption was issued in the Federal Register (54 FR 35953), on August 30, 1989.

For further details with respect to this action, see the request for the temporary exemption dated July 10, 1989, which is available for public inspection at the Commission's Public Document Room, Gelman Building, 2120 L Street NW., Washington, DC., and at the Chattanooga-Hamilton County Library, 1001 Broad Street, Chattanooga, Tennessee 37402.

The temporary Exemption is effective upon issuance and must be implemented no later than November 7, 1989. Dated at Rockville, Maryland this 1st day of September, 1989.

For the Nuclear Regulatory Commission.

B.D. Liaw,

Director, TVA Projects Division, Office of Nuclear Reator Regulation.

[FR Doc. 89-21404 Filed 9-11-89; 8:45 am]

BILLING CODE 7590-01-M

[Docket Nos. 030-19752, 030-20466, 030-05985; License Nos. 29-19769-02, 29-19769-03, 29-15364-01; EA 89-19]

Isomedix, Inc., Whippany, NJ; Order Imposing Civil Monetary Penalties

I

Isomedix, Inc., (license) is the holder of License Nos. 29-19769-02 and 29-19769-03 issued by the Nuclear Regulatory Commission (Commission or NRC) which authorizes the licensee to irradiate materials as a commercial service. The current licenses were issued on December 10, 1987 and October 20, 1988 and are due to expire on December 31, 1992 and October 31, 1993.

The licensee was also the holder of License No. 29-15364-01, which was last issued on May 30, 1986, which authorized the commercial irradiation of materials at their Parsippany, New Jersey facility. That license was terminated by the NRC on April 28, 1989 after the licensee closed the Parsippany facility on December 31, 1987, and requested termination of the license.

II

NRC safety inspections of the licensee's activities were conducted at the licensee's former facility in Parsippany, New Jersey on August 19 and 25, 1987, and at its facility in Northboro, Massachusetts on August 20, 1987. Further, investigations were also conducted by the NRC Office of Investigations subsequent to the inspections. The results of the inspections and investigations indicated that the licensee had not conducted its activities in full compliance with NRC requirements. A written Notice of Violation and Proposed Imposition of Civil Penalties (Notice) was served upon the licensee by letter dated June 28, 1989. The Notice stated the nature of the violations, the provisions of the Nuclear Regulatory Commission's requirements that the licensee has violated, and the civil penalty amount for the violations. The licensee responded to the Notice of Violation and Proposed Imposition of Civil Penalties by letter dated July 28, 1989. In its response the licensee admitted the violations, however requested that the civil penalties be mitigated.

III

After consideration of the licensee's response and the statement of fact, explanations, and argument for mitigation contained therein, the NRC staff has determined as set forth in the appendix to this Order that the penalties proposed for the violations designated in the Notice of Violation and Proposed Imposition of Civil Penalties should be imposed.

IV

In view of the foregoing and pursuant to section 234 of the Atomic Energy Act of 1954, as amended (Act), 42 U.S.C. 2282, and 10 CFR 2.205, *it is hereby* ordered that:

The licensee pay civil penalties in the amount of $28,500 within 30 days of the date of this Order, by check, draft, or money order, payable to the Treasurer of the United States and mailed to the U.S. Nuclear Regulatory Commission, ATTN: Document Control Desk, Washington, DC 20555.

V

The licensee may request a hearing within 30 days of the date of this Order. A request for a hearing shall be clearly marked as a "Request for an Enforcement Hearing" and shall be addressed to the Director, Office of Enforcement, U.S. Nuclear Regulatory Commission, ATTN: Document Control Desk, Washington, DC 20555. A copy of the hearing request shall also be sent to the Assistant General Counsel for Hearings and Enforcement, Office of the General Counsel, U.S. Nuclear Regulatory Commission, Washington, DC 20555 and to the Regional Administrator, Region I, 475 Allendale Road, King of Prussia, Pennsylvania 19406.

If a hearing is requested, the Commission will issue an Order designating the time and place of the hearing. If the licensee fails to request a hearing within 30 days of the date of this Order, the provisions of this Order shall be effective without further proceedings. If payment has not been made by that time, the matter may be referred to the Attorney General for collection.

In the event the licensee requests a hearing as provided above, the issue to be considered at such hearing shall be whether, on the basis of the admitted violations set forth in the Notice of

Violation and Proposed Imposition of

radioactive source) was not equipped

Violations Not Assessed a Civil penalty

that when the inspectors identified the

Violation and Proposed Imposition of Civil Penalties referenced in Section II, above, this Order should be sustained.

Dated at Rockville, Maryland, this 1st day of September 1989.

For the Nuclear Regulatory Commission.

James Lieberman,

Director, Office of Enforcement.

Appendix—Evaluations and Conclusions

On June 28, 1989, a Notice of Violation and Proposed Imposition of Civil Penalties was issued to Isomedix, Incorporated for violations identified during NRC inspections and investigations. The licensee responded to the Notice on July 26, 1989. In its response, the licensee admits all of the violations but requests mitigation of the civil penalties. The NRC's evaluation and conclusion regarding the licensee's arguments are as follows:

1. Restatement of Violations

Violations Assessed Civil Penalties:

I. 10 CFR 20.203(c)(6)(i) requires that each entrance or access point to an area (in which there may exist radiation levels in excess of 500 rems in one hour at one meter from a sealed radioactive source) must be equipped with entry control devices which function automatically to prevent any individual from inadvertently entering the area when such radiation levels exist.

A. Contrary to the above, for a period of time of at least one day prior to and after February 11, 1985, the access point to the irradiator room at the licensee's former irradiator facility in Parsippany, New Jersey (in which radiation levels existed in excess of 500 rems in one hour at one meter from a sealed radioactive source) was not equipped with an entry control device which functioned automatically to prevent an individual from entering the area. Specifically, during this time period, while the irradiator was operating, the required entry control device radiation monitor, which functions automatically to lock the entrance when excessive radiation levels are present, was not present and operating because it had been removed and sent for calibration without a replacement monitor being installed.

This a Severity Level II violation. (Supplement IV) Civil Penalty—$8,000.

B. Contrary to the above, for a period of time of at least one day prior to and after April 14, 1986, the access point to the irradiator room at the licensee's former irradiator facility in Parsippany, New Jersey (in which radiation levels existed in excess of 500 rems in one hour at one meter from a sealed radioactive source) was not equipped with an entry control device which functioned automatically to prevent an individual from entering the area. Specifically, during this time period, while the irradiator was operating, the required entry control device radiation monitor, which functions automatically to lock the entrance when excessive radiation levels are present, was not present and operating because it had been removed and sent for calibration without a replacement monitor being installed.

This is a Severity Level II violation. (Supplement IV) Civil Penalty—$8000.

C. Contrary to the above, from May 29, to August 19, 1987, the access point to the irradiator room at the licensee's former irradiator facility in Parsippany, New Jersey (in which radiation levels existed in excess of 500 rems in one hour at one meter from a sealed radioactive source) was not equipped with an entry control device which functioned automatically to prevent an individual from entering the area. Specifically, during this time period, while the irradiator was operating, the required entry control device radiation monitor, which functions automatically to lock the entrance when excessive radiation levels are present, was not present and operating because it had been removed and sent for calibration without a replacement monitor being installed.

This is a Severity Level II Violation. (Supplement IV) Civil Penalty—$10,000.

II. Condition 19 of License No. 29–19769–02 requires that the licensee possess and use licensed radioactive material at its facility in Northboro, Massachusetts in accordance with the statements, representations, and procedures contained in the license application dated May 24, 1982.

Section 4.6.1 of the license application dated May 24, 1982 requires that the proper operation of the irradiator ventilation fan be monitored by an air flow switch installed in the filter body such that if no air flow is indicated, the source is returned to the fully shielded position.

Contrary to the above, on August 20, 1987 and for an indeterminate number of times prior to that date (specifically whenever water from heavy rainfall entered the ventilation system), no air flow was indicated in the ventilation system and, because jumper cables were installed to bypass the interlock associated with the air flow switch, the source was not returned to the fully shielded position.

This is a Severity Level III violation. (Supplement VI) Civil Penalty—$2,500.

Violations Not Assessed a Civil penalty

III. Condition 20 of License No. 29–15364–01 required that the licenses possess and use licensed radioactive material at its former Parsippany facility in accordance with statements, representations, and procedures contained in the application dated December 20, 1985.

Item 7.2 of this application required that formalized weekly and monthly safety and maintenance related checks be performed on the mechanical systems of the irradiator.

Contrary to the above, the required monthly safety and maintenance related checks of the mechanical systems of the irradiator were not performed for January and February 1987, and the required weekly safety and maintenance related checks were not performed between December 17, 1986 and March 24, 1987.

This is a Severity Level IV violation. (Supplement VI)

IV. 10 CFR 20.203(c)(6)(vii) requires that entry control devices required in accordance with 10 CFR 20.203(c)(6)(i) be tested with a source of radiation for proper functioning prior to initial operation on any day that operations are not uninterruptedly continued from the previous day, or before resuming operations after any interruptions, and records maintained of the date, time, and results of such tests.

Contrary to the above, records were not maintained of the safety interlock checks performed during the period from August 29, 1986 to February 1, 1987.

This is a Severity Level V Violation. (Supplement IV)

2. Summary of Licensee Response Requesting Mitigation of the Civil Penalties

Although the licensee admits the occurrence of all of the violations, the licensee requests mitigation of the respective civil penalties proposed for Violations. I.A, I.B and I.C. In support of its request, the licensee argues that during those periods that the radiation cell monitor was out for calibration, the safety of personnel was not jeopardized because (1) alternate safety procedures were instituted requiring two individuals with two survey meters to monitor the door entry point, and the operators were instructed in these procedures which were posted at the entry point; and (2) seven other safety features were operable as part of the normal cell entry procedure. The licensee also argues that it was totally open and honest with the NRC during the inspections and investigations. The licensee also states that when the inspectors identified the violations, the licensee responded honestly regarding whether it had operated in this manner before, and that this form of self-incrimination should not be a basis for civil action.

3. NRC Evaluation of the Licensee's Response

In its letter dated June 28, 1989, transmitting the Notice of Violation and Proposed Imposition of Civil Penalties to Isomedix, Inc., the NRC recognized that alternate safety procedures had been instituted when the radiation monitor was removed for calibration. However, the NRC also noted that the licensee knew that the alternate procedures did not constitute an entry control device which functioned automatically to prevent inadvertent entry to the area, and this did not constitute compliance with the requirements set forth in 10 CFR 20.203 (c)(6)(i). These factors were considered by the NRC in evaluating the significance and severity level of the violations. In accordance with the guidance provided in the "General Statement of Policy and Procedure for NRC Enforcement Actions," 10 CFR Part 2, Appendix C (Enforcement Policy), these factors are not considered by the NRC in the decision to escalate and mitigate a civil penalty (although a reduced Severity Level of a violation will generally result in a lower civil penalty amount). In this case, the NRC considered classifying each of these three violations at Severity Level I since the violations were willful. However, because alternate procedures and other safety features were in effect, the NRC determined that a Severity Level II classification was appropriate, and the amount of the civil penalties was determined after considering the normal escalation and mitigation factors in the manner described in the NRC's letter dated June 28, 1989.

Furthermore, while the NRC acknowledges the openness and honesty exhibited during the inspection and investigation, the NRC requires such honesty from its licensees and anything less would have been unacceptable and may have resulted in more significant civil and/or criminal enforcement action. It is a fundamental regulatory principal that all information provided to the NRC be complete and accurate in all material ways. Therefore, while this openness and honesty is commendable, it provides no basis for mitigation of the penalty.

4. NRC Conclusion

The NRC staff has carefully reviewed the licensee's response and has concluded that the licensee has not provided a sufficient basis for mitigation of the amount of the civil penalties. Therefore, civil penalties in the amount of $28,500 should be imposed.

BILLING CODE 7590-01-M

OFFICE OF MANAGEMENT AND BUDGET

Office of Federal Procurement Policy

SMALL BUSINESS ADMINISTRATION

Final Policy Directive

AGENCY: Office of Federal Procurement Policy (OFPP); Small Business Administration (SBA).

ACTION: Notice of final policy directive.

SUMMARY: The OFPP and SBA are issuing a final policy directive and test plan implementing title VII of the "Business Opportunity Development Reform Act of 1988," Public Law (Pub. L.) 100–656, which establishes the Small Business Competitiveness Demonstration Program. As a result of comments received following publication of an interim policy directive and test plan in the **Federal Register** on December 29, 1988 (53 FR 52889), changes have been made to the interim policy directive and test plan as indicated below. The changes include deleting Federal Procurement Data System (FPDS) service codes C217, Mapping Incidental to A&E Services, and C218, Surveying Incidental to A&E Services, and establishing an annual report on results of the Program.

In addition, the "Business Opportunity Development Reform Act Technical Corrections Act," Pub. L. 101–37, adds the Department of Interior as a participating agency in the Program. The final policy directive and test plan reflect this change.

EFFECTIVE DATE: October 12, 1989.

FOR FURTHER INFORMATION CONTACT: Karen Maris, Deputy Associate Administrator, (202) 395–3300; or Robert Neal, Deputy Associate Administrator, (202) 395–6810.

SUPPLEMENTARY INFORMATION:

A. Background

Title VII of the "Business Opportunity Development Reform Act of 1988," Pub. L. 100–656, seeks to test the effectiveness of eliminating small business set-asides in certain industries through the establishment of the "Small Business Competitiveness Demonstration Program." The program has two primary objectives: (1) To demonstrate whether small businesses in certain industry groups can compete successfully on an unrestricted basis for Federal contracts; and (2) to demonstrate whether targeted goaling and management techniques can expand Federal contract opportunities for small businesses in industry categories where such opportunities historically have been low despite adequate numbers of small business contractors in the economy. OFPP and SBA are charged with issuing a policy directive to ensure consistent government-wide implementation of Title VII.

B. Public Comments

OFPP and SBA published an interim policy directive and test plan with request for comment on December 29, 1988 (53 FR 52889). Forty public comments were received in response to that notice. Twenty-nine specifically supported the Program or the interim policy directive. Only one expressed disagreement with the Program as a whole.

A majority of the comments suggested adding more Federal agencies to the list of nine participating agencies covered by the interim policy directive and test plan. The agencies mentioned include the Departments of Interior, Commerce, State, Justice, and Housing and Urban Development. The Department of Interior has been added as a participating agency by the "Business Opportunity Development Reform Act Technical Corrections Act," Pub. L. 101–37.

The Administrator of OFPP (Administrator) is authorized by section 718(c) of Pub. L. 100–656 to specify the list of executive agencies designated to participate in the Program, but is required to include at least the ten agencies listed in the law, as amended. The Conference Report on Pub. L. 100–656 indicates that Congress intended to include in the Program agencies whose combined procurement constituted a substantial portion of all Federal procurement and to exclude those agencies whose procurement was relatively insignificant. After considering the comments received and analyzing procurement award data for FY 1987 and 1988 from the FPDS, the Administrator has decided that it is inappropriate to include any other agencies in the Program.

The statutorily designated agencies already account for over 90% of the Federal procurement awards in each of the four designated industry groups covered by the Program. The inclusion of any one of the remaining suggested agencies would not result in an appreciable expansion of coverage for any of the designated industry groups because the maximum increase obtained would be less than 2 percent. Therefore, the Administrator has determined that the amount of procurement done by these agencies, in the industry groups covered by the Program, is not sufficient to warrant their inclusion in the Program.

Thirteen comments were received which recommended that FPDS service codes C217, Mapping Incidental to A&E Services, and C218, Surveying Incidental to A&E Services, be deleted from the Program. The commenters urged that these codes, which were created specifically for the Program, are confusing because surveying and mapping services are considered to be architectural and engineering services; consequently, there is no need to refer to surveying and mapping "incidental" to A&E services. Several commenters also argued that adequate FPDS service codes already existed for reporting surveying and mapping contracts, and therefore the new codes C217 and C218 were superfluous and confusing. OFPP and SBA have decided to delete new FPDS service codes C217 and C218 because we agree that the previously existing FPDS service codes are adequate for reporting purposes and that the addition of the new codes could cause confusion.

Ten comments were received that recommended that OFPP and SBA report regularly to the public on the results of the Program. We believe this is a good idea and will issue reports summarizing Program results on an annual basis.

Several comments were received that suggested the language in paragraph IV.A. of the test plan be clarified to indicate that the references to monitoring goal attainment based on awards in "individual codes" means FPDS service codes rather than Standard Industrial Classification (SIC) codes. The use of the words "individual codes" rather than "FPDS service codes" in paragraph IV.A. was intentional. This is because as provided in paragraph IV.B.4., the construction industry is to be monitored by SIC codes rather than FPDS service codes. (We believe that the construction SIC codes sufficiently identify the components of that industry for reporting purposes, while the same is not true for the other industries covered by the Program.) We have, however, amended paragraph IV.A. to clarify this point.

Several comments from firms engaged in the surveying and mapping professions and from associations that represent them suggested the addition to Program coverage of FPDS service codes D315, Digitizing Services to T099, Other Photographic, Mapping, Printing and Publication Services, in order to cover the fullest range of surveying and mapping contracts. We have decided not to add these codes to the Program. D315 is a code that falls under automated data processing (ADP) services, and it is our understanding that digitizing is an ADP application. While it is used for putting maps into a digitized form, it may be done by an ADP firm and need not be done by a surveying and mapping firm. Similarly, FPDS service code T099 is a miscellaneous code that covers a variety of services that may include, but are not limited to, surveying and mapping. If we added T099 to the Program, we would be covering services other than surveying and mapping which should not be included in the Program.

A few commenters also recommended the creation of new product and service codes to better define surveying under the program. We have determined that such an undertaking is not properly within the scope of the Program, which is a four year test that covers selected executive agencies. FPDS service codes are used for reporting purposes across the Federal government. Therefore, we do not believe a comprehensive restructuring of the surveying service codes for a limited purpose such as the Demonstration Program is appropriate.

Nine comments were received that suggested revising the size ranges included in Clause No. 1 and Clause No. 3 of Attachment A of the test plan. These clauses contain blanks that an offeror must check to indicate its size according to one of a series of specified size ranges, starting at $1 million or less and going to over $17 million. The commenters recommended that the size ranges should better reflect the actual size standard for their own industry. We have determined not to change the size ranges in the clauses.

The size ranges used in Clause No. 1 and Clause No. 3 were chosen because they generally are the same ranges used elsewhere in the government, such as the Bureau of Census, to collect data on small businesses. We did, however, make minor modifications to those ranges, such as providing more detailed breakdowns between the commonly used ranges of $1–$5 million and 500–1000 employees, to accommodate the most frequently used size standards. In order to change the size ranges so that they reflect the size standards for each of the covered industry groups, we would have to replace each clause with several alternative clauses because the size standards for the covered industry groups are all different. This would be cumbersome and confusing, and would make it difficult to make across the board comparisons between data obtained under the Program and data from other sources, such as the Bureau of the Census.

We also have been asked to amend Clause No. 1, paragraph (c) and Clause No. 3, paragraph (c) to clarify for offerors which of the two alternative columns, "No. of employees" and "Avg. annual gross revenues," they should check. This has been done by adding a parenthetical explanation to each clause. The parenthetical indicates that the column entitled "No. of employees" should be checked when the size standard stated in the solicitation is expressed in terms of number of employees, and the column entitled "Avg. annual gross revenues" should be checked when the size standard is expressed in terms of annual receipts.

Several comments were received which suggested changes which we believe would be inconsistent with the requirements of Pub. L. 100–656. For example, some commenters argued that the trigger for reinstituting set-asides should be set at a lower percentage, such as 20 percent. The 40 percent figure used in the Program is required by sections 712(a) and 713(a) of Pub. L. 100–656. Section 712(a) requires that each participating agency establish an annual small business participation goal of 40 percent, and section 713(a) provides that an agency that has failed to attain its small business participation goal shall solicit subsequent contracting opportunities through the use of small business set-asides to the extent necessary to attain its goal.

We also received several other comments recommending changes to policies that have broad applicability beyond the scope of the Program. We have determined that such changes are not appropriate within the limited context of the Program.

C. Clarification of Monitoring Requirements

We have learned that there is some confusion concerning whether the monitoring requirements in paragraphs IV.A.1., IV.A.2., and IV.A.3. of the test plan apply to emerging small businesses. These requirements do apply to emerging small businesses, and the paragraphs in question have been amended to clarify this point.

In addition, we have amended paragraphs III.A.1. and IV.A.3. to clarify that modifications to contracts covered by the Program should be counted toward goal attainment.

D. Addition of Portable Sanitation Services to the Program

We received a request to include portable sanitation services in the Program. The requestor points out that the Conference Report on Pub. L. 100–656 (H. Rep. No. 1070, at 84–85) states that the industry group "Refuse Systems and Related Services" is intended to include contracts for the regular collection and disposal of nonhazardous waste material from federal facilities and operations. The requestor argues that portable sanitation services come within this description. The requestor also notes that including portable sanitation services in the Program would advance the objectives of Pub. L. 100–656 because virtually all contracts for these services currently are being set aside, which indicates that this industry is already dominated by small businesses.

We believe that the inclusion of portable sanitation services in the Program is consistent with the congressional intent expressed in Pub. L. 100–656. These services do entail the regular collection and disposal of nonhazardous waste. Furthermore, they do not fit within any of the categories that the Conference Report indicates should not be covered: the operation of dumps, landfills, and sludge disposal sites; sea disposal operations; incinerators, and the collection and disposal of acid, radioactive, or other hazardous waste material. Accordingly, we have amended paragraphs III.A.2.b. and IV.B.1. to include portable sanitation services.

E. Regulatory Flexibility Act

These procedures may have a significant economic impact on a substantial number of small businesses, within the meaning of the Regulatory Flexibility Act, 5 U.S.C. 601 *et seq.*, and an Initial Regulatory Flexibility Analysis is necessary. However, data adequate for performance of an initial analysis are not yet available. An initial analysis will be prepared when adequate data are available and will be provided to the Chief Counsel for Advocacy, U.S. Small Business Administration.

The Program seeks to demonstrate whether expanded use of full and open competition in the four designated industry groups adversely affects small business participation in those industry groups. This element of the Program contains two protective features to ensure that any possible adverse impacts on small business participation in these industry groups are limited. First, the Program sets a small business participation goal of 40 percent in each of these groups. Second, the Program sets a goal for participation by emerging small businesses of 15 percent in each of these groups. Baseline data needed to perform an initial analysis of the likely effects of these provisions in the designated industry groups are not currently available.

Also, the Program directs each of the participating agencies to identify ten procurement categories that represent products and services purchased in substantial quantities by the agency that historically have had a small business participation rate of less than 10 percent by category, and in which there is a significant amount of small business productive capacity that has not been utilized by the Government. Successful implementation of this aspect of the Program would have a significant beneficial impact on a substantial number of small businesses. Baseline data to be used in performing the initial analysis of this portion of the Program also are not currently available.

F. Executive Order 12291

For the purposes of E.O. 12291, OFPP and SBA have determined that this interim policy directive is a major rule because it will have an annual effect on the economy of $100 million or more. In FY 1988, the total amount of Federal contract dollars set aside for small businesses by the participating agencies in the four designated industry groups affected by this directive was approximately $4.5 billion. We assume that the figures will be comparable for FY 1989. Most of these contracts will no longer be set aside for small businesses. This is expected to have a substantial impact on the small businesses in the four designated industry groups; however, the net effect on the economy is expected to be positive due to the increased level of competition for Federal contracts, by all sizes of firms, and the resulting reduction in Federal contract costs. This estimate does not include the portion of the Program covering the ten industry categories. Estimates of the economic impact for this portion of the Program cannot be developed here and instead must be developed by each agency covered by the Program for the ten industry categories it has selected to target for increased participation.

The lack of available economic data will not allow us to publish a regulatory analysis at this time. We, therefore, requested and received from the Office of Management and Budget (OMB) a waiver from the requirements of section 3 of E.O 12291 regarding the preparation and consideration of a Regulatory Impact Analysis at this time. We will publish in the **Federal Register** a notice of availability of the results of the regulatory analysis upon its completion.

G. Paperwork Reduction Act

The information collection requirements contained in the policy directive and test plan were previously approved by OMB and assigned OMB control number 9000–0100. Pub. L. 101-37, however, expanded the universe of contracts requiring this data submission. A revised information collection request has been submitted to OMB for approval under the Paperwork Reduction Act (44 U.S.C. 35).

Dated: August 31, 1989.

Allan V. Burman,

Deputy Administrator and Acting Administrator Office of Federal Procurement Policy.

Robert J. Moffitt,

Acting Associate Administrator for Procurement Assistance Small Business Administration.

Memorandum For: The Secretary of Agriculture, The Secretary of Defense, The Secretary of Energy, The Secretary of Health and Human Services, The Secretary of the Interior, The Secretary of Transportation, The Administrator of the Environmental Protection Agency, The Administrator of the General Services, The Administrator of the National, Aeronautics and Space Administration, The Secretary of Veterans Affairs.

Subject: The Small Business Competitiveness Demonstration Program.

August 31, 1989.

1. *Purpose.* This memorandum provides policy direction to the participating agencies for implementation of Title VII of the "Business Opportunity Development Reform Act of 1988", Pub. L. 100–656, that establishes the Small Business Competitiveness Demonstration Program.

2. *Authority.* This memorandum is issued pursuant to Sec. 715. of Pub. L. 100–656 which requires that the Office of Federal Procedurement Policy (OFPP) and the Small Business Administration (SBA) issue a policy directive to ensure consistent government-wide implementation of Title VII in the Federal Acquisition Regulation (FAR).

3. *Background.* Section 15(a) of the Small Business Act mandates that small businesses receive a fair proportion of Federal procurements. To achieve this goal, Subpart 19.5 of the FAR requires that Federal agencies reserve, or set aside, procurements for exclusive small business participation when a contracting officer determines that two

or more small businesses are capable of providing the goods or services at reasonable prices. While restricting procurements for exclusive small business participation has been very effective in assuring a small business share of Federal contracts, one unintended result is a concentration of awards in certain industries often dominated by small businesses. A further result is that agencies expend resources in those industries that are conducive to high levels of small business participation rather than expand the base of small business contracting into areas were small businesses do not traditionally obtain a significant share of procurement awards.

4. *Policy.* The Small Business Competitiveness Demonstration Program is designed to provide for enhanced goals for small businesses in certain industry groups and to expand small business participation in a broader range of industry categories. The Program is conducted under the authority of section 15 of the Office of Federal Procurement Policy Act which provides for the test of unique and innovative procurement procedures and techniques. The goal of the Program is to test the ability of small businesses in certain designated industry groups to retain a fair proporation of procurement awards in unrestricted competition in those industry groups. The Act designates SBA to act as the executive agent for OFPP in conducting the test. The procedures for implementing the test required by the Program are set forth in the attached test plan.

5. *Implementation.* This final policy directive shall be implemented in FAR Part 19. Pursuant to Sec. 714(a) of Pub. L. 100–656, provisions of the FAR that are inconsistent with this final policy directive and the attached test plan are hereby waived.

6. *Expiration Date.* The Small Business Competitiveness Demonstration Program and this policy will expire on December 31, 1992.

Allan V. Burman,

Deputy Administrator and Acting Administrator, Office of Federal Porcurement Policy.

Robert J. Moffitt,

Acting Associate Administrator for Procurement Assistance, Small Business Administration.

Small Business Competitiveness Demonstration Program Test Plan

I. Purpose

This document implements Title VII of the "Business Opportunity Development Reform Act of 1988", which establishes the Small Business Competitiveness Demonstration Program (the Program). There are three primary purposes for this Program. First, the Program seeks to demonstrate whether the competitive capabilities of small business firms in certain industry groups will enable them to successfully compete on an unrestricted basis for Federal contracts. Second, the Program attempts to demonstrate whether the use of targeted goaling and management techniques by procuring agencies, in conjunction with the Small Business Administration (SBA), will expand small business participation in Federal contracting opportunities that have been historically low despite adequate numbers of qualified small business contractors in the economy. Finally, the Program seeks to demonstrate whether expanded use of full and open competition adversely affects small business participation in certain industry groups, taking into consideration the numerical dominance of small firms, the size and scope of most contracting opportunities, and the competitive capabilities of small firms.

II. Authority

The Program is established pursuant to Title VII of the Business Opportunity Development Reform Act of 1988 (Pub. L. 100–656) and Section 15 of the Office of Federal Procurement Policy Act, 41 U.S.C. 413, which provides for the testing of innovative procurement methods and procedures.

III. Program Requirements

A. Applicability

1. The Program shall be conducted over a period of four (4) years, from January 1, 1989, through December 31, 1992. The Program will consist of two major components: (1) four Designated Industry Groups, which test unrestricted competition, and (2) ten Targeted Industry Categories, which test enhanced small business participation. Contracts resulting from solicitations issued from January 1, 1989 through December 31, 1992, and any subsequent modifications to such contracts, are covered by this Program.

2. Contract awards in the following designated industry groups are covered by this Program:

a. Construction under standard industrial classification (SIC) codes that comprise major groups 15, 16, and 17 (excluding dredging—Federal Procurement Data System (FPDS) service codees Y216 and Z216);

b. Refuse systems and related services, including portable sanitation services, under SIC code 4212 or 4953, limited to FPDS service code S205;

c. Architectural and engineering (A&E) services (including surveying and mapping) under SIC codes 7389, 8711, 8712, or 8713 (limited to FPDS service codes C111 through C216, C219, T002, T004, T008, T009, T014, and R404); and

d. Non-nuclear ship repair—ship repair (including overhauls and conversions) performed on non-nuclear propelled and nonpropelled ships under SIC code 3731, limited to FPDS service codes J998 (repair performed east of the 108th meridian) and J999 (repair performed west of the 108th meridian).

3. Targeted industry categories for enhanced participation will be determined by each participating agency, in conjunction with SBA.

4. Contract awards under the Federal Schedule Program are not covered by the Program.

B. Participating Agencies

The following agencies are participants in the Program:

1. The Department of Agriculture,
2. The Department of Defense, except the Defense Mapping Agency,
3. The Department of Energy,
4. The Department of Health and Human Services,
5. The Department of Transportation,
6. The Environmental Protection Agency,
7. The General Services Administration,
8. The National Aeronautics and Space Administration,
9. The Department of Veterans Affairs, and
10. The Department of the Interior

C. Agency Goals for the Four Designated Industry Groups

1. Each participating agency shall have a small business participation goal that is 40 percent of the agency's total contract dollars awarded for each of the four designated industry groups. In addition, each participating agency must make a good faith effort to assure that emerging small businesses receive not less than 15 percent of the agency's total contract dollars awarded for each of the four designated industry groups.

2. The Business Opportunity Development Reform Act of 1988 defines an emerging small business as one whose size is no greater than 50 percent of the numerical size standard applicable to the SIC Code assigned to the procurement. Subject to the requirements of paragraph D.3 below, contract opportunities in the four designated industy groups, which have an estimated award value equal to or less than the reserve amount established

for emerging small businesses, are reserved for such businesses.

3. Contract awards made to fulfill the 15 percent goal for emerging small businesses also count toward attainment of the 40 percent goal. All prime contract awards to small businesses, including awards under section 8(a) of the Small Business Act, section 1207 of the FY 87 National Defense Authorization Act, and sole source awards, count toward attainment of goals.

D. Procurement Procedures for the Four Designated Industry Groups

Participating agencies shall use the following procedures for procurements in the four designated industry groups.

1. Full and Open Competition for Contracts in Excess of the Emerging Business Reserve Amount. Subject to the requirements of the Competition in Contracting Act of 1984, participating agencies are required to use full and open competition for all solicitations issued on or after January 1, 1989, in the four designated industry groups, if the anticipated award value exceeds the dollar amount reserved for emerging small businesses (unless the procurement is placed under section 8(a) of the Small Business Act or set aside under section 1207 of the FY National Defense Authorization Act). Each participating agency shall continue to use full and open competition as long as quarterly reviews show that the agency's 40 percent goals are being attained. The continued use of full and open competition is not affected by an agency's failure to meet its 15 percent award goals for emerging small businesses.

2. Restricted Competition for Contracts in Excess of the Emerging Small Business Reserve Amount. a. If any participating agency's quarterly review of its awards to small businesses in the four designated industry groups shows that the agency has failed to attain its 40 percent goals for any of the groups, subsequent contracting opportunities, in excess of the amount reserved for emerging small businesses, shall be solicited through competition ½restricted to eligible small businesses to the extent necessary for the agency to attain its goals for that industry. Such solicitations (unless placed under section 8(a) of the Small Business Act or set aside under section 1207 of the FY National Defense Authorization Act) shall be conducted in accordance with section 15(a) of the Small Business Act and Subpart 19.5 of the Federal Acquisition Regulation (FAR).

b. Agencies shall be responsible for determining the extent to which restricted competition shall be employed in order to attain their small business participation goals; successive failures to meet small business participation goals warrant more aggressive measures. (For example, if an agency only misses a goal by five percent, the agency may conclude that it can attain its goal by restricting competition for a portion of its procurements, rather than all of them. Agencies are expected to exercise this discretion judiciously, and make appropriate adjustments if they miss their goal again.) Agencies shall return to the use of full and open competition upon determining that their contract awards to small business concerns meet the required goals.

c. Modifications to agency solicitation practices (instituting restricted competition and reinstituting full and open competition) shall be made as soon as practicable, but no later than the beginning of the quarter following completion of the review indicating the need for such change.

3. Reserve Program for Emerging Small Businesses

a. The emerging small business reserve amount is $25,000, or such higher amount as OFPP sets in the event that emerging small business concerns are not receiving 15 percent of the total dollar value of contract awards in one or more of the four designated industry groups. Any required adjustments to the emerging small business reserve amount will be made semi-annually by industry group.

b. Competition for all contract opportunities in the four designated industry groups with an estimated award value that is equal to or less than the emerging small business reserve amount shall be restricted to emerging small businesses, provided that the contracting officer determines that there is a reasonable expectation of obtaining offers from two or more responsible emerging small businesses that will be competitive in terms of market price, quality, and delivery. If no such reasonable expectation exists, requirements will be processed in accordance with FAR Subpart 13.105 or in accordance with FAR Subpart 19.5 or 19.8. However, if no such reasonable expectation exists where OFPP has raised the small business reserve amount to a level over $25,000, requirements over $25,000 will be processed in accordance with paragraphs D.1 and D.2, above.

c. The use of small purchase procedures is not required under the reserve program; any competitive source selection method may be used. The reserve program applies only to new awards within the emerging small business reserve threshold. Modifications within the scope of work contracts having an initial award value in excess of the emerging small business reserve amount are not subject to the reserve program.

d. Each solicitation under the Program that utilizes small purchase procedures shall include the applicable SIC code and size standard for the procurement. The exception for small purchases in FAR subpart 19.303(a) is hereby waived for the Program.

4. Solicitation Provisions for Procurements in the Four Designated Industry Groups

a. The provision set forth in Attachment A entitled "Small Business Concern Representation For The Small Business Competitiveness Demonstration Program (AUGUST 1989)" shall be inserted in full text in all solicitations issued by the participating agencies under the Small Business Competitiveness Demonstration Program for the four designated industry groups.

b. The clause set forth in Attachment A entitled "Notice of Emerging Small Business Set-Aside (DEC 1988)" shall be inserted in full text in all solicitations and resulting contracts restricted to emerging small businesses pursuant to paragraph III.D.3.

c. The face of each award issued by a participating agency under the Small Business Competitiveness Demonstration Program for the four designated industry groups shall contain a statement that the award is being issued pursuant to such Program.

E. Agency Programs For Targeted Industry Categories With Limited Small Business Participation

1. Each participating agency is required to select ten industry categories (four-digit SIC Code or some segmented portion(s) of such code(s), as identified by FPDS product or service code) as targeted categories for expansion of small business participation.

2. In order to achieve such expanded participation, agencies shall select categories that represent products and services purchased in substantial quantities by the agency; that historically have had a small business participation rate of less than 10 percent by category; and, in which there is a significant amount of small business productive capacity that has not been utilized by the Government.

3. Each participating agency shall consult with the Administrator of SBA in selecting the ten targeted categories, developing the plan for expanded small business participation, and establishing

the goals for the Program. Upon completion of their consultation with SBA, participating agencies shall publish in the **Federal Register**, an announcement soliciting public comment on that agency's program for expansion of small business participation in the targeted categories.

4. Each plan shall be submitted to the Administrator of SBA and shall contain a detailed time-phased strategy with incremental goals, including reporting on goal attainment. To the extent practicable, provisions that encourage and promote teaming and joint ventures shall be included. These provisions should permit small business firms to effectively compete for contracts that individual small businesses would be ineligible to compete for because of lack of production capacity or capability. Such joint ventures or teams shall comply with the applicable small business guidelines. (See 13 C.F.R. § 121.3(a)(vii)(C) and 121.5(a)).

5. Participating agencies shall report to OFPP and SBA on the results of the expansion program regarding the ten targeted categories on the same quarterly schedule as required for the four designated industry groups.

6. Goal attainment for the ten targeted industry categories shall be determined on the basis of awards to U.S. business firms.

7. The provision set forth in Attachment A entitled "Small Business Size Representation For Targeted Industry Categories Under The Small Business Competitiveness Demonstration Program (AUGUST 1989)" shall be inserted in full text in any soliciation issued in each of the ten targeted industry categories under the Small Business Competitiveness Demonstration Program that is expected to result in a contract award in excess of $25,000.

8. The face of each award issued in any of the ten targeted industry categories under the Small Business Competitiveness Demonstration Program shall contain a statement that the award is being issued pursuant to such Program.

IV. Monitoring and Reporting for Four Designated Industry Groups

A. Monitoring of Goals for the Four Designated Industry Groups

1. Each participating agency shall monitor its attainment of its small business and emerging small business participation goals on a quarterly basis. Written reports must be made to OFPP and SBA as to whether goals have been attained for each industry group, as specified in paragraph A.3 below. The Department of Defense shall submit a report that separately identifies performance by the Army, Air Force, Navy and the Defense Agencies. The report submitted by the General Services Administration shall separately identify performance by the Public Building Service. Reports shall be submitted within 60 days after the end of each quarter.

2. Agencies shall monitor their goal attainment for the first three quarters based on aggregate data for the following time periods:

a. First quarterly review: 1/1/89–3/31/89.

b. Second quarterly review: 1/1/89–6/30/89.

c. Third quarterly review: 1/1/89–9/30/89.

Thereafter, monitoring is to be based on aggregate data for the four preceding quarters.

3. Attainment of small business and emerging small business participation goals for the four designated industry groups will be monitored by each participating agency. Monitoring of goal attainment will be based on awards (and any subsequent modifications to those awards) in the individual codes comprising the industry, as specified in paragraph B. below.

4. Any necessary modifications to agency solicitation practices for the purpose of achieving the agency's small business participation goals (instituting restricted competition or reinstituting full and open competition) will be accomplished for each of the industry groups as follows:

a. Construction (excluding dredging).

i. Major Group 15.

ii. Major Group 16.

iii. Major Group 17.

b. Refuse Systems and related services.

c. Architectural and engineering services (including surveying and mapping).

d. Non-nuclear ship repair.

However, if goal attainment for any individual FPDS service code within the architectural and engineering services or non-nuclear ship repair industry groups falls below 35 percent, the agency shall reinstitute set-asides for that individual service code, even if overall goal attainment in the industry group is 40 percent or more. In addition, if goal attainment for any individual SIC code within one of the major groups comprising the construction industry group falls below 35 percent, the agency shall reinstitute set-asides for that individual SIC code, even if overall goal attainment in the major group is 40 percent or more.

5. Agencies shall monitor goal attainment in the four designated industry groups by reviewing total prime contract award dollars to (a) all U.S. business firms (b) small U.S. business concerns and (c) emerging small U.S. business concerns.

6. OFPP and SBA will closely monitor the Program using data from the FPDS to ensure that each participating agency makes a consistent effort to achieve goals evenly across all individual codes that comprise a designated industry group. Data shall be retrieved in the format set forth at Attachment B.

7. All prime contract awards to small businesses, including awards under section 8(a) of the Small Business Act, Section 1207 of the FY 87 National Defense Authorization Act, and sole source awards, count toward attainment of goals.

B. Codes for Monitoring and Reporting Goal Attainment For The Four Designated Industry Groups

1. Refuse Systems and Related Services.

The Business Opportunity Development Reform Act of 1988 outlines the SICs that are included in the designated industry groups. However, in the area of refuse systems and related services, SICs 4212 and 4953 include services that should not be included in the Program. The Program is designed to test small firms' competitiveness generally in procurements for the collection, transportation, and disposal of residential and nonhazardous commercial garbage, refuse and waste materials. For example, contracts for the regular collection and disposal at publicly or privately operated landfills of residential and nonhazardous commercial solid waste, garbage, debris, or other refuse from military installations, federal office buildings, and other federal facilities, and garbage processing and recycling activities, should be included. Contracts for the operation of those facilities, collection and disposal of acid, radioactive, or other hazardous waste should not be included. Therefore, participating agencies shall use FPDS service code S205 (trash/garbage collection services—including portable sanitation services) to monitor goal attainment for refuse systems and related services.

2. Architectural and Engineering Services.

a. The statute designates SICs 8711, 8712, 8713, and 7389 (if identified as mapping), as the codes for tracking architectural and engineering services, which includes surveying and mapping. Since SIC 7389 includes many more services than mapping, participating agencies shall use the following FPDS service codes to monitor goal attainment for mapping services:

T002 Cartography services
T004 Charting services
T006 Photogrammetry services
T009 Aerial photographic services
T014 Topography services

b. Participating agencies shall use the following FPDS service codes to monitor A&E services under SICs 8711 and 8712:

C111 Administrative and Service Buildings
C112 Airfield, Communication and Missile Facilities
C113 Educational Buildings
C114 Hospital Buildings
C115 Industrial Buildings
C116 Residential Buildings
C117 Warehouse Buildings
C118 Research and Development Facilities
C119 Other Buildings
C121 Conservation and Development
C122 Highways, Roads, Streets and Bridges
C123 Electric Power Generation (EPG)
C124 Utilities
C129 Other Non-Building Structures
C130 Restoration
C211 Architect—Engineer Services (non-construction)
C212 Engineering Drafting Services
C213 A&E Inspection Services (non-construction)
C214 A&E Management Engineering Services
C215 A&E Production Engineering Services
C216 Marine A&E Services
C219 Other Architect and Engineering Services

(c) Participating agencies shall identify surveying by using FPDS service code R404 (land surveys, cadastral services—non construction).

3. Non-nuclear Ship Repair.

Non-nuclear ship repair is included within SIC 3731. Since this SIC includes all ship repair as well as shipbuilding, participating agencies shall use the following FPDS service codes to monitor goal attainment for non-nuclear ship repair: J998 (Ship Repair (Including Overhauls and Conversions) Performed on Non-nuclear Propelled and Nonpropelled Ships East of the 108th Meridian) or J999 (Ship Repair (Including Overhauls and Conversions) Performed on Non-nuclear Propelled and Nonpropelled Ships West of the 108th Meridian).

4. Construction.

Goal attainment for construction shall be monitored through the use of the SIC codes identified in Attachment B.

V. Data Collection Requirements

Participating agencies shall maintain and report procurement data to the FPDS in order to determine the level of small business participation in the four designated industry groups and the ten targeted industry categories for the small business expansion program.

A. Awards in Excess of $25,000

For contract awards in excess of $25,000, the FPDS (1) has information on the SIC code of the procurement and (2) can distinguish awards to small business concerns. However, the FPDS reporting requirements are being revised to:

1. Distinguish awards resulting from solicitations issued under the Program from awards resulting from solicitations issued prior to January 1, 1989, in the four designated industry groups. A distinction must be made between contract actions awarded from solicitations issued under the Program and contract actions awarded from solicitations issued prior to January 1, 1989.

2. Distinguish emerging shall business firms from other small businesses. Participating agencies must make a good faith effort to award not less than 15 percent of the dollar value of awards in the four designated industry groups to emerging small businesses.

3. Distinguish awards to emerging small business firms in the small business reserve program. Participating agencies must reserve for exclusive competition among emerging small business concerns all contracts of $25,000 or less in the four designated industry groups or a greater amount set by OFPP if the 15 percent goal is not attained. Emerging small businesses can also receive awards above the small business reserve threshold.

4. Provide the size of the small business concern in terms of number of employees or dollar volume of sales for awards in the four designated industry groups and the ten targeted industry categories. Section 714(c) of the Business Opportunity Development Reform Act of 1988 requires each participating agency to collect data pertaining to the size of the small business concern receiving any award for services in the four designated industry groups and products or services in the ten targeted industry categories.

5. The number of employees will be based on the average of the pay periods for the last twelve months. The volume of sales will be based on the average annual gross revenue for the last three fiscal years (See FAR 19.101).

6. Specific details outlining the FPDS changes have been included in an amendment to the October 1988 FPDS Reporting Manual.

B. Awards of $25,000 or Less

During the term of the Program, each award of $25,000 or less made by a participating agency for the procurement of a service in the four designated industry groups shall be reported to the Federal Procurement Data Center in the same manner as if the award was in excess of $25,000. This means that all applicable data collected in the FPDS via the Individual Contract Action Report (SF 279), or agencies' equivalent computer-generated format, shall be reported for these purchases. It should be noted that awards of $500 or less are not reportable to the FPDS.

C. Subcontracting Activity

1. The OFPP Administrator must devise and implement, during the Program, a simplified system to test the collection, reporting, and monitoring of data on subcontract awards to small business concerns and small disadvantaged business concerns for services in the four designated industry groups and products or services in the ten targeted industry categories. The Test Subcontracting Reporting System must, even if limited to only a small number of buying activities or products or services, effectively capture the full range of small business participation at all tiers.

2. The simplified system should be implemented at the beginning of FY 1990 (October 1989). OFPP is working with officials from participating agencies' Small and Disadvantaged Business Utilization Office to develop the requirements for the simplified subcontracting system.

Attachment A—Clause No. 1

Insert the following provision (clause no. 1) in full text in all solicitations issued by the participating agencies under the Small Business Competitiveness Demonstration Program for the four designated industry groups. Insert this clause as Alternate I in addition to the clause at FAR 52.219–1.

Small Business Concern Representation for the Small Business Competitiveness Demonstration Program (August 1989)

(a) *Definition.*

"Emerging small business", as used in this solicitation, means a small business concern whose size is no greater than 50 percent of the numerical size standard applicable to the standard industrial classification code assigned to a contracting opportunity.

(b) (Complete only if Offeror has certified itself under the clause at FAR 52.219–1 as a

BEST COPY AVAILABLE

small business concern under the size standards of this solicitation.)

The Offeror represents and certifies as part of its offer that it ______ is, ______ is not an emerging small business.

(c) (Complete only if the Offeror is a small business or an emerging small business, indicating its size range.)

Offeror's number of employees for the past twelve months (check this column if size standard stated in solicitation is expressed in terms of number of employees) *or* Offeror's average annual gross revenue for the last three fiscal years (check this column if size standard stated in solicitation is expressed in terms of annual receipts). (Check one of the following.)

No. of employees	Avg. annual gross revenues
50 or fewer	$1 million or less.
51–100	$1,000,001–$2 million.
101–250	$2,000,001–$3.5 million.
251–500	$3,500,001–$5 million.
501–750	$5,000,001–$10 million.
751–1,000	$10,000,001–$17 million.
Over 1,000	Over $17 million

(End of clause)

Clause No. 2

A. Insert the following provision (clause no. 2) in full text in all solicitations and resulting contracts restricted to emerging small businesses pursuant to paragraph III. D. 3.

Notice of Emerging Small Business Set-Aside (Dec 1988)

Offers or quotations under this acquisition are solicited from emerging small business concerns only. Offers that are not from an emerging small business shall not be considered and shall be rejected.

(End of provision)

B. When using other than small purchase procedures, insert the clause at 52.219–14 in all solicitations and resulting contracts restricted to emerging small businesses.

Clause No. 3

Insert the following provision (clause no. 3) in full text in all solicitations issued in each of the ten targeted industry categories under the Small Business Competitiveness Demonstration Program that is expected to result in a contract award in excess of $25,000. Insert this clause as Alternate II in addition to the clause at FAR 52.219–1.

Small business Size Representation for Targeted Industry Categories Under the Small Business Competitiveness Demonstration Program (Augst 1989)

(Complete only if the Offeror has certified itself under the clause at FAR 52.219–1 to be a small business concern under the size standards of this solicitation.)

Offeror represents and certifies as follows:

Offeror's number of employees for the past twelve months (check this column if size standard stated in solicitation is expressed in terms of number of employees) *or* Offeror's average annual gross revenue for the last three fiscal years (check this column if size standard stated in solicitation is expressed in terms of annual receipts). (Check one of the following.)

No. of employees	Avg. annual gross revenues
50 or fewer	$1 million or less.
51–100	$1, 000,001–$2 million.
101–250	$2, 000,001–$3.5 million.
251–500	$3, 500,001–$5 million.
501–750	$5, 000,001–$10 million.
751–1,000	$10, 000,001–$17 million.
Over 1,000	Over $17 million.

(End of clause)

BILLING CODE 3110-01-M

SECURITIES AND EXCHANGE COMMISSION

[Rel. No. IC–17124; 812–7274]

Allied Capital Corp., et al.; Notice of Application

September 1, 1989

AGENCY: Securities and Exchange Commission ("SEC").

ACTION: Notice of Application for Exemption under the Investment Company Act of 1940 ("1940 Act").

Applicants: Allied Capital Corporation ("Allied Capital"), Allied Capital Corporation II ("Allied Capital II") (together, the "Funds"), Allied Advisory, Inc. ("Allied Advisory"), Allied Management Partners ("Management Partners") and Allied Venture Partnership ("Venture"), and Allied Technology Partnership ("Technology") (Venture and Technology, the "Venture Partnerships").

Relevant 1940 Act Sections: Order requested under Sections 6(c), 17(d) and Rule 17d–1 thereunder permitting certain joint transactions otherwise prohibited by Sections 17(d) and 57(a)(4).

Summary of Application: Applicants seek an order under Sections 6(c) and 17(d) of the Act and Rule 17d–1 thereunder permitting certain joint transactions relating to a proposed co-investment program involving Allied Capital, Allied Capital II, and the Venture Partnerships.

Filing Dates: The application was filed on March 23, 1989, and an amendment thereto was filed on September 1, 1989.

Hearings or Notification of Hearing: An order granting the application will be issued unless the SEC orders a hearing.

Interested persons may request a hearing by writing to the SEC's Secretary and serving Applicant[s] with a copy of the request, personally or by mail. Hearing requests should be received by the SEC by 5:30 p.m. on September 25, 1989, and should be accompanied by proof of service on the Applicant[s], in the form of an affidavit or, for lawyers, a certificate of service. Hearing requests should state the nature of the writer's interest, the reason for the request, and the issues contested. Persons who wish to be notified of a hearing may request notification by writing to the SEC's Secretary.

ADDRESSES: Secretary, SEC, 450 5th Street, NW., Washington, DC 20549. Applicants, 1666 K Street, NW., Suite 901, Washington, DC 20006.

FOR FURTHER INFORMATION CONTACT: Stuart Horwich, Staff Attorney (202) 272–3035 or Karen Skidmore, Branch Chief, at (202) 272–3023, Division of Investment Management.

SUPPLEMENTARY INFORMATION: Following is a summary of the application; the complete application is available for a fee from either the SEC's Public Reference Branch in person or the SEC's commercial copier who can be contacted at (800) 231–3282 (in Maryland (301) 258–4300).

Applicant's Representations

1. Allied Capital is a closed-end investment company registered under the Act. It is a holding company engaged in providing venture capital financing to small businesses primarily through four wholly-owned subsidiaries also registered as closed-end investment companies. Allied Capital's total consolidated assets as of December 31, 1988 were valued at $127,530,000.

2. Allied Capital II is a closed-end investment company. Its board of directors has determined that it will elect to be regulated as a business development company ("BDC") pursuant to Section 54 of the Act. As is true of Allied Capital, the investment objective of Allied Capital II is a long-term capital appreciation through venture capital investments in small businesses ("Portfolio Companies"). Like Allied Capital, it will invest in high-yielding debt, debt with equity features, and equity securities of companies believed to have significant potential for growth. A registration statement on Form N–2 has been filed registering the offering of shares of Allied Capital II under the Securities Act of 1933. Upon the effectiveness of such registration, a public offering expected to raise up to $125 million will commence. The principal underwriter for Allied Capital II is Shearson Lehman Hutton Inc.

3. Allied Advisory, a wholly-owned subsidiary of Allied Capital, will be the investment adviser of Allied Capital II. Allied Advisory is registered as an investment adviser under the Investment Advisers Act of 1940 ("Advisers Act"). The Commission is reviewing an application for exemptive relief under the Act to permit the spin-off of 100 percent of the shares of Allied Advisory to the shareholders of Allied Capital (the "spin-off"). Under the terms of the spin-off, shareholders of Allied Capital would receive shares of Allied Advisory equal to the number of shares of Allied Capital owned. Upon effectuation of the spin-off, Allied Advisory will become the investment adviser of Allied Capital pursuant to a contract to be submitted to the shareholders of Allied Capital.

4. Allied Capital and Allied Capital II have identical fundamental investment policies and strategies. The principal difference between the two companies is in their structure: Allied Capital makes its investments principally through its investment company subsidiaries, while Allied Capital II will make its investments directly. Both Funds will have officers in common, and two of Allied Capital's directors will be interested directors of Allied Capital II. Except for the two directors the Funds will have in common, their boards will be composed of different and unrelated persons, including the non-interested directors.

5. Allied Advisory structures all investments made by Allied Capital and the Venture Partnerships and will do so as well for Allied Capital II. Fees received from potential and actual borrowers are treated as either "commitment fees" or "management advisory fees". When Allied Advisory receives these fees, they are then distributed to the various entities such as Allied Capital and the Venture Partnerships (and will be distributed to Allied Capital II) based on each fund's pro rata commitment to invest, or, in the case of management advisory fees, the amount they have already invested. This means that no fees remain in Allied Advisory; they are all directed to the various funds.

6. Under the terms of a proposed investment advisory contract, Allied Capital II will pay an advisory fee of 2 percent of invested assets under management to Allied Advisory during its first year of operation, and 2.5 percent in its second year. In those first two years, it will pay a fee of .5 percent on assets invested in money market instruments and a business management fee of .25 percent of assets under management to The Boston Company Advisors, Inc. In its third year, Allied Capital II will pay to Allied Advisory a fee of 2.5 percent of all assets under management; Allied Advisory will either provide business management services itself or pay an outside entity to perform that function. When shareholders of Allied Advisory are solicited for approval of the spin-off proposal, they will also be asked to approve an advisory contract that will call for Allied Capital to pay a fee to Allied Advisory of 2.5 percent of assets under management.

7. Allied Capital has been granted orders of the Commission to permit it to co-invest with the two Venture Partnerships and certain other affiliates (Release IC–14725, September 17, 1985; Release IC–15833, June 30, 1987; Release IC–13461, August 23, 1983; Release IC–14961, February 27, 1986; and Release IC–16468, July 5, 1988) ("Prior Orders"). Venture and Technology are private venture capital investment partnerships that manage the assets of institutional and sophisticated investors. Allied Advisory is the investment adviser of the Venture Partnerships.

8. Applicants propose to allow Allied Capital and Allied Capital II to invest in tandem in Portfolio Companies and to allow Allied Capital II to co-invest with Venture and Technology to the extent that Allied Capital shares its portion of investment opportunities with its affiliates, including Venture and Technology under the terms of the Prior Orders; Allied Capital II will never make direct co-investments with the Venture Partnerships. This cooperative program ("Co-Investment Program") will apply to all potential investments identified by Allied Advisory as suitable investments for both Funds, except when such investments involve Portfolio Companies already in Allied Capital's portfolio. It is expected that the Co-Investment Program will increase favorable investment opportunities for both Funds and the Allied Group as a whole. Such tandem investing will make larger amounts of capital available for Portfolio Companies, thus permitting Applicants to invest on more favorable terms and to exert a greater influence in the management and operations of those Portfolio Companies.

9. The relative amounts offered each Fund will be a function of a predetermined ratio derived by comparing the total consolidated assets

of Allied Capital plus the Venture Partnerships (the "Allied Group") with the total assets of Allied Capital II. The percentage participation offered the Allied Group in any transaction will equal the percentage determined by dividing its total consolidated assets by the total consolidated assets by the total consolidated assets of both the Allied Group and Allied Capital II. The percentage participation offered Allied Capital II will be for the balance of the investment. Once a Venture Partnership is fully invested, its total assets will not be used in the formula since it is no longer seeking investments. Each Fund's board of directors will determine how much the Funds will purchase of the offerings made available by Allied Advisory.

10. The non-interested directors of each Fund will be provided with independent counsel so that they may be advised as to potential conflicts. Among other things, counsel will present the non-interested directors with a memorandum detailing the responsibilities associated with their non-interested status and their obligations under the terms of any exemptive order obtained.

Applicant's Legal Conclusions

1. Allied Capital owns 100 percent of the outstanding voting securities of Allied Advisory. Allied Capital and Allied Advisory are thus affiliated persons of each other. Assuming Allied Advisory is retained by Allied Capital II as the investment adviser, Allied Advisory will be an affiliated person of Allied Capital II and Allied Capital will thus be an affiliated person of an affiliated person (Allied Advisory) of Allied Capital II. After the spin-off, it is expected that Allied Advisory will become the investment adviser to Allied Capital, as well as to Allied Capital II, and, if so, it will be an affiliate of both Allied Capital and Allied Capital II. Allied Advisory is the general partner of Management Partners, which is in turn the general partner of the Venture Partnerships. The Venture Partnerships, therefore, may be deemed to be controlled by, and therefore affiliates of, Allied Advisory. The Venture Partnerships could therefore be deemed to be affiliates of an affiliate (Allied Advisory) of Allied Capital II. Because of their relationships, Allied Capital, Allied Capital II, Allied Advisory, Management Partners and the Venture Partnerships may be deemed to be precluded from cooperation in the Co-Investment Program by virtue of Sections 17(d) and 57(a) of the Act and Rule 17d–1 thereunder.

2. Applicants assert that the Co-Investment Program meets the standards for granting relief under Sections 17(d) and 57(a)(4) of the Act and Rule 17d–1 thereunder in that the terms of the Co-Investment Program are not less advantageous to either Fund and each Fund would be offered the opportunity to participate in the transactions on an identical basis. Further, the formula for the sharing of investment opportunities ensures that the Funds will be treated fairly and the non-overlapping independent boards of the Funds will ensure that no overreaching occurs. Also, the non-interested directors of each Fund will be provided with independent counsel to advise them as to potential conflicts.

3. Applicants seek an exemption pursuant to Section 6(c) for a class of transactions under the Co-Investment Program. Applicants submit that it would be impractical to attempt to obtain separate exemptive relief for each transaction because: (a) participation in investment opportunities may be precluded because of time delays in obtaining separate exemptive orders; and (b) use of an escrow account pending receipt of an exemptive order is not a viable alternative since Portfolio Companies must be assured of non-contingent funds.

4. Under the terms of the Prior Orders, Allied Capital is allowed to engage in transactions with certain affiliates relating to the co-investment in Portfolio Companies. Nothing in the proposed Co-Investment Program will affect the conditions established in those Prior Orders; Allied Capital will merely share with those affiliates covered by the Prior Orders its portion of the Co-Investment Program securities. The conditions in the Prior Orders were designed to ensure that co-investments would always be made in the best interest of Allied Capital and that any disproportionate allocation of investment opportunities and any disposition of investments would be approved by a majority of Allied Capital's directors who have no interest in the Venture Partnerships. For this reason, Applicants do not believe the Prior Orders need to be amended. However, Applicants seek an order pursuant to Section 57(a)(4) of the Act and Rule 17d–1 thereunder to allow Allied Capital II to co-invest with Venture and Technology in Portfolio Companies to the extent that mutual holding of the securities of Portfolio Companies could be deemed a joint transaction.

Applicants' conditions

Applicants agree that any order of the Commission permitting the Co-Investment Program will be subject to the following conditions:

1. No concurrent investments will occur with respect to Portfolio Companies in which Allied Capital or any of its affiliates have acquired an interest prior to the implementation of the Co-Investment Program.

2. The boards of directors of Allied Capital and Allied Capital II will have no more than two common directors. The remaining directors of the two companies, including the "non-interested" directors, will be unrelated. Each board, including the non-interested directors, will approve investments in advance. To facilitate the boards' determinations, they will be provided with periodic information listing all venture capital investments made by the other Fund. Allied Advisory, the Funds' adviser, will be responsible for providing such information to the directors of each Fund, including the non-interested directors. Neither Fund will have more than 85 percent of their total consolidated assets [1] invested jointly with the Venture Partnerships, except as a higher percentage may result from appreciation rather than acquisition of assets.

3. (a) Allied Advisory will review investment opportunities. To the extent that a Fund has funds available for investment or is otherwise considering new investments, Allied Advisory will make a preliminary determination as to whether each particular investment opportunity meets applicable investment criteria and is consistent with the existing composition of the Fund's portfolio in terms of diversification of investments. If Allied Advisory makes a favorable determination with respect to a particular investment, such investment will be deemed eligible for investment by the Funds. Investment opportunities will be offered to the Funds in amounts proportionate to total consolidated assets.[2] The adviser will maintain at

---

[1] "Total consolidated assets" is a technical accounting term. It refers to all of the assets of the entity in question, including cash, investments, loans, receivables, and other assets. Each quarter, Allied Capital, Allied Capital II and the Venture Partnerships determine their total consolidated assets in accordance with general accepted accounting principles. This is done as a matter of course and is required for public companies in order to report to their shareholders. In allocating investment opportunities, the ratio would be based on the last quarter's total consolidated assets for each of the entities. The ratio would be expected to change quarterly.

[2] The relative amounts offered by each Fund will be function of a predetermined ratio derived by

Continued

each Fund's office written records of the factors considered in any preliminary determination.

(b) Following the making of the determination referred to in (a), information concerning the proposed investment will be distributed to the directors of each Fund, including the non-interested directors, except that such information need not be distributed to the directors of any Fund that, at that time, either does not have funds available for investment or is not otherwise considering new investments. Such information will be presented in written form and will include the name of each affiliated entity that proposes to make the investment and the amount of each proposed investment.

(c) Information regarding the adviser's preliminary determinations referred to in (a) will be reviewed by the board of directors of each Fund, including the non-interested directors. Each board, including a majority of the non-interested directors, will make an independent decision as to whether and how much, to participate in an investment based on what is appropriate under the circumstances. A Fund wil only make a joint investment if a majority of the non-interested directors of the Fund prior to making the investment conclude, after consideration of all information deemed relevant (including the extent to which such participation is on a basis different from or less advantageous than that of other participants), that the investments by another Fund or Venture Partnership would not disadvantage the Fund in the making of such investment, maintaining its investment position or disposing of such investment. The non-interested directors will maintain at the Fund's office written records of the factors considered in any decision regarding the proposed investment.

4. Joint purchases of securities by a Fund with the other Fund or a Venture Partnership will consist of the same class of securities, including the same registration rights (if any), and other rights related thereto, purchased at the same unit consideration and the approval of such transactions, including determination of the terms of the transactions by a Fund's non-interested directors will be made in the same time period.

5. Neither non-interested directors of a Fund nor any other Allied Advisory affiliate, will co-invest with a Fund unless a separate exemptive order with respect to such transaction has been obtained.

6. If one Fund or a Venture Partnership elects to sell, exchange or otherwise dispose of an interest in a security that is also held by another Fund or Venture Partnership, notice of the proposed sale will be given to the Fund(s) at the earliest practical time and the Fund(s) will be given the opportunity to participate in such disposition at the same time for the same unit consideration and in amounts proportional to their respective holdings of such securities. Allied Advisory, will formulate a recommendation as to participation by such Fund in such a disposition, and provide the recommendation to the non-interested directors of such Fund. Each Fund will participate in such disposition if a majority of its non-interested directors determines that such action is in the best interest of the Fund. Each Fund will bear its own expenses associated with the disposition of a portfolio security. The non-interested directors of each Fund will record in their records the adviser's recommendation and their decision as to whether to participate in such disposition, as well as the basis for their decision that such action is in the best interest of the Fund.

7. If a Fund or Venture Partnership determines that the Fund or Venture Partnership should make a "follow-on" investment (i.e., an additional investment in the same entity) in a particular Portfolio Company whose securities are held by one or both Funds or a Venture Partnership or to exercise warrants or other rights to purchase securities of such an issuer, notice of such transaction will be provided to the other Fund (or to the Funds in the case of the Venture Partnerships) at the earliest practical time. The adviser will formulate a recommendation as to the proposed participating by a Fund in a follow-on investment and provide the recommendation to the non-interested directors of the Fund along with notice of the total amount of the follow-on investment. Each Fund's non-interested directors will make their own determination with respect to follow-on investments. Assuming that the amount of a follow-on investment available to a Fund is not based on the amount of such Fund's initial investment, the relative amount of investment by each Fund participating in the follow-on investment will be based on a ratio derived by comparing the total consolidated assets of each participating Fund with the total amount of the available follow-on investment. Each Fund will participate in such investment if a majority of the non-interested directors determines that such action is in the best interest of their Fund. The non-interested directors of each Fund will record in their records the adviser's recommendation and their decision as to whether to engage in a follow-on transaction with respect to that Portfolio Company, as well as the basis for such decision.

8. The non-interested directors of a Fund will be provided quarterly for review, all information concerning co-investments made by the Funds, including co-investments in which one or both Fund declined to participate, so they may determine whether all investments made during the preceding quarter, including those investments they declined, complied with the conditions set forth above. In addition, at least annually, as well as during any quarter in which a co-investment was made, the non-interested directors will consider the continuing appropriateness of the standards established for investments by a Fund. The non-interested directors will consider whether use of such standards continues to be in the best interest of the Fund and its shareholders and does not involve overreaching of the Fund or its shareholders on the part of any party concerned.

9. The non-interested directors of Allied Capital and Allied Capital II will maintain the records required by Section 57(f)(3) of the Act and will comply with the provisions of Section 57(h) of such Act,[9] and each Fund will otherwise maintain all records required by the Act. All records referred to or required under these conditions will be available for inspection by the Commission.

10. The Funds will make no changes in conditions (1)–(9) until an amendment of any order issued pursuant to this Application is obtained from the Commission.

For the Commission, by the Division of Investment Management, pursuant to delegated authority.

Shirley E. Hollis,

Assistant Secretary.

[FR Doc. 89-21382 Filed 9-11-89; 8:45 am]

BILLING CODE 8010-01-M

---

comparing the total consolidated assets of the Allied Group (Allied Capital plus the Venture Partnerships) with the total assets of Allied Capital II. As stated above, once a Venture Partnership is fully invested, its total assets will not be used in the formula since it is no longer seeking investments.

[9] Allied Capital will comply with such provisions even though it is not a BDC and, therefore, not subject to these sections of the Act.

[File No. 22-19598]

Application and Opportunity for Hearing; American Airlines, Inc.

September 6, 1989.

Notice is hereby given that American Airlines, Inc. (the "Applicant") has filed an application under clause (ii) of section 310(b)(1) of the Trust Indenture Act of 1939 (the "Act") for a finding by the Securities and Exchange Commission ("Commission") that (*a*) the trusteeship of the Connecticut National Bank ("CNB") under two or more indentures to be qualified under the Act and (*b*) the trusteeship of CNB under one or more of such qualified indentures and under certain other indentures described below, is not so likely to involve a material conflict of interest as to make it necessary in the public interest or for the protection of investors to disqualify CNB from acting as trustee under such qualified indentures or such other indentures.

Section 310(b) of the Act provides, in part, that if a trustee under an indenture qualified under the Act has or shall acquire any conflicting interest (as defined in the section), it shall within ninety days after ascertaining that it has such conflicting interest either eliminate such conflicting interest or resign. Subsection (1) of such section provides, with certain exceptions, that a trustee is deemed to have a conflicting interest if it is acting as trustee under another indenture under which any other securities of the same obligor are outstanding. However, pursuant to clause (ii) of subsection (1), there may be excluded from the operation of this provision another indenture or indentures under which other securities of such obligor are outstanding, if the issuer shall have sustained the burden of proving on application to the Commission, and after opportunity for a hearing thereon, that trusteeship under the qualified indenture and such other indenture is not so likely to involve a material conflict of interest as to make necessary in the public interest or for the protection of investors to disqualify such trustee from acting as trustee under any of such indentures. The Applicant alleges that:

1. The Applicant has filed one or more Registration Statements on Form S–3 covering the proposed issuance of up to four new series of 1989 Equipment Trust Certificates, Series A, *et seq.* (the "Proposed Certificates").

2. Each series of the Proposed Certificates will be issued pursuant to a separate identure (a "Proposed Indenture", and collectively, the "Proposed Indentures"), each to be qualified under the Act, among a banking institution, as trustee (the "Proposed Owner Trustee"), the Applicant, as lessee, and an indenture trustee (the "Proposed Indenture Trustee"). The Applicant desires to appoint CNB as the Proposed Indenture Trustee under each such Proposed Indenture.

3. The proceeds from the sale of the Proposed Certificates will be used to provide long-term financing for a portion of the equipment cost of up to four Boeing 757–223 aircraft or McDonnell Douglas DC–9–82 aircraft (collectively, the "Proposed Aircraft"), each of which will be leased by the Proposed Owner Trustee to the Applicant.

4. Each series of the Proposed Certificates will be secured by a security interest in one of the Proposed Aircraft and by the right of the Proposed Owner Trustee to receive rentals payable in respect of such Aircraft by the Applicant under the applicable lease. No Aircraft will be covered by more than one Proposed Indenture or by any other indenture, and the Proposed Certificates to be issued pursuant to any one Proposed Indenture will be separate from the Proposed Certificates to be issued pursuant to any other Proposed Indenture.

5. Each Proposed Indenture will provide, pursuant to section 310(b) of the Act, for the resignation of the Proposed Indenture Trustee in the event that it does not eliminate a conflicting interest, and will provide that trusteeship under another indenture of the Applicant constitutes a conflicting interest, provided, however, that the Applicant may apply to the Commission for a finding that no material conflict exists.

6. CNB currently acts as indenture trustee (the "Pass Through Trustee") under four qualified indentures under which the Equipment Note Pass Through Certificates, Series 1988–A, are outstanding (the "1988 Qualified Indentures") and as indenture trustee (the "Loan Trustee") under four separate leveraged lease indentures related to the 1988 Qualified Indentures (the "1988 Lease Indentures").

7. Each of the 1988 Lease Indentures relates to a separate leveraged lease transaction in which an owner trustee leases one McDonnell Douglas DC–9–82 Aircraft to the Applicant. In 1988, each owner trustee, for the benefit of institutional investors acting as equity participants, issued four series of loan certificates (the "1988 Equipment Notes") under each 1988 Lease Indenture to four separate grantor trusts. These grantor trusts in turn issued four series of Pass Through Certificates (the "1988 Pass Through Certificates") under the four separate 1988 Qualified Indentures. The 1988 Equipment Notes issued with respect to each 1988 Lease Indenture are secured by a security interest in the aircraft to which such 1988 Lease Indenture relates and by the right of the owner trustee to receive rentals on such aircraft from the Applicant.

8. Each aircraft covered by a 1988 Lease Indenture is not covered by any other indenture, and the 1988 Equipment Notes issued under each 1988 Lease Indenture are separate from loan certificates issued under any other indenture.

9. The Pass Through Certificates issued under the 1988 Qualified Indentures represent undivided interests in the 1988 Equipment Notes held by the related Pass Through Trustee. The 1988 Equipment Notes are not covered by any other indenture, and the 1988 Pass Through Certificates issued under each 1988 Qualified Indenture are separate from loan certificates issued under any other indenture.

10. None of the 1988 Lease Indentures is subject to the Act and, accordingly, none contains the language regarding conflicts required by Section 3.10(b) of the Act for qualified indentures.

11. Each 1988 Qualified Indenture provides, pursuant to Section 310(b) of the Act, for the resignation of the Pass Through Trustee in the event that it does not eliminate a conflicting interest, and provides that trusteeship under another indenture of the Applicant constitutes a conflicting interest, provided, however, that the Applicant may apply to the Commission for a finding that no material conflict exists.

12. The Applicant is not in default in any respect under any of the 1988 Qulaified Indentures or the 1988 Lease Indentures.

13. CNB also acts as Pass Through Trustee under five qualified indentures under which the Equipment Note Pass Through Certificates, Series 1987–A, are outstanding (the "1987 Qualified Indentures") and as Loan Trustee under six separate leveraged lease indentures related to the 1987 Qualified Indentures (the "1987 Lease Indentures").

14. Each of the 1987 Lease Indentures relates to a separate leveraged lease transaction in which an owner trustee leases one McDonnell Douglas DC–9–82 Aircraft to the Applicant. In 1987 each owner trustee, for the benefit of institutional investors acting as equity participants, issued seven series of loan certificates (the "1987 Equipment Notes") under each 1987 Lease Indenture to seven separate grantor

if any, should be imposed by the

trusts. These grantor trusts in turn issued seven series of Pass Through Certificates (the "1987 Qualified Indentures.) (One series of 1987 Equipment Notes matured on January 1, 1988, and another series of 1987 Pass Through Certificates issued by the two grantor trusts holding such Equipment Notes were paid off. As a result, the two 1987 Qualified Indentures under which such 1987 Pass Through Certificates were issued terminated, and thus only five 1987 Qualified Indentures remain.) The 1987 Equipment Notes issued with respect to each 1987 Lease Indenture are secured by a security interest in the aircraft to which such 1987 Lease Indenture relates and by the right of the owner trustee to receive rentals on such aircraft from the Applicant.

15. Each aircraft covered by a 1987 Lease Indenture is not covered by any other indenture, and the 1987 Equipment Notes issued under each 1987 Lease Indenture are separate from loan certificates issued under any other indenture.

16. The Pass Through Certificates issued under the 1987 Qualified Indentures represent undivided interests in the 1987 Equipment Notes held by the related Pass Through Trustee. The 1987 Equipment Notes are not covered by any other indenture, and the 1987 Pass Through Certificates issued under each 1987 Qualified Indenture are separate from loan certificates issued under any other indenture.

17. None of the 1987 Lease Indentures is subject to the Act and, accordingly, none contains the language regarding conflicts required by Section 310(b) of the Act for qualified indentures.

18. Each 1987 Qualified Indenture provides, pursuant to Section 310(b) of the Act, for the resignation of the Pass Through Trustee in the event that it does not eliminate a conflicting interest, and provides that trusteeship under another indenture of the Applicant constitutes a conflicting interest, provided, however, that the Applicant may apply to the Commission for a finding that no material conflict exists.

19. The Applicant is not in default in any respect under any of the 1987 Qualified Indentures or the 1987 Lease Indentures.

20. CNB also acts as indenture trustee under an indenture, dated as of October 15, 1986 (the "Other Indenture"), between CNB and Wilmington Trust Company ("WTC"), which relates to a leveraged lease transaction in which WTC, as owner trustee for the benefit of certain institutional investors acting as equity participants, issued in a private placement loan certificates to institutional investors acting as loan participants. Such loan certificates had an original principal amount of $32,829,735 and have a final maturity date of January 2, 2005.

21. The proceeds of the issuance of the loan certificates issued under the Other Indenture were used by the owner trustee to purchase one Boeing 767–223 aircraft that was then leased by such owner trustee to the Applicant. The Applicant is not a party to the Other Indenture (only WTC, as the owner trustee and as issuer of the loan certificates, and CNB are parties), but the Applicant's unconditional obligation to make rental payments under the lease relating to such Other Indenture is the only credit source of principal and interest payments on the loan certificates.

22. The loan certificates issued under the Other Indenture are secured by a security interest in the aforementioned Boeing 767–223 aircraft and the right of the owner trustee to receive rentals on such aircraft from the Applicant. Such aircraft is not covered by any other indenture, and the loan certificates issued under the Other Indenture are separate from loan certificates issued under any other indenture.

23. The Other Indenture is not subject to the Act and, accordingly, does not contain the language regarding conflicts required by Section 310(b) of the Act of the qualified indentures.

24. The Applicant is not in default in any respect under the Other Indenture.

The Applicant waives notice of hearing, hearing and any and all rights to specify procedures under the Rules of Practice of the Commission with respect to the application.

For a more detailed account of the matters of fact and law asserted, all persons are referred to said application, which is a public document on file in the offices of the Commission at the Public Reference Section, File Number 22–19593, 450 Fifth Street NW., Washington, DC 20549.

Notice is further given that any interested person may, not later than October 2, 1989, request in writing that a hearing be held on such matter, stating the issues of law or fact raised by such application which he desires to controvert, or he may request that he be notified if the Commission should order a hearing thereon. Any such request should be addressed: Jonathan G. Katz, Secretary, Securities and Exchange Commission, Washington, DC 20549. At any time after said date, the Commission may issue an order granting the application, upon such terms and conditions as the Commission may deem necessary or appropriate in the public interest or for the protection of investors, unless a hearing is ordered by the Commission.

For the Commission, by the Division of Corporation Finance, pursuant to delegated authority.

Jonathan G. Katz,

Secretary.

BILLING CODE 8010-01-M

[File No. 1–1657]

Issuer Delisting; Application To Withdraw From Listing (Crane Co., Common Stock, $1 Par Value; Preferred Shares Purchase Rights; 7% Subordinated Debentures Due July 1, 1994; 5% Convertible Subordinated Debentures, Due July 1, 1994

September 5, 1989.

Crane Co. ("Company"), has filed an application with the Securities and Exchange Commission ("Commission") pursuant to Section 12(d) of the Securities Exchange Act of 1934 ("Act") and Rule 12d2–2(d) promulgated thereunder to withdraw the above specified security from listing and registration on the Pacific Stock Exchange ("PSE").

The reasons alleged in the application for withdrawing this security from listing and registration include the following:

Crane Co. ("the Company") has requested the PSE to delist the foregoing securities because the volume of trading with respect to each such security has been minimal.

Crane Co. Common Stock, its Preferred Share Purchase Rights and the 7% Subordinated Debentures are presently listed on the New York Stock Exchange and will continue to be so listed with that Exchange.

The Company's 5% Convertible Subordinated Debentures, due July 1, 1994, when delisted from the PSE will not be listed on any Exchange. As of July 31, 1989 the aggregate outstanding principal amount of Convertible Debentures was $993,500 and Convertible Debentures were held by approximately 590 holders. Accordingly, the Company that states the Convertible Debentures could not presently meet the applicable listing requirements of a national securities exchange.

Any interested person may, on or before September 26, 1989, submit by letter to the Secretary of the Securities and Exchange Commission, 450 Fifth Street NW., Washington, DC 20549, facts bearing upon whether the application has been made in accordance with the rules of the Exchanges and what terms,

if any, should be imposed by the Commission for the protection of investors. The Commission, based on the information submitted to it, will issue an order granting the application after the date mentioned above, unless the Commission determines to order a hearing on the matter.

For the Commission, by the Division of Market Regulation, pursuant to delegated authority.

Shirley E. Hollis,

Assistant Secretary.

[Declaration of Disaster Loan Areas #2376 and #2377]

Delaware and Contiguous Counties in the State of Maryland; Declaration of Disaster Loan Area

Sussex County and the contiguous county of Kent, in the State of Delaware, and Caroline, Dorchester, Wicomico, and Worcester Counties, in the State of Maryland, constitute a disaster area as a result of damages from heavy rains and flooding which occurred on August 18 and 19, 1989. Applications for loans for physical damage may be filed until the close of business on October 30, 1989 and for economic injury until the close of business on May 29, 1990 at the address listed below:

Disaster Area 2 Office, Small Business Administration, 120 Ralph McGill Blvd., 14th Fl., Atlanta, Georgia 30308,

or other locally announced locations.

The interest rates are:

	Percent
Homeowners with credit available elsewhere	8.000
Homeowners without credit available elsewhere	4.000
Businesses with credit available elsewhere	8.000
Businesses and non-profit organizations without credit available elsewhere	4.000
Businesses and non-profit organizations (EIDL) without credit available elsewhere	4.000
Others (including non-profit organizations) with credit available elsewhere	9.125

The numbers assigned to this disaster for physical damage are 237606 for the State of Delaware and 237706 for the State of Maryland. The numbers assigned for economic injury are 683000 for the State of Delaware and 683100 for the State of Maryland.

(Catalog of Federal Domestic Assistance Program Nos. 59002 and 59008).

Dated: August 29, 1989.

[Application No. 05/05/0212]

Polaris Capital Corp., Application for a Small Business Investment Company License

An application for a license to operate a small business investment company (SBIC) under the provisions of the Small Business Invest Act of 1958, as amended (15 U.S.C. 661 *et seq.*) has been filed by Polaris Capital Corp. (Applicant), One Park Plaza, Suite 320, 11270 W. Park Place, Milwaukee, Wisconsin 53224, with the Small Business Administration pursuant to 13 CFR 107.102 (1989).

The Proposed Officers, Directors and Shareholders of the Applicant will be as follows:

Name	Title or position	Percent of ownership
Dean A. Treptow, N61W5353 Edgewater Dr., Cedarburg, WI 53012.	Chairman, Director and Chief Executive Officer.	10.87
Richard F. Laabs, N99W16743 Woodcock Rd., Germantown, WI 53022.	President/Director.	4.35
John C. Gardner, 320 E. Buffalo Street, Milwaukee, WI 53202.	Director	10.87
Frederick G. Luber, 777 N. Prospect Ave., Milwaukee, WI 53202.	Director	10.87
Franklin M. Buchta, 2480 N. Mayfair Dr., Brookfield, WI 53005.	Director	4.35
Robert H. Taylor, 2116 W. Raleigh Ct., Mequon, WI 53092.	Director	2.17

The Applicant, a Wisconsin corporation, is expected to begin operations with $3,450,000 of private capital. The Applicant will conduct its activities primarily in the State of Wisconsin.

Matters involved in SBA's consideration of the Application include the general business reputation and character of the proposed owners and management, and the probability of successful operations of the company under their management, including profitability and financial soundness, in accordance with Small Business Investment Act and the SBA Rules and Regulations.

Notice is further given that any person may, not later than 30 days from the date of publication of this Notice, submit written comments on the proposed SBIC to the Deputy Associate Administrator for Investment, Small Business Administration, 1441 "L" Street, NW., Washington, DC 20416.

A copy of the Notice shall be published in a newspaper of general circulation in Milwaukee, Wisconsin.

DEPARTMENT OF TRANSPORTATION

Applications for Certificates of Public Convenience and Necessity and Foreign Air Carrier Permits Filed Under Subpart Q During the Week Ended September 1, 1989

The following applications for certificates of public convenience and necessity and foreign air carrier permits were filed under Subpart Q of the Department of Transportation's Procedural Regulations (see 14 CFR 302.1701 *et seq.*). The due date for answers, conforming application, or motion to modify scope are set forth below for each application. Following the answer period DOT may process the application by expedited procedures. Such procedures may consist of the adoption of a show-cause order, a tentative order, or in appropriate cases a final order without further proceedings.

Docket Number: 46474

Dated filed: August 29, 1989

Due Date for Answers, Conforming Applications, or Motion to Modify Scope: September 28, 1989

Description: Application of Express One International, Inc. pursuant to Section 401(d)(1) of the Act and Subpart Q of the Regulations, requests a certificate of public convenience and necessity to engage in interstate and overseas scheduled air transportation.

Docket Number: 46475

Date Filed: August 30, 1989

Due Date for Answers, Conforming Applications, or Motion to Modify Scope: September 27, 1989

Description: Application of Transbrasil S.A. pursuant to section 402 of the Act and Subpart Q of the Regulations requests a foreign air carrier permit authorizing it to conduct scheduled combination transportation of passengers, cargo and mail on the route between a point or points in the Federative Republic of Brazil and the terminal point of Orlando, Florida. Transbrasil requests that its foreign air carrier permit include authorization for long-term charter authority for the transportation of passengers and cargo between a point or points in the United States of America and a point or points in the Federative Republic of Brazil.

BILLING CODE 4910-62-M

Office of the Secretary

Continental/American Route Transfer

[Docket 46303]

AGENCY: Department of Transportation, Office of the Secretary.

ACTION: Tentative approval of transfer of Continental Airlines, Inc.'s Texas-Alberta, Canada route authority to American Airlines, Inc., Order to Show Cause, Order 89-9-7.

SUMMARY: The Department has tentatively decided to approve (1) the transfer of Continental Airlines, Inc.'s Houston/Dallas/Ft. Worth-Calgary/Edmonton, Alberta, Canada-Fairbanks, Alaska route authority (Route 470) to American Airlines, Inc., and (2) renewal of the authority for five years from the effective date of final approval of the route transfer. Continental's existing route authority will expire by its own terms February 5, 1990. The Department tentatively concludes that approval of the transfer will not conflict with any important international aviation policy objectives; will have no adverse impact on industry balance; and will not otherwise be inconsistent with the public interest.

DATES: Objections and comments to the Department's tentative decision are due not later than September 20, 1989; answers thereto shall be filed not later than September 27, 1989.

ADDRESS: Objections, comments and answers should be filed in Docket 46303, addressed to the Documentary Services Division, U.S. Department of Transportation, 400 7th St., SW. Room 4107, Washington, DC 20590 and should be served in all parties in Docket 46303.

Dated: September 5, 1989.

Jeffrey N. Shane,

Assistant Secretary for Policy and International Affairs.

BILLING CODE 4910-62-M

DEPARTMENT OF THE TREASURY

Internal Revenue Service

Tax on Certain Imported Substances; Notice of Filing of Petition

AGENCY: Internal Revenue Service, Treasury.

ACTION: Notice.

SUMMARY: This notice announces the acceptance under Notice 89-61, 1989-21 I.R.B. 25, of a petition requesting that *ABS (ACRYLONITRILE, BUTADIENE, STYRENE) PELLETS* be added to the list of taxable substances in section 4672(a)(3) of the Internal Revenue Code. Publication of this notice is in compliance with Notice 89-61. This is not a determination that the list of taxable substances should be modified.

DATE: Written comments and requests for a public hearing relating to this petition must be delivered or mailed by November 13, 1989.

ADDRESS: Send comments and requests for a public hearing to the Internal Revenue Service, Attention: CC:CORP:T:R (Petition), Room 4429, 1111 Constitution Avenue NW., Washington, DC 20224.

FOR FURTHER INFORMATION CONTACT: Ruth Hoffman, Office of Assistant Chief Counsel (Passthroughs and Special Industries). Telephone 202-566-4475 (not a toll-free number).

SUPPLEMENTARY INFORMATION: The petition was received on July 11, 1989. The petitioner is GE Chemicals, Inc., a manufacturer and exporter of this substance. The following is a summary of the information contained in the petition. The complete petition is available in the Internal Revenue Service Freedom of Information Reading Room.

Harmonized Tariff System number: 3903.30

Schedule B number: 3903.30.0000-6

Chemical Abstract Service number: 003-56-9

This substance is derived from the taxable chemicals *benzene, ethylene, propylene, ammonia, butadiene, potassium hydroxide,* and *sulfuric acid.* ABS is made by the emulsion polymerization process. The ABS resin is a great polymer that is manufactured by the continuous polymerization of a mixture of styrene and acrylonitrile in the presence of a butadiene homopolymer.

According to the petition, taxable chemicals constitute 95 per cent by weight of the materials used to produce this substance. The rate of tax for this substance would be $8.09 per ton.

Dale D. Goode,

Chief, Regulations Unit, Assistant Chief Counsel (Corporate).

Vol. 54, No. 175

Tuesday, September 12, 1989

This section of the FEDERAL REGISTER contains notices of meetings published under the "Government in the Sunshine Act" (Pub. L. 94-409) 5 U.S.C. 552b(e)(3).

FEDERAL DEPOSIT INSURANCE CORPORATION

Notice of a Matter To Be Withdrawn From Consideration at an Agency Meeting

Pursuant to the provisions of the "Government in the Sunshine Act" (5 U.S.C. 552b), notice is hereby given that the following matter will be withdrawn from the "summary agenda" for consideration at the open meeting of the Board of Directors of the Federal Deposit Insurance Corporation scheduled to be held at 2:00 p.m. on Tuesday, September 12, 1989, in the Board Room on the sixth floor of the FDIC Building located at 550-17th Street, NW., Washington, DC:

Memorandum and resolution re: Final amendments to Part 309 of the Corporation's rules and regulations, entitled "Disclosure of Information," in order to conform the regulation to the Financial Institutions Reform, Recovery, and Enforcement Act of 1989, which amendments substitute the term "depository institution" each place the term "bank" appears, with certain exceptions.

Requests for further information concerning the meeting may be directed to Mr. Robert E. Feldman, Deputy Executive Secretary of the Corporation, at (202) 898-3811.

Dated: September 7, 1989.

Federal Deposit Insurance Corporation.

Robert E. Feldman,

Deputy Executive Secretaary.

BILLING CODE 7590-01-M

RESOLUTION TRUST CORPORATION

Agency Meeting

Pursuant to the provisions of the "Government in the Sunshine Act" (5 U.S.C. 552b), notice is hereby given that at 2:47 p.m. on Tuesday, September 5, 1989, the Board of Directors of the Resolution Trust Corporation met in closed session to consider (1) matters relating to the resolution of certain depository institutions placed in conversatorship under the joint regulatory oversight program; and (2) matters regarding the Corporation's corporate activities.

In calling the meeting, the Board determined, on motion of Director C.C. Hope, Jr. (Appointive), seconded by Director Robert L. Clarke (Comptroller of the Currency), concurred in by Director M. Danny Wall (Director of the Office of Thrift Supervision), and Chairman L. William Seidman, that Corporation business required its consideration of the matters on less than seven days' notice to the public; that no earlier notice of the meeting was practicable; that the public interest did not require consideration of the matters in a meeting open to public observation; and that the matters could be considered in a closed meeting by authority of subsections (c)(2), (c)(6), (c)(8), (c)(9)(A)(ii), and (c)(9)(B) of the "Government in the Sunshine Act" (5 U.S.C. 552b(c)(2), (c)(6), (c)(8), (c)(9)(A)(ii), and (c)(9)(B)).

The meeting was held in the Board Room on the sixth floor of the FDIC Building located at 550-17th Street, N.W., Washington, DC.

Dated: September 6, 1989.

Resolution Trust Corporation.

John M. Buckley, Jr.,

Executive Secretary.

Reichhold Ltd. Application for Inconsistency Ruling Concerning State of Maine Regulations for the Transportation of Hazardous Materials; Public Notice and Invitation To Comment

---

DEPARTMENT OF TRANSPORTATION

Research and Special Programs Administration

[Docket No. IRA–48]

Reichhold Ltd., Application for Inconsistency Ruling Concerning State of Maine Regulations for the Transportation of Hazardous Materials

AGENCY: Research and Special Programs Administration (RSPA), DOT.

ACTION: Public notice and invitation to comment.

SUMMARY: Reichhold Limited has applied for an administrative ruling determining whether Maine's regulations requiring a license for the transportation of hazardous materials are inconsistent with the Hazardous Materials Transportation Act (HMTA) and the Hazardous Materials Regulations (HMR) issued thereunder and, therefore, preempted under section 112(a) of the HMTA. RSPA is expanding the proceeding to include Maine's licensing and enforcement statute concerning such transportation, and its fee statue for hazardous materials transported by railroad.

DATES: Comments received on or before October 20, 1989, and rebuttal comments received on or before December 8, 1989, will be considered before an administrative ruling is issued by the Director of the Office of Hazardous Materials Transportation (OHMT). Rebuttal comments may discuss only those issues raised by comments received during the initial comment period and may not discuss new issues.

ADDRESSES: The application and any comments received may be reviewed in the Dockets Unit, Research and Special Programs Administration, Room 8421, Nassif Building, 400 Seventh Street, SW., Washington, DC 20590. Comments and rebuttal comments on the application may be submitted to the Dockets Unit at the above address, and should include the Docket Number, IRA–48. Three copies are requested. A copy of each comment and rebuttal comment must also be sent to Mr. G.R. Beasant, Reichhold Limited, Mississauga Executive Centre, Four Robert Speck Parkway, Suite 700, Mississauga, Ontario, Canada L4Z 1S1, and to Mr. Garry R. Hinkley, Director, Commercial Vehicle, Secretary of State, Motor Vehicles Division, Station No. 29, Augusta, Maine 04333, and that fact certified to at the time each comment is submitted to the Dockets Unit. (The following format is suggested: "I hereby certify that copies of this comment have been sent to Mr. Beasant and Mr. Hinkley at the addresses specified in the Federal Register.").

FOR FURTHER INFORMATION CONTACT: Mr. Edward H. Bonekemper, III, Senior Attorney, Office of the Chief Counsel, Research and Special Programs Administration, 4000 Seventh Street SW., Washington, DC 20590, telephone number 202–366–4400.

SUPPLEMENTARY INFORMATION:

1. Background

The HMTA (49 App. U.S.C. 1801–1811), at section 112(a) (49 App. U.S.C. 1811(a)) expressly preempts "any requirement, of a State or political subdivision thereof, which is inconsistent with any requirement" of the HMTA or the HMR issued thereunder.

Procedural regulations implementing section 112(a) of the HMTA and providing for the issuance of inconsistency rulings are codified at 49 CFR 107.201 through 107.211. An inconsistency ruling is an advisory administrative opinion as to the relationship between a state or political subdivision requirement and a requirement of the HMTA or HMR. Section 107.209(c) sets forth the folowing factors which are considered in determining whether a state or local requirement is inconsistent:

(1) Whether compliance with both the state or local requirement and the HMTA or HMR is possible (the "dual complaince" test); and

(2) The extent to which the state or local requirement is an obstacle to the accomplishment and execution of the HMTA and the HMR (the "obstacle" test).

Inconsistency rulings do not address issues of preemption under the Commerce Clause of the Constitution or under statutes other than the HMTA.

In issuing its advisory inconsistency rulings concerning preemption under the HMTA, OHMT is guided by the principles enunciated in Executive Order No. 12,612 entitled "Federalism" (52 FR 41,685 (Oct. 30, 1987)). Section 4(a) of that Executive Order authorizes preemption of state laws only when the statute contains an express preemption of state laws only when the statute contains an express preemption provision, there is other firm and palpable evidence of Congressional intent to preempt, or the exercise of state authority directly conflicts with the exercise of Federal authority. The HMTA, of course, contains an express preemption provision, which OHMT has implemented through regulations and interpreted in a long series of inconsistency rulings beginning in 1978.

2. The Application for Inconsistency Ruling

On June 21, 1989, Reichhold Limited (Reichhold), Mississauga, Ontario, Canada, through Mr. G.R. Beasant, its Transportation Manager, applied for an inconsistency ruling concerning the State of Maine's Bureau of State Police regulations (chapter 11) requiring a license for the transportation of hazardous materials, reproduced in Appendix A to this Notice.

To facilitate consideration of all relevant issues, this proceeding is being expanded to include the State's statute, Me. Rev. Sta. Ann. tit. 29, sections 246–B and 246–C (1988), which require such a license and provide for enforcement; and Me. Rev. Sta. Ann. tit. 38, section 1319–I, subsection 4–B (1988), which imposes a fee on hazardous materials transported by railroad. Those statutes are reproduced in appendix B to this Notice.

Section 246–B.2 of Maine's statute concerning a license for transportation of hazardous materials states that "[h]azardous materials subject to the requirements of this section shall mean those substances identified pursuant to the United States Superfund Amendments and Reauthorization Act (SARA) of 1986, title III, sections 302 and 313" (Pub. L. No. 99–499, 100 Stat. 1730–31; 1742–47). Pursuant to this statute, Maine promulgated regulations governing the display and examination of the license for transportation of hazardous materials. These regulations apply to "any person * * * who transports certain hazardous materials, identified pursuant to the United States Superfund Amendments and Reauthorization Act of 1986, title III sections 302 and 313." Section 1319–I, subsection 4–B of Maine's statute concerning the imposition of fees on hazardous materials transported by railroad also identifies hazardous materials as those identified in sections 302 and 313 of SARA. The Environmental Protection Agency has published a list of the hazardous substances and toxics under sections 302 and 313 of SARA; a copy of that list is available from RSPA's Dockets Unit, Room 8421, Nassif Building, 400 Seventh Street SW., Washington, DC 20590 (202–366–4453).

In its application, Reichhold contends that SARA is applicable to fixed facility hazardous materials emissions and was never intended to apply to hazardous materials transportation. Reichhold further states that Maine's use of SARA

as a basis for its licensing requirement is inconsistent with 49 CFR 171.8, which defines "hazardous materials" as "a substance or material, including a hazardous substance, which has been determined by the Secretary of Transportation to be capable of posing an unreasonable risk to health, safety, and property *when transported* in commerce, and which has been so designated." (Emphasis added.) Reichhold states that certain hazardous chemicals covered by sections 302 and 313 of SARA, such as melamene, are not included in the Hazardous Materials Table, 49 CFR 172.101, and that certain hazardous materials in the table, such as paraformaldehyde, are not covered by section 302 or section 313 of SARA.

Reichhold alleges that it received a summons for violation of Maine state laws for operating without a hazardous materials license. Reichhold states that the material being transported from Quebec, Canada to Maine was a phenolic resin containing the following substances listed in 49 CFR 172.101: phenol, formaldehyde, and sodium hydroxide. However, Reichhold states that the substances transported were in concentrations below those defined as constituting a hazardous substance pursuant to 49 CFR 171.8 (less than 1.0%, 0.5%, and 0.25%, respectively). Reichhold thus contends the phenolic resin is not a material that is regulated for purposes of interstate transportation.

Therefore, Reichhold requests a ruling that the relevant State of Maine regulations are inconsistent with the hazardous materials regulations and are thus preempted by section 112(a) of the HMTA. Because those regulations were effectively mandated by Me. Rev. Sta. Ann. tit. 29, sections 246–B and 246–C (1988) and because Me. Rev. Sta. Ann. tit. 38, section 1319–I, subsection 4–B (1988) contains similar SARA-based provisions, this proceeding is being expanded to include those statutes.

3. Public Comment

Comments should be limited to the issues of whether Maine's above-described statutes and regulations, requiring a license for transportation of hazardous materials, and imposing a fee on hazardous materials transported by railroad, are inconsistent with the HMTA and the HMR. They should specifically address the "dual compliance" and "obstacle" tests described above under "Background".

Persons intending to comment on the application should examine the complete application in the RSPA Dockets Unit, Appendices A and B to this Notice, and the procedures governing the Department's consideration of applications for inconsistency rulings (49 CFR 107.201–107.211).

Alan I. Roberts,

Director, Office of Hazardous Materials Transportation.

Issued in Washington, DC on September 5, 1989.

Appendix A—State of Maine Bureau of State Police

Chapter 11—License for the Transportation of Hazardous Materials Rules

Sec.
11.01: Purpose
11.02: Scope
11.03: Rules
11.04: Enforcement

Summary: These rules adopt the regulations governing the display and examination of the license for transportation of hazardous materials.

Section 11.01: Purpose

These rules prescribe the requirements of the Commissioner of Public Safety governing the examination and display of the license for transportation of hazardous materials. They are established in order to meet the requirements of 29 MRSA section 246–B and 246–C.

Section 11.02: Scope

These rules apply to any person, including a private carrier or a common or contract carrier who transports certain hazardous materials, identified pursuant to the United States Superfund Amendments and Reauthorization Act of 1986, title III sections 302 and 313, by highway such that the motor vehicle used in that transportation transports more than 2,000 pounds of any of those hazardous materials at any one time.

Section 11.03: Rules

There shall be issued to each motor vehicle that transports more than 2,000 lbs. of any of those hazardous materials at any one time as specified in 29 MRSA section 246–B a license from the Secretary of State.

This license shall be readily accessible for inspection by Main State Police officers or any member of the Department of Public Safety designated by the Commissioner of Public Safety and shall be displayed upon demand. The license shall be filled out completely and legibly.

Section 11.04: Enforcement

Only Maine State Police officers or any members of the Maine Department of Public Safety designated by the Commissioner of Public Safety are authorized and directed to enforce 29 MRSA section 246–B, 246–C, and these rules.

Authority: 29 MRSA Section 246–B.

Effective Date: February 1, 1989.

Appendix B—Maine Revised Statutes Annotated

Title 29, Section 246–B. License for Transportation of Hazardous Materials

1. *License required.* As of January 1, 1989, any person, including a private carrier or a common or contract carrier, who transports certain hazardous materials as specified in this section by highway, such that the motor vehicle used in that transportation, transports more than 2,000 pounds of any of those hazardous materials at any one time shall first obtain from the Secretary of State an annual license or single-trip license for each motor vehicle used in that transportation. This license shall be available for examination and displayed in accordance with rules adopted by the Commissioner of Public Safety. Annual licenses shall expire one year following the date of issuance. The license shall be in such form as the Secretary of State by rule prescribes. No license may be transferable to another motor vehicle.

2. *Hazardous materials covered.* Hazardous materials subject to the requirements of this section shall mean those substances identified pursuant to the United States Superfund Amendments and Reauthorization Act of 1986, title III, sections 302 and 313.

3. *Exceptions.* This section shall not apply to:

A. Any motor vehicle owned or operated by the Federal Government or any political subdivision of the Federal Government;

B. Any properly registered agricultural motor vehicle used in a bona fide farming operation;

C. Any motor vehicle used during an emergency with the specific approval of a peace officer, fire chief, designated official of the Department of Environmental Protection or the Department of Public Safety; or

D. Any motor vehicle which has a valid license issued by the Department of Environmental Protection for the transportation of hazardous waste or waste oil pursuant to title 38, section 1319–O.

4. *Fee.* The fee for an annual license is $50 and the fee for a single-trip license is $25. No portion of the annual fee for licensing may be prorated or reduced.

5. *Apportionment of fees.* Fees shall be paid to the Secretary of State and, upon receipt, credited to the Maine Hazardous Waste Fund. Fees collected shall be apportioned in the following manner:

A. Sixty-five percent to the Maine Hazardous Waste Fund administered by the Department of Environmental Protection;

B. Fifteen percent to the Secretary of State for the costs of administering the licensing program;

C. Ten percent to the Department of Public Safety for costs related to motor vehicle inspections and enforcement of this section; and

D. Ten percent to the State Emergency Response Commission established under the Maine Emergency Management Agency for hazardous materials training of local and State officials.

Title 29, Section 246–C. Enforcement

Every State police officer or any member of the Department of Public Safety designated by the Commissioner of Public Safety is authorized and directed to enforce section 246–B. A violation of section 246.B is a Class E crime, except that any owner or operator who displays, causes or permits to be displayed a fictitious license or a license issued to another motor vehicle shall be guilty of a Class D crime. All fines shall accrue to the Maine Hazardous Waste Fund.

Title 3o, Section 1319–I, Subsection 4–B

Fee on hazardous materials transported by railroad. Effective October 1, 1988, any person who transports more than 25 tons of certain hazardous materials as specified in this subsection at any one time by rail shall register annually with the department. Fees for the transportation of hazardous materials by rail shall be imposed on the registrant who first transports the materials in Maine by rail. Fees for the transportation of hazardous materials shall be determined on the basis of fifteen cents per ton of hazardous materials transported by the registrant during the period of registration and shall be paid monthly by the registrant on the basis of records certified to the department. Fees shall be paid to the department and upon receipt by it credited to the Maine Hazardous Waste Fund.

Hazardous materials subject to the requirements of this subsection shall mean those substances identified pursuant to the United States Superfund Amendments and Reauthorization Act of 1986, title III, sections 302 and 313. The registrant shall make available to the department and its authorized representatives all documents relating to the hazardous materials transported by the registrant during the period of registration.

RIN 2120-AD36

Vibration, Buffet and Aeroelastic Stability Requirements for Transport Category Airplanes

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: This notice proposes to revise the airworthiness standards of the Federal Aviation Regulations (FAR) for transport category airplanes concerning flutter, divergence, vibration, and buffet. It would clarify the requirement to consider flutter and divergence when treating certain damage and failure conditions required by other sections of the FAR. It would revise the required safety margins by slightly reducing the safety margin concerning airplane speed for normal configurations and providing a minimum safety margin concerning airplane speed for damage and failure configurations. These changes are intended to provide consistency with other sections of the FAR, to relieve a design burden which is now unnecessary as a result of advances in technology, and to improve certain safety margins as a result of the evolution in the design of transport airplanes.

DATE: Comments must be received on or before March 12, 1990.

ADDRESSES: Comments on this proposal may be mailed in duplicate to: Federal Aviation Administration, Office of the Chief Counsel, Attention: Rules Docket (AGC-10), Docket No. 26007, 800 Independence Avenue SW., Washington, DC 20591, or delivered in duplicate to: Room 915G, 800 Independence Avenue SW., Washington, DC 20591. Comments delivered must be marked: Docket No. 26007. Comments may be inspected in Room 915G weekdays, except Federal holidays, between 8:30 a.m. and 5:00 p.m. In addition, the FAA is maintaining an information docket of comments in the Office of the Regional Counsel (ANM-7), FAA, Northwest Mountain Region, 17900 Pacific Highway South, C-68966, Seattle, Washington 98168. Comments in the information docket may be inspected in the Office of the Regional Counsel weekdays, except Federal holidays, between 7:30 a.m. and 4:00 p.m.

FOR FURTHER INFORMATION CONTACT: James Haynes, Airframe and Propulsion Branch (ANM-112), Transport Airplane Directorate, Aircraft Certification Service, FAA, 17900 Pacific Highway South, C-68966, Seattle, Washington 98168; telephone (206) 431-2113.

SUPPLEMENTARY INFORMATION:

Comments Invited

Interested persons are invited to participate in the proposed rulemaking by submitting such written data, views, or arguments as they may desire. Comments relating to the environmental, energy, or economic impact that might result from adoption of proposals contained in this notice are also invited. Substantive comments should be accompanied by cost estimates. Commenters should identify the regulatory docket or notice number and submit comments, in duplicate, to the Rules Docket address specified above. All comments will be considered by the Administrator before taking action on the proposed rulemaking. The proposals contained in this notice may be changed in light of comments received. All comments will be available in the Rules Docket, both before and after the closing date for comments, for examination by interested persons. A report summarizing each substantive public contact with FAA personnel concerning this rulemaking will be filed in the docket. Commenters wishing the FAA to acknowledge receipt of their comments must submit with those comments a self-addressed, stamped postcard on which the following statement is made: "Comments to Docket No. 26007." The postcard will be date/time stamped and returned to the commenter.

Availability of NPRM

Any person may obtain a copy of this NPRM by submitting a request to the Federal Aviation Administration, Office of Public Affairs, Attention: Public Information Center, APA-430, 800 Independence Avenue SW., Washington, DC 20591; or by calling (202) 267-3484. Communications must identify the notice number of this NPRM. Persons interested in being placed on a mailing list for future NPRMs should also request a copy of Advisory Circular No. 11-2A, Notice of Proposed Rulemaking Distribution System, which describes the application procedures.

Background

The term "aeroelastic" is applied to an important class of phenomena which involves the mutual interaction between the inertial, aerodynamic, and elastic forces in a structure. These forces can interact to give rise to a variety of aeroelastic phenomena ranging from transient or dynamic responses as a result of external forces (vibration or buffeting) to aeroelastic instabilities (flutter or divergence). The important distinction between response and instability phenomena is that instabilities are self-excited, that is, they can exist even in smooth air in the absence of any external forces. A slight perturbation of the structure at or above the critical airspeed is all that is needed to initiate the unstable condition which then may be maintained or grow to destructive proportions in the absence of any external forces.

Few aeroelastic phenomena fit neatly into classifications where exact definitions can be considered to apply without qualification. For the purpose of better understanding the proposals in this NPRM the following definitions are provided. They should be considered to apply to classical aeroelastic phenomena and used with a certain amount of judgment since not even the experts in the field would agree completely on any set of definitions.

1. *Vibration.* An oscillation of the structure or of a control surface resulting from an independent external excitation.

2. *Buffeting.* A random oscillation of the structure resulting from unsteady aerodynamic forces, usually associated with separated flow.

3. *Flutter.* The unstable self-excited structural oscillation at a definite frequency where energy is extracted from the airstream by the motion of the structure. The deformation and motion of the structure result in forces on the structure that tend to maintain or augment the motion. The displacement modes associated with potential flutter instabilities are often called "flutter modes" even though they may be well damped or do not become unstable within the flight envelope.

4. *Whirl Flutter.* Flutter in which the aerodynamic and gyroscopic forces associated with rotations and displacements in the plane of a propeller or large turbofan play an important role. The displacement modes associated with whirl flutter are frequently called "whirl modes."

5. *Divergence.* A static instability at a speed where the aerodynamic forces resulting from the deformation of the structure exceed the elastic restoring forces resulting from the same deformation.

6. *Control Reversal.* A condition in which the intended effects of displacing a given component of the control system are completely overcome by the aeroelastic effects of structural deformation, resulting in reversed command at higher speeds.

7. *Deformation Instability.* The loss of airplane stability and control as a result of the aeroelastic effects of structural deformation.

Many of the above terms have been used in the airworthiness regulations and associated advisory material for many years and there is no intent to redefine these phenomena or require consideration of new phenomena by this proposal.

Regulations dealing with flutter and divergence for transport category airplanes were first introduced in part 04 of the Civil Air Regulations (CAR) in the 1940's. A safety margin was established by requiring that the airplane be designed to be free from flutter and divergence at an airspeed 20 percent greater than the maximum design dive speed. Flutter analyses, using the available theoretical methods of that time, were used to show compliance. The 20 percent margin was intended to account for the inaccuracy in the analytical prediction of the flutter speed, as established by those early methods, and to provide for production and service variations. A 20 percent margin was chosen as the safety margin for civil airplanes after comparing analytical studies with the results of model testing conducted by the Army Air Corps. Based on the same studies and tests, a 15 percent margin was chosen by the Army Air Corps as the safety margin for the related military specification.

The flutter requirement of part 04 evolved into section 4b.308 of the CAR, where developing fail-safe philosophy continued to change the scope of the flutter and divergence substantiation requirements. Among the early fail-safe provisions were the requirements that control surface tabs and flutter damper systems be fail-safe. The most comprehensive fail-safe requirement was adopted in 1964 (29 FR 12609, September 5, 1964) and required compliance with the single failure criteria for the entire airplane, as well as compliance with special provisions for turbopropeller airplanes. The most recent substantive change in the fail-safe provisions was the addition of a requirement in § 25.629(d) for freedom from flutter with any combination of failures not shown to be extremely improbable (Amendment 25-46, 43 FR 50578; October 30, 1978).

Part 25 has been continually upgraded with failure and damage requirements in other sections. Among these requirements are the criteria for complete loss of all engines in § 25.671, the empennage bird strike criteria of § 25.631, and the discrete source damage criteria of § 25.571(e). These sections generally require "no catastrophic failure" or "safe flight and landing" or similar provisions. These regulations have been interpreted to require flutter substantiation if the failure or damage event could have a significant effect on the flutter modes.

The design margin for the fail-safe design conditions has been the margin between design cruise speed, V_C/M_C and design dive speed, V_D/M_D. This margin originally was 25 percent, but has since been reduced by the incorporation of an upset criterion to establish V_D/M_D (§ 25.335(b)). This criterion generally results in a margin of between 15 and 20 percent on modern conventional transport airplanes at altitudes where V_C is not limited by Mach number.

While the scope of the flutter requirements was being widened by additional fail-safe criteria, the ability of the industry to substantiate freedom from flutter and other aeroelastic instability phenomena was continually improving. At the time the 20 percent margin was established, the analytical capability was minimal and unreliable without a large speed margin. Current analytical methods employ finite element solutions with advanced unsteady aerodynamic theories and can accommodate airplanes of complex configurations. In addition, model testing, ground vibration testing and flight flutter testing techniques have all undergone significant improvements. Complete airplane experimental modal analyses are now commonplace. Furthermore, the cost of these analytical methods and testing techniques has been kept reasonable by the advances in computer technology.

The requirements to withstand vibration and buffet, as contained in part 4b of the CAR at the time of recodification to part 25 of the FAR, were divided into two parts, (1) a flight demonstration requirement (section 4b.190) in subpart B "Flight" and (2) a design requirement (section 4b.308) in subpart C "Structure." As a result of the recodification, these requirements were combined into a single requirement in § 25.251 of subpart B "Flight." In addition, since § 4b.190 referred to both flutter and vibration, the fail-safe flutter requirements from section 4b.308 were also incorporated into § 25.251 by reference to the new § 25.629(d) which was the recodified section 4b.308(d). However, at the same time the reference to flutter was removed from § 25.251 and it became only a vibration and buffet regulation. As a result of the placement in subpart B, there is a tendency to interpret the vibration and buffet requirements as only flight requirements. Also, because of the reference to the fail-safe requirements of § 25.629(d), § 25.251 literally requires that freedom from excessive vibration be demonstrated with failure conditions. The rule also continued to reference the structural design dive speed V_D rather than a flight speed such as V_{DF}.

Discussion

The scope of this proposal is to revise § 25.629 "Flutter, deformation and fail-safe criteria" which includes several substantive changes, and to reorganize some requirements of § 25.251 "Vibration and buffeting," without substantive changes.

The proposed changes to § 25.251 involve the creation of a new § 25.305(e) to incorporate the design requirements for buffet and vibration of § 25.251(a) into § 25.305, creating a new § 25.305(e). This requirement is a structural design requirement and should be set forth in subpart C. Section 25.251(a) would be revised to require only a flight demonstration for freedom from vibration and buffet in any likely operating condition, including probable inadvertent excursions beyond the buffet boundaries. Furthermore, the third sentence of § 25.251(b) would be deleted. This would provide relief from the requirement that freedom from excessive vibration be demonstrated in flight for the failure and damage conditions of § 25.629(d). The speed referenced in § 25.251 would be changed to the flight speed V_{DF} while the corresponding structural requirements that are moved to § 25.305(e) would continue to reference the structural design dive speed V_D.

It is also proposed to relocate the requirement for the evaluation of loads resulting from forced structural vibration after failures in the automatic flight control system. This requirement is currently located in § 25.629(d)(4)(vi), although it is a structural loading condition for oscillatory failures rather than for aeroelastic instability. It is proposed that it be set forth in subpart C, specifically in § 25.305, creating a new paragraph § 25.305(f). Furthermore, it is proposed to clarify that the loads resulting from these forced structural vibrations are limit loading conditions.

Section 25.629 would be retitled "Aeroelastic stability requirements" to more accurately describe the objective of the revised section. Originally the regulation contained vibration, buffet requirements and oscillatory failure load requirements, as well as flutter,

divergence, control reversal and

damage and failure conditions as well

for establishing a proper margin of

divergence, control reversal and deformation instability requirements. However, as a result of this proposal and previous amendments, the rule would only contain flutter (including whirl flutter), divergence, control reversal, and deformation instability requirements, all of which can be considered aeroelastic instabilities.

The references to propellers and turbopropellers in § 25.629 would be replaced by "propeller or rotating device that contributes significant dynamic forces" to encompass all types of rotating machinery which could influence the basic aeroelastic modes or create new "whirl modes." The general growth of compressors to large bypass fans and now to unducted fans has obscured the differences between propellers and other rotating machinery. The proposed rule would impose the requirements for the consideration of gyroscopic inertial forces and whirl flutter analysis on a more objective basis.

It is proposed to reduce the design envelope in which freedom from aeroelastic instability is to be shown for the normal (undamaged) airplane. The requirement for a 20 percent increase in equivalent airspeed at both constant altitude and constant Mach number would be reduced to a 15 percent increase. The principal purpose of the 20 percent margin has been for substantiation reliability. When the 20 percent margin was first established, flutter and divergence substantiation was in its infancy, and a large margin was needed because of the unreliability of the techniques. In addition, there were no failure or damage conditions at that time and the 20 percent margin, by virtue of the added stiffness, provided some degree of protection against damage and failure conditions as well as production and service variations. The transport airplane aeroelastic stability requirements, as provided in this proposal, and advances in aeroelastic substantiation techniques are now sufficient to justify a reduction in the substantiation margin. These provisions now require a complete program of analyses validated with test data and full-scale flight flutter testing. Furthermore, previous amendments, as well as the provisions of this proposal, have significantly amplified the specific fail-safe and damage conditions which must be considered with a separate fail-safe aeroelastic stability envelope. Since many transport airplanes serve both civil and military purposes, an added benefit of this proposal would be similarity with the military specifications which have used a 15 percent margin for many years without adverse service experience.

A further proposal affecting the normal envelope would be the inclusion of a general statement concerning aeroelastic stability criteria within the design envelope. The statement would require that, for the normal airplane without failures, malfunctions, or adverse conditions, there must be a proper margin of damping up to V_D/M_D and no large and rapid reduction in stability as V_D/M_D is approached. These words are currently in the rule but are stated as a condition required in order to allow the limiting of the aeroelastic stability substantiation envelope to Mach 1.0 when M_D is less than 1.0. This Mach 1.0 limitation would still be allowed, but the damping criteria would be a requirement in any case. Advisory Circular 25.629-1, Flutter Substantiation of Transport Category Airplanes, currently contains acceptable criteria for establishing a proper margin of damping.

It is also proposed that the fail-safe stability envelope be modified to provide a minimum speed margin. The margins between V_C/M_C and V_D/M_D have provided a sufficient margin in the past; however, with the advent of new types of propulsion systems, speed protection systems and unusual configurations, there is concern that this margin may be reduced to the point that it might not always serve as a sufficient margin for aeroelastic stability substantiation in the failed or damaged condition. Failures and damage conditions are typically substantiated by analyses or wind tunnel tests with very little flight test verification. The proposal would still require fail-safe aeroelastic stability substantiation within the structural design envelope, V_D/M_D; however, a minimum margin would be provided to ensure protection against substantiation unreliability if the V_D/M_D, envelope did not provide sufficient margin over V_C. The minimum margin would be a 15 percent increase in equivalent airspeed over design cruise speed, V_C, at all altitudes from sea level up to the altitude of the intersection of the extension of the constant cruise Mach number line, M_C, with 1.15 V_C. Then the minimum margin would be a linear variation in equivalent airspeed from that intersection to the point of intersection of the constant $M_C+.05$ line with the altitude of the lowest V_C/M_C intersection and a Mach increment of .05 over M_C at higher altitudes. Figure 1. shows the minimum flutter substantiation envelope for fail-safe conditions.

Also proposed are additions to the

be considered "negligible." This has

TABLE 1 — SUMMARY OF CHANGES AND

the United States, there are two

PART 25—AIRWORTHINESS

or other means found necessary by the

Also proposed are additions to the specified failure, malfunction, damage and adverse conditions specified in § 25.629(d). The list of conditions would be revised to add mismanagement of fuel not shown to be extremely improbable, the empennage bird strike requirement of § 25.631, and the discrete source damage conditions of § 25.571(e). Also included is a provision to consider inadvertent encounter with icing conditions, even though the airplane may not be approved for operation in icing conditions. Many of these are conditions that have generally required aeroelastic stability substantiation in order to show "safe flight and landing." This placement of the requirements in § 25.629(d) would make the margins and substantiation criteria of § 25.629 directly applicable to these aeroelastic stability substantiations.

The mismanagement of fuel condition is not specifically mentioned in part 25, although its consideration has been a practice for many years and has been required under general rules such as § 25.629(d)(1)(ii). There is an increasing complexity in fuel loading configurations including empennage fuel and automatic fuel distribution systems and these can have a significant effect on aeroelastic stability. Therefore, it is proposed to specifically require consideration of fuel mismanagement conditions, not shown to be extremely improbable, in order to provide a probability basis consistent with other fail-safe flutter conditions and to assure that this condition is not overlooked.

The combinations of feathered propellers in § 25.629(d) would also be revised to include any combination of feathered propellers (or rotating devices capable of significant dynamic forces) including all propellers feathered. The requirement in § 25.671 for the airplane to be controllable with all engines inoperative has made the current requirement inconsistent since the power failure requirement necessitates the feathering of all propellers.

The current § 25.629(d) requires single failures to be considered in engine mounts, other attachments of external bodies and engine structure supporting propeller shafts. Relief from this requirement for structural elements of these attachments is provided if "conservative static strength margins" or "sufficient fatigue strength" are shown. This provision was adopted in 1964 (29 FR 12809, September 5, 1964) and was intended to require design integrity of mounts and engine structures sufficiently above the normal design load and fatigue requirements so that the probability of their failure could be considered "negligible." This has resulted in confusion and inconsistencies in the application of the regulation. It is proposed that the damage-tolerance requirements of § 25.571(b) be used as a basis of evaluating these structures to determine if they should be treated under the single failure criteria of § 25.629(d). However, in order to assure conservative margins above the normal requirements of § 25.571, the damage-tolerance requirements would be applied with the specific loading conditions of § 25.571(b) replaced by "all ground and flight load conditions specified in this part." The quoted phrase is taken from the current rule (§ 25.629(d)(3)(i)), and when combined with the damage-tolerance requirements of § 25.571(b), should provide the conservatism necessary to warrant relief from the single failure requirement for the structural elements of these attachments. The proposal also provides a further alternative damage-tolerant method in case the inspection provisions of § 25.571 are impracticable.

It is also proposed to revise the full-scale flight flutter test requirement to the extent that full-scale flight flutter tests would always be required for new designs. Currently, flight flutter tests are specifically required if M_D is greater than .8. Indirectly, flight tests have always been necessary and required on transports, either as proof of freedom from flutter or as a means of validating the flutter analysis. The specific requirement for flight flutter testing on all new designs is considered necessary and consistent with the reduction of the normal flutter margins from 1.2 V_D to 1.15 V_D. It is also proposed to add a requirement that the flight test show a proper damping margin and that there be no large and rapid reduction in damping as V_{DF}/M_{DF} is approached.

Regulatory Evaluation

This section reviews the economic impact of the proposed regulatory changes. Table 1 below shows the proposed changes and their associated economic impact. Additional detail is contained in the regulatory evaluation that has been placed in the docket.

TABLE 1.— SUMMARY OF CHANGES AND ECONOMIC IMPACT

Change	Economic Impact
Changes to § 25.251. Incorporate design requirements § 25.251(a) into § 25.305.	Changes organization of regulations. No economic impact.

TABLE 1.— SUMMARY OF CHANGES AND ECONOMIC IMPACT—Continued

Change	Economic Impact
Provide for relief from requirement that freedom from vibration be demonstrated for failure conditions.	Clarifies the intent of the rule. No economic impact.
Reorganize contents of § 25.629 into a new section.	Reorganization of rule. No economic impact.
Change title of § 25.629....	Editorial change. No economic impact.
Include requirements for rotating devices other than propellers.	Clarifies the intent of the rule. No economic impact.
Reduce the design envelope from a 20 percent increase in equivalent airspeed to a 15 percent increase.	Relieving, no derogation of safety. Reduction in costs.
Provide a minimum speed margin or floor for aeroelastic stability analysis.	Ensures current practice as required by special conditions. No economic impact.
Provide additions to the failure, malfunction, damage and adverse conditions of § 25.629(d).	Consolidates existing requirements. No economic impact.
Require aeroelastic analysis of any combination of feathered propellers.	Resolve inconsistencies in regulations. No economic impact.
Revise the damage tolerance requirements for aeroelastic analysis.	Clarifies meaning of regulation. No economic impact.
Require full scale flight flutter tests for new designs.	Codifies what is currently required in practice. No economic impact.

Table 1 shows that most of the changes have no cost implications and the change relating to reducing the design airspeed margin from 20 percent to 15 percent will reduce costs.

International Trade Impact Analysis

The proposals are likely to have little impact on trade for both U.S. firms doing business in foreign countries and foreign firms doing business in the U.S. The proposals which do have an economic impact are relieving in nature and will reduce costs. If foreign nations do not adopt U.S. standards, their manufacturers may be at a disadvantage in the U.S. market. U.S. manufacturers selling abroad could continue to design to foreign standards which would also meet U.S. standards. However the impact is expected to be slight.

Regulatory Flexibility Determination

Under the criteria of the Regulatory Flexibility Act of 1980, the FAA has determined that the proposed rule would not have a significant economic impact on a substantial number of small entities.

Since the Act applies to U.S. entities, only U.S. manufacturers of transport category airplanes would be affected. In the United States, there are two manufacturers that specialize in commercial transport category airplanes, the Boeing Company and the McDonnell Douglas Corporation. In addition, there are a number of general aviation (GA) entities that manufacture other transport category airplanes such as large business jets, including Cessna Aircraft and Gates Lear Jet.

The FAA size threshold for a determination of a small entity for U.S. airplane manufacturers is 75 employees; any U.S. airplane manufacturer with more than 75 employees is considered not to be a small entity. None of the transport category airplane manufacturers is known to be a small entity. Thus, there would not be a significant economic impact on a substantial number of small entities as the result of the implementation of this proposal.

Federalism Implications

The regulations proposed herein would not have substantial direct effects on the states, on the relationship between the national government and the states, or on the distribution of power and responsibilities among the various levels of government. Therefore, in accordance with Executive Order 12612, it is determined that this proposal would not have sufficient federalism implications to warrant the preparation of a Federalism Assessment.

Conclusion

For the reasons given above, the FAA has determined that this proposed regulation is not considered to be major under Executive Order 12291, or significant under Department of Transportation Regulatory Policies and Procedures (44 FR 11034; February 26, 1979). In addition, the FAA certifies that this proposed rule, if promulgated, would not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act, since none would be affected.

List of Subjects in 14 CFR Part 25

Air transportation, Aircraft, Aviation safety, Safety.

The Proposed Amendment

Accordingly, the FAA proposes to amend part 25 of the Federal Aviation Regulations (FAR) 14 CFR part 25 as follows:

PART 25—AIRWORTHINESS STANDARDS: TRANSPORT CATEGORY AIRPLANES

1. The authority citation continues to read as follows:

Authority: 49 U.S.C. 1344, 1354(a),1355, 1421, 1423, 1424, 1425, 1428, 1429, 1430; 49 U.S.C. 106(g) (Revised Pub. L. 97–449, January 12, 1983). 49 CFR 1.47(a).

2. By amending section § 25.251 by revising paragraphs (a) and (b) to read as follows:

§ 25.251 Vibration and buffeting.

(a) The airplane must be demonstrated in flight to be free from any vibration and buffeting that would prevent continued safe flight in any likely operating condition.

(b) Each part of the airplane must be demonstrated in flight to be free from excessive vibration under any appropriate speed and power conditions up to V_{DF}/M_{DF}. The maximum speeds shown must be used in establishing the operating limitations of the airplane in accordance with § 25.1505.

* * * * *

3. By amending § 25.305 by adding new paragraphs (e) and (f) to read as follows:

§ 25.305 Strength and deformation.

* * * * *

(e) The airplane must be designed to withstand any vibration and buffeting that might occur in any likely operating condition up to V_D/M_D, including stall and probable inadvertent excursions beyond the boundaries of the buffet onset envelope. This must be shown by analysis, flight tests, or other tests found necessary by the Administrator.

(f) Unless shown to be extremely improbable, the airplane must be designed to withstand any forced structural vibration resulting from any failure, malfunction or adverse condition in the flight control system. These must be considered limit loads and must be investigated at airspeeds up to V_C/M_C.

4. By revising § 25.629 to read as follows:

§ 25.629 Aeroelastic stability requirements.

(a) *General.* The aeroelastic stability evaluations required under this section include flutter, divergence, control reversal and any undue loss of stability and control as a result of structural deformation. The aeroelastic evaluation must include whirl modes associated with any propeller or rotating device that contributes significant dynamic forces. Compliance with this section must be shown by analyses, wind tunnel tests, ground vibration tests, flight tests, or other means found necessary by the Administrator.

(b) *Aeroelastic stability envelopes.* The airplane must be designed to be free from aeroelastic instability for all configurations and design conditions within the aeroelastic stability envelopes as follows:

(1) For normal conditions without failures, malfunctions, or adverse conditions, all combinations of altitudes and speeds encompassed by the V_D/M_D versus altitude envelope enlarged at all points by an increase of 15 percent in equivalent airspeed at both constant Mach number and constant altitude. In addition, a proper margin of stability must exist at all speeds up to V_D/M_D and, there must be no large and rapid reduction in stability as V_D/M_D is approached. The enlarged envelope may be limited to Mach 1.0 when M_D is less than 1.0 at all design altitudes, and

(2) For the conditions described in § 25.629(d) below, for all approved altitudes, any airspeed up to the greater airspeed defined by:

(i) The V_D/M_D envelope determined by § 25.335(b); or,

(ii) An altitude-airspeed envelope defined by a 15 percent increase in equivalent airspeed above V_C at constant altitude, from sea level to the altitude of the intersection of 1.15 V_C with the extension of the constant cruise Mach number line, M_C, then a linear variation in equivalent airspeed to M_C+.05 at the altitude of the lowest V_C/M_C intersection; then, at higher altitudes, up to the maximum flight altitude, the boundary defined by a .05 Mach increase in M_C at constant altitude.

(c) *Balance weights.* If concentrated balance weights are used, their effectiveness and strength, including supporting structure, must be substantiated.

(d) *Failures, malfunctions, and adverse conditions.* The airplane must be shown to be free from any aeroelastic instability that would preclude continued safe flight and landing within the fail-safe envelope described in paragraph (b)(2) of this section for each of the failures described in paragraph (d)(3) of this section.

(1) Safety following the failures, malfunctions, or adverse conditions of paragraph (d)(3) may be substantiated by showing that losses in rigidity or changes in frequency, made shape, or damping are within the parameter investigations.

(2) The structural failures described in paragraphs (d)(3)(iv) and (d)(3)(v) of this section need not be considered in showing compliance with this paragraph if a damage tolerance investigation,

---

using a conservative operating

(iv) Failure of any single element of

(x) Any other combination of failures,

Tuesday

using a conservative operating spectrum, shows that the structural element is designed with:

(i) Damage tolerance in accordance with § 25.571(b) using all the flight and ground loading conditions specified in this part in lieu of the loading conditions specified in § 25.571, or

(ii) If compliance with the inspection provisions of § 25.571(b) is shown to be impracticable, damage tolerance without inspections where analysis supported by tests shows that each critical structural element is capable of sustaining two lifetimes of slow crack growth starting with a 0.05 inch deep flaw and terminating with the maximum extent of damage at the limit load conditions specified in this part.

(3) The damage, failures, malfunctions, and adverse conditions which must be considered in showing compliance with this section are:

(i) Any critical fuel loading conditions, not shown to be extremely improbable, which may result from mismanagement of fuel.

(ii) Any single failure in any flutter damper system.

(iii) For airplanes not approved for operation in icing conditions, the maximum likely ice accumulation expected as a result of an inadvertent encounter.

(iv) Failure of any single element of the structure supporting any engine, independently mounted propeller shaft, large auxiliary power unit, or large externally mounted aerodynamic body (such as an external fuel tank).

(v) For airplanes with engines that have propellers or large rotating devices capable of significant dynamic forces, any single failure of the engine structure that would reduce the pitch or yaw rigidity of the rotational axis.

(vi) The absence of aerodynamic or gyroscopic forces resulting from the most adverse combination of feathered propellers or other rotating devices capable of significant dynamic forces. In addition, the effect of a single feathered propeller or rotating device must be coupled with the failures of paragraphs (d)(3)(iv) and (d)(3)(v) of this section.

(vii) Any single propeller or rotating device capable of significant dynamic forces rotating at the highest likely overspeed.

(viii) Any failure or malfunction, or combinations thereof, in the flight control system considered under §§ 25.671, 25.672, and 25.1309.

(ix) Any damage or failure condition, required or selected for investigation by § 25.571 or § 25.631, and

(x) Any other combination of failures, malfunctions, or adverse conditions not shown to be extremely improbable.

(e) Flight flutter testing. Full scale flight flutter tests at speeds up to V_{DF}/M_{DF} must be conducted for new type designs and for modifications to a type design unless they have been shown to have an insignificant effect on the aeroelastic stability. These tests must demonstrate that the airplane has a proper margin of damping at all speeds up to V_{DF}/M_{DF}, and that there is no large and rapid reduction in damping as V_{DF}/M_{DF} is approached. If a failure, malfunction, or adverse condition is simulated during flight test in showing compliance with paragraph (d) of this section, the maximum speed investigated need not exceed V_{FC}/M_{FC} if it is shown, by correlation of the flight test data with other test data or analyses, that the airplane is free from any aeroelastic instability at all speeds within the altitude-airspeed envelope described in paragraph (b)(2) of this section.

Issued in Washington, DC, on September 5, 1989.

Thomas E. McSweeny,

Acting Director, Aircraft Certification Service.

Part IV

Department of Education

Office of Educational Research Improvement

National Research and Development Centers Competition; Solicitation of Written Public Comments

DEPARTMENT OF EDUCATION

Office of Educational Research and Improvement

National Research and Development Centers Competition; Solicitation of Written Public Comments

ACTION: Notice to solicit written public comments on a proposed research and development centers competition.

Purpose: The Secretary invites written public comments on twelve planned research and development centers and the potential lines of inquiry within each center. Written comments received in response to this notice will be carefully considered by the Office of Educational Research and Improvement (OERI) in preparation for an upcoming national research and development centers competition to be held during FY 1990, with awards to be made in FY 1991.

Deadline for transmittal of written comments: To be considered, all written comments must be received on or before October 31, 1989. Written comments received on or before this date will be considered in preparing final mission statements that will describe the Department's recommendations for the research areas, activities, and objectives of the national research and development centers.

Applicable regulations: The regulations for the Research and Development Centers Program, 34 CFR Parts 706 and 708.

SUPPLEMENTARY INFORMATION: The Secretary plans to compete twelve educational research and development centers. At a later date, an application notice will be published for the competition to be conducted in FY 1990 for the national research and development centers to be awarded in FY 1991.

Prior to this announcement, OERI has engaged in a series of activities designed to identify the kinds of research most likely to benefit learners in this society. Recommendations were solicited from organizations and individuals with a variety of perspectives on the present status of education and how educational research and development activities could improve education. Planning meetings were held with parents, practitioners, policymakers, researchers, and public officials. Written comments were received from the general public, from members of the National Academy of Education, and from representatives of various interest groups, including many education organizations. OERI considered this planning work the essential first step in the conduct of both educational research and disciplined inquiry in education theory and practice.

The recommendations received by OERI often called for substantially new initiatives. In contrast to the ideas and recommendations offered in previous years—which typically addressed how schools could improve on what they were already doing—current advice repeatedly suggested that "tinkering at the edges" and "business as usual" would not suffice. Instead, the following sorts of fundamental questions were voiced: What should children know? What should they be able to do? Does the increasing cultural diversity of today's school population mean that new educational strategies are needed to ensure that tomorrow's citizens are literate, knowledgeable in mathematics and science, active in the community, and committed to learning throughout life? If so, what are these strategies? What should teachers know, and how do they learn it? What State and district policies encourage parental and community involvement in education or more effective school organization, and does the implementation of such policies foster student learning? What policies discourage student learning? How can adults learn to read and write? At the same time as OERI was counseled to encourage sustained basic research whose benefits are not so predictable, OERI was urged to support a timely practical response to current needs.

As result of the planning meetings, written comments, staff analyses, and further consideration of national needs, the present status of education and education research, and the limited resources available, OERI concluded that twelve particular research and development centers should be established. The planned array of research centers includes support for ongoing lines of inquiry that continue to warrant investigation, redirection of some current research activity, and also fundamentally new directions for center research. The twelve planned centers are designed as a group to reflect a comprehensive approach to education, one that aims to improve teaching and learning across the broad span of ages from childhood to adulthood, across the broad spectrum of languages and cultures in schools, and across large and small, urban and rural, public and private schools. Finding imaginative ways to create educated graduates, accountable teachers and schools, productive workers, and knowledgeable citizens is vital to national well-being.

In addition to recommendations which informed the development of the twelve missions outlined below, OERI identified four pervasive themes among the ideas and comments offered during the planning process which deserve special attention: student and teacher engagement, cultural diversity, student transitions, and the middle grades and high school years.

Student and teacher engagement: Exploring the factors that enable students and teachers to be actively involved in the education process, especially understanding what leads them to persist in the active pursuit of educational goals.

Cultural diversity: Finding ways to make use of opportunities presented by the increasingly wide range of linguistic and cultural backgrounds found in American classrooms, and finding ways to surmount the educational challenges posed by this diversity.

Student transitions: Exploring the educational significance of the maturational changes children and young people undergo as they progress from one institutional setting to another, from home to school, from one school to the next, from school to work and family, and from job to job.

Middle grades and high school: Examining the serious mismatch between the organization and curriculum of the middle grades and high schools, on the one hand, and the needs and capabilities of young adolescents, on the other hand.

OERI plans to encourage prospective centers to propose activities that address these themes in constructive ways that are consistent with the centers' particular research missions. Also, based in part on the ideas and comments received during its planning activities, OERI plans to encourage collaboration among centers and the dissemination of research findings to audiences who can make good use of them.

Planned priorities: OERI plans to invite proposals to establish research and development centers concerning the subjects listed below. The numbers following each priority correspond to the priorities listed in the regulations for this program at 34 CFR 706.3(b).

(1) *Families, Communities, and Young Children's Learning.* (Learning (Priority 1); Home, family, cultural, and community influences on education, including parental choice and involvement in schooling (Priority 14); Early childhood education (Priority 23)).—Family, community, and culture are recognized as powerful influences on learning. There are serious research problems involved in studying these complex influences properly, but the potential benefits of understanding them

and how they may contribute positively to education cannot be denied. Important areas of inquiry include: (1) Studying not only how family structural characteristics and socio-economic condition affect children's education, but what practices families might engage in which support and contribute to children's intellectual and moral development; (2) developing and disseminating useful information and effective strategies to assist parents' efforts to improve their children's learning; (3) exploring the nature of the learning experiences of the young child from birth through preschool and the transition into formal education, to understand how that learning takes place and how the influence of various people and learning environments encountered affect the young child's learning; (4) understanding the relationships between family and community and school during the early school years; (5) investigating learning opportunities in communities, both formally organized activities—such as day care and preschool facilities, scouting and church groups, civic association activities, and community service programs—and informal activity, to identify and augment the crucial educational qualities of such experiences; and (6) examing the cultural influences of family and community on children's education, to develop ways to overcome practical problems and take advantage of opporunities to enhance learning.

(2) *Student Learning.* (Learning (Priority 1); Student achievement, including students' motivation to learn, their failure to learn, and their failure to attend school and graduate (Priority 13)).—Recent evidence indicates that large numbers of students are completing their years of formal schooling without having achieved proficiency in learning, reasoning, problem solving, and other higher order thinking skills. In our highly complex and rapidly changing technological world, such individuals are poorly prepared to cope with the everyday demands they will encounter throughout their lives, both as citizens and as workers. The impressive strides researchers have made in elucidating the nature of certain high order thinking skills, such as reading comprehension and arithmetic problem solving, have served as a basis for the design of teaching experiments that have led to substantial improvements in the percentage of students mastering such skills. Areas of inquiry critical to the continued creation of a knowledge base useful in teaching higher order thinking skills include: (1) Delineation of similarities and differences in the patterns of thinking fostered in different academic subjects; (2) exploration of the role of social interactions in promoting the acquisition of higher order thinking; (3) exploration of ways of restructuring the presentation of academic content to help students achieve integrated knowledge; (4) assessment of the effectiveness of alternative methods for teaching thinking skills, looking in particular at the special learning problems of low achieving students; and (5) the relationship between learning higher order thinking skills and student motivation.

(3) *Writing and Literacy.* (English literacy, including reading, writing, and language skills (Priority 19)).—Because writing proficiency is an integral part of the literacy skills students need for academic success, understanding the ways in which students acquire and develop writing skills is an important prerequisite for improving the literacy level of all learners. Areas of inquiry critical to promoting writing proficiency and related literacy skills include: (1) The intersections between writing, reading, and oral language; (2) writing assessment (that is, measure of writing competence based upon classroom practice and instructional goals); (3) writing as a learning tool (that is, writing strategies that facilitate the comprehension and learning of subject matter content as well as teach students how to think more effectively); (4) the acquisition of writing skills by students with different language backgrounds; (5) instructional strategies that include the use of technology to teach writing and take into account individual learning differences; and (6) early literacy learning.

(4) *Mathematics Teaching and Learning.* (Mathematics (Priority 20); Teaching (Priority 2); Learning (Priority 1)).—Improving student achievement in mathematics, especially in problem solving, reasoning, and higher order thinking, is imperative to meeting the demands of a rapidly changing society. Mathematics educators have completed important work in such areas as establishing curricular and evaluation standards and researching how students learn mathematics. Areas of inquiry that promise to improve the learning, teaching, and assessment of mathematics include: (1) Improving the skills, knowledge, and teaching practices of mathematics teachers; (2) expanding our knowledge of how students learn mathematics, especially at the middle and secondary grades, with particular attention to the influence of student engagement; (3) uncovering barriers to implementing curricular reform in mathematics; (4) identifying the contextual and organizational features of classrooms and schools that promote improved student achievement in mathematics; (5) learning how teaching and assessing mathematics can be aligned more closely; (6) improving the integration of mathematics with other curricular areas; and (7) determining how technology can improve the mathematical problem solving and reasoning skills of all students.

(5) *Science Teaching and Learning.* (Science (Priority 21); Learning (Priority 1); Teaching (Priority 2)).—It is imperative that all students become scientifically literate. Areas of inquiry for improving the science proficiency of all students include: (1) The relationships among science, mathematics, and other subjects and the inclusion of scientific ideas into other subjects; (2) the use of innovative techniques to accurately assess students' knowledge and skills; (3) applying research on students' cognition and motivation to problems of classroom instruction in science; (4) studying the ways in which school and classroom organization and policy affect student problem-solving and reasoning in the classroom; and (5) the incorporation of technology into the science curriculum.

(6) *Learning to Teach.* (Teaching (Priority 2); Teachers (Priority 34)).—The quality of teaching is central to students' learning. Research on learning to teach focuses on understanding the continuing development of teachers' expertise. In contrast, such questions as determining the best combination of subject matter knowledge and teaching techniques, or how to recruit competent teachers, adopt a comparatively static prespective in which teachers are thought to master discrete elements of teaching competence near the beginning of their professional careers, and subsequently need only to maintain or preserve that competence. Focusing on how people learn to teach implies that good teaching depends on special kinds of knowledge, and that the quality of teaching may change and improve as that knowledge develops. Relevant areas of inquiry include studying (1) How teachers acquire their expertise both at the beginning of teaching and over the course of their professional careers; (2) the content of teachers' learning, including subject matter and how to teach it, how to teach students from diverse populations, and how teaching responds to the various ways in which

---

students learn; and (3) the effects of

since 1980, 45 States have either

skills (Priority 19); Adult and continuing

---

pedagogical skills, educational delivery students learn; and (3) the effects of innovative pedagogies (for example, case methods, computer technology) and nontraditional contexts (for example, professional development schools, teacher education in other countries, alternative routes to licensure) on teachers' learning.

(7) *Education in the Inner Cities.* (Education of special populations, including the educationally disadvantaged or students-at-risk, those with limited English proficiency, and immigrants (Priority 38); Secondary education (Priority 29); Early adolescent education (Priority 30); Home, family, cultural, and community influences on education, including parental choice and involvement in schooling (Priority 14)).—Inner cities pose formidable problems for education, both inside and outside of schools. Research in this area focuses on the distinctive characteristics of inner city education, taking into account the whole set of social, economic, cultural, and political conditions in which children and adolescents live and go to school. Developing constructive responses to the challenges of education in inner cities depends partly on knowing which problems are unique to education in inner cities, and which problems are common to other social contexts. Areas of inquiry include: (1) Studying how the educational system operates, for example, the functioning of its bureaucratic administration, the causes determining which students attend which of the different (public or private) schools, the allocation of resources among schools, and influences on the relationship between schools and other agencies; (2) examining how inner city conditions affect the features of schools, for example, the recruitment and retention of school personnel, the creation of school and classroom atmosphere, and examining what kinds of inner city schools and teachers are particularly successful, and why; (3) understanding how the cultural diversity of the inner city student population shapes students' educational experiences and interactions; and (4) studying both the beneficial and the detrimental effects of activities pursued by students outside of school.

(8) *Education Policies and Student Learning.* (Implementation and affects of educational policies (Priority 39); Learning (Priority 1); Improvement in education, including State and local reform initiatives (Priority 12)).—Teaching and learning take place within the context of Federal, State and local policies. In the past decade, new education policies have been developed at an unprecedented rate. For example, since 1980, 45 States have either specified for the first time or increased the number of courses a student must pass to graduate from high school. Similarly, more than 1,000 pieces of legislation regarding teachers were considered over this period, and a substantial number were passed. Virtually every State, enacted legislation to reform teacher education, licensing, or compensation during the decade of the 80's. Policymakers, such as governors, State legislators and members of State and local school boards, as well as concerned citizens, can be helped by studies that: (1) Describe the conceptual underpinnings of alternative policy approaches, (2) delineate the strengths and weaknesses of those alternative approaches, and (3) demonstrate which alternative approaches most effectively promote particular learner outcomes. Areas of inquiry include: (1) Examining such existing policies as raising student standards, changing teacher certification and compensation, increasing parental choice of schools, and moving education decisions to the school site level to study the impact of such policies on learning; (2) studying the development of innovative, promising policy approaches that have yet to be implemented, focusing on determining the type and nature of information that policymakers and concerned citizens need if they are to develop and implement policies that promote effective learning, and discovering the most effective means for delivering that information to those who need it.

(9) *Assessment, Evaluation, and Testing.* (Evaluation and indicator measures, including testing, measurement, and standards of performance (Priority 7)).—Assessment, evaluation, and testing processes and procedures have profound influences on what is taught and learned. Areas of inquiry include: (1) The interdisciplinary design of innovative assessments of student learning processes, student performance, and student products within and across content and skill areas—including higher order thinking and noncognitive development—for purposes of increasing the validity and usefulness of classroom and large-scale assessments; (2) the development of theories, models, and methodologies that support emerging assessment needs and practices and that accommodate an increasingly diverse student population; and (3) studies of the intended and unintended effects of assessment-related practices and reforms.

(10) *Adult Literacy.* (English literacy, including reading, writing, and language skills (Priority 19); Adult and continuing education (Priority 33); Postsecondary education (Priority 32)).—It is estimated that some 40–60 million adults in the United States are either illiterate or underliterate. Public and private programs, whether formal or informal, serve only 3–4 million adults. The instruction in these programs is often not very effective, and many people enrolled in such instruction gain only a year or two in reading ability before leaving the program. Areas of inquiry critical to adult learning and literacy include: (1) the identification of model programs with high enrollment; (2) the study of model programs with high rates of student persistence; (3) the assessment of the effectiveness of various programs; and (4) research on the effectiveness of basic skills training based upon new technologies.

(11) *Educational Quality of the Workforce.* (Education, work, and careers (Priority 15); Adult and continuing education (Priority 33); Postsecondary education (Priority 32)).—Being able to hire educated people who can be trained throughout their working lives has become a critical issue for the national economy. Areas of inquiry important to improving the educational quality of the workforce include: (1) The identification of the full range of threshold skills and competencies that workers need in order to be productive in modern work settings; (2) the identification of the factors that account for the differences in skills and competencies required across different jobs, firms, and industries; (3) the long-term effects of school and college achievement on labor market outcomes; and (4) the perceived, real, and projected career consequences of earned graduate degrees, and other post-baccalaureate education.

(12) *Postsecondary Learning and Teaching Assessment.* (Postsecondary education (Priority 32); Learning (Priority 1); Teaching (Priority 2); Evaluation and indicator measures, including testing, measurement, and standards of performance (Priority 7)).—Identifying effective teaching strategies and ways to enhance student learning, developing methods for assessing the quality of the undergraduate educational experience, and testing ways to incorporate new pedagogical approaches are essential prerequisites for improvng the quality of undergraduate education. Areas of inquiry critical to the improvement of postsecondary teaching and learning include: (1) An examination of instructional resources and support systems, faculty preparation and

pedagogical skills, educational delivery systems, learning environments, and student educational outcomes; (2) an examination of student backgrounds, study skills, levels of effort, learning styles, strategies, and motivation; (3) an exploration of general education and graduation requirements, along with the specific content of courses and majors; and (4) the identification, development, testing, and dissemination of effective indicators and methods for assessing instructional quality, student learning, and the outcomes of higher education.

Request for information: For additional information contact Dr. Joseph Conaty, U.S. Department of Education, OERI, Office of Research, Room 610, 555 New Jersey Avenue, NW., Washington, DC 20208–5573, (202) 357–6079.

Program Authority: 20 U.S.C. 1221e.

Dated: September 8, 1989.

Bruno V. Manno,

Acting Assistant Secretary for Educational Research and Improvement.

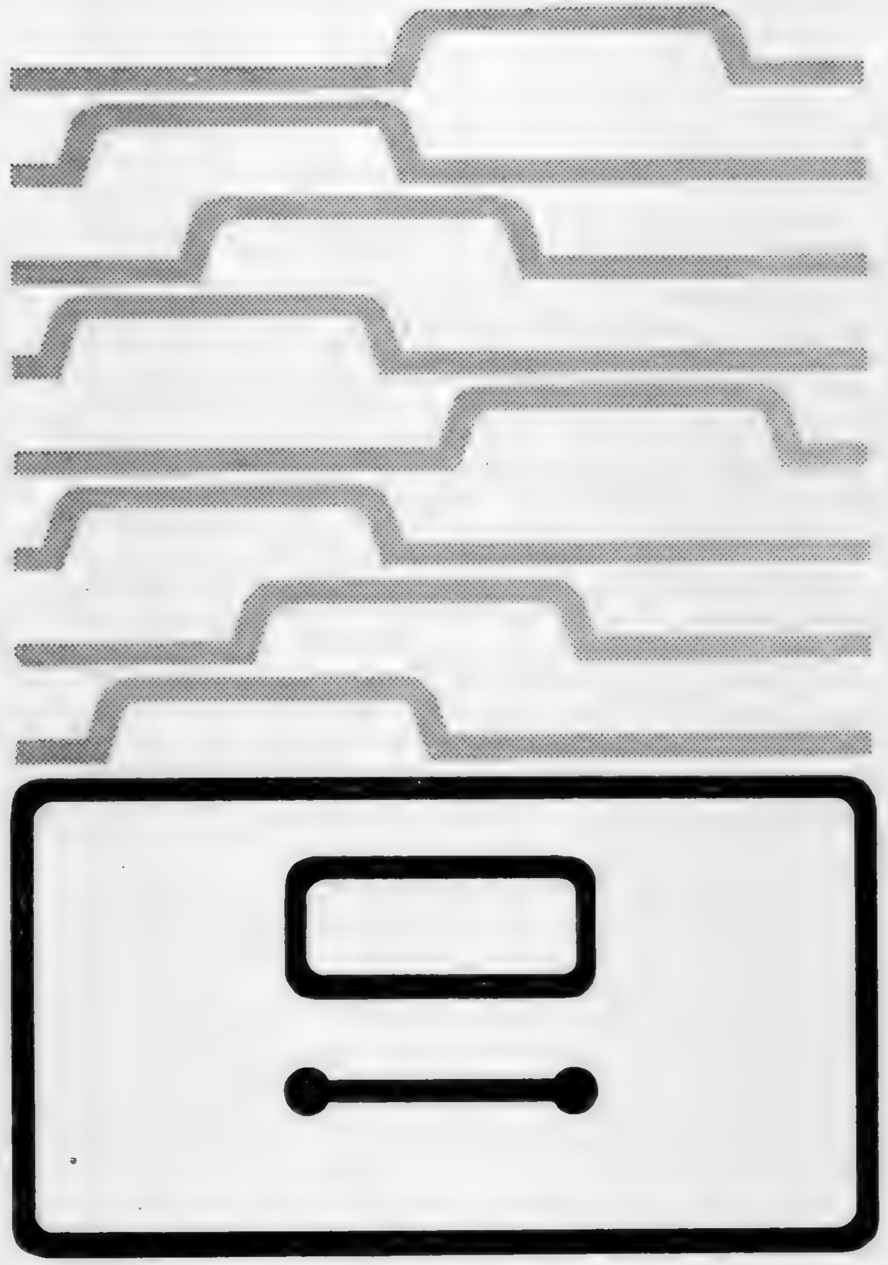
LIST OF PUBLIC LAWS

Note: No public bills which have become law were received by the Office of the Federal Register for inclusion in today's **List of Public Laws.**

Last List August 22, 1989

Guide to



Guide to Record Retention Requirements

in the Code of Federal Regulations (CFR)

Revised January 1, 1989

The GUIDE to record retention requirements is a useful reference tool, compiled from agency regulations, designed to assist anyone with Federal recordkeeping obligations.

The various abstracts in the GUIDE tell the user (1) what records must be kept, (2) who must keep them, and (3) how long they must be kept.

The GUIDE is formatted and numbered to parallel the CODE OF FEDERAL REGULATIONS (CFR) for uniformity of citation and easy reference to the source document.

Compiled by the Office of the Federal Register, National Archives and Records Administration.

Order from Superintendent of Documents,
U.S. Government Printing Office,
Washington, DC 20402-9325.

Briefings on How To Use the Federal Register
For information on briefings in Washington, DC, and Atlanta, GA, see announcement on the inside cover of this issue.

BEST COPY AVAILABLE

FEDERAL REGISTER Published daily, Monday through Friday, (not published on Saturdays, Sundays, or on official holidays), by the Office of the Federal Register, National Archives and Records Administration, Washington, DC 20408, under the Federal Register Act (49 Stat. 500, as amended; 44 U.S.C. Ch. 15) and the regulations of the Administrative Committee of the Federal Register (1 CFR Ch. I). Distribution is made only by the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402.

The **Federal Register** provides a uniform system for making available to the public regulations and legal notices issued by Federal agencies. These include Presidential proclamations and Executive Orders and Federal agency documents having general applicability and legal effect, documents required to be published by act of Congress and other Federal agency documents of public interest. Documents are on file for public inspection in the Office of the Federal Register the day before they are published, unless earlier filing is requested by the issuing agency.

The **Federal Register** will be furnished by mail to subscribers for $340 per year in paper form; $195 per year in microfiche form; or $37,500 per year for the magnetic tape. Six-month subscriptions are also available at one-half the annual rate. The charge for individual copies in paper or microfiche form is $1.50 for each issue, or $1.50 for each group of pages as actually bound, or $175.00 per magnetic tape. Remit check or money order, made payable to the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402, or charge to your GPO Deposit Account or VISA or Mastercard.

There are no restrictions on the republication of material appearing in the **Federal Register.**

How To Cite This Publication: Use the volume number and the page number. Example: 54 FR 12345.

THE FEDERAL REGISTER
WHAT IT IS AND HOW TO USE IT

FOR: Any person who uses the Federal Register and Code of Federal Regulations.

WHO: The Office of the Federal Register.

WHAT: Free public briefings (approximately 3 hours) to present:

1. The regulatory process, with a focus on the Federal Register system and the public's role in the development of regulations.
2. The relationship between the Federal Register and Code of Federal Regulations.
3. The important elements of typical Federal Register documents.
4. An introduction to the finding aids of the FR/CFR system.

WHY: To provide the public with access to information necessary to research Federal agency regulations which directly affect them. There will be no discussion of specific agency regulations.

ATLANTA, GA

WHEN: September 20; at 9:00 a.m.
WHERE: Room 808, 75 Spring Street, SW.

Rules and Regulations

Federal Register
Vol. 54, No. 176
Wednesday, September 13, 1989

This section of the FEDERAL REGISTER contains regulatory documents having general applicability and legal effect, most of which are keyed to and codified in the Code of Federal Regulations, which is published under 50 titles pursuant to 44 U.S.C. 1510.
The Code of Federal Regulations is sold by the Superintendent of Documents. Prices of new books are listed in the first FEDERAL REGISTER issue of each week.

DEPARTMENT OF AGRICULTURE

Foreign Agricultural Service

Commodity Credit Corporation

7 CFR Parts 11, 1485 and 1550

Foreign Market Development Programs

AGENCY: Foreign Agricultural Service and Commodity Credit Corporation, USDA.

ACTION: Final rule.

SUMMARY: This final rule amends regulations applicable to certain foreign market development programs for United States agricultural commodities conducted by the Foreign Agricultural Service (FAS) and Commodity Credit Corporation (CCC). The revised regulations contain provisions designed to ensure that the benefits generated by the programs are as broadly distributed throughout the relevant agricultural sector(s) as feasible and, particularly, that no U.S. firm or individual derives an unfair advantage or benefit from program activities. The final rule also updates regulations applicable to FAS' foreign market development programs in 7 CFR part 11, subpart B, by revising legal citations and terminology and updating references to FAS programs. As revised, the regulations would now appear in 7 CFR part 1550. The final rule also adds a new part 1485 dealing specifically with certain CCC foreign market development programs.

EFFECTIVE DATE: October 13, 1989.

FOR FURTHER INFORMATION CONTACT: Richard Passig, Director, Marketing Programs Division, Foreign Agricultural Service, USDA. Telephone: (202) 447–5521.

SUPPLEMENTARY INFORMATION:

Rulemaking Matters

This action has been reviewed under Department of Agriculture procedures established in accordance with Executive Order 12291 and Departmental Regulation 1512–1 and has been classified as "non-major". It has been determined that this rule will not result in an annual effect on the economy of $100 million or more; will not cause a major increase in costs to consumers, individual industries, Federal, State or local government agencies, or geographic regions; and will not have an adverse effect on competition, employment, investment, productivity, innovation, or the ability of U.S. based enterprises to compete with foreign based enterprises in domestic or export markets.

It has been determined that the Regulatory Flexibility Act is not applicable to this rule since neither FAS nor CCC is required by 5 U.S.C. 553 or any other provision of law to publish a notice of proposed rulemaking with respect to this rule.

This action will not have a significant impact upon area and community development. Therefore, review as provided by Executive Order 12372 was not used to assure that units of local government are informed of this action.

Discussion of Comments

A proposed rule indicating proposed revisions to the regulations was published for public comment on April 21, 1988 (53 FR 13125). Comments were received from nonprofit trade associations, private firms, individuals, and state organizations. A total of thirty-six (36) responses were received within the comment period (by June 20, 1988), and five (5) additional comments were received after the close of the comment period. In considering the comments received, only those that arrived within the specified comment period were considered by FAS in the formulation of this final rule.

Of the thirty-six (36) comments receiving consideration, eleven (11) were generally opposed to, while twenty-five (25) were in support of, the proposed rule. Those comments that were in favor of the proposed rule generally focused on section 1550.6 of the proposed rule, Program Participation and Benefits, (§ 1550.5 of this final rule) commonly referred to as the "conflict of interest" provision and stated that the rule would accomplish its objective of ensuring that benefits derived from the foreign market development programs would be as broadly distributed throughout the relevant agricultural sector(s) as feasible, and that no U.S. firm or individual would derive an unfair advantage or benefit from program activities. Other comments in favor of the proposed rule stated that such a rule would improve the overall fairness of the foreign market development programs, would serve to broaden participation among potential exporters, and would generally increase support for such programs at all levels of U.S. agriculture.

Of those eleven (11) organizations and individuals that were opposed to the proposed rule, four (4) nonprofit trade organizations and one (1) private individual believed that such a proposed rule was unnecessary because the motive for the proposed rule has its basis in unsubstantiated accusations that some firms received unfair commercial benefits from participation in the programs. These respondents propose that program participants adopt provisions for self-regulation as an alternative to § 1550.6 of the proposed rule (§ 1550.5 of this final rule). In considering these comments, the idea of self-regulation was rejected since separate industry guidelines may not be as beneficial as formal uniform guidance from the FAS regarding what constitutes conflicts of interest. Furthermore, it is irrelevant that any accusations of unfairness may be unsubstantiated. The regulation dealing with conflict of interest is intended to eliminate even the appearance of unfairness and to avoid future problems.

Another nonprofit trade organization that opposed the proposed rule recommended that penalties be established for conflict of interest violations in addition to those specified in the proposed rule. The commentor did not specify the nature of the desired penalties. Additionally, it was suggested that FAS channel funding for livestock promotion through a new organization which would include livestock exporters. In considering this comment, the suggestion that penalties be established was rejected. The remedies for noncompliance in § 1550.7(b) of the proposed rule (§ 1550.6(b) of this final rule), including disallowing claims and terminating agreements, are deemed

---

List of Subjects in 7 CFR Parts 1485 and

§ 1485.3 Targeted Export Assistance

and will serve as a basis for the

sufficient to provide reasonable assurance of compliance. The Department is not desirous of penalizing firms, but merely desires to assure that no firm has an unfair advantage from program participation. The suggestion that FAS support livestock promotion by working with a new organization does not address the general issue of safeguards against conflict of interest program-wide. The potential for possible abuse would still exist in a new organization and remains an issue for other industry groups.

One (1) nonprofit agricultural trade association indicated that it was not opposed to the proposed rule if in fact it was necessary to achieve the objectives of the foreign market development programs. However, they do not support the proposed changes if no enhancement to the programs for the segments of the agricultural industry currently represented by the various cooperators are made. FAS is of the strong opinion that a need for these regulations does exist and is proceeding on that basis.

One (1) nonprofit agricultural trade association objected to the rule's apparent failure to adequately differentiate between a variety of diverse programs in the attempt to fit all varieties of programs under one overall rule. Also, two (2) nonprofit trade associations recommended elimination of a specific provision in § 1550.3 of the proposed rule interpreting that provision as an indication of a preference on the part of FAS to authorize activities of agricultural commodities on a generic basis. In response to these comments, the definition of market development project agreements has been revised to make it clear that the rule applies to programs which are entirely generic (i.e. not brand identified), entirely brand-identified, or programs which include both elements. Nonprofit trade organizations may sponsor brand promotion activities, when such promotion is in accord with the purposes of the market development programs, and specifically approved. In addition, the definition has been revised to remove any implication that generic promotion is favored.

Two (2) nonprofit trade associations and one (1) private firm expressed concern about the reference to a specific reimbursement level in § 1550.4 dealing with Export Incentive Program (EIP) Agreements. The proposed rule was revised to eliminate this reference as it may inaccurately give the impression that a specific contribution level is required. In the EIP, FAS reimburses the participant a stated percentage of eligible promotion costs and the reimbursement percentage can vary by participant, program, and commodity. It was also suggested that probable success in cutting market losses should be included as a criterion in approving programs. The regulations already include the concept of maintaining markets which adequately addresses the stated concerns. However, § 1550.4(c) was revised to include consideration of the adequacy of supplies of U.S. commodities among the criteria for approving programs.

One (1) nonprofit trade association criticized § 1550.6 of the proposed rule (§ 1550.5 of this final rule) for failing to define the types of export activities and related services that industry representatives can perform overseas while participating in approved activities. We feel that the rule is sufficiently clear in that § 1550.5(e)(3) of the final rule states that individuals cannot conduct private business unless as part of a sales team. No further change is necessary in this regard. The same organization stated that it was not known whether prior approval of the selection criteria of industry representatives to participate in activities would be required by the Administrator, FAS. The regulation gives the Administrator the option to require prior approval of the criteria for selecting industry representatives and was revised to make this requirement clearer. This flexibility was deemed necessary to insure that programs are not unduly disrupted; however, it is anticipated that such approval will usually be required. Therefore, participants should be prepared to submit the information in a timely fashion.

Internal review resulted in revising several subsections for clarification purposes with no substantive changes. For example, the sections setting forth the criteria for reviewing program proposals has been clarified to distinguish between the eligibility of organizations to participate and the merits of particular market development proposals. Also, the review criteria have been revised for clarity without any substantive change from the proposed rule.

In addition, a definition section was added to clarify the scope and intent of the regulations even though such changes were not recommended by any comments received.

The conflict of interest provisions of the proposed rule (§ 1550.6) were intended to apply to the Targeted Export Assistance (TEA) program, a market development program of CCC administered by FAS, in addition to programs operated with funds appropriated to FAS. The TEA program operates under cooperative agreements between CCC and commodity groups for the specific purpose of developing foreign markets for U.S. agricultural commodities.

Since CCC is a separate organizational unit within the Department of Agriculture, the final rule adds a new part 1485 to title 7 of the Code of Federal Regulations which specifically restates the conflict of interest provisions as being applicable to the TEA program. The TEA program, mandated by section 1124 of the Food Security Act of 1985 (7 U.S.C. 1736s), is intended to counter or offset the adverse effect on the export of U.S. agricultural commodities or the product thereof of a subsidy, import quota, or other unfair trade practices of a foreign country.

The final rule includes a description of the TEA program and the criteria utilized in reviewing the merits of proposals for program funds. This description restates in a clearer manner the information published in the **Federal Register** notice on May 3, 1989 (54 FR 18916).

Changes were made in the conflict of interest provision itself. The regulation now refers only to "affiliates" with respect to prohibitions on export sales since reference to "parent organizations" and "subsidiaries" was superfluous. The regulation was also revised to more clearly specify that "affiliates" refers to any investment relationship and applies only to investments by organizations participating in market development agreements. It was also determined that the requirement to submit a certification under § 1550.7 of the proposed rule (§ 1550.6 of this final rule) was unnecessary and a statement of intent regarding export sales submitted within 30 days after the effective date of the regulations would be sufficient when coupled with the possibility of requiring a certification at a later time.

The citation of authority for part 1550 has been changed to include reference to section 4214(d) of the Agricultural Competitiveness and Trade Act of 1988 (title IV of the Omnibus Trade and Competitiveness Act of 1988). This section directs the Secretary of Agriculture to take appropriate action to prevent conflicts of interest in the cooperator program.

The Office of Management and Budget has received the collection of information contained in the proposed rule and assigned OMB Control No's. 0551-0027 and 0551-0028. See §§ 1485.7 and 1550.7.

List of Subjects in 7 CFR Parts 1485 and 1550

Agricultural commodities, Exports.

Accordingly, title 7 of the Code of Federal Regulations is amended as follows:

1. Part 11 is removed.

2. Part 1485 is added to read as follows:

PART 1485—COOPERATIVE AGREEMENTS FOR THE DEVELOPMENT OF FOREIGN MARKETS FOR AGRICULTURAL COMMODITIES

Sec.
1485.1 Purpose and scope.
1485.2 Definitions.
1485.3 Targeted Export Assistance Program Agreements.
1485.4 Targeted Export Assistance/Export Incentive Program Agreements.
1485.5 Program participation and benefits.
1485.6 Compliance with program requirements.
1485.7 Paperwork Reduction Act assigned number.

Authority: Sec. 5(f) of the Commodity Credit Corporation Charter Act (15 U.S.C. 714c(f)).

§ 1485.1 Purpose and scope.

This part sets forth policies and requirements with respect to the conduct by the Commodity Credit Corporation of the Targeted Export Assistance (TEA) program conducted pursuant to section 1124 of the Food Security Act of 1985. In addition, §§ 1485.2, 1485.5 and 1485.6 apply to any other agreement with the Commodity Credit Corporation that specifically incorporates the provisions of such sections.

§ 1485.2 Definitions.

(a) *Agricultural commodities* includes agricultural commodities and products thereof.

(b) *Affiliate or affiliated organization* means any partnership, association, company, corporation, trust, or any other legal entity in which the program participant has any investment other than an investment in any mutual fund.

(c) *CCC* means the Commodity Credit Corporation.

(d) *Participant and program participant* shall be deemed to mean any entity entering into an agreement within the scope of this part 1485.

(e) *Sales teams* are teams engaged in activities intended to result in specific sales by team members.

(f) *Trade teams* are teams engaged in activities to promote the interests of the entire agricultural sector represented by the program participant.

§ 1485.3 Targeted Export Assistance Program Agreements.

(a) *Purpose.* Agreements entered into under this section will be for the purpose of countering or offsetting the adverse effect on exports of agricultural commodities of a subsidy, import quota or other foreign unfair trade practices of a foreign country, with first consideration given to commodities with respect to which there has been a favorable decision under section 301 of the Trade Act of 1974 or for which exports have been adversely affected by retaliatory actions related to a favorable decision under section 301 of the Trade Act of 1974.

(b) *Eligible Organizations.* Organizations selected shall represent the commodity being assisted on the broadest possible basis, with priority given to those which are industry-wide and nation-wide in membership and scope. Participants must demonstrate an ability to provide a U.S.-based staff capable of developing, supervising and carrying out market development projects overseas, and be willing and able to contribute resources to a joint project.

(c) *Use of Third Parties.* A participant may undertake activities directly or through a third party provided that such participant remains responsible for the activities of the third party.

(d) *Contributions.* Participants are expected to contribute funds or make in-kind contributions toward completion of approved market development projects. Contributions by third parties will be accepted as partially satisfying the contribution obligation of the participant.

(e) *Reimbursement.* CCC will make commodity certificates or, at the option of CCC, U.S. dollar funds, available up to the amount stated in the Targeted Export Assistance Program Agreement, to reimburse participants for expenditures incurred in conducting activities authorized by the agreement and described and budgeted in an activity plan approved in advance by FAS.

(f) *Consideration of Projects.* Targeted Export Assistance Project Agreements will be entered into by FAS only if it is determined that such agreements could counter or offset the effects of foreign unfair trade practices by contributing to the effective creation, expansion, or maintainance of markets for the affected commodities in foreign markets based on available supplies of those commodities for export and international market conditions. Activity plans will be required from organizations selected to participate in the Targeted Export Assistance program and will serve as a basis for the expenditure of CCC resources committed to Targeted Export Assistance Project Agreements. Activity plans will be reviewed according to the following criteria:

(1) The market potential for the commodities covered in the markets identified for promotional effort and the identification of conditions affecting the level of U.S. exports which could be influenced by the projects proposed;

(2) The extent and complexity of activities proposed in relation to each Cooperator's prior export market development experience and U.S. based staff resources;

(3) The likelihood of these activities influencing conditions affecting the level of U.S. exports.

(4) Anticipated U.S. industry and third party contributions to the projects proposed, as indicators of the potential success of those activities which would require such support to succeed;

(5) Provision for appropriate monitoring and evaluation of activities proposed within the plan.

§ 1485.4 Targeted Export Assistance/Export Incentive Program Agreements.

(a) *Eligible Commodities.* Agreements entered into under this section will be for the purpose specified in § 1485.3(a), when FAS has determined that branded promotion of the commodity in export markets will be a preferred means of expanding total U.S. exports of the commodity concerned.

(b) *Eligible Organizations.* TEA/EIP agreements will be entered into with private U.S. entities.

(c) *Use of Third Parties.* An entity that enters into a TEA/EIP Agreement may undertake market development activities directly or through a third party provided such entity remains responsible for the activity.

(d) *Consideration of Projects.* TEA/EIP Agreements will be entered into by FAS only if it is determined that such agreements with private firms could counter or offset the effects of foreign unfair trade practices by contributing to the effective creation, expansion, or maintenance of markets for the affected commodities in foreign markets. Project proposals will be reviewed in relation to market conditions in the countries where activities are proposed, and in relation to the proposing firms prior experience in exporting and in market promotion activities abroad, based upon the same criteria set forth in § 1485.3(f)(1–3).

§ 1485.5 Program Participation and Benefits.

(a) This section establishes requirements applicable only to participation in Targeted Export Assistance Project Agreements and any other agreement with CCC that specifically incorporates the provision of this part.

(b) *General.* It is the policy of CCC to insure that the benefits generated by agreements for the development of foreign markets for United States agricultural commodities are as broadly distributed throughout the relevant agricultural sector as feasible and, particularly, that no program participant derives an unfair advantage or benefit from activities conducted pursuant to the agreement, whether funded with CCC assets or industry contributions.

(c) *Industry Participation.* When required by CCC, program participants entering into an agreement shall promptly furnish to CCC for approval its criteria for the selection of U.S. agricultural industry representatives to participate in activities conducted pursuant to the agreement, such as trade teams, sales teams, and trade fairs, and its criteria for the selection of firms to participate in U.S. brand-identified promotions. Such criteria must ensure participation on an equitable basis by a representative cross section of the relevant U.S. agricultural industry. If CCC requests submission of criteria for approval, the program participant shall not make any selections using criteria disapproved by CCC after the program participant has been notified of CCC's disapproval.

(d) *Distribution of Information.* All program participants shall provide, on a timely basis, upon request of any entity in the United States, other than a representative of a foreign government, any and all data developed and produced with CCC assets or funds of the program participant contributed under the terms of the agreement with CCC. Any fee charged in connection therewith may not exceed the costs incurred in assembling, duplicating and distributing the requested material.

(e) *Export Activities and Related Services.* (1) Neither program participants nor affiliated organizations shall, during the term of the agreement, make export sales of agricultural commodities of the kind which are promoted, in whole or in part, by use of CCC assets.

(2) Neither program participants nor affiliated organizations may assess fees for services provided to exporters in facilitating an export sale if the promotional activities intended to directly result in that specific export sale are supported, in whole or in part, by CCC assets. This paragraph applies to activities such as those involving discussions with potential buyers or the solicitation of specific sales including activities performed by sales teams and performed through trade fairs rather than activities of a more general promotional nature. This paragraph does not apply to checkoffs or membership dues based on commodity sales when such assessments are a condition of membership in the participating organization.

(3) Participants in approved program activities shall not use the activities to promote private self-interests or conduct private business, except as members of sales teams or as part of a U.S. brand-identified promotion when such activities are specifically approved by CCC.

§ 1485.6 Compliance with Program Requirements.

(a) Within 30 days after the effective date of these regulations, program participants shall submit a written statement to the Vice President, CCC, who is the Administrator, Foreign Agricultural Service (FAS), that neither they, nor their affiliated organizations, will, after the effective date of these regulations, make export sales of agricultural commodities promoted, in whole or in part, by the use of CCC assets during the term of an agreement between the program participant and CCC within the scope of this part 1485. CCC may, from time to time, require program participants to submit certifications for purposes of this part as to export sales.

(b) In the event of noncompliance with any provisions of these regulations CCC may disallow a claim submitted under an agreement for expenses incurred after the effective date of these regulations or terminate the agreement in addition to any other remedies available to CCC.

§ 1485.7 Paperwork Reduction Act assigned number.

Information collection requirements contained in these regulations have been submitted to OMB for approval under control number 0551–0027. However, these requirements are not effective until final clearance is received from OMB.

3. Part 1550 is added to read as follows:

PART 1550—PROGRAMS TO HELP DEVELOP FOREIGN MARKETS FOR AGRICULTURAL COMMODITIES

Sec.

1550.1 Purpose and scope.
1550.2 Definitions.
1550.3 Market Development Project Agreements.
1550.4 Export Incentive Program Agreements.
1550.5 Program participation and benefits.
1550.6 Compliance with program requirements.
1550.7 Paperwork Reduction Act assigned number.

Authority: Sec. 601 of the Agricultural Act of 1954, as amended (7 U.S.C. 1761); Secs. 108(d)(2)(B) and 108(f) of the Agricultural Trade Development and Assistance Act of 1954, as amended (7 U.S.C. 1708); Sec. 4214(d) of the Agricultural Competitiveness and Trade Act of 1988 (7 U.S.C. 5234(d)); E.O. 12220, 45 FR 44245.

§ 1550.1 Purpose and scope.

(a) This part sets forth policies and requirements with respect to the conduct by the FAS of programs utilizing public or private entities in the United States to help develop foreign markets for United States agricultural commodities on a mutually benefiting basis. As far as practicable, FAS relies upon representatives of the private U.S. agricultural sector to carry out market development activities through cooperative agreements.

(b) These activities include entering into contracts pursuant to which FAS procures, for a stated consideration, property and services needed in developing markets for U.S. agricultural commodities.

§ 1550.2 Definitions.

(a) *Agricultural commodities* includes agricultural commodities and products thereof.

(b) *Affiliate* or *affiliated organization* means any partnership, association, company, corporation, trust, or any other legal entity in which the program participant has any investment other than an investment in any mutual fund.

(c) *Cooperator* means an entity entering into a Market Development Project Agreement.

(d) *Export Incentive Program Agreements* mean cooperative agreements between FAS and a private United States entity for the purpose of maintaining, expanding or creating foreign markets for United States agricultural commodities through the promotion of brand-identified agricultural commodities.

(e) *FAS* means the Foreign Agricultural Service of the United States Department of Agriculture.

(f) *Incentive payment* means FAS reimbursement for eligible promotion costs incurred under the terms of an Export Incentive Program Agreement.

(g) *Market Development Project Agreements* mean cooperative agreements between FAS and United States agricultural trade associations or associations of State Departments of Agriculture for the purpose of maximizing sales in foreign markets of U.S. agricultural commodities. Activities to be undertaken are intended to promote specific commodities on a generic or brand-identified basis, or through programs which include both elements.

(h) *Participant or program participant* means any entity entering into an agreement within the scope of this part 1550.

(i) *Project funds* are funds made available by FAS to program participants.

(j) *Sales teams* are teams engaged in activities intended to result in specific sales by team members.

(k) *Trade teams* are teams engaged in activities to promote the interests of the entire agricultural sector represented by the program participant.

§ 1550.3 Market Development Project Agreements.

(a) *Eligible Organizations.* In selecting trade and Agricultural groups as cooperators, representative nonprofit U.S. agricultural trade organizations will be used to the maximum extent possible. Organizations selected should represent the commodity being promoted on the broadest possible basis, with priority given to those which are industry-wide or nationwide in membership and scope. Cooperators must demonstrate an ability to provide U.S.-based staff capable of developing, supervising, and carrying out projects overseas, and be willing and able to contribute resources to a joint project.

(b) *Use of Third Parties.* A Cooperator that enters into a Market Development Project Agreement may undertake market development activities directly or through a third party provided that such Cooperator remains responsible for the activities of the third party.

(c) *Contributions.* Cooperators are expected to contribute funds or make in-kind contributions towards completion of approved market development projects. Contributions by third parties will be accepted as partially satisfying the contribution obligation of the Cooperator.

(d) *Project Funds.* FAS will make funds available, up to the amount stated in the Market Development Project Agreement, to reimburse Cooperators for expenditures incurred in conducting activities authorized by the agreement and budgeted in a marketing plan approved in advance by FAS. Funds will be paid in United States dollars unless the Cooperator and FAS specifically agree that payment will be made in foreign currencies.

(e) *Consideration of Projects.* Market Development Project Agreements will be entered into by FAS only if it is determined that such agreements could contribute to the effective creation, expansion, or maintenance of foreign markets for U.S. agricultural commodities based on available supplies of those commodities for export and international market conditions. Marketing plans will be required from organizations selected to participate in Market Development Project Agreements and will serve as a basis for the expenditure of funds committed to Market Development Project Agreements. Marketing plans will be reviewed according to the following criteria:

(1) The market potential for the commodities covered in the markets identified for promotional effort and the identification of conditions affecting the level of U.S. exports which could be influenced by the projects proposed;

(2) The extent and complexity of activities proposed in relation to each Cooperator's prior export market development experience and U.S.-based staff resources;

(3) The likelihood of these activities influencing conditions affecting the level of U.S. exports.

§ 1550.4 Export Incentive Program Agreements.

(a) *Eligible Organizations.* Export Incentive Program (EIP) agreements will be entered into with private U.S. entities.

(b) *Use of Third Parties.* An entity that enters into an Export Incentive Program Agreement may undertake market development activities directly or through a third party provided such entity remains responsible for the activity.

(c) *Reimbursement.* After submission of a claim for an incentive payment, FAS will reimburse a percentage of eligible promotion costs defined in the Export Incentive Program Agreement, up to the amount stated in the Agreement, to carry out the purposes of the project. Such a claim will be submitted on a marketing year basis or at such other time as may be agreed by FAS. The amount of funds to be paid by FAS on each claim will be specified in the Agreement and will be based upon either a stated percentage of the promotional expenditures claimed, volume of exports over a stated period, or a combination of both. Funds will be paid in U.S. dollars only.

(d) *Consideration of Projects.* Export Incentive Program Agreements will be entered into by FAS only if it is determined that such agreements with private firms could contribute to the effective creation, expansion, or maintenance of foreign markets for the commodities concerned. Project proposals will be reviewed in relation to market conditions in the countries where activities are proposed, and in relation to the proposing firm's prior experience in exporting and in market promotion activites abroad, based upon the same criteria set forth in section 1550.3(e)(1–3).

§ 1550.5 Program participation and benefits.

(a) *Scope.* This section establishes requirements applicable only to participation in Market Development Project Agreements and any other agreement with FAS that specifically incorporates the provisions of this part.

(b) *General.* It is the policy of FAS to insure that the benefits generated by agreements are as broadly distributed throughout the relevant agricultural sector as feasible and, particularly, that no program participant derive an unfair advantage or benefit from activities conducted pursuant to the agreement, whether funded with project funds or industry contributions.

(c) *Industry Participation.* When required by FAS, program participants shall promptly furnish to FAS for approval its criteria for the selection of U.S. agricultural industry representatives to participate in activities conducted pursuant to the agreement such as trade teams, sales teams, and trade fairs, and its criteria for the selection of firms to participate in U.S. brand-identified promotions. Such criteria must ensure participation on an equitable basis by a representative cross section of the relevant U.S. agricultural industry. If FAS requests submission of criteria for approval, the program participant shall not use criteria disapproved by FAS after the program participant has been notified of FAS's disapproval.

(d) *Distribution of Information.* All program participants shall provide, on a timely basis, upon request of any entity in the United States, other than a representative of a foreign government, any and all data developed and produced with project funds or contributions. Any fee charged in connection therewith may not exceed the costs incurred in assembling, duplicating and distributing the requested material.

(e) *Export Activities and Related Services.* (1) Neither program participants nor their affiliated organizations shall, during the term of the agreement, make export sales of agricultural commodities of the kind which are promoted, in whole or in part, with project funds.

(2) Neither the program participants nor affiliated organizations may assess fees for services provided to exporters in facilitating an export sale if the promotional activities intended to directly result in that specific export sale are supported, in whole or in part, by project funds. This paragraph applies to activities such as those involving discussions with potential buyers or the solicitation of specific sales including activities performed by sales teams and performed through trade fairs rather than activities of a more general promotional nature. This paragraph does not apply to checkoffs or membership dues based on commodity sales, when such assessments are a condition of membership in the participating organization.

(3) Participants in approved program activities shall not use the activities to promote private self-interests or conduct private business, except as members of sales teams or as part of a U.S. brand-identified promotion when such activities are specifically approved by FAS.

§ 1550.6 Compliance with program requirements.

(a) Within 30 days after the effective date of these regulations, program participants shall submit a written statement to the Administrator, FAS, that neither they, nor their affiliated organizations, will make export sales of agricultural commodities promoted, in whole or in part, with project funds during the term of any agreement between the program participant and FAS within the scope of section 1550.5. FAS may from time to time require program participants to submit certifications as to export sales for purposes of this part.

(b) In the event of noncompliance with any provision of these regulations, FAS may disallow a claim submitted under an agreement for expenses incurred after the effective date of these regulations or terminate the agreement in addition to any other remedy available to FAS.

§ 1550.7 Paperwork Reduction Act assigned number.

Information collection requirements contained in these regulations have been submitted to OMB for approval under control number 0551–0026. However, these requirements are not effective until final clearance is received from OMB.

Signed at Washington, DC on August 22, 1989.

F. Paul Dickerson,

Acting Administrator, Foreign Agricultural Service, and Vice President, Commodity Credit Corporation.

SECURITIES AND EXCHANGE COMMISSION

17 CFR Part 240

[Release No. 34–27231; File No. S7–25–89]

RIN 3235–AD80

Exemption of Certain Securities Issued by the Resolution Funding Corporation

AGENCY: Securities and Exchange Commission.

ACTION: Final rule.

SUMMARY: The Securities and Exchange Commission today announced the adoption of emergency Rule 3a12–10 under the Securities Exchange Act of 1934 ("Exchange Act"). The rule defines certain securities issued by the Resolution Funding Corporation as "exempted securities" for purposes of those provisions of the Exchange Act that by their terms do not apply to an "exempted security" or to "exempted securities."

EFFECTIVE DATE: Rule 3a12–10 is effective upon publication in the **Federal Register**. Comments should be received on or before December 12, 1989.

ADDRESSES: Comments should be submitted in triplicate to Jonathan G. Katz, Secretary, Securities and Exchange Commission, 450 Fifth Street NW., Mail Stop 6–9, Washington, DC 20549. Comment letters should refer to File No. S7–25–89. All comment letters received will be made available for public inspection and copying in the Commission's Public Reference Room, 450 Fifth Street NW, Washington, DC.

FOR FURTHER INFORMATION CONTACT: Robert L.D Colby, Chief Counsel, Edward L. Pittman, Assistant Chief Counsel, or John Polanin, Jr., Special Counsel, Division of Market Regulation, Securities and Exchange Commission, 450 Fifth Street NW, Mail Stop 5–1, Washington, DC 20549, telephone (202) 272–2848.

SUPPLEMENTARY INFORMATION:

I. Background

The Financial Institutions Reform, Recovery and Enforcement Act (the "FIRRE Act") [1] was approved by Congress on August 4, 1989 and signed into law on August 9, 1989. The FIRRE Act provides for a comprehensive reform of the savings and loan industry, and establishes the Resolution Trust Corporation ("RTC") and the Resolution Funding Corporation ("Refcorp").[2] In addition, the FIRRE Act creates an Oversight Board of the RTC (the "Oversight Board"), whose function is to establish general policies for the oversee the activities of RTC.

RTC, which is specifically designated an instrumentality of the U.S. Government,[3] is charged with managing and resolving liquidation and other restructing matters relating to Federal Savings and Loan Insurance Corporation ("FSLIC") insured savings and loan associations that are or become insolvent during the period between January 1, 1989 and August 9, 1992. Under the management of a Directorate composed of government officials, Refcorp is a special purpose limited finance company formed to fund RTC's activities through the issuance of debt securities to the public, and nonvoting capital stock to Federal Home Loan Banks. Refcorp's obligations are designated as not being issued by an instrumentality of the U.S. Government for purposes of the federal securities laws.

Financing for the resolution of matters relating to insolvent savings and loan associations will be obtained from public and private sources, including $20 billion from the Department of the Treasury and $30 billion from public offerings of debt securities to be issued by Refcorp.[4] Interest and principal

---

[1] Public Law No. 101–73, _______ Stat. _______ (August 9, 1989). All provisions discussed in this release are included in title V of the FIRRE Act (sections 501, 511, and 512), which amends the Federal Loan Bank Act, 12 U.S.C. 1421 *et seq.* ("FHLBA").

[2] *See generally* FHLBA sections 21A(b)(1)(A) and 21B(b) (establishing the entities, respectively).

[3] FHLBA section 21A(b)(1)(A).

[4] Refcorp expressly is authorized to issue "bonds, notes, debentures and similar obligations in an aggregate amount not to exceed $30,000,000,000." FHLBA section 21B(f)(1). Net proceeds received from the offerings by Refcorp will be transferred to RTC through Refcorp's purchase of RTC's nonvoting capital certificates, and will be used to finance the activities of RTC.

payable on Refcorp's obligations will be backed directly (with respect to interest) and indirectly (with respect to principal) by the Department of the Treasury. The funds to pay interest on Refcorp's debt securities will come first from any cash revenues generated by: (1) Earnings on Refcorp's assets not used for other enumerated purposes; (2) proceeds, if any, received by RTC from liquidating dividends and receivership claims; (3) payments by the Federal Home Loan Banks; and (4) proceeds received by the FSLIC Resolution Fund from sales of assets.[5] To the extent that funds from these sources are insufficient to pay interest on Refcorp's debt securities, the Secretary of the Treasury is directed to pay to Refcorp the amount of any shortfall.[6]

Repayment of principal on the debt securities will be funded through proceeds received on maturity of zero-coupon Treasury securities that are required to be purchased and held by Refcorp specifically for this purpose.[7] Under the FIRRE Act, Refcorp is authorized only to issue debt securities in amounts that do not exceed the principal amount of the zero-coupon securities that is payable at maturity.[8] These zero-coupon Treasury securities must be held in a separate account, the Principal Fund, to ensure payment of principal on Refcorp's debt securities.[9] Because of the linkage between Refcorp's obligations and the Principal Fund, principal payable on maturity of Refcorp's securities, while not backed by the full faith and credit of the U.S. Government,[10] will be completely backed by direct obligations of the U.S. Government.

II. Discussion

"Government securities," as defined in section 3(a)(42)(A) of the Exchange Act,[11] are "exempted securities" for purposes of the Exchange Act,[12] and therefore are not subject to the same reporting, registration, and regulatory provisions of the Exchange Act that apply to corporate securities.[13] Although the debt securities issued by Refcorp fall within the definition of "government securities" in section 3(a)(42)(A), they are not exempted securities for all purposes of the Exchange Act. The FIRRE Act provides that Refcorp's securities:

> [S]hall not be considered "exempted securities" within the meaning of section 3(a)(12)(A)(i) of the Securities Exchange Act of 1934, except that such obligations shall be considered to be exempted securities for purposes of section 15 of such Act.[14]

Thus, while persons effecting transactions in Refcorp's securities will not be required to register as broker-dealers under section 15(a) of the Exchange Act,[15] the securities, and persons selling and trading in the securities, would be subject to a host of other provisions of the Exchange Act that normally would not apply to government securities.

Among other provisions, underwriters selling the securities would be subject to the restrictions in section 11(d)(1) of the Exchange Act [16] preventing the extension of credit, by persons who are both brokers and dealers, during the distribution of a new issue of securities. A significant portion of the sales of new issues of government securities are financed by dealers through the use of repurchase agreements, which are regarded as an extension of credit. Applying section 11(d)(1) to Refcorp's securities seriously would limit the ability of non-bank dealers to participate in the offering of such securities. Similar problems would be raised under section 7(c) of the Exchange Act, governing the initial margin that may be extended on securities.[17] Moreover, absent an exemption from section 15A of the Exchange Act,[18] trades in Refcorp's securities also would be subject to rules of the National Association of Securities Dealers, Inc., including fair practice and advertising rules, that currently do not apply to sales of exempt government securities.

Secretary of the Treasury Nicholas F. Brady, as Chairman of the Oversight Board, has informed the Commission that the Oversight Board intends to list the securities on a national securities exchange.[19] Therefore, absent an exemption, Refcorp's securities would need to be registered under section 12(a) of the Exchange Act,[20] and would be subject to the reporting requirements of section 13(a) of the Exchange Act,[21] the proxy provisions of sections 14(a) and 14(c) of the Exchange Act,[22] and the Commission's rules and regulations thereunder.

Concurrent with the publication of this release, the Commission has issued an Order ("Order") [23] exempting Refcorp's securities from the registration requirements of section 5 of the Securities Act.[24] The Order was issued under explicit Securities Act exemptive authority provided by the FIRRE Act.[25] The FIRRE Act also carefully preserved for these securities the Commission's exemptive authority contained in section 3(a)(12)(A)(v),[26] thus, in the Commission's view, countenancing an exemption of Refcorp's securities from Exchange Act regulations applicable to non-exempt securities. In this connection, the Commission notes the colloquy of Senators Donald W. Riegle, Jr. and Jake Garn, urging the Commission to act quickly to assess the need for applying the registration provisions of the Securities Act and the Exchange Act to Refcorp's securities.[27]

---

[5] FHLBA section 21B(f)(2).

[6] FHLBA section 21B(f)(2)(E)(i). The FIRRE Act appropriates to the Secretary of the Treasury, for the fiscal year 1989 and all future fiscal years, the funds needed to satisfy the interest payments. *See* FHLBA section 21B(f)(2)(E)(iii).

[7] The zero-coupon Treasury securities are backed by the full faith and credit of the U.S. Government. *See* FHLBA section 21B(g)(2)(A). The Oversight Board represents that the zero-coupon securities will be issued directly to Refcorp, so that amounts and maturities can and will be matched exactly to the principal amounts and maturity dates on the corresponding Refcorp obligations at the time of issuance. Letter from Nicholas F. Brady, Secretary, Department of the Treasury, to David S. Ruder, Chairman, SEC (September 6, 1989) (the "Application"), at 5.

[8] FHLBA section 21B(f)(1).

[9] FHLBA section 21B(f)(3).

[10] *See* FHLBA section 21B(f)(10).

[11] 15 U.S.C. 78c(a)(42)(A). This section defines "government securities" to include "securities which are direct obligations of, or obligations guaranteed as to principal *or* interest by, the United States * * * *" (emphasis added). Because the Department of the Treasury is obligated to pay interest, Refcorp's debt securities are "government securities" under the Exchange Act.

[12] Section 3(a)(12)(A)(i) (15 U.S.C. 78c(a)(12)(A)(i)) provides that the term "exempted security" includes government securities as defined in section 3(a)(42) of the Exchange Act. Sections 3(a)(12)(A)(ii)–(iv) exempt additional securities.

[13] *See, e.g.*, Sections 7(f)(2)(B), 8(a), 11(d), and 12(a) (15 U.S.C. 78g (f)(2)(B), 78h(a), 78k(d) and 78*l*(a)). Exempted securities remain subject to the antifraud provisions of the federal securities laws. *See, e.g.*, Section 17(a) of the Securities Act of 1933 ("Securities Act") (15 U.S.C. 77q(a)) and section 10(b) of the Exchange Act (15 U.S.C. 78j(b)) and Rule 10b–5 thereunder (17 CFR 240.10b–5).

[14] FHLBA section 21B(f)(8)(A)(ii).

[15] 15 U.S.C. 78*o*(a). They would be subject, however, to the provisions of section 15C of the Exchange Act [15 U.S.C. 78*o*–5] concerning government securities brokers and dealers.

[16] 15 U.S.C. 78k(d)(1).

[17] 15 U.S.C. 78g(c).

[18] 15 U.S.C. 78*o*–3.

[19] *See* Application at 7.

[20] 15 U.S.C. 78*l*(a).

[21] 15 U.S.C. 78m(a) ("Every issuer of a security registered pursuant to section 12 * * * shall file with the Commission * * * such annual reports * * * and such quarterly reports * * * as the Commission may prescribe.").

[22] 15 U.S.C. 78n(a) and 78n(c). Because Refcorp will not have a class of equity securities registered under section 12, however, compliance with sections 13(d) [15 U.S.C. 78m(d)], 13(e) [15 U.S.C. 78m(e)] and 16 [15 U.S.C. 78p] would not be required.

[23] *See* Securities Act Release No. 6844 (September 8, 1989).

[24] 15 U.S.C. 77e.

[25] FHLBA section 21B(f)(8).

[26] Section 3(a)(12)(A)(v) (15 U.S.C. 78c(a)(12)(A)(v) authorizes the Commission, by rule or regulation, consistent with the public interest and the protection of investors, to define securities as exempted securities in addition to those enumerated in sections 3(a)(12)(A)(i)–(iv) as exempted securities. The specific reference to section 3(a)(12)(A)(i) in the FIRRE Act indicates that Congress did not intend to impinge upon the Commission's ability to define exempted securities under section 3(a)(12)(A)(v).

More recently, the Oversight Board also has requested that the Commission exempt Refcorp's securities from certain provisions of the Exchange Act discussed above.[28] The Application states that unless the Exchange Act regulatory issues are resolved promptly, the Board believes that the interest costs of Refcorp's debt securities would increase substantially, and would ultimately increase the costs to taxpayers. The Board specifically noted that subjecting the Refcorp securities to sections 7, 8, and 11(d)(1) of the Exchange Act [29] would preclude the development of a market for repurchase transactions in the securities, restricting severely the ability of dealers to finance their positions.

III. Rule 3a12–10

As noted above, the debt securities of Refcorp are government securities within the meaning of section 3(a)(42) of the Exchange Act,[30] because payment of interest on the securities is assured by the Department of the Treasury. In addition, repayment of principal will be made through proceeds received on maturity from zero-coupon Treasury securities held by Refcorp solely for that purpose. Accordingly, the credit and investment risks to investors essentially are equivalent to those associated with direct obligations of the U.S. Government.

Because Refcorp will have no separate operations, and is not dependent on any cash generated by RTC, investors will be looking solely to the U.S. Government for repayment. The investment considerations pertaining to Refcorp's securities will be almost identical to those relating to securities issued or guaranteed directly by the Department of the Treasury. Moreover, Refcorp is subject to substantial government regulation of its securities. In light of the similarities between the securities issued by Refcorp and other government securities, the Commission believes that it would be inconsistent to apply different regulatory requirements to Refcorp's securities.

In order to regulate Refcorp's securities in an equivalent manner to securities issued by the U.S. Government or quasigovernmental agencies, the Commission has determined to exercise its authority in section 3(a)(12)(A)(v) of the Exchange Act [31] to adopt Rule 3a12–10 (the "Rule"), which defines the securities as exempted securities for purposes of those provisions of the Exchange Act that by their terms do not apply to an "exempted security" or to "exempted securities."

The Commission deems the adoption of the Rule to be consistent with the public interest and the protection of investors.

IV. Emergency Rulemaking

Commission rulemaking is done pursuant to the procedures specified in the Administrative Procedure Act ("APA"). Under sections 553 (b) and (c) of the APA,[32] notice of proposed rulemaking by the Commission generally must be given in the **Federal Register**, and interested persons must have the opportunity to submit written comments on the proposed rule. Under section 553(b)(3)(B) of the APA, however, the Commission may dispense with the notice and comment rulemaking process if it "for good cause finds * * * that notice and public procedure * * * are impracticable, unnecessary, or contrary to the public interest." [33]

The Application states that it is probable that Refcorp will be requested to provide funding for RTC in early October of 1989. The Oversight Board therefore requests that the Commission act by September 8, 1989 in order to assure that the orderly maintenance of savings and loan case resolutions and liquidity funding can continue. In addition, the legislative history of the FIRRE Act reveals that Congress intended the Commission to consider this matter promptly.[34]

In this instance, the Commission believes that affording notice of, and opportunity for comment on, the Rule would delay unnecessarily the raising of funds needed for the management and liquidation of insolvent savings and loan associations. In light of the important policy objectives embodied in the FIRRE Act, and the limited likelihood that the adoption of Rule 3a12–10 will affect any private parties negatively, the Commission finds that observing the normal notice and comment procedures under the APA to adopt the Rule are impracticable, unnecessary, and contrary to the public interest. Accordingly, Rule 3a12–10 will become effective immediately upon publication in the **Federal Register**.[35]

Although it is necessary for the Commission to use an expedited rulemaking procedure in order to comply with the Oversight Board's request, the Commission is interested in receiving comments on the Rule and would consider either amending or rescinding the Rule in light of the comments. Commentators are invited to express their views on any substantive differences between Refcorp's securities and those of other governmental issuers that may require Refcorp's securities to be treated differently for purposes of federal securities regulation.

V. Effects on Competition

Section 23(a)(2) of the Exchange Act [36] requires that the Commission, in adopting rules under the Exchange Act, consider the anticompetitive effects of such rules, if any, and balance any anticompetitive impact against the regulatory benefits gained in terms of furthering the purposes of the Exchange Act. The Commission is of the view that Rule 3a12–10 will not result in any burden or competition that is not necessary or appropriate in furtherance of the purposes of the Exchange Act.

As stated above, the Commission believes that the exemptions provided to Refcorp's debt securities pursuant to Rule 3a12–10 will encourage the development of liquid markets for these securities and will apply equally to all participants in those markets. Although the Rule may reduce some of Refcorp's costs, and therefore provide a limited competitive advantage to Refcorp vis-a-vis issuers of non-exempted securities, the Commission believes that, among other things, the credit quality of these securities warrants their being treated in the same fashion as similar exempted government securities for purposes of Exchange Act regulation.[37]

[28] *See* Applications at 9. A copy of the Application is contained in File S7–25–89.

[29] 15 U.S.C. 78g, 78h and 78k(d)(1), respectively.

[30] *See supra* note 11

[31] *See supra* note 28.

[32] 5 U.S.C. 553 (b) and (c).

[33] 5 U.S.C. 553(b)(3)(B).

[34] As discussed above, in a colloquy on the Senate floor, Senators Riegle and Garn agreed that the Commission should act quickly regarding the exempt status of the debt securities to be issued by Refcorp. *See supra* note 27.

[35] Because Rule 3a12–10 provides an exemption for Refcorp's securities from certain provisions of the Exchange Act, the APA does not require thirty days' notice prior to the Rule's effective date. *See* 5 U.S.C. 553(d)(1).

[36] 15 U.S.C. 78w(a)(2).

[37] The Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*) provides, with exceptions, that in connection with notice and comment rulemaking, agencies should prepare an Initial and Final Regulatory Flexibility Act Analysis examining the impact of the rule on small businesses. Because the Commission is using the expedited rulemaking procedures under section 553(b)(3)(B) of the APA, it has not prepared these analyses. Interested persons are invited, however, to submit views on any impact that the Rule may have on small businesses.

VI. List of Subjects in 17 CFR Part 240

Reporting and recordkeeping requirements, Securities.

VII. Statutory Basis and Text of Amendments

Chapter II of title 17 of the Code of Federal Regulations is amended by adding § 240.3a12–10 as follows:

PART 240—GENERAL RULES AND REGULATIONS, SECURITIES EXCHANGE ACT OF 1934

1. The authority citation for part 240 is amended by adding the following citation:

Authority: Sec. 23, 48 Stat. 901, as amended, 15 U.S.C. 78w * * * § 240.3a12–10 also issued under 15 U.S.C. 78 b and c.

2. By adding § 240.3a12–10 as follows:

§ 240.3a12–10 Exemption of Certain Securities Issued by the Resolution Funding Corporation.

Securities that are issued by the Resolution Funding Corporation pursuant to section 21B(f) of the Federal Home Loan Bank Act (12 U.S.C. 1421 *et seq.*) are exempt from the operation of all provisions of the Act that by their terms do not apply to any "exempted security" or to "exempted securities."

By the Commission.

Dated: September 8, 1989.

Jonathan G. Katz,

Secretary.

BILLING CODE 8010–01–M

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Social Security Administration

20 CFR Parts 404 and 416

RIN 0960–AC07

Federal Old-Age, Survivors, and Disability Insurance; Supplemental Security Income for the Aged, Blind, and Disabled; Decisions by Administrative Law Judges in Cases Remanded by the Courts

AGENCY: Social Security Administration, HHS.

ACTION: Final rule.

SUMMARY: These final rules amend the regulations to provide that, if a court remands a case to the Secretary and the Appeals Council subsequently remands the case to an administrative law judge (ALJ) for further proceedings and a new decision, the ALJ may issue a decision which will become the final decision of the Secretary after remand unless the Appeals Council assumes jurisdiction of the case. The regulations also provide that, if the party disagrees with the ALJ's decision, the party may file exceptions to the decision with the Appeals Council. Under the current regulations on cases remanded to the Secretary by a court for further administrative proceedings, the ALJ must issue a recommended decision, and the Appeals Council must review that decision and take further action in every case before the ALJ's recommended decision becomes the final decision of the Secretary after remand.

Under these final regulations, ALJ decisions fully or partially favorable to the party that are not reviewed by the Appeals Council on its own initiative will be effectuated on a more timely basis, i.e., parties will receive their benefits sooner because the Appeals Council will not have to act in every case. Final Agency action on those decisions that are not fully or partially favorable to the party will also be accomplished more expeditiously because these decisions will no longer require the Appeals Council to issue an adopting or modifying decision. Further, if a party does not file exceptions and the Appeals Council does not assume jurisdiction without exceptions being filed, the party is again entitled to judicial review.

EFFECTIVE DATES: These amendments are effective September 13, 1989, for all court remand cases, including all court remand cases pending before the Secretary on September 13, 1989, on which an ALJ has not yet issued a recommended decision.

FOR FURTHER INFORMATION CONTACT: Philip Berge, Legal Assistant, 3–B–4 Operations Building, 6401 Security Boulevard, Baltimore, MD 21235, (301) 965–1769.

SUPPLEMENTARY INFORMATION: On October 16, 1987, we published proposed rules to eliminate the requirement that ALJs issue recommended decisions in cases remanded by the courts (52 FR 38466). The Notice of Proposed Rulemaking (NPRM) provided that in these cases, the ALJ could issue an initial decision rather than a recommended decision unless the Appeals Council directed otherwise or the ALJ elected to issue a recommended decision. The NPRM further provided that the ALJ's decision would become the final decision of the Secretary unless (1) the party disagreeing with the decision filed written exceptions with the Appeals Council within a specified time period and the Appeals Council took jurisdiction at any time based on the filing or (2) if no written exceptions were filed, the Appeals Council took jurisdiction of the case within 60 days after the date of the ALJ's decision. The NPRM also provided that the Appeals Council, on assuming jurisdiction of any case, would have the authority to review any aspect or issue in the case.

We have analyzed the public comments we received from six commenters in response to the NPRM. Most of the comments favored eliminating the requirement that ALJs issue recommended decisions in court remand cases. Except for several clarifying changes discussed below, the final regulations are unchanged from the NPRM. Responses to the public comments appear below.

The Final Regulations

These final regulations amend the regulations to eliminate the requirement that ALJs issue recommended decisions in court remand cases. ALJs will issue decisions which will become the final decision of the Secretary after remand unless: (1) Within 30 days after receipt of the ALJ decision, the parties submit written exceptions to the Appeals Council objecting to the ALJ's decision or, within that period, submit a written request for an extension of time to file exceptions and, based on these exceptions, the Appeals Council assumes jurisdiction of the case; or (2) the Appeals Council decides to assume jurisdiction of the case within 60 days after the date of the ALJ's decision. If the Appeals Council assumes jurisdiction, it may affirm, modify, or reverse the ALJ's decision or it may remand the case to the ALJ for further consideration. If the Appeals Council affirms, modifies, or reverses the ALJ's decision, the Appeals Council's decision and not that of the ALJ will become the final decision of the Secretary after remand. Its review will not necessarily be limited to the issues in the ALJ's decision, but may encompass all of the issues in the case. When parties file written exceptions to an ALJ's decision, the Appeals Council may assume jurisdiction at any time. Certain court remand orders may specifically direct the Secretary to consider only a particular issue or to follow a procedure other than the procedures specified in these regulations. We may seek to have such orders vacated or modified. If an order is not vacated or modified, we will comply with it.

Pursuant to 20 CFR 404.901 and 416.1401, we presume that the parties receive the ALJ's decision within 5 days of the date shown on the notice of the decision. New §§ 404.984(b) and

416.1484(b) allow the parties 30 days after receipt of the ALJ's decision to file written exceptions with the Appeals Council. Further, these sections provide that a 30-day extension for filing exceptions will be granted if the party makes the extension request within the 30-day period. This provision allows more time than the current regulations, which provide a 20-day period for the party to file briefs or other written statements with the Appeals Council when an ALJ issues a recommended decision.

If a party files written exceptions objecting to the ALJ's decision, the Appeals Council will consider the party's objections and all of the issues in the case, and take one of three actions: issue a new decision; remand the case to an ALJ for further proceedings; or issue a notice to the party explaining why it has concluded that the ALJ's decision is correct.

Under these regulations, if the Appeals Council decides to assume jurisdiction and no exceptions are filed, it will send a notice to all parties and their representatives within 60 days after the date of the ALJ's decision. The notice will inform them of the Appeals Council's proposed action and provide an opportunity to file a brief or other written statement with the Appeals Council relating to the proposed action.

If the parties do not file exceptions and the Appeals Council does not assume jurisdiction of the case on its own initiative, we will immediately effectuate the matters which the ALJ's decision resolved. ALJ's do not always decide all factors involved in a case. When they do not do so, the appropriate component of the Social Security Administration or the Health Care Financing Administration will make determinations on pertinent matters not addressed in the ALJ's decision. If these determinations are not fully favorable to the parties, we will advise the parties of the determinations and their right to request us to reconsider the determinations.

If an ALJ issues a decision, that decision will be the final decision of the Secretary after remand if: (1) The parties or their representatives do not file written exceptions disagreeing with the decision within the specified time period or any extension of time they may receive; and (2) the Appeals Council does not assume jurisdiction of the case.

Under these regulations, an ALJ may choose to issue a recommended decision, or the Appeals Council may order the ALJ to issue a recommended decision. In any case in which the ALJ issues a recommended decision, the parties will continue to have the right to file briefs or other written statements with the Appeals Council within 20 days of the ALJ's recommended decision and the Appeals Council will issue the final decision. 20 CFR 404.977(d) and 416.1477(d).

Public Comments and Responses

We received comments from attorneys engaged in the private practice of law, legal aid attorneys, and two city/state legal advocacy organizations. We have carefully considered all of the comments we received. For ease of reference, we have grouped comments according to the issues raised.

Comment: Definition of "at any time"

One commenter expressed concern about proposed §§ 404.984(b)(3) and 416.1484(b)(3), which state that if the party files exceptions, the Appeals Council may assume jurisdiction at any time, even after the 60-day time limit which applies if no exception has been filed. The commenter asked "what does 'at any time' mean?"

Response

"At any time" means that, if the party files timely written exceptions, the regulations do not limit the time within which the Appeals Council must assume jurisdiction of the case. Because the party may have up to 60 days to file exceptions (including the 30-day extension upon request), the Appeals Council may not receive the exceptions until its 60-day period to assume jurisdiction on its own initiative has elapsed. Once the Appeals Council receives exceptions, it must have sufficient time to consider them and to determine whether or not to assume jurisdiction. Although the regulation specifies no time limit, the Appeals Council will, as in all instances, handle the case as expeditiously as possible.

Comment: Relationship to Own Motion Review in § 404.969

One commenter stated that this proposed regulation directly contravenes § 404.969 which provides a 60-day period after the issuance of an ALJ decision for the Appeals Council to exercise its authority to review the decision on its own motion.

Response

The final regulations at §§ 404.984 and 416.1484 govern the Appeals Council's authority to review ALJ decisions in cases remanded by the Court. Sections 404.969 and 416.1469 are not applicable to ALJ decisions issued in court remand cases. In both situations, however, if the Appeals Council wishes to assume jurisdiction on its own initiative, it must do so within 60 days of the ALJ decision.

Comment: Considering Other Issues After 60 Days

With regard to the Appeals Council's authority to consider issues after the 60-day period for review on its own initiative has ended, a commenter asserted that the proposed rule contravened numerous court decisions which have held the Appeals Council to 60 days within which to notify parties of its intent to review issues other than those raised by the party.

Response

We do not agree with the commenter's reading of the case law that was cited in support of this observation. We believe that the proposed rule and the final rule fully inform the parties about the Appeals Council's authority to consider and review issues other than those raised by the party, and in so doing the rules are consistent with the court decisions cited by the commenter. By making the Appeals Council's authority explicit in these regulations, a party will have notice that the Appeals Council may consider and review any issues(s) relating to the claim, whether or not the party raises them in either the judicial or administrative proceedings.

Comment: Notice to Parties

One commenter stated that when the Appeals Council assumes jurisdiction of the case it should give the party notice of any issues it will consider that were not raised in the party's exceptions.

Response

Under the final rules, the Appeals Council may consider issues the party did not raise in the exceptions, and, as a matter of policy, issues the ALJ decided in the party's favor or issues the ALJ did not decide. The Appeals Council will notify the party and his or her representative, and provide an opportunity for comment on the proposed action when it assumes jurisdiction.

Comment: Chilling Effect on Filing Exceptions to Partially Favorable Decisions

Another commenter stated that the proposed regulations would have a chilling effect on the filing of exceptions to partially favorable decisions since, if a party files exceptions to those parts of the decision with which he or she disagrees, the Appeals Council will also review those parts of the decision which are favorable to the claimant.

Response

We do not agree with this comment and believe that the exceptions process will enable the party to obtain a more comprehensive administrative decision. The Appeals Council acts on behalf of the Secretary in ensuring that in any case in which it assumes jurisdiction, the final decision of the Secretary is correct in all respects, and in cases remanded from the courts, the final decision after remand comports fully with the court's order. Thus, the Appeals Council must have the authority to consider all of the issues in a case if it assumes jurisdiction. Likewise, the ALJ must have the authority to consider all of the issues if he or she is to make a final decision. We have amended § 404.983 and § 416.1483 to make clear this authority.

Comment: Effect on Judicial Review

One commenter noted that the NPRM was not clear as to the effect of a party's failure to file exceptions and recommended that the rule be clarified so that the party's failure to file written exceptions would not be viewed as a waiver of the right to judicial review.

Response

Because these regulations deal with decisions of ALJs and appeals of those decisions to the Appeals Council, we do not believe it is appropriate in these rules to discuss the effects on judicial review of the claimant's failure to file exceptions with the Appeals Council. Because courts in most instances retain jurisdiction of civil actions when they remand them to the Secretary, we cannot bar a person's right to return to that court. However, the Secretary has the right to prescribe the procedures under which the administrative review will be conducted. We have required the filing of exceptions for the claimant to obtain Appeals Council review because we believe that filing exceptions will help both the claimant and the Secretary to focus accurately and quickly on the issues still in dispute.

Comment: Time for Effectuation

One commenter expressed the belief that the proposed regulations would lengthen the time period for effectuation of partially favorable decisions, if a party filed exceptions.

Response

Partially favorable ALJ decisions in court remand cases will no longer require a decision by the Appeals Council before they can be effectuated. Thus, these regulations will in fact significantly reduce the time required to effectuate partially favorable ALJ decisions. Consideration of exceptions to such decisions by the Appeals Council will be undertaken after the decision is effectuated.

Comment: Retain Recommended Decisions

We received only one comment objecting to eliminating the requirement that ALJs issue recommended decisions in court remand cases. Noting that the proposed regulations provide for review by the Appeals Council only under certain circumstances, the commenter stated that the current regulations permit all parties to exercise their right to appeal to the fullest extent.

Response

As noted previously, eliminating the requirement for recommended decisions in all court remands will allow most favorable ALJ decisions to be effectuated more promptly. When a party disagrees with the ALJ's decision, the regulations permit the party to file exceptions with the Appeals Council and require the Appeals Council to respond to the exceptions. The new regulations do not diminish any right to appeal the ALJ decision issued on court remand.

Comment: Impact on Fee Petition Processing

One commenter inquired who will handle fee petitions for representatives in court remand cases, noting that staff in the Attorney Fee Branch of the Appeals Council currently handles fee petitions in these cases. He commented that, if the Appeals Council is no longer issuing the final decision in these cases, it would seem appropriate to transfer this function to the ALJs.

Response

SSA will continue its current policy that provides for the ALJ who issues the final decision to evaluate the request for approval of a fee. Thus, if an ALJ decision in a court remand case becomes the final decision of the Secretary after remand, the ALJ will evaluate the request for approval of a fee. If the Appeals Council issues the final decision, the Appeals Council will evaluate the fee request and determine the fee.

Comment: New Civil Action Required

One commenter believes it is confusing to call the "new" decision, i.e., the ALJ or Appeals Council decision issued after a court remand, "the final decision of the Secretary," since it suggests that a new civil action must be filed to obtain judicial review.

Response

We agree that calling the ALJ or Appeals Council decision that is made after a court remand "the final decision of the Secretary" is confusing and have changed the term to "the final decision of the Secretary after remand." We believe that referring to the decision issued after remand as the final decision of the Secretary after remand is the most accurate description, since it is the Agency's final determination of the issues in dispute. We do not believe using this new term will mislead a claimant, whose case has been remanded by a court, into believing that the claimant must file a new civil action to obtain judicial review. Notices accompanying the ALJ decisions and the Appeals Council's responses to exceptions will clearly set forth the claimant's rights in this regard.

Cases Affected

The procedures set forth in these regulations apply to cases under titles II and XVI of the Social Security Act. They also apply to cases involving remands by the courts of appeals arising under titles XI and XVIII of the Act, involving rights and benefits under the Medicare program. Regulations governing these appeals incorporate the regulations in 20 CFR part 404, Subpart J by reference. Therefore, the amendments to 20 CFR part 404 Subpart J set forth in the final regulations would apply to these appeals.

These procedures will not apply to appeals under 42 CFR Part 498. That part primarily governs appeals by providers of services and other entities as to their participation in the Medicare program. Under that part, the ALJ is not required to issue a recommended decision in a court remand case unless the Appeals Council so directs. Thus, that part is consistent with the procedures to be implemented in these regulations.

These procedures will also not apply to appeals pursuant to 20 CFR part 410, Subpart F. That subpart sets forth the procedure for appeals in claims under the Federal Coal Mine Health and Safety Act, Title IV, Black Lung Benefits, for which the Social Security Administration still has jurisdiction. We believe the existing procedures, considering that there are few cases, are appropriate. Thus, we are not changing the procedures for issuing decisions in court remand cases involving Black Lung benefits.

Regulatory Procedures

Executive Order 12291

The Secretary has determined that this is not a major rule under Executive Order 12291 because it will result in negligible administrative costs and savings. It will result in about $1 million administrative cost savings a year because it will reduce the number of workyears required to review ALJ decisions in court remand cases. Therefore, a regulatory impact analysis is not required.

Regulatory Flexibility Act

We certify that these regulations will not have a significant economic impact on a substantial number of small entities because these rules will affect only individuals. Therefore, a regulatory flexibility analysis as provided in Public Law 96–354, the Regulatory Flexibility Act, is not required.

Paperwork Reduction Act

These regulations impose no new reporting or recordkeeping requirements requiring Office of Management and Budget clearance.

(Catalog of Federal Domestic Assistance Program Nos. 13.773 and 13.774, Medicare; 13.802–13.805, Social Security; and 13.807 Supplemental Security Income.)

Dorcas R. Hardy,

Commissioner of Social Security.

Approved: August 4, 1989.

/s/ Louis W. Sullivan,

Secretary of Health and Human Services.

For the reasons set out in the preamble, Subpart J of Part 404 and Subpart N of Part 416 of 20 CFR Chapter III are amended as follows:

PART 404—FEDERAL OLD-AGE, SURVIVORS, AND DISABILITY INSURANCE

1. The authority citation for Subpart J of Part 404 continues to read as follows:

Authority: Secs. 201(j), 205 (a), (b), and (d) through (h), 221(d), and 1102 of the Social Security Act; 42 U.S.C. 401(j), 405 (a), (b), and (d) through (h), 421(d), and 1302; sec. 5 of Pub. L. 97–455, 96 Stat. 2500; sec. 6 of Pub. L. 98–460, 98 Stat. 1802.

2. Paragraph (b) of § 404.953 is revised to read as follows:

§ 404.953 The decision of an administrative law judge.

* * * * *

(b) Recommended decision. Although an administrative law judge will usually make a decision, he or she may send the case to the Appeals Council with a recommended decision where appropriate. The administrative law judge will mail a copy of the recommended decision to the parties at their last known addresses and send the recommended decision to the Appeals Council.

3. Paragraphs (d) and (e) are revised and a new paragraph (f) is added to § 404.955 to read as follows:

§ 404.955 The effect of an administrative law judge's decision.

* * * * *

(d) The expedited appeals process is used;

(e) The decision is a recommended decision directed to the Appeals Council; or

(f) In a case remanded by a Federal court, the Appeals Council assumes jurisdiction under the procedures in § 404.984.

4. An undesignated center heading is added immediately before § 404.983 and new § 404.984, and § 404.983 is revised to read as follows:

Court Remand Cases

§ 404.983 Case remanded by a Federal court.

When a Federal court remands a case to the Secretary for further consideration, the Appeals Council, acting on behalf of the Secretary, may make a decision, or it may remand the case to an administrative law judge with instructions to take action and issue a decision or return the case to the Appeals Council with a recommended decision. If the case is remanded by the Appeals Council, the procedures explained in § 404.977 will be followed. Any issues relating to your claim may be considered by the administrative law judge whether or not they were raised in the administrative proceedings leading to the final decision in your case.

5. A new § 404.984 is added to read as follows:

§ 404.984 Appeals Council review of administrative law judge decision in a case remanded by a Federal court.

(a) *General.* In accordance with § 404.983, when a case is remanded by a Federal court for further consideration, the decision of the administrative law judge will become the final decision of the Secretary after remand on your case unless the Appeals Council assumes jurisdiction of the case. The Appeals Council may assume jurisdiction based on written exceptions to the decision of the administrative law judge which you file with the Appeals Council or based on its authority pursuant to paragraph (c) of this section. If the Appeals Council assumes jurisdiction of your case, any issues relating to your claim may be considered by the Appeals Council whether or not they were raised in the administrative proceedings leading to the final decision in your case or subsequently considered by the administrative law judge in the administrative proceedings following the court's remand order. The Appeals Council will either. make a new, independent decision based on the entire record that will be the final decision of the Secretary after remand or remand the case to an administrative law judge for further proceedings.

(b) *You file exceptions disagreeing with the decision of the administrative law judge.* (1) If you disagree with the decision of the administrative law judge, in whole or in part, you may file exceptions to the decision with the Appeals Council. Exceptions may be filed by submitting a written statement to the Appeals Council setting forth your reasons for disagreeing with the decision of the administrative law judge. The exceptions must be filed within 30 days of the date you receive the decision of the administrative law judge or an extension of time in which to submit exceptions must be requested in writing within the 30-day period. A timely request for a 30-day extension will be granted by the Appeals Council. A request for an extension of more than 30 days should include a statement of reasons as to why you need the additional time.

(2) If written exceptions are timely filed, the Appeals Council will consider your reasons for disagreeing with the decision of the administrative law judge and all the issues presented by your case. If the Appeals Council concludes that there is no reason to change the decision of the administrative law judge, it will issue a notice to you addressing your exceptions and explaining why no change in the decision of the administrative law judge is warranted. In this instance, the decision of the administrative law judge is the final decision of the Secretary after remand.

(3) When you file written exceptions to the decision of the administrative law judge, the Appeals Council may assume jurisdiction at any time, even after the 60-day time period which applies when you do not file exceptions. If the Appeals Council assumes jurisdiction, it will make a new, independent decision based on its consideration of the entire record affirming, modifying, or reversing the decision of the administrative law judge or remand the case to an administrative law judge for further proceedings, including a new decision. The new decision of the Appeals Council is the final decision of the Secretary after remand.

(c) *Appeals Council assumes jurisdiction without exceptions being filed.* Any time within 60 days after the date of the decision of the administrative law judge, the Appeals Council may decide to assume jurisdiction of your case even though no written exceptions have been filed. Notice of this action will be mailed to all parties at their last known address. You will be provided with the opportunity to file briefs or other written statements with the Appeals Council about the facts and law relevant to your case. After the briefs or other written statements have been received or the time allowed (usually 30 days) for submitting them has expired, the Appeals Council will either issue a final decision of the Secretary affirming, modifying, or reversing the decision of the administrative law judge, or remand the case to an administrative law judge for further proceedings, including a new decision.

(d) *Exceptions are not filed and the Appeals Council does not otherwise assume jurisdiction.* If no exceptions are filed and the Appeals Council does not assume jurisdiction of your case, the decision of the administrative law judge becomes the final decision of the Secretary after remand.

PART 416—SUPPLEMENTAL SECURITY INCOME FOR THE AGED, BLIND, AND DISABLED

1. The authority citation for Subpart N of Part 416 continues to read as follows:

Authority: Secs. 1102, 1631, and 1633 of the Social Security Act; 42 U.S.C. 1302, 1383, and 1383b; sec. 6 of Pub. L. 98–460, 98 Stat. 1802.

2. paragraph (c) of § 416.1453 is revised to read as follows:

§ 416.1453 The decision of the administrative law judge.

* * * * *

(c) *Recommended decision.* Although an administrative law judge will usually make a decision, he or she may send the case to the Appeals Council with a recommended decision where appropriate. The administrative law judge will mail a copy of the recommended decision to the parties at their last known addresses and send the recommended decision to the Appeals Council.

3. Paragraphs (d) and (e) are revised and a new paragraph (f) is added to § 416.1455 to read as follows:

§ 416.1455 The effect of an administrative law judge's decision.

* * * * *

(d) The expedited appeals process is used;

(e) The decision is a recommended decision directed to the Appeals Council; or

(f) In a case remanded by a Federal court, the Appeals Council assumes jurisdiction under the procedures in § 416.1484.

4. An undesignated center heading is added immediately before § 416.1483 and new § 416.1484, and 416.1483 is revised to read as follows:

Court Remand Cases

§ 416.1483 Case remanded by a Federal court.

When a Federal court remands a case to the Secretary for further consideration, the Appeals Council, acting on behalf of the Secretary, may make a decision, or it may remand the case to an administrative law judge with instructions to take action and issue a decision or return the case to the Appeals Council with a recommended decision. If the case is remanded by the Appeals Council, the procedures explained in § 416.1477 will be followed. Any issues relating to your claim may be considered by the administrative law judge whether or not they were raised in the administrative proceedings leading to the final decision in your case.

5. A new § 416.1484 is added to read as follows:

§ 416.1484 Appeals Council review of administrative law judge decision in a case remanded by a Federal court.

(a) *General.* In accordance with § 416.1483, when a case is remanded by a Federal court for further consideration, the decision of the administrative law judge will become the final decision of the Secretary after remand on your case unless the Appeals Council assumes jurisdiction of the case. The Appeals Council may assume jurisdiction based on written exceptions to the decision of the administrative law judge which you file with the Appeals Council or based on its authority pursuant to paragraph (c) of this section. If the Appeals Council assumes jurisdiction of your case, any issues relating to your claim may be considered by the Appeals Council whether or not they were raised in the administrative proceedings leading to the final decision in your case or subsequently considered by the administrative law judge in the administrative proceedings following the court's remand order. The Appeals Council will either make a new, independent decision based on the entire record that will be the final decision of the Secretary after remand or remand the case to an administrative law judge for further proceedings.

(b) *You file exceptions disagreeing with the decision of the administrative law judge.* (1) If you disagree with the decision of the administrative law judge, in whole or in part, you may file exceptions to the decision with the Appeals Council. Exceptions may be filed by submitting a written statement to the Appeals Council setting forth your reasons for disagreeing with the decision of the administrative law judge. The exceptions must be filed within 30 days of the date you receive the decision of the administrative law judge or an extension of time in which to submit exceptions must be requested in writing within the 30-day period. A timely request for a 30-day extension will be granted by the Appeals Council. A request for an extension of more than 30 days should include a statement of reasons as to why you need the additional time.

(2) If written exceptions are timely filed, the Appeals Council will consider your reasons for disagreeing with the decision of the administrative law judge and all the issues presented by your case. If the Appeals Council concludes that there is no reason to change the decision of the administrative law judge, it will issue a notice to you addressing your exceptions and explaining why no change in the decision of the administrative law judge is warranted. In this instance, the decision of the administrative law judge is the final decision of the Secretary after remand.

(3) When you file written exceptions to the decision of the administrative law judge, the Appeals Council may assume jurisdiction at any time, even after the 60-day time period which applies when you do not file exceptions. If the Appeals Council assumes jurisdiction, it will make a new, independent decision based on its consideration of the entire record affirming, modifying, or reversing the decision of the administrative law judge or remand the case to an administrative law judge for further proceedings, including a new decision. The new decision of the Appeals Council is the final decision of the Secretary after remand.

(c) *Appeals Council assumes jurisdiction without exceptions being filed.* Any time within 60 days after the date of the decision of the administrative law judge, the Appeals Council may decide to assume jurisdiction of your case even though no written exceptions have been filed. Notice of this action will be mailed to all parties at their last known address. You will be provided with the opportunity to file briefs or other written statements with the Appeals Council about the facts and law relevant to your case. After the briefs or other written statements have been received or the time allowed (usually 30 days) for submitting them has expired, the Appeals Council will either issue a final decision of the Secretary affirming, modifying, or reversing the decision of the administrative law judge, or remand the case to an administrative law judge for further proceedings, including a new decision.

(d) *Exceptions are not filed and the Appeals Council does not otherwise assume jurisdiction.* If no exceptions are filed and the Appeals Council does not assume jurisdiction of your case, the decision of the administrative law judge becomes the final decision of the Secretary after remand.

POSTAL SERVICE

39 CFR 111

Domestic Mail Manual; Miscellaneous Amendments

AGENCY: Postal Service.

ACTION: Final rule.

SUMMARY: The Postal Service hereby describes the numerous miscellaneous revisions consolidated in the Transmittal Letter for issue 32 of the Domestic Mail Manual, which is incorporated by reference in the Code of Federal Regulations, see 39 CFR 111.1. All of the revisions are minor, editorial, or clarifying.

EFFECTIVE DATE: September 17, 1989.

FOR FURTHER INFORMATION CONTACT: Paul J. Kemp, (202) 268–2960.

SUPPLEMENTARY INFORMATION: The Domestic Mail Manual has been amended by the publication of a transmittal letter for issue 32, dated September 17, 1989. The text of all published changes is filed with the Director of the Federal Register. Subscribers to the Domestic Mail Manual receive these amendments automatically from the Government Printing Office.

The following excerpt from the Summary of Changes section of the transmittal letter for issue 32 covers all of the changes.

Summary of Changes

Chapter 1

Section 122.15, Return Address, is revised to clarify that the Postal Service will use the return address on a mailpiece bearing a mailer's ancillary service endorsement in determining the place where the mailer will accept and pay for mail rendered the ancillary service requested. (PB 21732, 7–6–89)

Exhibits 122.63a-r are changed to reflect the Florida ZIP Code changes previously announced. Compliance with these revisions is mandatory by September 17, 1989. (PB 21731, 6–29–89)

Exhibits 122.63e, 122.63o, are revised to reflect processing changes for ZIP Code areas 228, 229, 324–326, 365–366, 439 and 457. (PB 21726, 5–25–89)

Section 124.125, *Other laws and Regulations,* is revised to include a reference to 18 U.S.C. 2512 regarding the mailing of surveillance devices. (PB 21731, 6–29–89)

Sections 125 and 126 are amended to be in concert with current mailability and Department of State regulations. (PB 21729,6–15–89)

Sections 136.754 and 136.954, *Makings,* are revised to permit mailers who drop ship mail via Express Mail or Priority Mail to inform their customers that their mail was drop shipped by those services. (PB 21728, 6–8–89)

Section 137.15, *Forwarding Mailing Records for Franked Mail,* reflects changes in administrative and reporting responsibilities in the franked mail sampling system. (PB 21733, 7–13–89)

Section 137.252 is updated with several new agencies and revised business reply mail numbers. Some agencies have changed from sampling number to direct accountability.

Section 144.112 is revised to permit metered reply postage on all Express Mail shipments. (PB 21732, 7–6–89)

Sections 144.2, 144.3, 144.6, and 144.9 are revised to reflect changes in postage meter procedures and responsibilities. (PB 21741, 9–7–89)

Section 145.8 is revised to standardize the procedures for an Optional Procedure Mailing System. (PB 21742, 9–14–89)

Section 146.132a is revised to clarify how to handle refused, shortpaid First-Class Mail. (PB 21731, 6–29–89)

Exhibit 159.151a is revised to allow an authorized abbreviation for a First-Class Mail endorsement where space does not permit the full endorsement: *Forward and Address Correction Requested.* (PB 21731, 6–29–89)

Chapter 3

Section 322, *Postal Cards and Postcards,* is revised to (1) permit postcards to be formed of two pieces of paper that are permanently and uniformly bonded together; (2) permit paper labels to be permanently affixed to the back or the left portion of the address side; and (3) permit limited use of stickers on double postcards. (PB 21732, 7–6–89)

Section 392.1, *Return,* is revised to clarify how to handle refused, shortpaid First-Class Mail. (PB 21731, 6–29–89)

Chapter 4

Section 425.8, is revised to eliminate requirements for publishers of second-class publications to file Forms 15 and 15–E. (PB 21735, 7–27–89)

Section 429.31g(2) is revised to clarify what may be placed on the front of a label carrier for a second-class publication when it is completely enclosed in a plastic wrapper (polybag). (PB 21729, 6–15–89)

Chapter 6

Section 643.2, *Revocation for Nonuse,* is revised to include instructions advising postmasters to notify the General Manager, Rates and Classification Center, of the names of organizations that have not made use of their special rate privileges for at least 2 years. (PB 21729, 6–15–89)

Chapter 7

Section 792.1, *Endorsed and Unendorsed Pieces,* is revised to clarify procedures for return on undeliverable fourth-class mail. (PB 21731, 6–29–89)

Minor nonsubstantive changes are found in: 144.1, 144.3, 144.9, Exhibit 159.151a, 263.2, Exhibit 463.24, 623.51, 667.675, 941.2, and others.

39 CFR Part 233

Adding Child Pornography to the List of Offenses for Which Rewards May Be Paid for Information

AGENCY: Postal Service.

ACTION: Final rule.

SUMMARY: In 1988 the Postal Service added to the offenses listed on Notice 96, *Notice of Reward,* for which rewards will be paid for information on the offense of child pornography. The purpose of this final rule is to conform the regulations in title 39, Code of Federal Regulations, with that action.

EFFECTIVE DATE: September 12, 1989.

FOR FURTHER INFORMATION CONTACT: H.J. Bauman, (202) 268–4415.

SUPPLEMENTARY INFORMATION:

List of Subjects in 39 CFR Part 233

Crime, Postal Service

In consideration of the foregoing, 39 CFR 233 is amended as set forth below.

PART 233—[AMENDED]

1. The authority citation for part 233 continues to read as follows:

Authority: 39 U.S.C. 101, 401, 402, 403, 404, 406, 410, 411, 3005(e)(1); 12 U.S.C. 3401–3422; 18 U.S.C. 2254.

2. In § 233.2, add new paragraph (b)(1)(ix) as follows:

§ 233.2 Circulars and rewards.

* * * * *

(b) * * *

(1) * * *

(ix) Mailing or receiving through the mail any visual depiction involving the use of a minor engaging in sexually explicit conduct.

* * * * *

3. In the Note to § 233.2, after the offense entitled "Burglary of Post Office, $5,000.", add the following:

Child Pornography, $2,500. The mailing or receiving through the mail of any visual depiction involving the use of a minor engaging in sexually explicit conduct.

Fred Eggleston,

Assistant General Counsel, Legislative Division.

BILLING CODE 7710-12-M

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 52

[FRL-3644-5]

Approval and Promulgation of Implementation Plans; Ohio

AGENCY: United States Environmental Protection Agency (USEPA).

ACTION: Final rulemaking.

SUMMARY: In a July 7, 1988, **Federal Register** (53 FR 25509), notice of proposed rulemaking, USEPA proposed to disapprove a site-specific revision to the Ohio State Implementation Plan (SIP) for ozone. This revision is a compliance date extension and a relaxation of emission limits of Navistar's (formerly called International Harvester) one surface coating line at its Body plant and nine lines at its Assembly plant. Both plants are located in Springfield, Clark County, Ohio.

In today's Final Rulemaking, USEPA is disapproving this SIP revision because the State has not demonstrated that Navistar's compliance plan is expeditious and that it is technically or economically infeasible for Navistar to meet the volatile organic compounds (VOC) emission limits contained in the existing SIP.

EFFECTIVE DATE: This final rulemaking becomes effective on October 13, 1989.

ADDRESSES: Copies of the SIP revision, public comments on the notice of proposed rulemaking and other materials relating to this rulemaking are available for inspection at the following addresses: (It is recommended that you telephone Uylaine E. McMahan, (312) 886–6031, before visiting the Region V office.)

U.S. Environmental Protection Agency, Region V, Air and Radiation Branch, 230 South Dearborn Street, Chicago, Illinois 60604

Ohio Environmental Protection Agency, Office of Air Pollution Control, 1800 WaterMark Drive, Columbus, Ohio 43216.

A copy of today's revision to the Ohio SIP is available for inspection at: Environmental Protection Agency, Public Information Reference Unit, 401 M Street SW., Washington, DC 20460.

FOR FURTHER INFORMATION CONTACT: Uylaine E. McMahan, Air and Radiation Branch (5AR–26), U.S. Environmental Protection Agency, Region V, 230 South Dearborn Street, Chicago, Illinois 60604, (312) 886–6031.

SUPPLEMENTARY INFORMATION: On March 10, 1986, the Ohio Environmental Protection Agency (OEPA) submitted a site-specific revision to the Ohio ozone SIP for volatile organic compound (VOC) emissions from Navistar's one surface coating line at its Body plant and nine lines at its Assembly plant. Both plants are located in Springfield, Clark County, Ohio. Clark County is designated nonattainment for the pollutant ozone under section 107 of the Clean Air Act (Act) (40 CFR 81.336).[1]

I. Emission Limits

The two Navistar plants contain surface coating lines that are used to paint truck cabs, hoods, chassis, and miscellaneous metal parts. Under the existing federally approved SIP, each miscellaneous metal parts and products surface coating line is subject to the control requirements contained in Ohio Administrative Code (OAC) Rule 3745–21–09(U). OAC 3745–21–09(U)(1)(a)(iii) limits the VOC content of an extreme performance coating to 3.5 pounds of VOC per gallon (lbs of VOC/gal) of coating, excluding water. OAC Rule 3745–21–04(C)(28) requires compliance with this limit by December 31, 1982. USEPA approved these rules and others as meeting the reasonably available control technology (RACT)[2] requirements of part D and the Act on June 29, 1982 (47 FR 28097).

Navistar's nine lines at its Assembly plant (P001–P004, P007–P009, R004 and R005) and one line at its Body plant (K001) are currently being operated in violation of OAC Rule 3745–21–09(U) for surface coating of miscellaneous metal parts and products. In lieu of the requirements mentioned above, OEPA

---

[1] Because of the proximity of Clark County to Dayton, Clark County emissions and emission reductions were included as an integral part of the greater Dayton ozone demonstration area SIP. USEPA approved Ohio's attainment demonstration for the greater Dayton area including Clark County, on October 31, 1980 (45 FR 72122), because the State's plan for the area as a whole demonstrated the attainment and maintenance for the ozone standard there by December 31, 1982. Violations of the ozone standard were recorded in the Dayton area subsequent to 1982.

[2] A definition of RACT is contained in a December 9, 1976, memorandum from Roger Strelow, former Assistant Administrator for air and Waste Management. RACT is defined as the lowest emission limitation that a particular source is capable of meeting by the application of control technology that is reasonably available, considering technological and economic feasibility.

BEST COPY AVAILABLE

has submitted for Navistar as a revision to the Ohio SIP (1) a compliance date extension until December 31, 1987, and (2) for seven of the lines, a relaxation from the RACT based limits to the VOC content of coatings currently in use on these lines. The coatings currently used are acrylic enamel, urethane, and chassis coating with VOC contents of 4.86, 4.66, and 3.66 lbs of VOC per gallon of coating, excluding water, respectively.

II. Compliance Date Extension

The OEPA requested a compliance date extension to December 31, 1987, for lines K001, P001, and P002. By that date, the lines will be shut down and replaced with new coating lines which will be in compliance with OAC Rule 3745–21–09(U). In order for a compliance date extension to be approvable, the request must comply with USEPA's criteria. The extension for Navistar's surface coating lines does not satisfy these criteria because the OEPA did not adequately research the compliance status of other similar sources to determine if compliance by the original deadline was reasonable. As explained below, Illinois has documentation that complying coatings are available (and in use) for the heavy duty off highway vehicle manufacturing industry. In addition, USEPA policy requires the State to demonstrate that the extension will not interfere with the timely attainment and maintenance of the ozone standard and, where relevant "reasonable further progress" (RFP) towards timely attainment. This would generally be done by comparing the margin for attainment predicted by the approved ozone attainment demonstration, and the increased emissions that would result under the extension. However, if the State or USEPA believes that there has been a substantial change in the inventory since the ozone SIP was approved so that the margin of attainment has changed significantly, a revised demonstration in support of the revision request is required. Such a demonstration would be necessary in areas which purported to demonstrate attainment by 1982, but for which post 1982 monitoring data are indicating exceedances of the ozone standard. Because Navistar is located in such an area, a revised demonstration of attainment for the Dayton area would be required before the compliance date extension can be approved.

III. Status of Ozone Attainment Demonstration-Clark County

Navistar's Body and Assembly plants are located in Clark County, which is designated nonattainment for the ozone NAAQS, and which is a part of the greater Dayton nonattainment area for ozone. Navistar provided an air quality demonstration for the proposed revision which was based on the 1979 USEPA approved ozone SIP for the Dayton area. In order to get approval of a source-specific SIP revision, a State must demonstrate that the revision will not interfere with expeditious attainment and maintenance of the ozone standard and reasonable further progress toward attainment. Dayton's 1979 ozone SIP was approved for attainment of the standard by the end of 1982 and maintenance thereafter. However, because violations have been measured in 1983 and 1984, and there have been more recent exceedances of the ozone standard (as late as 1987), USEPA cannot determine whether the SIP is maintaining the ozone standard. Ohio cannot, therefore, rely on the 1979 demonstration of attainment to show that the revision will not interfere with continued maintenance of the ozone standard. While USEPA has not chosen to call for a SIP revision because of a substantially inadequate plan for this area, any relaxations, such as the one addressed in this notice, must be accompanied by a persuasive demonstration that the area will continue to maintain the ozone standard for the foreseeable future despite the relaxation. Since the State has not made this demonstration, USEPA cannot approve this relaxation.

USEPA is disapproving this variance as a SIP revision because (1) the State has not shown that the granting of the variance will not interfere with expeditious attainment of the ozone NAAQS in the area; (2) the State did not demonstrate that Navistar's compliance plan is expeditious; and (3) the State has not demonstrated that the current emission limits for Navistar are technically or economically infeasible and that the proposed limits are RACT for that particular source.

IV. Proposed SIP Revision

In a July 7, 1988, **Federal Register** (53 FR 25509) notice, USEPA proposed to disapprove a revision to Ohio's ozone SIP, which would allow for a compliance date extension and for a relaxation of emission limits for Navistar's one surface coating line at its Body plant and nine lines at its Assembly plant, USEPA proposed to disapprove this SIP revision because the State has not demonstrated that Navistar's compliance plan is expeditious and that the present emission limits for Navistar in the SIP are technically or economically infeasible.

V. Comments and USEPA's Response

Comments on this notice of proposed rulemaking were received from the OEPA, the (Dayton) Regional Air Pollution Control Agency (RAPCA), the Motor Vehicle Manufacturer's Association (MVMA), and Navistar. These comments and USEPA's response are provided below.

A. Expeditiousness of the Compliance Plan

1. Comment

OEPA and RAPCA stated in their comments that Navistar's compliance plan is expeditious because the operations performed on lines K001, P001 and P002 (for which compliance date extensions were requested) are being transferred to new, well-controlled sources and the schedule is consistent with the schedule contained in the permit to install for the new sources. Navistar made the same comment and added that it has shut down more lines than it initially promised to the State of Ohio.

USEPA's Response. USEPA's May 2, 1987, Technical Support Document (TSD) stated that "for this compliance date extension to be approved, [Navistar] must demonstrate that it proceeded expeditiously to develop, and implement its compliance plan from the time the regulations were adopted to the present with no significant periods of inaction. [Navistar] has provided no information concerning the development of this compliance plan." Navistar still has not provided any information concerning its compliance plan. The earliest indication of Navistar's intent to replace old lines with new lines is the November 6, 1985, Permit to Install. This permit was issued nearly three years after Navistar was required to be in compliance with OAC rule 3745–21–09(U). No evidence has been provided that the new lines could not have been installed sooner.

Although Navistar has indicated that it has shut down more lines than it originally intended, it has not shut down lines K001, P001, and P002 as required by the variances.

2. Comment

OEPA and RAPCA commented that the compliance status of two other medium and heavy duty truck assembly plants was examined at the time Navistar applied for the variance, and it was determined that neither was using coatings capable of complying with OAC Rule 3745–21–09(U).

USEPA's Response. OEPA's previous submittals contained no evidence that

the State examined the compliance status of other sources. Only one of the two sources examined by OEPA and RAPCA is subject to a rule similar to OAC Rule 3745–21–09(U). Although this source also requested a compliance date extension until December 31, 1987, for its "specialty" topcoats, the majority of its remaining operations were in compliance or expected to be in compliance by April 15, 1985. It should be noted that the extensions were not approved by USEPA.

In addition, OEPA has not provided a complete survey of the availability of complying coatings and the compliance status of other similar sources. The State should provide evidence that it made all reasonable efforts to determine the availability of complying coatings or other kinds of control, as appropriate. Examples of these efforts include, but may not be limited to examining information that is or should be reasonably available to the State including whether sources operating in the State that were in an industry comparable to the source are using complying coatings, or other kinds of controls, that the source could adopt. Reasonable efforts also include seeking all information that is reasonably available to the source requesting the SIP revision. This would include contacting suppliers that the source uses or could use, to determine if they have, or could develop, complying coatings or other controls. In addition, the State or source should contact regional or national trade associations for the industry, and review information the associations may have concerning coatings or other controls.

3. Comment

The Notice of Proposed Rulemaking (NPR) stated that Illinois has documentation that complying coatings are available (and in use) for the heavy duty, off-highway vehicle (HOV) manufacturing industry, and that an explanation should be provided of why Navistar cannot use such coatings. OEPA and RAPCA commented that they do not believe the study referred to in the notice of proposed rulemaking is relevant to Navistar's Springfield facilities. This is based on the dissimilarities between Navistar's trucks, which utilize customized coatings designed to meet the individual customer's preference, and the HOV's referred to in the study.

Navistar added that the two are not comparable because the HOV industry uses standard color coatings which do not have to meet the performance tests of the high-quality finishings applied at the Springfield plants. Finally, all three commenters stated that the industries are not comparable due to the differences in the numbers and volumes of coatings used.

USEPA's Response. The commenters have misinterpreted the statements in the NPR. USEPA is not suggesting that Navistar must use the coatings used by the HOV industry. However, because the two industries appear to be similar in some respects, USEPA does feel that some explanation of possible differences in the operations which would make it infeasible for Navistar to use the coatings used by some HOV manufacturers is in order.

OEPA, RAPCA and Navistar have all attempted to indicate such differences. The fact that coatings used by Navistar must meet more stringent performance tests would be more convincing if it has been shown that the coatings used by the HOV manufacturers would not be able to meet such requirements. Likewise, the differences in number and volume of coatings used may have some merit as a basis for not using the coatings used by the HOV manufacturers. However, no detailed information has been provided concerning the number and volumes of coatings used by Navistar and how this relates to the number and volumes of coatings used by the HOV manufacturers or how these factors affect Navistar's ability to use the complying coatings used by the HOV industry. Therefore, USEPA is not able to evaluate the merit of these arguments.

B. Economic Feasibility of Meeting the SIP Limit

1. Navistar's Comment

Navistar's comments contain a lengthy discussion of the appropriate cost-effectiveness cutoff for determining the economic feasibility of add–on control equipment.

USEPA's Response. This entire discussion is completely irrelevant to the rulemaking. The NPR clearly states that the issue of concern is the validity of the cost estimates provided by Navistar, not whether, based on these estimates, control equipment can be considered economically feasible.

2. Navistar's Comment

Navistar's comments reference a draft report prepared by a contractor for USEPA as part of USEPA's enforcement case. Navistar states that the cost estimates contained in this report yield cost-effectiveness values ranging from $7,935 to $604,428 per ton of VOC controlled. In addition, this report only considers two control alternatives.

USEPA's Response. The draft report referenced by Navistar was never intended to be a comprehensive evaluation of the economic feasibility of add-on control equipment. The purpose of the report was to evaluate the technical feasibility of control equipment, with cost estimates provided for informational purposes only. Furthermore, because this report was prepared for USEPA only as part of its enforcement action, it has no relevance to the rulemaking.

3. Navistar's Comment

Navistar's comments provide additional information concerning the economic feasibility of add-on control equipment. This new information consists of more detailed cost estimates and an explanation of how cost figures were determined. Navistar believes that this information shows that add-on control is economically infeasible.

USEPA's Response. Based on the more detailed cost estimates provided by Navistar, add-on control equipment appears to be economically infeasible for the spray booths. However, Navistar still has not demonstrated that it would not be feasible to control oven exhausts. Navistar has argued that such control is not feasible because of the low volume gas stream and low VOC content of the oven exhaust, and because the great majority of VOC emissions from the facilities are exhausted from the spray booths and flash-off areas. The only information provided to support this argument is a September 4, 1984, Kintech report. The report shows that for lines 57 and 58, only 4 to 5 percent of VOC emissions are exhausted from the bake ovens. The report does not discuss the distribution for the other five lines which have ovens. While control of the bake ovens may not reduce emissions enough to bring these lines into compliance, it still may be a reasonable way to reduce emissions beyond the level proposed in the variances. It is common, for example, in the auto industry to control bake ovens where less than 20 percent of emissions are exhausted.

C. Technical Feasibility of Meeting the SIP Limit

Navistar's Comment. Navistar's comments concerning technical feasibility of meeting the existing SIP limit are, in large part, the same as its comments on the expeditiousness of the compliance plan. Navistar believes that the information adequately demonstrates that the complying coatings are unavailable

---

USEPA's Response. As discussed

that such an extension will not

that the Dayton area was in attainment

---

the requested SIP revision. Navistar's

requirements of section 3 of Executive

pharmacokinetics test only, EPA will

USEPA's Response. As discussed previously, Navistar has not demonstrated that complying coatings are unavailable. In addition to the lack of information concerning the compliance status of other heavy duty trucks assembly plants and the feasibility of using coatings used by HOV manufacturers, Navistar still has not demonstrated that it has been unable to reformulate a sufficient number of its coatings to achieve compliance with the applicable rule on a daily basis. Navistar argues that reformulation (and compliance) is not feasible because Navistar uses 6500 different coatings. However, it seems likely that if Navistar uses that many coatings, some of the coatings are used in large quantities while others are only used occasionally, or that some of the coatings may be similar. If this is the case, Navistar should have focused its reformulation efforts on high volume coatings (or groups of coatings). In any case, Navistar has not provided any detailed information concerning the number and volumes of coatings used or its efforts to reformulate coatings. Although Navistar has provided a chronology of coating development and testing, it is not clear how many of the items listed in the chronology relate to development of complying coatings for the Springfield plants.

D. Other Comments

1. OEPA's RAPCA's and Navistar's Comments

OEPA, RAPCA and Navistar all state that USEPA incorrectly evaluated the variances for seven of the lines as permanent relaxations. They feel that, because the variances expired on December 31, 1987, the revisions should be considered a compliance date extension for all of the lines.

USEPA's Response. The variances for the seven lines were treated as permanent relaxations because they do not require lines to come into compliance with the SIP once the variances expire. Instead, the variances require Navistar to evaluate the feasibility of three different emission limitations (one of which is a permanent relaxation). OEPA's and RAPCA's comments indicate that Navistar has submitted an alternative emission control strategy which is under review by OEPA.

In addition, it should be noted that even if these variances could be considered compliance date extensions, they would still not be approvable. As discussed previously, it has not been demonstrated that compliance by December 31, 1987, is expeditious and that such an extension will not jeopardize attainment or maintenance.

Finally, because the variances expired before they went into effect (they are effective upon approval by USEPA), even if they were approved as SIP revisions, they would have no effect.

2. Navistar's and MVMA's Comments

Navistar and MVMA state that the NPR does not provide an adequate explanation of USEPA's basis for its determination and that USEPA does not identify any specific control technology or coating reformulation which is reasonably available considering technological and economic feasibility.

USEPA's Response. The NPR clearly explains the basis of USEPA's proposed disapproval. The compliance date extension is not approvable because the compliance schedule was not demonstrated to be expeditious. This must include a survey of other similar sources. The relaxation is not approvable because it has not been demonstrated that it is infeasible to meet the existing SIP limit. In addition, for both the extension and the relaxation the State must demonstrate that approval will not jeopardize attainment or maintenance. As discussed in the NPR, there is a lack of documentation to support the revision.

The limits and schedules contained in Ohio's Federally approved SIP are presumed to represent the implementation of RACT as expeditiously as practicable unless a demonstration is made that such limits are not achievable in the time allowed. It is not the responsibility of USEPA to demonstrate that such limits are achievable, but it is the responsibility of the State (and Navistar) to demonstrate that they are not.

3. Navistar's Comment

Navistar states that the Agency record is incomplete because it does not contain a number of relevant documents.

USEPA's Response. USEPA's docket files regarding Navistar's site-specific RACT SIP revision contains all of the documents directly pertinent to this SIP revision.

4. Navistar's Comment

Navistar provided additional information concerning ozone levels in the vicinity of the Navistar facility. Navistar's consultant indicated that the meteorological data and air quality data for high ozone days in the Dayton area during the 1979 through 1987 period imply that Navistar's emissions did not contribute to the monitored standard exceedances. In addition, it is indicated that the Dayton area was in attainment of the ozone standard during the 1985–1987 period even without an emission reduction from the Navistar facility.

USEPA's Response. The meteorological analysis included in the report was based on single line forward and backward trajectories for the high ozone days. The single line trajectory of the analysis ignores the three dimensional nature of ozone formation and transport. A more sophisticated analysis is necessary. Further, despite the report's claim that Navistar's emissions only impacted downwind attainment areas, little can be said about this impact because no or little data exist in these areas upon which to base conclusions. No modeling analyses were conducted to support any claim of a lack of ozone standard exceedances downwind of Navistar.

Although no violations of the ozone standard were monitored in the 1985–1987 period in the Dayton area, they were monitored in the 1986–1988 period. In the 1986–1988 period, the Urbana Road site in Clark County recorded seven exceedances of the standard, with five occurring in 1988. The Spangler Road site in Clark County experienced six exceedances of the standard in the 1986–1988 period. Clearly, Clark County and the rest of the Dayton area continue to experience violations of the standard. More ozone precursor emission reduction is required in this area.

5. Navistar's Comment

Navistar contends that USEPA's review of its site-specific RACT SIP revision "has been tainted by an improper mixture of its program and enforcement functions."

USEPA's Response. Navistar bases this argument on two facts, neither of which is supported in the administrative record. First, Navistar argues that the mere filing of an enforcement action against Navistar automatically undermines USEPA's ability to review objectively the site-specific RACT SIP revision. Yet, Navistar fails to note that the enforcement actions against its plants were instituted before it submitted its March 10, 1986, SIP revision. The USEPA's notice of violations at Navistar's assembly plant was issued on March 21, 1984, and the notice of violations at its body plant was issued on December 30, 1985. Moreover, the Federal complaint for assembly plant violations was filed on April 30, 1985. A second complaint for body plant violations was filed November 30, 1986. Almost all of USEPA's enforcement actions were taken prior to USEPA's knowledge of

the requested SIP revision. Navistar's argument that the filing of a SIP revision should suspend all Federal enforcement action would gravely undercut the enforcement requirements of the Clean Air Act, 42 U.S.C. 7413. A violator remains subject to the existing requirements of a SIP until a SIP revision is obtained. *Train* v. *Natural Resources Defense Council,* 421 U.S. 60, 92 (1975); *Duquesne Light Co.* v. *USEPA,* 698 F.2d 456, 471 (D.C. Cir. 1983); *National Resources Defense Council* v. *USEPA,* 507 F.2d 905, 915 (9th Cir. 1974).

The other fact Navistar refers to which purportedly supports its argument that there has been an improper mixture of rulemaking and enforcement is that USEPA allegedly has made a Federal court pleading part of the administrative record. Navistar cities "Record Item 261–5," which it alleges corresponds to the pleading styled, "Defendant's First Set of Requests for Admissions dated December 17, 1987." After a careful review of the index to the administrative record and the administrative record itself, USEPA can locate no such document.

In summary, the administrative record contains the very items Navistar suggests it should: "the identities of all persons involved in the Agency's review of the SIP revision and * * * memoranda, records of conversations, or other documents reflecting that review" (Navistar comment, page 23). USEPA's rulemaking on Navistar's site-specific RACT SIP revision has been completely independent of its enforcement action as mandated by the law. *See Bethlehem Steel* v. *USEPA,* 636 F.2d 994 (7th Cir. 1980).

Conclusion

USEPA is disapproving this revision because the State has not demonstrated that Navistar's compliance schedule is expeditious, that meeting the existing SIP limit is technically or economically infeasible, and that the revision will not jeopardize attainment or maintenance.

Under section 307(b)(1) of the Act, petitions for judicial review of this action must be filed in the United States Court of Appeals for the appropriate circuit by November 13, 1989. This action may not be challenged later in proceedings to enforce its requirements. (See 307(b)(2).)

This action has been classified as a Table 2 action by the Regional Administrator under the procedures published in the **Federal Register** on January 19, 1989 (54 FR 2214–2225). On January 6, 1989, the Office of Management and Budget waived Table 2 and 3 SIP revisions (54 FR 2222) from the requirements of section 3 of Executive Order 12291 for a period of two years.

List of Subjects in 40 CFR Part 52

Environmental protection, Air pollution control, Ozone, Carbon monoxide, Hydrocarbon, Intergovernmental offices.

Authority: 42 U.S.C. 7401–7642.

Dated: August 31, 1989.

Frank M. Covington,
Acting Regional Administrator.

PART 52—APPROVAL AND PROMULGATION OF IMPLEMENTATION PLANS

Subpart KK—Ohio

Title 40 of the Code of the Federal Regulations, chapter 1, part 52, is amended as follows:

1. The authority citation for part 52 continues to read as follows:

Authority: 42 U.S.C. 7401–7642.

2. Section 52.1885 is amended by adding paragraph (p) to read as follows:

§ 52.1885 Control strategy: Ozone.

* * * * *

(p) Disapproval—On March 10, 1986, the Ohio Environmental Protection Agency (OEPA) submitted a site-specific revision to the Ohio ozone SIP for volatile organic compound emissions from Navistar's (Formerly called International Harvester) one surface coating line at its Body plant and nine lines at its Assembly plant. Both plants are located in Springfield, Clark County, Ohio. Clark County is designated nonattainment for the pollutant ozone under section 107 of the Clean Air Act (40 CFR 81.336).

Methyl Ethyl Ketoxime; Final Test Rule

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: EPA is issuing this final test rule under section 4 of the Toxic Substances Control Act (TSCA), requiring manufacturers and processors of methyl ethyl ketoxime (MEKO, CAS No. 96–29–7) to perform testing for health effects. The testing requirements include oncogenicity, mutagenicity, developmental toxicity, reproductive toxicity, neurotoxicity, and pharmacokinetics. For the pharmacokinetics test only, EPA will finalize the test standard and reporting requirement in a separate final rule.

DATES: In accordance with 40 CFR 23.5, this rule shall be promulgated for purposes of judicial review at 1 p.m. eastern (daylight or standard as appropriate) time on September 27, 1989. This rule should become effective on October 27, 1989.

FOR FURTHER INFORMATION CONTACT: Michael M. Stahl, Director, Environmental Assistance Division (TS-799), Office of Toxic Substances, Rm. EB–44, 401 M St., SW., Washington, DC 20460, (202) 554–1404, TDD: (202) 554–0551.

SUPPLEMENTARY INFORMATION: EPA is issuing a final test rule under section 4(a) of TSCA to require health effects testing for MEKO.

I. Introduction

A. Test Rule Development Under TSCA

This final rule is part of the overall implementation of section 4 of TSCA (Pub. L. 94–469, 90 Stat. 2003 *et seq.*, 15 U.S.C. 2601 *et seq.*), which contains authority for EPA to require the development of data relevant to assessing the risk to health and environment posed by exposure to particular chemical substances or mixtures (chemicals).

Under section 4(a) of TSCA, EPA must require testing of a chemical to develop data if the Administrator makes certain findings as described in TSCA under section 4(a)(1) (A) or (B). Detailed discussions of the statutory section 4 findings are provided in the EPA's first and second proposed test rules which were published in the **Federal Register** of July 18, 1980 (45 FR 48510) and June 5, 1981 (46 FR 30300).

B. Regulatory History

The Interagency Testing Committee (ITC) designated MEKO for priority testing consideration in its 19th Report, published in the **Federal Register** of November 14, 1986 (51 FR 41417). The ITC recommended that MEKO be considered for health effects testing. EPA responded to the ITC's recommendations for MEKO by publishing a notice of proposed rulemaking in the **Federal Register** of September 15, 1988 (53 FR 35838), which proposed that MEKO be tested for oncogenicity, mutagenicity, reproductive toxicity, developmental toxicity, neurotoxicity, and pharmacokinetics. The proposed rule contained a chemical profile of MEKO, a discussion of EPA's TSCA section 4(a) findings, and the proposed test standards and reporting requirements.

II. Response to Public Comments

EPA received written comments on the MEKO proposed test rule from Allied-Signal, Inc. (Allied), Huls America Inc. (Huls), Cosan Chemical Corp. (Cosan), and ICI Americas Inc. (ICI). A public meeting was also requested by Allied and was held on December 15, 1988 (Ref. 18). Allied submitted additional comments on human exposure to MEKO (Ref. 21) and on the economic impact of the rule (Ref. 23). The comments submitted by these companies and the EPA's response are contained in the public record for this rule (Ref. 24)

A. Route of Administration

Huls believes that all major toxicity tests should be conducted by the inhalation route and that inhalation is the major route of human exposure to MEKO. Allied believes the oncogenicity test should be conducted by inhalation.

EPA believes that, in addition to inhalation exposure, dermal contact may also be an important route of exposure to MEKO (Refs. 3 and 11). EPA has no information at this time to reject the inhalation route for the oncogenicity, in vivo mammalian cytogenetics, and neurotoxicity studies, and the final rule has been modified to allow either inhalation or oral routes for these tests. EPA believes there will be severe methodological problems associated with performing the developmental and reproductive toxicity tests by the inhalation route. The most serious problem is that dosing the dams by inhalation requires prolonged separation from their offspring (Ref. 40). Because the reproductive land developmental studies are complimentary, EPA has concluded that they should be conducted by the same route.

B. Oncogenicity

Huls believes acetoxime is not a good analogue because MEKO is asymmetrical and because acetoxime may be an atypical homologue.

EPA believes that, although acetoxime is symmetrical and the first member of a homologous series, it is still a good analogue for MEKO and is adequate for the finding that MEKO may present an unreasonable risk of injury to human health. Structurally, MEKO differs from acetoxime by a single methyl group, both chemicals are relatively water soluble and both exhibit similar acute toxicity (Ref. 24).

Allied believes the study by Mirvish concerning acetoxime and the positive results from a mouse lymphoma mutagenicity study are not an adequate basis for requiring a bioassay.

EPA has concluded that the Mirvish study of acetoxime, while not sufficient for use in quantitative risk assessment, is sufficient to raise concern for the possible oncogenicity of MEKO. EPA's use of structure-activity relationships (SAR) in supporting the section 4(a)(1)(A) TSCA finding was upheld by the D.C. Circuit Court of Appeals in a case reviewing the final rule for 2-Ethylhexanoic Acid (EHA, Ref. 39). The court stated, "But Congress explicitly contemplated that EPA would base test rules on comparisons among structurally similar chemicals" (Ref. 41). In addition, the Third Circuit has suggested that "structure-activity relationships" be used even when there is uncertainty and that such uncertainty may "highlight the need for testing" (Ref. 42).

EPA believes the positive results from the mouse lymphoma study of MEKO provide further evidence that MEKO may be oncogenic.

Allied indicates that neither of the hypothesized metabolites of MEKO, methyl ethyl ketone (MEK), or hydroxylamine, have been implicated in a positive carcinogenic response.

EPA believes MEKO itself may be oncogenic. This alone is sufficient for EPA's findings under TSCA section 4(a)(1)(A). Furthermore, even if the metabolites are not carcinogenic, there is no assurance that the parent compound (MEKO) is not.

Allied believes that, because tumors were observed in male rates in the study of acetoxime, the male rat would be an adequate subject for testing MEKO, and testing females is not necessary.

EPA disagrees. Testing experience and standard scientific references indicate there may be substantial sex-related differences in sensitivity to different compounds, EPA is requiring that females as well as males be tested.

Allied expressed general concern for the unnecessary sacrifice of animals.

EPA shares this concern, and has made every effort to design studies which economize on the number of animals while providing adequate numbers for acceptable statistical analysis. Industry may further reduce the number of animals by submitting study plans which use satellite groups or the same animals for different measurements, wherever feasible. EPA also notes that there are presently no alternatives to whole-animal testing for the toxicological endpoints required by this rule.

Allied and Huls believe there is no justification for using two species in any oncogenicity study of MEKO. They believe testing should be limited to the rat because the mouse is a poor test species for a substance where they believe the liver is the sole target organ. Huls is concerned about using the B6C3F1 mouse.

EPA disagrees. It has not been established that the liver is the only target for possible MEKO oncogenicity. EPA requires data from two species under its cancer risk assessment guidelines. Thus, a negative single species test would be insufficient evidence to exonerate MEKO. This requirement is consistent with those of the EPA Office of Pesticide Programs and the Organization for Economic Cooperation and Development (OECD).

EPA has not specified the strain of mouse for testing MEKO, however, the National Toxicology Program (NTP) concluded that even with the variable rate of background liver tumors in males, the B6C3F1 mouse is an acceptable species for oncogenicity studies (Ref. 19). EPA would consider the variable rate of background tumors with other evidence in estimating potential human risk from MEKO.

Huls believes that the reporting requirements should be extended to 65 months if conducted in only the rat and 79 months if both rat and mouse are used.

EPA does not believe that MEKO presents special testing problems requiring an extension of the reporting requirements.

C. Mutagenicity

Allied believes that because the mouse lymphoma assay conducted on MEKO was negative with activation, MEKO would be deactivated by enzymes in vivo.

EPA believes the positive results from this mouse lymphoma study, without activation, indicate that MEKO can potentially cause mutagenic effects. The negative result obtained by using enzymes in vitro does not necessarily predict how MEKO would react in vivo, nor how it would be processed by human enzyme systems. This information must be obtained through further testing. In addition, EPA found that hydroxylamine, a possible metabolite of MEKO, and hydroxylamine hydrochloride, a structurally related chemical, are mutagenic in a variety of test systems (Refs. 6 and 7). Therefore, MEKO may also be mutagenic. Allied noted that hydroxylamine is active in vitro but not in vivo. Further, hydroxylamine, a product of normal cell metabolism, is endogenously present in humans where it apparently does not have mutagenic effect.

EPA believes in vitro studies indicate that hydroxylamine is intrinsically

mutagenic, and are sufficient to raise concern for MEKO. Further study is needed to determine the mutagenic risk of MEKO itself.

Allied requests that in vitro cytogenetics, sister chromatid exchange, and Ames *Salmonella* studies of MEKO being conducted by NTP be evaluated before conducting mutagenicity studies of MEKO.

EPA's tiered testing system for both gene mutations and chromosomal aberrations is explained in detail in the final test rules for C9 aromatic hydrocarbon fraction (40 CFR 799.2175; 50 FR 20662; May 17, 1985), and diethylenetriamine (40 CFR 799.1575; 50 FR 21398; May 23, 1985).

NTP has indicated that the in vitro cytogenetics and the in vitro sister chromatid exchange studies conducted by NTP are negative (Ref. 31). EPA has not reviewed the studies but will do so when they are available. However, regardless of the results of NTP's testing, both the sex-relinked recessive lethal assay in *Drosophila* and an in vivo mammalian bone marrow cytogenetics test are required to confirm the negative.

D. Developmental and Reproductive Toxicity

Allied proposed that a protocol combining developmental toxicity, neurotoxicity, and reproductive toxicity be devised.

EPA believes that a combined protocol testing for neurotoxicity, developmental toxicity, and reproductive toxicity will compromise the results of these studies. Developmental and reproductive tests require different exposure periods and different dose levels. Neurotoxicity tests also require longer exposure times than the developmental test (Ref. 24, 25, and 40). Theoretically, the neurotoxicity and reproductive studies could be combined. However, at this time, the commenter failed to establish that it can be done successfully.

Allied disagrees with EPA's interpretation of data used to support the need for reproductive toxicity testing of MEKO.

Although EPA believes data from the 13-week subchronic toxicity study (Ref. 30) are inadequate to prove that MEKO causes hypospermatogenesis, these data strongly suggest that MEKO may cause adverse effects on male reproductive organs (Ref. 25).

Allied questions EPA's use of Ramaija's study with hydroxylamine (Ref. 31) to support the need for reproductive toxicity testing, and especially the use of spermatogenesis staging studies.

Although the Ramaija data do not prove conclusively that hydroxylamine is a reproductive toxicant, EPA believes the data suggest that hydroxylamine has adverse effects on spermatogenesis and embryonic viability. These study results support concern for the potential reproductive toxicity of hydroxylamine, and hence of MEKO. We also believe that if reproductive toxicity testing is to be conducted, it would be prudent to include the "histopathology of the tests with staging of the sperm" as outlined in the proposed rule. We do not concur with Allied that staging of sperm is only appropriate for compounds that are metabolized slowly. The purpose of the staging study is to determine if a particular stage of sperm development is uniquely sensitive to the toxic effects of a compound. For this purpose quantitation is not necessary. Since spermatogenesis is a continual process, and not a cyclic process, all stages of sperm development will be present and exposed to a compound even if the compound is metabolized and eliminated rapidly. Although the data from the study by Ramaija are of limited value because of the high doses used, they do not provide suggestive evidence that specific stages of sperm development may be more sensitive to the effects of hydroxylamine than other stages.

Allied questions EPA's use of the available information on hydroxylamine as support for developmental toxicity testing of MEKO.

EPA considers none of the studies available on the developmental toxicity of hydroxylamine to be adequate for risk assessment. However, these data are considered sufficient to raise concern for the developmental toxicity potential of hydroxylamine. Since hydroxylamine is a possible metabolite of MEKO, EPA believes MEKO may also be developmentally toxic.

Allied considered the results of two developmental toxicity tests (Ref. 16) to be contradictory and thus insufficient to support developmental toxicity testing.

EPA disagrees (Ref. 25). Both studies demonstrated increased frequencies of skeletal anomalies and grossly malformed fetuses. Because MEKO is structurally related to the chemicals from these studies, MEKO may cause similar effects.

E. Neurotoxicity

Allied and Huls believe that existing data for MEKO indicate it is unlikely that MEKO will cause neurotoxic effects.

As a matter of testing policy, the substantial production, the substantial potential exposure to MEKO, and the lack of adequate neurotoxicity data justify definitive testing under TSCA. The available data are limited (Refs. 1, 16 and 24). There is no evidence that other than gross cage side observations were conducted in any of the existing studies, and EPA believes data from these studies is inadequate for evaluating the potential for neurotoxic effects from MEKO.

If neurotoxicity testing is to be conducted, Huls recommends that satellite groups be added to the subchronic probe study for the oncogenicity test to conserve animals.

As prescribed in 40 CFR 798.6400, the neurotoxicity tests may be combined with any other toxicity test as long as one of the requirements of either are violated by the combination.

Huls commented that, only if pathologic evidence from examination of a variety of neurologic tisses provides reason for concern, should the additional proposed neurotoxicity testing be required.

No data were provided by the commenters to support their contention that a persistent nervous system effect must have a basis in observable pathology. EPA does not agree that only those chemicals that test positive for neuropathological effects warrant testing for functional or behavioral type effects. The National Academy of Sciences also supports the consideration of both behavior and pathology in evaluation of neurotoxic effects (Refs. 43, 44, 45).

Allied believes that EPA has not considered the availability of contract laboratories to conduct the neurotoxicity studies.

EPA has determined that laboratories are available to complete the neurotoxicity testing requirements for the MEKO final rule (Ref. 38).

F. Pharmacokinetics

Allied believes that the pharmacokinetics test guideline has not undergone full scientific and technical evaluation and comment.

Because numerous comments were received on the generic pharmacokinetics guideline published in the MEKO proposed rule (53 FR 35838; September 15, 1988), EPA has decided to reevaluate the pharmacokinetics test standard and reporting requirements for MEKO. EPA plans to promulgate the pharmacokinetics test standard and related reporting requirements for MEKO in a separate rule.

G. Exposure

Allied contends that MEKO has insufficient exposure potential to pose unreasonable risk of injury since workplace exposure is controlled during manufacture, and consumer and occupational exposure to MEKO from paint is low. In support of this claim, Allied submitted the results of an exposure study (Ref. 21).

EPA has reviewed this study (Ref. 20) and has found that the methodology used by Allied in developing exposure estimates was similar to the methodology used by EPA. Furthermore, the MEKO exposure levels and number of people exposed agree with or exceed those previously estimated by EPA. EPA has found that individual exposure estimates can vary a great deal with small changes in the assumptions used for the calculations. Exposure to MEKO is a range of values depending upon factors like ventilation, application method, duration, amount of paint used, and others. Moreover, as risk is a function of toxicity and exposure, levels of exposure have no meaning for determining risk until testing is conducted to determine the toxicity of a chemical. EPA believes the potential exposure to MEKO both with regard to the large numbers of individuals exposed and the duration and levels to which they are exposed are sufficient to support the TSCA section 4 (a)(1) (A) and (B) findings.

H. Economic Impact

Allied believes that the cost of testing will force Allied to abandon its production of MEKO. They state that price competition for Meko is keen, and foreign suppliers respond aggressively to opportunities to gain market share.

EPA believes that even though the annualized costs of testing may appear high relative to the product price, other factors indicate that the potential for economic impact is moderate. Because there are no cost-effective substitutes for MEKO, the price of MEKO can be increased to cover the cost of testing. In addition, because small quantities are used in paints, the increased cost of MEKO would have little effect on retail paint prices. EPA believes the market for alkyd resin paints is relatively stable, and alkyd resin paint manufacturers will continue to use MEKO in their formulations. In addition, EPA believes the market structure of MEKO may change, but the market will support testing for MEKO, and MEKO will continue to be available to domestic users.

EPA cost reimbursement procedures subject all manufacturers and importers, under the rule, to the same requirements for cost reimbursement. EPA has not received adequate information for evaluating the cost structure of foreign suppliers or of Allied. Foreign suppliers could use subsidies, as Allied has claimed, to increase market share. But, EPA believes subsidies could be used independent of a test rule for MEKO.

Allied believes the anti-skinning agent market will be eliminated in 5 years and that a 5-year amortization period will more than double EPA's estimated annual burden.

EPA notes there is some indication of a possible decline in the demand for alkyd resin paints, but does not believe that the anti-skinning market will be eliminated in 5 years. Nonetheless, EPA used Allied's estimate of a 5-year amortization period as a worst case scenario. The increase does not appropach the price of the substitutes for MEKO. No data have been provided to EPA to justify use of a 5-year amortization period.

Allied claims key economic determinants of competition profitability, and historical price competition were neglected in EPA's economic analysis.

EPA requested information on cost structure, profitability, and historical price competition (Ref. 26). Additional information provided to EPA was inadequate to change EPA's analysis of economic impact. However, EPA acknowledges that Allied may leave the MEKO market.

Allied believes the total cost of testing will be $2.3 million.

EPA estimates that testing will cost between $1.4 and $1.9 million. Allied has not substantiated its claim for higher costs; and, without further information, EPA cannot justify using higher cost estimates. Nonetheless, using Allied's cost figures does not significantly change the economic viability of MEKO and does not change the conclusion of the economic analysis.

III. Final Test Rule for MEKO

A. Findings

Although findings under either section 4(a)(1) (A) or (B) may independently support testing, EPA is basing its oncogenicity, mutagenicity, developmental toxicity, reproductive toxicity, neurotoxicity, and pharmacokinetics testing for MEKO on the authority of section 4(a)(1) (A) and (B) of TSCA.

Under section 4(a)(1)(B)(i) of TSCA, EPA finds that MEKO is produced in substantial quantities and there may be substantial human exposure to MEKO during its manufacture, processing, and use.

Although the total annual production of MEKO is confidential business information (CBI), public information indicates the total imports and domestic annual production are in excess of 5 million pounds per year (Ref. 2). Over two million consumers may be exposed to MEKO through use of oil-based paints. In addition, consumers may be exposed to MEKO through use of household cleaning products and adhesives, caulking, and repair products (Refs. 3, 4, and 9). An estimated 900,000 professional painters may be routinely exposed to MEKO through use of oil-based paints (Ref. 14), and an estimated 12,000 workers in 1,500 plants may be exposed through manufacture and processing of MEKO (Refs. 10 and 11). EPA finds that this production volume and potential exposure to large numbers of consumers and workers constitutes sufficient basis for making a finding under section 4(a)(1)(B)(i) of TSCA.

Under section 4(a)(1)(A)(i), EPA finds that the manufacture, processing, and use of MEKO may present an unreasonable risk of injury to human health due to its potential to cause oncogenic, mutagenic, reproductive, developmental, and subchronic effects. The finding for potential oncogenic risk is based upon data which indicate that acetoxime, a structural analogue of MEKO, caused benign and carcinogenic hepatocellular tumors in mice (Refs. 5 and 6). In addition, MEKO is positive in the mouse lymphoma gene mutation test (Ref. 28) which also raises concern that MEKO may be oncogenic.

The finding for potential mutagenic risk is based on data indicating that MEKO caused gene mutations in a mouse lymphoma test (Ref. 28). In addition, data on hydroxylamine, a possible metabolite of MEKO, indicates hydroxylamine is mutagenic in various systems (Refs. 6 and 7). Because there is concern for potential mutagenicity from hydroxylamine, there is concern for potential mutagenci risk from MEKO.

The finding for potential reproductive risk is based on adverse effects on the tests of rats from a 90-day exposure to MEKO (Ref. 6). In addition, hydroxylamine, a possible metabolite of MEKO, appears to adversely affect spermatogenesis, mammary gland development, prolactin levels, estrous cycle, and development of Graafian follicles (Refs. 5, 6, 30, 31, and 37). These results suggest potential reproductive risk from MEKO.

The finding for potential developmental risk is based on data from tests on MEK, a possible metabolite of MEKO, which indicate that MEK causes skeletal and soft tissue abnormalities in rats at 1,000 ppm and soft tissue abnormalities in rats at 3,000 ppm (Ref. 13). In addition, data on

hydroxylamine (Refs, 5, 6, 30, 32, 37, and 39), another possible metabolite of MEKO, suggest that hydroxylamine is developmentally toxic. These studies on the metabolites of MEKO suggest that MEKO may also potentially cause developmental effects.

The finding for potential blood effects risk is based on data from a 90-day oral toxicity study of MEKO (Ref. 30) which suggest that MEKO induces hemolytic anemia in the rat with compensatory erythropoiesis as described in unit II.E.3. of the proposed rule (53 FR 35838; September 15, 1988), and supports concern for the risk of blood effects from MEKO.

Although the available data on blood effects are adequate for risk assessment, it may be in the interest of those subject to this rule to further assess blood effects. The 90-day subchronic study (Ref. 30) does not provide a no-observed-adverse-effect level (NOAEL) for blood effects for MEKO. Uncertainty factors would be added to the lowest-observed-adverse-effect level (LOAEL) to establish acceptable levels of exposure. Testing to determine the NOAEL for blood effects associated with subchronic and chronic exposure would reduce the uncertainty in evaluating these effects.

The NOAEL for blood effects could be established in the subchronic range-finding studies for the MEKO oncogenicity test. These data should be developed according to the test guidelines at 40 CFR 798.2650, modified to direct specific attention towards the hematology profile. Hematology determinations (hematocrit, hemoglobin concentrations, erythrocyte count, total and differential leukocyte count, and a measure of clotting potential such as clotting time, prothrombin time, thromboplastin time, or platelet count, and certain clinical biochemistry determinations on blood) could be made on all groups, including controls, at day 30 and at day 90 of the test period for the rat. A chronic NOAEL for blood effects could be obtained by modifying the oncogenicity study to include hematology and blood biochemistry. This could be accomplished by modifying the oncogenicity test guideline at 40 CFR 798.3300 to include hematology determinations and certain clinical biochemistry determinations on blood for rats, in accordance with 40 CFR 798.3320, the combined chronic toxicity/oncogenicity test guideline. Satellite groups of rats may be necessary to avoid stress to the test animals from blood sampling and to provide sufficient animals for adequate blood collections.

The findings for the potential health effects as listed above along with the exposure cited above (Refs. 2, 3, 4, 9, 10, 11, and 14) are sufficient to support EPA's finding that the manufacturing, processing, and use of MEKO may present an unreasonable risk of injury to human health.

Under section 4(a)(1) (A)(ii) and (B)(ii), EPA finds that there are insufficient data and experience from which the potential oncogenicity, mutagenicity, reproductive toxicity, developmental toxicity, and neurotoxicity from manufacturing, processing, and use of MEKO can reasonably be determined or predicted.

Under section 4(a)(1) (A)(iii) and (B)(iii), EPA finds that testing of MEKO is necessary to develop such data for oncogenicity, mutagenicity, reproductive toxicity, developmental toxicity, and neurotoxicity. EPA believes the data resulting from this testing will be relevant to a determination as to whether manufacturing, processing, and use of MEKO does or does not present an unreasonable risk of injury to human health.

Because of the concerns for oncogenicity, mutagenicity, blood effects, reproductive toxicity, and developmental toxicity for the described exposures to MEKO, EPA finds that pharmacokinetics testing is necessary. Pharmacokinetics data will be used for making extrapolations of toxicologic data from species to species, from route to route of administration, and from high to low doses. Pharmacokinetics data will be used to detect differences between sexes relative to the metabolic processes of absorption, tissue distribution, biotransformation and excretion. In addition, these data will show if metabolic processes are modified by different routes of administration or by repeated dosing.

B. Required Testing and Test Standards

On the basis of the findings presented in Unit III.A. of this preamable, EPA is requiring that health effects testing be conducted for MEKO. The tests shall be conducted in accordance with EPA's TSCA Good Laboratory Practice Standards in 40 CFR part 792 and in accordance with specific test standards based on the guidelines set forth in 40 CFR part 798, or other published test methods as specified in this test rule and enumerated in the following Table.

REQUIRED TESTING, TEST STANDARDS AND REPORTING REQUIREMENTS FOR MEKO

Test	Test standard (40 CFR citation)	Reporting deadline for final report [1]	Number of interim (6 month) reports required
Health Effects:			
Oncogenicity, oral/inhalation	§ 798.3300	53	8
Developmental toxicity, oral	§ 798.4900	15	2
Reproductive toxicity, oral	§ 798.4700	29	4
Sex-linked recessive lethal assay in *Drosophila*	§ 798.5275	18	2
In vivo mammalian bone marrow cytogenetics tests:			
Chromosomal analysis, oral/inhalation	§ 798.5385	14/17	2
or			
Micronucleus assay, oral/inhalation	§ 798.5395	18/17	2
Functional observational battery: Acute and subchronic, oral/inhalation	§ 798.6050	18/21	2
Motor activity test: Acute and subchronic, oral/inhalation	§ 798.6200	18/21	2
Neuropathology: Subchronic oral/inhalation	§ 798.6400	18/21	2
Pharmacokinetics [3]	(2)	(2)	

[1] Number of months, beginning with the effective date of this rule. These reporting requirements have been adjusted from those specified in the proposed rule to be consistent with other test rules under section 4 and to allow additional time if inhalation testing is conducted.

[2] Pharmacokinetics test standard and reporting requirements will be promulgated at a later date.

[3] [Reserved].

The health effects tests to be conducted for MEKO are: (1) An oral or inhalation 2-year oncogenicity study, using the guideline at 40 CFR 798.3300; (2) an oral 2-species developmental toxicity study using the guideline at 40 CFR 798.4900; (3) an oral 2-generation reproductive toxicity study using the guideline at 40 CFR 798.4700 and including histopathology of the ovaries, and vaginal cytology for the last 3 weeks prior to mating to monitor the estrus cycle; (4) sex-linked recessive lethal gene mutation assay in *Drosophila* using the guideline at 40 CFR 798.5275, (5) oral or inhalation in vivo mammalian bone marrow cytogenetics test using the guideline for either the chromosomal analysis at 40 CFR 798.5385 or the micronucleus assay at 40 CFR 798.5395; and (6) acute and subchronic (90-day) oral or inhalation neurotoxicity tests, including: a functional observational battery using the guideline at 40 CFR 798.6050, and a motor activity test using the guideline at 40 CFR 798.6200, and subchronic neuropathology using the guideline at 40 CFR 798.6400.

The test guideline for the two-generation reproductive toxicity test (40 CFR 798.4700) in the test standard for MEKO is modified as follows: The integrity of the various cell stages of spermatogenesis shall be determined, with particular attention directed toward achieving optimal quality in the fixation and embedding. Preparations of testicular and associated reproductive organ samples for histology should follow the recommendations of Lamb and Chapin (Ref. 46), or an equivalent procedure. Histopathology of the testes shall be conducted on all P and F_1 adult males at the time of sacrifice, and histological analyses shall include evaluations of the spermatogenic cycle, i.e., the presence and integrity of the 14 cell stages. These evaluations should follow the guidance provided by Clermont and Percy (Ref. 47). Information shall also be provided regarding the nature and level of lesions observed in control animals for comparative purposes.

Data on female cyclicity shall be obtained by performing vaginal smears and cytology in parental (P) and first generation (F_1) females over the last 3 weeks prior to mating. The cell staging technique of Sadleir (Ref. 33), and the vaginal smear method in Hafez (Ref. 34), or equivalent methods should be used. Data shall be provided on whether the animal is cycling and the cycle length.

P and F_1 females shall continue to be exposed to MEKO for at least an additional 2 weeks following weaning of offspring to permit them to begin cycling once again. They shall then be sacrificed and their ovaries shall be serially sectioned with a sufficient number of sections examined to adequately detail oocyte and follicular morphology. The methods of Mattison and Thorgiersson (Ref. 35) and Pederson and Peters (Ref. 36) may provide guidance. The strategy for sectioning and evaluation is left to the discretion of the investigator, but shall be described in detail in the protocol and final report. The nature and background level of lesions in the control tissue shall also be noted. Gross and histopathologic evaluations shall be conducted on the mammary glands in F_1 females and second generation (F_2) pups sacrificed at weaning and in adult (F_1) females at the termination of the study. Any abnormalities shall be described in the final report.

An in vitro mammalian cytogenetics assay, and a sister chromatid exchange test on MEKO were conducted by NTP, which indicates that both of these tests were negative (Ref. 31). NTP is also conducting a gene mutation assay in *Salmonella*. EPA will evaluate this information along with lower-tier mutagenicity data developed through this test rule to determine if the mouse visible specific locus assay, the rodent dominant lethal assay, the rodent heritable translocation assay, or other mutagenic testing is necessary for MEKO. These upper-tier mutagenic tests are not being required at this time. EPA is requiring that the TSCA Health Effects Testing Guidelines referenced in the table, including all modifications made herein, be the test standards for the required tests for MEKO. The TSCA testing guidelines for health effects testing specify generally accepted minimum conditions for determining the health effects for substances such as MEKO to which humans are exposed.

C. Test Substance

EPA is requiring that MEKO of at least 99 percent purity be used as the test substance. MEKO of this purity is commercially available. EPA has specified a relatively pure substance for teting because EPA is interested in evaluating the effects attributable to MEKO itself.

D. Persons Required to Test

Section 4(b)(3)(B) of TSCA specifies that the activities for which EPA makes section 4(a) findings (manufacture, processing, distribution in commerce, use, and/or disposal) determine who bears the responsibility for testing a chemical. Manufacturers and persons who intend to manufacture the chemical are required to test if the findings are based on manufacturing ("manufacture" is defined in section 3(7) of TSCA to include "import"). Processor and persons who intend to process the chemical are required to test if the findings are based on processing. Manufacturers and processors and persons who intend to manufacture or process the chemical are required to test if exposure giving rise to the potential risk occurs during distribution in commerce, use, or disposal of the chemical.

Because EPA has found that there are insufficient data and experience to reasonably determine or predict the effects of the manufacture, processing, and use of MEKO on human health, EPA is requiring persons who manufacture and/or process, or who intend to manufacture and/or process MEKO, including persons who manufacture or process or intend to manufacture or process MEKO as a byproduct, or who import or intend to import products which contain MEKO, at any time from the effective date of the final test rule to the end of the reimbursement period be subject to the testing requirements contained in this final rule. Persons who manufacture, import, or process MEKO only as an impurity are not subject to these requirements. The end of the reimbursement period shall be at least 5 years after the last final report is submitted, but if it takes longer than 5 years to develop the data, the reimbursement period shall be extended an amount of time equal to that which was required to develop the data.

Because TSCA contains provisions to avoid duplicative testing, not every person subject to this rule must individually conduct testing. Section 4(b)(3)(A) of TSCA provides that EPA may permit two or more manufacturers or processors who are subject to the rule to designate one such person or a qualified third person to conduct the tests and submit data on their behalf. Section 4(c) provides that any person required to test may apply to EPA for an exemption from the requirement. EPA promulgated procedures for applying for TSCA section 4(c) exemptions in 40 CFR part 790.

Manufacturers (including importers) subject to this rule are required to submit either a letter of intent to perform testing or an exemption application within 30 days after the effective date of the final test rule. The required procedures for submitting such letters and applications are described in 40 CFR part 790.

Processors subject to this rule, unless they are also manufacturers, are not required to submit letters of intent or exemption applications, or to conduct testing, unless manufacturers fail to submit notices of intent to test or later fail to sponsor the required tests. EPA expects that the manufacturers will pass an appropriate portion of the costs of testing on to processors through the pricing of their products or other reimbursement mechanisms. If manufacturers perform all the required tests, processors will be granted exemptions automatically. If manufacturers fail to submit notices of intent to test or fail to sponsor all the required tests, EPA will publish a separate notice in the **Federal Register** to notify processors to respond; this procedure is described in 40 CFR part 790.

EPA is not requiring the submission of equivalence data as a condition for exemption from the required testing for MEKO. As noted in Unit IV.B., EPA is interested in evaluating the effects attributable to MEKO itself and has specified a relatively pure substance for testing.

Manufacturers and processors subject to this test rule shall comply with the test rule development and exemption procedures in 40 CFR part 790 for single-phase rulemaking.

E. Reporting Requirements

All data developed under this rule shall be reported in accordance with TSCA Good Laboratory Practice (GLP) Standards which appear in 40 CFR part 792.

In accordance with 40 CFR part 790 under single-phase rulemaking procedures, test sponsors are required to submit individual study plans at least 45 days prior to the initiation of each test.

EPA is required by TSCA section 4(b)(1)(C) to specify the time period during which persons subject to a test rule must submit test data. EPA's reporting requirements for each of the test standards are specified in the table in Unit III.B. Note that longer reporting periods are provided for inhalation tests to calibrate and set up inhalation chambers. Progress reports for all tests are required at 6-month intervals starting 6 months from the effective date of the final test rule.

TSCA section 14(b) governs EPA disclosure of test data submitted pursuant to section 4 of TSCA. Upon receipt of test data required by this rule, EPA will publish a notice of receipt in the **Federal Register** as required by section 4(d).

Persons who export a chemical which is subject to a section 4 test rule are subject to the export reporting requirements of section 12(b) of TSCA. Final regulations interpreting the

requirements of section 12(b) are in 40 CFR part 707. In brief, as of the effective date of the final test rule, an exporter of MEKO must report to EPA the first annual export or intended export of MEKO to each country. EPA will notify the foreign country concerning the test rule for the chemical.

F. Enforcement Provisions

EPA considers failure to comply with any aspect of a section 4 rule to be a violation of section 15 of TSCA. Section 15(1) of TSCA makes it unlawful for any person to fail or refuse to comply with any rule or order issued under section 4. Section 15(3) of TSCA makes it unlawful for any person to fail or refuse to: (1) Establish or maintain records, (2) submit reports, notices, or other information, or (3) permit access to or copying of records required by TSCA or any rule issued under TSCA. Section 15(4) makes it unlawful for any person to fail or refuse to permit entry or inspection as required by TSCA section 11. Section 11 applies to any "* * * establishment, facility, or other premises in which chemical substances or mixtures are manufactured, processed, stored, or held before or after their distribution in commerce * * *" EPA considers a testing facility to be a place where the chemical is held or stored and, therefore, subject to inspection. Laboratory inspections and data audits will be conducted periodically in accordance with the authority and procedures outlined in TSCA section 11 by duly designated representatives of the EPA for the purpose of determining compliance with the final rule for MEKO. These inspections may be conducted for purposes which include verification that testing has begun, schedules are being met, and reports accurately reflect the underlying raw data, interpretations, and evaluations, and to determine compliance with TSCA GLP Standards and the test standards established in the rule.

EPA's authority to inspect a testing facility also derives from section 4(b)(1) of TSCA, which directs EPA to promulgate standards for the development of test data. These standards are defined in section 3(12)(B) of TSCA to include those requirements necessary to assure that data developed under test rules are reliable and adequate, and to include such other requirements as are necessary to provide such assurance. EPA maintains that laboratory inspections are necessary to provide this assurance.

Violators of TSCA are subject to criminal and civil liability. Persons who submit materially misleading or false information in connection with the requirement of any provision of this rule may be subject to penalties which may be calculated as if they never submitted their data. Under the penalty provisions of section 16 of TSCA, any person who violates section 15 of TSCA could be subject to a civil penalty of up to $25,000 for each violation with each day of operation in violation constituting a separate violation. This provision applies primarily to manufacturers who fail to submit a letter of intent or an exemption request and continue manufacturing after the deadlines for such submissions. This provision also applies to processors who fail to submit a letter of intent or an exemption application and continue processing after EPA has notified them of their obligation to submit such documents (see 40 CFR 790.48(b)). Knowing or willful violations could lead to the imposition of criminal penalties of up to $25,000 for each day of violation, imprisonment for up to 1 year, or both. In determining the amount of penalty, EPA will take into account the seriousness of the violation and the degree of culpability of the violator, as well as all the other factors listed in TSCA section 16. Other remedies are available to EPA under section 17 of TSCA, such as seeking an injunction to restrain violations of TSCA section 4.

Individuals as well as corporations could be subject to enforcement actions. Sections 15 and 16 of TSCA apply to "any person" who violates provisions of TSCA. EPA may, at its discretion, proceed against individuals as well as companies themselves. In particular, this includes individuals who report false information or who cause it to be reported. In addition, the submission of false, fictitious, or fraudulent statements is a violation under 18 U.S.C. 1001.

IV. Economic Analysis

To assess the potential economic impact of this rule, EPA has prepared an economic analysis (Ref. 2) that evaluates the potential for significant economic impact on the industry as a result of the required testing. The economic analysis estimates the costs of conducting the required testing and evaluates the potential for significant adverse economic impact as a result of these tests costs by examining four market characteristics of MEKO: Price sensitivity of demand, industry cost characteristics, industry structure, and market expectations. Since, in the case of MEKO, preliminary analysis indicated some potential for significant economic impact, a more comprehensive and detailed analysis was conducted to more precisely predict the magnitude and distribution of the expected impact.

Total testing costs for MEKO are estimated to range from $1.4 to $1.9 million. To predict the financial decision making practices of manufacturing firms, these costs have been annualized. Annualized costs are compared with annual revenue as an indication of potential impact. The annualized costs represent equivalent constant costs which would have to be recouped each year of the payback period to finance the testing expenditure in the first year. EPA recognizes that inhalation exposure during toxicity testing is more expensive than oral dosing. However, since exercising this option is voluntary, its cost has not been included in the economic analysis.

The annualized test costs, calculated using a cost of capital of 7 percent over a period of 15 years, range from $150,000 to $205,000. Though the annualized unit costs of the tests relative to the product price of MEKO appear to be high, EPA believes that the potential for adverse economic impact is moderate. This conclusion is based on the following observations: Demand for MEKO appears to be inelastic with respect to price in its largest end use as an antiskinning agent in alkyd paints because of the higher price of substitutes, and the market for MEKO appears to be stable.

Refer to the economic analysis which is contained in the public record for this rulemaking for a complete discussion of test cost estimation and potential for economic impact resulting from these costs (Ref. 2). Some of the information reviewed in the economic analysis is confidential business information and not available for public review. However, consideration of this information does not change the conclusions of the economic analysis.

V. Availability of Test Facilities and Personnel

Section 4(b)(1) of TSCA requires EPA to consider the reasonably foreseeable availability of the facilities and personnel needed to perform the testing required under the rule. Therefore, EPA conducted a study to assess the availability of test facilities and personnel to handle the additional demand for testing services created by section 4 test rules. Copies of the study, Chemical Testing Industry: Profile of Toxicological Testing (PB 82–140773), can be obtained through the National Technical Information Service (NTIS), 5285 Port Royal Road, Springfield, VA 22161 or the docket for this rule. On the basis of this study, EPA believes that there will be available test facilities and personnel to perform the testing specified in this rule.

EPA has recently reviewed the availability of contract laboratory facilities to conduct the neurotoxicity testing requirements (Ref. 38) and believes that facilities will be available for conducting these tests. The laboratory review indicates that few laboratories are currently conducting these tests according to TSCA test guidelines and TSCA GLP Standards. However, the barriers faced by testing laboratories to gear up for these tests are not formidable. Laboratories will need to invest in testing equipment and personnel training, but EPA believes that these investments will be recovered as the neurotoxicity testing program under TSCA section 4 continues. EPA's expectations of laboratory availability were borne out under the testing requirements of the C_9 aromatic hydrocarbon fraction test rule at 40 CFR 799.2175. Pursuant to that rule, the manufacturers were able to contract with a laboratory to conduct the testing according to TSCA test guidelines and TSCA GLP Standards.

VI. Rulemaking Record

EPA has established a record for this rulemaking proceeding (docket number OPTS–42099A). This includes:

A. Supporting Documentation

(1) Federal Register notices pertaining to this rule consisting of:

(a) Notice containing the ITC's recommendation of MEKO to the Priority List (50 FR 41417; Nov. 14, 1986) and comments on MEKO in response to that notice.

(b) Methyl Ethyl Ketoxime; Proposed Test Rule and Proposed Pharmacokinetics Test Guideline (53 FR 35838; September 15, 1988).

(c) Rule requiring TSCA section 8(a) and 8(d) reporting on MEKO (51 FR 41329; Nov. 14, 1986).

(d) TSCA test guidelines cited as test standards for this rule, 40 CFR part 798.

(e) Final rule on Ethyltoluenes, Trimethylbenzenes, and the C_9 Aromatic Hydrocarbon Fraction (50 FR 20662; May 17, 1985).

(f) Final rule on Diethylenetriamine (50 FR 21398, May 23, 1985).

(2) Communications before final rulemaking, consisting of:

(a) Written public comments and letters.

(b) Meeting summaries.

(c) Telephone contact reports.

(3) Reports—published and unpublished factual materials including: Chemical Testing Industry: Profile of Toxicological Testing (October, 1981).

Confidential business information (CBI), while part of the record is not available for public review. A public version of the record, from which CBI has been deleted, is available for inspection in the TSCA Public Docket Office, Rm. G–004, NE Mall, 401 M Street SW., Washington, DC, from 8 a.m. to 4 p.m., Monday through Friday, except legal holidays.

VII. Other Regulatory Requirements

A. Executive Order 12291

Under Executive Order 12291, EPA must judge whether a rule is "major" and therefore subject to the requirement of a Regulatory Impact Analysis. EPA has determined that this test rule is not major because it does not meet any of the criteria set forth in section 1(b) of the Order; i.e., it will not have an annual effect on the economy of at least $100 million, will not cause a major increase in costs or prices, and will not have a significant adverse effect on competition or the ability of U.S. enterprise to compete with foreign enterprises.

This rule was submitted to the Office of Management and Budget (OMB) for review as required by Executive Order 12291. Any written comments from OMB to EPA, and any EPA response to those comments, are included in the rulemaking record.

B. Regulatory Flexibility Act

Under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*, Pub. L. 96–354, September 19, 1980), EPA is certifying that this test rule will not have a significant impact on a substantial number of small businesses because: (1) They are not likely to perform testing themselves, or to participate in the organization of the testing effort; (2) they will experience only very minor costs, if any, in securing exemption from testing requirements; and (3) they are unlikely to be affected by reimbursement requirements.

C. Paperwork Reduction Act

OMB has approved the information collection requirements contained in this final rule under the provisions of the Paperwork Reduction Act of 1980 (44 U.S.C. 3501 *et seq*., Pub. L. 96–511, December 11, 1980), and has assigned OMB control number 2070–0033.

Public reporting burden for this collection of information is estimated to total 12,534 hours and to average 1,253 hours per test, including time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments or information, including suggestions for reducing this burden, to Chief, Information Policy Branch, PM–223, U.S. Environmental Protection Agency, 401 M Street SW., Washington, DC 20460; and to the Office of Information and Regulatory Affairs, Office of Management and Budget, Washington, DC 20503.

List of Subjects in 40 CFR Part 799

Testing, Environmental protection, Hazardous substances, Chemicals, Recordkeeping and reporting requirements.

Dated: August 28, 1989.

Victor J. Kimm,

Acting Assistant Administrator for Pesticides and Toxic Substances.

Therefore, 40 CFR part 799 is amended as follows:

PART 799—[AMENDED]

1. The authority citation for part 799 continues to read as follows:

Authority: 15 U.S.C. 2603, 2611, and 2625.

2. By adding new § 799.2700, to read as follows:

§ 799.2700 Methyl ethyl ketoxime.

(a) *Identification of test substance.* (1) Methyl ethyl ketoxime (MEKO, CAS No. 96–29–7) shall be tested in accordance with this section.

(2) MEKO of at least 99 percent purity shall be used as the test substance.

(b) *Persons required to submit study plans, conduct tests, and submit data.* All persons who manufacture (including import) or process or intend to manufacture or process MEKO, including persons who manufacture or process or intend to manufacture or process MEKO as a byproduct, or who import or intend to import products which contain MEKO, after the date specified in paragraph (e) of this section to the end of the reimbursement period, shall submit letters of intent to conduct testing, submit study plans, conduct tests and submit data, or submit exemption applications, as specified in this section, subpart A of this part, and parts 790 and 792 of this chapter for single-phase rulemaking. Persons who manufacture, import, or process MEKO only as an impurity are not subject to these requirements.

(c) *Health effects testing*—(1) *Pharmacokinetics testing*—(i) *Required testing.* Pharmacokinetics testing shall be conducted with MEKO in accordance with paragraph (c)(1)(ii) of this section.

(ii) [Reserved.]

(2) *Oncogenicity*—(i) *Required testing.* Oncogenicity testing shall be conducted in accordance with § 798.3300 of this chapter.

(ii) *Route of administration.* MEKO shall be administered either orally or by inhalation.

(iii) *Reporting requirements.* (A) Oncogenicity testing shall be completed and a final report submitted to EPA within 53 months of the date specified in paragraph (e) of this section.

(B) Interim progress reports shall be submitted to EPA at 6-month intervals, beginning 6 months after the date specified in paragraph (e) of this section, until submission of the final report to EPA.

(3) *Developmental toxicity*—(i) *Required testing.* Developmental toxicity testing shall be conducted in a rodent and a nonrodent mammalian species in accordance with § 798.4900 of this chapter.

(ii) *Route of administration.* MEKO shall be administered orally.

(iii) *Reporting requirements.* (A) Developmental toxicity testing shall be completed and a final report submitted to EPA within 15 months of the date specified in paragraph (e) of this section.

(B) Interim progress reports shall be submitted to EPA at 6-month intervals, beginning 6 months after the date specified in paragraph (e) of this section.

(4) *Reproductive toxicity*—(i) *Required testing.* (A) Reproductive toxicity testing shall be conducted orally in accordance with § 798.4700 of this chapter except for the provisions in paragraphs (c) (8)(iii) and (9)(i) of § 798.4700.

(B) For the purpose of this section, the following provisions also apply:

(*1*) The following organs and tissues, or representative samples thereof, shall be preserved in a suitable medium for possible future histopathological examination: Vagina, uterus, oviducts, ovaries, testes, epididymides, vas deferens, seminal vesicles, prostate, pituitary gland, and, target organ(s) of all P and F_1 animals selected for mating.

(*2*)(*i*) Full histopathology shall be conducted on the organs and tissues listed in paragraph (c)(4)(i)(B)(*1*) of this section for all high dose and control P and F_1 animals selected for mating.

(*ii*) The integrity of the various cell stages of spermatogenesis shall be determined, with particular attention directed toward achieving optimal quality in the fixation and embedding. Preparations of testicular and associated reproductive organ samples for histology should follow the recommendations of Lamb and Chapin (1985) under paragraph (d)(1) of this section, or an equivalent procedure. Histopathology of the testes shall be conducted on all P and F_1 adult males at the time of sacrifice, and histological analyses shall include evaluations of the spermatogenic cycle, i.e., the presence and integrity of the 14 cell stages. These evaluations should follow the guidance provided by Clermont and Percy (1957) under paragraph (d)(2) of this section. Information shall also be provided regarding the nature and level of lesions observed in control animals for comparative purposes.

(*iii*) Data on female cyclicity shall be obtained by conducting vaginal cytology in P and F_1 females over the last 3 weeks prior to mating; the cell staging technique of Sadleir (1978) and the vaginal smear method in Hafez (1978) under paragraphs (d)(3) and (d)(7) of this section, respectively, or equivalent methods should be used. Data shall be provided on whether the animal is cycling and the cycle length.

(*iv*) P and F_1 females shall continue to be exposed to MEKO for at least an additional 2 weeks following weaning of offspring to permit them to begin cycling once again. They shall then be sacrificed and their ovaries shall be serially sectioned with a sufficient number of sections examined to adequately detail oocyte and follicular morphology. The methods of Mattison and Thorgiersson (1979) and Pederson and Peters (1968) under paragraphs (d) (4) and (5) of this section, respectively, may provide guidance. The strategy for sectioning and evaluation is left to the discretion of the investigators, but shall be described in detail in the study plan and final report. The nature and background level of lesions in control tissue shall also be noted.

(*v*) Gross and histopathologic evaluations shall be conducted on the mammary glands in F_1 females and F_2 pups sacrificed at weaning and in adult F_1 females at the termination of the study. Any abnormalities shall be described in the final report.

(ii) *Reporting requirements.* (A) Reproductive toxicity testing shall be completed and a final report submitted to EPA within 29 months of the date specified in paragraph (e) of this section.

(B) Interim progress reports shall be submitted to EPA at 6-month intervals, beginning six months after the date specified in paragraph (e) of this section until submission of the final report to EPA.

(5) *Mutagenic effects—gene mutations*—(i) *Required testing.* The sex-linked recessive lethal assay in *Drosophila* shall be conducted with MEKO in accordance with § 798.5275 of this chapter.

(ii) *Reporting requirements.* (A) The sex-linked recessive lethal assay in *Drosophila* shall be completed and a final report submitted to EPA within 16 months of the date specified in paragraph (e) of this section.

(B) Interim progress reports shall be submitted to EPA at 6-month intervals beginning 6 months after the date specified in paragraph (e) of this section.

(6) *Mutagenic effects—chromosomal aberrations*—(i) *Required testing.* (A) An in vivo mammalian bone marrow cytogenetics test shall be conducted with MEKO in accordance with either § 798.5385 (chromosomal analysis) of this chapter, or § 798.5395 (micronucleus assay) of this chapter except for the provisions in paragraphs (d)(5) (ii), (iii), and (iv) of §§ 798.5385 and 798.5395.

(B) For the purpose of this section, the following provisions also apply if § 798.5385 of this chapter is used in conducting the test:

(*1*) *Dose levels and duration of exposure.* At least three dose levels shall be tested. The highest dose tested shall be the maximum tolerated dose or that dose producing some signs of cytotoxicity (e.g., partial inhibition of mitosis) or shall be the highest dose attainable. Under oral administration, animals shall be exposed once per day for 5 consecutive days. Under administration by inhalation, animals shall be exposed 6 hours per day for 5 consecutive days.

(*2*) *Route of administration.* Animals shall be exposed to MEKO either orally or by inhalation.

(C) For the purpose of this section, the following provisions also apply if § 798.5395 of this chapter is used in conducting the test:

(*1*) *Dose levels and duration of exposure.* At least three-dose levels shall be tested. The highest dose tested shall be the maximum tolerated dose or that dose producing some signs of cytotoxicity (e.g., a change in the ratio of polychromatic to normochromatic erythrocytes) or shall be the highest dose attainable. Under oral administration animals shall be exposed once per day for 5 consecutive days. Under administration by inhalation, animals shall be exposed 6 hours per day for 5 consecutive days.

(*2*) *Route of administration.* Animals shall be exposed to MEKO either orally or by inhalation.

(ii) *Reporting requirements.* (A) The oral in vivo mammalian cytogenetics test shall be completed and a final report submitted to EPA within 14 months of the date specified in paragraph (e) of this section. The inhalation in vivo mammalian cytogenetics test shall be completed and a final report submitted to EPA within 17 months of the date specified in paragraph (e) of this section.

(B) Interim progress reports shall be submitted to EPA at 6-month intervals, beginning 6 months after the date specified in paragraph (e) of this section.

(7) *Neurotoxicity*—(i) *Required testing*—(A) *Functional observational battery.* (*1*) A functional observational battery shall be conducted with MEKO in accordance with § 798.6050 of this chapter except for the provisions in paragraphs (d) (4)(ii), (5), and (6) of § 798.6050.

(*2*) For the purpose of this section, the following provisions also apply:

(*i*) *Route of exposure.* Animals shall be exposed either orally or by inhalation.

(*ii*) *Lower doses.* The data from the lower doses shall show either graded dose-dependent effects in at least two of all the doses tested, including the highest dose, or no neurotoxic (behavioral) effects at any dose tested.

(*iii*) *Duration and frequency of exposure.* For the oral acute testing, animals shall be exposed once. For the oral subchronic testing, animals shall be exposed once per day 5 days per week for a 90-day period. For the inhalation acute testing, animals shall be exposed for 6 hours for 1 day. For the inhalation subchronic testing, animals shall be exposed 6 hours per day 5 days per week for a 90-day period.

(B) *Motor activity.* (*1*) A motor activity test shall be conducted with MEKO in accordance with § 798.6200 of this chapter except for provisions in paragraphs (d) (4)(ii), (5), and (6) of § 798.6200.

(*2*) For the purpose of this section, the following provisions also apply:

(*i*) *Route of exposure.* Animals shall be exposed either orally or by inhalation.

(*ii*) *Lower doses.* The data from the lower doses shall show either graded dose-dependent effects in at least two of all the doses tested including the highest dose, or no neurotoxic (behavioral) effects at any dose tested.

(*iii*) *Duration and frequency of exposure.* For the acute oral testing, animals shall be exposed once. For the oral subchronic testing, animals shall be exposed once per day 5 days per week for a 90-day period. For the acute inhalation testing, animals shall be exposed for 6 hours for 1 day. For the inhalation subchronic testing, the animals shall be exposed for 6 hours per day 5 days per week for a 90-day period.

(C) *Neuropathology.* (*1*) A neuropathology test shall be conducted with MEKO in accordance with § 798.6400 of this chapter except for the provisions in paragraphs (d) (4)(ii), (5), (6), and (8)(iv)(C) of § 798.6400.

(*2*) For the purpose of this section, the following provisions also apply:

(*i*) *Route of exposure.* Animals shall be exposed either orally or by inhalation.

(*ii*) *Lower doses.* The data from the lower doses shall show either graded dose-dependent effects in at least two of all the doses tested including the highest dose, or no neurotoxic (behavioral) effects at any dose tested.

(*iii*) *Duration and frequency of exposure.* Animals shall be exposed orally once per day 5 days per week for a 90-day period; or if exposed by inhalation, for 6 hours per day 5 days per week for a 90-day period.

(*iv*) *Clearing and embedding.* After dehydration, tissue specimens shall be cleared with xylene and embedded in paraffin or paraplast except for the sural nerve which should be embedded in plastic. Multiple tissue specimens (e.g., brain, cord, ganglia) may be embedded together in one single block for sectioning. All tissue blocks shall be labeled to provide unequivocal identification. A suggested method for plastic embedding is described by Spencer et al. in paragraph (d)(6) of this section.

(ii) *Reporting requirements.* (A) The neurotoxicity tests required under this paragraph (c)(7) and administered orally shall be completed and the final results submitted to EPA within 18 months of the date specified in paragraph (e) of this section. The neurotoxicity tests required under this paragraph (c)(7) and administered by inhalation shall be completed and the final results submitted to EPA within 21 months of the date specified in paragraph (e) of this section.

(B) Interim progress reports shall be submitted to EPA at 6-month intervals beginning 6 months after the date specified in paragraph (e) of this section until submission of the final report to EPA.

BILLING CODE 5560-50-M

GENERAL SERVICES ADMINISTRATION

41 CFR Part 301–4

[FTR Amendment 1]

Federal Travel Regulation

AGENCY: Federal Supply Service, GSA.

ACTION: Final rule.

SUMMARY: This final rule amends the Federal Travel Regulation to increase the mileage reimbursement rate from 22.5 cents to 24 cents per mile for use of privately owned automobiles when authorized as advantageous to the Government. This FTR amendment reflects the results of the General Services Administration's (GSA's) report to Congress on the investigation of the cost of operating privately owned automobiles.

EFFECTIVE DATE: This final rule is effective for travel performed on or after September 17, 1989.

FOR FURTHER INFORMATION CONTACT: Raymond F. Price, Jr., Travel Management Division (FBT), Washington, DC 20406, telephone FTS 557–1253 or commercial (703) 557–1253.

SUPPLEMENTARY INFORMATION: The Travel Expense Amendments Act of 1975 (Pub. L. 94–22, May 19, 1975) authorizes the Administrator of General Services to issue regulations prescribing, within statutory limits, mileage allowance rates. GSA is required by law to periodically investigate the cost of operating privately owned vehicles (automobiles, airplanes, and motorcycles) to employees while on official travel and report the results of these investigations to the Congress. GSA reported the results of the December 1988 investigation of the cost of operating privately owned automobiles to the Congress indicating that the governing regulation would be revised to reflect an increase in the mileage allowance for use of privately owned automobiles. Necessary adjustments are reflected in this amendment to the FTR.

GSA has determined that this rule is not a major rule for the purposes of Executive Order 12291 of February 17, 1981, because it is not likely to result in an annual effect on the economy of $100 million or more, a major increase in costs to consumers or others, or significant adverse effects. GSA has based all administrative decisions underlying this rule on adequate information concerning the need for, and consequences of, this rule; has determined that the potential benefits to society from this rule outweigh the potential costs and has maximized the net benefits; and has chosen the alternative approach involving the least net cost to society.

List of Subjects in 41 CFR Part 301–4

Government employees, Travel, Travel allowances, Travel and transportation expenses.

For the reasons set out in the preamble, 41 CFR part 301–4 is amended as follows:

PART 301–4—REIMBURSEMENT FOR USE OF PRIVATELY OWNED CONVEYANCES

1. The authority citation for part 301–4 continues to read as follows:

AUTHORITY: 5 U.S.C. 5701–5709; E.O. 11609, July 22, 1971 (36 FR 13747).

2. Section 301–4.2 is amended by revising paragraphs (a)(2), (d)(1), and (d)(2) to read as follows:

§ 301–4.2 When use of a privately owned conveyance is advantageous to the Government.

(a) * * *

(2) For use of a privately owned automobile: 24 cents per mile.

* * * * *

(d) * * *

(1) *Round trip instead of taxicab to carrier terminals*. Instead of using a taxicab under § 301–2.3(c), payment on a mileage basis at the rate of 24 cents per mile and other allowable costs as set forth in § 301–4.1(c) shall be allowed for the round-trip mileage of a privately owned automobile used by an employee going from either the employee's home or place of business to a terminal or from a terminal to either the employee's home or place of business. However, the amount of reimbursement for the round trip shall not in either instance exceed the taxicab fare, including tip, allowable under § 301–2.3(c) for a one-way trip between the applicable points.

(2) *Round trip instead of taxicab between residence and office on day of travel*. Instead of using a taxicab under § 301–2.3(d) (in connection with official travel requiring at least one night's lodging), payment on a mileage basis at the rate of 24 cents per mile and other allowable costs as set forth in § 301–4.1(c) shall be allowed for round-trip mileage of a privately owned automobile used by an employee going from the employee's residence to the employee's place of business or returning from place of business to residence on a day travel is performed. However, the amount of reimbursement for the round trip shall not exceed the taxicab fare, including tip, allowable

under § 301–2.3(d) for a one-way trip between the points involved.

* * * * *

Dated: August 24, 1989.

Richard G. Austin,

Acting Administrator of General Services.

[FR Doc. 89–21478 Filed 9–12–89; 8:45 am]

BILLING CODE 6820-34-M

---

41 CFR Parts 302–6 and 302–12

[FTR Amendment 2]

Federal Travel Regulation

AGENCY: Federal Supply Service, GSA.

ACTION: Final rule.

SUMMARY: Because of a change in the law, this final rule amends the Federal Travel Regulation to authorize, under certain conditions, reimbursement of allowable residence transaction expenses for employees transferred from an official station in a foreign area to a different nonforeign area official station than the one from which the employee was transferred when assigned to the foreign post of duty.

EFFECTIVE DATE: This final rule is effective for employees whose effective date of transfer (date the employee reports for duty at the new nonforeign area official station) is on or after February 19, 1988.

FOR FURTHER INFORMATION CONTACT: Doris L. Jones, Regulations Branch (FBTR), Washington, DC 20406, telephone FTS 557–1253 or commercial (703) 557–1253.

SUPPLEMENTARY INFORMATION: The Continuing Resolution for fiscal year 1988, Public Law 100–202 (101 Stat. 1329–430, 431) December 22, 1987, authorized new relocation benefits for certain transferred employees. Section 628 of that law amended 5 U.S.C. 5724a to specifically authorize, under certain specified conditions, reimbursement of allowable residence transaction expenses for employees transferred from an official station in a foreign area to a different nonforeign area official station than the one the employee left when transferred to the foreign post of duty.

The General Services Administration has determined that this rule is not a major rule for the purposes of Executive Order 12291 of February 17, 1981, because it is not likely to result in an annual effect on the economy of $100 million or more; a major increase in costs to consumers or others; or significant adverse effects. The General Services Administration has based all administrative decisions underlying this rule on adequate information concerning the need for, and consequences of, this rule; has determined that the potential benefits to society from this rule outweigh the potential costs; has maximized the net benefits; and has chosen the alternative approach involving the least net cost to society.

List of Subjects in 41 CFR Parts 302–6 and 302–12

Government employees, Transfers, Relocation allowances and entitlements.

For the reasons set out in the preamble, 41 CFR parts 302–6 and 302–12 are amended as follows:

PART 302–6—ALLOWANCE FOR EXPENSES INCURRED IN CONNECTION WITH RESIDENCE TRANSACTIONS

1. The authority citation for part 302–6 continues to read as follows:

Authority: 5 U.S.C. 5721–5734; 20 U.S.C. 905(a); E.O. 11609, July 22, 1971 (36 FR 13747).

2. Section 302–6.1 is amended by revising the introductory text, paragraphs (a), (b), (c), (d), and (e)(1), and by adding paragraph (g) to read as follows:

§ 302–6.1 Conditions and requirements under which allowances are payable.

To the extent allowable under this part 302–6, the Government shall reimburse an employee for expenses required to be paid by him/her in connection with the sale of one residence at his/her old official station, for purchase (including construction) of one dwelling at his/her new official station, or for the settlement of an unexpired lease involving his/her residence or a lot on which a mobile home used as his/her residence was located at the old official station provided the conditions set forth in this section are met:

(a) *Transfers covered—agreement required*. A permanent change of station is authorized or approved and, except as provided in paragraph (g) of this section, the old and new official stations are located within the 50 States, the District of Columbia, the territories and possessions of the United States, the Commonwealth of Puerto Rico, or the former Canal Zone area (i.e., areas and installations in the Republic of Panama made available to the United States under the Panama Canal Treaty of 1977 and related agreements (as described in section 3(a) of the Panama Canal Act of 1979)), and the employee has signed an agreement as required in § 302–1.5. (See exclusions in § 302–6.4.)

(b) *Location and type of residence*. The residence or dwelling is the residence as described in § 302–1.4(j), which may be a mobile home and/or the lot on which such mobile home is located or will be located. These criteria also apply to the former nonforeign area official station residence of employees who are eligible for residence transaction expenses under paragraph (g) of this section (see definition in paragraph (g)(1)(i) of this section).

(c) *Title requirements*. The title to the residence or dwelling at the old or new official station, or the interest in a cooperatively owned dwelling or in an unexpired lease, is in the name of the employee alone, or in the joint names of the employee and one or more members of his/her immediate family, or solely in the name of one or more members of his/her immediate family. For an employee to be eligible for reimbursement of the costs of selling a dwelling or terminating a lease at the old official station, the employee's interest in the property must have been acquired prior to the date the employee was first officially notified of his/her transfer to the new official station. In the case of employees covered by paragraph (g) of this section, the employee's interest must have been acquired prior to the date the employee was first officially notified of his/her transfer to the foreign area.

(d) *Occupancy requirements*. The dwelling for which reimbursement of selling expenses is claimed was, except as provided in paragraph (g) of this section, the employee's residence at the time he/she was first officially notified by competent authority of his/her transfer to the new official station.

(e) *Time limitation*—(1) *Initial period*. The settlement dates for the sale and purchase or lease termination transactions for which reimbursement is requested are not later than 2 years after the date that the employee reported for duty at the new official station. For employees eligible under paragraph (g) of this section, new official station means the official station to which the employee reports for duty when reassigned or transferred from a foreign area.

* * * * *

(g) *Transfer from a foreign area to a nonforeign area*—(1) *Definitions*. For purposes of this paragraph (g), the following definitions apply:

(i) *Former nonforeign area official station*. This term means the official station from which the employee was transferred when assigned to the post of duty in the foreign area.

(ii) *Nonforeign area*. Nonforeign area includes the United States, its territories or possessions, the Commonwealth of Puerto Rico, or the former Canal Zone area (i.e., areas and installations in the Republic of Panama made available to the United States pursuant to the Panama Canal Treaty of 1977 and related agreements (as described in section 3(a) of the Panama Canal Act of 1979)).

(iii) *Foreign area.* Foreign area refers to any area not defined as a nonforeign area.

(2) *Applicability.* The provisions of this part 302-6 are applicable, as specified in this paragraph (g), to employees who have completed an agreed upon tour of duty in a foreign area and instead of being returned to the former nonforeign area official station, are reassigned or transferred in the interest of the Government to a different nonforeign area official station than the official station from which the employee was transferred when assigned to the foreign post of duty. The distance between the former and new official station must meet the mileage criteria specified in § 302-1.7 for short distance transfers.

(3) *Authorized reimbursement.* Generally, an employee is required to serve at least one tour of duty in a foreign area and retain a residence in a nonforeign area with the expectation of returning to the former official station in the nonforeign area. However, there are instances when an employee completes a tour of duty in a foreign area and is subsequently transferred to a different official station or post of duty in a nonforeign area than the one from which he/she transferred when assigned to the foreign post of duty. When this type of transfer is authorized or approved, reimbursement is allowable for real estate expenses required to be paid by the employee in connection with:

(i) The sale of the residence (or the settlement of an unexpired lease) at the official station from which the employee was transferred when he/she was assigned to a post of duty located in a foreign area; and

(ii) The purchase of a residence at the new official station when the employee is transferred in the interest of the Government from a post of duty located in a foreign area to a nonforeign area official station (other than the official station from which he/she was transferred when assigned to the foreign post of duty).

(4) *Reimbursement limitations.* Reimbursement under this paragraph (g) is prohibited for any sale (or settlement of an unexpired lease) or purchase transaction that occurs prior to the employee's first being officially notified (generally in the form of a change of official station travel authorization) that instead of returning to the former nonforeign area official station, he/she will be reassigned or transferred to a different nonforeign area official station than the one from which he/she was transferred when assigned to the foreign post of duty.

(5) *Service agreement required.* A signed service agreement shall be required as prescribed in § 302.1.5 for any employee who is eligible for reimbursement of residence transaction expenses authorized under this paragraph (g).

PART 302-12—USE OF RELOCATION SERVICE COMPANIES

3. The authority citation for Part 302-12 continues to read as follows:

Authority: 5 U.S.C. 5721-5734; 20 U.S.C. 905(a); E.O. 11609, July 22, 1971 (36 FR 13747); E.O. 12466, February 27, 1984 (49 FR 7349); E.O. 12522, June 24, 1985 (50 FR 26337).

4. Section 302-12.4 is amended by revising paragraph (b)(3) to read as follows:

§ 302-12.4 General conditions and limitations for eligibility.

* * * * *

(b) * * *

(3) Employees assigned or transferred to or from a post of duty in a foreign area except employees eligible for reimbursement of residence transaction expenses as provided in § 302.6.1(g).

Dated: August 24, 1989.

Richard G. Austin,

Acting Administrator of General Services.

BILLING CODE 6820-24-M

DEPARTMENT OF THE INTERIOR

Bureau of Land Management

43 CFR Public Land Order 6747

[ID-943-09-4214-10; IDI-27036]

Partial Revocation of Secretarial Order Dated October 8, 1921; Idaho

AGENCY: Bureau of Land Management, Interior.

ACTION: Public Land Order.

SUMMARY: This order revokes a Secretarial order which withdrew 80 acres of National Forest System land from surface entry for use by the U.S. Forest Service for Stock Driveway No. 48 in the Sawtooth National Forest. The land is not needed for the purpose for which it was withdrawn. This action will open the land to surface entry and allow for a proposed exchange. The land will remain closed to mining and mineral leasing due to an overlapping withdrawal.

EFFECTIVE DATE: October 13, 1989.

FOR FURTHER INFORMATION CONTACT: Larry Lievsay, BLM Idaho State Office, 3380 Americana Terrace, Boise, Idaho 83706, 208-334-1735.

By virtue of the authority vested in the Secretary of the Interior by section 204 of the Federal Land Policy and Management Act of 1976, 90 Stat. 2751; 43 U.S.C. 1714, it is ordered as follows:

1. The Secretarial order dated October 8, 1921, is hereby revoked insofar as it affects the following described land:

Boise Meridian

T. 7 N., R. 14 E.,
Sec. 24, W½SE¼.

The area described contains 80 acres in Blaine County.

2. At 9:00 a.m. on October 13, 1989, the land described shall be opened to such forms of disposition as may by law be made of National Forest System land, subject to valid existing rights, the provisions of existing withdrawals, other segregations of record, and the requirements of applicable law. The land will remain closed to mining and mineral leasing.

Dated: September 1, 1989.

Frank A. Bracken,

Under Secretary of the Interior.

BILLING CODE 4310-GG-M

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

50 CFR 217 and 227

Sea Turtle Conservation; Shrimp Trawling Requirements

AGENCY: National Marine Fisheries Service, NOAA, Commerce.

ACTION: Reinstatement of regulations.

SUMMARY: NOAA published an interim final rule on August 10, 1989, as a temporary substitute for the rule that requires shrimp fishermen in the Gulf of Mexico (Gulf) and the Atlantic Ocean off the coast of the southeastern United States to use Turtle Excluder Devices (TEDs) to reduce incidental captures of endangered and threatened species of sea turtles during shrimp fishing operations. The interim final rule allowed shrimp fishermen in offshore waters to choose between continuing to use TEDs or to restrict trawling times to specific 105-minute periods. That rule expired on September 8, 1989, at 12:01

a.m. After reviewing the comments on the interim final rule and evaluating the 105-minute trawl restriction, NOAA has decided to reinstate the TEDs regulations originally promulgated on June 29, 1987 (and as amended on October 5, 1987 and September 1, 1988). NOAA has also decided to allow emergency sea turtle conservation regulations promulgated on February 23, 1989, to continue in effect.

DATE: These regulations are effective September 8, 1989.

ADDRESS: Dr. Nancy Foster, Director, Office of Protected Resources and Habitat Programs, National Marine Fisheries Service, 1335 East-West Highway, Silver Spring, MD 20910.

FOR FURTHER INFORMATION CONTACT: Charles Karnella, (301) 427-2322, or Charles A. Oravetz, (813) 893-3366.

SUPPLEMENTAL INFORMATION:

Background

NOAA issued regulations under the Endangered Species Act (ESA) on June 29, 1987 (hereafter referred to as the TED regulations, 52 FR 24244) to protect endangered and threatened sea turtles. Those regulations required shrimp fishermen in the south Atlantic Ocean and the Gulf to use TEDs in certain areas and at certain times. Due to a delay imposed by Congress, those regulations did not become effective in most areas until May 1, 1989. In the Canaveral area of Florida, however, regulations have been in effect since October 1, 1987. In the Atlantic offshore waters of south Georgia and north Florida, an emergency rule requiring the use of TEDs became effective March 9, 1989 (see 54 FR 7773 (2/23/89)). That rule continues in effect.

The Secretary of Commerce (Secretary) implemented a 60-day grace period, issuing only written warnings for most violations, when the congressional delay expired. On July 20, 1989, the Secretary announced that enforcement of the TED regulations would resume. Over the weekend of July 22-23, shrimp fishermen in several Gulf ports engaged in various forms of civil disobedience protesting the enforcement of the TED regulations. In response to the protests, the Secretary suspended enforcement of the TED regulations on July 24 for 45 days and announced his intention to consider alternatives such as limitations on trawling times.

On July 25, 1989, the National Wildlife Federation filed suit against the Secretary, claiming that his actions violated the ESA (including the ESA amendments of 1988), the National Environmental Policy Act, and the Administrative Procedure Act. On August 3, 1989, the U.S. District Court for the District of Columbia granted summary judgment for the plaintiffs. The court ordered the Secretary to "reinstitute existing TED regulations, or issue interim turtle conservation measures to become effective immediately." The Secretary issued the interim final rule in response to the court's order.

NOAA provided a 15 day comment period (comments were actually accepted until September 1, 1989) on the 105-minute trawling period option provided in the interim final rule. During the comment period, a total of 3,736 comments were received. Of those comments, 3,459 favored the use of TEDs and 151 opposed mandatory TEDs. Some comments did not specifically address the use of TEDs. Also, NOAA scientists estimated that full compliance with 105-minute trawl times would result in turtle mortalities unacceptably higher than would full compliance with the TED regulations. Based upon the comments received, as well as NOAA's evaluation of the 105-minute trawling period option, NOAA decided to abandon the approach of the interim rule.

The interim rule stated the "existing TED regulations may be reinstated or modified after September 7, 1989 * * * *" NOAA now reinstates the 1987 TED regulations, as amended.

Dated: September 8, 1989.

James Brenner,

Assistant Administrator for Fisheries.

For the reasons set out in the preamble, provisions of 50 CFR Parts 217 and 227 are reinstated as follows:

PART 217—GENERAL PROVISIONS

1. The authority citation for Part 217 continues to read as follows:

Authority: 16 U.S.C. 1521-1543 and 16 U.S.C. 742a *et seq.*

2. In § 217.12, the definition of *"tow time"* is reinstated in alphabetical order to read as follows:

§ 217.12 Definitions.

* * * * *

Tow time means the interval from trawl doors entering the water to trawl doors being removed from the water.

* * * * *

PART 227—THREATENED FISH AND WILDLIFE

1. The authority citation for Part 227 continues to read as follows:

Authority: 16 U.S.C. 1531 *et seq.*

2. Paragraph 227.72(e)(2), (3) and (6) are reinstated to read as follows:

§227.72(e) Exceptions to Prohibitions

* * * * *

(e) * * *

(2) *Gear requirements.* (i) Except as provided in paragraphs (e)(2)(ii), (e)(2)(iii) and (e)(2)(iv) of this section, a qualified turtle excluder device (TED) must be carried and used in each net during trawling by a shrimp trawler 25 feet or longer in length fishing for white, brown, pink, or seabob shrimp (or for rock shrimp in the Gulf of Mexico) in areas and during periods as follows (see Table 1 for a summary of the requirements and Maps 1 and 2 for depictions of the areas):

(A) Atlantic Ocean:

(*1*) Canaveral Area, offshore—all year, commencing October 1, 1987.

(*2*) Atlantic Area, offshore—May 1 through August 31, each year, commencing May 1, 1988.

(B) Gulf of Mexico:

(*1*) Southwest Florida Area, offshore to 15 nautical miles—all year, commencing January 1, 1988.

(*2*) Gulf Area, offshore to 15 nautical miles—March 1 through November 30, each year, commencing March 1, 1988.

(*3*) Southwest Florida Area, offshore—all year, commencing January 1, 1989.

(*4*) Gulf Area, offshore—March 1, through November 30, each year, commencing March 1, 1989.

(ii) In the Southwest Florida and Gulf Areas a shrimp trawler fishing for or possessing royal red shrimp is exempt from the TED requirement provided that 90 percent of all shrimp offloaded from, or on board, the trawler are royal red shrimp.

(iii) In the Canaveral and Atlantic Areas, a shrimp trawler fishing for or possessing rock shrimp or royal red shrimp is exempt from the TED requirement provided that 90 percent of all shrimp offloaded from, or on board, the trawler are rock shrimp or royal red shrimp.

(iv) A single test net having a headrope length of 20 feet or less is exempt from the TED requirement provided that the test net is pulled immediately in front of any other net or is not connected to another net in any way.

(3) *Tow time restrictions.* (i) Except for a shrimp trawler carrying and using a qualified TED in each net during trawling, a shrimp trawler, regardless of length, fishing for white brown, pink, or seabob shrimp (or rock shrimp in or from the Gulf or Southwest Florida Areas) must limit each tow time to 90 minutes in areas and during periods as follows (see Table 2 for a summary of the requirements and Maps 3 and 4 for depictions of the areas):

(A) Atlantic Ocean:

(*1*) Canaveral Area, inshore—all year, commencing October 1, 1988.

(*2*) Atlantic Area, inshore—May 1 through August 31, each year, commencing May 1, 1988.

(B) Gulf of Mexico:

(*1*) Southwest Florida Area, inshore—all year, commencing January 1, 1988.

(*2*) Gulf Area inshore—March 1 through November 30, each year, commencing March 19, 1988.

(ii) Except for a shrimp trawler carrying and using a qualified TED in each net during trawling, a shrimp trawler less than 25 feet in length fishing for white, brown, pink, or seabob shrimp must limit each tow time to 90 minutes in areas and during periods as follows (see Table 2 for a summary of the requirements and Maps 1 and 2 for depictions of the areas):

(A) Atlantaic Ocean:

(*1*) Canaveral Area, offshore—all year, commencing October 1, 1987.

(*2*) Atlantic Area, offshore—May 1 through August 31, each year, commencing May 1, 1988.

(B) Gulf of Mexico:

(*1*) Southwest Florida Area, offshore to 15 nautical mile—all year, commencing January 1, 1988.

(*2*) Gulf Area, offshore to 15 nautical miles—March 1 through November 30, each year, commencing March 1, 1988.

(*3*) Southwest Florida Area, offshore—all year, commencing January 1, 1988.

(*4*) Gulf Area, offshore—March 1 through November 30, each year, commencing March 1, 1989.

(iii) In the Southwest Florida and Gulf Areas a shrimp trawler fishing for or possessing royal red shrimp is exempt from the tow time restrictions provided than 90 percent of all shrimp offloaded from, or on board, the trawler are royal red shrimp.

(iv) In the Atlantic and Canaveral Areas, a shrimp trawler fishing for or possessing royal red or rock shrimp is exempt from the tow time restriction provided that 90 percent of all shrimp offloaded from, the trawler are royal red or rock shrimp.

(4) * * *

(5) * * *

(6) *Prohibitions.* It is unlawful for any person to do any of the following:

(i) Fail to use a qualified TED in each net during trawling on a vessel 25 feet or longer in length in an area where and at a time when a TED is required pursuant to this part;

(ii) Fail to restrict a tow time to 90 minutes in an area and at a time such restriction applies, unless a qualified TED is being used in each net during trawling;

(iii) Land from or possess on board a vessel white, brown, pink, or seabob shrimp in quantities exceeding 10 percent of the total shrimp landed or on board after having fished for royal red shrimp (or for rock shrimp in the Atlantic Ocean) in TED required area without using a qualified TED in each net during trawling;

(iv) Fail to follow sea turtle handling and resuscitation procedures specified in paragraph (e)(1)(i) of this section; or

(v) Fail to comply with instructions and signals issued by an authorized officer. Enforcement procedures and signals used in the Gulf of Mexico shrimp fishery are listed at 50 CFR Part 658. These procedures will be used to enforce the rules of this section in all geographic areas.

3. In § 227.72(e) the title of Table 1 is reinstated to read "Table 1.—Waters Where TEDs Are Required on Shrimp Trawlers 25 Feet or Longer in Length". Table 2 is reinstated as follows:

TABLE 2.—90-MINUTE TOW TIMES [1]

Area	Start data	Season	Vessel sizes
Atlantic Ocean:			
Canaveral Area—inshore	October 1, 1988	All Year	All.
Atlantic Area—inshore	May 1, 1988	May 1 through August 1, each year	All.
Gulf of Mexico:			
Southwest Florida Area—inshore	January 1, 1988	All year	All.
Gulf Area—inshore	March 1, 1988	March 1 through November 1, each year	All.
Atlantic Ocean:			
Canaveral Area—offshore	October 1, 1987	All year	<25 feet.
Atlantic Area—offshore	May 1, 1988	May 1 through August 31, each year	<25 feet.
Gulf of Mexico:			
Southwest Florida Area—offshore to 15 nautical miles	January 1, 1988	All year	<25 feet.
Gulf Area—offshore to 15 nautical miles	March 1, 1988	March 1 through November 30, each year	<25 feet.
Southwest Florida Area—offshore	January 1, 1989	All year	<25 feet.
Gulf Area—offshore	March 1, 1989	March 1 through November 30, each year	<25 feet.

[1] Tow time restrictions do not apply to shrimp trawlers using a qualified TED in each net during trawling.

4. Also in § 227.72(e), the title to Map 1 is reinstated to read "Offshore Atlantic Waters Where TEDs Are Required". The title to Map 2 is reinstated to read "Offshore Gulf of Mexico Waters Where TEDs Are Required".

[FR Doc. 89–21516 Filed 9–8–89; 1:09 pm]

BILLING CODE 3510-22-M

Proposed Rules

Federal Register
Vol. 54, No. 176
Wednesday, September 13, 1989

This section of the FEDERAL REGISTER contains notices to the public of the proposed issuance of rules and regulations. The purpose of these notices is to give interested persons an opportunity to participate in the rule making prior to the adoption of the final rules.

DEPARTMENT OF THE TREASURY

Internal Revenue Service

26 CFR Part 1

[PS-217-84]

RIN 1545-AH49

Golden Parachute Payments

AGENCY: Internal Revenue Service, Treasury.

ACTION: Notice of public hearing on proposed regulations.

SUMMARY: This document provides notice of a public hearing on proposed regulations relating to golden parachute payments.

DATES: The public hearing will be held on Friday, November 17, 1989. Outlines of oral comments must be delivered by Friday, October 27, 1989.

ADDRESSES: The public hearing will be held in the I.R.S. Auditorium, Seventh Floor, 7400 Corridor, Internal Revenue Building, 1111 Constitution Avenue NW., Washington, DC. The requests to speak and outlines of oral comments should be submitted to the Internal Revenue Service, P.O. Box 7604, Ben Franklin Station, Attention: CC:CORP:T:R (PS-217-84) Room 4429, Washington, DC 20044.

FOR FURTHER INFORMATION CONTACT: Angela Wilburn telephone (202) 566-3935 (not a toll-free call).

SUPPLEMENTARY INFORMATION: The subject of the public hearing is proposed regulations appearing in the **Federal Register** for Friday, May 5, 1989, (54 FR 19390).

The rules of § 601.601(a)(3) of the "Statement of Procedural Rules" (26 CFR part 601) shall apply with respect to the public hearing. Persons who have submitted written comments within the time prescribed in the notice of proposed rulemaking and who also desire to present oral comments at the hearing on the proposed regulations should submit, not later than Friday, October 27, 1989, an outline of the oral comments to be presented at the hearing and the time they wish to devote to each subject.

Each speaker (or group of speakers representing a single entity) will be limited to 10 minutes for an oral prsentation exclusive of the time consumed by the questions from the panel for the government and answers thereto.

Because of controlled access restrictions, attendees cannot be admitted beyond the lobby of the Internal Revenue Building until 9:45 a.m.

An agenda showing the scheduling of the speakers will be made after outlines are received from the speakers. Copies of the agenda will be available free of charge at the hearing.

By direction of the Commissioner of Internal Revenue.

Dale D. Goode,

Chief, Regulations Unit Assistant Chief Counsel (Corporate).

BILLING CODE 4830-01-M

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 52

[FRL-3645-5]

Approval and Promulgation of Air Quality Implementation Plans; Louisiana; Alternative Emission Reduction Plan for Vista Chemical Co., Westlake, LA

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule; Reopening of public comment period.

SUMMARY: Through this notice, EPA is reopening the comment period for a proposed rule published on June 17, 1985, at 50 FR 25093. In that notice, EPA proposed to approve a source specific SIP revision submitted by the State of Louisiana, which would allow an alternate emission reduction plan ("bubble") for a Vistal Chemical Company (formerly CONOCO) facility in Westlake, Louisiana (a community within the rural Lake Charles, Louisiana, ozone nonattainment area). Today EPA is requesting additional comment on the availability of emissions credits under the proposed trade with regard to an aspect of the trade not discussed previously.

DATE: Interested persons are invited to submit comments on this reproposed action no later than October 13, 1989.

ADDRESSES: Written comments on this proposed action should be addressed to Thomas H. Diggs of the EPA Region 6 office (address below). Copies of the State's submittals and EPA's technical review may be examined during normal business hours at the following locations:

Environmental Protection Agency,
  Region 6, Air Programs Branch, Mail
  Code 6T-AN, 1445 Ross Avenue,
  Dallas, Texas 75202-2733.

Louisiana Department of Environmental
  Quality, Office of Air Quality, 625
  North Fourth St., Baton Rouge,
  Louisiana 70804-4096.

FOR FURTHER INFORMATION CONTACT: Barbara Durso at (214) 655-7214 or FTS 255-7214.

SUPPLEMENTARY INFORMATION: At 47 FR 15076 (April 7, 1982) EPA issued a proposed policy statement entitled "Emissions Trading Policy Statement; General Principles for Creation, Banking, and Use of Emission Reduction Credits." The statement described emissions trading, outlined EPA's criteria for review of emissions trades, and provided guidelines to aid states and industry in meeting these requirements. On December 4, 1986, EPA issued a revised policy statement. The December policy stated that for pending bubbles "in other areas (i.e., in areas not classified as urban nonattainment) these bubbles must show that applicable standards, increments, and visibility requirements will not be jeopardized. Pending bubbles which meet these tests and all other applicable requirements of the 1982 policy will be processed for approval."[1]

In accordance with the then applicable Emissions Trading Policy Statement, the State of Louisiana submitted a revision to its SIP to EPA on November 22, 1983. This SIP revision authorized Vista Chemical Company's use of a bubble to bring two oil-water separators and two alcohol plant batch oxidation reactors into compliance with the applicable State regulations. EPA proposed to approve this bubble in the **Federal Register** [2] but has not taken

BEST COPY AVAILABLE

final action on the State's submittal to date. EPA received comments from one party which will be addressed when the final action is taken on the trade.

In reviewing the matter EPA has uncovered an issue that was not raised during the original comment period. We now solicit comments on this issue.

The subject of interest is ozone formation and how hydrocarbons contribute to ozone formation. The issue of concern is the contribution of halogenated versus nonhalogenated hydrocarbons to excessive ambient ozone concentrations.[3] Halogenated and nonhalogenated hydrocarbons contribute to ozone pollution in the following fashion: Nitrogen dioxide strongly absorbs ultraviolet radiation from the sun causing molecular dissociation of NO_2. The resulting atomic oxygen quickly combines with molecular oxygen in a three-body reaction, forming ozone (O_3). Some of the NO formed reacts with volatile organic compounds (VOCs) which removes the opportunity for some of the O_3 to react with NO to form NO_2 and O_2. When this opportunity is removed, the O_3 that would have reacted with NO remains in the ambient air and results in elevated O_3 concentrations. In simpler terms, VOCs take away the opportunity for ozone to self-destruct.

Now, as related to VOCs, it was thought in the past that halogenated VOCs and nonhalogenated VOCs had different reactivity rates with NO: that is, the nonhalogenated VOCs were thought to react more quickly and easily with NO than the halogenated hydrocarbons. However, EPA has never treated halogenated VOCs as a class differently from nonhalogenated VOCs. With a few receptions, EPA believes all VOCs should be regulated equally and, in emissions trades, generally considers VOCs as a single pollutant that may be traded on a pound-for-pound basis.[4]

When the State of Louisiana adopted Louisiana Air Quality Regulation 22.8 to control hydrocarbon emissions from waste gas streams, it used a different approach. LAQR 22.8(a) requires that nonhalogenated hydrocarbons be burned at 1300 °F for 0.3 seconds or greater in a direct-flame afterburner or an equally effective device, but LAQR 22.8(b) allows halogenated hydrocarbons to be simply flared without specifying flame temperature and residence time for burning. By devising two regulatory requirements, one could infer that the State considers these two types of VOCs as inherently different with regard to controlling ambient ozone concentrations.

Complicating matters, EPA approved LAQR 22.8(a) as part of Louisiana's 1979 ozone SIP for the Lake Charles area, but took no action on LAQR 22.8(b) when it was submitted by the State, apparently because it misunderstood the nature of the obligation the regulation imposed.[5] As a result, Louisiana regulates halogenated and nonhalogenated VOCs as "different" pollutants under LAQR 22.8, but EPA only recognizes the regulation of nonhalogenated VOCs under the Federally approved SIP.

The waste stream at issue includes halogenated and nonhalogenated VOCs, and Vista incinerates them both. Under the proposed bubble, Vista would receive credit for destroying the halogenated VOCs in the waste stream (regulated under LAQR 22.8(b) but not under the SIP). These credits would then be aplied to another waste stream within the facility to satisfy its requirement to destroy nonhalogenated VOCs (imposed by LAQR 22.8(a) and the SIP). There are no surplus emissions under the State's regulations, but there are under the SIP. Whereas the State regulates the two components of the single waste gas stream as two different entities, the federally approved SIP only regulates the nonhalogenated component. However, EPA policy does not recognize that the two components are necessarily different with regard to ozone control.

To summarize the problem, there is a conflict between the two concepts and there exist arguments for and against granting these credits. EPA wants to solicit comments on what the public thinks is the appropriate decision and why. The various arguments for or against the bubble are described below.

To approve the credits could be possible under this argument: The credits are available because LDEQ 22.8(b) was not Federally approved at the time of bubble submittal and therefore, there was no requirement under the SIP to incinerate the halogenated hydrocarbons in the waste stream. Thus, this incineration went beyond the requirements of the SIP. Furthermore, since NESHAP does not require control of oxyvents, these credits would be valid.

To disapprove the credits could be possible under another argument: The required control of the nonhalogenated compounds in the stream necessarily results in the control of the halogenated compounds in that same waste stream because the two kinds of compounds are inseparable. The concept of splitting the stream into halogenated and nonhalogenated hydrocarbons for the purpose of control is abstract and theoretical, but not practical or maybe even not possible. Thus there is no alternative for the company but to incinerate the halogenated hydrocarbons when it is fulfilling its duties to incinerate the nonhalogenated hydrocarbons; therefore, it is not going beyond the requirements of the SIP.

Yet another argument could be made as follows: Assumning that the State's implied difference between halogenated and nonhalogenated VOCs with regard to the NO–O_3 is legitimate, then halogenated and nonhalogenated VOCs would be considered different pollutants under this regulation. Because the emissions trading policy limits trades to like pollutants, one could trade a pound of halogenated VOCs for a pound of halogenated VOCs but not for a pound of nonhalogenated VOCs. This argument would work against this particular trade but would open the way for other trades.

Proposed Action

EPA is reopening the comment period on a proposed approval of a bubble for Vista Chemical as published at 50 FR 25093 to solicit comment on an aspect of the proposal that was not set out for comments previously.

Under 5 U.S.C. section 605(b), I certify that this SIP revision will not have a significant economic impact on a substantial number of small entities. (See 46 FR 8709.)

This action has been classified as a Table 3 action by the Regional Administrator under the procedures published in the **Federal Register** on January 19, 1989 (54 FR 2214–2225). On January 6, 1989, the Office of Management and Budget waived Table 2 and 3 SIP revisions (54 FR 2222) from the requirements of section 3 of Executive Order 12291 for a period of two years.

---

[3] Halogenated hydrocarbons are compounds composed of hydrogen, carbon, and at least one halogen atom (e.g., fluorine, chlorine, bromine, iodine). A related term is "volatile organic compounds" (VOCs). VOCs are hydrocarbons, either halogenated or not, that vaporize easily. The terms "hydrocarbon" and "VOC" are often used interchangeably.

Another term the reader should be familiar with its "photochemically reactive" which refers to how easily the VOC participates in the NO-O_3 cycle. EPA recognizes that some VOCs do not participate in the NO-O_3 cycle and terms these VOCs "negligibly photochemically reactive." To date, EPA has designated only 15 compounds as negligibly photochemically reactive. These 15 compounds are also known as "exempt VOCs."

[4] EPA has declared 15 VOCs to be negligibly photochemically reactive in a series of policy statements published in the **Federal Register**. Of these 15 compounds, 13 are halogenated. See 42 35314 (July 8, 1977), 44 FR 32042 (June 4, 1979), 45 FR 32424 (May 16, 1980), 45 FR 48941 (July 22, 1980), and 54 FR 1987 (January 18, 1989).

40 CFR Part 81

[FRL–3645–4, TN–077]

Designation of Areas for Air Quality Planning Purposes; Tennessee; Redesignation of Knox County for Total Suspended Particulates

AGENCY: Environmental Protection Agency.

ACTION: Proposed rule.

SUMMARY: On May 16, 1989, the State of Tennessee requested redesignation of that portion of Knox County within downtown Knoxville from unclassified to attainment for total suspended particulates. Today, EPA is proposing approval of the change in attainment status.

DATES: To be considered, comments must reach us on or before October 13, 1989.

ADDRESSES: Written comments should be addressed to Rosalyn Hughes of EPA Region IV's Air Programs Branch (see EPA Region IV address below). Copies of the State's submittal are availabe for review during normal business hours at the following locations:

Division of Air Pollution Control, Tennessee Department of Health and Environment, Customs House, 4th Floor, 701 Broadway, Nashville, Tennessee 37219

Knox County Air Pollution Control Department, City/County Building, 400 Main Avenue, Suite L222, Knoxville, Tennessee 37902

Environmental Protection Agency, Air Programs Branch, 345 Courtland Street NE., Atlanta, Georgia 30365.

FOR FURTHER INFORMATION CONTACT: Rosalyn Hughes, EPA Region IV Air Programs Branch, at the address listed above and phone (404) 347–2864 or FTS 257–2864.

SUPPLEMENTARY INFORMATION: On May 16, 1989, the State of Tennessee submitted Board Order 04–89, reclassifying Knox County from unclassifiable to attainment for TSP. The local agency, the Knox County Department of Air Pollution Control, submitted eight consecutive quarters of the most recent ambient air quality data to support their request for reclassification. The State of Tennessee reviewed the Knox County request and on May 10, 1989 adopted Board Order 04–89 approving the reclassification request. The State then submitted the redesignation request, in the form of a Board Order, to EPA.

Proposed Action

EPA reviewed the request along with the monitoring which revealed no violations of the TSP National Ambient Air Quality Standards and found it to meet present EPA requirements. Therefore, EPA is today proposing to approve the redesignation of Knox County from unclassified to attainment for TSP and is soliciting public comment on it. EPA will consider all comments received within thirty days of publication of this notice.

Under 5 U.S.C. section 605(b), the Administrator has certified that SIP approvals do not have a significant economic impact on a substantial number of small entities (see 46 FR 8709).

This action has been classified as a Table 3 action by the Regional Administrator under the procedures published in the **Federal Register** on January 19, 1989 (54 FR 2214–2225). On January 6, 1989, the Office of Management and Budget waived Table 2 and 3 SIP revisions (54 FR 2222) from the requirements of section 3 of Executive Order 12291 for a period of two years.

[FRL–3645–6]

Rhode Island; Final Authorization of State Hazardous Waste Management Program

AGENCY: Environmental Protection Agency.

ACTION: Notice of Tentative Determination for Final Authorization on Application of Rhode Island for Program Revision and Public Comment Period.

SUMMARY: Rhode Island has applied for final authorization of revisions to its hazardous waste program under the Resource Conservation and Recovery Act (RCRA). The United States Environmental Protection Agency (EPA) has reviewed Rhode Island's application and has made a tentative determination, subject to public review and comment, that Rhode Island's hazardous waste program revisions satisfy all of the requirements necessary to qualify for final authorization. Thus, EPA intends to approve Rhode Island's hazardous waste program revisions. Rhode Island's application for program revision is a available for public review and comment.

DATES: Comments on Rhode Island's program revision application must be received by the close of business on October 13, 1989.

ADDRESSES: Copies of Rhode Island's program revision application are available 8:30 a.m. to 4:00 p.m. Monday thru Friday at the following addresses for inspection and copying: R.I. Department of Environmental Management, Division of Air and Hazardous Materials, 291 Promenade Street, Providence, Rhode Island 02908–5767, Phone: (401) 277–2797; U.S. EPA Headquarters Library, PM–211A, 401 M Street SW., Washington, DC 20460, Phone: 202/382–5926; U.S. EPA Region I Library, JFK Federal Building, Room 1500, Boston, Massachusetts 02203, Phone: (617) 565–3300. Written comments on the application should be sent to Frank Battaglia, at the address below.

FOR FURTHER INFORMATION CONTACT: Frank Battaglia, NH & RI Waste Management Branch, U.S. EPA, HSR–CAN5, JFK Federal Building, Boston, Massachusetts 02203, Phone: (617) 573–9643.

SUPPLEMENTARY INFORMATION:

A. Background

States with final authorization under section 3006(b) of the Resource Conservation and Recovery Act ("RCRA" or "the Act"), 42 U.S.C. 6929(b), have a continuing obligation to maintain a hazardous waste program that is equivalent to, consistent with, and no less stringent than the Federal hazardous waste program. In addition, as an interim measure, the Hazardous and Solid Waste Amendments of 1984 (Pub. L. 98–616, November 8, 1984, hereinafter "HSWA") allow States to revise their programs to become substantially equivalent to RCRA requirements promulgated under HSWA authority. States exercising the latter option receive "interim authorization" for the HSWA requirements under section 3006(g) of RCRA, 42 U.S.C. 6926(g), and later apply for final authorization for the HSWA requirements.

Revisions to State hazardous waste programs are necessary when Federal or State authority or regulatory authority is modified or when certain other changes occur. Most commonly, State program revisions are necessitated by changes to EPA's regulations in 40 CFR Parts 260–266 and 124 and 270.

B. Rhode Island

Rhode Island initially received Final Authorization of its hazardous waste program on January 31, 1986 (51 FR 3780, January 30, 1986). On April 3, 1989 Rhode Island submitted a final program revision application for non-HSWA requirements promulgated through June 30, 1985. Today, Rhode Island is seeking approval of its program revision in accordance with 40 CFR 271.21(b)(4). Specific provisions which are included in the Rhode Island Program Authorization Revision made today are listed in Table I below.

The State of Rhode Island submitted an initial draft application for the revision of its authorized hazardous waste program on March 9, 1987. After review of this application Rhode Island was placed on a schedule of compliance to obtain program modifications for the redefinition of solid waste on April 8, 1987 (52 FR 11263). A final program revision application was received on April 3, 1989. Today, Rhode Island is seeking approval of its program revision in accordance with 40 CFR 271.21(b)(4).

TABLE I.—PROVISIONS COVERED BY THIS PROGRAM AUTHORIZATION REVISION

Federal requirement	State authority
1. Biennial Report, 48 FR 3977–3983, January 28, 1983.	Rule 5.05[1] Rule 5.06. Rule 7.01(E). Rule 9.10. Rule 9.14. Rule 9.22.
2. Permit Rules: Settlement Agreement, 48 FR 39622, September 1, 1983.	Rule 8.01(B) Rule 8.01(C). Rule 2.02.
3. Interim Status Standards—Applicability, 48 FR 52718–52720, November 22, 1983 and 49 FR 46095, November 21, 1984.	Rule 7.01(E)
4. Chlorinated Aliphatic Hydrocarbon Listing, 49 FR 5312–5313, February 10, 1984.	Rule 3.25. Rule 3.59.
5. National Uniform Manifest, 49 FR 10490–10510, March 20, 1984.	Rule 3.45. Rule 5.03(B). Rule 5.03(C) Rule 5.03(G).
6. Permit Rules—Settlement Agreement, 49 FR 17716–17719, April 24, 1984.	Rule 7.09(G)
7. Correction to Test Methods Manual, 49 FR 47391, December 4, 1984.	Rule 5.08. Rule 9.21.
8. Satellite Accumulation, 49 FR 49571–49572, December 20, 1984.	Rule 5.02.
9. Redefinition of Solid Waste, 50 FR 614–68, January 4, 1985.	Rule 3.05. Rule 3.15. Rule 3.25. Rule 3.34. Rule 3.36. Rule 3.69. Rule 7.01(A)(2). Rule 7.01(E). Rule 11.00.
10. Interim Status Standards for Landfills, 50 FR 16044–16048, April 23, 1985.	Rule 7.01(E).
11. RCRA Section 3006(F): Availability of Information, 40 CFR Part 2 Subpart A, 5 U.S.C. § 552	RIGL 38-2-2.[2] RIGL 38-2-3. RIGL 38-2-4. RIGL 38-2-7. RIGL 38-2-8. RIGL 38-2-9. RIGL 42-92.

[1] Rules and Regulations for hazardous waste generation, transportation, treatment, storage and disposal.

[2] Rhode Island General Law (RIGL).

EPA has reviewed Rhode Island's application, and has made a tentative determination, subject to public review and comment, that Rhode Island's hazardous waste program revisions satisfy all of the requirements necessary to qualify for final authorization. EPA recognizes Rhode Island's limitations on the award of reasonable attorney fees and other litigation costs to a party who substantially prevails in judicial review of an agency action, as specified at Section 552(a)(4)(E) of the Freedom of Information Act, 5 U.S.C. 552(a)(4)(E). The Agency interprets section 3006(f) of RCRA 42 U.S.C. 6926(f), as requiring Rhode Island to have authority equivalent to 5 U.S.C. 552(a)(4)(E), in order to provide for the availability of hazardous waste information "in substantially the same manner, and to the same degree" as EPA. Rhode Island General Law 42–92, entitled "Equal Access to Justice for Small Businesses and Individuals," provides for the award of reasonable litigation expenses when a small business or individual prevails in contesting an agency action. Parties eligible for such award are defined as: "Party" means any individual whose net worth is less than two hundred fifty thousand dollars ($250,000) at the time the adversary adjudication was initiated; and, any individual, partnership, corporation, association, or private organization doing business and located in the state, which is independently owned and operated, not dominant in its field, and which employs one hundred (100) or fewer persons at the time the adversary adjudication was initiated. R.I.G.L. 42–92–2(a)

It is the Region's opinion that Rhode Island's limitations on parties eligible for award of litigation costs does not place an undue burden on the public seeking information from state agencies. R.I.G.L. 42–92 serves the purpose of encouraging parties who are least able financially to contest unjust actions by state agencies. The law eliminates the significant disincentive of legal costs facing small business and individuals who want to challenge an agency's decision to withhold documents. Furthermore, Rhode Island asserts that R.I.G.L. 42–92 provides relief to most of the parties covered by 5 U.S.C. 552(a)(4)(E). In Rhode Island's program revision application, the Attorney General writes: "The universe of non-small businesses and non-individuals for purposes of this statute is very small." Finally, the Region believes that a certain amount of flexibility with regard to such state procedural requirements is allowable in evaluating whether Rhode Island makes hazardous waste information available to the public "in substantially the same manner" as EPA. Consequently, EPA intends to grant Rhode Island Final Authorization for the additional program modification in Table I. EPA solicits comments on this proposed decision.

The public may submit written comments on EPA's decision until October 13, 1989. Copies of Rhode Island's application for program revision are available for inspection and copying at the locations indicated in the "ADDRESSES" section of this notice.

EPA will consider all public comments on its proposed decision received during the public comment period. Issues raised by those comments may be the basis for a decision to deny authorization of the program revision to Rhode Island.

Approval of Rhode Island's program revision shall become effective when the Regional Administrator's final approval is published in the **Federal Register.** If adverse comment(s) pertaining to Rhode Island's program revision discussed in this notice is received, EPA will publish either (1) a notice of disapproval or (2) a final rulemaking approving the modification, which will include a summary of the reasons for hte final decision and a response to all major comments.

Rhode Island is not seeking authorization to operate on Indian Lands.

Compliance With Executive Order 12291

The Office of Management and Budget has exempted this rule from the requirements of section 3 of Executive Order 12291.

Certification Under the Regulatory Flexibility Act

Pursuant to the provisions of 5 U.S.C. 605(b), I hereby certify that this authorization will not have a significant economic impact on a substantial number of small entities. This authorization effectively suspends the applicability of certain Federal regulations in favor of Rhode Island's program, thereby eliminating duplicative requirements for handlers of hazardous waste in the State. It does not impose any new burdens on small entities, and therefore, does not require a regulatory flexibility analysis.

List of Subjects in 40 CFR Part 271

Administrative practice and procedures, Confidential business information, Hazardous materials transportation, Hazardous waste, Indian lands, Intergovernmental relations, Penalties, Reporting and recordkeeping requirements, Water pollution control, Water supply.

Authority: This notice is issued under the authority of secs. 2002(a), 3006 and 7004(b) of the Solid Waste Disposal Act as amended 42 U.S.C. 6912(a), 6926, and 6974(b).

Dated: August 9, 1989.

Paul G. Keough,

Acting Regional Administrator.

Notices

Federal Register
Vol. 54, No. 176
Wednesday, September 13, 1989

This section of the FEDERAL REGISTER contains documents other than rules or proposed rules that are applicable to the public. Notices of hearings and investigations, committee meetings, agency decisions and rulings, delegations of authority, filing of petitions and applications and agency statements of organization and functions are examples of documents appearing in this section.

CIVIL RIGHTS COMMISSION

Alaska Advisory Committee; Public Meeting

Notice is hereby given, pursuant to the provisions of the Rules and Regulations of the U.S. Commission on Civil Rights, that the Alaska Advisory Committee to the Commission will convene at 9 a.m. and adjourn at 12 noon on October 5, 1989, at the Federal Building, 701 C Street (Room 130), Anchorage, Alaska 99513. The purpose of the meeting is to develop a proposal for a new study on employment issues and to discuss follow-up activities to the Committee's published report on minority and womens' business enterprise programs.

Persons desiring additional information, or planning a presentation to the Committee, should contact Committee Chairperson, Daniel Alex or Philip Montez, Director of the Western Regional Division (213) 894–3437, (TDD 213/894–0508). Hearing impaired persons who will attend the meeting and require the services of a sign language interpreter, should contact the Regional Division office at least five (5) working days before the schedule date of the meeting.

The meeting will be conducted pursuant to the provisions of the rules and regulations of the Commission.

Dated at Washington, DC, September 5, 1989.

Melvin L. Jenkins,

Acting Staff Director.

BILLING CODE 6335-01-M

DEPARTMENT OF COMMERCE

Agency Form Under Review by the Office of Management and Budget (OMB)

DOC has submitted to OMB for clearance the following proposal for collection of information under the provisions of the Paperwork Reduction Act (44 U.S.C. Chapter 35).

Agency: Bureau of the Census

Title: Current Industrial Reports (Wave II Mandatory)

Form Number: Various

Agency Approval Number: 0607–0395

Type of Request: Revision of a currently approved collection

Burden: 28,217 hours

Number of Respondents: 37,696

Avg Hours Per Response: 45 minutes

Needs and Uses: The Current Industrial Reports Program (CIR) is a series of monthly, quarterly, and annual surveys which provide key measures of production, shipments, and/or inventories on a national basis for selected manufactured products. Many government agencies use the data for industrial analysis, projections, and monitoring import penetration. Private business firms and organizations use the data for trend projections, market analysis, product planning, and other economic and business-oriented analysis.

Affected Public: Businesses or other for-profit organizations

Frequency: Monthly, quarterly, and annually

Respondent's Obligation: Mandatory

OMB Desk Officer: Don Arbuckle, 395–7340

Copies of the above information collection proposal can be obtained by calling or writing DOC Clearance Officer, Edward Michals, (202) 377–3271, Department of Commerce, Room H6622, 14th and Constitution Avenue NW., Washington, DC 20230.

Written comments and recommendations for the proposed information collection should be sent to Don Arbuckle, OMB Desk Officer, Room 3208, New Executive Office Building, Washington, DC 20503.

Dated: September 8, 1989.

Edward Michals,

Departmental Clearance Officer, Office of Management and Organization.

BILLING CODE 3510-07-M

National Oceanic and Atmospheric Administration

Marine Mammals; Permit Modification Request; Southwest Fisheries Center, NMFS (P77#33)

Notice is hereby given that the Southwest Fisheries Center, National Marine Fisheries Service has requested a modification of Permit No. 680 issued on August 16, 1989 (54 FR 35221), under the authority of the Marine Mammal Protection Act of 1972 (16 U.S.C. 1361–1407) and the Regulations Governing the Taking and Importing of Marine Mammals (50 CFR part 216).

The Permit authorizes the taking of tissue samples by biopsy dart from up to 80 individuals/yr for three years of 30 stocks of marine mammals in the Eastern Tropical Pacific. The Permit Holder is requesting authorization to include authorization to collect tissue samples by biopsy dart from up to 80 individuals/yr for three years each, the Costa Rican form of the spinner dolphin (*Stenella longirostris*) and the coastal form of the spotted dolphin (*Stenella attenuata*) to the stocks already authorized.

Concurrent with the publication of this notice in the **Federal Register**, the Secretary of Commerce is forwarding copies of the modification request to the Marine Mammal Commission and the Committee of Scientific Advisors.

Written data or views, or requests for a public hearing on this modification request should be submitted to the Assistant Administrator for Fisheries, National Marine Fisheries Service, NOAA, Silver Spring Metro Center 1, 1335 East-West Highway, Room 7330, Silver Spring, Maryland 20910, within 30 days of this notice. Those individuals requesting a hearing should set forth the specific reasons why a hearing on this particular modification request would be appropriate. The holding of such hearing is at the discretion of the Assistant Administrator for Fisheries.

The modification request and associated documents are available for review in the following offices:

Office of Protected Resources, National Marine Fisheries Service, NOAA, 1335 East-West Highway, Room 7330, Silver Spring, MD 20910; Director, Southwest Region, National Marine Fisheries Service, NOAA, 300 South Ferry Street, Terminal Island, CA 90731–7451; and Administrator, Pacific Area Office, National Marine Fisheries Service, NOAA, 2570 Dole Street, Room 106, Honolulu, HI 96822–2396.

Dated: September 7, 1989.

Nancy Foster,

Director, Office of Protected Resources and Habitat Programs.

[FR Doc. 89–21456 Filed 9–12–89; 8:45 am]

BILLING CODE 3510-22-M

Marine Mammals; Permit Modifications; Theater of the Sea (P92 and P92B); Dolphin Research Center (P53B); Dolphins Plus, Inc. (P234 and P234A)

Notice is hereby given that pursuant to the provisions of § 216.33 (d) and (e) of the Regulations Governing the Taking and Importing of Marine Mammals (50 CFR Part 216), public display permit Nos. 69 and 326 issued to Theater of the Sea, Inc., Islamorada, FL, No. 514 issued to Dolphin Research Center, Marathon, FL, Nos. 292 and 577 issued to Dolphins Plus, Inc., Key Largo, FL are modified by adding the following Special Conditions on swin-with-the-dolphin programs.

The National Marine Fisheries Service (NOAA Fisheries) informed the permit holders of these Special Conditions on August 25, 1988. A public hearing was requested under § 216.33(d), but the request was subsequently withdrawn. In the interim, permit holders have continued to provide quarterly reports and other information required by the Special Conditions. Thus, the effective date of these modifications is September 30, 1988. Notice of these modifications inadvertently was not published at that time.

Since the authority to use marine mammals in swim-with-the-dolphin programs expires on December 31, 1989 (Special Condition D.1.), NOAA Fisheries intends to decide whether to continue such authority at that time. To assist us in making a decision on the future of swim-with-the-dolphin programs, NOAA Fisheries is preparing an environmental impact statement under the National Environmental Policy Act of 1969 (See 54 FR 20170, May 10, 1989).

Documents concerning the above modifications and permits are available for inspection in the Office of Protected Resources and Habitat Programs, National Marine Fisheries Service, Room 7324, 1335 East-West Highway, Silver Spring, Maryland 20910.

Dated: September 7, 1989.

Nancy Foster,

Director, Office of Protected Resources and Habitat Programs, National Marine Fisheries Service.

Section D. Special Conditions on Human/Dolphin Swim Programs

D. 1. The Permit Holder is authorized to use dolphins in an experimental human/dolphin swim program until December 31, 1989. The National Marine Fisheries Service (NMFS) may revoke this authority before December 31, 1989 if this program is found to have an adverse effect on the health or well-being of the animals, if an ongoing review of public display permit authorities, procedures and criteria results in new regulations that disallow such programs, or if the terms of the following conditions are not being met.

D. 2. The Permit Holder must identify the individual animals to be used in the program and submit: (a) A detailed description of the planned human/dolphin swim program, including (1) descriptions of the planned nature of the human/dolphin encounters and the anticipated maximum, minimum, and average frequency and duration of encounters per animal, per day, and per week, and (2) the content and planned methods for conducting the preencounter orientation and instructions for human swimmers regarding, among other things, any restrictions on physical contact with the dolphins and proper response in the event of aggressive dolphin behavior; (b) a detailed description of the facilities that will be used to house the dolphins and to conduct the human/dolphin swim program, and how the dolphins have been or will be trained to participate in the program; (c) curriculum vitae for the dolphin trainers, the attending veterinarian(s), and any other persons responsible for handling, feeding or otherwise insuring the welfare of the animals; and (d) an assessment by the attending veterinarian of the current (baseline) health and behavior patterns of each animal and a description of the monitoring program that will be used to detect and determine the cause(s) and significance of any changes in the health or behavior of the dolphins as a result of the authorized activities.

D. 3. Human/dolphin swim operations must be continuously supervised by experienced trainers. An appropriately qualified and locally available veterinarian must be on call, but not necessarily present, during each human/dolphin encounter. The animals must be provided with adequate escape access from the swimming area should they choose to terminate the human/dolphin encounter and adequate security arrangements must be provided at all times to prevent harrassment or injury to the dolphins. NMFS may inspect facilities and monitor swim operations.

D. 4. The Permit Holder must develop and implement a monitoring program to detect any changes in the health or behavior of the animals involved in the human/dolphin swim program. Animals that respond adversely to encounters with humans must be removed from the program until such time as their health is restored and/or their behavior poses no risk to humans involved in the program. The program must be suspended immediately if the dolphins show signs of program-related health problems or undesirable behavioral modifications that are a result of the human/dolphin swim program.

D. 5. The Permit Holder must advise NMFS immediately of any injuries to dolphins or humans resulting from the authorized activities, any program changes that might cause additional stress or otherwise have an adverse effect on the health or behavior of the dolphins involved in the program, and any removals or additions of animals to the program and the reasons for such removals or additions. In addition, the Permit Holder must submit quarterly reports describing the nature and extent of the program in the preceding quarter, any problems that may have developed, and steps taken to overcome such problems. Among other things, the quarterly progress report should provide: (a) Summary statistics on (1) the number of people by age and sex that participated in the program during the reporting period and (2) the number of times, by day and week, that each dolphin participated in the program; (b) descriptions of any encounters that resulted in, injury to a human or dolphin and any changes made in the program to improve the safety, educational or other aspects of the program; and (c) a brief summary and assessment of the results of the required dolphin monitoring program. Reports must be submitted to the Director, Office of Protected Resources and Habitat Programs, NMFS, Washington, DC 20235. Failure to submit adequate and timely reports may result in revocation of the Permit Holder's authority to use dolphins in an experimental human/dolphin swim program.

D. 6. By authorizing this experimental program, NMFS assumes no liability for physical or other injuries or harm to individuals participating in the experimental human/dolphin swim program. This fact must be reflected in any liability waivers or program instructions prepared by and for the Permit Holder.

BILLING CODE 3510-22-M

DEPARTMENT OF DEFENSE

Office of the Secretary of Defense

AGENCY: Under Secretary of Defense (Acquisition).

ACTION: Notice of open meeting.

SUMMARY: In accordance with section 10(a)(2) of the Federal Advisory Committee Act (Public Law 92–463), the Office of the Under Secretary of Defense for Acquisition announces a forthcoming planning meeting for a Defense Manufacturing board project on concurrent engineering.

DATE AND TIME: 25 Sep 89, 0900–1500.

ADDRESS: Institute for Defense Analysis, 1801 N. Beauregard, Room 216S, Alexandria, VA 22311.

The agenda for the meeting will include an overview of Department of Defense activity in the general area of concurrent engineering.

FOR FURTHER INFORMATION CONTACT: Ms. Sherry Fitzpatrick of the DMB Secretariat, (202) 697–0957.

Dated: September 6, 1989.

L.M. Bynum,

Alternate OSD Federal Register Liaison Officer, Department of Defense.

DEPARTMENT OF EDUCATION

Proposed Information Collection Requests

AGENCY: Department of Education.

ACTION: Notice of Proposed Information Collection Requests.

SUMMARY: The Director, Office of Information Resources Management, invites comments on the proposed information collection requests as required by the Paperwork Reduction Act of 1980.

DATES: Interested persons are invited to submit comments on or before October 13, 1989.

ADDRESSES: Written comments should be addressed to the Office of Information and Regulatory Affairs, Attention: Jim Houser, Desk Officer, Department of Education, Office of Management and Budget, 726 Jackson Place, NW., Room 3208, New Executive Office Building, Washington, DC 20503. Requests for copies of the proposed information collection requests should be addressed to Margaret B. Webster, Department of Education, 400 Maryland Avenue, SW., Room 5624, Regional Office Building 3, Washington, DC 20202.

FOR FURTHER INFORMATION CONTACT: Margaret B. Webster (202) 732–3915.

SUPPLEMENTARY INFORMATION: Section 3517 of the Paperwork Reduction Act of 1980 (44 U.S.C. Chapter 35) requires that the Office of Management and Budget (OMB) provide interested Federal agencies and the public an early opportunity to comment on information collection requests. OMB may amend or waive the requirement for public consultation to the extent that public participation in the approval process would defeat the purpose of the information collection violate State or Federal law, or substantially interfere with any agency's ability to perform its statutory obligations.

The Director, Office of Information Resources Management, publishes this notice containing proposed information collection requests prior to submission of these requests to OMB. Each proposed information collection, grouped by office, contains the following:

(1) Type of review requested, e.g., new, revision, extension, existing or reinstatement; (2) Title; (3) Frequency of collection; (4) The affected public; (5) Reporting burden; and/or (6) Recordkeeping burden; and (7) Abstract. OMB invites public comment at the address specified above. Copies of the requests are available from Margaret Webster at the address specified above.

Dated: September 7, 1989.

Carlos U. Rice,

Director, for Office of Information Resources Management.

BILLING CODE 4000-1-M

Notice of Proposed Information Collection Requests

AGENCY: Department of Education.

ACTION: Notice of Proposed Information Collection Requests.

SUMMARY: The Director, Office of Information Resources Management, invites comments on proposed information collection requests as required by the Paperwork Reduction Act of 1980.

DATES: An expedited review has been requested in accordance with the Act, since allowing for the normal review period would adversely affect the public interest. Approval by the Office of Management and Budget (OMB) has been requested by October 6, 1989.

ADDRESSES: Written comments should be addressed to the Office of Information and Regulatory Affairs, Attention: Jim Houser, Desk Officer, Department of Education, Office of Management and Budget, 726 Jackson Place NW., Room 3208, New Executive Office Building, Washington, DC 20503. Requests for copies of the proposed information collection requests should be addressed to Margaret B. Webster, Department of Education, 400 Maryland Avenue SW., Room 5624, Regional Office Building 3, Washington, DC 20202.

FOR FURTHER INFORMATION CONTACT: Margaret B. Webster (202) 732–3915. Reduction Act of 1980 (44 U.S.C. Chapter 3517) requires that the Director of OMB provide interested Federal agencies and persons an early opportunity to comment on information collection requests. OMB may amend or waive the requirement for public consultation to the extent that public participation in the approval process would defeat the purpose of the information collection, violate State or Federal law, or substantially interfere with any agency's ability to perform its statutory obligations.

The Director, Office of Information Resources Management, publishes this notice with attached proposed information collection requests prior to submission of these requests to OMB. For each proposed information collection request, grouped by office, this notice contains the following information: (1) Type of review requested, e.g., new, revision, extension, existing, or reinstatement; (2) Title; (3) Frequency of collection; (4) The affected public; (5) Reporting and/or Recordkeeping burden and (6) Abstract. Because an expedited review is requested, the information collection request is also included as an attachment to this notice.

Dated: September 7, 1989.

Carlos U. Rice,

Director for Office of Information Resources Management.

Office of Special Education and Rehabilitative Services

Type of Review: Expedited.

Title: TeleCaption 4000 Rebate Officer.

Abstract: This form will be used by consumers to receive a rebate offer for purchasing the telecaption decoder. The National Captioning Institute, (NCI) funded by the Department will use the information to verify purchase of the decoder in order to mail the rebate to the consumer.

Additional Information: An expedited review is requested for this rebate certificate to allow NCI sufficient time to print and distribute the certificates to potential customers in a timely manner. This rebate offer is scheduled to expire on December 31, 1989. Allowing for the normal review period would adversely affect timely implementation of this project.

Frequency: Annually.

Affected Public: State or Local Governments.

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket Nos. ER89-627-000, et al.]

Florida Power Corporation, et al.; Electric rate, Small Power Production, and Interlocking Directorate Filings

September 5, 1989.

Take notice that the following filings have been made with the Commission:

1. Florida Power Corporation

[Docket No. ER89-627-000]

Take notice that on August 30, 1989, Florida Power Corporation (Florida Power) tendered for filing (1) new All Requirements Electric Service Agreements between Florida Power and the City of Wauchula, The Town of Havana, the City of Bartow, and the City of Newberry, all located in Florida; and (2) a rate decrease based on a prefiling Settlement Agreement between Florida Power and all of its wholesale and transmission customers, including the City of Wauchula, Town of Havana, the City of Bartow, and the City of Newberry.

Comment date: September 18, 1989, in accordance with Standard Paragraph E at the end of this notice.

2. Connecticut Light and Power Company

[Docket No. ER89-631-000]

Take notice that on August 31, 1989, the Connecticut Light and Power Company (CL&P) tendered for filing a proposed Sales Agreement with Respect to Base Load/Pumped Storage Units, for a four-year sale of entitlements in a group of units from CL&P's generating system, for service to Boston Edison Company (Buyer).

CL&P states that the Sales Agreement provides for a sale of capacity and energy from CL&P's base Load/Pumped Storage Units (the Units) during the period November 1, 1989 to October 31, 1993. CL&P states that the rates for the proposed service are based on cost-of-service formulas. CL&P requests that the Commission permit the Sales Agreement to become effective as of November 1, 1989.

CL&P states that a copy of the Sales Agreement has been mailed or delivered to buyer and to the Massachusetts Department of Public Utilities.

Comment date: September 18, 1989, in accordance with Standard Paragraph E at the end of this notice.

3. Golden Spread Electric Cooperative, Inc. v. Southwestern Public Service Company

[Docket No. EL89-50-000]

Take notice that on August 31, 1989, Golden Spread Electric Cooperative, Inc. (Golden Spread) tendered for filing a complaint against Southwestern Public Service Company (SPS). Golden Spread submits that the wholesale rates charged by SPS are grossly excessive. Golden Spread further states that based upon a fully allocated cost of service analysis, that the rate SPS is seeking to maintain in effect will yield a return on equity of 28%. Golden Spread requests that the Commission: (1) Initiate an investigation into the justness and reasonableness of the full requirements rate of SPS, (2) establish hearing procedures on SPS' full requirements rate and require SPS to show why the full requirements rate is not unjust and unreasonable, (3) establish lower, just and reasonable rates for full requirements customers of SPS, (4) establish a refund effective date in this proceeding at the earliest date permitted by law and (5) grant such other relief as the Commission finds appropriate.

Comment date: October 5, 1989, in accordance with Standard Paragraph E at the end of this notice.

4. Connecticut Light and Power Company

[Docket No. ER89-629-000]

Take notice that on August 31, 1989, Connecticut Light and Power Company (CL&P) tendered for filing a Sales Agreement with respect to Slice-Of-Systems Units, for a five-year sale of entitlements in a group of units representative of CL&P's generating system, for service to Fitchburg Gas and Electric Light Department (Buyer).

CL&P states that the Sales Agreement provides for the sale of capacity and energy from CL&P's Slice-of-System Units (the Units) during the period November 1, 1989 to October 31, 1994. CL&P states that the rates for the proposed service are based on cost-of-service formulas. CL&P requests that the Commission permit the Sales Agreement to become effective on November 1, 1989.

CL&P states that a copy of the Sales Agreement has been mailed or delivered to Buyer and to the Massachusetts Department of Public Utilities.

Comment date: September 18, 1989, in accordance with Standard Paragraph E end of this notice.

5. Consolidated Edison Company of New York, Inc.

[Docket No. ER89-630-000

Take notice that on August 31, 1989, Consolidated Edison Company of New York, Inc. (Con Edison) tendered for filing Supplements to fourteen of its Rate Schedules:

Rate schedule no.	Supplement no.	Person receiving service
55	5	Philadelphia Electric Company (PECO)
56	6	Public Service Electric and Gas Company (Public Service)
57	6	Northeast Utilities (NU)
62	6	Orange and Rockland Utilities, Inc. (O&R)
69	5	NU
70	3	Niagara Mohawk Power Corporation (Mohawk) and Pennsylvania Power & Light Company (PP&L)
71	3	New England Power Co. (NEP)
74	6	PP&L
75	7	GPU Service Corporation (GPU)
78	8	Power Authority of the State of New York (the Power Authority)
82	4	Baltimore Gas & Electric Company (BG&E)
83	4	Atlantic City Electric Company (Atlantic)
84	4	Connecticut Municipal Electric Energy Cooperative (CMEEC)
88	3	Boston Edison (BE)
95	1	Long Island Lighting Company (LILCO)

The Supplements provide for an increase in rate from 2.4 mills to 2.5 mills per Kwh of interruptible transmission of power and energy over Con Edison's transmission facilities, thus increasing annual revenues under the Rate Schedules by a total of $21,961.10. Con Edison has requested waiver of notice requirements so that the Supplements can be made effective as of September 1, 1989.

Con Edison states that copies of this filing have been served by mail upon PECO, Public Service, NU, O&R, Mohawk, PP&L, NEP, GPU, the Power Authority, BG&E, Atlantic, CMEEC, BE and LILCO.

Comment date: September 18, 1989, in accordance with Standard Paragraph E at the end of this notice.

Standard Paragraph

E. Any person desiring to be heard or to protest said filing should file a motion to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street, NE., Washington, DC 20426, in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211 and 385.214). All such motions or protests should be filed on or before the comment date. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a motion to intervene. Copies of this filing are on file with the Commission and are available for public inspection.

Lois D. Cashell,

Secretary.

BILLING CODE 6717-01-M

[Docket No. RP89-132-008]

El Paso Natural Gas Co.; Compliance Tariff Filing

September 6, 1989.

Take notice that on August 30, 1989, El Paso Natural Gas Company ("El Paso") filed, pursuant to Part 154 of the Federal Energy Regulatory Commission's ("Commission") Regulations Under the Natural Gas Act and in compliance with the Letter Order dated August 1, 1989 at Docket Nos. RP89-132-001 and 003, certain tariff sheets to its FERC Gas Tariff, First Revised Volume No. 1.

El Paso states that on May 12, 1989, as supplemented May 26, 1989, at Docket No. RP89-132-000, *et al.*, El Paso tendered for filing with the Commission certain tariff sheets in compliance with ordering paragraphs (A)(1) and (2) of the Commission's order issued April 28, 1989 at Docket Nos. RP89-132-000, RP88-184-000, RP88-184-001 and TA88-1-1-33-000. By the Letter Order dated August 1, 1989 at Docket Nos. RP89-132-001 and 003, the Commission accepted such tariff sheets, effective May 1, 1989, subject to refund and conditions. The Commission directed El Paso to refile certain tariff sheets to (i) remove certain vague language regarding the definition of buyout and buydown costs and (ii) clarify the period interest can be charged. Accordingly, El Paso tendered tariff sheets in compliance with such directives.

El Paso requested, pursuant to Section 154.51 of the Commission's Regulations, that waiver of the notice requirements of Section 154.22 of the Commission's Regulations be granted, to the extent necessary, so as to permit the tendered tariff sheets to become effective May 1, 1989, the same date as authorized in the Commission's August 1, 1989 Letter Order.

Copies of this filing were served upon all parties of record in Docket Nos. RP89-132-000, RP88-184-000 and TA88-1-33-000 and, otherwise upon all interstate pipeline system sales customers of El Paso and interested state regulatory commissions.

Any person desiring to protest said filing should file a protest with the Federal Energy Regulatory Commission, 825 North Capitol Street, NE., Washington, DC 20426, in accordance with Sections 385.214 and 385.211 of the Commission's Rules and Regulations. All such protests should be filed on or before Sept. 13, 1989. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Persons that are already parties to this proceeding need not file a motion to intervene in this matter. Copies of this filing are on file with the Commission and are available for public inspection.

Lois D. Cashell,

Secretary.

BILLING CODE 6717-01-M

[Docket No. TM89-9-4-000]

Granite State Gas Transmission, Inc.; Tariff Filing

September 6, 1989.

Take notice that on August 30, 1989, Granite State Gas Transmission, Inc. (Granite State), 120 Royall Street, Canton, Massachusetts 02021, tendered for filing with the Commission the following revised tariff sheet in its FERC Gas Traiff, First Revised Volume No. 1, for effectiveness on July 1, 1989:

Substitute Second Revised Sheet No. 7-C

According to Granite State, the instant filing is submitted pursuant to a Letter Order issued July 7, 1989 accepting a filing made on June 14, 1989 tracking take-or-pay charges billed to Granite State by Tennessee Gas Pipeline Company (Tennessee) under Order No. 500 procedures. It is further stated that Granite State's filing was accepted subject to a condition that it be modified to reflect any changes ordered by the Commission in Tennessee's underlying filing. It is further stated that the instant filing tracks the modifications in Tennessee's filing which were accepted by the Commission on August 7, 1989 in Docket No. RP88-191-011.

According to Granite State, copies of its filing were served upon its customers, Bay State Gas Company and Northern Utilities, Inc. and the regulatory commissions of the States of Maine, Massachusetts and New Hampshire.

Any person desiring to be heard or to protest said filing should file a motion to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street, NE., Washington DC 20426, in accordance with Sections 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211, 385.214). All such motions or protests should be filed on or before September 13, 1989. Protests will be considered by the Comission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a motion to intervene. Copies of this filing are on file with the Commission and are available for public inspection.

Lois D. Cashell,

Secretary.

[FR Doc. 89-21450 Filed 9-12-89 8:45 am]

BILLING CODE 6717-01-M

[Docket No. RP89-35-005]

Midwestern Gas Transmission Co.; Rate and Tariff Filing Pursuant to Stipulation and Agreement

September 6, 1989.

Take notice that on August 30, 1989, Midwestern Gas Transmission Company (Midwestern), P.O. Box 2511, Houston, Texas 77252, tendered for filing the following Tariff Sheets to its First Revised FERC Gas Tariff Volume Nos. 1 and 2, proposed to be effective September 1, 1989:

First Revised Volume No. 1

First Revised Sheet Nos. 1 and 5
Original Sheet Nos. 32-59
First Revised Sheet Nos. 61-62, 64-66
Original Sheet Nos. 62A-62G, 64A
Original Sheet Nos. 85, 86-109, 117-119
Original Sheet Nos. 120-159

First Revised Volume No. 2

First Revised Sheet No. 60
First Revised Sheet Nos. 85-86

Midwestern states that the filing implements the terms of a Stipulation and Agreement filed by Midwestern in Docket No. RP89-35 on August 29, 1989 (the Stipulation), pursuant to which Midwestern agreed to file reduced interim rates for existing sales and certificated transportation services based upon the settlement cost of service and original and revised tariff sheets to established the terms and conditions under which Midwestern will conduct blanket open-access transportation under Order No. 500 and part 284 of the Commission's Regulations. Midwestern states that the filing includes tariff sheets for Rate Schedules FT and IT, including initial rates for such service, General Terms and Conditions for FT and IT, and Forms of Service Agreements. Midwestern states that it intends to provide open-access transportation pursuant to section 311 of the Natural Gas Policy Act and part 284, subpart B of the Commission's Regulations, effective September 16, 1989, assuming acceptance of the instant tariff filing.

Midwestern requests the Commission to waive the thirty-day notice requirement of §154.22 to the extent necessary to allow the interim rates and part 284 terms and conditions to become effective as of September 1, 1989. Midwestern also requests waiver of § 284.10 of the Commission's Regulations pending Commission approval of the Stipulation.

Any person desiring to be heard or to protest this filing should file a motion to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street NE., Washington, DC 20426, in accordance with the requirements of Rules 211 and 214 of the Commission's Rules of Practice and Procedure. All such motions or protests should be filed on or before September 13, 1989. Persons who are already parties to this proceeding need not file a motion to intervene in this matter. Copies of this filing are on file with the Commission and are available for public inspection.

Lois D. Cashell,

Secretary.

[FR Doc. 89-21452 Filed 9-12-89; 8:45 am]

BILLING CODE 6717-01-M

[Docket No. CP89-2013-000]

Natural Gas Pipeline Co. of America; Application

September 1, 1989.

Take notice that on August 28, 1989, Natural Gas Pipeline Company of America (Applicant), 701 East 22nd Street, Lombard, Illinois, 60148, filed in Docket No. CP89-2013-000 an application pursuant to Section 7(b) of the Natural Gas Act for permission and approval to abandon partially firm sales service to Associated Natural Gas Company, a division of Arkansas Western Gas Company, (Associated), all as more fully set forth in the application which is on file with the Commission and open to public inspection.

Associated, it is said, has elected to convert 1,000 Mcf per day of firm sales entitlements to firm transportation service pursuant to § 284.10 of the Commission's Regulations. Applicant seeks approval to permanently abandon that portion of its certificated sales obligation to Associated which was converted to firm transportation service.

Pursuant to 18 CFR 284.10(d)(2) the exercise of the customer's option to convert constitutes consent to the proposed abandonment. Accordingly, any person desiring to be heard or any person, other than the converting customer, desiring to make any protest with reference to said application should on or before September 22, 1989, file with the Federal Energy Regulatory Commission, Washington DC 20426, a motion to intervene or a protest in accordance with the requirements of the Commission's Rules of Practice and Procedure (18 CFR 385.214 or 385.211) and the Regulations under the Natural Gas Act (18 CFR 157.10). All protests filed with the Commission will be considered by it in determining the appropriate action to be taken but will not serve to make the protestants parties to the proceeding. Any person wishing to become a party to a proceeding or to participate as a party in any hearing therein must file a motion to intervene in accordance with the Commission's Rules.

Take further notice that, pursuant to the authority contained in and subject to the jurisdiction conferred upon the Federal Energy Regulatory Commission by Sections 7 and 15 of the Natural Gas Act and the Commission's Rules of Practice and Procedure, a hearing will be held without further notice before the Commission or its designee on this application if no motion to intervene is filed within the time required herein, if the Commission on its own review of the matter finds that permission and approval for the proposed abandonment are required by the public convenience and necessity. If a motion for leave to intervene is timely filed, or if the Commission on its own motion believes that a formal hearing is required, further notice of such hearing will be duly given.

Under the procedure herein provided for, unless otherwise advised, it will be unnecessary for Applicant to appear or be represented at the hearing.

Lois D. Cashell,

Secretary.

[FR Doc. 89-21449 Filed 9-12-89; 8:45 am]

BILLING CODE 6717-01-M

[Docket No. RP89-222-000]

Transwestern Pipeline Co.; Proposed Changes in FERC Gas Tariff

September 6, 1989.

Take notice that Transwestern Pipeline Company ("Transwestern") on August 30, 1989, tendered for filing, as part of its FERC Gas Tariff, Second Revised Volume No. 1, the following tariff sheets:

First Revised Sheet No. 25A
Original Sheet No. 25B
Original Sheet No. 25C
Original Sheet No. 25D
Original Sheet No. 25B
Original Sheet No. 25C
Original Sheet No. 25D
4th Revised Sheet No. 30
Original Sheet No. 32B
Original Sheet No. 32C
Original Sheet No. 32D

Transwestern states that these tariff sheets are filed to revise Transwestern's tariff to include scheduling and balancing penalties. The tariff sheets also revise the provisions regarding unauthorized gas flow, waiver of penalty payments and reservation of other remedies provisions in such schedules.

Transwestern, herein, respectfully requests that the Commission grant any and all waivers of its rules, regulations, and orders as may be necessary so as to permit the above-listed tariff sheets to become effective on October 1, 1989.

Any person desiring to be heard or to protest said filing should file a motion to intervene or protest with the Federal Energy Regulatory Commission, 825 N. Capitol Street, NE., Washington, DC 20426, in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure. All such motions or protests should be filed on or before September 13, 1989. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a motion to intervene. Copies of this filing are on file with the Commission and are available for public inspection.

Lois D. Cashell,

Secretary.

BILLING CODE 6717-01-M

ENVIRONMENTAL PROTECTION AGENCY

[FRL-3544-8]

Establishment of the Policy Review Board of the Gulf of Mexico Program

AGENCY: United States Environmental Protection Agency (EPA).

ACTION: Notice of Establishment and Chartering of the Policy Review Board of the Gulf of Mexico Program.

SUMMARY: EPA Regions IV and VI have established the Gulf of Mexico Program, designed to develop and implement a comprehensive strategy to manage and protect the Gulf of Mexico. A Policy Review Board has been selected to guide and review activities of the Program. In accordance with the Federal Advisory Committee Act (FACA) administered by the General Services Administration (GSA), notice of establishment of the Policy Review Board is hereby given.

DATE: Effective on September 13, 1989.

ADDRESSES: Comments should be mailed to the Gulf of Mexico Program Office, Building 1103, John C. Stennis Space Center, Stennis Space Center, MS 39529-6000.

FOR FURTHER INFORMATION CONTACT: William Whitson (Assistant Director of Operations), (601) 688-3726, FTS 494-3726.

SUPPLEMENTARY INFORMATION: As required by Section 9(a)(2) of the Federal Advisory Committee Act (Pub. L. 92-463), we are giving notice of the establishment of a Policy Review Board for the Gulf of Mexico Program. This Board, consisting of twenty (20) senior level representatives from state and Federal agencies with regulatory or resource management authorities in the Gulf of Mexico and citizens representatives, will guide and review activities of the Gulf of Mexico Program. The Board approves program goals and objectives and establishes priorities and direction for the Gulf Program. The Board is chaired by the US EPA Region IV Regional Administrator, with the US EPA Region VI Regional Administrator serving as the vice-chair.

The primary purpose of the Gulf of Mexico Program is to provide a forum for defining and addressing environmental problems that face the Gulf. It is designed to better coordination the collaboration efforts of the many different organizations that carry out programs affecting the Gulf of Mexico, resulting in a strategy developed through the consensus process that will better manage and protect the resources of the Gulf.

We have determined that this is in the public interest and will assist the Agency in performing its duties described in the Clean Water Act. This effort compliments the Agency's Near Coastal Waters Initiative. Copies of the Policy Review Board's charter will be filed with appropriate committees of Congress and the Library of Congress.

September 7, 1989.

Joseph R. Franzmathes,

Assistant Regional Administrator for Policy and Management.

[FRL-3645-9]

Science Advisory Board; Drinking Water Committee, Open Meeting

Under Public Law 92-463 notice is hereby given that a two-day meeting of the Drinking Water Committee of the Science Advisory Board will be held October 11 & 12, 1989, at the Governor's House Holiday Inn, 1615 Rhode Island Avenue, NW, Washington, DC 20036. The meeting will be held from 8:30 a.m. to 5:00 p.m. on October 11th and from 8:30 a.m. to 12:00 p.m. on October 12th.

The purpose of this meeting is to review recent developments in the thinking of the Office of Drinking Water concerning the regulation of disinfectants and disinfection by-products and to review the scientific research needed to support a proposed regulation in this area. Also the Committee will be briefed on the current and future activities of the Office of Drinking Water. The meeting will be open to the public. Any member of the public wishing to make a presentation at the meeting should forward a written statement to Dr. C. Richard Cothern, Executive Secretary, Science Advisory Board (A-101F), U.S. Environmental Protection Agency, Washington, DC 20460 or contact him on (202) 382-2552 by September 29, 1989. The Science Advisory Board expects that the public statements presented at this meeting will not be repetitive of previously submitted written statement. In general, each individual or group making an oral presentation will be limited to at total time of ten minutes.

Dated: September 5, 1989.

Donald G. Barnes,

Director, Science Advisory Board.

BILLING CODE 6560-50-M

[OPP-100068; FRL-3645-2]

Computer Sciences Corporation and CRC Systems Inc.; Transfer of Data

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: This is a notice to certain persons who have submitted information to EPA in connecton with pesticide information requirements imposed under the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Federal Food, Drug, and Cosmetic Act (FFDCA). Computer Sciences Corporation (CSC) and its subcontractor, CRC Systems, Inc. have been awarded a contract to perform work for EPA's Office of Pesticide Programs, and will be provided access to certain information submitted to EPA under FIFRA and the FFDCA. Some of this information may have been claimed to be confidential business information (CBI) by submitters. This information will be made available to CSC and CRC Systems, Inc. in accordance with requirements of 40 CFR 2.307(h)(3) and 2.308(h)(2), respectively. This transfer will enable CSC and CRC Systems, Inc. to fulfill the obligations of the contract and serves to notify affected persons.

DATE: CSC and CRC Systems, Inc. will be given access to this information no sooner than (September 18, 1989.

FOR FURTHER INFORMATION CONTACT: By mail:

Catherine S. Grimes, Program Management and Support Division (H7502C), Office of Pesticide Programs, Environmental Protection Agency, 401 M St., SW., Washington, DC 20460.

Office location and telephone number: Rm. 212, CM#2, 1921 Jefferson Davis Highway, Arlington, VA, (703) 557-4460.

SUPPLEMENTARY INFORMATION: Under Contract No. 68-01-7176, Delivery Order No. 518, CSC and CRC Systems, Inc. will provide automated document processing support functions which include operating key-to-disc terminal stations, operating numerous DATA/100 remote job entry equipment, operating of the DEC2020 and have access to data bases containing information submitted to EPA under FIFRA and FFDCA. This access is incidental to their work, which involves loading and maintenance of all systems and applications software, system performance tuning, data file backup services, diagnosis and remedy of system hardware and software failures, and implementation of EPA directed security protocols within the system environment. While CSC and CRC Systems, Inc. employees have complete access to all data within the systems environment, they are not in a position to know the actual significance to the data, nor do they use the data within its subject matter context.

The Office of Pesticide Programs has determined that access by CSC and CRC Systems, Inc. to information on all pesticide chemicals is necessary for the performance of the contract.

Some of this information may be entitled to confidential treatment. The information has been submitted to EPA under sections 3, 4, 6, and 7 of FIFRA and obtained under sections 408 and 409 of the FFDCA.

In accordance with the requirements of 40 CFR 2.307(h)(3) and 2.308(i)(2), the contract with CSC and CRC Systems, Inc. prohibits use of the information for any purpose other than purposes specified in the contract; prohibits disclosure of the information in any form to a third party without prior written approval from the Agency or affected business; and requires that each official and employee of the contractor sign an agreement to protect the information from unauthorized release and handle it in accordance with the FIFRA Information Security Manual. In addition, CSC and CRC Systems, Inc. are required to submit for EPA approval a security plan under which any CBI will be secured and protected against unauthorized release or compromise. No information will be provided to this contractor and it's subcontractor until the above requirements have been fully satisfied. Records of information provided to this contractor and subcontractor will be maintained by the Project Officer for this contract in the EPA Office of Pesticide Programs. All information supplied to CSC and CRC Systems, Inc. by EPA for use in connection with this contract will be returned to EPA when CSC and CRC Systems, Inc. have completed their work.

Dated: August 31, 1989.

Douglas D. Campt,

Director, Office of Pesticide Programs.

BILLING CODE 6560-50-M

FEDERAL MARITIME COMMISSION

[Docket No. 89-16]

Actions to Address Adverse Conditions Affecting United States Carriers That Do Not Exist for Foreign Carriers in the United States/Taiwan Trade; Availability of Finding of No Significant Impact

Upon completion of an environmental assessment, the Federal Maritime Commission's Office of Special Studies has determined that Docket No. 89-16 will not constitute a major Federal action significantly affecting the quality of the human environment within the meaning of the National Environmental Policy Act of 1969, 42 U.S.C. section 4321 et seq., and that preparation of an environmental impact statement is not required.

Docket No. 89-16 initiates an investigation under the Foreign Shipping Practices Act of 1988, 46 U.S.C. app. § 1710a, of the shipping conditions in the United States/Taiwan trade. The investigation seeks to determine whether Taiwan laws, rules, regulations, policies or practices result in the existence of conditions which adversely affect the operations of United States carriers and which do not exist for Taiwan carriers in the United States.

This investigation focuses on certain "doing business" restrictions which appear to affect adversely the intermodal operations of United States carriers in Taiwan. These include restrictions of off-dock container terminal licensing, shipping agency licensing, and trucking licensing as well as restrictions affecting chassis registration and the domestic use of containers.

This Finding of No Significant Impact ("FONSI") will become final within 10 days of publication of this notice in the **Federal Register** unless a petition for review is filed pursuant to 46 CFR 504.6 (b).

The FONSI and related environmental assessment are available for inspection on request from the Office of the Secretary, Room 11101, Federal Maritime Commission, Washigton, DC 20573-0001, telephone (202) 523-5725.

By the Commission.

Joseph C. Polking,

Secretary.

BILLING CODE 6730-01-M

FEDERAL RESERVE SYSTEM

BancTenn Corp., et al., Applications To Engage de novo in Permissible Nonbanking Activities

The Companies listed in this notice have filed an application under § 225.23(a)(1) of the Board's Regulation Y (12 CFR 225.23(a)(1)) for the Board's approval under section 4(c)(8) of the Bank Holding Company Act (12 U.S.C. 1843(c)(8)) and § 225.21(a) of Regulation Y (12 CFR 225.21(a)) to commence or to engage *de novo*, either directly or through a subsidiary, in a nonbanking activity that is listed in § 225.25 of Regulation Y as closely related to banking and permissible for bank holding companies. Unless otherwise noted, such activities will be conducted throughout the United States.

Each application is available for immediate inspection at the Federal Reserve Bank indicated. Once the application has been accepted for processing, it will also be available for inspection at the offices of the Board of Governors. Interested persons may express their views in writing on the question whether consummation of the proposal can "reasonably be expected to produce benefits to the public, such as greater convenience, increased competition, or gains in efficiency, that outweigh possible adverse effects, such as undue concentration of resources, decreased or unfair competition, conflicts of interests, or unsound banking practices." Any request for a hearing on this question must be accompanied by a statement of the reasons a written presentation would not suffice in lieu of a hearing, identifying specifically any questions of fact that are in dispute, summarizing the evidence that would be presented at a hearing, and indicating how the party commenting would be aggrieved by approval of the proposal.

Unless otherwise noted, comments regarding the applications must be received at the Reserve Bank indicated or the offices of the Board of Governors not later than September 27, 1989.

A. Federal Reserve Bank of Atlanta (Robert E. Heck, Vice President) 104 Marietta Street, NW., Atlanta, Georgia 30303:

1. *BancTenn Corp.*, Kingsport, Tennessee; to engage *de novo* through its subsidiary, BancTenn Service Corporation, Johnson City, Tennessee, in (1) servicing loans pursuant to § 225.25(b)(1); and (2) real estate and personal property appraisals pursuant to § 225.25(b)(13) of the Board's Regulation Y. These activities will be conducted in

Sullivan, Hawkins, Washington and Unicol Counties, Tennessee.

2. *Gold Coast Bancshares, Inc.*, Hypoluxo, Florida, and Gulfstream Financial Services, Inc., Fort Lauderdale, Florida; to engage *de novo* through their subsidiary, Gold Coast Financial Services, Inc., Hypoluxo, Florida, in mortgage banking and brokerage activities, including originating, brokering, and servicing of first and junior mortgages in the commercial and residential markets, purchase and sale of existing mortgages, and other activities incidental to a mortgage banking and mortgage brokerage business pursuant to § 225.25(b)(1)(iii) of the Board's Regulation Y.

B. Federal Reserve Bank of St. Louis (Randall C. Sumner, Vice President) 411 Locust Street, St. Louis, Missouri 63166:

1. *Liberty National Bancorp., Inc.*, Louisville, Kentucky; to engage *de novo* through its subsidiary, Banker's Investment Group, Inc., Louisville, Kentucky, in underwriting and dealing in government obligations and money market instruments, pursuant to § 225.25(b)(16); providing investment advice incidental to transactions involving these securities pursuant to § 225.25(b)(4); and acting as broker in these and other government and money market securities pursuant to § 225.25(b)(15) of the Board's Regulation Y.

Board of Governors of the Federal Reserve System, September 7, 1989.

Jennifer J. Johnson,

Associate Secretary of the Board.

BILLING CODE 6210-01-M

Changed in Bank Control Notices; Acquisitions of Share of Banks or Bank Holding Companies; Correction

This notice corrects a previous **Federal Register** notice (FR Doc. 89-20278) published at page 35722 of the issue for Tuesday, August 29, 1989.

Under the Federal Reserve Bank of Kansas City, the entry for Ed Berrong is amended to read as follows:

1. *Ed Borrong*, Weatherford, Oklahoma; to acquire an additional 4.32 percent of the voting shares of First National Bancshares of Weatherford, Inc., Weatherfood, Oklahoma, for a total of 20.00 percent, and thereby indirectly acquire First National Bank and Trust Company, Weatherford, Oklahoma.

Comments on this application must be received by September 27, 1989.

Board of Governors of the Federal Reserve System September 7, 1989.

Jennifer J. Johnson,

Associate Secretary of the Board.

The Royal Bank of Canada, Montreal, Quebec, Canada; Application to Conduct Private Placements of All Types of Securities as Agent

The Royal Bank of Canada, Montreal, Quebec, Canada ("Applicant"), has applied, pursuant to section 4(c)(8) of the Bank Holding Company Act (12 U.S.C. 1843(c)(8)) (the "Act") and § 225.23(a)(3) of the Board's Regulation Y (12 CFR 225.23(a)(3)), for prior approval to engage through RBC Dominion Securities Corporation ("Company") in the placement, as agent for issuers, of all types of obligations and securities, registered and nonregistered. Company is currently authorized to engage in providing various types of brokerage and investment and financial advisory services, as well as underwrite and deal in obligations that state member banks are permitted to underwrite and deal in under the Glass-Steagall Act.

The Board previously has authorized a bank holding company subsidiary to privately place third-party commercial paper as agent subject to certain limitations. *Bankers Trust New York Corporation*, 73 Federal Reserve Bulletin 138 (1987) (*"Bankers Trust"*); *Bank of Montreal*, 74 Federal Reserve Bulletin 500 (1988). Applicant has proposed to engage in the placement activity subject to the limitations contained in *Bankers Trust* and *Bank of Montreal*, with certain exceptions. In particular, Applicant's proposal differs from that approved in *Bankers Trust* and *Bank of Montreal* in the following principal respects:

- The instruments proposed to be placed include all types of obligations and securities, registered and nonregistered;
- The eligible purchasers include individuals with a net worth of over $1 million and other persons who meet the standards of the SEC's Regulation D;
- Company's foreign affiliates and, under certain circumstances, its U.S. affiliates may engage in credit enhancement activities with respect to the securities placed;
- Officers of Company's foreign affiliates would be permitted to serve on Company's board of directors; and
- The limitations imposed in *Bankers Trust* on certain activities of affiliates of the subsidiary engaging in placement activities would apply only to Company's U.S. affiliates.

The Board has not previously determined that the proposed placement activities are permissible under section 4(c)(8) of the Act. Section 4(c)(8) provides that a bank holding company may, with prior Board approval, engage directly or indirectly in any activities "which the Board after due notice and opportunity for hearing has determined [by order or regulation— to be so closely related to banking or managing or controlling banks as to be a proper incident thereto." A particular activity may be found to meet the "closely related to banking" test if it is demonstrated that banks have generally provided the proposed activity; that banks generally provide services that are operationally or functionally so similar to the proposed activity so as to equip them particularly well to provide the proposed activity; or that banks generally provide services that are so integrally related to the proposed activity as to require their provision in a specialized form. *National Courier Ass'n* v. *Board of Governors*, 516 F.2d 1229, 1237 (D.C. Cir. 1975). In addition, the Board may consider any other basis that may demonstrate that the activity has a reasonable or close relationship to banking or managing or controlling banks. Board Statement Regarding Regulation Y, 49 **Federal Register** 806 (1984). Applicant maintains that the proposed placement activities are closely related to banking because banks are currently active participants in the private placement market and because such activities are operationally and functionally equivalent to many traditional commercial banking functions.

In determining whether an activity meets the second, or proper incident to banking, test of section 4(c)(8), the Board must consider whether the performance of the activity by an affiliate of a holding company "can reasonably be expected to produce benefits to the public, such as greater convenience, increased competition, or gains in efficiency that outweigh possible adverse effects, such as undue concentration of resources, decreased or unfair competition, conflicts of interests, or unsound banking practices." Applicant contends that permitting bank holding companies to engage in the proposed activities would result in increased competition and would raise no substantial risks of unsound banking, conflicts of interest, unfair competition, or similar problems.

Applicant contends that approval of the application would not be barred by section 20 of the Glass-Steagall Act (12 U.S.C. 377), which prohibits the

affiliation of a member bank with a firm that is "engaged principally" in the "underwriting, public sale or distribution" of securities. Applicant contends that the proposed placement activities do not raise an issue under section 20, first, in that Applicant is not affiliated with a member bank, and second, in that the proposed activities do not differ in any material respect from those approved in the Board's *Bankers Trust* Order and *Securities Industry Ass'n* v. *Board of Governors*, 807 F.2d 1052 (D.C. Cir. 1986), *cert. denied*, 483 U.S. 1005 (1987).

In publishing the proposal for comment, the Board does not take any position on issues raised by the proposal under the Act. Notice of the proposal is published solely in order to seek the views of interested persons on the issues presented by the application and does not represent a determination by the Board that the proposal meets or is likely to meet the standards of the Act.

Any views or requests for a hearing should be submitted in writing and received by William W. Wiles, Secretary, Board of Governors of the Federal Reserve System, Washington, DC 20551, not later than October 13, 1989. Any request for a hearing must, as required by section 262.3(e) of the Board's Rules of Procedure (12 CFR 262.3(e)), be accompanied by a statement of why a written presentation would not suffice in lieu of a hearing, identifying specifically any questions of fact that are in dispute, summarizing the evidence that would be presented at a hearing, and indicating how the party commenting would be aggrieved by approval of the proposal.

This application may be inspected at the offices of the Board of Governors or the Federal Reserve Bank of New York.

Board of Governors of the Federal Reserve System, September 7, 1989.

William W. Wiles,

Secretary of the Board.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Alcohol, Drug Abuse, and Mental Health Administration

Advisory Committee Meetings in October

AGENCY: Alcohol, Drug Abuse, and Mental Health Administration, HHS.

ACTION: Notice of meetings.

SUMMARY: This notice sets forth the schedule and proposed agendas of the forthcoming meetings of the agency's advisory committees in the month of October 1989.

The Extramural Science Advisory Board, NIMH, will discuss the peer review process that evaluates all grant applications to the NIMH extramural research program. Attendance by the public will be limited to space available.

The initial review committees will be performing initial review of applications for Federal assistance. Therefore, portions of the meetings will be closed to the public as determined by the Administrator, ADAMHA, in accordance with 5 U.S.C. 552(b)(6) and 5 U.S.C. app. 2 10(d).

Notice of these meetings is required under the Federal Advisory Committee Act, Pub. L. 92-463.

Committee Name: Biological and Neurosciences Subcommittee of the Mental Health Small Grant Review Committee, NIMH

Date and Time: October 4-6: 9:00 a.m.

Place: The Sheraton Washington Hotel, 2660 Woodley Road at Connecticut Avenue, NW., Washington, DC 20008

Status of Meeting: Open—October 5: 9:00-10:00 a.m. Closed—Otherwise

Contact: Monica Woodfork, Room 9C-05, Parklawn Building, 5600 Fishers Lane, Rockville, MD 20857, (301) 443-4843

Purpose: The Subcommittee is charged with the initial review of applications for research in all disciplines pertaining to mental health for support of research in the areas of psychology, psychiatry, and the behavioral and biological sciences.

Committee Name: Clinical and Behavioral Sciences Subcommittee of the Mental Health Small Grant Review Committee, NIMH

Date and Time: October 4-6: 9:00 a.m.

Place: The Sheraton Washington Hotel, 2660 Woodley Road at Connecticut Avenue, NW., Washington, DC 20008

Status of Meeting: Open—October 5: 9:00-10:00 a.m. Closed—Otherwise

Contact: Kimberly Crown, Room 9C-05, Parklawn Building, 5600 Fishers Lane, Rockville, MD 20857, (301) 443-4843

Purpose: The Subcommittee is charged with the initial review of applications for research in all disciplines pertaining to alcohol, drug abuse, and mental health for support of research in the areas of psychology, psychiatry, and the behavioral and biological sciences.

Committee Name: Epidemiology and Prevention Subcommittee of the Alcohol Psychosocial Research Review Committee, NIAAA

Date and Time: October 11-13: 9:00 a.m.

Place: The Carlyle Suites, 1731 New Hampshire Avenue, N.W., Washington, DC 20009

Status of Meeting: Open—October 11: 9:00-10:00 a.m. Closed—Otherwise

Contact: Lenore Sawyer Radloff, Room 16C-26, Parklawn Building, 5600 Fishers Lane, Rockville, MD 20857, (301) 443-6106

Purpose: The Subcommittee is charged with the initial review of applications for assistance from the National Institute on Alcohol Abuse and Alcoholism for suport of research and training activities and makes recommendations to the National Advisory Council on Alcohol Abuse and Alcoholism for final review.

Committee Name: Aging Subcommittee of the Life Course and Prevention Research Review Committee, NIMH

Date and Time: October 12-13: 9:00 a.m.

Place: Sheraton Washington Hotel, 2660 Woodley Road at Connecticut Avenue, NW., Washington, DC 20008

Status of Meeting: Open—October 12: 9:00-10:00 a.m. Closed—Otherwise

Contact: Phyllis Zusman, Room 9C-26, Parklawn Building, 5600 Fishers Lane, Rockville, MD 20857, (301) 443-3857

Purpose: The Subcommittee is charged with the initial review of applications for assistance from the National Institute of Mental Health for support of research grants, individual postdoctoral research fellowships and institutional research training grants, cooperative agreements, and research and development contracts, as they relate to mental health, in the fields of child, family, and aging, with recommendations to the National Advisory Mental Health Council for final review.

Committee Name: Behavioral Neurobiology Subcommittee of the Neurosciences Research Review Committee, NIMH

Date and Time: October 12-14: 8:30 a.m.

Place: Crowne Plaza Holiday Inn, 1750 Rockville Pike, Rockville, MD 20852

Status of Meeting: Open—October 12: 8:30-9:30 a.m. Closed—Otherwise

Contact: Gerry Perlman, Room 9C-26, Parklawn Building, 5600 Fishers Lane, Rockville, MD 20857, (301) 443-3936

Purpose: The Subcommittee is charged with the initial review of applications for assistance from the National Institute of Mental Health for support of research and research training activities relating to behavioral neurobiology, with recommendations to the National Advisory Mental Health Council for final review.

Committee Name: Cellular Neurobiology and Psychopharmacology

Subcommittee of the Neurosciences Research Review Committee, NIMH

Date and Time: October 12–14; 8:30 a.m.

Place: Crowne Plaza Holiday Inn, 1750 Rockville Pike, Rockville, MD 20852

Status of Meeting: Open—October 12: 8:30–9:30 a.m. Closed—Otherwise

Contact: Barbara Campbell, Room 9C–26, Parklawn Building, 5600 Fishers Lane, Rockville, MD 20857 , (301) 443–3944

Purpose: The Subcommittee is charged with the initial review of applications for assistance from the National Institution of Mental Health for Support of research and research training activities relating to cellular neurobiology, and psychopharmacology with recommendations to the National Advisory Mental Health Council for final review.

Committee Name: Cognition, Emotion, and Personality Research Review Committee, NIMH

Date and Time: October 12–14: 9:00 a.m.

Place: Henley Park Hotel, 926 Massachusetts Avenue, NW., Washington, DC 20001

Status of Meeting: Open—October 12: 9:00–10:00 a.m. Closed—Otherwise

Contact: Shirley Maltz, Room 9C–26, Parklawn Building, 5600 Fishers Lane, Rockville, MD 20857, (301) 443–3944

Purpose: The committee is charged with the initial reivew of applications for assistance from the National Institute of Mental Health for support of research and research training activities relating to the fields of personality, cognition, emotion, and higher mental processes with recommendations to the National Advisory Mental Health Council for final review.

Committee Name: Psychobiology and Behavior Research Review Committee, NIMH

Date and Time: October 16–17: 9:00 a.m.

Place: The State Plaza Hotel, 2117 E Street, NW., Washington, DC 20037

Status of Meeting: Open—October 16: 9:00–10:00 a.m. Closed—Otherwise

Contact: Doris East, Room 9C–26, Parklawn Building, 5600 Fishers Lane, Rockville, MD 20857, (301) 443–3936

Purpose: The Committee is charged with the initial review of applications for assistance from the National Institute of Mental Health for support of research and research training activites relating to experimental and physiological psychology and comparative behavior, with recommendations to the National Advisory Mental Health Council for final review.

Committee Name: Biochemistry Research Subcommittee of the Drug Abuse Biomedical Research Review Committee, NIDA

Date and Time: October 17–18: 8:30 a.m.

Place: Bethesda Holiday Inn, Pennsylvania Room, Bethesda, MD 20814

Status of Meeting: Open—October 17: 8:30 a.m. to 9:00 a.m. Closed—Otherwise

Contact: Rita Liu, Room 10–42, Parklawn Building, 5600 Fishers Lane, Rockville, MD 20857, (301) 443–2620

Purpose: The Subcommittee is charged with the initial review of applications for assistance from the National Institute on Drug Abuse for support of research and research training activities, and makes recommendations to the National Advisory Council on Drug Abuse for final review.

Committee Name: Drug Abuse Clinical and Rehavioral Research Review Committee NIDA

Date and Time: October 17–20: 9:00 a.m.

Place: Bethesda Holiday Inn, Georgia Room, 8120 Wisconsin Avenue, Bethesda, MD 20814

Status of Meeting: Open—October 17: 9:00–9:30 a.m. Closed—Otherwise

Contact: Daniel Mintz, Room 10–42, Parklawn Building, 5600 Fishers Lane, Rockville, MD 20857, (301) 443–2620

Purpose: The Committee is charged with the initial review of applications for assistance from the National Institute on Drug Abuse for support of research and research training activities, and makes recommendations to the National Advisory Council on Drug Abuse for final review.

Committee Name: Drug Abuse Epidemiology and Prevention Research Review Committee NIDA

Date and Time: October 17–19: 8:30 a.m.

Place; Bethesda Holiday Inn, Gallery Room, 8120 Wisconsin Avenue, Bethesda, MD 20814

Status of Meeting: Open—October 17: 8:30–12:00 noon. Closed—Otherwise

Contact: Raquel Crider, Room 10–42, Parklawn Building, 5600 Fishers Lane, Rockville, MD 20857, (301) 443–2620

Purpose: The Committee is charged with the initial review of applications for assistance from the National Institute on Drug Abuse for support of research and research training activities, and makes recommendations to the National Advisory Council on Drug Abuse for final review.

Committee Name: Clinical and Treatment Subcommittee of the Alcohol Psychosocial Research Review Committee NIAAA

Date and Time: October 18–20: 8:30 a.m.

Place: Carlyle Suites, 1731 New Hampshire Avenue, NW., Washington, DC 20009

Status of Meeting: Open—October 18: 8:30–9:30 a.m. Closed—Otherwise

Contact: Thomas D. Sevy, Room 16C–26, Parklawn Building, 5600 Fishers Lane, Rockville, MD 20857 (301) 443–6106

Purpose: The Subcommittee is charged with the initial review of applications for assistance from the National Institute on Alcohol Abuse and Alcoholism for support of research and training activities and makes recommendations to the National Advisory Council on Alcohol Abuse and Alcoholism for final review.

Committee Name: Clinical Biology Subcommittee of the Psychopathology and Clinical Biology Research Review Committee, NIMH

Date and Time: October 18–20: 9:00 a.m.

Place: The Hampshire Hotel, 1310 New Hampshire Avenue, NW., Washington, DC 20036

Status of Meeting: Open—October 18: 9:00–10:00 a.m. Closed—Otherwise

Contact: Maureen Eister, Room 9C–08, Parklawn Building, 5600 Fishers Lane, Rockville, MD 20857, (301) 443–1340

Purpose: The Subcommittee is charged with the initial review of applications for assistance from the National Institute of Mental Health for support of activities in the fields of research and research training activities in the areas of clinical psychopathology and clinical biology as they relate to mental health, with recommendations to the National Advisory Mental Health Council for final review.

Committee Name: Criminal and Violent Behavior Research Review Committee, NIMH

Date and Time: October 18–19: 9:15 a.m.

Place: Carlyle Suites, 1731 New Hampshire Avenue, NW., Washington, DC 20009

Status of Meeting: Open—October 18: 9:15–10:15 a.m. Closed—Otherwise

Contact: Peg Lyons, Room 9C–18, Parklawn, Building, 5600 Fishers Lane, Rockville, MD 20857, (301) 443–3857

Purpose: The Committee is charged with the initial review of applications for assistance from the National Institute of Mental Health for support of research and research training activities relating to the mental health aspects of antisocial, criminal, and individual violent behavior, including sexual assault and victimization, and law-mental health interactions related to these areas, with recommendations to the National Advisory Mental Health Council for final review.

Committee Name: Research Scientist Development Review Committee, NIMH

Date and Time: October 18–20: 9:00 a.m.

Place: The Inn at Foggy Bottom, 824 New Hampshire Avenue, NW., Washington, DC 20037

Status of Meeting: Open—October 18: 9:00–10:00 a.m. Closed—Otherwise

Contact: Phyllis D. Artis, Room 9C–15, Parklawn Building, 5600 Fishers Lane, Rockville, MD 20857, (301) 443–6470

Purpose: The Committee is charged with the initial review of applications for assistance from the National Institute of Mental Health for support of activities to develop and execute a program of Research Scientist and Research Scientist Development Awards to appropriate institutions for the support of individuals who are engaged full-time in research and related activities relevant to mental health, with recommendations to the National Advisory Mental Health Council for final review.

Committee Name: Child and Family and Prevention Subcommittee of the Life Course and Prevention Research Review Committee, NIMH

Date and Time: October 19–21: 9:00 a.m.

Place: Crowne Plaza Holiday Inn, 1750 Rockville Pike, Rockville, MD 20852

Status of Meeting: Open—October 19: 9:00 a.m.–10:00 a.m. Closed—Otherwise

Contact: Christina De Mare, Room 9C–18, Parklawn Building, 5600 Fishers Lane, Rockville, MD 20857, (301) 443–3857

Purpose: The Subcommittee is charged with the initial review of applications for assistance from the National Institute of Mental Health for support of research and research training activities that focus on topics in the periods of the life cycle from infancy through adulthood where vulnerability to mental distress is known and assumed to be high and where research efforts can identify, prevent, reduce, or eliminate that distress or vulnerability with recommendations to the National Advisory Mental Health Council for final review.

Committee Name: Biochemistry, Physiology, and Medicine Subcommittee of the Alcohol Biomedical Research Review Committee, NIAAA

Date and Time: October 23–25: 9: a.m.

Place: Holiday Inn—Capitol, 550 C Street, SW., Washington, DC 20024

Status of Meeting: Open—October 23: 9:00–9:30 a.m. Closed—Otherwise

Contact: Ronald Suddendorf, Room 16C–26, Parklawn Building, 5600 Fishers Lane, Rockville, MD 20857, (301) 443–6106

Purpose: The Subcommittee is charged with the initial review of applications for assistance from the National Institute on Alcohol Abuse and Alcoholism for support of research and training activities and makes recommendations to the National Advisory Council on Alcohol Abuse and Alcoholism for final review.

Committee Name: Clinical Program Projects and Clinical Research Centers Subcommittee of the Treatment Development and Assessment Research Review Committee, NIMH

Date and Time: October 23–24: 9:00 a.m.

Place: Crowne Plaza Holiday Inn, 1750 Rockville Pike, Rockville, MD 20852

Status of Meeting: Open—October 23: 9:00–10:00 a.m. Closed—Otherwise

Contact: Helen Craig, Room 9C–14, Parklawn Building, 5600 Fishers Lane, Rockville, MD 20857, (301) 443–1367

Purpose: The Subcommittee is charged with the initial review of applications for assistance from the National Institute of Mental Health for support of Mental Health Clinical Research Centers, clinical program projects, and other large-scale multi-disciplinary research projects, and makes recommendations to the National Advisory Mental Health Council for final review.

Committee Name: Extramural Science Advisory Board, NIMH

Date and Time: October 23–24: 8:30 a.m.

Place: National Institutes of Health, Building, 31, Conference Room 6, Bethesda, MD 20892

Status of Meeting: Open

Contact: Tony Pollitt, Room 17C–26, Parklawn Building, 5600 Fishers Lane, Rockville, MD 20857, (301) 443–3175

Purpose: The Committee advises the Secretary of Health and Human Services, the Administrator, Alcohol, Drug Abuse, and Mental Health Administration, and the Director, National Institute of Mental Health, on the direction, scope, balance, and emphasis of the Institute's extramural science programs.

Committee Name: Small Business Research Review Committee, NIMH

Date and Time: October 23–24: 9:00 a.m.

Place: Chevy Chase Holiday Inn, 5520 Wisconsin Avenue, Chevy Chase, MD 20815

Status of Meeting: Open—October 23: 9:00–11:00 a.m. Closed—Otherwise

Contact: Gloria Levin, Room 9C–14, Parklawn Building, 5600 Fishers Lane, Rockville, MD 20857, (301) 443–1367

Purpose: The Committee is charged with the initial review of applications requesting support from the National Institute of Mental Health for small businesses involved in mental health research. Final review and recommendations are made from the National Advisory Mental Health Council.

Committee Name: Mental Health Behavioral Sciences Research Review Committee, NIMH

Date and Time: October 26–28: 9:00 a.m.

Place: The River Inn, 924 25th Street NW., Washington, DC 20037

Status of Meeting: Open—October 26: 9:00–10:00 a.m. Closed—Otherwise

Contact: Sheila O'Malley, Room 9C–26, Parklawn Building, 5600 Fishers Lane, Rockville, MD 20857, (301) 443–3936

Purpose: The Committee is charged with the initial review of applications for assistance from the National Institute of Mental Health for support of research and/or research training activities relating to behavioral science areas relevant to mental health and makes recommendations to the National Advisory Mental Health Council for final review.

Committee Name:

- Psychopharmacological, Biological, and Physical Treatments Subcommittee of the Treatment Development and Assessment Research Review Committee, NIMH

Date and Time: October 26–27: 9:00 a.m.

Place: Crowne Plaza Holiday Inn, 1750 Rockville Pike, Rockville, MD 20852

Status of Meeting: Open—October 26: 9:00–10:00 a.m. Closed—Otherwise

Contact: Helen Craig, Room 9C–14, Parklawn Building, 5600 Fishers Lane, Rockville, MD 20857, (301) 443–1367

Purpose: The Subcommittee is charged with the initial review of applications for assistance from the National Institute of Mental Health for support of research and/or research training activities in the fields of treatment development and assessment and makes recommendations to the National Advisory Mental Health Council for final review.

Committee Name: Psychopathology and Clinical Biology Research Review Committee NIMH

Date and Time: October 31–November 1: 9:00 a.m.

Place: Days Inn Congressional Park, 1775 Rockville Pike, Rockville, MD 20852

Status of Meeting: Open—October 31: 9:00–10:00 a.m. Closed—Otherwise

Contact: Barbara Silver, Room 9C–14, Parklawn Building, 5600 Fishers Lane, Rockville, MD 20857, (301) 443–1330

Purpose: The Committee is charged with the initial review of applications for assistance from the National Institute of Mental Health for support of activities in the fields of research and research training activities in the areas of clinical psychopathology and clinical biology as they relate to mental health, with recommendations to the National Advisory Mental Health Council for final review.

Substantive information, summaries of the meetings, and rosters of committee members may be obtained as follows: Ms. Diana Widner, NIAAA Committee Management Officer, Room 16C–20, 443–4375; Ms. Camilla Holland, NIDA Committee Management Officer Room 10–42, (301) 443–2620; Ms. Joanna Kieffer, NIMH Committee Management Officer, Room 9–105, (301) 443–4333. The mailing address for the above parties is: Parklawn Building, 5600 Fishers Lane, Rockville, Maryland 20857.

Dated: September 7, 1989.

Peggy W. Cockrill,

Committee Management Officer Alcohol, Drug Abuve, and Mental Health Administration.

BILLING CODE 4160-20-M

Food and Drug Administration

[Docket No. 89M–0352]

CooperVision, Inc.; Premarket Approval of CooperVision SURGEON PLUS+® Nylon Monofilament Suture U.S.P.

AGENCY: Food and Drug Administration.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA) is announcing its approval of the application by CooperVision, Inc., Irvine, CA, for premarket approval, under the Medical Device Amendments of 1976, of the CooperVision SURGEON PLUS+® Nylon Monofilament Suture U.S.P. After reviewing the recommendation of the General and Plastic Surgery Devices Panel, FDA's Center for Devices and Radiological Health (CDRH) notified the applicant, by letter of August 2, 1989, of the approval of the application.

DATES: Petitions for administration review by October 13, 1989.

ADDRESSES: Written requests for copies of the summary of safety and effectiveness data and petitions for administrative review to the Dockets Management Branch (HFA–305), Food and Drug Administration, Rm. 4–62, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: Kenneth A. Palmer, Center For Devices and Radiological Health (HFZ–410), Food and Drug Administration, 1390 Piccard Dr., Rockville, MD 20850, 301–427–1090.

SUPPLEMENTARY INFORMATION: On September 19, 1988, CooperVision, Inc., Irvine, CA 92713, submitted to CDRH an application for premarket approval of CooperVision SURGEON PLUS+® Nylon Monofilament Suture U.S.P. The device is indicated for use in soft tissue approximation in ophthalmic surgery, but not in general surgery, cardiovascular surgery, microsurgery, and neural tissue. The device is available in sterile packets in U.S.P. sizes 9–0 through 11–0.

In the **Federal Register** of September 30, 1977, FDA published a final regulation listing the color additive logwood extract (21 CFR 73.1410) for use in coloring nylon surgical sutures. The use of logwood extract in coloring CooperVision SURGEON PLUS+® Nylon Monofilament Suture U.S.P. conforms to the color additive listing requirements specified in the regulation.

On March 10, 1989, the General and Plastic Surgery Devices Panel, an FDA advisory committee, reviewed and recommended approval of the application. On August 2, 1989, CDRH approved the application by a letter to the applicant fom the Acting Director of the Office of Device Evaluation, CDRH.

A summary of the safety and effectiveness data on which CDRH based its approval is on file in the Dockets Management Branch (address above) and is available from that office upon written request. Requests should be identified with the name of the device and the docket number found in brackets in the heading of this document.

A copy of all approved labeling is available for public inspection at CDRH—contact Kenneth A. Palmer (HFZ–410), address above.

Opportunity for Administrative Review

Section 515(d)(3) of the Federal Food, Drug, and Cosmetic Act (the act) (21 U.S.C. 360e(d)(3)) authorizes any interested person to petition, under section 515(g) of the act (21 U.S.C. 360e(g)), for administrative review of CDRH's decision to approve this application. A petitioner may request either a formal hearing under Part 12 (21 CFR Part 12) of FDA's administrative practices and procedures regulations or a review of the application and CDRH's action by an independent advisory committee of experts. A petition is to be in the form of a petition for reconsideration under § 10.33(b) (21 CFR 10.33(b)). A petitioner shall identify the form of review requested (hearing or independent advisory committee) and shall submit with the petition supporting data and information showing that there is a genuine and substantial issue of material fact for resolution through administrative review. After reviewing the petition, FDA will decide whether to grant or deny the petition and will publish a notice of its decision in the **Federal Register**. If FDA grants the petition, the notice will state the issue to be reviewed, the form of review to be used, the persons who may participate in the review, the time and place where the review will occur, and other details.

Petitioners may, at any time on or before October 13, 1989, file with the Dockets Management Branch (address above) two copies of each petition and supporting data and information, identified with the name of the device and the docket number found in brackets in the heading of this document. Received petitions may be seen in the office above between 9 a.m. and 4 p.m., Monday through Friday.

This notice is issued under the Federal Food, Drug, and Cosmetic Act (secs. 515(d), 520(h), 90 Stat. 554–555, 571 (21 U.S.C. 360e(d), 360j(h))) and under authority delegated to the Commissioner of Food and Drugs (21 CFR 5.10) and redelegated to the Director, Center for Devices and Radiological Health (21 CFR 5.53).

Dated: September 6, 1989.

Walter E. Gundaker,

Acting Deputy Director, Center for Devices and Radiological Health.

BILLING CODE 4160-01-M

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

Office of Administration

[Docket No. N–89–2051]

Submission of Proposed Information Collection to OMB

AGENCY: Office of Administration, HUD.

ACTION: Notice.

SUMMARY: The proposed information collection requirement described below has been submitted to the Office of Management and Budget (OMB) for review, as required by the Paperwork Reduction Act. The Department is soliciting public comments on the subject proposal.

ADDRESS: Interested persons are invited to submit comments regarding this proposal. Comments should refer to the proposal by name and should be sent to: John Allison, OMB Desk Officer, Office of Management and Budget, New Executive Office Building, Washington, DC 20503.

FOR FURTHER INFORMATION CONTACT: David S. Cristy, Reports Management Officer, Department of Housing and Urban Development, 451 7th Street, Southwest, Washington, DC 20410, telephone (202) 755–6050. This is not a toll-free number. Copies of the proposed forms and other available documents submitted to OMB may be obtained from Mr. Cristy.

SUPPLEMENTARY INFORMATION: The Department has submitted the proposal for the collection of information, as described below, to OMB for review, as required by the Paperwork Reduction Act (44 U.S.C. Chapter 35).

The Notice lists the following information: (1) The title of the information collection proposal; (2) the office of the agency to collect the information; (3) the description of the need for the information and its proposed use; (4) the agency form number, if applicable; (5) what members of the public will be affected by the proposal; (6) how frequently information submissions will be required, (7) an estimate of the total numbers of hours needed to prepare the information submission including number of respondents, frequency of response, and hours of response; (8) whether the proposal is new or an extension, reinstatement, or revision of an information collection requirement; and (9) the names and telephone numbers of an agency official familiar with the proposal and of the OMB Desk Officer for the Department.

Authority: Section 3507 of the Paperwork Reduction Act, 44 U.S.C. 3507; Section 7(d) of the Department of Housing and Urban Development Act, 42 U.S.C. 3535(d).

Dated: September 7, 1989.

John T. Murphy,

Director, Information Policy and Management Division.

Proposal: Housing Counseling Program and Recordkeeping Requirements (Non-Funded)
Office: Housing
Description of the need for the information and its proposed use: Section 106 of the Housing and Urban Development (HUD) Act authorizes HUD to approve organizations with knowledge and experience in counseling to provide housing counseling services to HUD clientele. Section 106 also authorizes HUD to make grants to these organizations for the delivery of services. The information will be used to meet the requirements of the program, to obtain data to prepare and support the program, and to obtain recommendations from grantees for improving the program
Form Number: HUD–9900, 9902, 9903, and 9909

[CA-010-09-3110-CAPL; Casefile # CACA 25767]

Realty Action Exchange of Public and Private Lands in Kern and San Luis Obispo Counties, CA

AGENCY: Bureau of Land Management, Interior.

ACTION: Notice of Realty Action—CACA 25767.

SUMMARY: The following described lands have been determined to be suitable for disposal by exchange under section 206 of the Federal Land Policy and Management Act of October 21, 1976 (43 USC 1716):

Mt. Diablo Meridian, California
T.31S., R.32E.
Sec. 32 E½NE¼, NE¼SE¼ (surface and mineral estate)
Sec. 34 SW¼NE¼, SE¼NW¼, SW¼SW¼, SE¼SE¼ (minerals only)
T.32S., R.32E.
Sec. 2 W½of lot 1 of NW¼, W½ of Lot 2 of NW¼, SW¼SE¼ (minerals only)
Sec. 4 W½ of Lot 2 of NW¼ (minerals only)
Sec. 8 E½Nw¼, S½SW¼ (minerals only)
Sec. 10 N½, E½SW¼, SE¼ (minerals only)
Containing 120 acres of public surface plus mineral estate, and 1,040.95 acres of public mineral estate only.

In exchange for these lands, the United States will acquire an equal value of lands within the Carrizo Plain Natural Area from The Nature Conservancy, a private, nonprofit organization.

SUPPLEMENTARY INFORMATION: The purpose of this exchange is to acquire a portion of the non-federal lands within the Carrizo Plain Natural Area. This Natural Area would promote the conservation of threatened and endangered species and preserve a representative sample of the historic southern San Joaquin Valley flora and fauna.

The ultimate goal of the Bureau of Land Management is to acquire approximately 155,000 acres within the Natural Area. A secondary purpose of the exchange is to consolidate the Bureau lands and reduce the number of scattered, isolated Bureau parcels that are difficult for the Bureau to manage and that may develop use conflicts with adjacent or surface owners. The public interest will be well served by completing the exchange.

Publication of this notice in the **Federal Register** segregates the public lands from the operation of the public land laws and mining laws. The segregative effect will end upon issuance of patent or two years from the date of publication in the **Federal Register**, whichever occurs first.

After the exchange is completed, The Nature Conservancy plans to offer the former BLM land for sale to the surrounding landowner.

The exchange will be on an equal value basis. Acreage of the private land will be adjusted to approximate equal values. Full equalization of value will be achieved by future exchanges under a pooling agreement with The Nature Conservancy.

Land transferred from the United States will retain the following reservations

1. A right-of-way for ditches or canals constructed by the authority of the United States under the Act of August 30, 1890 (43 USC 945). This reservation will apply only to the aforementioned public lands in sec. 32, T.31S., R.32E., MDM.

FOR FURTHER INFORMATION CONTACT: Bureau of Land Management, Caliente Resource Area Office, 4301 Rosedale Highway, Bakersfield, California 93308; (805) 861-4236.

DATE: On or before October 30, 1989, interested parties may submit comments to the Area Manager, Caliente Resource Area Office, Bureau of Land Management, at the above address. Objections will be reviewed by the State Director who may sustain, vacate or modify this realty action. In the absence of any objections, this realty action will become the final determination of the Department of Interior.

Dated: September 1, 1989.

Glenn A. Carpenter,

Caliente Resource Area Manager.

Fish and Wildlife Service

Information Collection Submitted to the Office of Management and Budget for Review Under the Paperwork Reduction Act

The proposal for the collection of information listed below has been submitted to the Office of Management and Budget (OMB) for approval under the provisions of the Paperwork Reduction Act (44 U.S.C. Chapter 35). Copies of the proposed information collection requirement and related forms and explanatory material may be obtained by contacting the Service's Information Collection Clearance Officer at the phone number listed below. Comments and suggestions on the requirement should be made directly to the Service and OMB, Paperwork Reduction Project (1018-0067), Washington, DC 20503, telephone 202-395-7340.

Title: Migratory Bird Hunting: Nontoxic Shot Approval Procedures

OMB Approval No: 1018-0067

Abstract: Regulations contained in 50 CFR 20.134(a) require that the Service Director determine the nontoxicity of candidate shot material that could be used for migratory bird hunting. Applicants proposing candidate shot, as alternatives to existing types, must gain a determination of status of nontoxicity through confirmatory tests. The process of application and testing is designed to eliminate obviously unacceptable candidate shot types, unnecessary testing and/or reviews. Failure to require this procedure would result in no further research and development of alternative nontoxic shot types, as there would be no mechanism for obtaining approval for its use.

BILLING CODE 4310-55-M

Minerals Management Service

Development Operations Coordination Document; Samedan Oil Corp.

AGENCY: Minerals Management Service, Interior.

ACTION: Notice of the Receipt of a Proposed Development Operations Coordination Document (DOCD).

SUMMARY: Notice is hereby given that Samedan Oil Corporation has submitted a DOCD describing the activities it proposes to conduct on Lease OCS–G 5670, Block 33, West Delta Area, offshore Louisiana. Proposed plans for the above area provide for the development and production of hydrocarbons with support activities to be conducted from an existing onshore base located at Venice, Louisiana.

DATE: The subject DOCD was deemed submitted on September 5, 1989. Comments must be received September 28, 1989, or 15 days after the Coastal Management Section receives a copy of the plan from the Minerals Management Service.

ADDRESSES: A copy of the subject DOCD is available for public review at the Public Information Office, Gulf of Mexico OCS Region, Minerals Management Service, 1201 Elmwood Park Boulevard, Room 114, New Orleans, Louisiana (Office Hours: 8 a.m. to 4:30 p.m., Monday through Friday). A copy of the DOCD and the accompanying Consistency Certification are also available for public review at the Coastal Management Section Office located on the 10th Floor of the State Lands and Natural Resources Building, 625 North 4th Street, Baton Rouge, Louisiana (Office Hours: 8 a.m. to 4:30 p.m., Monday through Friday). The public may submit comments to the Coastal Management Section, Attention OCS Plans, Post Office Box 44487, Baton Rouge, Louisiana 70805.

FOR FURTHER INFORMATION CONTACT: Ms. Angie Gobert; Minerals Management Service, Gulf of Mexico OCS Region, Field Operations, Plans and Pipeline Section, Exploration/Development Plans Unit; Telephone (504) 736–2876.

SUPPLEMENTARY INFORMATION: The purpose of this Notice is to inform the public, pursuant to Sec. 25 of the OCS Lands Act Amendments of 1978, that the Minerals Management Service is considering approval of the DOCD and that it is available for public review. Additionally, this Notice is to inform the public, pursuant to § 930.61 of Title 15 of the CFR, that the Coastal Management Section/Louisiana Department of Natural Resources is reviewing the DOCD for consistency with the Louisiana Coastal Resources Program.

Revised rules governing practices and procedures under which the Minerals Management Service makes information contained in DOCDs available to affected States, executives of affected local governments, and other interested parties became effective May 31, 1988 (53 FR 10595). Those practices and procedures are set out in revised § 250.34 of Title 30 of the CFR.

Dated: September 5, 1989.

J. Rogers Pearcy,

Regional Director, Gulf of Mexico OCS Region.

BILLING CODE 4310-MR-M

INTERNATIONAL TRADE COMMISSION

[Investigation No. 701–TA–298 (Final)]

Fresh, Chilled, or Frozen Pork From Canada

Determination

On thè basis of the record [1] developed in the subject investigation, the Commission determines,[2] pursuant to section 705(b) of the Tariff Act of 1930 (19 U.S.C. 1671d(b)) (the act), that an industry in the United States is threatened with material injury [3] by reason of imports from Canada of fresh, chilled, or frozen pork, provided for in subheadings 0203.11.00, 0203.12.90, 0203.19.40, 0203.21.00, 0203.22.90, and 0203.29.40 of the Harmonized Tariff Schedule of the United States, that have been found by the Department of Commerce to be subsidized by the Government of Canda.

Background

The Commission instituted this investigation effective May 8, 1989, following a preliminary determination by the Department of Commerce that imports of fresh, chilled or frozen pork from Canada were being subsitlized within the meaning of section 701 of the act (19 U.S.C. 1671). Notice of the institution of the Commission's investigation and of a public hearing to be held in connection therewith was given by posting copies of the notice in the Office of the Secretary, U.S. International Trade Commission, Washington, DC, and by publishing the notice in the **Federal Register** of May 25, 1989 (54 FR 22634). The hearing was held in Washington, DC on August 1, 1989, and all persons who requested the opportunity were permitted to appear in person or by counsel.

The Commission transmitted its determination in this investigation to the Secretary of Commerce on September 5, 1989. The views of the Commission are contained in USITC Publication 2218 (September 1989) entitled "Fresh, Chilled, or Frozen Pork from Canada: Determination of the Commission in Investigation No. 701–TA–298 (Final) Under the Tariff Act of 1930, Together With the Information Obtained in the Investigation."

Issued: September 6, 1989.

By Order of the Commission.

Kenneth R. Mason,

Secretary.

[FR Doc. 89–21506 Filed 9–12–89; 8:45 am]

BILLING CODE 7020-02-M

[Investigation Nos. 701–TA–300 (Preliminary) and 731–TA–438 (Preliminary)]

Limousines From Canada

Determinations

On the basis of the record [1] developed in the subject investigations, the Commission determines,[2] pursuant to sections 703(a) and 733(a) of the Tariff Act of 1930 (19 U.S.C. 1671b(a) and 1673b(a)), that there is a reasonable indication that an industry in the United States is materially injured by reason of imports from Canada of limousines,[3] provided for in subheadings 8703.23.00, 8703.24.00, and 9802.00.50 of the Harmonized Tariff Schedule of the United States (previously under items 692.10 and 806.20 of the Tariff Schedules of the United States), that are alleged to be subsidized by the Government of Canada and sold in the United States at less than fair value (LTFV).

Background

On July 24, 1989, petitions were filed with the Commission and the Department of Commerce by Southhampton Coachworks, Ltd., Farmingdale, NY, on behalf of U.S. manufacturers of limousines, alleging that an industry in the United States is materially injured by reason of subsidized imports and LTFV imports of limousines from Canada. Accordingly, effective July 24, 1989, the Commission instituted preliminary countervailing duty and antidumping investigations Nos. 701–TA–300 (Preliminary) and 731–TA–438 (Preliminary).

Notice of the institution of the Commission's investigations and of a public conference to be held in connection therewith was given by posting copies of the notice in the Office of the Secretary, U.S. International Trade Commission, Washington, DC, and by publishing the notice in the **Federal Register** of August 2, 1989 (54 FR 31897). The conference was held in Washington, DC on August 15, 1989, and all persons who requested the opportunity were permitted to appear in person or by counsel.

The Commission transmitted its determinations in these investigations to the Secretary of Commerce on September 7, 1989. The views of the Commission are contained in USITC Publication 2220 (September 1989) entitled "Limousines from Canada: Determinations of the Commission in Investigations Nos. 701–TA–300 (Preliminary) and 731–TA–438 (Preliminary) Under the Tariff Act of 1930, Together With the Information Obtained in the Investigations."

Issued: September 8, 1989.

By order of the Commission.

Kenneth R. Mason,

Secretary.

BILLING CODE 7020-02-M

---

[1] The record is defined in § 207.2(h) of the Commission's Rules of Practice and Procedure (19 CFR 207.2(h)).

[2] Chairman Brunsdale and Vice Chairman Cass dissenting. Commissioner Lodwick did not participate.

[3] Commissioners Eckes, Rohr, and Newquist further determine that, pursuant to section 705(b)(4)(B), they would not have found material injury by reason of the imports subject to the investigation but for the suspension of liquidation of the entries of the subject merchandise.

[1] The record is defined in § 207.2(h) of the Commission's Rules of Practice and Procedure (19 CFR 207.2(h)).

[2] Commissioner Rohr did not participate.

[3] The products covered by these investigations are limousines, which are defined as extended wheelbase and expanded seating capacity motor vehicles principally designed for the transport of persons, of a cylinder capacity exceeding 1,500 cubic centimeters, and having spark-ignition internal combustion reciprocating piston engines of six or more cylinders. The vehicles are built on Lincoln Town Car, Mercury Grand Marquis, Cadillac Brougham, or any other six or eight cylinder gasoline engine powered chassis.

[Investigation No. 337–TA–300]

Certain Doxorubicin and Preparations Containing Same; Change of Commission Investigative Attorney

Notice is hereby given that, as of this date, George C. Summerfield, Esq. and Gary M. Hnath, Esq., of the Office of Unfair Import Investigations have been designated as the Commission investigative attorneys in the above-cited investigation instead of George C. Summerfield, Esq.

The Secretary is requested to publish this notice in the **Federal Register**.

Dated: September 8, 1989.

Respectfully submitted,

Lynn I. Levine,

Director, Office of Unfair Import Investigations.

BILLING CODE 7020-02-M

[Investigation No. 731–TA–429 (Final)]

Mechanical Transfer Presses From Japan

AGENCY: United States International Trade Commission.

ACTION: Institution of a final antidumping investigation and scheduling of a hearing to be held in connection with the investigation.

SUMMARY: The Commission hereby gives notice of the institution of final antidumping investigation No. 731–TA–429 (Final) under section 735(b) of the Tariff Act of 1930 (19 U.S.C. 1673d(b)) (the act) to determine whether an industry in the United States is materially injured, or is threatened with material injury, or the establishment of an industry in the United States is materially retarded, by reason of imports from Japan of mechanical transfer presses,[1] provided for in subheadings 8462.99.00 and 8466.94.50 of the Harmonized Tariff Schedule of the United States (HTS), that have been found by the Department of Commerce, in a preliminary determination, to be sold in the United States at less than fair value (LTFV). Commerce will make its final LTFV determination on or before December 26, 1989 and the Commission will make its final injury determination by February 8, 1990 (see sections 735(a) and 735(b) of the act (19 U.S.C. 1673d(a) and 1673d(b))).

For further information concerning the conduct of this investigation, hearing procedures, and rules of general application, consult the Commission's Rules of Practice and Procedure, part 207, subparts A and C (19 CFR part 207, as amended by 53 FR 33041, August 29, 1988, and 54 FR 5220, February 2, 1989), and part 201, subparts A through E (19 CFR part 201 as amended by 54 FR 13672, April 5, 1989).

EFFECTIVE DATE: August 16, 1989.

FOR FURTHER INFORMATION CONTACT: Olympia DeRosa Hand (202–252–1182), Office of Investigations, U.S. International Trade Commission, 500 E Street SW., Washington, DC 20436. Hearing-impaired individuals are advised that information on this matter can be obtained by contacting the Commission's TDD terminal on 202–252–1810. Persons with mobility impairments who will need special assistance in gaining access to the Commission should contact the Office of the Secretary at 202–252–1000.

SUPPLEMENTARY INFORMATION:

Background.—This investigation is being instituted as a result of an affirmative preliminary determination by the Department of Commerce that imports of mechanical transfer presses from Japan are being sold in the United States at less than fair value within the meaning of section 731 of the act (19 U.S.C. 1673). The investigation was requested in a petition filed on January 12, 1989, by Verson Division of Allied Products Corporation, Chicago, IL, the United Auto Workers of America, and the United Steelworkers of America (AFL–CIO–CLC). In response to that petition the Commission conducted a preliminary antidumping investigation and, on the basis of information developed during the course of that investigation, determined that there was a reasonable indication that an industry in the United States was materially injured by reason of imports of the subject merchandise (54 FR 9905, March 8, 1989).

Participation in the investigation.—Persons wishing to participate in this investigation as parties must file an entry of appearance with the Secretary to the Commission, as provided in § 201.11 of the Commission's rules (19 CFR 201.11), not later than twenty-one (21) days after the publication of this notice in the **Federal Register**. Any entry of appearance filed after this date will be referred to the Chairman, who will determine whether to accept the late entry for good cause shown by the person desiring to file the entry.

Service list.—Pursuant to § 201.11(d) of the Commission's rules (19 CFR 201.11(d), the Secretary will prepare a service list containing the names and addresses of all persons, or their representatives, who are parties to this investigation upon the expiration of the period for filing entries of appearance. In accordance with §§ 201.16(c) and 207.3 of the rules (19 CFR 201.16(c) and 207.3), each document filed by a party to the investigation must be served on all other parties to the investigation (as identified by the service list), and a certificate of service must accompany the document. The Secretary will not accept a document for filing without a certificate of service.

---

[1] For purposes of this investigation, the term "mechanical transfer presses" refers to automatic metal-forming machine tools with multiple die stations in which the workpiece is moved from station to station by a transfer mechanism synchronized with the press action, whether imported as machines or parts suitable for use solely or principally with these machines. These presses may be assembled or unassembled.

Limited disclosure of business proprietary information under a protective order.—Pursuant to § 207.7(a) of the Commission's rules (19 CFR 207.7(a)), the Secretary will make available business proprietary information gathered in this final investigation to authorized applicants under a protective order, provided that the application be made not later than twenty-one (21) days after the publication of this notice in the **Federal Register**. A separate service list will be maintained by the Secretary for those parties authorized to receive business proprietary information under a protective order. The Secretary will not accept any submission by parties containing business proprietary information without a certificate of service indicating that it has been served on all the parties that are authorized to receive such information under a protective order.

Staff report.—The prehearing staff report in this investigation will be placed in the nonpublic record on December 15, 1989, and a public version will be issued thereafter, pursuant to § 207.21 of the Commission's rules (19 CFR 207.21).

Hearing.—The Commission will hold a hearing in connection with this investigation beginning at 9:30 a.m. on January 4, 1990, at the U.S. International Trade Commission Building, 500 E Street SW., Washington, DC. Requests to appear at the hearing should be filed in writing with the Secretary to the Commission not later than the close of business (5:15 p.m.) on December 21, 1989. All persons desiring to appear at the hearing and make oral presentations should file prehearing briefs and attend a prehearing conference to be held at 9:30 a.m. on December 27, 1989, at the U.S. International Trade Commission Building. The deadline for filing prehearing briefs is December 27, 1989.

Testimony at the public hearing is governed by § 207.23 of the Commission's rules (19 CFR 207.23). This rule requires that testimony be limited to a nonbusiness proprietary summary and analysis of material contained in prehearing briefs and to information not available at the time the prehearing brief was submitted. Any written materials submitted at the hearing must be filed in accordance with the procedures described below and any business proprietary materials must be submitted at least three (3) working days prior to the hearing (see § 201.6(b)(2) of the Commission's rules (19 CFR 201.6(b)(2))).

Written submissions.—All legal arguments, economic analyses, and factual materials relevant to the public hearing should be included in prehearing briefs in accordance with § 207.22 of the Commission's rules (19 CFR 207.22). Posthearing briefs must conform with the provisions of section 207.24 (19 CFR 207.24) and must be submitted not later than the close of business on January 10, 1990. In addition, any person who has not entered an appearance as a party to the investigation may submit a written statement of information pertinent to the subject of the investigation on or before January 10, 1990.

A signed original and fourteen (14) copies of each submission must be filed with the Secretary to the Commission in accordance with § 201.8 of the Commission's rules (19 CFR 201.8). All written submissions except for business proprietary data will be available for public inspection during regular business hours (8:45 a.m. to 5:15 p.m.) in the Office of the Secretary to the Commission.

Any information for which business proprietary treatment is desired must be submitted separately. The envelope and all pages of such submissions must be clearly labeled "Business Proprietary Information." Business proprietary submissions and requests for business proprietary treatment must conform with the requirements of §§ 201.6 and 207.7 of the Commission's rules (19 CFR 201.6 and 207.7).

Parties which obtain disclosure of business proprietary information pursuant to § 207.7(a) of the Commission's rules (19 CFR 207.7(a)) may comment on such information in their prehearing and posthearing briefs, and may also file additional written comments on such information no later than January 16, 1990. Such additional comments must be limited to comments on business proprietary information received in or after the posthearing briefs.

Authority: This investigation is being conducted under authority of the Tariff Act of 1930, title VII. This notice is published pursuant to section 207.20 of the Commission's rules (19 CFR 207.20).

Issued: September 7, 1989.

By order of the Commission.

Kenneth R. Mason,
Secretary.

BILLING CODE 7020-02-M

INTERSTATE COMMERCE COMMISSION

[Finance Docket No. 31387 (Sub-No. 1)]

Canadian National Railway Co.—Lease From Grand Trunk Western Railroad Co.

Decided: September 5, 1989.

AGENCY: Interstate Commerce Commission.

ACTION: Extension of period for filing comments.

SUMMARY: The date for filing comments is extended for one week, with corresponding extensions in the succeeding filing dates.

DATES: Written comments must be filed by September 25, 1989. Comments from the Secretary of Transportation and Attorney General of the United States must be filed by October 10, 1989. The Commission will prepare a service list shortly thereafter. Comments must be served within 10 days of the issuance of the service list. Applicant's reply is due by October 31, 1989.

FOR FURTHER INFORMATION CONTACT: Joseph H. Dettmar (202) 275-7245 [TDD for hearing impaired: (202) 275-1721].

SUPPLEMENTARY INFORMATION: By application filed July 20, 1989, Canadian National Railway Company (CN) and Grand Trunk Western Railroad Company (GTW), collectively referred to as applicants, seek Commission approval under 49 U.S.C. 11343, *et seq.*, for CN to lease GTW's Railport intermodal facility (Railport) in Chicago, IL. In a decision served August 17, 1989 (54 FR 34260, August 18, 1989),[1] the Commission determined that the proposal is a minor transaction within the meaning of 49 CFR 1180.2(c), and since the application was filed in conformity with the consolidation regulations at 49 CFR Part 1180, it formally accepted the application for consideration. The Commission requested comments from interested persons by September 18, 1989, and from the Secretary of Transportation (Secretary) and the Attorney General of the United States (Attorney General) by October 2, 1989. Applicant's reply comments were due by October 23, 1989.

On August 29, 1989, the Railway Labor Executives' Association (RLEA) requested a 30-day extension of the procedural schedule, computed from the date of this decision, because it was not

---

[1] A corrected version was served August 22, 1989, (54 FR 35258, August 24, 1989).

served with a copy of the August 17 decision accepting the application for consideration. It says that it did not receive actual notice until August 29. Applicants state that they do not object to the extension request so long as the Commission does not modify the date upon which it is considered to have accepted the application.

Previously, RLEA had participated as a party in Finance Docket No. 31387, *Canadian National Ry. Co.—Partial Revoc. of Class Exempt.—Lease from Grand Trunk West. R. Co.* (not printed), served January 27, 1989. In that proceeding, the Commission granted a partial revocation of the class exemption for transactions within a corporate family under 49 CFR 1180.2(d)(3) to the extent that it related to the rail properties involved in this anticipated application proceeding. Mistakenly, applicants then filed this application under that same exemption proceeding docket number, Finance Docket No. 31387, and served a copy of the application on RLEA since RLEA had been a party to the exemption proceeding. However, the exemption revocation proceeding and the proposed lease are two separate proceedings. Thus, the Commission redocketed the application proceeding as Sub-No. 1. Accordingly, RLEA was not served directly.

When an application is filed under 49 U.S.C. 11343, *et seq.*, and is determined to involve a minor transaction, the decision is published in the **Federal Register**, but is not made on private parties. Publication in the **Federal Register** is deemed adequate notice for interested parties to determine their interest in the proceeding and to file appropriate comments. *See Friends of Sierra Railroad v. ICC*, No. 87-7407, slip op. at 8501 (9th Cir. July 31, 1989). It is unfortunate that the misfiled application and subsequent redocketing procedure created confusion on the part of RLEA, but the Commission's adding the sub-number to distinguish the lease transaction from the previous exemption revocation proceeding does not affect the adequacy of the **Federal Register** notice.

RLEA has not shown why it needs a new 30-day period to file comments. However, since the applicants do not object to an extension of the comment period, I will grant a one week extension. The comment period for the Secretary and Attorney General and the period for applicants to file a reply will also be extended correspondingly.

This action will not significantly affect either the quality of the human environment or the conservation of energy resources.

By the Commission, Heather J. Gradison, Chairman.

Noreta R. McGee,
Secretary.

[FR Doc. 89-21309 Filed 9-12-89; 8:45 am]

BILLING CODE 7035-01-M

DEPARTMENT OF JUSTICE

Federal Bureau of Investigation

Meeting; Advisory Policy Board (APB) Uniform Crime Reporting (UCR)

The UCR APB will meet on October 13, 1989, from 1:00 p.m. until close of business at the Galt House, Fourth Street and River Road, Louisville, Kentucky 40202.

The major topics of discussion will be the current implementation status of the National Incident-Based Reporting System to include Federal participation, Federal representation on the APB, and the current status of Hate/Bias crime legislation in Congress.

The meeting will be open to the public with approximately 25 seats available on a first-come, first-served basis. Any member of the public may file a written statement with the APB before or after the meeting. Anyone wishing to address a session of the meeting should notify the Committee Management Liaison Officer, Mr. J. Harper Wilson, FBI, at least 24 hours prior to the start of the session. The notification may be by mail, telegram, cable, or hand-delivered note. It should contain their name, corporate or Government designation, and consumer affiliation, along with the capsulized version of the statement and an outline of the material to be offered. A person will be allowed not more than 15 minutes to present a topic, except with the special approval of the Chairperson of the Board.

Inquiries may be addressed to Mr. J. Harper Wilson, Committee Management Liaison Officer, Records Management Division, Federal Bureau of Invetigation, Washington, DC 20535, telephone number (202) 324-2614.

Dated: August 24, 1989.

William S. Sessions,
Director.

BILLING CODE 4410-02-M

DEPARTMENT OF LABOR

Employment and Training Administration

[TA-W-21,406 Dallas, TX; TA-W-21,406A Magnolia, AR; TA-W-21,406B Irving, TX]

Core Laboratories, Inc.; Amended Certification Regarding Eligibility To Apply for Worker Adjustment Assistance

In accordance with section 223 of the Trade Act of 1974 (19 U.S.C. 2273) the Department of Labor issued a Certification of Eligibility to Apply for Worker Adjustment Assistance on December 19, 1988 applicable to all workers of Core Laboratories, Inc., Dallas, Texas and Magnolia Arkansas.

The Department is amending the certification to show the correct locations of the worker groups. In late 1987 the Dallas, Texas operation was moved to Irving, Texas. Worker separations have occurred at both Dallas and Irving, Texas and in Magnolia, Arkansas. The notice, therefore, is amended by including workers in Irving, Texas under this petition.

The amended notice applicable to TA-W-21,406 is hereby issued as follows:

> "All workers of Core Laboratories, Inc., Dallas, Texas; Irving, Texas and Magnolia, Arkansas who became totally or partially separated from employment on or after October 1, 1985 are eligible to apply for adjustment assistance under section 223 of the Trade Act of 1974.

Signed at Washington, DC, this 31st day of August 1989.

Robert O. Deslongchamps,
Director, Office of Legislation and Actuarial Services, UIS.

[FR Doc. 89-21460 Filed 9-12-89; 8:45 am]

BILLING CODE 4510-30-M

[TA-W-23,078 Dallas, TX; TA-W-23,078A Giddings, TX]

HECI Exploration Co.; Amended Certification Regarding Eligibility To Apply for Worker Adjustment Assistance

In accordance with section 223 of the Trade Act of 1974 (19 U.S.C. 2273) the Department of Labor issued a Certification of Eligibility to Apply for Worker Adjustment Assistance on August 3, 1989 applicable to all workers of HECI Exploration Company, Dallas, Texas.

The Department is amending the certification to show the correct locations of the worker groups. HECI

Exploration has its headquarters in

75.305 (weekly examination for

are available for inspection at that

[Docket No. M-89-134-C)]

entry would be patrolled twice each

Exploration has its headquarters in Dallas, Texas and operates in Giddings, Texas where worker separations occurred. The notice, therefore, is amended by including workers in the field office in Giddings, Texas.

The amended notice applicable to TA–W–23,078 is hereby issued as follows:

> All workers of HECI Exploration Company, Dallas, Texas, and Giddings, Texas who became totally or partially separated from employment on or after May 31, 1988 are eligible to apply for adjustment assistance under section 223 of the Trade Act of 1974.

Signed at Washington, DC, this 31st day of August 1989.

Robert O. Deslongchamps,

Director, Office of Legislation and Actuarial Services, UIS.

[FR Doc. 89–21461 Filed 9–12–89; 8:45 am]

BILLING CODE 4510-30-M

[TA–W–22,369A Mount Pleasant, MI]

Schlumberger Well Services; Cancellation of Certification Regarding Eligibility to Apply for Adjustment Assistance

In accordance with section 223 of the Trade Act of 1974 (19 U.S.C. 2273) the Department of Labor issued a Certification of Eligibility to Apply for Worker Adjustment Assistance on March 2, 1989 applicable to all workers of Schlumberger Well Services, Traverse City, Michigan and Mount Pleasant, Michigan.

The Department, on its own motion, has reopened the investigation and is cancelling the certification for the Mount Pleasant, Michigan location of Schlumberger Well Services since the workers at Mount Pleasant are already certified eligible for adjustment assistance under petition TA–W–21,755. However, that part of the certification concerning workers of Schlumberger Well Services at Traverse City, Michigan, TA–W–22,369, remains in effect.

Signed at Washington, DC, this 31st day of August 1989.

Robert O. Deslongchamps,

Director, Office of Legislation and Actuarial Services, UIS.

BILLING CODE 4510-30-M

Mine Safety and Health Administration

[Docket No. M–89–10–M]

Lone Star Industries, Inc.; Petition for Modification of Application of Mandatory Safety Standard

Lone Star Industries, Inc., 162 Old Mill Road, West Nyack, New York 10994, has filed a petition to modify the application of 30 CFR 57.15020 (life jackets and belts) to its Clinton Point Quarry (I.D. No. 30–00082) located in Dutchess County, New York. The petition is filed under section 101(c) of the Federal Mine Safety and Health Act of 1977.

A summary of the petitioner's statements follows:

1. The petition concerns the requirement that life jackets or belts be worn where there is danger from falling into water.

2. In the dock loading operation, employees (trimmers) are required to work on top of the load as it is being loaded. There is no danger of falling into the water.

3. During warm weather, the wearing of a life jacket causes problems because of heat stress.

4. As an alternate method, petitioner proposes that employees not be required to wear life jackets during the "trimming" phase of barge loading from May 15 through October 15.

5. For these reasons, petitioner requests a modification of the standard.

Request for comments

Persons interested in this petition may furnish written comments. These comments must be filed with the Office of Standards, Regulations and Variances, Mine Safety and Health Administration, Room 627, 4015 Wilson Boulevard, Arlington, Virginia 22203. All comments must be postmarked or received in that office on or before October 13, 1989. Copies of the petition are available for inspection at that address.

Dated: September 6, 1989.

Patricia W. Silvey,

Director, Office of Standards, Regulations and Variances.

[FR Doc. 89–21463 Filed 9–12–89; 8:45 am]

BILLING CODE 4510-43-M

[Docket No. M–89–128–C]

McElroy Coal Co.; Petition for Modification of Application of Mandatory Safety Standard

McElroy Coal Company, 1800 Washington Road, Pittsburgh, Pennsylvania 15241 has filed a petition to modify the application of 30 CFR 75.305 (weekly examination for hazardous conditions) to its McElroy Mine (I.D. No. 46–01437) located in Marshall County, West Virginia. The petition is filed under section 101(c) of the Federal Mine Safety and Health Act of 1977.

A summary of the petitioner's statements follows;

1. The petition concerns the requirement that return aircourses be examined in their entirety on a weekly basis.

2. Due to numerous roof falls, certain areas of the return aircourses cannot be safely traveled. Restoration of these areas would require an exorbitant amount of time and work would be performed under extremely hazardous conditions.

3. As an alternate method, petitioner proposes to establish checkpoints at specific locations where the air returning to these areas would be monitored.

4. In support of this request, petitioner states that—

(a) All monitoring stations and the approaches to such stations would, at all times, be maintained in a safe condition. Additionally, the fan operation is continuously monitored at the 24-hour manned Communication Center. Also, the water gauge is continuously monitored at the Communication Center, so that any sudden drop or increase would set off an alarm. The fan is inspected and the water gauge signal is tested on a daily basis, and the results recorded;

(b) Tests for methane and the quantity of air would be determined weekly by a certified person at each station; and

(c) The person making such examinations and tests would place his/her initials and the date and time at each station. A record of these examinations, tests and actions taken would be recorded in a book kept on the surface and made available for inspection by interested persons.

5. Petitioner states that the proposed alternate method will provide the same degree of safety for the miners affected as that afforded by the standard.

Request for Comments

Persons interested in this petition may furnish written comments. These comments must be filed with the Office of Standards, Regulations and Variances, Mine Safety and Health Administation, Room 627, 4015 Wilson Boulevard, Arlington, Virginia 22203. All comments must be postmarked or received in that office on or before October 13, 1989. Copies of the petition

are available for inspection at that address.

Dated: September 6, 1989.

Patricia W. Silvey,

Director, Office of Standards, Regulations and Variances.

[FR Doc. 89–21464 Filed 9–12–89; 8:45 am]

BILLING CODE 4510-43-M

[Docket No. M–89–132–C]

Preece Processing, Inc.; Petition for Modification of Application of Mandatory Safety Standard

Preece Processing, Inc., P.O. Box 449, Turkey Creek, Kentucky 41570 has filed a petition to modify the application of 30 CFR 75.1710 (cabs and canopies) to its Mine No. 1 (I.D. No. 15–16441) located in Pike County, Kentucky. The petition is filed under section 101(c) of the Federal Mine Safety and Health Act of 1977.

A summary of the petitioner's statements follows:

1. The petition concerns the requirement that cabs or canopies be installed on the mine's 74 S & S Scoop, Serial No. 74BCA–125.

2. The mine ranges in height from 30 to 50 inches.

3. The use of a canopy on the mine's 74 S & S Scoop, Serial No. 74BCA–125 would result in a diminution of safety to the miners affected because the canopy would:

(a) Rub the top of the mine, pulling out roof bolts and loose rock;

(b) Cause the operator to lean outside of the scoop to operate it; and

(c) Limit the operator's visibility.

5. For these reasons, petitioner requests a modification of the standard.

Request for Comments

Persons interested in this petition may furnish written comments. These comments must be filed with the Office of Standards, Regulations and Variances, Mine Safety and Health Administration, Room 627, 4015 Wilson Boulevard, Arlington, Virginia 22203. BILLING CODE 4510-43-M

[Docket No. M–89–134–C)]

Pyro Mining Co.; Petition for Modification of Application of Mandatory Safety Standard

Pryo Mining Company, P.O. Box 267, Sturgis, Kentucky 42459 has filed a petition to modify the application of 30 CFR 75.1103–4(a) (automatic fire sensor and warning device systems; installation, minimum requirements) to its Pyro No. 11 Mine (I.D. No. 15–10339), its Pyro No. 9 Wheatcroft Mine (I.D. No. 15–13920), and its Placo Mine (I.D. No. 15–14492) all located in Webster County, Kentucky, and its Pyro No. 9 Slope, William Station Mine (I.D. No. 15–13881) located in Union County, Kentucky. The petition is filed under section 101(c) of the Federal Mine Safety and Health Act of 1977.

A summary of the petitioner's statements follows:

1. The petition concerns the requirement that automatic fire sensor and warning device systems provide identification of fire within each belt flight.

2. As an alternate method, petitioner proposes to install an early warning fire detection system. A low-level carbon monoxide (CO) detection system would be installed in all belt entries. The low-level CO system would be capable of giving warning of a fire for four hours should the power fail; both visual and audible alarms would be activated when the CO level is 225 ppm above the established ambient level or in the event of any system failure. All persons would be evacuated when the level reaches 25 ppm. When the alarm is activated because of system failure, immediate repair work would begin. The CO monitoring system would initiate the fire alarm signals at an attended surface location where there is two-way communication. This responsible person would notify all affected personnel when an alarm occurs. The CO system would be capable of identifying any activated sensor and for detecting any system failures and providing alarms if failures occur.

3. The CO monitoring system would be inspected weekly. The CO sensors would also be calibrated monthly, and since each calibration would activate the alarm system, the entire system would also be functionally tested monthly.

4. If at any time the CO monitoring system or any portion of the system would be deenergized for reasons such as routine maintenance or failure of a sensor unit, the belt conveyor would continue to operate provided the affected portion of the belt conveyor entry would be patrolled twice each shift and monitored for CO by a qualified person using a hand-held CO detector.

5. Petitioner states that the proposed alternate method will provide the same degree of safety for the miners affected as that afforded by the standard.

Request for Comments

Persons interested in this petition may furnish written comments. These comments must be filed with the Office of Standards, Regulations and Variances, Mine Safety and Health Administration, Room 627, 4015 Wilson Boulevard, Arlington, Virginia 22203. All comments must be postmarked or received in that office on or before October 13, 1989. Copies of the petition are available for inspection at that address.

Dated: September 6, 1989.

Patricia W. Silvey,

Director, Office of Standards, Regulations and Variances.

[FR Doc. 89–21466 Filed 9–12–89; 8:45 am]

BILLING CODE 4510-33-M

[Docket No. M–89–119–C]

Westmoreland Coal Co.; Petition for Modification of Application of Mandatory Safety Standard

Westmoreland Coal Company, P.O. Drawer A & B, Big Stone Gap, Virginia 24219 has filed a petition to modify the application of 30 CFR 75.1105 (housing of underground transformer stations, battery-charging stations, substations, compressor stations, shops, and permanent pumps) to its Pierrepont Mine (I.D. No. 44–06206) located in Wise County, Virginia. The petition is filed under section 101(c) of the Federal Mine Safety and Health Act of 1977.

A summary of the petitioner's statements follows:

1. On August 2, 1986, petitioner was granted a modification of 30 CFR 75.1105 to use air currents which are used to ventilate dry-type transformers, permanent pumps containing no flammable liquid hydraulic oil (except for capacitors in transformers which may contain up to a total of 3 gallons of flammable liquid) and rectifiers to ventilate active working places and to install an early warning fire detection system and to monitor the air with a carbon monoxide detection system in all belt entries utilized as intake aircourses [Docket No. M–85–59–C].

2. This petition concerns paragraph 1(d) of MSHA's Decision and Order which requires that the velocity of air in

the belt conveyor entry be 50 feet a minute or greater and have a definite and distinct movement in the designated direction. The velocity of the air current in the belt conveyor entry cannot exceed 300 feet per minute.

3. Paragraph 1(d) should be modified to require that the velocity of air in the belt conveyor entry be 50 feet a minute or greater and have a definite and distinct movement in the designated direction.

4. In support of this request, petitioner states that limiting velocities to 300 feet per minute seriously impairs the ability to maintain the minimum velocity of 50 feet per minute required for a definite and distinct air movement in the designated direction in section belt entries. Furthermore restricting the air current in the belt conveyor entries to 300 feet per minute would reduce the volume of air coursed to mining sections necessary to dilute, render harmless and to carry away flamable, explosive, noxious, and harmful gases and dust and to ensure adequate ventilation for diesel equipment operated in aircourses common to the belt entries and the working section.

5. For these reasons, petitioner requests an amendment to the Decision and Order granting the petition modifying the application of 30 CFR 75.1105.

Request for Comments

Persons interested in this petition may furnish written comments. These comments must be filed with the Office of Standards, Regulations and Variances, Mine Safety and Health Administration, Room 627, 4015 Wilson Boulevard, Arlington, Virginia 22203. All comments must be postmarked or received in that office on or before October 13, 1989. Copies of the petition are available for inspection at that address.

BILLING CODE 4510–43–M

[Docket No. M–89–118–C]

Westmoreland Coal Co; Petition for Modification of Application of Mandatory Safety Standard

Westmoreland Coal Company, P.O. Drawer A & B, Big Stone Gap, Virginia 24219 has filed a petition to modify the application of 30 CFR 75.1103–4(a) (automatic fire sensor and warning device systems; installation; minimum requirements) to its Pierrepont Mine (I.D. No. 44–06206) located in Wise County, Virginia. The petition is filed under section 101(c) of the Federal Mine Safety and Health Act of 1977.

A summary of the petitioner's statements follows:

1. On August 7, 1986, petitioner was granted a modification of 75.1103–4(a) to use a fire sensor and warning device system capable of identification of fire by activated sensors rather than identification of fire within each belt flight and to install an early warning fire detection system and to monitor the air with a carbon monoxide system in all belt entries utilized as intake aircourses [Docket No. M–85–58–C].

2. This petition concerns paragraph 1(d) of MSHA's Decision and Order which requires that the velocity of air in the belt conveyor entry be 50 feet a minute or greater and have a definite and distinct movement in the designated direction. The velocity of the air current in the belt conveyor entry cannot exceed 300 feet per minute.

3. Paragraph 1(d) should be modified to require that the velocity of air in the belt conveyor entry be 50 feet a minute or greater and have a definite and distinct movement in the designated direction.

4. In support of this request, petitioner states that limiting velocities to 300 feet per minute seriously impairs the ability to maintain the minimum velocity of 50 feet per minute required for a definite and distinct air movement in the designated direction in section belt entries. Furthermore, restricting the air current in the belt conveyor entries to 300 feet per minute would reduce the volume of air coursed to mining sections necessary to dilute, render harmless and to carry away flammable, explosive, noxious, and harmful gases and dust and to ensure adequate ventilation for diesel equipment operated in aircourses common to the belt entries and the working section.

5. For these reasons, petitioner requests an amendment to the Decision and Order granting the petition modifying the application of 30 CFR 75.1103–4(a).

BILLING CODE 4510–43–M

[Docket No. M–89–117–C]

Westmoreland Coal Co.; Petition for Modification of Application of Mandatory Safety Standard

Westmoreland Coal Company, P.O. Drawer A & B, Big Stone Gap, Virginia 24219 has filed a petition to modify the application of 30 CFR 75.326 (aircourses and belt haulage entries) to its Pierrepont Mine (I.D. No. 44–06206) located in Wise County, Virginia. The petition is filed under section 101(c) of the Federal Mine Safety and Health Act of 1977.

A summary of the petitioner's statements follows:

1. On August 2, 1986, petitioner was granted a modification of 30 CFR 75.326 to use intake air which is coursed through belt haulage and or track entries to ventilate active working places and to install an early warning fire detection system and to monitor the air with a carbon monoxide detection system [Docket No. M–85–57–C].

2. This petition concerns paragraph 1(d) of MSHA's Decision and Order which requires that the velocity of air in the belt conveyor entry be 50 feet a minute or greater and have a definite and distinct movement in the designated direction. The velocity of the air current in the belt conveyor entry cannot exceed 300 feet per minute.

3. Paragraph 1(d) should be modified to require that the velocity of air in the belt conveyor entry be 50 feet a minute or greater and have a definite and distinct movement in the designated direction.

4. In support of this request, petitioner states that limiting velocities to 300 feet per minute seriously impairs the ability to maintain the minimum velocity of 50 feet per minute required for a definite and distinct air movement in the designated direction in section belt entries. Furthermore, restricting the air current in the belt conveyor entries to 300 feet per minute would reduce the volume of air coursed to mining sections necessary to dilute, render harmless and to carry away flammable, explosive, noxious, and harmful gases and dust and to ensure adequate ventilation for diesel equipment operated in aircourses common to the belt entries and the working section.

5. For these reasons, petitioner requests an amendment to the Decision and Order granting the petition modifying the application of 30 CFR 75.326.

BILLING CODE 4510–43–M

Occupational Safety and Health Administration

[Docket No. NRTL–1–89]

ETL Testing Laboratories, Inc.

AGENCY: Occupational Safety and Health Administration, Department of Labor.

ACTION: Notice of recognition as a nationally, recognized testing laboratory.

SUMMARY: This notice announces the Agency's final decision on the ETL Testing Laboratories, Inc., applications for recognition as a Nationally Recognized Testing Laboratory (NRTL) under 29 CFR 1910.7.

FOR FURTHER INFORMATION CONTACT: James J. Concannon, Director, Office of Variance Determination, NRTL Recognition Program, Occupational Safety and Health Administration, U.S. Department of Labor, Third Street and Constitution Avenue NW., Room N3653, Washington, DC 20210.

SUPPLEMENTARY INFORMATION:

Notice of Final Decision

Notice is hereby given that ETL Testing Laboratories, Inc., which made application for recognition pursuant to 29 CFR 1910.7, has been recognized as a Nationally Recognized Testing Laboratory for the equipment or materials listed below.

The addresses of the laboratories covered by this recognition are:

ETL Testing Laboratories, Inc., Cortland Safety Division, Industrial Park, Cortland, New York 13045

ETL Testing Laboratories, Inc., 5855–P Oakbrook Parkway, Norcross, Georgia 30093

ETL Testing Laboratories, Inc., West Coast Division, 660 Forbes Boulevard, South San Francisco, California 94080

Background

ETL Testing Laboratories, Inc., (ETL), was founded in New York City as the Lamp Testing Bureau in 1896 by the Edison Illuminating Companies. After 46 years of performing electrical, chemical and photometric tests, ETL was divested by the illuminating companies and purchased by its employees in 1942. By that time the name of the company had been changed to Electrical Testing Laboratories. In 1977, the Electrical Testing Laboratories, Inc., moved its operation to Cortland, New York. Soon after moving to Cortland, the name of the company was changed to ETL Testing Laboratories, Inc. In 1979, the decision was made to implement a product safety labeling, listing, and follow-up program similar to that of Underwriters' Laboratories, Inc. In 1984, ETL established a West Coast Division in South San Francisco, California, specializing in product safety testing, to serve clients west of the Rocky Mountains. In 1985, a Southeast Division located in Norcross, Georgia was established. This Division also specializes in product safety testing. Also in 1985, ETL was purchased by its management, along with a New York based investment firm. In October 1988, ETL Testing Laboratories, Inc., was purchased by Inchcape Inspection and Testing Services USA, Inc.

ETL Testing Laboratories, Inc., applied to OSHA for recognition as a Nationally Recognized Testing Laboratory in May 1988. The application was subsequently revised and additional data provided as requested. On-site evaluations were conducted (Exs. 2B(1), 2C(1), and 2D(1)), and the results were discussed with the applicant who responded with appropriate corrective actions and clarifications to recommendations made as a result of the survey (Exs. 2B(2), 2C(2), and 2D(2)). Final on-site review reports, consisting of the on-site evaluations of ETL's testing facilities and administrative and technical practices and the corrective actions taken by ETL in response to these evaluations (Exs. 2B, 2C, and 2D) and the OSHA staff recommendation, were subsequently forwarded to the Assistant Secretary for a preliminary finding on the application. A notice of ETL's application together with a positive preliminary finding was published in the **Federal Register** on February 28, 1989 (54 FR 8411–8414). Interested parties were invited to submit comments.

There were seventeen responses to the **Federal Register** notice of the ETL application and preliminary finding (Docket No. NRTL–1–89). Exhibits 3–1 through 3–6 and 3–8 through 3–17 attested to the credibility of the applicant, agreed with the positive preliminary finding, and recommended recognition as a nationally recognized testing laboratory. The other comment, Exhibits 3–7, will be discussed more fully below.

The Occupational Safety and Health Administration has evaluated the record in relation to the regulations set out in 29 CFR 1910.7 and makes the following findings:

Capability

Section 1910.7(b)(1) states that for each specified item of equipment or material to be listed, labeled or accepted, the testing laboratory must have the capability (including proper testing equipment and facilities, trained staff, written testing procedures, and calibration and quality control programs) to perform appropriate testing.

Based upon the on-site review reports, the products and standards in question, ETL's three laboratories have adequate floor space for testing and evaluation and numbers of technical and professional personnel to accomplish the services required for the present workload in the areas of recognition it seeks.

The Cortland Safety Division is located in an ETL owned commercial building complex on a 45 acre site. The main building contains more than 160,000 square feet of floor space of which approximately 18,000 square feet is allocated to product testing and evaluation.

Ambient environmental conditions in the building are monitored and controlled by a central heating, ventilating, and air conditioning system while the temperature and humidity are more closely controlled in rooms used for calibrating test instruments and for specific product testing. Visitor entry to the facility is carefully controlled and the premises are protected by security personnel at all times. The building has a security alarm system and fire sprinkler systems.

The Cortland Safety Division consists of 72 professional or technical employees, of which 67 are located at

determine compliance with the manual.

improper or unauthorized use of its

Creditable Reports/Complaint Handling

the Cortland, New York facility, as follows:

1—Safety Division Manager
4—Department Managers
1—Staff Engineer
2—Senior Engineers
9—Project Engineers
36—Field Engineers
3—Team Leaders
5—Technicians
5—Report Writers
1—Staff Assistant

The Norcross (Atlanta) laboratory, which is a department of the Cortland Safety Division, leases 5,000 square feet of floor space in a commercial/industrial park; some 1,800 square feet in the facility is devoted to product testing and evaluation.

Ambient environmental conditions within the laboratory are monitored and controlled by a central heating, ventilating, and air conditioning system. Entrance to the laboratory is monitored during working hours. The facility has a manual key-activated security alarm system and a water sprinkler system for fire protection.

The Norcross laboratory consists of the following professional or technical personnel:

1—Department Manager
3—Project Engineers
1—Report Writer

The East Coast Divison laboratory located in South San Francisco leases a commercial building consisting of more than 10,500 square feet of floor space. Of this space, some 7,000 square feet is allocated to product testing and evaluation.

Ambient environmental conditions in the office areas are monitored and controlled by a central heating, ventilating, and air conditioning system. Other individual rooms in the laboratory are temperature controlled for specific product testing. The building has a security alarm and motion detection systems. The laboratory has a water sprinkler system for fire protection.

The South San Francisco laboratory consists of the following professional or technical personnel:

1—Division Manager
4—Project Engineers
2—Technicians
1—Report Writer
2—Marketing

ETL has submitted copies of the job responsibilities and qualifications for each of the technical positions listed above and the employees, in OSHA's opinion, appear to be qualified by training or experience for performing testing in the areas for which ETL seeks recognition.

ETL has more than 1,470 items of test equipment it uses to perform the testing required by the various test standards. This equipment is located as follows:

The Cortland, New York laboratory maintains some 1,380 pieces of equipment for product testing.

The Norcross (Atlanta) facility and the South San Francisco laboratory normally maintain some 35 and 57 test instruments, respectively, for product testing.

Test equipment which is not available at the Cortland laboratory would be leased as necessary. Test equipment not available at either the Norcross or the South San Francisco facilities would either be borrowed from the Cortland laboratory or leased locally.

One respondent (Ex. 3–7, p. 3) believed that the applicant has attempted to cover too many product categories for the facilities, test equipment, and staff resources of the firm. OSHA is satisfied that ETL has adequate facilities, personnel and test equipment to accomplish the services required for its present workload in the applied-for product categories.

This same respondent (Ex. 3–7, p. 3) noted further that ETL applied to test two more test standards than appeared in its January 1989 Directory of Listed Products, and felt that recognition should not be extended to any test standard or product category for which no experience can be demonstrated. However, 29 CFR 1910.7 merely requires that the applicant have the capability to do the work. OSHA believes that an otherwise qualified laboratory may be extended recognition to test a certain product category if the personnel have adequate expertise in a given area, even if that laboratory does not have a background of testing a particular product category. To decide differently would have the effect of inhibiting an otherwise qualified laboratory's growth into new areas merely because they had not done the work previously. OSHA's requirements for recognition as a nationally recognized testing laboratory were not intended to have this effect. ETL has staff expertise in those categories not yet listed. Additionally, many of the test standards which ETL seeks to use and which have not appeared in the ETL Directory are closely allied to those already listed. OSHA will, of course, continue to monitor the operations of ETL as part of its oversight function.

The EL project engineer utilizes written standard operating procedures to describe and evaluate the construction of a sample of the product submitted for testing. These procedures refer to specific sections of the standards. The procedures are detailed in the on-site review reports. See the On-Site Evaluations (Exs. 2B(1), 2C(1), and 2D(1), pp. 3–4).

The applicant has various procedures in place to help assure consistent test protocol and interpretations. For example, a test method must be written for each test performed, and must be of sufficient detail to permit duplication of the test at a subsequent time. Copies of all these test methods are maintained by the laboratories and, as appropriate, filed in the test record of the product listing report. ETL also retains a Technical Advisory Council composed of leading national experts in the field of public safety which advises it on interpretations of codes and standards. In addition, issues concerning the investigation that are not covered by the standard or that require an interpretation of the standard are discussed in meetings of key personnel. Engineering decisions to resolve these issues are based upon input from the laboratory staff, members of the Technical Advisory Council and, in some cases, the organization that developed the standard (see the On-Site Evaluations, Exs. 2B(1), 2C(1), and 2D(1), p. 3). OSHA considers these procedures to be adequate.

The on-site review reports (Exs. 2B, 2C, and 2D) revealed that ETL has a comprehensive calibration program for its test equipment. A separate calibration laboratory at the Cortland site calibrates, repairs, and maintains most of the test equipment used for product testing for all three laboratory locations. ETL permits outside vendor calibration services to be used when approved by the appropriate laboratory official. A written Equipment Calibration Program is available and, as detailed in the on-site evaluation of the Cortland facility (Ex. 2B(1)), is in use. The Program includes periodic calibration, color-coded labels to identify calibration standards, date of last calibration, and due date for next calibration. The Calibration Manager is responsible for specifying the test equipment calibration intervals, typically on an annual basis, and for retention of records of calibration, repair and maintenance of the test equipment, and for the decision to use outside vendor calibration services. The Calibration Manager also issues monthly reports to appropriate personnel indicating the equipment due for calibration during the following month. These reports are generated by a computer data base.

ETL has a written Quality Control (QC) Systems Manual which describes the appointment of an auditor to make periodic reviews of each division to

determine compliance with the manual. It also details the responsibilities of each division manager to implement specific procedures. (See the On-Site Evaluations, Exs. 2B(1), 2C(1), and 2D(1), p. 6).

Type of Testing

The standard contemplates that testing done by NRTLs fall into one of two categories: testing to determine conformance with appropriate test standards, or experimental testing where there might not be one specific test standard covering the new product or material. ETL has applied for recognition in the first category.

Follow-Up Procedures

Section 1910.7(b)(2) requires that the NRTL shall provide certain follow-up procedures to the extent necessary for the particular equipment or material to be listed, labeled or accepted. These include implementation of control procedures for identifying the listed or labeled equipment or materials, inspecting the production run at factories to assure conformance with test standards, and conducting of field inspections to monitor and assure the proper use of the label.

The Follow-Up Listing Program is the responsibility of the Field Engineering Services Division located at the Cortland site. ETL requires the client/submitter to sign a listing, labeling, and follow-up service agreement and to allow an initial plant inspection prior to applying the laboratory's listing label to the product. This initial inspection is for the purpose of reviewing the client's quality control program and its ability to conduct any production line tests required by the standard. Follow-up inspections on actively produced products are conducted at the manufacturing site on a quarterly basis. ETL conducts unannounced inspections and selects random samples of the listed products and components for inspection and test at any time. The laboratory has written procedures for conducting these inspections. Follow-up inspections are scheduled by the Manager of the Field Engineering Services and assigned to selected field inspectors under contract to ETL. Any discrepancies discovered between the product and the listing report during the inspection are documented and reported to the laboratory. The use of the laboratory's listing mark is suspended until corrective action is taken to resolve the discrepancies. Field inspectors are audited by the Field Engineering Office at least once each year. ETL has the right to notify vendors, authorities, potential users, and others of an improper or unauthorized use of its mark. The printing and distribution of the listing label is controlled by ETL. The manufacturer must account for all labels.

Field inspections may be necessary under various circumstances. The determination on whether to conduct these field inspections routinely, sporadically, or not at all for a given product, will depend upon the results of the factory follow-up and other relevant considerations. As an example, field inspections may be appropriate when the laboratory has reason to believe that its mark or label is being improperly used. Such belief could result from observed events or information from complainants. Another situation necessitating a field inspection could arise where it is impractical to conduct regular factory inspections because of a limited production schedule. It is expected that the decision on conducting field inspections will be continually reevaluated to fit the circumstances. ETL, in the written terms and conditions of its follow-up services, states that it will make periodic examinations or tests of products at the factory and may, from time to time, select samples from the factory, the open-market, or elsewhere to be sent to a ETL testing station for examination or test to determine compliance with ETL's requirements.

The on-site review demonstrated that ETL has experience with a follow-up program to correct product problems and insure the integrity of the label. Moreover, OSHA will periodicially review the follow-up procedures to evaluate their efficacy.

Independence

Section 1910.7(b)(3) requires that the NRTL be completely independent of employers subject to the tested equipment requirements and of any manufacturer or vendor of equipment or materials being tested. The applicant stated in its application that, with reference to services performed, there are no managerial affiliations with any producer, supplier, or vendor, and there are no securities investments or stock options in the product line. Furthermore, the employment security of personnel is free from influence by any producer, supplier, or vendor and, finally, the laboratory is not owned, operated, or controlled by any producer, supplier or vendor.

ETL has stated that it will maintain this same level of independence throughout its existence as a Nationally Recognized Testing Laboratory.

Creditable Reports/Complaint Handling

Section 1910.7(b)(4) provides that an OSHA recognized NRTL must maintain effective procedures for producing creditable findings and reports that are objective and without bias. The laboratory, in order to be recognized, must also maintain effective procedures for handling complaints under a fair and reasonable system.

The ETL application as well as the on-site review report indicate that ETL does maintain effective procedures for producing creditable findings and reports that are objective. As part of the review, several test reports were reviewed and found to be consistent with the intent of 1910.7(b)(4)(i) to produce creditable findings and reports. This requirement is, however, essentially procedural in nature (see 53 FR at 12111, 4/12/88). OSHA believes that its evaluation of ETL's capabilities, including its personnel, equipment, facilities, calibration program, and quality assurance program, as well as its independence, among other things, indicates that there are appropriate procedures being implemented to produce objective test reports that are without bias.

The requirement that a laboratory have a fair and reasonable system for handling complaints was intended to allow interested parties an avenue of redress when, for example, it was believed that an item had been improperly labeled or that an inappropriate test procedure had been applied. It was not intended to interfere with any laboratory's recognized responsibility to decide whether to approve, list, label, or certify any particular type of equipment or material which it had tested. Indeed, many of the ANSI test standards include in the preface a statement specifically indicating that an item may not be acceptable even though it may meet all the test criteria. In fact, 29 CFR 1910.7(b)(4)(ii) was intended to help settle complaints and disputes after an item had been approved, listed, labeled, or certified.

One respondent (Ex. 3–7, p. 2) questioned ETL's dispute handling procedure claiming that inconsistent results will be inherent in the program since the product manufacturer is unable to question any of the decision-making by ETL regarding implementation of a test standard for a particular client. The essential ingredient in 29 CFR 1910.7(b)(4)(ii) is that all interested persons have access to a dispute handling system which is both "fair and reasonable" (cf *ASME* v.

Hydrolevel 456 U.S. 556, 102 S.Ct. 1935 (1982)). ETL's appeals procedure, which includes an ad hoc appeals committee appointed by the ETL president, appears to provide a fair and reasonable method of dispute handling.

While ETL's formal appeals procedure was originally limited to disagreements between the client and the laboratory regarding the evaluation and testing of products to a standard, it has since been expanded to address and resolve complaints from end users and other interested parties regarding products listed by ETL.

One commentator (Ex. 3–7, p.3) objected to the lack of coverage of dispute resolution in the ETL application, noting that no information is presented describing the ETL appeals procedure. A written appeals procedure describing the hierarchy of appeals and assuring procedural safeguards has been included in the Laboratory's Quality Control Manual (Ex. 5). OSHA believes that the ETL appeals procedures, as detailed in this Quality Control Manual, are consistent with the requirement that a recognized NRTL maintain effective procedures for handling complaints and disputes under a fair and reasonable system.

Test Standards

Section 1910.7 requires that a nationally recognized testing laboratory use "appropriate test standards". The regulation defines an appropriate test standard as a document which specifies the safety requirements for specific equipment or a class of equipment and is recognized in the United States as providing adequate level of safety, compatible with and maintained current with periodic revisions of applicable national codes, and developed by a standards developing organization under a system of providing for broad input from interested parties § 1910.7(c)(1), (2), and (3)). Section 1910.7 also specifies as "appropriate" any standard that is currently designated as an ANSI safety designated product standard or an ASTM test standard used for evaluation of products or materials. (See § 1910.7(c)(4)). Laboratories may also use other test standards that the Assistant Secretary of Labor has evaluated to determine that such standard provides an adequate level of safety. (See § 1910.7(d)). In this case, ETL has indicated that it will use the ANSI, ANSI/UL and UL test standards listed below. The ANSI and ANSI/UL standards are appropriate test standards within the meaning of 29 CFR 1910.7 (b) and (c)(4). All of the UL test standards which ETL has applied to use, with the exception of nine, have also been adopted by ANSI. Eight of these nine UL standards (UL No's. 141, 416, 544, 733, 763, 795, 1059, and 1244) have not been considered for adoption by ANSI as ANSI/UL standards since similar standards sponsored by other organizations have previously received ANSI approval. The one remaining UL standard (UL 775) is either in canvass or about to be canvassed to establish a consensus for approval by ANSI. As to the non-ANSI UL test standards ETL has applied to use, OSHA has examined the status of these Underwriters Laboratories Inc. (UL) Standards for Safety and, in particular, the method of their development, revision and implementation and has determined that they are appropriate test standards under the criteria described in 29 CFR 1910.7(c) (1), (2), and (3). That is, these standards specify the safety requirements for specific equipment or classes of equipment and are recognized in the United States as safety standards providing adequate levels of safety; they are compatible with and remain current with periodic revisions of applicable national codes and installation standards (that is, they have all been revised within the past five years); and they are developed by a standards developing organization (i.e., UL) under a method providing for input and consideration of views of industry groups, experts, users, consumers, governmental authorities, and others having broad experience in the safety fields involved.

One of the commentators (Ex. 3–7, p. 2) stated that the test standards "are listed without their date of issue" and raised the spectre of inconsistency; this commentator believes "there is need for assurance of testing to latest versions of the standard". ETL tests to the latest published versions of the test standards. ETL indicated that part of its testing includes a Revision Subscription Service to automatically obtain the latest revisions of the standards. The main (Cortland) laboratory maintains a central standards library and distributes updates of the standards to the engineers at the Cortland site, and to the Norcross laboratory. The South San Francisco laboratory receives copies of the standards directly from Underwriters Laboratories Inc. (see Ex. 2B, p. 5, Ex. 2C, p. 5, and Ex. 2D, p. 5). The procedures identified by ETL indicate its capability to test to the latest revisions of the test standards. This is the same level of assurance that would be required of other recognized laboratories. The procedures to be followed in the event of test standard changes are adequately stated in Appendix A of 29 CFR 1910.7. The commentator also questioned whether the ANSI implementation of each revision or the UL implementation of each revision of an ANSI/UL standard will be applicable. The standard effective date as established by UL is generally applicable. It would be a rarity if such a situation would result in potentially different levels of safety. If such were the case, however, ETL would use the more safe application. (Ex. 4–1, p. 2).

Other Issues

One of the respondents (Ex. 3–7) raised several issues that were not directly relevant to the issue of ETL meeting the definition of an NRTL as set forth in 29 CFR 1910.7. These comments were general criticisms of the standard. For example, one such comment focused on the need to designate and use a single test standard for each product. (Ex. 3–7, pp. 1–2). This issue had been raised by the same respondent during the rulemaking proceeding and was discussed and resolved in the preamble to the final rule (see 53 FR at 12108–12109, 4/12/88). Since these general issues were raised and resolved during the promulgation of the standard it is not now timely to comment on them.

Two other issues, directly related to ETL, were also raised. One commentator (Ex. 3–7, p. 4) suggested that ETL's organizational chart, showing a "Design Sources" unit under the Business Development Group, would constitute a potential "conflict of interest if (the) laboratory participates in any manner in the design of a product which the laboratory is to evaluate". In certain circumstances such action might compromise the ability of a laboratory to produce test results which are objective and unbiased and might adversely impact their independence. However, ETL stipulates that the "Design Sources" unit shown on their organizational chart refers to test facility design services and not product design services (see Ex. 4–1, p. 2). OSHA finds ETL's response to be adequate and believes no further investigation is necessary.

The second issue raised by the respondent (Ex. 3–7, p. 4), had to do with the ETL application description of an "on-site" test procedure performed at a location where an item of commercial or industrial equipment is installed. The respondent believes that, while that type of testing may be valid, it should be the exception rather than the rule and should only include custom installations where the manufacturer's self-certification is usually the only available

option. The applicant's response to this comment (Ex. 4–1, p. 3) is that ETL's test activity is generally limited to equipment already installed where this is the only alternative to manufacturer self-certification. This service utilizes a special serialized label to identify it as distinct from the labeling and listing program. Reports are maintained against the specific individual pieces of apparatus and referenced against the serial number appearing on the label. In any event, this type of testing is outside of the scope of 29 CFR 1910.7 and, therefore, is not considered to be part of this recognition.

Final Decision and Order

Based upon a preponderance of the evidence resulting from an examination of the complete application, the supporting documentation, the OSHA staff finding including the on-site review report, and the comments presented during the public review and comment period, OSHA finds that ETL Testing Laboratories, Inc., has met the requirements of 29 CFR 1910.7 to be recognized by OSHA as a Nationally Recognized Testing Laboratory to test and certify certain equipment or materials.

Pursuant to the authority in 29 CFR 1910.7, ETL Testing Laboratories, Inc., is hereby recognized as a Nationally Recognized Testing Laboratory subject to the conditions listed below. This recognition is limited to equipment or materials which, under 29 CFR 1910, require testing, listing, labeling, approval, acceptance, or certification, by a Nationally Recognized Testing Laboratory. This recognition is limited to the use of the following test standards for the testing and certification of equipment or materials included within the scope of these standards.

ETL has stated that all the standards in these categories are used to test equipment or materials which may be used in environments under OSHA's jurisdiction:

ANSI/UL 4 Armored Cable
ANSI/UL 20 General-Use Snap Switches
ANSI/UL 45 Portable Electric Tools
ANSI/UL 48 Electric Signs
ANSI/UL 50 Electrical Cabinets and Boxes
ANSI/UL 67 Electric Panelboards
ANSI/UL 73 Electric Motor-Operated Appliances
ANSI/UL 82 Electric Gardening Appliances
ANSI/UL 83 Thermoplastic-Insulated Wires and Cables
ANSI/UL 94 Tests for Flammability of Plastic Materials for Parts in Devices and Appliances
ANSI/UL 98 Enclosed and Dead-Front Switches
ANSI/UL 114 Electric Office Appliances and Business Equipment
ANSI/UL 122 Photographic Equipment
ANSI/UL 130 Electric Heating Pads
UL 141 Garment Finishing Appliances
ANSI/UL 153 Portable Electric Lamps
ANSI/UL 174 Household Electric Storage-Tank Water Heaters
ANSI/UL 187 X-Ray Equipment
ANSI/UL 197 Commercial Electric Cooking Appliances
ANSI/UL 231 Electrical Power Outlets
ANSI/UL 250 Household Refrigerators and Freezers
ANSI/UL 291 Automated Teller Systems
ANSI/UL 296 Oil Burners
ANSI/UL 298 Portable Electric Hand Lamps
ANSI/UL 303 Refrigeration and Air Conditioning Condensing and Compressor Units
ANSI/UL 310 Electrical Quick-Connect Terminals
ANSI/UL 325 Door, Drapery, Gate, Louver, and Window Operators and Systems
ANSI/UL 399 Drinking-Water Coolers
ANSI/UL 412 Refrigeration Unit Coolers
UL 416 Refrigerated Medical Equipment
ANSI/UL 427 Refrigerating Units
ANSI/UL 429 Electrically Operated Valves
ANSI/UL 430 Electric Waste Disposers
ANSI/UL 464 Audible Signal Appliances
ANSI/UL 465 Central Cooling Air Conditioners
ANSI/UL 466 Electric Scales
ANSI/UL 471 Commercial Refrigerators and Freezers
ANSI/UL 474 Dehumidifiers
ANSI/UL 478 Information-Processing and Business Equipment
ANSI/UL 482 Portable Sun/Heat Lamps
ANSI/UL 484 Room Air Conditioners
ANSI/UL 489 Molded-Case Circuit Breakers and Circuit-Breaker Enclosures
ANSI/UL 496 Edison Base Lampholders
ANSI/UL 497 Protectors for Communication Circuits
ANSI/UL 498 Electrical Attachment Plugs and Receptacles
ANSI/UL 499 Electric Heating Appliances
ANSI/UL 506 Speciality Transformers
ANSI/UL 507 Electric Fans
ANSI/UL 508 Electric Industrial Control Equipment
ANSI/UL 519 Impedance-Protected Motors
ANSI/UL 541 Refrigerated Vending Machines
ANSI/UL 542 Lampholders, Starters, and Starter Holders for Fluorescent Lamps
UL 544 Electric Medical and Dental Equipment
ANSI/UL 547 Thermal Protectors for Electric Motors
ANSI/UL 559 Heat Pumps
ANSI/UL 560 Electric Home-Laundry Equipment
ANSI/UL 563 Ice Makers
ANSI/UL 574 Electric Oil Heaters
ANSI/UL 609 Local Burglar-Alarm Units and Systems
ANSI/UL 621 Ice Cream Makers
ANSI/UL 639 Intrusion-Detection Units
ANSI/UL 705 Power Ventilators
ANSI/UL 726 Oil-Fired Boiler Assemblies
ANSI/UL Oil-Fired Central Furnances
ANSI/UL 731 Oil-Fired Unit Heaters
ANSI/UL 732 Oil-Fired Water Heaters
UL 733 Oil-Fired Air Heaters and Direct-Fired Heaters
ANSI/UL 749 Household Electric Dishwashers
ANSI/UL 751 Vending Machines
UL 763 Motor-Operated Commercial Food Preparing Machines
UL 775 Graphic Arts Equipment
ANSI/UL 778 Motor-Operated Water Pumps
UL 795 Commercial-Industrial Gas-Heating Equipment
ANSI/UL 796 Electrical Printed-Wiring Boards
ANSI/UL 813 Commercial Audio Equipment
ANSI/UL 817 Cord Sets and Power-Supply Cords
ANSI/UL 834 Heating, Water Supply, and Power Boilers—Electric
ANSI/UL 845 Motor Control Centers
ANSI/UL 854 Service-Entrance Cables
ANSI/UL 858 Household Electric Ranges
ANSI/UL 863 Time-Indicating and Recording Appliances
ANSI/UL 867 Electrostatic Air Cleaners
ANSI/UL 869 Electric Service Equipment
ANSI/UL 873 Elecrical Temperature-Indicating and Regulating Equipment
ANSI/UL 883 Fan-Coil Units and Room Fan-Heater Units
ANSI/UL 891 Dead-Front Electrical Switchboards
ANSI/UL 913 Intrinsically Safe Apparatus and Associated Apparatus for Use in Class I, II, and III, Division 1, Hazardous Locations
ANSI/UL 917 Clock-Operated Switches
ANSI/UL 921 Commercial Electric Dishwashers
ANSI/UL 923 Microwave Cooking Appliances
ANSI/UL 935 Fluorescent-Lamp Ballasts
ANSI/UL 943 Ground-Fault Circuit Interrupters
ANSI/UL 969 Marking and Labeling Systems
ANSI/UL Motor-Operated Household Food Preparing Machines
ANSI/UL 984 Hermetic Refrigerant Motor-Compressors
ANSI/UL 987 Stationary and Fixed Electric Tools
ANSI/UL 998 Humidifers
ANSI/UL 1004 Electric Motors
ANSI/UL 1005 Electric Flatirons
ANSI/UL 1008 Automatic Transfer Switches
ANSI/UL 1012 Power Supplies
ANSI/UL 1017 Electric Vaccum Cleaner Machines and Blower Cleaners
ANSI/UL 1020 Thermal Cutoffs for Use in Electrical Appliances and Components
ANSI/UL 1025 Electric Air Heaters
ANSI/UL 1026 Household Electric Cooking and Food-Serving Appliances
ANSI/UL 1029 High-Intensity-Discharge Lamp Ballasts
ANSI/UL 1030 Sheathed Heating Elements
ANSI/UL 1042 Electric Baseboard Heating Equipment
ANSI/UL 1054 Special-Use Switches
UL 1059 Electrical Terminal Blocks
ANSI/UL 1077 Supplementary Protectors for Use in Electrical Equipment
ANSI/UL 1081 Electric Swimming Pool Pumps, Filters, and Chlorinators
ANSI/UL 1082 Household Electric Coffee Makers and Brewing-Type Appliances
ANSI/UL 1083 Household Electric Skillets and Frying-Type Appliances

ANSI/UL 1086 Household Trash Compactors
ANSI/UL 1096 Electric Central Air-Heating Equipment
ANSI/UL 1097 Double Insulation Systems for Use in Electrical Equipment
ANSI/UL 1236 Electric Battery Chargers
UL 1244 Electrical and Electronic Measuring and Testing Equipment
ANSI/UL 1261 Electric Water Heaters for Pools and Tubs
ANSI/UL 1262 Laboratory Equipment
ANSI/UL 1270 Radio Receivers, Audio Systems, and Accessories
ANSI/UL 1410 Television Receivers and High-Voltage Video Products
ANSI/UL 1411 Transformers and Motor Transformers for Use in Audio-, Radio-, and Television-Type Appliances
ANSI/UL 1414 Across-the-Line, Antenna-Coupling, and Line-By-Pass Capacitors for Radio- and Television-Type Appliances
ANSI/UL 1433 Control Centers for Changing Message Type Electric Signs
ANSI/UL 1436 Outlet Circuit Testers and Similar Indicating Devices
ANSI/UL 1438 Household Electric Drip-Type Coffee Makers
ANSI/UL 1453 Electric Booster and Commercial Storage Tank Water Heaters
ANSI/UL 1564 Industrial Battery Chargers
ANSI/UL 1570 Fluorescent Lighting Fixtures
ANSI/UL 1571 Incandescent Lighting Fixtures
ANSI/UL 1572 High Intensity Discharge Lighting Fixtures
ANSI/UL 1585 Class 2 and Class 3 Transformers
ANSI A90.1 Safety Standard for Belt Manlifts

For purposes of certification using the following standards, only equipment designed for use with "liquefied petroleum gas" (also known as "LP-Gas" or "LPG") is intended.

ANSI Z21.1 Household Cooking Gas Appliances
ANSI Z21.5 Gas Clothes Dryers
ANSI Z21.10 Gas Water Heaters
ANSI Z21.11 Unvented Room Heaters
ANSI Z21.12 Draft Hoods
ANSI Z21.13 Gas-Fired Low-Pressue Steam and Hot Water Heating Boilers
ANSI Z21.15 Manually Operated Gas Valves
ANSI Z21.17 Domestic Gas Conversion Burners
ANSI Z21.18 Gas Appliance Pressure Regulators
ANSI Z21.20 Automatic Gas Ignition Systems and Components
ANSI Z21.21 Automatic Valves for Gas Appliances
ANSI Z21.23 Gas Appliance Thermostats
ANSI Z21.35 Gas Filters on Appliances
ANSI Z21.40.1 Gas-Fired Absorption Summer Air Conditioning Appliances
ANSI Z21.47 Gas-Fired Central Furnaces
ANSI Z21.48 Gas-Fired Gravity and Fan Type Floor Furnaces
ANSI Z21.49 Gas-Type Gravity and Fan Type Vented Wall Furnaces
ANSI Z21.56 Gas-Fired Pool Heaters
ANSI Z83.4 Direct Gas-Fired Make-Up Air Heaters
ANSI Z83.8 Gas Unit Heaters
ANSI Z83.9 Gas-Fired Duct Furnaces
ANSI Z83.11 Gas Food Service Equipment—Ranges and Unit Broilers
ANSI Z83.12 Gas Food Service Equipment—Baking and Roasting Ovens
ANSI Z83.13 Gas Food Service Equipment—Deep Fat Fryers
ANSI Z83.14 Gas Food Service Equipment—Counter Appliances
ANSI Z83.15 Gas Food Service Equipment—Kettles, Steam Cookers, and Steam Generators
ANSI Z83.16 Gas-Fired Unvented Commercial and Industrial Heaters

ETL Testing Laboratories, Inc., also must abide by the following conditions of its recognition, in addition to those already required by 29 CFR 1910.7:

This recognition does not apply to any aspect of the "FACTS" program, under which ETL might rely on some test results from certain highly qualified manufacturers (clients) in the evaluation of a product for listing or approval;

The Occupational Safety and Health Administration shall be allowed access to ETL's facilities and records for purposes of ascertaining continuing compliance with the terms of its recognition and to investigate as OSHA deems necessary;

If ETL has reason to doubt the efficacy of any test standard it is using under this program, it shall promptly inform the test standard developing organization of this fact and provide that organization with appropriate relevant information upon which its concerns are based;

ETL shall not engage in or permit others to engage in any misrepresentation of the scope or conditions of its recognition. As part of this condition, ETL agrees that it will allow no representation that it is either a recognized or an accredited Nationally Recognized Testing Laboratory (NRTL) without clearly indicating the specific equipment or material to which this recognition is tied, or that its recognition is limited to certain products;

ETL will continue to meet the requirements for recognition in all areas for which it has applied; and

ETL will cooperate with OSHA at all times to assure compliance with the letter as well as the spirit of its recognition and 29 CFR 1910.7.

Effective Date: This recognition will become effective on September 13, 1989, and will be valid for a period of five years from that date, until September 13, 1994, unless terminated prior to that date, in accordance with 29 CFR 1910.7.

Signed at Washington, DC, this 7th day of September 1989.

Alan C. McMillan,

Acting Assistant Secretary.

[FR Doc. 89–21470 Filed 9–12–89; 8:45 am]

BILLING CODE 4510-26-M

Puerto Rico State Standards; Approval

1. Background

Part 1953 of title 29, Code of Federal Regulations prescribes procedures under section 18 of the Occupational Safety and Health Act of 1970 (hereinafter called the Act) by which the Regional Administrator for Occupational Safety and Health (hereinafter called the Regional Administrator) under a delegation of authority from the Assistant Secretary of Labor for Occupational Safety and Health (hereinafter called the Assistant Secretary), (29 CFR 1953.4) will review and approve standards promulgated pursuant to a State Plan which has been approved in accordance with section 18(c) of the Act and 29 CFR part 1902. On August 30, 1977, notice was published in the **Federal Register** (42 FR 43628) of the approval of the Puerto Rico plan and the adoption of subpart FF to part 1952 containing the decision.

The Puerto Rico plan provides for the adoption of Federal standards as State standards by reference. Section 1953.20 29 CFR provides that "where any alteration in the Federal program could have an adverse impact on the 'at least as effective as' status of the State program, a program change supplement to a State plan shall be required."

In response to Federal standards changes, the State has submitted by letter dated November 12, 1987 from Filiberto Cruz Aguila, Assistant Secretary for OSHO, to Regional Administrator James W. Stanley, and incorporated as part of the plan, State standards comparable to the Occupational Safety and Health Administration standards for Hazardous Waste Operations and Emergency Response; Interim Final Rule, 29 CFR 1910.120, as published in the **Federal Register** (51 FR 45654) dated December 19, 1986, and corrections as published in the **Federal Register** (52 FR 16241) dated May 4, 1987. These standards which are contained in the Puerto Rico Regulations, Number Four (equivalent to 29 CFR 1910) were promulgated by resolutions adopted by the Puerto Rico Department of Labor and Human Resources on September 14, 1987, pursuant to the Puerto Rico Act Number 16 and Chapter 52 of the Puerto Rico Rules and Regulations Act of 1958.

The State has also submitted by letter dated January 19, 1988, and incorporated as part of the plan, State standards comparable to the Occupational Safety and Health Administration standards for Commercial Diving—Final Rule; Technical Amendments, 29 CFR 1910.430, as published in the **Federal Register** (51 FR 33033) dated September 18, 1986; Accident Prevention Tags, 29 CFR 1910.145, as published in the **Federal Register** (51 FR 33251) dated September 19, 1986; Recordkeeping Requirements for Tests, Inspections, and Maintenance Checks; 29 CFR 1910 and 1915, as published in the **Federal Register** (51 FR 34552) dated September 29, 1986; and Hazard Communication; Definition of Trade Secret and Disclosure of Trade Secrets to Employees, Designated Representatives and Nurses, 29 CFR 1910.1200, as published in the **Federal Register** (52 FR 34590) dated September 30, 1986.

These standards which are contained in the Puerto Rico Rules and Regulations, Number Four (equivalent to 29 CFR 1910) were promulgated by resolution adopted by the Puerto Rico Department of Labor and Human Resources on July 1, 1987, pursuant to the Puerto Rico Act Number 16 and Chapter 52 of the Puerto Rico Rules and Regulations Act of 1958.

2. Decision

Having reviewed the State submission in comparison with the Federal standards it has been determined that the State standards are identical to the Federal standards and accordingly are hereby approved.

3. Location of Supplement for Inspection and Copying

A copy of the standard supplement, along with the approved plan, may be inspected and copied during normal business hours at the following locations: Office of the Regional Administrator, Occupational Safety and Health Administration, Room 670, 201 Varick Street, New York, New York 10014; Puerto Rico Department of Labor and Human Resources, Prudencio Rivera Martinez Bldg., Munoz Rivera Avenue 505, Hato Rey, Puerto Rico 00917; and the Directorate of Federal-State operations, Room N3476, 200 Constitution Avenue NW., Washington, DC 20210.

4. Public Participation

Under 29 CFR 1953.2(c), the Assistant Secretary may prescribe alternative procedures to expedite the review process or for other good cause which may be consistent with applicable laws. The Assistant Secretary finds that good cause exists for not publishing the supplement to the Puerto Rico State Plan as a proposed change and making the Regional Administrator's approval effective upon publication for the following reasons:

1. The standards are identical to the Federal standards which were promulgated in accordance with Federal law meeting requirements for public participation.
2. The standards were adopted in accordance with the procedural requirement of State Law and further participation would be unnecessary.

The decision is effective September 13, 1989 (sec. 18 Pub. L. 91–596, 84 Stat. 1608 (29 U.S.C. 667)). Signed at New York City, New York, this seventh day of March 1988.

James W. Stanley,

Regional Administrator.

[FR Doc. 89–21471 Filed 9–12–89; 8:45 am]

BILLING CODE 4510-26-M

NATIONAL COMMISSION ON CHILDREN

Hearing

Background

The National Commission on Children was created by Public Law 100–203, December 22, 1987 as an amendment to the Social Security Act. The purpose of the law is to establish a nonpartisan Commission directed to study the problems of children in the areas of health, education, social services, income security, and tax policy.

The powers of the Commission are vested in Commissioners consisting of 36 voting members as follows:

1. Twelve members appointed by the President.
2. Twelve members appointed by the Speaker of the House of Representatives.
3. Twelve members appointed by the President pro tempore of the Senate.

This notice announces the first hearing of the National Commission on Children to be held in Chicago, Illinois.

Time: 1:00 pm–4:30 pm, Monday, September 25, 1989.

Place: Dirksen Federal Building, Ceremonial Court Room, 219 Dearborn Street, Chicago, Illinois.

Status: 1:00 pm–4:30 pm, open to the public.

Agenda: Healthy Mothers–Healthy Babies.

Contact: Jeannine Atalay, (202) 254–3800.

Dated: Sepember 7, 1989.

John D. Rockefeller IV,

Chairman, National Commission on Children.

[FR Doc. 89–21581 Filed 9–12–89; 8:45 am]

BILLING CODE 6820-37-M

NUCLEAR REGULATORY COMMISSION

Advisory Committee on Reactor Safeguards Subcommittee on Human Factors; Meeting

The ACRS Subcommittee on Human Factors will hold a meeting on September 27, 1989, Room P–110, 7920 Norfolk Avenue, Bethesda, MD.

The entire meeting will be open to public attendance.

The agenda for the subject meeting shall be as follows: *Wednesday, September 27, 1988–8:30 a.m. until the conclusion of business.*

The Subcommittee will review the proposed Access Authorization Rule, and performance indicators.

Oral statements may be presented by members of the public with the concurrence of the Subcommittee Chairman; written statements will be accepted and made available to the Committee. Recordings will be permitted only during those portions of the meeting when a transcript is being kept, and questions may be asked only by members of the Subcommittee, its consultants, and Staff. Persons desiring to make oral statements should notify the ACRS staff member named below as far in advance as is practicable so that appropriate arrangements can be made.

During the initial portion of the meeting, the Subcommittee, along with any of its consultants who may be present, may exchange preliminary views regarding matters to be considered during the balance of the meeting.

The Subcommittee will then hear presentations by and hold discussions with representatives of the NRC Staff, its consultants, and other interested persons regarding this review.

Further information regarding topics to be discussed or whether the meeting has been cancelled or rescheduled can be obtained by a prepaid telephone call to the cognizant ACRS staff member, Mr. Elpidio G. Igne (telephone 301/492–8192) between 7:30 a.m. and 4:15 p.m. Persons planning to attend this meeting are urged to contact the above named individual one or two days before the scheduled meeting to be advised of any changes in schedule, etc., which may have occurred.

Dated: September 6, 1989.

Gary R. Quittschreiber,

Chief, Project Review Branch No. 2.

BILLING CODE 7590-01-M

[Docket No. 50-255]

Consumers Power Co.; Consideration of Issuance of Amendment to Provisional Operating License and Proposed No Significant Hazards Consideration Determination and Opportunity for Hearing

The U.S. Nuclear Regulatory Commission (the Commission) is considering issuance of an amendment to Provisional Operating License No. DPR–20, issued to Consumers Power Company (the licensee), for operation of the Palisades Plant, located in Van Buren County, Michigan.

The proposed amendment would revise the Technical Specifications (TS) related to the applicability of limiting conditions for operation (LCO) and surveillance requirements of TS Tables 3.17.1, 4.1.1, 4.1.2 and section 4.0, based in part on recommendations provided by the staff in Generic Letter (GL) 87–09. Several changes of an administrative nature are also requested in accordance with the licensee's application for amendment dated April 3, 1989.

Specification 4.0.3 is added to incorporate an appropriate time period for completion of missed surveillance testing prior to initiating the Action Requirements, when the Action Requirements provide a restoration time of less than 24 hours.

Specification 4.0.4 is added to strengthen the definition of the plant surveillance program and to provide conformance with the Standard Technical Specifications (STS).

Specification 4.0.5 is added to consolidate requirements for inservice inspection of ASME Code Class 1, 2, and 3 components. The new specification includes requirements previously addressed by Specification 4.3 and adds appropriate requirements for inservice testing of valves. The portions of Specifications 4.3 superseded by this revision are deleted.

TS Tables 3.17.1, 4.1.1, and 4.1.2 are revised to identify operational conditions during which certain reactor protection system instrumentation is required to be operable, and when associated instrument checks are required. These changes are needed to ensure consistency with the proposed revisions to Section 4.0.

Several administrative changes deleting outdated references and statements, and the addition of relevant Basis statements for the changes discussed above, are also included.

Before the issuance of the proposed license amendment, the Commission will have made findings required by the Atomic Energy Act of 1954, as amended (the Act) and the Commission's regulations.

The Commission has made a proposed determination that the request for amendment involves no significant hazards consideration. Under the Commission's regulations in 10 CFR 50.92, this means that operation of the facility in accordance with the proposed amendment would not (1) involve a significant increase in the probability or consequences or an accident previously evaluated; or (2) create the possibility of a new or different kind of accident from any accident previously evaluated; or (3) involve a significant reduction in a margin of safety.

The licensee has evaluated the proposed changes against the above three standards as required by 10 CFR 50.91(a) and has concluded:

1. The proposed change will not involve a significant increase in the probability or consequences of any accident previously evaluated. The proposed changes to the TS do not involve physical changes to the plant. The changes do include requirements for testing of ASME Class 1, 2, and 3 valves. This testing is presently accomplished under an administratively controlled program at Palisades and, therefore, no additional surveillance tests are required. The addition of reactor protection system (RPS) instrumentation operability requirements and exceptions to when certain RPS surveillances are required to be performed is consistent with the plant safety analysis and the STS.

2. The proposed change does not create the possibility of a new or different kind of accident from any accident previously evaluated. No physical modification to the plant is involved in this proposed change. The operability and surveillance requirements for RPS instrumentation are not reduced with respect to the safety analysis.

3. The proposed change does not involve a significant reduction in a margin of safety. The addition of operabillity/applicability requirements for RPS instrumentation to TS Table 3.17.1 is consistent with the safety analysis requirements. The revisions to Tables 4.1.1 and 4.1.2 allow surveillances to be omitted when the RPS equipment is not required to be operable. The addition of Specifications 4.0.3, 4.0.4, 4.0.5, and a Basis statement for Section 4.0 serves to strengthen the definition of the Palisades Plant surveillance program and will ensure that interpretation of the specifications of Section 4.0 will be consistent with their intent. Incorporation of a time limit into Specification 4.0.3 for completion of missed surveillances prior to initiating the applicable Action Requirement balances the risks associated with the time allowance, against the risks associated with the potential for plant upset and challenge to safety systems when the alternative is a shutdown to comply with Action Requirements before the surveillance can be completed. The addition of Specification 4.0.5 includes inservice testing requirements for both pumps and valves versus the present 4.3 requirements which apply only to testing of pumps. Therefore, there is no reduction in a margin of safety.

The staff has reviewed the licensee's no significant hazards consideration determination and agrees with the licensee's analysis. Therefore, the staff proposes to determine that the application for amendment involves no significant hazards consideration.

The staff also concludes that the licensee's no signficant hazards determination given above would apply to the administrative changes identified.

The Commission is seeking public comments on this proposed determination. Any comments received within 30 days after the date of publication of this notice will be considered in making any final determination. The Commission will not normally make a final determination unless it receives a request for a hearing.

Written comments may be submitted by mail to the Regulatory Publications Branch, Division of Freedom of Information and Publications Services, Office of Administration, U.S. Nuclear Regulatory Commission, Washington, DC 20555, and should cite the publication date and page number of this notice. Written comments may also be delivered to Room P–216, Phillips Building, 7920 Norfolk Avenue, Bethesda, Maryland, from 8:15 a.m. to 4 p.m. Copies of written comments received may be examined at the NRC Public Document Room, 2120 L Street NW., Washington, DC. The filing of requests for hearing and petitions for leave to intervene is discussed below.

By October 13, 1989, the licensee may file a request for a hearing with respect to issuance of the amendment to the subject provisional operating license and any person whose interest may be affected by this proceeding and who wishes to participate as a party in the proceeding must file a written petition for leave to intervene. Request for a hearing and petitions for leave to intervene must be filed in accordance with the Commission's "Rules of Practice for Domestic Licensing Proceedings" in 10 CFR part 2. If a request for a hearing or petition for leave to intervene is filed by the above date, the Commission or an Atomic Safety and Licensing Board, designated by the Commission or by the Chairman of the Atomic Safety and Licensing Board Panel, will rule on the request and/or petition, and the Secretary or the designated Atomic Safety and Licensing Board will issue a notice of hearing or an appropriate order.

As required by 10 CFR 2.714, a petition for leave to intervene shall set forth with particularity the interest of the petitioner in the proceeding, and how that interest may be affected by the results of the proceeding. The petition should specifically explain the reasons why intervention should be permitted with particular reference to the following factors: (1) The nature of the petitioner's right under the Act to be made a party to the proceeding; (2) the nature and extent of the petitioner's property, financial, or other interest in the proceeding; and (3) the possible effect of any order which may be entered in the proceeding on the petitioner's interest. The petition should also identify the specific aspect(s) of the subject matter of the proceeding as to which the petitioner wishes to intervene. Any person who has filed a petition for leave to intervene or who has been admitted as a party may amend the petition without requesting leave of the Board up to fifteen (15) days prior to the first prehearing conference scheduled in the proceeding, but such an amended petition must satisfy the specificity requirements described above.

Not later than fifteen (15) days prior to the first prehearing conference scheduled in the proceeding, a petitioner shall file a supplement to the petition to intervene which must include a list of the contentions which are sought to litigated in the matter, and the bases for each contention set forth with reasonable specificity. Contentions shall be limited to matters within the scope of the amendment under consideration. A petitioner who fails to file such a supplement which satisfies these requirements with respect to at least one contention will not be permitted to participate as a party.

Those permitted to intervene become parties to the proceeding, subject to any limitations in the order granting leave to intervene, and have the opportunity to participate fully in the conduct of the hearing, including the opportunity to present evidence and cross-examine witnesses.

If a hearing is requested, the Commission will make a final determination on the issue of no significant hazards consideration. The final determination will serve to decide when the hearing is held.

If the final determination is that the request for amendment involves no significant hazards consideration, the Commission may issue the amendment and make it effective, notwithstanding the request for a hearing. Any hearing held would take place after issuance of the amendment.

If the final determination is that the amendment involves a significant hazards consideration, any hearing held would take place before the issuance of any amendment.

Normally, the Commission will not issue the amendment until the expiration of the 30-day notice period. However, should circumstances change during the notice period such that failure to act in a timely way would result, for example, in derating or shutdown of the facility, the Commission may issue the license amendment before the expiration of the 30-day notice period, provided that its final determination is that the amendment involves no significant hazards consideration. The final determination will consider all public and State comments received. Should the Commission take this action, it will publish a notice of issuance and provide for opportunity for a hearing after issuance. The Commission expects that the need to take this action will occur very infrequently.

A request for a hearing or a petition for leave to intervene must be filed with the Secretary of the Commission, U.S. Nuclear Regulatory Commission, Washington, DC 20555, Attention: Docketing and Service Branch, or may be delivered to the Commission's Public Document Room, 2120 L Street NW., Washington, DC, by the above date. Where petitions are filed during the last ten (10) days of the notice period, it is requested that the petitioner promptly so inform the Commission by a toll-free telephone call to Western Union at (800) 325–6000 (in Missouri (800) 342–6700). The Western Union operator should be given Datagram Identification Number 3737 and the following message addressed to John O. Thoma, Acting Director, Project Directorate III–1; petitioner's name and telephone number; date petition was mailed; plant name; and publication date and page number of this **Federal Register** notice. A copy of the petition should also be sent to the Office of the General Counsel, U.S. Nuclear Regulatory Commission, Washington, DC 20555, and to Judd L. Bacon, Esquire, Consumers Power Company, 212 West Michigan Avenue, Jackson, Michigan 49201, attorney for the licensee.

Nontimely filings of petitions for leave to intervene, amended petitions, supplemental petitions and/or requests for hearing will not be entertained absent a determination by the Commission, the presiding officer or the presiding Atomic Safety and Licensing Board, designated to rule on the petition and/or request, that the petitioner has made a substantial showing of good cause for the granting of a late petition and/or request. That determination will be based upon a balancing of the factors specified in 10 CFR 2.714(a)(1)(i)–(v) and 2.714(d).

For further details with respect to this action, see the application for amendment which is available for public inspection at the Commission's Public Document Room, 2120 L Street NW., Washington, DC and at the Van Zoeren Library, Hope College, Holland, Michigan 49423.

Dated at Rockville, Maryland, this 30th day of August 1989.

For the Nuclear Regulatory Commission.

Albert De Agazio,

Acting Director, Project Directorate III–1, Division of Reactor Projects—III, IV, V & Special Projects, Office of Nuclear Reactor Regulation.

SECURITIES AND EXCHANGE COMMISSION

Forms Under Review by Office of Management and Budget

Agency Clearance Officer: Kenneth A. Fogash (202) 272–2142.

Upon Written Request Copy Available From: Securities and Exchange Commission, Public Reference Branch, 450 Fifth Street NW., Washington, DC 20549–1002.

Extension

Form SE, File No. 270–289
Form ID, File No. 270–291
Form ET, File No. 270–290

Notice is hereby given that, pursuant to the Paperwork Reduction Act of 1980 (44 U.S.C. 3501 *et seq.*), the Securities and Exchange Commission has submitted for extension of OMB approval Forms ET, SE, and ID under the Securities Act of 1933, the Securities Exchange Act of 1934, the Public Utility Holding Company Act of 1935, the Trust Indenture Act of 1938, the Investment Advisers Act of 1940 and the Investment Company Act of 1940, for use by registrants voluntarily participating in the Edgar pilot project. The first, Form SE, is used by new registrants to file paper copies of exhibit documents that cannot be transmitted electronically. The second, Form ET, accompanied tapes and diskettes submitted to the Commission. The third, Form ID, is used to obtain company identification numbers, passwords, and personal identification numbers to access to Edgar system.

Each of the estimated 642 respondents using Form SE incurs an average estimated .1 burden hour to comply with the Form requirements. Each of the 283 respondents using Form ET incurs an average .25 burden hour to comply with the Form. Each of the 8,879 respondents using Form ID incurs an average .15 estimated burden hour to comply with the Form.

The estimated average burden hours are solely for purposes of the Paperwork Reduction Act, and are not derived from a comprehensive or even representative sample or study of the costs of the Securities and Exchange Commission's rules and forms.

Direct general comments to Gary Waxman at the address below. Direct any comments concerning the accuracy of the estimated average burden hours for compliance with SEC forms to Kenneth A. Fogash, Deputy Executive Director, 450 Fifth Street NW., Washington, DC 20549-6004, and Gary Waxman, Clearance Officer, Office of Management and Budget [Paperwork Reduction Projects 3235–0327–Form SE, 3235–0328, Form ID, and 3235–0329, Form ET], Room 3208 New Executive Office Building, Washington, DC 20543.

Dated: August 31, 1989.

Shirley E. Hollis,

Assistant Secretary.

BILLING CODE 8010-01-M

[34–27227; File No. 600–24]

Self-Regulatory Organizations; Delta Government Options Corporation; Application for Registration as a Clearing Agency; Request for Additional Comments

September 7, 1989.

On July 29, 1988, Delta Government Options Corporation ("Deltas") filed an application under section 19(a) of the Securities Exchange Act of 1934 ("Act")[1] for registration as a clearing agency under section 17A of the Act.[2] On August 5, 1988, the Commission published notice of Delta's application in the Federal Register and requested comment on the application.[3] On October 7, 1988, Delta filed an amendment to its application and on October 18, 1988, notice of that amendment was published in the Federal Register and comments again were requested.[4] On January 12, 1989, the Commission approved, on a temporary basis for a period of 36 months, pursuant to sections 17A(b)(2) and 19(a) of the Act, Delta's application for registration as a clearing agency.[5]

On August 17, 1989, the U.S. Court of Appeals for the Seventh Circuit ("Court") issued an opinion in *Board of Trade* v. *SEC*, Civ. Doc. Nos. 89–1064 and 89–1449 slip op. (7th Cir. Aug. 17, 1989), in which the Court vacated the Commission's Order temporarily registering Delta as a clearing agency ("Order"), deferring for 120 days after the date of its mandate the effectiveness of that decree. The Commission's Order concluded that Delta, as required by section 17A(b)(3)(A) of the Act, was so organized and had the capacity to comply with the Act and rules and regulations thereunder. The Court held, however, that "(b)efore concluding that Delta's proposed operations could 'comply' with the '34 Act, the Commission had to determine that the (Over-The-Counter Options Trading) System [with which Delta is affiliated] is not an exchange." slip op. at 21. Because the Commission's Order contained no determination as to the status of the system as an exchange, the Court vacated the Commission's Order, but deferred for 120 days the effectiveness of the judgement. The ourt stated, "the SEC has 120 days after that (the date of the Court's mandate) to decide whether the System is an exchange and to re-register Delta or decline to do so." slip op. at 22. The Court stated that a Commission decision during that time would be effective as a new decision.

In light of the Court's decision, the Commission requests further general comment on Delta's clearing agency registration application. Also, the Commission invites commentators to address specifically whether the System should be registered as an exchange and whether Delta has demonstrated an ability to promote the prompt and accurate clearance and settlement of securities transactions and the safeguarding of securities and funds within its custody or control. The Commission will consider all written comments previously received concerning Delta's clearing agency registration application. The comment period will terminate 30 days from the date of publication of this notice in the Federal Register. Due to time constraints placed on the Commission by the Court, the comment period will not be extended.

Persons desiring to make written submissions should file six copies thereof with the Secretary of the Commission, Securities and Exchange Commission, 450 Fifth Street NW., Washington, DC 20549. Reference should be made to File No. 600–24. Copies of the application and all written comments will be available for inspection at the Securities and Exchange Commission's Pubic Reference Room, 450 Fifth Street NW., Washington, DC.

For the Commission, by the Division of Market Regulation, pursuant to delegated authority. 17 CFR 200.30–3.

Jonathan G. Katz,

Secretary.

BILLING CODE 8010-01-M

[Release No. 34-27210; File No. IDD–89–03]

Self-Regulatory Organizations; the Options Clearing Corp.; Order Approving Proposed Amendment to Index Participations Disclosure Document

On August 24, 1989, the Options Clearing Corporation ("OCC"), in conjunction with the Philadelphia ("Phlx") and American ("Amex") Stock and the Chicago Board Options ("CBOE") Exchanges, Inc. [collectively, the self-regulatory organizations ("SROs")] submitted to the Securities and Exchange Commission ("SEC" or "Commission"), pursuant to Rule 9b–1 of the Securities Exchange Act of 1934 ("Act")[1] copies of an amendment to the Index Participations ("IPs") Disclosure Document ("IDD").[2]

The proposed amendment to the IDD clarifies the disclosure concerning the OCC cash-out of outstanding IP longs contained in a recent amendment to the IDD,[3] submitted by the OCC and approved by the Commission, in response to the August 18, 1989 opinion of the United States Court of Appeals for the Seventh Circuit ("Seventh Circuit") setting aside the Commission order approving the proposed SRO rule changes to list for trading and to issue, clear, and settle IPs.[4] Specifically, the amendment notes that all IP longs which are exercised by the OCC on September 14, 1989[5] shall be entitled to receive, and all IP shorts will be obligated to pay (1) the accumulated dividend equivalents on September 15, 1989, and (2) the cash-out value of such IPs on September 18, 1989. The amendment notes further that any holder of physical IPs (*i.e.*, Amex Equity Index Participations), who is entitled and desires to exercise the delivery privilege in respect to such IPs, must tender an exercise notice to OCC on September 14, 1989, or OCC will exercise the IP cash-out privilege in respect of such IPs.

Rule 9b–1 provides that an options market must file five copies of amendments to a disclosure document with the Commission at least 30 days prior to the date definitive copies are furnished to customers unless the Commission determines otherwise having due regard to the adequacy of the information disclosed and the protection of investors.[6]

The Commission has reviewed the IDD amendment and finds that it provides adequate disclosure of the change in IPs' status due to the Seventh Circuit opinions as well as the OCC's determination to exercise the cash-out privilege on behalf of all outstanding IP longs. In addition, the Commission believes it is consistent with the public interest and the protection of investors to allow its distribution as of September 1, 1989, less than 30 days prior to the date definitive copies are furnished to customers. Specifically, allowing immediate distribution of the IDD amemdment should help eliminate any possible investor confusion concerning the rights and obligations of IP longs and shorts in respect of the OCC cash-out of outstanding IP longs.

For the Commission, by the Division of Market Regulation, pursuant to delegated authority.[7]

Dated: September 1, 1989.

Shirley E. Hollis,

Assistant Secretary.

BILLING CODE 8010-01-M

[34–27211; File No. SR–OCC–89–11]

Self-Regulatory Organizations; The Options Clearing Corporation; Filing and Immediate Effectiveness of Proposed Rule Change Regarding the Consolidation of the Membership and Margin Committees

September 1, 1989.

Pursuant to section 19(b)(1) of the Securities Exchange Act of 1934, 15 U.S.C. 78s(b)(1) (the "Act"), notice is hereby given that on August 21, 1989, The Options Clearing Corporation ("OCC") filed with the Securities and Exchange Commission the proposed rule change as described in Items I, II and III below, which Items have been prepared by the self-regulatory organization. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

File No. SR–OCC–89–11 proposes amendments to OCC's Rules which would consolidate the Membership and Margin Committees.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The self-regulatory organization has prepared summaries, set forth in sections (A), (B), and (C) below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change General

The purpose of the proposed rule change is to allow OCC to consolidate its Membership and Margin Committees since the issues considered by the two committees are related.

The Membership Committee and the Margin Committee both work with Clearing Member issues. The Membership Committee reviews applications for Clearing Membership and recommends approval or disapproval thereof. The Margin Committee reviews the financial status of Clearing Members and establishes margin requirements therefor.

Accordingly, since the work of the two committees overlap, the Board of Directors determined that a consolidating of the Committees would best serve the interests of the Clearing Members and the Participant Exchanges.

B. Self-Regulatory Organization's Statement on Burden on Competition

OCC does not believe that the proposed rule change would impose any burden on competition.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received from Members, Participants or Others

Written comments were not and are not intended to be solicited by OCC with respect to the proposed rule change and none have been received by OCC.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change has become effective pursuant to section 19(b)(3) of the Securities Exchange Act of 1934 and subparagraph (e) of Securities Exchange Act Rule 19b–4. At any time within 60 days of the filing of such proposed rule change, the Commission may summarily abrogate such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Securities Exchange Act of 1934.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing. Persons making written submissions should file six copies thereof with the Secretary, Securities and Exchange Commission, 450 Fifth Street NW.,

BILLING CODE 8010-01-M

[Rel. No. 34–27220; File No. SR–CSE–89–1]

Self-Regulatory Organizations; Cincinnati Stock Exchange; Order Approving Proposed Rule Change Relating to Guaranteed Agency Order Executions

On January 24, 1989, the Cincinnati Stock Exchange ("CSE" or "Exchange") filed with the Securities and Exchange Commission ("Commission"), pursuant to section 19(b) of the Securities Exchange Act of 1934 ("Act") [1] and Rule 19b–4 thereunder,[2] a proposed rule change to amend Exchange Rule 11.9(c) so as to permit the Exchange's Securities Committee to assign the obligation of guaranteeing public agency order executions to one Designated Dealer ("DD") in a new National Securities Trading System ("NSTS") issue.[3]

The proposed rule change was noticed in Securities Exchange Act Release No. 26853 (May 22, 1989), 54 FR 23003 (May 30, 1989). No comments were received on the proposal.[4]

The CSE, through its NSTS, guarantees the execution of up to 2,099 shares of public agency market orders at the national best bid or offer. Because NSTS is a multiple market maker system, the obligation to guarantee agency orders rotates daily among DDs in issues for which there is more than one such dealer.

In its filing, the Exchange stated that it is necessary to provide an incentive for prospective market makers to become DDs in issues not yet traded in NSTS so that the Exchange could improve the quality of its markets and also achieve broader coverage of issues in NSTS. Accordingly, the Exchange adopted a policy which permits its Securities Committee ("Committee") to authorize a requesting member to become the "primary" DD [5] in any issue which was not traded in NSTS as of September 9, 1988. Because NSTS is a multiple market maker system, the proposed amendment to Rule 11.9 provides that the obligation to guarantee agency orders will rotate daily among DDs in issues for which there is more than one member as the primary DD in that issue.

As provided in the Exchange's Securities Committee Stock Allocation Policy for DDs ("Policy"),[6] the Committee shall use its best judgment in determining whether to allocate non-NSTS issues to requesting members. As set forth in Section III.B.2 of the Policy, the factors which will be considered by the Committee in making this determination shall include the following: (1) The member's commitment to bring public agency order flow to the CSE in his requested issues; [7] (2) the number of issues requested by the member; (3) the member's capital position; and (4) the member's technical capability. In addition, Section III.B.2 of the policy provides that the Committee will consider the capital, market quality, and performance criteria that members must satisfy in order to be approved as a DD in NSTS issues, as set forth in Section II.A. of the policy, when determining whether to approve a member as a primary DD in a non-NSTS issue.[8] The allocation criteria for NSTS issues set forth in Section II.A. of the policy include the following: (1) The commitment by the requesting member to maintain "competitive" quotation spread and size parameters [9]; (2) the satisfactory past performance of the requesting member; [10] and (3) any other factor which the Committee deems relevant to the public interest, the maintenance of fair and orderly markets, or just and equitable principles of trade.

Stock price	Spread parameters
$0 to $50	No more than ½ point.
$50 to $100	No more than ¾ point.
$100 to $200	No more than 1 point.
Greater than $200	No more than 2 points.
Activity Level	Size
"Active" Stocks (defined as stocks which trade more than 5 million shares per month on a consolidated basis).	No less than 500 shares each side.
Inactive stocks	No less than 200 shares each side.

The exchange has indicated that although the above-described spread and size quotation parameters are not included specifically in the text of the proposed rule change, they have been adopted as binding policy by the Exchange. *See* Letter from David Colker, General Counsel and Vice President, Market Regulation, CSE, to Sharon L. Itkin, Esq., Division of Market Regulation, Securities and Exchange Commission, dated June 22, 1989 ("Letter").

Before a member can be registered as a primary DD, the member must agree to maintain "competitive" quotations throughout the trading day.[11] Exceptions to the primary DD's obligation to maintain competitive quotations will be permitted only during unusual market conditions [12] or as

otherwise allowed by an Exchange official.[13]

The Commission finds that the proposed rule change is consistent with the requirements of the Act and the rules and regulations thereunder applicable to a national securities exchange, and, in particular, the requirements of section 6(b)(5) [14] of the Act in that the proposal is designed to facilitate transactions in securities and to perfect the mechanism of a national market system. In this regard, the Commission notes that the proposed modifications to the Exchange's stock allocation and order execution procedures, which the CSE states are designed to improve the quality of its markets and to achieve broader coverage of issues in NSTS, may result in improved execution of public customer orders.

The Commission notes that the CSE's Securities Committee Stock Allocation Policy is designed to enhance the quality of the Exchange's markets by ensuring narrow quotation spread parameters, and significant size quotation. In the past, the Commission has recognized the benefits of a multiple market maker system that has elements of a specialist system.[15] The Commission notes that the grafting of elements of a specialist system onto a multiple market maker system may facilitate the execution of customer orders and provide tight and liquid markets. This may be particularly true in less active securities. In this case, the CSE's proposal is designed to improve its DD system and attract a DD who is best able to make tight and liquid markets.

It is therefore ordered, pursuant to section 19(b)(2) of the Act, [16] that the proposed rule change is approved.

For the Commission, by the Division of Market Regulation, pursuant to delegated authority.[17]

Dated: September 5, 1989.

Jonathan G. Katz,

Secretary.

[FR Doc. 89–21491 Filed 9–12–89; 8:45 am]

BILLING CODE 8010-01-M

[Rel. No. 34–27224; File No. SR–CBOE–89–16]

Self-Regulatory Organizations; Notice of Filing of Proposed Rule Change by the Chicago Board Options Exchange, Inc. Relating to the Priority of Bids and Offers

Pursuant to section 19(b)(1) of the Securities Exchange Act of 1934 ("Act"), 15 U.S.C. 78s(b)(1), notice is hereby given that on August 16, 1989, the Chicago Board Options Exchange, Inc. ("CBOE" or "Exchange") filed with the Securities and Exchange Commission ("Commission") the proposed rule change as described in Items I, II, and III below, which Items have been prepared by the self-regulatory organization. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to amend Exchange Rule 6.45 to permit combination orders which are executed in conjunction with stock orders the same priorities as combination orders that do not involve stock transactions and to update the Rule with respect to the limit order book to reflect that Board Brokers are no longer on the Exchange. (Brackets indicate language to be deleted, italic indicate new language.)

Priority of Bids and Offer

Rule 6.45. Except as provided by Rule 6.47 below, the following rules of priority shall be observed with respect to bids and offers:

(a) Priority of bids. The highest bid shall have priority, but where two or more bids for the same option contract represent the highest price and one such bid is displayed [by the Board Broker or Order Book Official] *in the customer limit order book* in accordance with Rule 7.7, such bid shall have priority over any other bid at the post. If two or more bids represent the highest price and a bid [by a Board Broker or Order Book Official] *from the customer limit order book* is not involved, priority shall be afforded to such bids in the sequence in which they are made.

(b) No change.

(c) Openings. Notwithstanding anything in paragraphs (a) and (b) to the contrary, where necessary to achieve a single-priced opening, market orders in which no member or any non-member broker/dealer has an interest shall have priority over limit orders at the same opening price [on the Board Broker's or Order Book Official's] *in the customer limit order* book. The cut-off time for orders entitled to participate in the opening is set forth in Interpretation .02 to Rule 7.4.

(c) Exception. Notwithstanding anything in paragraphs (a) and (b) to the contrary, when a member holding a spread order, a straddle order, or a combination order and bidding or offering on the basis of a total credit or debit for the order has determined that the order may not be executed by a combination of transactions with or within the bids and offers displayed [by the Board Broker or Order Book Official] *in the customer limit order book* or announced by members in the trading crowd, then the order may be executed as a spread, straddle, or combination at the total credit or debit with one other member without giving priority to bids or offers of members in the trading crowd or of the [Board Broker or Order Book Official] *customer limit order book* that are no better than the bids or offers comprising such total credit or debit. Under the circumstances described above, a stock-option order, as defined in Rule 1.1(ii)(*a*), has priority over the bids and offers of members in the trading crowd but not over the bids and offers [of] *in* the [Board Broker or Order Book Official] *customer limit order book. A stock option order as defined in Rule 1.1(ii)(b), consisting of a combination order with stock, may be executed in conjunction with the exception provisions as provided herein.*

* * * Interpretations and Policies:

.01 When [A Board Broker or Order Book Official] *the customer limite order book* is displaying, pursuant to Rule 7.7, limit orders to sell at 1/16th which have priority pursuant to Rule 6.45, no [Floor Broker] *member,* [Board Broker] or Order Book Official shall hold a market order to sell that series. Whenever this condition occurs, any such market order held by a [Floor Broker, Board Broker] *member* or Order Book Official shall be considered a limit order to sell at a price of 1/16th and the [Floor Broker, Board Broker] *member* or Order Book Official shall change the market sell order to reflect a limit price of 1/16th.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The self-regulatory organization has prepared summaries, set forth in sections (A), (B) and (C) below, of the most significant aspects of such statements.

---

[1] 15 U.S.C. 78s(b)(1) (1982).

[2] 17 CFR 240.19b–4 (1988).

[3] NSTS is an electronic securities communication and execution facility through which bids and offers of competing dealers, as well as public orders, are consolidated for review and execution by users. *See* CSE Rule 11.9(a)(1).

[4] The CSE filed amendment no. 1 to its proposal on May 2, 1989.

[5] Primary DD status in an issue entitles a member to receive all of the guaranteed portion of all public agency market and marketable limit orders even if other DDs subsequently become registered in that issue. The guaranteed portion of an order is equal to 2,099 shares minus the number of shares executed in NSTS against any agency or principal interest, including interest of the DD of the day, priced at the ITS best bid or offer when the order enters the system.

[6] *See* Letter from David Colker, Vice President, Market Regulation and General Counsel, CSE to Howard Kramer, Assistant Director, Division of Market Regulation, Securities and Exchange Commission, dated August 8, 1989.

[7] David Colker indicated to Howard Kramer, Assistant Director, Market Regulation, Securities and Exchange Commission, in a conversion on August 23, 1989, that this includes such factors as the member's commitment to quote tight or large size markets in order to attract order flow to the Exchange. This in no way requires the applicant's firm to direct order flow to the Exchange.

[8] *See* Section II.A of the Policy.

[9] In this context, "competitive" is defined by compliance with the following spread and size parameters:

[10] The committee will consider the following factors in determining whether the member's performance was satisfactory: (1) whether the member maintained competitive quotations in issues for which the member has been acting as DD; (2) trade and share activity in such issues; and (3) the member's cooperation with the Exchange in resolving ITS disputes and NSTS errors.

[11] *See* note 7, *supra*

[12] The Exchange defines "unusual market conditions" for purposes of allowing exceptions to this policy as market conditions during which (1) a trading halt is in effect, or (2) the Exchange is incapable of collecting, processing, disseminating, and receiving quotation information in a manner which accurately reflects the current state of the market. *Id.*

[13] The Exchange President and Vice President for Market Regulations are the officers who have authority to permit exceptions to the new quotation policy. Such officers shall grant exceptions when a system problem prevents a member from inputing his quotations. *Id.*

[14] 15 U.S.C. 78f(b)(5) (1982).

[15] *See* the Commission's approval order of the Chicago Board Options Exchange's proposal to provide for designated dealer status on that exchange.

[16] 15 U.S.C. 78s(b)(2) (1982).

[17] 17 C.F.R. 200.30–3(a)(12) (1988).

(A) Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

The proposed rule filing will afford combination orders which are executed in conjunction with stock (conversions and reversals) the same priorities as combination orders that do not involve stock. Current Exchange rules allow combination, spread and straddle orders to touch the customer limit order book on one side (*i.e.*, in one series). The extension of the priority to combination orders with stock does not include straight stock/option orders such as buy writes that only involve one option series. The Exchange believes that the priority of the public customer limit order book will not be greatly affected because of this change. The two-sided option order which is part of a conversion/reversal will only be able to touch the book on one side. In addition, by not extending the exception to straight stock-option orders where the option component consists of only one side, the public customer limit order book will maintain its current priority over any single series (side) option orders.

The filing also addresses the need for the Exchange to update the rules concerning the customer limit order book. There are no Board Brokers on the Exchange and, therefore, their functions as to running the limit order book have been deleted. A new category of members, Designated Primary Market-Makers ("DPM's"), has been created. The DPM has in qualifying securities taken the place of Order Book Officials. As such, the other rule revisions contained herein reflect the deletion of Board Brokers and addition of DPMs.

The Exchange believes that the proposed rule change is consistent with the requirements of the Act, and the rules and regulations thereunder, and, in particular, the provisions of section 6(b)(5) of the Act, which provide, among other things, that the rules of the exchange are to be designed to promote just and equitable principles of trade and to protect investors and the public interest.

(B) Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change imposes a burden on competition.

(C) Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received from Members, Participants, or Others

Written comments on the proposed rule change were neither solicited nor received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Within 35 days of the date of publication of this notice in the **Federal Register** or within such longer period (i) as the Commission may designate up to 90 days of such date if it finds such longer period to be appropriate and publishes its reasons for so finding or (ii) as to which the self-regulatory organization consents, the Commission will:

(A) By order approve such proposed rule change, or

(B) Institute proceedings to determine whether the proposed rule change should be disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing. Persons making written submissions should file six copies thereof with the Secretary, Securities and Exchange Commission, 450 Fifth Street NW., Washington, DC 20549. Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with provisions of 5 U.S.C. 552, will be available for inspection and copying in the Commission's Public Reference Section, 450 Fifth Street NW., Washington, DC. Copies of such filing will also be available for inspection and copying at the principal office of the above-mentioned self-regulatory organization. All submissions should refer to the file number in the caption above and should be submitted by October 4, 1989.

For the Commission, by the Division of Market Regulation, pursuant to delegated authority.[1]

Dated: September 6, 1989.

Jonathan G. Katz,

Secretary.

BILLING CODE 8010-01-M

---

[1] 17 CFR 200.30-3(a)(12) (1988).

[Release No. 34-27219; File No. SR-NASD-89-27]

Self Regulatory Organizations; National Association of Securities Dealers, Inc.; Order Approving Proposed Rule Change Relating to Study Outlines and Specification for Series 11 Examination, Assistant Representative-Order Processing

The National Association of Securities Dealers, Inc. ("NASD") submitted the proposed rule change on July 11, 1989, pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 ("Act"), and Rule 19b-4 thereunder, to establish the examination specifications and study outline for the new registration category of Assistant Representative-Order Processing. This new category was proposed in an amendment to Schedule C of the NASD By-Laws in File No. SR-NASD-88-28 and was approved by the Commission on June 12, 1989 (Securities Exchange Act Release No. 26920 (June 12, 1989), 54 FR 26289 (June 22, 1989)].

Notice of the proposed rule change together with the substance of the terms of the proposed rule change was given by the issuance of a Commission release (Securities Exchange Act Release No. 27067, July 26, 1989) and by publication in the **Federal Register** (54 FR 31909, August 2, 1989). No comments were received with respect to the proposed rule change.

The Commission finds that the proposed rule change is consistent with the requirements of the Act and the rules and regulations thereunder applicable to the NASD and, in particular, with the requirements of Section 15A and the rules and regulations thereunder. Specifically, the proposed rule change meets the requirements of section 15A(g)(3)(B) which permits the NASD to "examine and verify the qualifications of an applicant to become a person associated with a member."

It is therefore ordered, pursuant to section 19(b)(2) of the Act, that the proposed rule change, SR-NASD-89-27, be, and hereby is, approved.

For the Commission, by the Division of Market Regulation, pursuant to delegated authority, 17 CFR § 200.30-3(a)(12).

Dated: September 5, 1989.

Jonathan G. Katz,

Secretary.

BILLING CODE 8010-01-M

[34-27207 File No. SR-NSCC-89-08]

Proposed Rule Change by National Securities Clearing Corp. Regarding an Amendment to NSCC's Proposed Rule Filing Concerning Basket Trades

September 1, 1989.

Pursuant to section 19(b)(1) of the Securities Exchange Act of 1934, 15 U.S.C. 78s(b)(1), notice is hereby given that on August 24, 1989 NSCC filed with the Securities and Exchange Commission the proposed amendment to NSCC-89-08 as described below. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The proposed rule change consists of an amendment to NSCC's proposed rule filing on Basket Trades in order to describe the processing of Basket Trades involving specialists and the establishment of fees for processing of Basket Trades.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, NSCC included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. NSCC has prepared summaries, set forth in sections (A), (B), and (C) below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change.

(I) The purpose of the proposed rule change is to detail how specialist involvement in New York Stock Exchange Basket Trading will be processed by NSCC.

The Basket Trade currently proposed by the New York Stock Exchange will be comprised of 462 New York Stock Exchange listed securities and 38 non-New York Stock Exchange listed securities. The New York Stock Exchange will require each specialist to maintain two quotes for his securities within the 462 listed securities that are part of the Basket. A Basket Book Dealer will maintain a quote for the 38 non-listed stocks, which are referred to as a "Mini-Basket".

Whenever a Basket Trade is executed where the specialist is involved, the New York Stock Exchange will break down the Basket into the 462 equity trades and a Mini-Basket. NSCC will receive from the New York Stock Exchange, 462 locked-in trades for the equity trades (which are the component securities the specialists are assigned to), and one locked-in trade for the Mini-Basket. The trades involving specialists will be reported by NSCC as locked-in trades on T-contracts which are available on T+1. These trades will be identifiable as trades resulting from Basket Trades because the contra party will always be a unique omnibus account number.

The Mini-Basket will be reported on a separate section of the Basket Trade Detail Report (referred to in the original filing as the Basket Trade Settlement Detail Report) to the NSCC Member which is the Basket Book Dealer. The Mini-Basket trades will be processed, including netting of the Mini-Baskets, bursting of the component parts and assignment of the Basket Value Settlement Sum, and settled the same way regular Basket Trades are processed. (If a Basket Book Dealer also executes Basket Trades these will not be netted with the Mini-Baskets. However, the component securities of the Mini-Baskets will be netted with components of regular Basket Trades and other Regular Way or Balance Order securities for settlement.)

In its filing NSCC also stated that certain operational features of Basket Trading would possibly not be ready when the New York Stock Exchange implemented Basket Trading. NSCC will, by implementation date, have developed the operational features referred to in the filing. Specifically, NSCC will net Basket Trades prior to separating them into the component securities. The Trade Summaries will separately indicate securities to be received or delivered from Basket Trading. In addition, the Basket Value Settlement Sum (cash adjustment) will be separately set forth on the Members' Settlement Statements and not included with the clearance cash adjustment for Balance Orders. Lastly, NSCC will issue all applicable reports in printed form and the Basket Trade Detail Report in machine readable output and print image output.

NSCC will charge $30.00 to the buyer and seller per Basket Trade received and $10.00 to the Basket Book Dealer per Mini-Basket received. These fees are in addition to the trade recording fees currently charged by NSCC which will be applied to the individual stock components after netting.

(2) Since the proposed rule change will facilitate the prompt and accurate clearance and settlement of securities transactions, and provides for the equitable allocation of charges among Members, it is consistent with the requirements of the Securities Exchange Act of 1934, as amended, and the rules and regulations thereunder applicable to self-regulatory organizations.

B. Self-Regulatory Organization's Statement on Burden on Competition

NSCC does not believe that the proposed rule will have an impact or impose a burden on competition.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received from Members, Participants, or Others

No written comments have been solicited or received. NSCC will notify the Commission of any written comments received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Within 35 days of the date of publication of this notice in the **Federal Register** or within such longer period (i) as the Commission may designate up to 90 days of such date if it finds such longer period to be appropriate and published its reason for so finding or (ii) as to which the self-regulatory organization consents, the Commission will:

(A) By order approve such proposed rule change, or

(B) Institute proceedings to determine whether the proposed rule change should be approved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing. Persons making written submissions should file six copies thereof with the Secretary, Securities and Exchange Commission, 450 Fifth Street NW., Washington, DC 20549. Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change that are filed with Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with provisions of 5 U.S.C. 552, will be available for inspection and copying in the Commission's Public

Reference Section, 450 Fifth Street NW., Washington, DC 20549.

Copies of such filing will also be available for inspection any copying at the principal office of the above-mentioned self-regulatory organization. All submissions should refer to file No. NSCC-89-08 and should be submitted [October 4, 1989].

For the Commission by the Division of Market Regulation, pursuant to delegated authority.

Shirley E. Hollis,

Assistant Secretary.

BILLING CODE 8010-01-M

[Rel. No. 34-27223; File No. SR-PSE-89-21]

Self Regulatory Organizations; Notice of Filing of Proposed Rule Change by the Pacific Stock Exchange, Inc. Relating to the Narrowing of Certain Options Bid/Ask Differentials

Pursuant to section 19(b)(1) of the Securities Exchange Act of 1934 ("Act"), 15 U.S.C. 78s(b)(1), notice is hereby given that on August 15, 1989, the Pacific Stock Exchange Incorporated ("PSE" or "Exchange") filed with the Securities and Exchange Commission ("Commission") the proposed rule change as described in Items I, II, and III below, which Items have been prepared by the self-regulatory organization. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to amend Exchange Rule VI, Section 79, to allow for a maximum differential of ¼ of $1 between the bid and the offer for each option contract for which the bid is less than $2, and to provide that the maximum bid/ask differential for in-the-money options series may be identical to the bid-ask spread in the underlying security market when the spreads in such market are wider than those allowed by section 79. (Brackets indicate langauge to be deleted, italics indicate new language.)

Obligations of Market Makers

Sec. 79:

(a) No change.

(b) No change.

(1) Bidding and/or offering so as to create differences of no more than ¼ of $1 between the bid and the offer for each option contract for which the bid is [$1 or less] *less than $2*, no more than ⅜ of $1 where the bid is [more than $1] *$2 or more* but does not exceed $5, no more than ½ of $1 where the bid is more than $5 but does not exceed $10, no more than ¾ of $1 where the bid is more than $10 but does not exceed $20, and no more than $1 when the last bid is $20⅛ or more, proided that the Options Floor Trading Committee may establish differences other than the above for one or more series or clases of options. *In the event the bid/ask differential in the underlying security is greater than the bid/ask differential set forth herein, the permissible price differential for any in-the-money option series may be identical to those in the underlying security market.*

(b)(2) and (b)(3) No change.

(c) through (d)(3) No change.

Commentary:

.01 through .07 No change.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The self-regulatory organization has prepared summaries, set forth in sections (A), (B) and (C) below, of the most significant aspects of such statements.

(A) Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

The proposed rule change involves the tightening of markets for option series in which the bid is less than $2, such that the maximum bid/offer differential may not exceed ¼ of $1. Currently, the maximum differential is ¼ of $1 for option contracts for which the bid is $1 or less, and ⅜ of $1 for option contracts for which the bid is more than $1 but does not exceed $5. The maximum differential would remain ⅜ of $1 for option contracts in which the bid is $2 or more, but does not exceed $5.

The Exchange believes that the narrowed spreads resulting from this rule change will provide improved price continuity and tighter, more liquid markets to a significant number of public investors. All orders, including public customer orders, will benefit from the narrower bid/ask differentials.

The proposed amendment further provides that in connection with in-the-money series in which the quote differential in the underlying security is greater than the bid/ask differentials specified in Rule IV, section 79, the permissible differential for the respective option series may be identical to those in the underlying security.

These changes are being proposed to effect conformity with rules of the other option exchanges and thus avoid member and investor confusion.

The Exchange believes that the proposed rule change is consistent with the requirements of the Act, and in particular, section 6(b)(5), as it is designed to promote just and equitable principles of trade and to remove impediments to and perfect the mechanism of a free and open market.

(B) Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change imposes a burden on competition.

(C) Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received from Members, Participants, or Others

Written comments on the proposed rule change were neither solicited nor received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Within 35 days of the date of publication of this notice in the **Federal Register** or within such longer period (i) as the Commission may designate up to 90 days of such date if it finds such longer period to be appropriated and publishes its reasons for so finding or (ii) as to which the self-regulatory organization consents, the Commission will:

(A) By order approve such proposed rule change, or

(B) Institute proceedings to determine whether the proposed rule change should be disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing. Persons making written submissions should file six copies thereof with the Secretary, Securities and Exchange Commission, 450 Fifth Street, NW., Washington, DC 20549. Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed

rule change between the Commission and any person, other than those that may be withheld from the public in accordance with provisions of 5 U.S.C. 552, will be available for inspection and copying in the Commission's Public Reference Section, 450 Fifth Street, NW., Washington, DC. Copies of such filing will also be available for inspection and copying at the principal office of the above-mentioned self-regulatory organization. All submissions should refer to the file number in the caption above and should be submitted by October 4, 1989.

For the Commission, by the Division of Market Regulation, pursuant to delegated authority.[1]

Dated: September 6, 1989.

Jonathan G. Katz,

Secretary.

DEPARTMENT OF STATE

Office of the Secretary

[Public Notice No. 1130]

Laredo, TX.; Application for Bridge Permit

Notice is hereby given that the Department of State has received an application for a permit authorizing construction of a bridge across the Rio Grande River from Laredo, Texas to Colombia, Nuevo Leon, Mexico.

The Department's jurisdiction with respect to this application is based upon Executive Order 11423, dated August 16, 1968, and the International Bridge Act of 1972 (Pub. L. 92-434, 86 Stat. 731, 33 U.S.C. 535 approved September 26, 1972).

As required by E.O. 11423, the Department of State is circulating this application to concerned agencies for comment.

Interested persons may submit their views regarding the application in writing by October 13, 1989 to Mr. Kenneth R. Propp, Office of Legal Adviser, Economic, Business and Communications Affairs, Room 6420, U.S. Department of State, 2201 C Street, NW., Washington, DC 20520.

The application and related documents made part of the record to be considered by the Department of State in connection with this application are available for inspection and copying in the Office of the Assistant Legal Adviser for Economic, Business and Communications Affairs during normal business hours.

Any questions relating to this notice may be addressed to Mr. Propp at the above address (202) (647-7770).

Dated: August 31, 1989.

Ted A. Borek,

Assistant Legal Adviser, Economic, Business and Communications Affairs.

BILLING CODE 4710-08-M

DEPARTMENT OF TRANSPORTATION

Federal Highway Administration

Environmental Impact Statement; Monterey County, CA

AGENCY: Federal Highway Administration (FHWA), Department of Transportation.

ACTION: Notice of intent.

SUMMARY: The FHWA is issuing this notice to advise the public that an environmental impact statement will be prepard for a proposed highway project in Monterey County, California.

FOR FURTHER INFORMATION CONTACT: John R. Schultz, District Engineer, Federal Highway Administration, P.O. Box 1915, Sacramento, California 95809, Telephone: 551-1307.

SUPPLEMENTARY INFORMATION: The FHWA in cooperation with the California Department of Transportation (CALTRANS) will prepare an environmental impact statement (EIS) on a proposal to improve the segment of Route 1 between Castroville and the Santa Cruz County line in Monterey County to relieve congestion and improve safety. Four alternative concepts have been identified.

Alternative 1: Expressway along Existing Alignment

Alternative 1 would involve widening the existing two-lane highway to a four-lane divided expressway with interchanges at Merritt Street and Salinas Road and access from local roads at intermediate points along the route.

Alternative 2: Expressway with Adjusted Horizontal Alignment to Minimize Wetland Impacts

Alternative 2 is identical to Alternative 1 except for an adjustment in the horizontal alignment of the roadway widening to minimize wetland impacts in the vicinity of Struve Pond and Bennett Slough.

Alternative 3: Expressway with Realignment to Avoid Wetland Impacts

Alternative 3 is also identical to Alternative 1 except for a one-mile segment where the road would be routed around the northwest side of Struve Pond to avoid wetland impacts in the vicinity of Struve Pond and Bennett Slough.

Alternative 4: "No-Build" Alternative

Alternative 4 is basically a "no-action" option; however limited operational and safety improvements could be made including shoulder widening, passing land additions, and intersection improvements.

Public information meetings will be held at several points during the study process. A public environmental study scoping meeting is planned for September 21, 1989 at 7:00 p.m. at North Monterey County High School, 13990 Castroville Boulevard in Castroville.

"Catalog of Federal Domestic Assistance Program Number 20.205, Highway Research, Planning and Construction. The regulations implementing Executive Order 12372 regarding intergovernmental consultation on Federal Programs and activities apply to this program.)"

Issued on September 7, 1989.

John R. Schultz,

District Engineer, Sacramento, California.

BILLING CODE 4910-22-M

National Highway Safety Administration

Rulemaking, Research and Enforcement Programs and Air Bag Related Issues of Automatic Occupant Protection Requirements; Meetings

AGENCY: National Highway Traffic Safety Administration, DOT.

ACTION: Notice of meetings.

SUMMARY: This notice announces a public meeting at which the National Highway Traffic Safety Administration (NHTSA) will answer questions from the public and the automobile industry regarding the agency's rulemaking, research and enforcement programs.

This notice also announces the second meeting to be held on the implementation of the automatic occupant protection requirements of Standard No. 208, *Occupant Protection*. This meeting will focus on air bag related issues.

DATES: The agency's regular, quarterly public meeting relating to the agency's rulemaking, research and enforcement programs will be held on October 16, 1989, beginning at 3:00 p.m. Questions relating to the agency's rulemaking, research and enforcement programs, must be submitted in writing by October 9, 1989. If sufficient time is available, questions received after the October 9, 1989 date may be answered at the meeting. The individual, group or company submitting a question does not have to be present for the question to be answered. A consolidated list of the questions submitted by October 9, 1989, and the issues to be discussed, will be mailed to interested persons by October 11, 1989. This list will also be available at the meeting.

---

[1] 17 CFR 200.30-3(a)(12) (1986).

The meeting on the implementation of the automatic occupant protection requirements of Standard No. 208, focusing on air bag related issues, will be held on October 17, 1989, beginning to 10:30 a.m. Anyone interested in making a presentation at the October 17, meeting must submit a request in writing to Mary Coyle, NHTSA, NRD–01, 400 Seventh Street SW., Room 6208, Washington, DC 20590, by September 29, 1989. The agenda for the October 17, meeting will be available by October 12.

ADDRESS: Both meetings will be held in the Conference Room of the Environmental Protection agency's Laboratory Facility, 2565 Plymouth Road, ann Arbor, Michigan.

FOR FURTHER INFORMATION CONTACT: Questions for the October 16, meeting relating to the agency's rulemaking, research, and enforcement programs should be submitted to Barry Felrice, Associate Administrator for Rulemaking. Room 5401, 400 Seventh Street SW., Washington, DC 20590.

Questions on, or requests to make presentations at, the October 17, meeting on air bag related issues should be directed to Ms. Mary Coyle, NHTSA, 400 Seventh Street SW., Room 6208, Washington, DC 20590, telephone (202) 366–1537.

SUPPLEMENTARY INFORMATION: NHTSA will hold its regular, quarterly meeting to answer questions from the public and industry regarding the agency's rulemaking, research, and enforcement programs on October 16, 1989. The meeting will begin at 3:00 p.m., and will be held in the Conference Room of the Environmental protection Agency's Laboratory Facility, 2565 Plymouth Road, Ann Arbor, Michigan. The purpose of the meeting is to focus on those phases of these NHTSA activities which are technical, interpretative or procedural in nature. A transcript of the meeting will be available for public inspection in the NHTSA Technical Reference Section in Washington, DC, within four weeks after the meeting. Copies of the transcript will then be available at twenty-five cents for the first page and five cents for each additional page (length has varied from 100 to 150 pages) upon request to NHTSA Technical Reference Section, Room 5108, 400 Seventh Street SW., Washington, DC 20590. Room 5108, 400 Seventh Street SW., Washington, DC 20590.

On July 13, 1989, the agency held a meeting on issues regarding automatic safety belts. The agency now wishes to announce the second meeting to be held on the implementation of the automatic occupant protection requirements of Standard No. 208. This meeting will begin at 10:30 a.m., on October 17, 1989, at the Environmental Protection Agency Facility in Ann Arbor, Michigan. The purpose of this meeting is to discuss air bag-related issues, including their safety effectiveness, reliability, belt usage with air bags, threshold deployment strategies, sensor strategies, bag design (tethered, folded, type of material, venting, etc.), belt pretensioner use, data collection protocols, and consumer acceptance issues. Presentations by agency staff will be made at this meeting. Anyone desiring to make a presentation at the October 17, meeting should contact May Coyle, NHTSA, 400 Seventh Street SW., Washington, DC 20590, telephone (202) 366–1537 by September 29, 1989. A transcript of this meeting will also be available for public inspection in the NHTSA Technical Reference Section in Washington, DC, within four weeks after the meeting. Copies of the transcript will then be available at twenty-five cents for the first page and five cents for each additional page upon request to NHTSA Technical Reference section, Room 5108, 400 Seventh Street SW., Washington, DC 20590.

Issued on September 7, 1989.

Barry Felnice,

Associate Administrator for Rulemaking.

[FR Doc. 89–21437 Filed 9–12–89; 8:45 am]

BILLING CODE 4910-59-M

DEPARTMENT OF THE TREASURY

Fiscal Service

[Dept. Circ. 570, 1989 Rev., Supp. No. 3]

Surety Companies Acceptable on Federal Bonds

Covenant Mutual Insurance Company

A Certificate of Authority as an acceptable surety on Federal bonds is hereby issued to the following company under Sections 9304 to 9308, Title 31, of the United States Code. Federal bond-approving officers should annotate their reference copies of the Treasury Circular 570, 1989 Revision, on page 27807 to reflect this addition:

Covenant Mutual Insurance Company. *Business Address:* 241 Main Street, Hartford, CT 06106–1862. *Underwriting Limitation* [b]: *$3,166,000. Surety Licenses* [c]: AL, AZ, CA, CO, CT, DE, FL, GA, ID, IL, IN, ME, MD, MA, MS, MO, NV, NH, NJ, NY, OH, OK, PA, TX, VT and WA. *Incorporated In:* Connecticut.

Certificates of Authority expire on June 30 each year, unless revoked prior to that date. The Certificates are subject to subsequent annual renewal as long as the companies remain qualified (31 CFR, Part 223). A list of qualified companies is published annually as of July 1 in Treasure Department Circular 570, with details as to underwriting limitations, areas in which licensed to transact surety business and other information.

Copies of the Circular may be obtained from the Surety Bond Branch, Finance Division, Financial Management Service, Department of the Treasury, Washington, DC 20227, telephone (202) 287–3921.

Dated: September 1, 1989.

Mitchell A. Levine,

Assistant Commissioner, Comptroller, Financial management Service.

BILLING CODE 4810-35-M

DEPARTMENT OF VETERANS AFFAIRS

Information Collection Under OMB Review

AGENCY: Department of Veterans Affairs.

ACTION: Notice.

The Department of Veterans Affairs has submitted to OMB the following proposal for the collection of information under the provisions of the Paperwork Reduction Act (44 U.S.C. Chapter 35). This document lists the following information: (1) the agency responsible for sponsoring the information collection; (2) the title of the information collection; (3) the Department form number(s), if applicable; (4) a description of the need and its use; (5) frequency of the information collection, if applicable; (6) who will be required or asked to respond; (7) an estimate of the number of responses; (8) an estimate of the total number of hours needed to complete the information collection; and (9) an

indication of whether section 3504(h) of Public Law 96–511 applies.

ADDRESSES: Copies of the proposed information collection and supporting documents may be obtained from John Turner, Veterans Benefits Administration, (203C), Department of Veterans Affairs, 810 Vermont Avenue, NW., Washington, DC 20420 (202) 233–2744.

Comments and questions about the items on the list should be directed to VA's OMB Desk Officer, Joseph Lackey, Office of Management and Budget, 726 Jackson Place NW., Washington, DC 20503, (202) 395–7316. Please do not send applications for benefits to the above addressees.

DATES: Comments on the information collection should be directed to the OMB Desk Officer within 30 days of this notice.

Dated: September 6, 1989.

By direction of the Secretary.

David N. Stone,

Executive Assistant, Office of Information Management and Statistics.

Extension

1. Veterans Benefits Administration
2. Veterans' Job Training Act
3. VA Forms 22–8929, 22–8930, 22–8931, 22–8932
4. These four forms are used to administer the Veterans' Job Training Program created by Public Law 98–77: (1) Certification of Training; (2) Notice of Intent to Employ a Veteran; (3) Employer's Application for Approval of Job Training Program; and (4) Application for Certificate of Eligibility.
5. On occasion, monthly, quarterly
6. Individuals or households, State or local governments, businesses or other for-profit, non-proft institutions, small businesses or organizations
7. 105,000 responses
8. .555 hour
9. Not applicable

BILLING CODE 8320-01-M

Wage Committee; Notice of Meetings

The Department of Veterans Affairs (VA) in accordance with Pub. L. 92–463, gives notice that meetings of the VA Wage Committee will be held on:

Thursday, October 5, 1989, at 2:00 p.m.
Thursday, October 19, 1989, at 2:00 p.m.
Thursday, November 2, 1989, at 2:00 p.m.
Thursday, November 16, 1989, at 2:00 p.m.
Thursday, November 30, 1989, at 2:00 p.m.
Thursday, December 14, 1989, at 2:00 p.m.
Thursday, December 28, 1989, at 2:00 p.m.

The meetings will be held in Room 300, Veterans Affairs Central Office, 810 Vermont Avenue NW., Washington, DC 20420.

The Committee's purpose is to advise the Chief Medical Director on the development and authorization of wage schedules for Federal Wage System (blue-collar) employees.

At these meetings the Committee will consider wage survey specifications, wage survey data, local committee reports and recommendations, statistical analyses, and proposed wage schedules.

All portions of the meetings will be closed to the public because the matters considered are related solely to the internal personnel rules and practices of the Department of Veterans Affairs and because the wage survey data considered by the Committee have been obtained from officials of private business establishments with a guarantee that the data will be held in confidence. Closure of the meetings is in accordance with subsection 10(d) of Public Law 92–463, as amended by Public Law 94–409, and as cited in 5 U.S.C. 552b(c) (2) and (4).

However, members of the public are invited to submit material in writing to the Chairperson for the Committee's attention.

Additional information concerning these meetings may be obtained from the Chairperson, VA Wage Committee, Room 1175, 810 Vermont Avenue N.W., Washington, DC 20420.

Dated: September 5, 1989.

By Direction of the Secretary.

Sylvia Chavez Long,

Committee Management Officer.

BILLING CODE 8320-01-M

Sunshine Act Meetings

Federal Register
Vol. 54, No. 178
Wednesday, September 13, 1989

This section of the FEDERAL REGISTER contains notices of meetings published under the "Government in the Sunshine Act" (Pub. L. 94-409) 5 U.S.C. 552b(e)(3).

FEDERAL MINE SAFETY AND HEALTH REVIEW COMMISSION

September 7, 1989.

TIME AND DATE: 10:00 a.m., Thursday, September 14, 1989.

PLACE: Room 600, 1730 K Street NW., Washington, DC.

STATUS: Open.

MATTERS TO BE CONSIDERED: The Commission will consider and act upon the following:

1. *Consolidation Coal Company,* Docket No. WEVA 88–178. (Issues include whether the administrative law judge erred in concluding that the operator violated 30 CFR 50.10, dealing with the immediate contact of MSHA concerning reportable accidents.)

STATUS: Closed [Pursuant to 5 U.S.C. 552b(c)(10)]

MATTERS TO BE CONSIDERED:

2. *Robert Simpson v. Kenta Energy, Inc.,* Docket No. KENT 83–155–D. (Consideration of a Motion to Remand).
3. *Ronald Tolbert v. Chaney Creek Coal Corporation,* Docket No. KENT 86–123–D. (Consideration of Motion to Reopen and Remand).

It was determined by a unanimous vote of Commissioners that this portion of the meeting be closed.

Any person intending to attend the open portion of this meeting who requires special accessibility features and/or auxiliary aids, such as sign language interpreters, must inform the Commission in advance. Subject to 29 CFR 2706.150(a)(3) and § 2706.160(d).

CONTACT PERSON FOR MORE INFO: Jean Ellen (202) 653–5629/(202) 708–9300 for TDD Relay 800–877–8339 for Toll Free.

Jean H. Ellen,
Agenda Clerk.

BILLING CODE 6735-01-M

FEDERAL RESERVE SYSTEM BOARD OF GOVERNORS

TIME AND DATE: 11:00 a.m., Monday, September 18, 1989.

PLACE: Marriner S. Eccles Federal Reserve Board Building, C Street entrance between 20th and 21st Streets NW., Washington, DC 20551.

STATUS: Closed.

MATTERS TO BE CONSIDERED:

1. Personnel actions (appointments, promotions, assignments, reassignments, and salary actions) involving individual Federal Reserve Systems employees.
2. Any items carried forward from a previously announced meeting.

CONTACT PERSON FOR MORE INFORMATION: Mr. Joseph R. Coyne, Assistant to the Board; (202) 452–3204. You may call (202) 452–3207, beginning at approximately 5 p.m. two business days before this meeting, for a recorded announcement of bank and bank holding company applications scheduled for the meeting.

Dated: September 8, 1989.

Jennifer J. Johnson,
Associate Secretary of the Board.

[FR Doc. 89–21576 Filed 9–8–89; 4:31 pm]

BILLING CODE 6210-01-M

FOREIGN CLAIMS SETTLEMENT COMMISSION

F.C.S.C. Meeting Notice No. 2–89

Announcement in Regard to Commission Meetings and Hearings

The Foreign Claims Settlement Commission, pursuant to its regulations (45 CFR Part 504), and the Government in the Sunshine Act (5 U.S.C. 552b), hereby gives notice in regard to the scheduling of open meetings and oral hearings for the transaction of Commission business and other matters specified, as follows:

DATE AND TIME: Thurs., September 28, 1989, at 10:00 a.m.

SUBJECT MATTER: Consideration of Supplemental Proposed decisions on claims against Egypt.

Subject matter listed above, not disposed of at the scheduled meeting, may be carried over to the agenda of the following meeting.

All meetings are held at the Foreign Claims Settlement Commission, 1111 20th Street NW., Washington, DC. Requests for information, or advance notices of intantion to observe a meeting, may be directed to Administrative Officer, Foreign Claims Settlement Commission, 1111 20th Street NW., Room 400, Washington, DC 20579. Telephone: (202) 653–6155.

Dated at Washington, DC, on September 11, 1989.

Judith H. Lock,
Administrative Officer.

[FR Doc. 89–21650 Filed 9–11–89; 2:19 pm]

BILLING CODE 4410-01-M

OVERSEAS PRIVATE INVESTMENT CORPORATION

Meeting of the Board of Directors

TIME AND DATE: 9:30 a.m. (closed portion), 11:00 a.m. (open portion), Tuesday, September 26, 1989.

PLACE: Offices of the Corporation, fourth floor Board Room, 1615 M Street NW., Washington, DC.

STATUS: The first part of the meeting from 9:30 a.m. to 11:00 a.m. will be closed to the public. The open portion of the meeting will commence at 11:00 a.m. (approximately).

MATTERS TO BE CONSIDERED: (Closed to the public 9:30 a.m. to 11:00 a.m.):

1. President's Report
2. Finance Project in West Asian Country
3. Finance Project in Central American Country
4. Finance Project in South American Country
5. Insurance Project in Oceanian Country
6. Claims Report
7. Report on Conversion Funds

FURTHER MATTERS TO BE CONSIDERED: (Open to the public 11:00 a.m.)

1. Approval of Minutes of Previous Meeting
2. Treasurer's Report
3. Scheduling Dates for Future Meetings
4. Information Reports

CONTACT PERSON FOR INFORMATION: Information with regard to the meeting may be obtained from the Secretary of the Corporation on (202) 457–7079.

Dated: September 11, 1989.

Margaret A. Kole,
OPIC Corporate Secretary.

Part II

Department of Health and Human Services

Office of Child Support Enforcement

45 CFR Parts 302, 303, and 304

Child Support Enforcement Program: $50 Pass-through; Mandatory Support Guidelines; Mandatory Genetic Testing; Paternity Establishment; Laboratory Testing; Proposed Rule

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Office of Child Support Enforcement

45 CFR Parts 302, 303, and 304

RIN 0970–AA64

Child Support Enforcement Program: $50 Pass-Through; Mandatory Support Guidelines; Mandatory Genetic Testing; Paternity Establishment; Laboratory Testing

AGENCY: Office of Child Support Enforcement (OCSE), HHS.

ACTION: Notice of proposed rulemaking.

SUMMARY: These proposed rules would implement five provisions of the Family Support Act of 1988 (Pub. L. 100–485) signed by the President October 13, 1988, which amend title IV–D of the Social Security Act (the Act), the authority for the child support enforcement program. The provisions amend the Act to require payment to the family and disregard for purposes of eligibility for Aid to Families with Dependent Children (AFDC), the first $50 of child support payments for each month which were made in the month when due; to require that State guidelines be used as a rebuttable presumption of support levels; to require the child and all other parties in a contested paternity case to submit to genetic testing upon request; to specify that the requirement for a State law permitting paternity establishment up to a child's eighteenth birthday also applies to any child for whom a paternity action was previously dismissed under a statute of limitations of less than 18 years; and to provide 90 percent Federal matching for laboratory costs incurred in determining paternity.

DATES: Consideration will be given to comments received by November 13, 1989. It should be noted that the statutory effective dates of certain statutory provisions occur before the end of the comment period on these proposed rules. The statutory provisions are effective as prescribed in the statute regardless of the absence of final implementing regulations.

ADDRESS: Address comments to: Director, Office of Child Support Enforcement, Department of Health and Human Services, 370 L'Enfant Promenade SW., Washington, DC 20447, Attention: Director, Policy and Planning Division. Comments will be available for public inspection Monday through Friday, 8:30 a.m. to 5:00 p.m., on the 4th floor of the Department's office at the above address.

FOR FURTHER INFORMATION CONTACT: Policy Branch, OCSE, specifically:

Andrew Hagan (202) 252–5375—$50 pass-through, 90% Federal matching for laboratory costs, and mandatory genetic testing

Craig Hathaway (202) 252–5367—Mandatory guidelines and paternity establishment until age 18.

SUPPLEMENTARY INFORMATION:

Paperwork Reduction Act

Public reporting burden for the collection of information requirement at 45 CFR 302.56(g) is estimated to be a one-time burden of 20 hours to develop criteria to determine when application of guidelines would be inappropriate. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to the Office of Child Support Enforcement, Family Support Administration, 370 L'Enfant Promenade SW., Washington, DC 20447; and to the Office of Information and Regulatory Affairs, Office of Management and Budget (OMB), Washington, DC 20503. OMB has already approved the requirement for State notice to employers concerning wage withholding under 45 CFR 303.100(d) and the requirement for guidelines for setting support awards under 45 CFR 302.56 (OMB approval number 0970–0051).

Statutory Authority

These proposed rules are published under the authority of the following provisions of the Act, as amended by Public Law 100–485: Section 457(b)(1) (with respect to the $50 pass-through), section 467(b) (with respect to mandatory support guidelines), section 466(a)(5) (with respect to State laws and procedures requiring parties to submit to genetic testing and State law and procedures for establishment of paternity), and section 455(a)(1) (with respect to 90 percent matching for laboratory testing). The proposed rules are also published under the general authority of section 1102 of the Act, which requires the Secretary to publish regulations that may be necessary for the efficient administration of the functions for which he is responsible under the Act.

Background and Description of Regulatory Provisions

1. Pass-through of Child Support Payments

Section 2640 of the Deficit Reduction Act (Pub. L. 98–369) amended section 457(b)(1) of the Act to require States to pay the first $50 of such amounts collected periodically which represent the monthly support obligation to the AFDC family. The statute also amended section 402(a)(8)(A)(vi) of the Act to require States to disregard "the first $50 of any child support payments received in such month" when determining AFDC eligibility and the amount of the AFDC payment. These changes resulted in AFDC families having up to $50 of additional disposable income each month.

Section 102 of Public Law 100-485 amends sections 402(a)(8)(A)(vi) and 457(b)(1) of the Act, effective January 1, 1989, to clarify that the first $50 of support payments received in a month which was due for a prior month must be paid to the family if paid by the absent parent in the month when due. Under the new law, the AFDC family may not be denied the $50 payment when the absent parent pays support on-time but there is a delay in transmitting the payment from the point of collection to the agency responsible for distribution.

This is consistent with regulations at 45 CFR 302.51(a) (final regulations published on June 9, 1988 (53 FR 21642)), which provide that the date of collection of a child support payment for purposes of distribution is the date on which payment is received by the State IV–D agency or by the legal entity of any State or political subdivision actually making the collection, whichever is earliest. We are expanding the date of collection rule however, with respect to payments made through wage or other income withholding for the reasons noted below.

Public Law 100-485 also made significant changes in the Act affecting requirements for income withholding. Immediate income withholding is required in child support orders issued or modified on or after November 1, 1990, and other changes were made which will ensure that income withholding applies in a majority of cases in the future. (The changes to the Act as a result of Pub. L. 100–485 not addressed in this document will be regulated separately.)

From the inclusion in Public Law 100-485 of the amendments concerning the $50 pass-through, and the amendments which will result in payment of child support through income withholding in the vast majority of cases, we conclude that the Congress' intent was to apply the $50 pass-through, after January 1, 1989, as of the date of withholding. Therefore, in any case in which an absent parent's child support payment is irrevocably withheld from his or her wages or other income in the month in which the payment was due, even where the IV–D agency does not receive the payment until a later month (because the absent parent's employer or other entity withholding income did not promptly forward to the IV–D agency the support withheld), the date of collection, for distribution purposes, will be the date of the withholding. If the State's withholding law includes withholding of other income such as unemployment compensation or pension benefits, the date of collection would be the date of the withholding. In order to implement this statutory requirement, a regulatory amendment is needed to treat the date of witholding from wages or other income as the date of collection for distribution purposes. Amendments are also needed to clarify the applicability of § 302.51(a) and to ensure reporting by employers of the date of wage withholding and appropriate information exchange in interstate cases, as follows:

Section 302.51—Distribution of Support Collections

Section 302.51(a) requires support collected to be treated first as current support for the month in which it was collected and excess amounts to be applied to arrearages. It also defines the date of collection for distribution purposes, effective June 9, 1988, as the date on which payment is received by the IV–D agency or the legal entity of any State or political subdivision actually making the collection, whichever is earliest. Finally, § 302.51(a) requires that, in any case in which collections are received by an entity other than the agency responsible for final distribution, the entity must transmit the collection within 10 days of receipt.

There appears to be some misunderstanding about whether § 302.51(a) applies for distribution purposes in all IV–D cases and, specifically, whether the definition of the date of collection, which determines how amounts collected must be distributed, must be used in determining the appropriate distribution in all IV–D cases, e.g., AFDC and non-AFDC cases, intra- and interstate cases. In addition, some States have asked if the clarification in Public Law 100–485 with respect to payment of the $50 pass-through when payments are made in the month when due applies only to the $50 payment or to distribution of all collections in IV–D cases under § 302.51.

In response to these concerns, accurate distribution in IV–D cases depends on the date of collection. Therefore, when payments which were made in the month when due are received in a later month by the IV–D agency responsible for final distribution, that agency must recompute distribution of all collections for the month in which payments were made on-time, not just the $50 payment.

In response to these concerns, we are revising § 302.51(a) to clarify under the proposed first sentence that, for purposes of distribution in all IV–D cases, amounts collected shall be treated first as payment on the required support obligation for the month in which the support was collected and if any amounts are collected which are in excess of such amounts, these excess amounts shall be treated as amounts which represent payment on the required support obligation for previous months.

For purposes of distribution and redetermining eligibility in AFDC cases, States are required, in OCSE–AT–76–5 (March 11, 1976), to convert to a monthly amount support that is ordered to be paid more frequently than monthly. The proposed second sentence in § 302.51(a) would indicate that, in AFDC cases in which conversion to a monthly amount is necessary, the IV–D agency may round down the converted amount to the next lower whole dollar amount for the purpose of distribution under § 302.51. This is consistent with the method for determining the amount of the assistance payment in 45 CFR 233.20(a)(2)(iv). Conversion is not necessary in other IV–D cases.

We propose to clarify that the third sentence of § 302.51(a) applies in all IV–D cases and to address the date of collection when payments are made through wage or income withholding. Therefore, the third sentence of 45 CFR 302.51(a) would define the date of collection for distribution purposes, effective June 9, 1988, for all IV–D collections, other than those payments made through wage or other income withholding, as the date on which the payment is received by the IV–D agency or the legal entity of any State or political subdivision actually making the collection, whichever is earliest. Under a new fourth sentence, with respect to payments made through wage or other income withholding and received by the IV–D agency on or after January 1, 1989, the date of collection for distribution purposes would be the date the wages or other income are withheld to meet the support obligation. The last sentence of 45 CFR 302.51(a) would continue to indicate, until the effective date of distribution timeframes regulations published in response to the Family Support Act of 1988, that in any case in which collections are received by an entity other than the agency responsible for final distribution under this section, the entity must transmit the collection within 10 days of receipt.

Section 303.7—Provision of Services in Interstate IV–D Cases

We propose to amend the regulation governing provision of services in interstate IV–D cases (which was published as a final rule on February 22, 1988 (53 FR 5246) and amended June 9, 1988 (53 FR 21642)) to require under § 303.7(c)(7)(iv) the responding State IV–D agency to forward support payments to the location specified by the initiating State IV–D agency no later than 15 calendar days from the date of *initial* receipt in the responding State. This will clarify that payments must be forwarded to the initiating State timely and will eliminate delays when each entity through which a collection must be sent holds the collection for no legitimate reason. We would point out that this does not include, in wage withholding cases, the time between when the wages are withheld and when they are sent by the employer to the State. The 15-day clock starts running only upon receipt by a legal entity of the State. In addition, paragraph (c)(7)(iv) will be revised to require the responding State IV–D agency to inform the initiating State IV–D agency of the date of collection as defined under § 302.51(a).

Section 303.100—Procedures for Wage or Income Withholding

We propose to amend § 303.100 by revising paragraph (d)(1)(ii) to require that the IV–D agency's notice to employers concerning wage withholding state that employers must report to the IV–D agency, or such other individual or entity as the State may direct, at the time they forward support withheld from wages or other income, the date such amounts were withheld from the absent parent's wages.

2. State Guidelines for Child Support Award Amounts

Section 18 of the Child Support Enforcement Amendments of 1984 (Pub. L. 98–378) amended title IV–D of the Act to add Section 467 requiring each State, as a condition of State IV–D plan approval, to establish guidelines for child support award amounts within the State. The State must make the guidelines available to all judges and other officials who have the power to determine awards, but the guidelines need not be binding on them.

Section 103 of Public Law 100–485 amends section 467 of the Act to delete the clause that the State guidelines need not be binding upon judges or other officials and to require that the State's guidelines be used to create a rebuttable presumption in any judicial or administrative proceeding for the award of child support that the amount of the award which would result from the application of such guidelines is the correct amount of child support to be awarded. The statute further provides that a written finding or specific finding on the record that application of the guidelines would be unjust or inappropriate in a particular case, as determined under criteria established by the State, shall be sufficient to rebut the presumption in that case. The State must review the guidelines at least every four years to ensure that their application results in the determination of appropriate child support award amounts.

In response to the Child Support Enforcement Amendments of 1984, a number of States implemented mandatory guidelines rather than the advisory guidelines required under the statute. Therefore, some States may already be in compliance with the requirement in Public Law 100–485. However, the concern has been raised that some States may have implemented procedures for using guidelines which are more restrictive than the new requirements. For example, procedures requiring that guidelines be followed in setting all support awards without the possibility of rebuttal appear not to comply with the requirements of the new law. We advise States in this position that changes to their guidelines and accompanying procedures will be necessary to conform to the requirements of Public Law 100–485 unless Congress clarifies an intent to the contrary.

We propose to make the following regulatory changes in response to the requirements under section 103 of Public Law 100–485 outlined above:

Section 302.50—Support Obligations

Under current regulations at § 302.50(b)(2), when there is no court order for support, States are required to establish a support obligation, in an amount determined in writing by the IV–D agency in accordance with a formula which meets criteria prescribed under § 302.53. We propose to replace the reference to the formula and the criteria under § 302.53 with reference to § 302.56, Guidelines for setting child support awards. Since guidelines will eliminate the need for such a formula, this is a technical change to conform the requirements for establishing support obligations with the proposed requirement mandating the use of guidelines in setting support amounts.

Section 302.53—Formula for Determining the Amount of the Obligation

Under current regulations at § 302.53, for cases without court orders for support, States must utilize a formula in setting support amounts which takes into consideration a number of criteria. The formula must be designed to ensure that the child benefits from the income and resources of the absent parent on an equitable basis with other minor children of the parent and must be utilized to determine the required monthly obligation, any arrearages and the amount to be paid periodically against any existing arrearages.

We are proposing to delete § 302.53 in its entirety effective October 13, 1989, to conform to the new requirement mandating the use of child support guidelines in setting all support awards. Because guidelines under § 302.56 must be used, effective October 13, 1989, in any proceeding, judicial or administrative, for the award of support, it is no longer necessary to have a separate formula for setting child support orders administratively. All decision makers will be responsible for using the State's guidelines as a rebuttable presumption of support levels in setting child support award amounts.

Section 302.56—Guidelines for Setting Child Support Awards

The Conference Report (Report 100–98) states that judges and other officials must use the "State's guidelines, uniformly applied, as a rebuttable presumption." Therefore, there must be one set of guidelines developed by the State and uniformly applied as a rebuttable presumption in setting all child support awards.

Paragraph (a) of 45 CFR 302.56 requires each State, effective October 1, 1987, to establish guidelines by law or by judicial or administrative action for setting child support award amounts within the State. This paragraph remains unchanged under this proposed rule. Paragraph (b) of this section requires the State to have procedures for making guidelines available to decision makers for advisory purposes. We propose to delete reference in paragraph (b) to the fact that guidelines need not be binding on decision makers because Public Law 100–485 requires that, effective October 13, 1989, guidelines be used by all decision makers as a rebuttable presumption of support levels.

We propose to revise paragraph (c) to require that at a minimum the guidelines established under paragraph (a): (1) Take into consideration all earnings, income and resources of the absent parent; (2) be based on specific descriptive and numeric criteria and result in a computation of the support obligation (this is required under current paragraph (c)); (3) provide for coverage of the child or children's health care needs and include health insurance when available to either parent at reasonable cost as defined in § 306.51(a); and (4) apply to all child support orders issued in the State.

Recent studies estimated that there are up to 1.4 million children with no health coverage who could have received it had absent parents been instructed to include the children on available employment-based health coverage. Medical care for children without health coverage is a concern of the President. Including health coverage in State guidelines is an important step toward helping these children receive private health coverage.

Children's health coverage can be included in support orders in several ways. Either the absent parent or the custodial parent can cover children with their employment-based or other reasonably priced group coverage. If only one parent has access to employment-based coverage which would include the children, the other parent may be deemed responsible for an appropriate share of the premiums and unreimbursed health care expenses. When neither party has access to reasonably priced private group health coverage, support orders might specify the parents' liability for health care costs incurred and include a triggering mechanism requiring coverage should it become available.

In a substantial subset of cases, employment-based or other reasonably priced group coverage that could cover the children is available to one parent, but not to the other. In such cases, guidelines would require that coverage will be awarded to the children when available to either parent at reasonable cost. We are evaluating what additional steps would help children receive health coverage under either parents' plans and policies, and welcome suggestions.

We believe that inclusion of these basic elements are essential to developing reasonable, responsible support guidelines. However, we have chosen not to prescribe to States more specific requirements at this time. We believe States are generally in a better position to determine specific considerations for families residing in their jurisdictions. We will closely monitor State guidelines and their application to assure that children's

support is met adequately and equitably. If not, more specific requirements may become appropriate.

Paragraph (d) continues to require States to include a copy of the guidelines in the State plan. A new paragraph (e) would be added to require that each State review its guidelines at least once every four years to ensure that their application results in the determination of appropriate child support award amounts, as required in section 103(b) of Public Law 100–485. Congress included this requirement to ensure that guidelines continue to remain equitable over time. A four-year cycle for review will protect the needs of the children for whom support is ordered, guarantee the validity of the guidelines and provide States the opportunity to update the guidelines to meet changing economic and social conditions.

Proposed paragraph (f) would require States, effective October 13, 1989, to provide that there will be a rebuttal presumption, in any judicial or administrative proceeding for the award of child support, that the amount of the award which would result from the application of the guidelines established under paragraph (a) is the correct amount, as required under section 103(a)(3) of Public Law 100–485.

Also in accordance with section 103(a)(3) of the new law, we propose under paragraph (g), to stipulate that only a written finding on the record of a proceeding for the award of child support that the use of the guidelines would be inappropriate in a particular case shall be sufficient to rebut the presumption in that case. Such finding must be predicated on criteria established by the State. While development of the specific criteria for rebuttal is being left to each State's discretion, we are proposing under this paragraph that the State's criteria must be based on the best interests of the child. We believe that in any proceeding regarding child support, the interests of the child should prevail and determinations not to use the guidelines in a particular case should be the exception rather than the rule. We also propose that written findings that rebut State guidelines clearly state the nature and extent of the variation from the guidelines. In cases where items of value are conveyed in lieu of a portion of the support presumed under the guidelines, that value should be noted. This information will be useful in cases where support orders are appealed and in States' evaluation of the effectiveness of their guidelines.

We are concerned that States construct guidelines in such a way as to reasonably limit the number of cases in which the guidelines are rebutted. States should gather data on what proportion of orders are being issued under guidelines and the reasons for rebuttal where the guidelines are not applied. The data should be analyzed by the State in conducting a review of those guidelines and the State should enhance the guidelines as necessary where they find that a disproportionate number of orders have been established in which the guidelines are rebutted. Therefore, in paragraph (h), we are proposing that States should gather such data and use this information to make any revisions as part of their initial review of their guidelines. Data collection should start as soon as possible to assist in any reviews conducted before the statutorily required date in 1993. We plan to publish draft audit regulations for guidelines and other parts of the program within the next six months.

3. State Laws Providing for Paternity Establishment

Section 466(a)(5) of the Act, added by the Child Support Enforcement Amendments of 1984, Public Law 98–378, requires that States have in effect laws requiring the use of procedures which permit the establishment of the paternity of any child at any time prior to such child's eighteenth birthday. The implementing regulation at 45 CFR 302.70(a)(5) requires, effective October 1, 1985, that the State plan provide that the State has in effect such a law and has implemented such procedures.

Section 111(b) of Public Law 100–485 amends section 466(a)(5) of the Act by redesignating the above requirement as section 466(a)(5)(A) and adding a new requirement under paragraph (B) to require each State to have in effect laws requiring the use of procedures under which the State is required (except in cases where the individual involved has been found under section 402(a)(26)(B) of the Act to have good cause for refusing to cooperate) to require the child and all other parties in a contested paternity case to submit to genetic tests upon the request of any party, effective November 1, 1989. Further, paragraph (c) of section 111 of Public Law 100–485 amends section 454(6) of the Act to allow States to impose a fee for performing genetic tests on any individual who is not an AFDC recipient. We strongly encourage the charging of fees for genetic tests in order to discourage frivolous requests for testing.

In addition, section 111(e) of Public Law 100–485 amends section 466(a)(5)(A) of the Act (as amended by section 111(b)), retroactive to August 16, 1984 (the effective date of Public Law 98–378), to provide that the State law requirement permitting the establishment of paternity of any child prior to the child's 18th birthday, also applies to any child for whom paternity has not yet been established and any child for whom a paternity action was brought but dismissed because a statute of limitations of less than 18 years was then in effect in the State.

To address these statutory changes we are proposing the following regulatory amendments:

Section 302.70—Required State Laws

We propose to amend 45 CFR 302.70 to reiterate the statutory changes outlined above by revising the introductory language in paragraph (a) regarding effective dates and by revising paragraph (a)(5) to redesignate the current contents as § 302.70(a)(5)(i) and to add at the end thereof "including for any child for whom paternity has not yet been established and any child for whom a paternity action was previously dismissed under a statute of limitations of less than 18 years."

We propose to add a new § 302.70(a)(5)(ii) to require that, effective November 1, 1989, States have in effect laws providing for procedures under which the State is required, except in cases where good cause has been found, to require the child and all other parties in a contested paternity case to submit to genetic tests upon the request of any party.

Section 303.5—Establishment of Paternity

Regulations at § 303.5 set forth requirements States must adhere to in establishing paternity. We propose to amend § 303.5 by adding two new paragraphs to be designated as §§ 303.5(d) and (e).

Section 303.5(d) would require, upon the request of any party in a contested paternity case, that all parties submit to genetic testing, unless, in the case of an individual receiving AFDC, there has been a determination of good cause for refusal to cooperate under §§ 232.40 through 232.49. Genetic testing should be done promptly after the request is made, notwithstanding the age of the child in early months of infancy. Procedures currently exist which permit testing regardless of the child's age.

Proposed paragraph (e) would provide that the IV–D agency may charge any individual who is not receiving AFDC a reasonable fee for the costs of performing genetic tests. We strongly encourage States to charge fees for genetic tests in order to discourage frivolous requests for testing. The development of a fee payment mechanism would also reduce the incidence of contested cases by reducing frivolous denials or accusations of paternity.

States electing to charge such fees may set a flat fee for genetic tests in an amount not exceeding the actual cost of performing such tests or may establish a fee schedule based on income. Such fees may be collected from non-AFDC custodial parents or from the absent parent if paternity is substantiated. States electing to charge such fees must ensure that the amount is reasonable so as not to discourage the application of non-AFDC families needing paternity establishment services. Paragraph (e) would also require that, if paternity is established due to genetic test results, the IV–D agency must attempt to obtain a judgment for the costs of the genetic tests from the putative father.

4. Increased Federal Financial Participation for Laboratory Testing to Determine Paternity

Section 112 of Public Law 100–485 amends section 455(a)(1) of the Act to provide 90 percent Federal matching for States' costs for laboratory testing to determine paternity. The amendment is effective with respect to laboratory costs incurred on or after October 1, 1988. Under prior law, these costs were matched at the applicable rate pursuant to section 455(e) of the Act (68 percent for FY 1988 and 1989).

Section 304.20—Availability and rate of Federal Financial Participation

We propose to amend § 304.20 by adding a new paragraph (d) to specify that 90 percent Federal matching is available for laboratory costs of paternity determination incurred on or after October 1, 1988. This matching rate would be available for laboratory costs incurred in determining paternity in a specific case, including, for example, the costs of obtaining and transporting blood and other samples of genetic material, repeated testing where necessary, analysis of test results, and the costs for expert witnesses in a paternity determination proceeding, when the expert witness costs are included as part of the genetic testing contract. We have decided to include costs for expert witnesses because we believe that such costs are usually included as part of genetic testing contracts and are necessary and reasonable costs for the State to incur in making paternity determinations. The same costs may be excluded, pursuant to section 458(c) of the Act and the implementing regulation at 45 CFR 303.52(b)(4)(iv), in determining a State's incentive payments.

The final regulation on standards for program operations, published on August 4, 1989, require that paternity testing laboratories be selected competitively. Consistent with current Federal requirements, Federal financial participation will be available only for reasonable and necessary costs; costs significantly above market rate are not reasonable. This requirement for competitive selection will also reduce coss to individuals in States that choose to charge fees to the requesting party.

Regulatory Flexibility Analysis

Under the Regulatory Flexibility Act of 1980 (Pub. L. 96–354), we are required to prepare a regulatory flexibility analysis for those rules which would have a significant economic impact on a substantial number of small entities. While this regulation requires States to notify employers that they must indicate the date wages are withheld when forwarding wages to the State, this would not have a significant economic impact on employers because they are already required to comply with wage withholding requests, and supplying this date when forwarding withheld wages would not significantly increase the economic burden placed on them. Because the impact of these regulations is primarily on States, these regulations would not have a significant economic impact on a substantial number of small entities and a regulatory flexibility analysis is not required.

Regulatory Impact Analysis

The Secretary has determined, in accordance with Executive Order 12291, that this rule does not constitute a "major" rule for the following reasons:

(1) The annual effect on the economy would be less than $100 million;

(2) This rule would not result in a major increase in costs or prices for consumers, individual industries, Federal, State, or local government agencies, or geographic regions; and

(3) This rule would not result in significant adverse effects on competition, employment, investment, productivity, innovation, or the ability of United States-based enterprises to compete with foreign-based enterprises in domestic or export markets.

List of Subjects

Parts 302 and 303

Child support, Grant programs—social programs, Reporting and recordkeeping requirements.

45 CFR Part 304

Child support, Grant programs—social programs.

(Catalog of Federal Domestic Assistance Program No. 13.783, Child Support Enforcement Program)

Wayne A. Stanton,
Director, Office of Child Support Enforcement.

Approved: April 10, 1989.

Louis W. Sullivan,
Secretary.

For the reasons set out in the preamble, we propose to amend Title 45 Chapter III of the Code of Federal Regulations as follows:

PART 302—STATE PLAN REQUIREMENTS [AMENDED]

1. The authority citation for Part 302 continues to read as follows:

Authority: 42 U.S.C. 651 through 658, 660, 664, 666, 667, 1302, 1396a(a)(25), 1396b(d)(2) 1396b(o), 1396b(p) and 1396(k).

2. Section 302.50(b)(2) is amended by replacing the words "a formula which meets the criteria prescribed in § 302.53" with the words "the requirements of § 302.56".

3. Section 302.51 is amended by revising paragraph (a) to read as follows:

§ 302.51 Distribution of support collections.

* * * * *

(a) For purposes of distribution in any IV–D case, amounts collected shall be treated first as payment on the required support obligation for the month in which the support was collected and if any amounts are collected which are in excess of such amount, these excess amounts shall be treated as amounts which represent payment on the required support obligation for previous months. In AFDC cases in which conversion to a monthly amount is necessary, the IV–D agency may round down the converted amount to the next lower whole dollar amount for the purpose of distribution under this section. Effective June 9, 1988, the date of collection for distribution purposes in all IV–D cases, except with respect to those collections addressed under the next sentence of this section, shall be the date on which the payment is received by the IV–D agency or the legal entity of any State or political subdivision actually making the collection, whichever is earliest. With respect to payments made through wage or other income withholding and received by the IV–D agency on or after January 1, 1989, the date of collection for distribution purposes in all IV–D cases shall be the date the wages or other income are withheld to meet the support obligation. Until the effective date of regulations setting distribution timeframes in accordance with the Family Support Act of 1988, in any case in which collections are received by an entity other than the agency responsible for final distribution under this section, the entity must transmit the collection within 10 days of receipt.

4. Section 302.53 is removed.

5. Section 302.56 is amended by revising paragraphs (b) and (c) and adding paragraphs (e), (f), (g), and (h) to read as follows:

§ 302.56. Guidelines for setting child support awards.

* * * * *

(b) The State shall have procedures for making the guidelines available to all persons in the State whose duty it is to set child support award amounts.

(c) The guidelines established under paragraph (a) of this section must at a minimum:

(1) Take into consideration all earnings, income and resources of the absent parent;

(2) Be based on specific descriptive and numeric criteria and result in a computation of the support obligation;

(3) Provide for coverage of the child or children's health care needs and include health insurance when available to either parent at reasonable cost as defined in § 306.51(a); and

(4) Apply to all orders in the State.

(d) * * *

(e) The State must review the guidelines established under paragraph (a) of this section at least once every 4 years to ensure that their application results in the determination of appropriate child support award amounts.

(f) Effective October 13, 1989, the State must provide that there shall be a rebuttable presumption, in any judicial or administrative proceeding for the award of child support, that the amount of the award which would result from the application of the guidelines established under paragraph (a) of this section is the correct amount of child support to be awarded.

(g) A written finding on the record of a judicial or administrative proceeding for the award of child support that the application of the guidelines established under paragraph (a) of this section would be unjust or inappropriate in a particular case shall be sufficient to rebut the presumption in that case, as determined under criteria established by the State. Such criteria must be based on the best interests of the child. Findings that rebut the guidelines shall state the amount of support that would have been required, how the order varies from the guidelines, including the value of any property or other support awarded in lieu of support presumed by the guidelines, the justification of how the finding serves the best interests of the child; and, in cases where items of value are conveyed in lieu of a portion of the support presumed under the guidelines, the estimated value of items conveyed.

(h) As part of the initial review of a State's guidelines required under paragraph (e) of this section, a State must gather and analyze data regarding the number of cases in which guidelines have been applied, the number in which there has been a deviation from the guidelines, and the reasons for such deviation. The analysis of the data must be used in the State's review of the guidelines to ensure that deviations from the guidelines are limited.

6. Section 302.70(a) is amended by adding the clause "Unless otherwise indicated," at the beginning of the introductory text, and by revising paragraph (a)(5) to read as follows:

§ 302.70 Required State laws.

(a) * * *

(5)(i) Procedures for the establishment of paternity for any child at least to the child's 18th birthday, including any child for whom paterntiy has not yet been established and any child for whom a paternity action was previously dismissed under a statute of limitations of less than 18 years; and

(ii) Effective November 1, 1989, procedures under which the State is required (except in cases where the individual involved has been found under §§ 232.40 through 232.49 of this title to have good cause for refusing to cooperate) to require the child and all other parties in a contested paternity case to submit to genetic tests upon the request of any such party, in accordance with §§ 330.5 (d) and (e) of this chapter.

* * * * *

PART 303—STANDARDS FOR PROGRAM OPERATIONS

7. The authority citation for part 303 continues to read as follows:

Authority: 42 U.S.C. 651 through 658, 660, 663, 664, 666, 667, 1302, 1396a(a)(25), 1396b(d)(2), 1396b(o), 1396b(p), and 1396(k).

8. Section 303.5 is amended by adding new paragraphs (d) and (e) to read as follows:

§ 303.5 Establishment of paternity.

* * * * *

(d) Upon the request of any party in a contested parternity ase, the IV–D agency shall require all parties to submit to genetic tests unless, in the case of an individual receiving aid under the State's title IV–A plan, there has been a determination of good cause for refusal to cooperate under §§ 232.40 through 232.49 of this title.

(e) The IV–D agency may charge any individual who is not a recipient of aid under the State's title IV–A plan a reasonable fee for the costs of performing genetic tests. If paternity is established as a result of genetic tests, the IV–D agency must attempt to obtain a judgment for the costs of the genetic tests from the putative father.

9. Section 303.7 is amended by revising paragraph (c)(7)(iv) to read as follows:

§ 303.7 Provision of services in interstate IV–D cases.

* * * * *

(c) * * *

(7) * * *

(iv) Collecting and monitoring any support payments from the absent parent and forwarding payments to the location specified by the IV–D agency in the initiating State no later than 15 calendar days from the date of initial receipt in the responding State, except with respect to certain Federal tax refund offset collections as specified in § 303.72(h)(5) of this part. The IV–D agency must include sufficient information to identify the case, indicate the date of collection as defined under § 302.51(a) of this title, and include the responding State's identifying code as defined in the Federal Information Processing Standards Publication (FIPS) issued by the National Bureau of Standards or the Worldwide Geographic Location Codes issued by the General Services Administration.

* * * * *

10. Section 303.100(d)(1)(ii) is amended by inserting the following words before the semicolon at the end:

§ 303.100 Procedures for wage or income withholding.

* * * * *

(d) * * *

(1) * * *

(ii) * * *, and must report to the State (or to such other individual or entity as the State may direct) the date on which the amount was withheld from the absent parent's wages;

* * * * *

PART 304—FEDERAL FINANCIAL PARTICIPATION

11. The authority citation for part 304 continues to read as follows:

Authority: 42 U.S.C. 651 through 655, 657, 1302, 1396a(a)(25), 1396b(d)(2), 1396b(o), 1396b(p), and 1396(k).

12. Section 304.20 is amended by adding a new paragraph (d), as follows:

§ 304.20 Availability and rate of Federal financial participation.

* * * * *

(d) Federal financial participation at the 90 percent rate is available for laboratory costs incurred in determining paternity on or after October 1, 1988, including the costs of obtaining and transporting blood and other samples of genetic material, repeated testing when necessary, analysis of test results, and the costs for expert witnesses in a paternity determination proceeding, but only if the expert witness costs are included as part of the genetic testing contact.

Department of Education

34 CFR Parts 245, 246, 247, and 745

Women's Educational Equity Act Program; Rule and Notice Inviting Applications

DEPARTMENT OF EDUCATION

34 CFR Parts 245, 246, 247, and 745

RIN: 1810-AA16

Women's Educational Equity Act Program

AGENCY: Department of Education.

ACTION: Final regulations.

SUMMARY: The Secretary amends the regulations for the Women's Educational Equity Act (WEEA) Program. These regulations implement the changes mandated by the Augustus F. Hawkins-Robert T. Stafford Elementary and Secondary School Improvement Amendments of 1988 (Pub. L. 100–297), include new regulations for projects of local significance, reflect program policy changes and effect other revisions based on a thorough review of the current regulations for the purpose of deregulation.

EFFECTIVE DATE: These regulations take effect either 45 days after publication in the **Federal Register** or later if the Congress takes certain adjournments. If you want to know the effective date of these regulations, call or write the Department of Education contact person. A document announcing the effective date will be published in the **Federal Register**.

FOR FURTHER INFORMATION CONTACT: Mrs. Alice T. Ford, Women's Educational Equity Act Program, 400 Maryland Avenue SW. (Room 2053, FOB–6), Washington, DC 20202–6439. (202) 732–4351.

SUPPLEMENTARY INFORMATION: The purpose of the Women's Educational Equity Act (WEEA) Program is to: (1) Provide equity for women—including girls—at all levels of education, (2) provide financial assistance to educational agencies and institutions in meeting all requirements of Title IX of the Education Amendments of 1972 (relating to nondiscrimination on the basis of sex in federally assisted educational programs), and (3) promote educational equity for women who suffer multiple discrimination, bias, or stereotyping based on sex and race, ethnic origin, disability, or age. Funds are provided through grants and contracts for projects of national, statewide, or general significance (referred to in this preamble as projects of general significance) that could be disseminated widely and replicated in a variety of settings. Projects of general significance include challenge grants, not to exceed $40,000 each, for projects to develop new dissemination and replication strategies and innovative approaches to achieving the purposes of the WEEA.

Funds may also be provided for projects of local significance, if the appropriation for the WEEA Program exceeds a statutorily specified amount. In that case, the Secretary has the option of using the excess funds for projects of general significance, projects of local significance, or both.

On January 30, 1989, the Secretary published a notice of proposed rulemaking for this program in the **Federal Register** (54 FR 4742–4748). The NPRM included a discussion of the specific changes to be made by these regulations.

Changes include revisions to sections of the current regulations, based on a deregulation review, because the provisions were either not necessary to the administration of the program (i.e., § 745.5—equity in education) or they could be streamlined (i.e., § 745.4—the definition of educational equity for women). In addition, certain sections of these regulations were revised to focus on some current issues affecting educational equity for women and girls. For example, some of the priorities for general significance grants were deleted (§§ 745.26 and 745.27) and replaced with new priorities (§ 246.11) to highlight some areas of growing concern to women and girls: participating in mathematics, science, and computer science courses and in careers in which they are underrepresented; expanding opportunities for economically disadvantaged women; and ensuring that women remain in school or, if they drop out, resume their education.

Analysis of Comments and Responses

In response to the Secretary's invitation in the NPRM, fifty parties submitted comments on the proposed regulations. An analysis of the comments and of the changes in the regulations since publication of the NPRM is published as an appendix to these regulations. Technical and other minor changes—and suggested changes the Secretary is not legally authorized to make under the applicable statutory authority—are not addressed.

Some changes have been made in these regulations as a result of public comments. The following substantive changes have been made to these final regulations:

- The definition of educational equity for women in § 245.5 has been changed to clarify that eliminating institutional sex discrimination and inequitable educational policies and procedures is a part of the definition.
- Section 246.1 has been changed by eliminating the words "likely to" in describing the types of general significance grants that will be funded, to clarify that general significance projects must have nationwide or statewide significance.
- Section 246.32 has been revised to include the requirement that applicants demonstrate how their projects will address, or can be adapted to address, the needs of racial and ethnic minority women, disabled women, and older women. In addition, the prefatory language in this section has been revised to clarify that all projects funded under Part 246 must be of general significance.

Executive Order 12291

These proposed regulations have been reviewed in accordance with Executive Order 12291. They are not classified as major because they do not meet the criteria for major regulations established in the Executive Order.

Executive Order 12606

These regulations will have a positive impact on the family and are consistent with the requirements of Executive Order 12606—The Family. These regulations strengthen the authority and participation of parents in the education of their children. For example, the regulations specifically require that a local educational agency hold an open meeting regarding the contents of its application to give parents and the public in general an opportunity to testify or otherwise comment on the contents.

Intergovernmental Review

This program is subject to the requirements of Executive Order 12372 and the regulations in 34 CFR Part 79. The objective of the Executive Order is to foster an intergovernmental partnership and a strengthened federalism by relying on processes developed by State and local governments for coordination and review of proposed Federal financial assistance.

In accordance with the order, this document is intended to provide early notification of the Department's specific plans and actions for this program.

Assessment of Educational Impact

In the notice of proposed rulemaking, the Secretary requested comments on whether the proposed regulations would require transmission of information that is being gathered by or is available from any other agency or authority of the United States.

Based on the responses to the proposed rules and on its own review,

the Department has determined that the regulations in this document do not require transmission of information that is being gathered by or is available from any other agency or authority of the United States.

List of Subjects in 34 CFR Parts 245, 246, 247, and 745

Education, Government contracts, Grant programs—education, Reporting and recordkeeping requirements, Sex discrimination.

Dated: September 6, 1989.

Lauro F. Cavazos,

Secretary of Education.

(Catalog of Federal Domestic Assistance Number 84.083, Women's Educational Equity Act Program)

The Secretary amends Title 34 of the Code of Federal Regulations by redesignating Part 745 as Part 245, revising redesignated Part 245, and adding new Parts 246 and 247 to read as follows:

PART 245—WOMEN'S EDUCATIONAL EQUITY ACT PROGRAM—GENERAL PROVISIONS

Subpart A—General

Sec.
245.1 What is the Women's Educational Equity Act Program?
245.2 Who is eligible for an award?
245.3 Are men and boys eligible to participate in projects and activities?
245.4 What regulations apply?
245.5 What definitions apply?

Subpart B—What Kinds of Projects and Activities May the Secretary Fund?

245.10 What kinds of projects may the Secretary fund?
245.11 What kinds of activities may the Secretary fund?
245.12 How does the Secretary establish priorities?

Subpart C—How Does One Apply for an Award?

245.20 How must a local educational agency satisfy the requirement for an open meeting certification?
245.21 What assurance must an application include?

Subpart D—What Conditions Must Be Met by a Recipient?

245.40 What costs are allowed?
245.41 What cost principles apply to individuals?

Authority: 20 U.S.C. 3041–3045, unless otherwise noted.

Subpart A—General

§ 245.1 What is the Women's Educational Equity Act Program?

(a) The Women's Educational Equity Act Program provides funds for projects designed to do one or more of the following:

(1) Promote educational equity for women in the United States.

(2) Promote educational equity for women who suffer multiple discrimination, bias, or stereotyping based on—

(i) Sex; and

(ii) Race, ethnic origin, disability, or age.

(3) Enable educational agencies and institutions to meet the requirements of Title IX of the Education Amendments of 1972 (relating to nondiscrimination on the basis of sex in federally assisted educational programs).

(b) Unless otherwise specified, as used in this part—and in 34 CFR Parts 246 and 247—the term "women" includes girls.

(c) The Secretary may provide funds under this program in the form of a grant or contract.

(Authority: 20 U.S.C. 3041(b), 3042(a))

§ 245.2 Who is eligible for an award?

The following are eligible to receive awards under the Women's Educational Equity Act Program:

(a) Public agencies, institutions, and organizations.

(b) Nonprofit private agencies, institutions, and organizations, including student and community groups.

(c) Individuals.

(Authority: 20 U.S.C. 3042(a))

§ 245.3 Are men and boys eligible to participate in projects and activities?

Nothing in this part or in 34 CFR Parts 246 or 247 prohibits men and boys from participating in any project or activity assisted under the Women's Educational Equity Act Program.

(Authority: 20 U.S.C. 3043(c))

§ 245.4 What regulations apply?

The following regulations apply to the Women's Educational Equity Act Program:

(a) The Education Department General Administrative Regulations (EDGAR) in 34 CFR Part 74 (Administration of Grants to Institutions of Higher Education, Hospitals and Nonprofit Organizations); 34 CFR Part 75 (Direct Grant Programs); 34 CFR Part 77 (Definitions that Apply to Department Regulations); 34 CFR Part 79 (Intergovernmental Review of Department of Education Programs and Activities); 34 CFR Part 80 (Uniform Administrative Requirements for Grants and Cooperative Agreements to State and Local Governments); 34 CFR Part 81 (General Education Provisions Act—Enforcement); and 34 CFR Part 85 (Governmentwide Debarment and Suspension (Nonprocurement) and Governmentwide Requirements for Drug-Free Workplace (Grants)).

(b) The Federal Acquisition Regulation (FAR) in 48 CFR Chapter 1 and the Department of Education Acquisition Regulation (EDAR) in 48 CFR Chapter 34.

(c) The regulations in 34 CFR Parts 246 and 247, as appropriate.

(d) The regulations in this Part 245.

(Authority: 20 U.S.C. 3041–3045)

§ 245.5 What definitions apply?

The following terms used in this part are defined in 34 CFR 77.1:

Applicant
Application
Award
Budget
Contract
EDGAR
Grant
Local educational agency
Nonprofit
Private
Project
Public
Secretary
State

(b) *Other definitions.* The following definitions also apply to this part:

"Act" means the Women's Educational Equity Act, as amended.

"Educational equity for women" means—

(1) The elimination of institutionalized barriers and inequitable educational policies and practices that prevent full and fair participation by women in educational programs and in American society generally; and

(2) The ability of women to choose freely among benefits and opportunities in educational institutions, programs and curricula, without limitations based on sex.

"Title IX" means Title IX of the Education Amendments of 1972 (Pub. L. 92–318).

(Authority: 20 U.S.C. 3041–3045)

Subpart B—What Kinds of Projects and Activities May the Secretary Fund?

§ 245.10 What kinds of projects may the Secretary fund?

(a) The Secretary provides Federal funds for projects of general significance (34 CFR Part 246).

(b) If funds appropriated for the Women's Educational Equity Act Program exceed an amount specified in 20 U.S.C. 3042(b), the Secretary may also

BEST COPY AVAILABLE

provide funds for projects of local significance (34 CFR Part 247).

(Authority: 20 U.S.C. 3042)

§ 245.11 What kinds of activities may the Secretary fund?

(a) The Secretary awards at least one grant or contract each fiscal year for the performance of each of the activities described in paragraph (c) of this section.

(b) The Secretary awards funds for demonstration, developmental, and dissemination activities designed to provide, advance, ensure, or achieve educational equity for women at all levels of education.

(c) Activities described in paragraph (b) of this section may include, but are not restricted to, the following:

(1) Development—if materials are commercially unavailable—and evaluation of curricula, textbooks, and other educational materials.

(2) Model training programs for educational personnel.

(3) Research and development projects.

(4) Guidance and counseling activities, including the development of nondiscriminatory tests.

(5)(i) Educational activities to increase opportunities for women, including continuing educational activities and programs for underemployed and unemployed adult women.

(ii) As used in paragraph (c)(5)(i) of this section, "adult" refers to women who—

(A) Have attained the age of 16; and

(B) Are no longer in school.

(6) Expansion and improvement of educational programs and activities for women in vocational education, career education, physical education, and educational administration.

(Authority: 20 U.S.C. 3042(a))

§ 245.12 How does the Secretary establish priorities?

(a) Each year, in a notice published in the **Federal Register,** the Secretary establishes separate priorities for projects of general significance and projects of local significance. The Secretary selects one or more priorities for each category of projects, from among the following:

(1) The priorities in § 246.11.

(2) The priorities in § 247.11.

(b)(1) Applicants may submit applications under one or more of the selected priorities. Applicants must identify in their applications the priorities under which they wish to compete.

(2) Applications under a priority compete against other applications under that priority for funds allocated to the priority.

(c)(1) An applicant may propose a project that is not under a priority, but is within the scope of the authorized activities described in § 245.11. These applications compete for funds not allocated to any priority.

(2) If an applicant fails to identify a priority, the application competes with other applications that are not under a selected priority.

(d)(1) Each year the Secretary may select one or more of the priorities established for general grants to apply to challenge grants.

(2) In any year that the Secretary establishes priorities for challenge grants, the procedures in paragraphs (a) through (c) of this section apply.

(Authority: 20 U.S.C. 3045)

Subpart C—How Does One Apply for an Award?

§ 245.20 How must a local educational agency satisfy the requirement for an open meeting certification?

An applicant that is a local educational agency shall—

(a) Give reasonable notice of the general public's opportunity to testify or otherwise comment at an open meeting regarding the subject matter of the application;

(b) Hold the open meeting;

(c) Consider comments obtained at the meeting in developing the final application; and

(d) Certify in the application submitted to the Secretary that the LEA has held an open meeting regarding the application, as required by this section.

(Authority: 20 U.S.C. 3386)

§ 245.21 What assurance must an application include?

In addition to meeting the other requirements in this part, and as appropriate, Parts 246 and 247, an application must include an assurance that the applicant, if selected for an award, would administer or supervise the project or activity for which the applicant seeks Federal financial assistance under the program.

(Authority: 20 U.S.C. 3043(a))

Subpart D—What Conditions Must Be Met by a Recipient?

§ 245.40 What costs are allowed?

In addition to the costs allowed in EDGAR, the Secretary allows project funds to be used for the following:

(a) The payment of stipends, travel costs, and child care to persons who participate in training under the project and to persons who participate in field-testing of materials and programs developed under the project if—

(1) Provision for these payments was included in the application;

(2) The applicant demonstrates to the Secretary's satisfaction that the payments are necessary to achieve the objectives of the project; and

(3) Participants who receive stipends are not otherwise paid for the time during which they participate in the training or testing.

(b) The costs of tuition and fees for participants in a training activity under the project if—

(1) Provision for these costs was included in the application; and

(2) The applicant demonstrates to the Secretary's satisfaction that payment of the costs is necessary to achieve the objectives of the project.

(Authority: 20 U.S.C. 3042(a))

§ 245.41 What cost principles apply to individuals?

The cost principles referenced in 34 CFR 80.22 (Allowable Costs) apply to an individual who receives a grant under this program, except that an individual may not use an indirect cost rate.

(Authority: 20 U.S.C. 3042(a))

PART 246—WOMEN'S EDUCATIONAL EQUITY ACT PROGRAM—PROJECTS OF GENERAL SIGNIFICANCE

Subpart A—General

Sec.

246.1 What are projects of general significance under the Women's Educational Equity Act Program.
246.2 Who is eligible for an award?
246.3 What regulations apply?

Subpart B—What Kinds of Projects and Activities May the Secretary Fund?

246.10 What kinds of projects and activities may the Secretary fund?
246.11 What priorities may the Secretary select?

Subpart C—[Reserved]

Subpart D—How Does the Secretary Make an Award?

246.30 How does the Secretary evaluate an application?
246.31 Selection criterion: Need.
246.32 Selection criterion: Impact.
246.33 Selection criterion: Plan of operation.
246.34 Selection criterion: Qualifications of staff.
246.35 Selection criterion: Innovative approach.
246.36 What additional factors does the Secretary consider in selecting projects for funding?

Authority: 20 U.S.C. 3041–3045, unless otherwise noted.

Subpart A—General

§ 246.1 What are projects of general significance under the Women's Educational Equity Act Program?

Under the Women's Educational Equity Act Program—Projects of General Significance, the Secretary provides Federal funds to projects—

(a) That address one or more purposes of the Act;

(b) That will—

(1) Have national or statewide significance; or

(2) Be of significance to women generally; and

(c) Whose potential impact is not confined to a local area.

(Authority: 20 U.S.C. 3042(a)(1))

§ 246.2 Who is eligible for an award?

(a) The types of entities listed in 34 CFR 245.2 are eligible to receive awards under the Women's Educational Equity Act Program—Projects of General Significance.

(b) In addition to the types of entities referred to in paragraph (a) of this section, a consortium of these entities is eligible to receive a challenge grant.

(Authority: 20 U.S.C. 3042(a); 3044(b))

§ 246.3 What regulations apply?

The following regulations apply to the Women's Educational Equity Act Program—Projects of General Significance:

(a) The regulations in 34 CFR Part 245.

(b) The regulations in this Part 246.

(Authority: 20 U.S.C. 3041–3045)

Subpart B—What Kinds of Projects and Activities May the Secretary Fund?

§ 246.10 What kinds of projects and activities may the Secretary fund?

Under the Women's Educational Equity Act Program—Projects of General Significance, the Secretary provides Federal funds for the following kinds of activities:

(a) *General grants or contracts.* The Secretary may provide assistance through a general grant or award a contract for one or more of the kinds of activities described or listed in 34 CFR 245.11.

(b)(1) *Challenge grants.* The Secretary may provide assistance through a challenge grant for projects designed to develop innovative approaches to achieving the purposes of the Act.

(2) These approaches may include, but are not restricted to the following:

(i) Comprehensive plans for implementation of equity programs at every educational level.

(ii) Innovative approaches to school-community partnerships.

(iii) New dissemination and replication strategies.

(Authority: 20 U.S.C. 3042, 3044(a))

§ 246.11 What priorities may the Secretary select?

In establishing priorities for funding each year according to 34 CFR 245.12, the Secretary may select one or more of the following:

(a) Projects to develop and test model programs and materials that could be used by local educational agencies and other entities in meeting the requirements of Title IX.

(b) Projects to develop new educational programs, training programs, counseling programs, or other programs, designed to increase the interest and participation of women in instructional courses in mathematics, science, and computer science.

(c) Projects to develop new educational programs, training programs, counseling programs, or other programs, or to expand existing model programs, designed to accomplish the following:

(1) Reduce the rate at which women drop out of formal education.

(2) Encourage women dropouts to resume their education.

(d) Projects to develop or expand guidance and counseling programs designed to increase the knowledge and awareness of women regarding opportunities in careers in which women have not significantly participated.

(e) Projects to develop new educational programs or expand existing model educational programs designed to enhance opportunities for educational achievement by economically disadvantaged women.

(f) Projects to develop new educational programs or expand existing model educational programs designed to enhance opportunities for educational achievement by women who suffer multiple discrimination on the basis of sex and race, ethnic origin, age, or disability.

(Authority: 20 U.S.C. 3045)

Subpart C—[Reserved]

Subpart D—How Does the Secretary Make an Award?

§ 246.30 How does the Secretary evaluate an application?

(a)(1) The Secretary evaluates an application on the basis of the criteria in §§ 246.31 through 246.34.

(2) The Secretary awards up to 100 points for these criteria.

(b)(1) In the case of an application for a challenge grant under 34 CFR Part 246, the Secretary also applies the criterion in 34 CFR 246.35.

(2) The Secretary awards up to five additional points for this criterion.

(c) The maximum possible score for each criterion is indicated in parentheses.

(Authority: 20 U.S.C. 3045)

§ 246.31 Selection criterion: Need.

The Secretary determines the extent to which—

(a) The proposed project addresses a need or needs that—

(1) Are central to one or more of the purposes of the Act; (8 points) and

(2) Have magnitude and significance; (8 points) and

(b) The applicant has sufficient knowledge of other projects dealing with this need or these needs, and demonstrates convincingly that the proposed project would not duplicate the other projects. (4 points)

(Authority: 20 U.S.C. 3045)

§ 246.32 Selection criterion: Impact.

The Secretary determines the degree to which the project is of general significance, as evidenced by the extent to which—

(a) The objectives of the proposed project are realistic; (6 points)

(b) The strategy and activities proposed to implement the project are likely to accomplish the project's objectives; (6 points)

(c) The proposed project holds promise of making a substantial contribution toward attaining one or more of the purposes of the Act; (6 points) and

(d) The applicant demonstrates that the project will address or can be adapted to address the educational equity needs of racial and ethnic minority group women, disabled women and older women. (6 points)

(Authority: 20 U.S.C. 3043, 3045)

§ 246.33 Selection criterion: Plan of operation.

The Secretary determines the extent to which—

(a) The management plan proposed by the applicant—

(1) Is likely to be effective for implementing the proposed project and achieving the project's objectives; (10 points)

(2) Provides for adequate and appropriate allocation of resources; (5 points) and

(3) Contains realistic schedules; (5 points)

(b) The budget proposed by the applicant is adequate and provides for costs that are reasonable in relation to the objectives of the project; (10 points) and

(c) The policies and procedures provided by the applicant for evaluating the proposed project are likely to ensure adequate evaluation including, if appropriate, an evaluation or estimate of the potential for continued significance following completion of the grant period. (10 points)

(Authority: 20 U.S.C. 3043, 3045)

§ 246.34 Selection criterion: Qualifications of staff.

The Secretary determines the extent to which—

(a) The director of the proposed project has the qualifications and capability to conduct the project successfully; (5 points)

(b) The staff of the project has the qualifications and capability to implement and operate the project successfully; (5 points)

(c) The time to be spent on the project by the director and staff is sufficient to carry out the project activities. (3 points) and

(d) The applicant, as part of its nondiscriminatory employment practices, will ensure that its personnel are selected for employment without regard to race, color, national origin, gender, age, or handicapping conditions. (3 points)

(Authority: 20 U.S.C. 3045)

§ 246.35 Selection criterion: Innovative approach.

The Secretary determines the extent to which the proposed project uses a new or untried approach to achieving some aspect of educational equity for women.

(Authority: 20 U.S.C. 3044, 3045)

§ 246.36 What additional factors does the Secretary consider in selecting projects for funding?

(a) In addition to the criteria in §§ 246.31 through 246.34—and, if appropriate, the criterion in § 246.35—the Secretary, in selecting projects for funding, gives special consideration to—

(1) Applications submitted by applicants that have not received assistance under this part or Part C of Title IX of the Elementary and Secondary Education Act of 1965; and

(2) The geographical distribution of awards.

(b) The Secretary awards ten additional points to each project that is eligible for consideration under paragraph (a)(1) of this section.

(Authority: 20 U.S.C. 3043(b); 3045)

PART 247—WOMEN'S EDUCATIONAL EQUITY ACT PROGRAM—PROJECTS OF LOCAL SIGNIFICANCE

Subpart A—General

Sec.

247.1 What are projects of local significance under the Women's Educational Equity Act Program?
247.2 Who is eligible for an award?
247.3 What regulations apply?

Subpart B—What Kinds of Activities May the Secretary Fund?

247.10 What kinds of activities may the Secretary fund?
247.11 What priorities may the Secretary select?

Subpart C—[Reserved]

Subpart D—How Does the Secretary Make an Award?

247.30 How does the Secretary evaluate an application?
247.31 Selection criterion: Need.
247.32 Selection criterion: Impact.
247.33 Selection criterion: Plan of operation.
247.34 Selection criterion: Qualification of staff.
247.35 Selection criterion: Cooperation and commitment.
247.36 Selection criterion: Budget and cost effectiveness.
247.37 Selection criterion: Evaluation.
247.38 What is the maximum period of an award?

Subpart E—What Conditions Must Be Met by a Recipient?

247.40 What portion of the costs must a recipient contribute?

Authority: 20 U.S.C. 3041–3045, unless otherwise noted.

Subpart A—General

§ 247.1 What are projects of local significance under the Women's Educational Equity Act Program?

Under the Women's Educational Equity Act Program—Projects of Local Significance, the Secretary provides Federal funds to pay a portion of the costs of establishing and operating special programs and projects of local significance that provide equal opportunities for both sexes.

(Authority: 20 U.S.C. 3042(a)(2))

§ 247.2 Who is eligible for an award?

(a) The types of entities listed in 34 CFR 245.2 are eligible to receive awards under the Women's Educational Equity Act Program—Projects of Local Significance.

(b) Each year the Secretary allocates at least 75 percent of the funds available for these types of projects for awards to local educational agencies (LEAs).

(Authority: 20 U.S.C. 3042(a)(2))

§ 247.3 What regulations apply?

The following regulations apply to the Women's Educational Equity Act Program—Projects of Local Significance:

(a) The regulations in 34 CFR Part 245.

(b) The regulations in this Part 247.

(Authority: 20 U.S.C. 3041–3045)

Subpart B—What Kinds of Activities May the Secretary Fund?

§ 247.10 What kinds of activities may the Secretary fund?

Under the Women's Educational Equity Act Program—Projects of Local Significance, the Secretary provides Federal funds for the following kinds of activities:

(a) The kinds of activities described or listed in 34 CFR 245.11.

(b) Activities incident to achieving compliance with Title IX.

(c) Other special activities designed to achieve the purposes of the Act.

(Authority: 20 U.S.C. 3042(a)(2))

§ 247.11 What priorities may the Secretary select?

In establishing priorities for funding each year, according to 34 CFR 245.12, the Secretary may select one or more of the following:

(a) Projects to help LEAs and other educational agencies and institutions meet the requirements of Title IX.

(b) Projects to develop—if materials are commercially unavailable—and adapt to local needs, curricula, textbooks, and other educational materials that will promote educational equity.

(c) Projects to develop and implement training programs, counseling programs, or other programs designed to enhance the skills of women in mathematics, science, and computer science.

(d) Projects to develop and implement guidance and counseling programs designed to—

(1) Increase the knowledge and awareness of women regarding non-traditional career options and opportunities for women; and

(2) Provide information on educational and other requirements for women entering those careers.

(Authority: 20 U.S.C. 3045)

Subpart C—[Reserved]

Subpart D—How Does the Secretary Make an Award?

§ 247.30 How does the Secretary evaluate an application?

(a) The Secretary evaluates an application for Federal financial assistance for a project of local significance on the basis of the criteria in §§ 247.31 through 247.37.

(b) The Secretary awards up to 100 points for these criteria.

(c) The maximum possible score for each criterion is indicated in parentheses.

(Authority: 20 U.S.C. 3045)

§ 247.31 Selection criterion: Need.

The Secretary determines the extent to which—

(a) The proposed project addresses needs that are central to the purposes of the Act; (5 points) and

(b) The applicant documents that there are severe and significant needs to be addressed in the local community, agency, or institution to be served. (5 points)

(Authority: 20 U.S.C. 3045)

§ 247.32 Selection criterion: Impact.

The Secretary determines the extent to which—

(a) The project will help educational agencies or institutions meet the requirements of Title IX or otherwise provide educational equity in the local community, agency or institution to be served; (5 points) and

(b) The project will increase the knowledge and commitment of administration, faculty, staff, students, parents, and the public to the needs and issues addressed by the project. (5 points)

(Authority: 20 U.S.C. 3045)

§ 247.33 Selection criterion: Plan of operation.

The Secretary determines the extent to which—

(a) The project's objectives are clear and related to the needs identified in the application; (8 points)

(b) The applicant's strategies and activities are feasible and are likely to address the identified needs successfully; (8 points)

(c) The applicant has an effective management plan that ensures proper management and administration of the project, including realistic schedules and adequate allocation of resources and personnel to achieve each objective; (8 points) and

(d) The applicant demonstrates how it will provide equal access and treatment for eligible project participants who are members of groups that suffer multiple discrimination, bias, or stereotyping based on sex and race, ethnic origin, age, or disability. (8 points)

(Authority: 20 U.S.C. 3045)

§ 247.34 Selection criterion: Qualifications of staff.

The Secretary determines the extent to which—

(a) The project director and staff have the qualifications and the capability to conduct the project successfully; (10 points)

(b) The time to be spent on the project by the director and staff is sufficient to carry out project activities; (5 points) and

(c) The applicant, as part of its nondiscriminatory employment practices, will ensure that its personnel are selected for employment without regard to race, color, national origin, gender, age, or handicapping conditions. (5 points)

(Authority: 20 U.S.C. 3045)

§ 247.35 Selection criterion: Cooperation and commitment.

The Secretary determines the extent to which—

(a) There is involvement and cooperation in the planning and implementation of the project by appropriate community groups, such as parent-teacher groups, that could contribute to the project's success; (3 points)

(b) There is support for the project and commitment to the success of the project by the top administration of the applicant; (3 points)

(c) The project's activities and management of those activities will be centrally placed in the agency or institution and will be an integral part of the agency's or institution's ongoing activities; (3 points) and

(d) The applicant plans to incorporate the proposed project into the permanent policies and practices of the agency or institution following completion of the grant period. (3 points)

(Authority: 20 U.S.C. 3045)

§ 247.36 Selection criterion: Budget and cost effectiveness.

The Secretary determines the extent to which the budget for the project is adequate to support the project activities. (8 points)

(Authority: 20 U.S.C. 3045)

§ 247.37 Selection criterion: Evaluation.

The Secretary determines the extent to which—

(a) The policies and procedures provided by the applicant for evaluating the proposed project are likely to ensure adequate evaluation including, if appropriate, an evaluation or estimate of the potential for continued significance following completion of the grant period; (4 points) and

(b) The methods of evaluation, to the extent possible, are objective and produce data that are quantifiable. (4 points)

(Authority: 20 U.S.C. 3043, 3045)

§ 247.38 What is the maximum period of an award?

A project of local significance may receive Federal funds for a period that does not exceed two years.

(Authority: 20 U.S.C. 3042(a)(2))

Subpart E—What Conditions Must Be Met by a Recipient?

§ 247.40 What portion of the costs must a recipient contribute?

(a) If selected for funding under the Women's Educational Equity Act Program—Projects of Local Significance, an LEA shall contribute the following share of approved costs:

(1) In the first year of the project, 20 percent.

(2) In the second year of the project, if applicable, 40 percent.

(b) If selected for funding under the Women's Educational Equity Act Program—Projects of Local Significance, an entity other than an LEA shall contribute the following share of approved costs:

(1) In the first year of the project, 10 percent.

(2) In the second year of the project, if applicable, 20 percent.

(Authority: 20 U.S.C. 3042(a)(2)).

Note—This appendix will not be published in the Code of Federal Regulations.

Appendix—Analysis of Comments and Changes

Women's Educational Equity Act (WEEA) Program Regulations

General Comments

Comments: Numerous commenters expressed concern that the changes proposed in the NPRM were not required by the legislation reauthorizing the program, and that the proposed changes could undermine the intent of the WEEA program to end institutionalized sex discrimination, bias, and stereotyping. Some commenters also viewed the regulations as an attempt to move the program away from the statutory requirement that projects be of national, statewide, or general significance. One commenter felt that the NPRM had not adequately explained the substantive changes being made, that statutory requirements for the changes were not cited, and that therefore, the NPRM should be withdrawn.

Discussion: As explained in the preambles to the NPRM and these final regulations, the new regulations were developed as a result of a deregulation review and policy changes reflecting the changing needs of women, in addition to the amendments to the WEEA, made by the Augustus F. Hawkins-Robert T. Stafford Elementary and Secondary School Improvement Amendments of 1988. For example, § 745.5 was deleted because it was not necessary for the administration of the WEEA program. Some of the priorities for general significance grants were deleted and replaced with new priorities to reflect the need to encourage women and girls to stay in school or resume their education, participate in mathematics, science and computer science courses, and move into careers in which women have been underrepresented; and the need to expand educational opportunities for economically disadvantaged women. In addition, the NPRM included proposed regulations for the program of local significance that was added to the WEEA by the 1984 amendments, but for which the Secretary had not yet published regulations. Proposed deletions from the current regulations and other proposed changes, *e.g.*, changes in the selection criteria and priorities for general significance grants, were not intended to undermine the purpose of the WEEA. On the contrary, the Secretary believes the regulations fully effectuate the purposes of the WEEA. Nevertheless, after reviewing the comments received, the Secretary has adopted some changes to ensure that the regulations clearly implement the requirements of the WEEA.

Changes: Specific changes made in these regulations are explained in the sections that follow.

Section 245.5 What definitions apply?

Comments: Many commenters said that the Secretary should not eliminate the definition of sex role stereotyping or revise the definition of educational equity for women. They felt that the revised definition of educational equity for women assumes that all sex discrimination and bias have been eliminated. Several commenters stated that the proposed regulations deleted sex bias and sex role stereotyping as goals of the program.

Discussion: The Secretary did not intend for the new definition of "educational equity for women" to imply that institutionalized sex discrimination, sex bias, and sex role stereotyping no longer exist. The elimination of the institutional and social barriers to women's educational equity, including eliminating sex bias and sex role stereotyping, are indeed among the purposes of this program. The Secretary only intended to streamline the definition of "educational equity for women". The definition of sex role stereotyping was deleted because it was not used in the revised regulations and, therefore, did not need to be defined.

Changes: The definition of "educational equity for women" in § 245.5(b) has been revised and expanded, to clarify that the elimination of institutionalized barriers and inequitable educational practices and procedures that prevent full and fair participation by women in educational programs and in American society generally is part of the definition.

Projects of General Significance

Section 246.1 What are projects of general significance under the Women's Educational Equity Act Program?

Comments: The proposed regulations stated that, under the general grants program, projects can be funded if they are "likely to" have a national, statewide or general significance. Several commenters felt that the phrase "likely to" weakens the requirement that only projects of national, statewide, or general significance may be funded.

Discussion: The Secretary did not intend to weaken the statutory requirement that general significance grants have national or statewide impact. Therefore, to avoid confusion, the Secretary has adopted the change suggested by the commenters.

Changes: The words "likely to" have been deleted from § 246.1(b).

Comments concerning multiple discrimination

Comments: Many commenters stated that the proposed regulations reflected a decreased interest in and lack of understanding of the different needs of racial and ethnic minority women and disabled women. In support of their position, these commenters pointed to the deletion from the current regulations of § 745.6 (requiring applications that proposed broad-based projects to address the diverse needs of women); §§ 745.24 and 745.25 (the priorities for projects addressing racial and ethnic minority women and girls and disabled women and girls); and § 745.32(c) (a selection criterion under which the Secretary awards points for projects that will address or may be adapted to address the educational equity needs of racial and ethnic minority group women). Moreover, one commenter stated that by deleting § 745.6, it appears that the Secretary believes that discrimination no longer exists against women and girls who are members of racial and ethnic groups and who are disabled.

Discussion: The Secretary did not intend to dilute the focus in this program on addressing the unique needs of women and girls who suffer multiple discrimination based on sex and on race, ethnic origin, disability, or age. Section 745.6 of the current regulations applied only to applications that propose broad-based projects designed to address all women. In reviewing the applications that are submitted to the WEEA program, the Secretary determined that most of the applications focus on the needs of a particular group of women or girls. Therefore, this requirement was not applicable to most of the applications for WEEA funding. However, the Secretary wants to ensure that all projects address or can be adapted to address the needs of women and girls who suffer multiple discrimination, and that priority funding may be given to projects that address multiple discrimination. A priority for funding projects focusing on educational equity for women and girls who suffer multiple discrimination is in § 246.11(f) of these regulations.

Changes: The Secretary has added paragraph (d) to § 246.32 (Selection Criterion: Impact), as a factor for evaluating all applications for general significance grants on how well they address the issue of multiple discrimination in their projects.

Section 246.11 What priorities may the Secretary select?

Comment: Numerous commenters recommended that the current priority for model projects to influence leaders in educational policy and administration, the separate priorities for projects that address racial and ethnic minority women and girls and disabled women and girls, and the priority for projects that address eliminating persistent barriers to educational equity for women, be retained. These commenters felt that deletion of the current priorities was another attempt to shift the emphasis of the program away from eliminating institutional sex discrimination.

Discussion: Under the WEEA, the Secretary is given the discretion to establish priorities to ensure that available funds are used for programs that most effectively will achieve the purpose of the statute. The Secretary believes that the priorities should reflect the changing needs of women and focus on broad issues of educational equity for women and girls. Thus, with the

exception of the current priority for model projects on Title IX compliance, the priorities have been revised. In most cases, applications that fall within one of the current priorities will qualify under one of the new priorities. For example, a model project to counsel women on careers in mathematics and science submitted under the priority for eliminating persistent barriers, could be submitted now under the new priority for projects designed to increase the interest and participation of women in instructional courses in mathematics, science, and computer science. Moreover, as explained above, the new priorities include a priority for projects that focus on multiple discrimination, including discrimination based on sex and age. The priorities in the current regulations do not address age discrimination.

Changes: None.

Section 246.32 Selection criterion: Impact

§ 246.32 Selection criterion: Impact.

Comments: Several commenters stated that applications should be evaluated on and receive points for the extent to which they propose projects that are of national, statewide, or general significance.

Discussion: The evaluation factor and the points attributed to how well a project is of national, statewide and general significance in the current regulations were deleted in the NPRM, because the Secretary determined that the selection factor alone did not ensure that all projects submitted for funding under part 246 would be of national, statewide, or general significance, as required by the statute. However, the Secretary agrees that projects funded under part 246 must be of national, statewide, or general significance.

Changes: Section 246.32 (Selection Criterion: Impact) has been revised to clarify that all projects funded under part 246 must be of general significance and that the Secretary determines the degree to which the project is of general significance by evaluating the extent to which the project meets the criteria in § 246.32.

Comments: A few commenters also stated the applications proposing projects of general significance should not compete with applications proposing projects of local significance.

Discussion: Applications proposing projects of general significance are evaluated under a different set of criteria than projects of local significance. They do not compete against each other for funding.

Changes: None.

Comments: A few commenters stated that the criterion requiring an applicant to demonstrate its commitment to educational equity for women should be retained.

Discussion: This selection criterion has been deleted because the Secretary determined that an applicant's commitment to educational equity for women would be demonstrated by its responses to other evaluation criteria.

Changes: None.

Section 246.34 Selection Criteria: Qualifications of Staff

Comments: Numerous commenters felt that experience in addressing women's issues should be retained as a separate evaluation factor in these regulations and that extra points should be awarded.

Discussion: The requirements under § 246.31 of these regulations ensure that the staff of the project will have sufficient knowledge and experience to carry out the project successfully. The experience of the proposed staff will affect the number of points an applicant can receive under this criterion. A seperate evaluation factor for experience is not necessary.

Changes: None.

Projects of Local Significance

Section 247.40 What portion of costs must a recipient contribute?

Comments: One commenter felt that the requirement for successful applicants to contribute to the approved costs of the project is discriminatory and imposes an undue hardship on smaller applicants that may not be able to meet this requirement.

Discussion: The WEEA statute mandates that the Department pay only a portion of the costs to eligible entities for the establishment and operation of special programs and projects of local significance. In determining how much of the cost of the project a grantee should assume, the Secretary considered the statutory requirement, including the two-year limitation on funding projects under this program, and the limited funding available for this program. The Secretary determined that the levels of grantee contributions established in these regulations would ensure that grantees would be committed to their projects, and more likely continue the projects when the grantees could no longer receive funding under this program.

Changes: None.

BILLING CODE 4000-01-M

DEPARTMENT OF EDUCATION

Notice Inviting Applications for New Awards Under the Women's Educational Equity Act Program for Fiscal Year 1990 (CFDA No. 84-083)

Purpose of Program: To promote educational equity for women and girls, particularly those who suffer multiple discrimination, bias, or stereotyping; and to provide assistance to agencies and institutions to meet the requirements of title IX of the Education Amendments of 1972.

Deadline for Transmittal of Application: November 2, 1989.

Deadline for Intergovernmental Review Comments: January 1, 1990.

Applications Available: September 28, 1989.

Available Funds Anticipated: It is estimated that approximately $2,436,000 will be available for fiscal year 1990 awards under this program. However, applicants should note that the Congress has not yet completed action on the fiscal year 1990 appropriation.

Estimated Range of Awards: Challenge Grants: $30,000–$40,000; General Grants: $50,000–$200,000.

Estimated Average Size of Awards: Challenge Grants: $35,000; General Grants: $125,000.

Estimated Number of Awards: Challenge Grants: 15; General Grants: 15.

Project Period: Up to 24 months.

Priority: For FY 1990, the Secretary has allocated 60% of the funds to be divided equally among the following priorities listed in 34 CFR 246.11:

(a) Projects to develop new educational programs, training programs, counseling programs, or other programs, or to expand existing model programs, designed to accomplish the following:

(1) Reduce the rate at which women drop out of formal education.

(2) Encourage women dropouts to resume their education. (20%)

(b) Projects to develop new educational programs or expand existing model educational programs designed to enhance opportunities for educational achievement by economically disadvantaged women. (20%)

(c) Projects to develop new educational programs or expand existing model educational programs designed to enhance opportunities for educational achievement by women who suffer multiple discrimination on the basis of sex and race, ethnic origin, age, or disability. (20%)

These priorities apply to general significance and challenge grants. An applicant must indicate if it is submitting an application under one of these priorities. Applications under a priority complete against other applications submitted under that priority for funds allocated to the priority. An applicant may propose a project that is not under one of these priorities but is within the scope of the authorized activities described in 34 CFR 245.11. If an applicant fails to identify a priority, the application will complete with other applications that are not under one of these priorities. The remaining 40% of the funds will be allocated for applications within the scope of other authorized activities. An applicant may not submit an application under one of the priorities and also submit the same application for consideration to compete with applications that are not under one of the priorities.

Applicable Regulations: (a) The Education Department General Administrative Regulations (EDGAR) in 34 CFR parts 74, 75, 77, 79, 80, 81, and 85; and (b) the regulations for this program in 34 CFR Parts 245–247 published in this issue of the **Federal Register**.

For Applications or Information Contact: Mrs. Alice T. Ford, U.S. Department of Education, 400 Maryland Avenue SW., Room 2053, FOB #6, Washington, DC 20202-6439. Telephone: (202) 732-4351.

Program Authority: 20 U.S.C. 3041–3047.

Dated: September 6, 1989.

Daniel F. Bonner,

Acting Assistant Secretary for Elementary and Secondary Education.

Part IV

Department of Transportation

Federal Aviation Administration

14 CFR Part 71

Proposed Establishment of the Orlando Terminal Control Area and Revocation of the Orlando International Airport Radar Service Area, Florida; Notice of Proposed Rulemaking

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 71

[Airspace Docket No. 89–AWA–4]

RIN 2120–AD03

Proposed Establishment of the Orlando Terminal Control Area and Revocation of the Orlando International Airport Radar Service Area, Florida

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking.

SUMMARY: This notice proposes to establish a Terminal Control Area (TCA) at Orlando, FL. The TCA would consist of airspace from the surface or higher within a 30-nautical-mile radius of the Orlando International Airport up to and including 10,000 feet above mean sea level (MSL). Establishment of this TCA would impose certain operating rules and pilot/equipment requirements, including requirements for an operable two-way radio, a 4096 transponder with automatic altitude-reporting equipment, an operable very high frequency omnidirectional radio range (VOR) or tactical air navigational aid (TACAN) receiver, and restrictions on student pilot operations. This action is intended to increase the capability of the air traffic control (ATC) system to separate aircraft in the terminal airspace around the Orlando International Airport. The objective of this proposal is to substantially increase safety while accommodating the legitimate concerns of airspace users. Orlando International Airport is currently served by an Airport Radar Service Area (ARSA) which would be rescinded concurrent with the establishment of this TCA.

DATES: Comments must be received on or before November 13, 1989.

ADDRESSES: Send comments on the proposal in triplicate to: Federal Aviation Administration, Office of the Chief Counsel, Attention: Rules Docket [AGC–10], Airspace Docket No. 89–AWA–4, 800 Independence Avenue SW., Washington, DC 20591.

The official docket may be examined in the Rules Docket, weekdays, except Federal holidays, between 8:30 a.m. and 5:00 p.m. The FAA Rules Docket is located in the Office of the Chief Counsel, Room 916, 800 Independence Avenue SW., Washington, DC.

An informal docket may also be examined during normal business hours at the office of the Regional Air Traffic Division.

FOR FURTHER INFORMATION CONTACT: Lewis W. Still, Airspace Branch (ATO–240), Airspace—Rules and Aeronautical Information Division, Air Traffic Operations Service, Federal Aviation Administration, 800 Independence Avenue SW., Washington, DC 20591; telephone: (202) 267–9250.

SUPPLEMENTARY INFORMATION:

Comments Invited

Interested parties are invited to participate in this proposed rulemaking by submitting such written data, views, or arguments as they may desire. Comments that provide the factual basis supporting the views and suggestions presented are particularly helpful in developing reasoned regulatory decisions on the proposal. Comments are specifically invited on the overall regulatory, aeronautical, economic, environmental, and energy aspects of the proposal. Communications should identify the airspace docket and be submitted in triplicate to the address listed above. Commenters wishing the FAA to acknowledge receipt of their comments on this notice must submit with those comments a self-addressed, stamped postcard on which the following statement is made: "Comments to Airspace Docket No. 89–AWA–4." The postcard will be date/time stamped and returned to the commenter. All communications received before the specified closing date for comments will be considered before taking action on the proposed rule. The proposal contained in this notice may be changed in the light of comments received. All comments submitted will be available for examination in the Rules Docket both before and after the closing date for comments. A report summarizing each substantive public contact with FAA personnel concerned with this rulemaking will be filed in the docket.

Availability of NPRM's

Any person may obtain a copy of this Notice of Proposed Rulemaking (NPRM) by submitting a request to the Federal Aviation Administration, Office of Public Affairs, Attention: Public Inquiry Center, APA–230, 800 Independence Avenue SW., Washington, DC 20591, or by calling (202) 267–3484. Communications must identify the notice number of this NPRM. Persons interested in being placed on a mailing list for future NPRM's should also request a copy of Advisory Circular No. 11–2A which describes the application procedure.

Related Rulemaking Actions

On May 21, 1970, the FAA published FAR Amendment 91–78 (35 FR 7782) which provided for the establishment of TCA's.

On February 3, 1987, the FAA published a final rule which established requirements pertaining to the use, installation, inspection, and testing of Air Traffic Control Radar Beacon System (ATCRBS) and Mode S transponders in U.S.-registered civil aircraft (53 FR 3380). The rule adopted continues to require a transponder for operation in each TCA.

On June 21, 1988, the FAA published a final rule which requires Mode C equipment when operating within 30 nautical miles of any designated TCA primary airport from the surface up to 10,000 feet MSL, except for operations by certain aircraft types specifically excluded (53 FR 23356).

On October 14, 1988, the FAA published a final rule which revised the classification and pilot/equipment requirements for conducting operations in a TCA (53 FR 40318). Specifically, the rule: (a) establishes a single-class TCA; (b) requires the pilot-in-command of a civil aircraft operating within a TCA to hold at least a private pilot certificate, except for a student pilot who has received certain documented training; and (c) eliminates the helicopter exception from the minimum navigational equipment requirement.

Background

The TCA program was developed to reduce the midair collision potential in the congested airspace surrounding airports with high density air traffic by providing an area in which all aircraft will be subject to certain operating rules and equipment requirements.

The density of traffic and the type of operations being conducted in the airspace surrounding major terminals increase the probability of midair collisions. In 1970, an extensive study found that the majority of midair collisions occurred between a general aviation (GA) aircraft and an air carrier, military or another GA aircraft. The basic causal factor common to these conflicts was the mix of uncontrolled aircraft operating under visual flight rules (VFR) and controlled aircraft operating under instrument flight rules (IFR). TCA's provide a method to accommodate the increasing number of IFR and VFR operations. The regulatory requirements of TCA airspace afford the greatest protection for the greatest number of people by providing ATC with an increased capability to provide

aircraft separation service, thereby minimizing the mix of controlled and uncontrolled aircraft.

To date, the FAA has established a total of 24 TCA's. The FAA is proposing to take action to modify or implement the application of these proven control techniques to more airports to provide greater protection of air traffic in the airspace regions most commonly used by passenger-carrying aircraft.

On August 22, 1987, the Secretary of Transportation announced nine locations for which the FAA would issue Notices proposing the establishment of TCA's. The nine candidates cited qualify for TCA status by meeting the criteria published in FAA Handbook 7400.2C, "Procedures for Handling Airspace Matters." The criteria for establishing a TCA are based on factors which include the number of aircraft and people using that airspace, the traffic density, and the type or nature of operations being conducted. Accordingly, guidelines have been established to identify TCA locations based on two elements—the number of enplaned passengers and the number of aircraft operations.

PRE-NPRM Public Input

Airspace Meetings

Two pre-NPRM airspace meetings were held August 16–17, 1988, to permit local aviation interests and airspace users an opportunity to present ideas on the design of the proposed Orlando TCA. In attendance were fixed-base operators, civilian flight instructors, the Florida Department of Transportation, the TCA Planning Workshop, representatives of Sun 'n Fun Experimental Aircraft Association Fly-In, Inc., the Florida Aviation Trades Association, private pilots and concerned citizens. Although it was generally agreed that a TCA is needed for the Orlando/Tampa area, it was felt that the generic TCA should be replaced by a rectangular design, which would be about 33×41 miles, with altitudes ranging from the surface to 8,000 feet MSL. This rectangular design would permit access to Orlando Executive Airport and Kissimmee Municipal Airport, FL.

Written Comments

Five comments were received. Three supported and two opposed the establishment of the TCA. The comments received are summarized as follows:

1. The Florida Department of Transportation Planning and Utilization Committee offered a different airspace configuration for the TCA which they felt would accomplish the enhancement of safety and separation of traffic required at a major airline hub and military base, yet allow access to other airports by general aviation users.
2. The Florida Aviation Trades Association recommended acceptance of the plan and the boundaries of the TCA and mandatory Mode C use in the Orlando area.
3. The Marathon Flight School, Inc., recommended a cutout for the Kissimmee Municipal Airport and the lowering of the floor from 5,000 to 4,000 feet MSL, suggesting that this would allow better handling of IFR traffic into the Orlando International Airport.
4. The Central Florida General Aviation Association generally supports the implementation of the Orlando TCA.
5. A general aviation pilot expressed his concern that the establishment of the TCA would restrict the operation of his float plane which he bases at his home on Bear Gully Lake, FL. The pilot requested that some mechanism be established for use of the lower altitudes of airspace.

The Proposal

The FAA is considering an amendment to part 71 of the Federal Aviation Regulations (14 CFR part 71) to establish a TCA at Orlando, FL. The total number of annual enplaned passengers at Orlando International Airport was 4,847,194, as of June 1988, which more than qualifies it for consideration as a candidate for a TCA. The total number of airport operations was 251,602 of which 60 percent were air carrier operations. This figure exceeds the criteria necessary for the establishment of a TCA. Additionally, within the proposed boundaries more than 430,000 flights are conducted annually. Consequently, the FAA has determined that establishment of a TCA at Orlando International Airport is in the interest of flight safety and will result in a greater degree of protection for the greatest number of people during flight in that terminal area. Orlando International Airport is currently served by an ARSA, which would be rescinded concurrent with the establishment of this TCA. The proposed location is depicted on the attached chart.

Section 91.90 of part 91 of the Federal Aviation Regulations (14 CFR part 91) defines TCA's and prescribes operating rules for aircraft in airspace designated as a TCA. The TCA rule provides, in part, that prior to entering the TCA, any pilot arriving at any airport within the TCA or flying through the TCA must: (1) Obtain appropriate authorization from ATC; (2) comply with applicable procedures established by ATC for pilot training operations at an airport within a TCA; (3) hold at least a private pilot certificate; and (4) meet the requirements of § 61.95 of the Federal Aviation Regulations if the aircraft is operated by a student pilot. Any aircraft arriving at any airport within a TCA or flying through a TCA must: Have an operable VOR or TACAN receiver; have an operable two-way radio capable of communications with ATC on appropriate frequencies for that TCA; and be equipped with the applicable operating transponder and automatic altitude-reporting equipment specified in paragraph (a) of § 91.24 of the Federal Aviation Regulations, except as provided in paragraph (d) of that section. Unless otherwise authorized by ATC, all large turbine-engine aircraft operating to or from a primary airport must be operated above the designated floors of a TCA. The pilot of any aircraft departing from an airport located within a TCA is required to receive a clearance from ATC prior to takeoff.

All aircraft operating within a TCA are required to comply with all ATC clearances and instructions, and any FAA arrival or departure traffic pattern for the airport of intended operation. However, the TCA rule permits ATC to authorize deviations from any of the operating requirements of the rule when safety considerations justify the deviation or more efficient utilization of the airspace can be attained. Ultralight vehicle operations and parachute jumps in a TCA may only be conducted under the terms of an ATC authorization.

Definitions, operating requirements, and specific airspace designations applicable to TCA's may be found in §§ 71.12, 71.401, and 71.403 of part 71 of the Federal Aviation Regulations (14 CFR part 71); and §§ 91.1 and 91.90 of part 91 of the Federal Aviation Regulations (14 CFR part 91).

The standard configuration of a TCA consists of three concentric circles centered on the primary airport extending to 10, 20, and 30 nautical miles respectively. The vertical limits of the TCA are 12,500 feet above MSL, with the floor established at the surface in the inner area and at levels appropriate to containment of operations in the outer areas. Variations of these criteria may be authorized contingent upon terrain, adjacent regulatory airspace, and factors unique to the terminal area. The airspace configuration contained herein is the result of an extensive staff study conducted by the local FAA authority after obtaining public input from informal airspace meetings and coordinating with the FAA regional office. The FAA has determined the following proposed TCA airspace configuration is consistent with TCA objectives and allows consideration of terminal area flight operations and terrain:

Summary

The basic design of the proposed Orlando TCA is a rectangle with airspace extending upward from the surface to 10,000 feet MSL. The outer segments of the TCA extend upward from 6,000 feet to 10,000 feet MSL. Airports within the TCA include Orlando Executive, Sanford Regional, Kissimmee Municipal, Orlando Country, Orlando West, Mid Florida Air Service, Dunn Air Park, Space Center Executive, and Orlando International. The estimated number of locally based aircraft is 1,110. Approximately 767 of these aircraft would be required to purchase Mode C transponders.

The proposed Orlando TCA would bring all aircraft operating within that airspace under ATC, thereby increasing aviation safety. The Mode C equipment requirements would make potential traffic conflicts readily apparent to the controller. Inadvertent intrusions into the TCA by Mode C equipped aircraft would minimize the safety problem to aircraft operating within 30 nautical miles of the TCA. The ever-increasing operations in the Orlando terminal airspace by air carrier and high-performance business aircraft compound the complexity of the problem.

The preceding general summary of the proposed TCA airspace configuration identifies that airspace which is necessary to contain large turbojet aircraft operations at the Orlando International Airport. Air traffic control would provide control and separation of all flights within the proposed airspace boundaries. Furthermore, ATC authorization is requisite to aircraft operations within that airspace. Establishment of this TCA would greatly enhance the safety of flight within the congested airspace overlying the Orlando metropolitan area by facilitating the separation of controlled and uncontrolled flight operations. Section 71.403 of part 71 of the Federal Aviation Regulations was republished in Handbook 7400.6E dated January 3, 1989.

Regulatory Evaluation Summary

The FAA is required to assess the benefits and costs of each proposed rulemaking action to assure that the public is not burdened with rules having costs which outweigh their benefits. This section contains an analysis which quantifies, to the maximum possible extent, the costs and benefits of establishing a TCA at Orlando, FL. This regulatory evaluation summary should be read in conjunction with the NPRM since it provides additional background information.

This proposal is intended to lower the likelihood of midair collisions by increasing the capability of the ATC system to separate all aircraft in terminal airspace around the Orlando International Airport. This action was prompted by data indicating that a high percentage of near midair collisions reported to the FAA in terminal areas involve VFR aircraft that are not required to be under the control of ATC. Thus, the overall objective of this proposal is to substantially increase safety while accommodating the legitimate concerns of airspace users.

Cost-Benefit Analysis

a. Costs

The FAA estimates the total cost expected to accrue from implementation of the proposed rule to be $7.3 million ($4 million, discounted, 15 years) in 1987 dollars. Approximately $3.8 million (discounted) or 95 percent of the total estimated costs would be incurred by the FAA primarily for additional personnel. The remaining costs would be incurred by small GA aircraft operators who would be required under this proposal to equip their aircraft with Mode C transponders sooner than they would have for the ARSA under the previous FAA rule: "Transponder With Automatic Altitude Reporting Capability Requirement (Mode C)" (53 FR 23356, June 21, 1988). This rule will be implemented in two phases. Phase I, which began in July 1989, requires a transponder with Mode C at and above 10,000 feet MSL and in the vicinity (30 nautical miles) of TCA-primary airports. There are currently 24 TCA's.

Phase II will implement a transponder with Mode C requirement in the airspace in the vicinity (10 nautical miles) of ARSA-primary airports. Phase II becomes effective on December 30, 1990, and will affect over 135 ARSA's. Also in Phase II, a transponder with Mode C will be required at other designated airports for which either a TCA or ARSA has not been adopted. Consequently, most aircraft without Mode C transponders would need ATC authorization to fly within 30 nautical miles of a TCA-primary airport, within 10 nautical miles of an ARSA-primary airport, or within controlled airspace of other designated airports that would also require Mode C transponders.

Thus, this evaluation, as well as the Mode C rule, assumes that all aircraft without Mode C would acquire such equipment rather than circumnavigate the subject airport. The only aircraft without this equipment would be nonelectrical types. Costs to these types of aircraft operators have already been accounted for by the Mode C rule. As a result, aircraft operators impacted by this proposal would only incur the opportunity cost of capital by requiring them to acquire, install, and maintain Mode C transponders one year earlier than they would be required to do so in accordance with Phase II of the Mode C rule.

b. Benefits

This proposed rule is expected to generate potential benefits primarily in the form of enhanced safety to the aviation community and the flying public. Such safety, for instance, would take the form of reduced casualty losses (namely, aviation fatalities and property damage) resulting from a lowered likelihood of midair collisions due to increased ATC in airspace to be established by the TCA. In addition, potential benefits are expected to accrue in the form of improved operational efficiency on the part of FAA air traffic controllers.

Ordinarily, the potential benefits of this proposal would be the reduction in the probability of midair collisions resulting from converting the existing ARSA to a TCA. However, due to the recent Mode C rule (and to some extent, the rule for Traffic Alert and Collision Avoidance (TCAS), 54 FR 940, January 10, 1989), the number of potential midair collisions avoided by this proposal is expected to be significantly lower. Nevertheless, this proposal is still expected to accrue benefits in terms of enhanced safety, though on a much smaller scale.

This point can be illustrated with the use of statistical models based on actual and projected critical near midair collision (NMAC) incidents in lieu of actual midair collisions. (A critical NMAC is an event involving two aircraft coming within 100 feet of each other; the fact that they do not collide is not due to an action on the part of either pilot but, rather, is due purely to chance.) Since midair collisions involving part 135 aircraft and especially part 121 aircraft are rare, the use of critical NMAC's will serve to illustrate, to some degree, the potential improvements in aviation safety from implementing this proposal.

Simple regression analyses were prepared for this evaluation which focused on critical NMAC's' aircraft operations in the 23 existing TCA's, and a random sample of 23 of the existing 79

ARSA's (as of 1986 and 1987). The results of these analyses indicated that TCA's have approximately 68 percent fewer critical NMAC's annually, on average, than ARSA's. While there is no demonstrated relationship between NMAC's and actual midair collisions, the lower NMAC rate does indicate a more efficient separation of aircraft in congested airspace.

As the result of these findings, if the existing Orlando ARSA were to remain unchanged (and the recent Mode C and TCAS rules were not in effect), the Orlando Terminal Area would be expected to experience approximately 2.3 critical NMAC's annually (or 34 critical NMAC's over the next 15 years). If, however, the ARSA were to become a TCA, this figure would reduce to approximately 0.7 critical NMAC's annually (or 11 critical NMAC's over the next 15 years). Thus, over the next 15 years, this proposal could result in the reduction of approximately 23 critical NMAC's. However, it is important to note that many, if not most, of these potential critical NMAC's would never materialize as predicted primarily because of the Mode C rule as it is applied to the Orlando ARSA and, to some extent, the TCAS rule.

According to Phase II of the Mode C rule, all aircraft operating within ten nautical miles (except for flights below the outer five-mile "shelf") of an ARSA-primary airport must be equipped with a Mode C transponder. Phase I of the Mode C rule requires, as of July 1989, aircraft operating within 30 nautical miles of a TCA to be equipped with a Mode C transponder. These requirements are expected to significantly reduce the risk of midair collisions in ARSA's and TCA's. For this reason, the primary safety benefit of this proposal to create a TCA in 1990 at Orlando is that the safety enhancements of the Mode C and TCAS requirements will occur earlier than would be otherwise expected without this proposal. A second safety benefit would be in terms of the lowered likelihood of midair collisions as a result of expanding the lateral boundaries by 20 nautical miles through replacing the Orlando ARSA with a TCA.

Thus, the safety benefits of the establishment of a new TCA, while positive, would be less than would otherwise accrue in the absence of the Mode C and TCAS rules. Since this proposal essentially extends the effects of the Mode C rule, virtually all of its potential safety benefits are assumed to be part of that rule. Such benefits cannot be estimated separately and, therefore, are considered to be inextricably linked primarily to the Mode C rule. Over a 15-year period, the Mode C rule is expected to generate total potential safety benefits of $344 million (discounted, in 1987 dollars). (The Mode C rule benefits estimate of $310 million for 10 years has been adjusted to a 15-year period for the purpose of comparability with the TCAS rule and other FAA rulemaking actions). It is important to note that part of these safety benefits would be attributed to the TCAS rule. Thus, the potential safety benefits of this proposal, and the Mode C and TCAS rules, are considered to be inextricably linked.

Another potential benefit of the proposed rule would be improved operational efficiency on the part of FAA air traffic controllers. Under the proposed rule, Mode C transponder requirements would ease controller workload as a result of aircraft being controlled due to a reduction in radio communications. The proposed rule would also make potential traffic conflicts more readily apparent to the controller. As the result of improved operational efficiency, the impact of controller workload, increased by separation requirements in the proposed TCA, would be somewhat offset due to the controller's ability to adjust the volume of VFR traffic in any given portion of the TCA.

Improved operational efficiency should generate other types of benefits in the form of significant reductions in the number of VFR aircraft requests denied and in the number of VFR aircraft delayed during busy periods. As the result of converting the existing Orlando ARSA to a TCA, improved operational efficiency would accrue due to the availability of additional air traffic controllers. If the Orlando ARSA were to remain intact, such air traffic personnel would not be required. Therefore, the potential benefits of improved operational efficiency, which are not considered to be quantifiable in monetary terms in this evaluation, would be attributed to this proposal rather than either the Mode C rule or TCAS rule.

c. Comparison of Benefits and Costs

The total cost that would accrue from implementation of the proposed rule is estimated to be $4 million (discounted, in 1987 dollars). Approximately five percent of this total cost estimate would fall on those GA aircraft operators without Mode C transponders in the form of opportunity costs requiring them to acquire such avionics equipment, including maintenance, sooner than they otherwise would under the status quo. The typical individual GA aircraft operator impacted would incur an estimated one-time cost ranging from $86 to $191 (discounted) under the proposed rule. (As a result of the opportunity cost concept, the derivation of these cost estimates are too complex to discuss briefly. Therefore, the reader should refer to the detailed regulatory evaluation, which is contained in the docket, for a full explanation of the method by which these costs estimates were made.)

The potential benefits of the proposed rule would be the lowered likelihood of midair collisions from the conversion of the existing ARSA to a TCA. The number of midair collisions avoided and their respective monetary values cannot be estimated for this proposal independent of the Mode C and TCAS rules, but the FAA believes this risk would be substantially reduced. An FAA analysis prepared for this evaluation, however, has shown that critical near midair collisions occur approximately two-thirds less frequently in a TCA than within an ARSA. The FAA believes that even after the aviation community complies with the Mode C and TCAS rules, locations converting from ARSA's to TCA's would continue to experience reduced critical NMAC's. In addition, the proposed rule would generate improved operational efficiency benefits on the part of FAA air traffic controllers, though they are not considered to be quantifiable in monetary terms.

Clearly, in view of the cost of compliance relative to the significant reduction in the likelihood of midair collisions as well as improved operational efficiency in the Orlando Terminal Area, the FAA firmly believes the proposed rule is cost-beneficial.

The Regulatory Evaluation that has been placed in the docket contains additional detailed information related to the costs and benefits that are expected to accrue from the implementation of this NPRM.

Initial Regulatory Flexibility Determination

The Regulatory Flexibility Act of 1980 (RFA) was enacted to ensure that small entities are not unnecessarily and disproportionately burdened by Government regulations. The RFA requires agencies to review rules which may have "a significant economic impact on a substantial number of small entities."

The small entities which could be potentially affected by the implementation of this proposed rule are unscheduled operators of aircraft for hire owning nine or fewer aircraft.

Virtually all of the aircraft operators impacted by this proposed rule would be those who acquire Mode C transponder capability. The FAA believes that all unscheduled aircraft operators (namely, air taxi operators) potentially impacted by this proposed rule already have Mode C transponders due to the fact that such operators fly regularly in or near airports where radar approach control service has been established. Even if some of these operators were to acquire, install, and maintain Mode C transponders, the cost would not have a significant economic impact on a substantial number of them. The annual FAA threshold for significant economic impact is $3,700 (1987 dollars) for a small entity. According to FAA Order 2100.14A (Regulatory Flexibility Criteria and Guidance), the definition of a small entity, in terms of an air taxi operator is one with nine aircraft owned, but not necessarily operated.

If we were to assume that a particular aircraft operator had nine aircraft without transponders then the annual one-time cost per impacted aircraft would be approximately $210 (undiscounted, for the purpose of comparability with the figure of $3,700). The total annual one-time cost per small entity would amount to an estimated $1,890. Thus, the annual worst case cost for a small entity would fall far below the FAA's annual threshold of $3,700. Therefore, the FAA believes this proposed rule would not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

International Trade Impact Assessment

The proposed rule would neither have an effect on the sale of foreign aviation products or services in the United States, nor would it have an effect on the sale of U.S. products or services in foreign countries. This is because the proposed rule would only potentially impact small GA aircraft operators without Mode C, and not aircraft manufacturers. The average cost of acquiring Mode C capability is estimated to range from $900 (to upgrade from a Mode A transponder) to $2,000 (to acquire a Mode C transponder without having a Mode A transponder). The cost of acquiring Mode C capability is not considered to be high enough to discourage potential buyers of small GA airplanes.

Federalism Implications

This proposed regulation would not have substantial direct effects on the states, on the relationship between the national government and the states, or on the distribution of power and responsibilities among the various levels of government. Therefore, in accordance with Executive Order 12612, preparation of a Federalism assessment is not warranted.

Conclusion

For the reasons discussed under "Regulatory Evaluation," the FAA has determined that this proposed regulation (1) is not a "major rule" under Executive Order 12291; and (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979). It is certified that this proposal, if adopted, would not have a significant economic impact on a substantial number of small entities.

The Proposed Amendment

Accordingly, pursuant to the authority delegated to me, the Federal Aviation Administration proposes to amend part 71 of the Federal Aviation Regulations (14 CFR part 71) as follows:

PART 71—DESIGNATION OF FEDERAL AIRWAYS, AREA LOW ROUTES, CONTROLLED AIRSPACE AND REPORTING POINTS

1. The authority citation for part 71 continues to read as follows:

Authority: 49 U.S.C. 1348(a), 1354(a), 1510; Executive Order 10854; 49 U.S.C. 106(g) (Revised Pub. L. 97.449, January 12, 1983); 14 CFR 11.69.

§ 71.403 [Amended]

2. Section 71.403 is amended as follows:

Orlando, FL [New]

Primary Airport

Orlando International Airport (lat. 28°25′54″N., long. 81°19′29″W.)

Boundaries:

Area A. That airspace extending upward from the surface to and including 10,000 feet MSL beginning at lat. 28°30′15″ N., long. 81°26′30″ W.; to lat. 28°34′00″ N., long. 81°16′15″ W.; to lat. 28°34′00″ N., long. 81°11′00″ W.; to lat. 28°19′15″ N., long. 81°10′45″ W.; to lat. 28°17′45″ N., long. 81°14′45″ W.; to lat. 28°19′30″ N., long. 81°26′45″ W.; to the point of beginning.

Area B. That airspace extending upward from 1,500 feet MSL to and including 10,000 feet MSL beginning at lat. 28°28′45″ N., long. 81°30′15″ W.; to lat. 28°30′13″ N., long. 81°26′30″ W.; to lat. 28°19′30″ N., long. 81°26′45″ W.; to lat. 28°17′45″ N., long. 81°14′45″ W.; to lat. 28°19′15″ N., long. 81°10′45″ W.; to lat. 28°11′30″ N., long. 81°10′30″ W.; to lat. 28°11′30″ N., long. 81°29′30″ W.; to the point of beginning.

Area C. That airspace extending upward from 1,600 feet MSL to and including 10,000 feet MSL beginning at lat. 28°41′00″ N., long. 81°31′00″ W.; to lat. 28°40′30″ N., long. 81°11′15″ W.; to lat. 28°34′00″ N., long. 81°11′00″ W.; to lat. 28°34′00″ N., long., 81°16′15″ W.; to lat. 28°30′15″ N., long. 81°26′30″ W.; to lat. 28°28′45″ N., long. 81°30′15″ W.; to the point of beginning.

Area D. That airspace extending upward from 3,000 feet MSL to and including 10,000 feet MSL beginning at lat. 28°51′00″ N., long. 81°39′00″ W.; to lat. 28°51′15″ N. long. 81°36′00″ W.; to lat. 28°52′30″ N., long. 81°18′00″ W.; to lat. 28°51′30″ N., long. 81°10′30″ W.; to lat. 28°51′00″ N., long. 81°05′30″ W.; to lat. 28°32′00″ N., long. 81°02′00″ W.; to lat. 28°16′15″ N., long. 80°58′15″ W.; to lat. 28°03′00″ N., long. 81°05′45″ W.; to lat. 28°03′00″ N. long. 81°35′30″ W.; to lat. 28°13′00″ N., long. 81°40′30″ W.; to lat. 28°37′30″ N., long. 81°46′30″ W.; to lat. 28°41′30″ N., long. 81°44′15″ W.; to the point of beginning, excluding Areas A, B, and C.

Area E. That airspace extending upward from 6,000 feet MSL to and including 10,000 feet MSL beginning at lat. 28°10′15″ N. long. 81°46′30″ W.; to lat. 28°13′00″ N., long. 81°40′30″ W.; to lat. 28°03′00″ N., long. 81°38′30″ W.; to lat. 28°03′00″ N., long. 81°46′45″ W.; to the point of beginning.

Area F. That airspace extending upward from 6,000 feet MSL to and including 10,000 feet MSL beginning at lat. 28°48′30″ N., long. 81°50′00″ W.; to lat. 28°55′30″ N., long. 81°43′00″ W.; to lat. 28°51′15″ N., long. 81°36′00″ W.; to lat. 28°51′00″ N., long. 81°39′00″ W.; to lat. 28°41′30″ N., long. 81°44′15″ W.; to the point of beginning.

Area G. That airspace extending upward from 6,000 feet MSL to and including 10,000 feet MSL beginning at lat. 29°00′00″ N. long. 81°10′30″ W.; to lat. 29°00′00″ N., long. 81°00′00″ W.; to lat. 28°53′00″ N., long. 81°00′00″ W.; then clockwise along the 27 NM DME arc of the Orlando VOR to lat. 28°23′14″ N. long. 80°51′21″ W.; to lat. 28°26′15″ N. long. 81°00′37″ W.; to lat 28°32′00″ N., long. 81°02′00″ W.; to lat. 28°51′00″ N., long. 81°05′30″ W.; to lat. 28°51′30″ N., long. 81°10′30″ W.; to the point of beginning.

§ 71.501 [Amended]

3. Section 71.501 is amended as follows:

Orlando International Airport, FL [Removed]

Issued in Washington, DC, on September 7, 1989.

Part V

Environmental Protection Agency

40 CFR Part 307

Response Claims Procedures for the Hazardous Substance Superfund; Proposed Rule

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 307

[FRL-3399-6]

RIN 2050-AA90

Response Claims Procedures for the Hazardous Substance Superfund

AGENCY: Environmental Protection Agency.

ACTION: Proposed Rule.

SUMMARY: The Environmental Protection Agency (EPA) is today proposing regulations to establish the procedures for filing, evaluating, and resolving claims for costs incurred for responding to releases of harzardous substances, pollutants, or contaminants asserted against the Hazardous Substance Superfund (the "Fund") established under the Comprehensive Environmental Response, Compensation, and Liability Act of 1980 ("CERCLA" or the "Act"), as amended by the Superfund Amendments and Reauthorization Act of 1986 ("SARA"), 42 U.S.C. 9601 *et seq.* In addition, this proposed regulation would establish procedures for notifying concerned parties regarding limitations on the payment of response claims. This proposed regulation is consistent with EPA's proposed revisions to the National Oil and Hazardous Substances Pollution Contingency Plan ("NCP" or the "Plan") (53 FR 51394 *et seq.*, December 21, 1988).

DATES: Comments must be submitted on or before November 13, 1989.

ADDRESSES: Written comments on the proposed procedures may be submitted, in triplicate, to the Superfund Docket, located in Room 2427, at the U.S. Environmental Protection Agency, 401 M Street SW., Washington, DC 20460. The record supporting this rulemaking is contained in the Superfund Docket and is available for public inspection by appointment only, (202) 382-3046, from 9:00 a.m. to 4:30 p.m. Monday through Friday, excluding holidays. As provided in 40 CFR Part 2, EPA may charge a reasonable fee for copying services.

FOR FURTHER INFORMATION CONTACT: William O. Ross, Office of Emergency and Remedial Resonse (WH-220), Environmental Protection Agency, 401 M Street SW., Washington, DC 20460, (202) 382-4645, or The RCRA/CERCLA Hotline, (800) 424-9346 (or 382-3000 in the Washington, DC metropolitan area).

SUPPLEMENTARY INFORMATION: The contents of today's preamble are listed in the following outline:

I. Introduction.
II. Statutory Background.
  A. Statutory Framework.
  B. Response Mechanisms.

  Appendix—List of EPA Regional Offices

I. Introduction

This proposed response claims regulation provides the forms and procedures required by section 112(b)(1) of CERCLA for filing response claims authorized by sections 111(a)(2) and 122(b)(1) of the Act. This proposed regulation applies only to claims for reimbursement from the Fund established by section 517 of SARA. This proposed regulation is intended for use by any individual, private entity, potentially responsible party, or foreign entity eligible to submit a claim pursuant to section 111(a)(2) or 122(b)(1) of CERCLA. Such persons, as prescribed by section 112, must use the forms and procedures as promulgated in this rule. EPA has elected to utilize the procedures in this proposed rule, which are issued under the authority of section 112, to implement its authority to reimburse from the Fund parties who are potentially liable for a release and who agree to conduct a response action pursuant to section 122(b)(1) of CERCLA.

This proposed rule does not apply to: (1) Responses undertaken pursuant to section 104 of CERCLA, (2) petitions for reimbursement of the costs of complying with a CERCLA section 106 order, (3) actions to recover response costs under section 107 of CERCLA (See also Section IV.D.1. of this preamble), or (4) reimbursement of local governments pursuant to section 123 of CERCLA. This regulation also does not address claims for response to discharges of petroleum, as defined in sections 101(14) and 101(33) of CERCLA, since such response actions are not covered by CERCLA.

This proposed regulation addresses only response claims; i.e., claims for necessary response costs incurred as a result of carrying out the NCP (40 CFR Part 300). The NCP is established under section 311(c) of the Clean Water Act and amended under section 105 of CERCLA. The NCP provides for efficient, coordinated, and effective response to: (1) Discharges or substantial threats of discharges of oil, (2) releases or substantial threats of releases of hazardous substances, and (3) releases or substantial threats of releases of pollutants or contaminants that may present an imminent and substantial danger to public health or welfare. The NCP provides for the division and designation of responsibility among the Federal government, States and political subdivisions, and Indian Tribes in response actions, and specifies the appropriate roles for private entities. The recently proposed revisions to the NCP would clarify the roles of these parties as they relate to response claims authorized under section 111(a)(2) of CERCLA.

Today's proposed response claims rule would establish the process under which claimants may be reimbursed for the costs of response actions from the Fund. The claims process consists of two parts: the preauthorization process and the claims award process.

Under the preauthorization process, a potential claimant must first obtain the prior approval of EPA for any proposed response actions for which he/she plans to seek reimbursement. This prior approval is necessary for the claimant to be consistent with the NCP, and is initiated by submitting an application for preauthorization to EPA. The process for obtaining EPA's prior approval to submit a claim for a response action is referred to as "preauthorization." Only after the Agency has determined that the preauthorization application is complete will EPA review and analyze

the application according to the criteria proposed in today's rule. If EPA determines that the preauthorization application adequately meets the requirements for approval, the applicant will be approved to conduct the proposed response actions. EPA will then prepare a Preauthorization Decision Document (PDD) that will contain the terms and conditions that must be satisfied by the claimant in order to be reimbursed by EPA from the Fund. (Hereinafter, response actions reviewed and approved by EPA through the preauthorization process will be referred to as "preauthorized response actions" or "response actions preauthorized by EPA.")

After the preauthorized response actions have been completed by the protential claimant, he/she may submit a claim(s) to EPA under the claims award process for the previously-approved costs of the completed actions. Once EPA determines that the claim contains all the information and documentation necessary for evaluation (i.e., the claim has been "perfected"), the Agency will review and analyze the claim according to the criteria proposed in this rule and contained in the PDD. If the claim sufficiently fulfills the established requirements, EPA will award the claim and reimburse the claimant in the amount of the approved response costs. If a claim for response costs (which has been previously preauthorized) is denied by EPA in whole or in part, the claimant is authorized by section 112(b)(2) of CERCLA to request an administrative hearing.

II. Statutory Background

CERCLA authorizes several options for responding to releases or substantial threats of releases of hazardous substances, pollutants, or contaminants. This section describes briefly the framework of the statute as it applies to this regulation, the types of claims compensable under CERCLA, and the planning required for response actions.

A. Statutory Framework

CERCLA establishes broad authority for responding to actual or threatened releases of hazardous substances, pollutants, or contaminants. CERCLA establishes the Fund for use by the Government to respond to releases and to pay claims to certain other parties for responding to releases. CERCLA also imposes liability on certain categories of persons who own or operate vessels or facilities (both currently and in the past) and on persons who were involved with the transportation, treatment, or disposal of hazardous substances. Furthermore, the Act provides authority to pursue enforcement and abatement actions against these responsible parties.

CERCLA authorizes responses to releases or threats of releases of hazardous substances, pollutants or contaminants from vessels and facilities. ("Hazardous substance" is defined by section 101(14) of CERCLA, and the term "pollutant or contaminant" is defined by section 101(33) of CERCLA.) Under section 104 of CERCLA, the Government may take response actions whenever there is a release or a substantial threat of a release of a hazardous substance into the environment or whenever there is a release or substantial threat of a release of pollutants or contaminants into the environment that may present an imminent and substantial danger to public health or welfare. (Hereinafter, unless otherwise indicated, the term "release" refers to either actual or threatened releases of hazardous substances, or actual or threatened releases of pollutants or contaminants into the environment that may present an imminent and substantial danger to public health or welfare.) "Release" is broadly defined by section 101(22) of CERCLA, and includes abandoning or discarding barrels, containers, and other closed receptacles containing hazardous substances, pollutants, or contaminants.

In the event of a release, EPA may use CERCLA's response authorities unless: (1) The release is of a naturally occurring substance in its unaltered form, (2) the release is from products that are part of residential or business structures and result in exposure within the structure, or (3) the release is into drinking water due to deterioration of the drinking water system through ordinary use. CERCLA section 104(a)(3). However, EPA may respond to any of the above releases if the release constitutes a major public health or environmental emergency and no other person with the authority and capability to respond to the emergency will respond in a timely manner. CERCLA section 104(a)(4).

Parties responsible for a release can conduct any type of response activity; however, section 104(a)(1) of CERCLA requires that certain conditions be met before EPA authorizes a responsible party to conduct either a remedial investigation or a feasibility study (RI/FS). Section V of this Preamble discusses these conditions and other special requirements for preauthorization of potentially responsible parties.

The first type of response action authorized by section 104(a) of CERCLA is a removal. "Removal," as defined by section 101(23) of CERCLA, includes: (1) Cleanup or removal of released hazardous substances from the environment; (2) actions to prevent releases from occurring; (3) monitoring, assessment, or evaluation of threatened or actual releases; and (4) other actions that prevent, minimize, or mitigate damage to public health, welfare, or the environment. Under the NCP, when the lead agency determines that there is a threat to public health, welfare or the environment, it may take any appropriate action to abate, minimize, stabilize, mitigate or eliminate the release, or the threat resulting from that release. Obligations from the Fund for removal actions are limited to not more than 12 months in duration or the expenditure of not more than $2 million unless certain statutory findings are made. CERCLA section 104(c)(1). One hundred percent of the cost of these removal actions may be paid out of the Fund (unless the site was operated at the time of disposal by a unit of State or local government and there is a subsequent remedial action). Removal actions should, to the extent practicable, contribute to the efficient performance of any long-term remedial actions with respect to the release concerned.

The other type of response action available under section 104(a) of CERCLA is the remedial action. "Remedial actions", as defined in section 101(24) of CERCLA, may be taken in place of, or in addition to, removal actions. Remedial actions are those actions consistent with a permanent remedy that are taken to prevent or minimize the release of hazardous substances into the environment so that they do not migrate to cause substantial danger to present or future public health or welfare or the environment. Remedial actions may include off-site transport and storage, treatment, destruction, or secure disposition of hazardous substances and associated contaminated materials. The NCP restricts CERCLA-funded remedial actions to sites that are on the National Priorities List (NPL). Remedial actions may take several years to plan, design, and implement. There is no statutory limitation on the amount of time or money that can be spent for a remedial action. However, section 121 of CERCLA sets forth a number of requirements for remedial actions: the remedy must be protective of human health and the environment, cost effective, and utilize permanent solutions and alternative treatment technologies or resource recovery technologies to the maximum extent practicable. States are required by section 104(c)(3) of CERCLA to contribute ten percent of the cost of the remedial action selected (or at least fifty percent of all response costs at the site if that site was operated by the State or political subdivision at the time of any disposal of hazardous substances).

Section 104(b) authorizes studies, investigations, monitoring, surveys, testing, and other information-gathering necessary to identify the existence, extent, source, and nature of an actual or threatened release, and the extent of danger to the public health, welfare, or the environment. Under this broad authority, EPA may authorize Fund expenditures for studies and investigations that are necessary or appropriate to plan and direct response actions. One hundred percent of the costs of section 104(b) studies may be paid from the Fund; i.e., there is no requirement of a State cost-share.

Section 106(a) of CERCLA authorizes Federal enforcement actions, including administrative orders, where a release or threatened release of a hazardous substance may cause an imminent and substantial endangerment to the public health, welfare, or the environment. Section 106(b) of CERCLA allows certain persons to petition EPA for reimbursement of the costs, plus interest, of complying with a section 106(a) order in certain circumstances.

Section 107 imposes broad liability for a hazardous substance release on: (1) Current owners or operators of vessels; (2) current and certain former owners and operators of facilities; and (3) certain persons connected with the disposal, treatment, or transportation of hazardous substances. Section 107 also confers a right of action upon the United States, States, and Indian Tribes to recover response costs incurred in a manner not inconsistent with the NCP; and upon "other persons" to recover necessary response costs incurred in a manner consistent with the NCP.

Section 111 of the Act governs how the money in the Fund may be used. Under this section, funds may be made available directly to units of governments to pay for "response costs incurred pursuant to section 104 of this title" (section 111(a)(1)). Payment also may be made to persons who submit claims for their response costs if those response actions were approved in advance (i.e., preauthorized) by EPA. (*See* section 111(a)(2)) This proposed rule applies to response claims asserted under section 111(a)(2) of CERCLA.

Other paragraphs of section 111 contain: authorization for payment of technical assistance grants, authorization to pay costs of pilot programs to remove or treat lead-contaminated soil, and limitations on the use of Fund money and other matters relevant to this regulation. Section 111(o) requires that procedures be developed so that local and State officials and "other concerned persons" shall be informed of the limitations on the payment of claims for necessary reponse costs "as soon as practicable" after a site is placed on the NPL. EPA is today proposing procedures to implement section 111(o) of CERCLA. The procedures are discussed in Section IX of this preamble.

Section 112 of the Act sets forth procedures for asserting claims against the Fund. That section requires the President (by delegation, EPA) to establish forms and procedures for claims. If a claim is denied in whole or in part, a claimant can request an administrative hearing. Payment of any claim is subject to the claimant subrogating to the United States his/her rights as claimant to recover costs incurred from the person responsible for the release to the extent his/her response costs are compensated from the Fund.

Section 122 of CERCLA was added by SARA to provide procedures for negotiating settlements with potentially responsible parties (PRPs) willing to conduct and finance response actions. One aspect of this CERCLA settlement provision directly affects response claims: the section 122(b) authorization for "mixed funding" agreements with PRPs. Preauthorization is one form of mixed funding agreement. The others are described in detail in "Superfund Program; Mixed Funding Settlements" (53 FR 8279 *et seq.*, March 14, 1988). EPA may agree to the partial reimbursement of a PRP's response costs. Such reimbursement may be accomplished by the PRPs filing a response claim against the Fund. While States and political subdivisions are otherwise ineligible for reimbursement through the response claims mechanism, States and political subdivisions that are PRPs and that enter into settlement agreements pursuant to section 122(b)(1) of CERCLA are eligible for reimbursement.

B. Response Mechanisms

CERCLA provides three basic mechanisms for removal or remedial actions: (1) Administrative orders and civil judicial actions to secure abatement of an actual or threatened release and otherwise protect human health, welfare, or the environment; (2) Fund-financed actions (either directly by the Federal Government or by a State, political subdivision, or Indian Tribe) through a contract or cooperative agreement, as authorized by section 104 of CERCLA; and (3) Fund-reimbursed actions by "any other persons" through a reponse claim against the Fund.

The first statutory mechanism authorizes the President to secure, through the Attorney General, such relief as may be necessary to abate an imminent or substantial endangerment to public health or welfare or the environment due to an actual or threatened release (section 106(a)). EPA may secure such relief through a judicial settlement or filing a law suit. This section also authorizes the issuance of administrative orders to responsible parties requiring them to abate releases or threatened releases.

The second mechanism authorized by CERCLA (section 104) is a direct government removal or remedial action conducted by a Federal agency, State (or political subdivision thereof), or Indian Tribe. Such action will not be taken by the government if the lead agency determines that the response will be done properly and promptly by a responsible party. Obligations from the Fund for removal actions may not continue beyond $2 million or after 12 months has elapsed from the date of initial response unless EPA makes certain determinations pursuant to section 104(c)(1) of CERCLA regarding the necessity to continue the response actions due to emergency conditions, the unavailability of such assistance by others on a timely basis, or that continued response action is consistent with the remedial action to be taken. As provided by the NCP, Fund-financed remedial actions may be undertaken only at sites on the NPL. The NPL, as authorized by section 105, currently includes 890 national priority sites and 273 proposed sites for remedial response (40 CFR part 300, 54 FR 13296 *et seq.*, March 31, 1989). Federal-lead removal actions are implemented through several contracts covering geographical regions of the country. Remedial actions directed by the Federal Government are implemented through contracts covering geographical regions of the country, and through EPA agreements with the U.S. Army Corps of Engineers and the Department of the Interior's Bureau of Reclamation.

Pursuant to section 104(d)(1) of CERCLA, response actions may also be implemented through cooperative agreements between EPA and any of the following parties: States, political subdivisions, or Indian Tribes. Undertaking response actions through cooperative agreements may afford advantages to the Federal Government over the use of claims in that: (1) Cooperative agreements must contain

certain assurances and provide minimum financial contributions by the State, and (2) the procedures for awards, settlements, and payments under cooperative agreements are well established and known to both parties.

CERCLA prohibits EPA from funding any section 104 remedial action unless the affected State first assures: (1) That it will share in the costs of the action; (2) the availability of an off-site disposal facility that complies with Subtitle C of the Solid Waste Disposal Act, if wastes are to be taken off-site; (3) all future maintenance of the remedial action; (4) after October 17, 1989, adequate capacity for hazardous waste to be generated during a 20-year period; and (5) that it will accept title to any real property acquired by EPA to conduct the response action. (*See* 40 CFR part 35, Subpart O regarding assurances from Indian Tribes.) EPA utilizes a cooperative agreement to obtain State assurances, among other things, when a State has lead responsibility for a remedial action. EPA uses Superfund State contracts to obtain these assurances when the Federal Government has lead responsibility for a remedial action.

For most sites listed on the NPL, EPA expects to pursue enforcement actions against the responsible party or enter into contracts or cooperative agreements with States, political subdivisions thereof, or Indian Tribes for the response actions. EPA and the States have already initiated response or enforcement actions at many of these sites and will initiate actions at many more in the near future. Under some circumstances, however, a third mechanism (i.e., claims for reimbursement of response costs under section 111 of CERCLA) may be useful to expedite remedial and removal actions.

The above mechanisms are not mutually exclusive and may be used in combination. For example, EPA may designate a site, for purposes of an RI/FS, as Fund-lead (mechanism two) and still bring an enforcement action against a responsible party (mechanism one) to provide for necessary remedial design and construction. Similarly, an enforcement action may be initiated against a responsible party, which may result in a partial settlement and authorization for a claim against the Fund for a portion of the cleanup costs. The Agency in most instances will bring suit under section 107 to recover any necessary response costs where there are viable PRPs.

C. Response Measures Compensable as Claims

Response measures which may be compensated as claims under this regulation (as defined in sections 101 (23) and (24) of CERCLA, and detailed in §§ 300.415(d) and Appendix D of the proposed revised NCP) may include: (1) Cleaning up or removing hazardous substances from the environment; (2) actions that may be necessary to prevent a threatened release of a hazardous substance into the environment; (3) monitoring, assessing, and evaluating the release or threatened release of hazardous substances; (4) disposing of removed substances; (5) constructing security fencing or other measures to limit access; (6) supplying alternative drinking water; (7) providing temporary evacuation and housing for threatened individuals for whom other arrangements have not been made; and (8) other actions as the lead agency may determine to be necessary to prevent, minimize, or mitigate damage to the public health or welfare or to the environment, which may otherwise result from a release.

Pursuant to § 300.700(d)(1)(iii) of the proposed revision to the NCP, no claim shall be paid pursuant to section 111(a)(2) of CERCLA for expenses incurred by a person carrying out a response action pursuant to a contract or assistance agreement with the United States. (This requirement, initially established in § 300.25(d)(1) of the 1985 NCP, remains in effect and is restated for clarification only.) Payments under such agreements shall be made in accordance with those agreements. Disputes shall also be resolved in accordance with the agreement and other guidelines and regulations governing contract and cooperative agreement dispute resolution.

CERCLA response claims are authorized under section 111, and as such are not required to meet the conditions of section 104. However, under section 111 claims may be paid for reimbursement only of necessary response costs incurred in carying out the NCP. Under § 300.700(d)(2) of the proposed revised NCP, claims for reimbursement under section 111(a)(2) must receive prior approval by EPA in order to be in conformance with the NCP. Section III below discusses the other NCP requirements with which the claimant must comply.

Individuals, private entities, foreign entities, and parties to agreements pursuant to section 122(b)(1) of CERCLA are eligible to present claims to the Fund for the costs of response actions. When multiple applicants or claimants are involved in a response action, EPA strongly encourages them to select a lead claimant for purposes of simplifying the administration of the claim. As provided by section 111(1) of the Act, foreign claimants may submit a claim only if: (a) The hazardous substance release occurred in U.S. navigable waters or in or on the territorial sea or adjacent shoreline of the country of which the claimant is a resident; (b) the claimant is not otherwise compensated; (c) the hazardous substance release occurred from a facility or vessel within or adjacent to U.S. navigable waters or a discharge connected with activities conducted under the Outer Continental Shelf Lands Act or the Deepwater Port Act; (d) comparable remedy for recovery by U.S. claimants is authorized by treaty or executive agreement, or if the Secretary of State, in consultation with the Attorney General and other appropriate officials, certifies that such country provides a comparable remedy for United States claimants; and (e) these regulations are met.

III. Relationship of Proposed Claims Procedures to Proposed NCP Revisions

The NCP provides for the division and specification of responsibility among the Federal Government, States and political subdivisions, and Indian Tribes in response actions. It also specifies the appropriate roles for private entities. As explained previously, EPA has recently proposed revisions to the current NCP. These proposed revisions clarify the roles of the Federal Government, States and political subdivisions, and private parties as they relate to response claims authorized under sections 111(a)(2) and 122(b)(1) of CERCLA. Provisions which are contained in the 1985 NCP are in effect. Provisions which would be established by the recently proposed amendments to the NCP will take effect upon promulgation of the NCP. (Note that some provisions of SARA are self-executing and are already effective even without any revision to the NCP.)

A. Proposed Revisions to Subpart B of the NCP (Responsibility)

Subpart B of the current NCP identifies the roles and responsibilities of those who may assist or conduct response actions under the Plan. One provision of this subpart is § 300.25, entitled "Nongovernment Participation," which in part provides an elaboration of CERCLA section 111(a)(2). Section 300.25 discusses the payment of claims for necessary response costs incurred by persons as a result of carrying out the NCP and identifies the roles and

BEST COPY AVAILABLE

responsibilities of the private sector. (In the proposed revisions, the language of § 300.25(d) of the current NCP would be transferred to proposed § 300.700 in a new Subpart H. Other subparagraphs of § 300.25 are located at proposed § 300.185 (Nongovernmental Participation).

The recently proposed revisions to the NCP: (1) Specify that States and political subdivisions (except in the context of a settlement agreement pursuant to section 122(b)(1)) cannot file response claims; (2) clarify which requirements of the NCP must be met in order for a preauthorized response action to be consistent with the NCP; (3) clarify that certain persons (i.e., those who are not undertaking responses pursuant to sections 104 or 106 of CERCLA or for which reimbursement from the Fund will be sought) may take any action which can be taken by the "lead agency" in carrying out the response action; and (4) clarify that preauthorization represents EPA's intention to reimburse the amount of the claimant's response costs that is specified in the PDD, but only if the claimant can demonstrate that the costs incurred were reasonable and necessary and that all the terms and conditions of the PDD were met. The Agency has attempted to incorporate in this proposal, for the convenience of the reader, the NCP provisions that may logically be applied to private-party cleanups. (Hereinafter, "private-party" includes States and political subdivisions that are PRPs. "PRP private-parties" and "non-PRP private-parties" are eligible for preauthorization.) Once preauthorization is obtained, the Federal Government will continue to oversee the subsequent cleanup.

In order for claims to be awarded, the claimant must perform the preauthorized actions in compliance with the NCP. This requirement was initially established in the 1985 NCP, is contained in § 300.700 of the proposed revisions, and is included here only for the convenience of the reader. Thus, this requirement continues to apply to preauthorized response actions. The claimant must also comply with the terms and condition of the PDD and, for PRPs, the terms of any applicable consent decree. The burden of proving the claim rests with the claimant. The claimant may submit claims only in accordance with the schedule set forth in the PDD.

B. Propposed Revisions to Subpart F (Hazardous Substances Response)

Subpart F of the current NCP (redesignated as Subpart E of the proposed revision) establishes the methods and criteria for determining the appropriate extent of response for both removal and remedial actions authorized by CERCLA. The proposed revised NCP contains a number of amendments to this subpart.

1. Section 300.62 State Role

Paragraph (c) of § 300.62 of the current NCP provides that contracts and cooperative agreements with States, authorized by section 104(c)(3) of CERCLA, are not a precondition to access, information gathering, investigations, studies, or liability pursuant to sections 106 and 107 of CERCLA. State cooperative agreements are the mechanism used to allow States to take the lead in a Fund-financed response action pursuant to section 104 of CERCLA. State contracts are the mechanism used to obtain the necessary assurances when the Federal Government assumes the lead in a Fund-financed response action pursuant to section 104 of CERCLA. There is no need for a contract or cooperative agreement with respect to a response action performed by a private-party. Accordingly, EPA proposed to amend paragraph (c) to make clear that a contract or a cooperative agreement with a State (or Indian Tribe, as a result of the SARA amendments) is not a prerequisite to claims against the Fund pursuant to section 111(a)(2). However, EPA may still consult with States or Indian Tribes during the preauthorization process. These changes are currently in effect because they are merely clarifications of the 1985 NCP, or were required by the SARA amendments.

2. Section 300.67(b) Community Relations Requirements for Removal Actions

Section 300.67(b) of the current NCP states that a formal community relations plan is not necessary for removal actions unless the action is expected to extend or does extend beyond 45 days. EPA has proposed in § 300.415(n)(3) to amend this provision so that a community relations plan is not necessary unless the removal is expected to extend or does extend beyond 120 days. Community relations plans are required for removal actions that extend beyond 45 days until the revised NCP is promulgated.

3. Section 300.68(a) Remedial Action Introduction—Permit Requirements

Sections 300.68(a)(3) of the current NCP states that Federal, State, and local on-site permits are not required for Fund-financed remedial actions taken pursuant to section 104 of CERCLA or for remedial actions taken pursuant to section 106 of CERCLA. As EPA explained in the preamble to the NCP, remedial actions undertaken pursuant to other authorities (e.g., actions preauthorized under section 111(a)(2) or other private-party cleanups with subsequent cost recovery actions under section 107) are not exempt from on-site permit requirements. The rationale for permit exemption applies only to remedial actions selected pursuant to section 121(e) of CERCLA and implemented pursuant to sections 104 or 106. Accordingly, a private-party response action that is not conducted pursuant to section 106 of CERCLA, even though it receives some reimbursement through the claims process is a private-party response action and thus, in EPA's view, is subject to on-site permit requirements.

EPA has proposed in § 300.400(e) to clarify that three general categories of response activity may be conducted without an on-site permit. In addition to responses taken pursuant to sections 104 and 106 of CERCLA, actions to be undertaken by PRPs using "mixed funding" (i.e., where the remedy is selected by the Federal lead agency but the response action is preauthorized pursuant to section 122 of CERCLA) are exempt from the on-site permit requirement (see section V of this preamble). All other response actions preauthorized pursuant to section 111 will continue to be subject to Federal, State or local permit requirements. This requirement is currently in effect.

4. Section 300.68(i) Selection of Remedy

Section 121 (b) and (d) of CERCLA mandate that all remedial actions assure protection of human health and the environment. If the remedy requires that a hazardous substance, pollutant, or contaminant remain on site, section 121(d) provides for compliance with legally applicable, or relevant and appropriate, Federal and State environmental requirements (ARARs) with certain enumerated exceptions. If the remedy requires that substances be transferred off site, section 121(d)(3) of CERCLA requires that the off-site facility be in compliance with applicable law. Section 121(d)(3) also imposes requirements on units at the off-site facility.

Consistent with section 121 of CERCLA, EPA will approve remedial activities under the preauthorization process only to the extent that they are cost-effective. EPA has proposed in § 300.430(f)(3) to amend the selection of remedy requirements to conform to the statutory changes. While the proposed

amendments cannot take effect until promulgation of the NCP, section 121 of CERCLA as amended established many of these requirements by statute.

5. Section 300.68(1) Response Actions Pursuant to Section 106 and 111(a)(2) of CERCLA/Consistency with NCP

Section 300.68(1) of the current NCP sets forth the requirements that response actions pursuant to sections 106 or 111(a)(2) must meet in order to be consistent with the NCP. Since § 300.700(d)(4) of the proposed revised NCP specifies the requirements for response claims to be consistent with the NCP (see discussion above), there is no need for § 300.68(1) to also discuss response claims. In the proposed NCP revisions, therefore, EPA has deleted any reference to response claims in this subsection.

6. Section 300.71 Other Party Responses

In the November 20, 1985 revision to the NCP, EPA added § 300.71 to address response actions other than those taken pursuant to sections 104 and 106 of CERCLA. The section sets forth in some detail what is required in order for a response action conducted by a private-party to be consistent with the NCP for the purpose of cost recovery under section 107 of CERCLA. Under § 300.700(c)(3)(i) of the proposed revisions to the NCP, EPA intends that a response action will be considered to be consistent with the NCP if the person taking the response action (including claimants) complies with an order issued by EPA pursuant to section 106 of CERCLA, a consent decree entered into pursuant to section 122 of CERCLA, or the following provisions where pertinent to the particular response chosen for the particular facility:

- Section 300.150 (on worker health and safety);
- Section 300.160 (on documentation and cost recovery);
- Section 300.400(c) (1), (4), (5) and (7) (on determining need for a response action), (e) (on permit requirements), and (g) (on identification of ARARs);
- Section 300.405(b), (c) and (d) (on reports of releases to the National Response Center (NRC));
- Section 300.410 (on removal site evaluation) except paragraphs (e) (5) and (6) and the reference to listing releases in EPA's data base in (h);
- Section 300.415 (on removal actions) except for paragraphs (a)(2), (b)(2)(vii), (b)(5) and (g);
- Section 300.420 (on remedial site evaluation);
- Section 300.430 (on RI/FS and selection of remedy) except paragraph (f)(3)(iv)(F); and
- Section 300.435 (on RD/RA and operation and maintenance).

In addition, "other persons" undertaking response actions must provide an opportunity for public comment concerning the selection of the response action. A response action shall not be considered consistent with the NCP unless:

- The person taking the response action complies with the following proposed NCP provisions regarding public participation, with the exception of administrative record and information repository requirements stated therein:
  - —Section 300.155 (on public information and community relations);
  - —Section 300.415(n) (on community relations during removal actions);
  - —Section 300.430(c) (on community relations during RI/FS) except paragraph (5);
  - —Section 300.430(f)(1), (2), and (5) (on community relations during selection of remedy); and
  - —Section 300.435(c) (on community relations during RD/RA); or
- The person taking the response action complies with State or local requirements which provide a substantially equivalent opportunity for public involvement in the choice of the remedy.

Finally, when selecting the appropriate remedial action, any other person shall, as appropriate, consider the methods of remedying releases listed in Appendix D of the proposed revised NCP. Except for actions taken pursuant to CERCLA sections 104 or 106 or response actions for which reimbursement from the Fund will be sought, any action to be taken by the lead agency in §§ 300.415, 300.430, and 300.435 may be taken by the person carrying out the response action.

Proposed § 300.700(c) would establish requirements that claimants must meet in carrying out preauthorized response actions. Some of these requirements were set forth in the 1985 NCP, and have been restated in the revised NCP for clarity. These requirements, which are essentially unchanged in the proposed revised NCP, remain in effect. However, some of the requirements in the proposed revised NCP are different from the 1985 requirements. Most of these new requirements interpret mandates established in CERCLA section 121 which was added by the 1986 amendments. For example, the proposed revised NCP defines the process for selecting a remedy that utilizes permanent solutions and alternative treatment technologies to the maximum extent practicable, as mandated by CERCLA. Although the proposed revisions to the NCP are of course not promulgated and not legally binding, they do generally represent EPA's current views, and the Agency will generally use them as guidance until the revisions are promulgated.

Section 300.71(a)(4) of the current NCP requires certain private-parties to comply with all applicable law and also on-site permit requirements when performing response actions. EPA has proposed to clarify, in § 300.400(e) of the proposed NCP, that the requirement to obtain on-site permits applies to persons undertaking response actions which are not undertaken pursuant to sections 104, 106, or 122. In other words, section 121(e)(1) of CERCLA does not apply to response actions *reimbursed* by EPA through the authority of section 111. Because this is merely a clarification of the current NCP, this requirement is currently in effect.

Response actions by PRPs preauthorized pursuant to section 122 of CERCLA are included among the response actions performed pursuant to section 106 and are therefore governed by the same standards as section 106 (e.g., no on-site permits are required). (see Sections III.B.2, B.3 and V of this preamble.) On the other hand, all other section 111 claims (i.e., non-PRP claims) are subject to legally applicable requirements, including on-site permit requirements. However, like actions under sections 104 and 106, such actions undertaken by claimants must comply with all relevant and appropriate requirements unless certain waivers apply (§ 300.68(i)(5) of the 1985 NCP and § 300.430(f)(3)(IV) of the proposed revised NCP). The waivers are discussed in more detail under General Requirements for preauthorization applications (See IV.D.).

Section 300.71(a)(4) of the current NCP has itself been partially superseded by section 121 of CERCLA, which is self-executing and therefore already effective. This new provision of the statute is more explicit with regard to the substantive standard that a particular cleanup should achieve. The NCP revisions proposed in § 300.700(d)(4)(ii) make clear that response claimants are required to adhere to these new requirements.

Additionally, EPA has proposed to amend § 300.71 to remove paragraph (c). Section 300.71(c) provides that organizations may be "certified" by EPA to conduct site response actions. The provision states that:

> Certification is not necessary for, but may facilitate, Fund preauthorization under § 300.25(d) and lead agency evaluation of the

adequacy of proposed response actions. (50 Federal Register 7978, November 20, 1985.)

In proposing the certification provision, the Agency stated:

> The advantage of certification is that the organization need only submit the written request demonstrating its qualifications one time rather than each time it requests preauthorization. (50 Federal Register 5870, Feb. 12, 1985.)

In developing the proposed revised NCP, EPA considered elaborating on the requirements for certification and the benefits that certification would confer. Upon further reflection, however, the Agency believes that certification would not be a useful tool in the claims process. The capability of applicants to perform proposed response actions must necessarily be evaluated on a case-by-case basis, taking into account the nature and scope of the proposed response. In addition, the qualifications of the applicant's personnel, as well as the sum total of the applicant's commitments and obligations, must be evaluated each time a preauthorization application is filed, regardless of whether the applicant is "certified." Finally, the Agency is concerned about use of certification as a marketing tool and about the potential for public misperception that certified firms are working on behalf of EPA. Accordingly, the Agency has not proposed a provision in the revised NCP comparable to that found in § 300.71(c) of the 1985 NCP.

By proposing to remove the certification provision in § 300.71(c), EPA is not seeking to discourage private entities from undertaking response actions. This deletion means only that EPA will evaluate capabilities on a case-by-case basis. Of course, entities that have already been preauthorized for one response action may incorporate the previous application by reference, which will aid the Agency in evaluating the applicant's capabilities. Effective with the proposal of the revised NCP on December 21, 1988, EPA, as a matter of policy, will not process requests for certification.

IV. Preauthorization

In accordance with section 111(a)(2) of CERCLA and § 300.25(d) of the current NCP (section 300.700(d) of the proposed revised NCP), all response actions must be approved in advance by EPA through the preauthorization process in order for a claim to be submitted to the Fund. The Agency will not allow a claim for a response action unless the response action has been preauthorized by the Agency. Claims for response actions that were not preauthorized will be returned without a determination of the merits of such claims. "Preauthorization" by EPA represents the Agency's intention that if response actions are taken in accordance with the PDD, and costs are reasonable and necessary, reimbursement will be made from the Fund, subject to any maximum amount of money set forth in the PDD. Preauthorization is not a contract between EPA and the claimant, nor does the claimant become an agent or authorized representative of EPA. Approval of an application for preauthorization does not detract from the lead agency's authority to review the adequacy of work at the site, nor does it override other terms of any settlement agreement between the United States and the PRP(s). Preauthorization is intended to benefit only the applicant and EPA. It extends no benefit to nor creates any right in any third party.

This section describes the existing statutory and regulatory basis for preauthorization and explains the Agency's response priorities, the procedural requirements to obtain preauthorization, the criteria EPA will use in evaluating applications for preauthorization, and the policy on preauthorization of operable units and response stages. The next section will discuss claims accompanying settlements with PRPs.

A. Basis for Requiring Preauthorization for Response Claims

The preauthorization requirement is based on the approval and certification provision in section 111(a)(2) of CERCLA, which states that the Fund may be used for:

> Payment of any claim for necessary response costs incurred by any other person as a result of carrying out the national contingency plan * * * *Provided, however,* That such costs must be approved under said plan and certified by the responsible Federal official.

This statutory provision contemplates Agency review of the necessity and priority of response claims before authorizing use of the money in the Fund for such claims. In accordance with the statute, § 300.25(d) of the NCP and § 300.700(d) of the proposed revised NCP provide that persons who would submit claims to the Fund for response actions must notify EPA and obtain EPA's prior approval before undertaking response activities.

Section 300.25(d) of the 1985 NCP was upheld in *State of Ohio* v. *U.S. EPA*, 838 F.2d 1325 (D.C. Cir., 1988), and is not reproposed. It is merely restated in § 307.22(a) of this Regulation in order to make Part 307 readable without extensive cross references to other regulations.

Preauthorization achieves four important objectives. First, it enables the Agency to fulfill its role as Fund manager by ensuring appropriate uses of the Fund. In this way, Fund money available for claims is expended in accordance with environmental and public health priorities. Because the number of incidents that may give rise to claims is large, and because remediating a single incident can involve considerable expense, it is essential that the Agency screen possible claims to determine the importance of the response that may be undertaken relative to other response needs.

Second, preauthorization of response actions reduces the likelihood that responses themselves will create environmental hazards. The Federal Government has considerable experience in performing and overseeing cleanup activities. This experience has shown that poorly-handled cleanup efforts can cause other environmental damage or can present risks to workers and the surrounding population. Moreover, nongovernmental persons may not be fully aware of statutory and regulatory requirements that apply to proposed activities. Through the preauthorization process, EPA can review a proposed response plan and either obtain necessary modifications to a plan or, if it appears desirable, replace the plan for nongovernmental response with one in which the Government would become involved directly in the response. Additionally, the NCP requires that persons who wish to undertake a response action demonstrate the necessary technical expertise before the request is approved.

Third, preauthorization ensures that a claimant is aware of, and will carry out a response action in a manner consistent with the NCP.

Fourth, preauthorization gives the claimant an assurance that if the response is conducted in accordance with EPA's approval and the costs are reasonable and necessary, monies may be had from the Fund.

B. Fund Priorities

EPA will approve a response action through the preauthorization process only if the response action is of sufficient priority to merit Fund expenditure. The Agency's top priority, as set forth in section 104(a)(1) of CERCLA, is response to releases of hazardous substances that pose a threat to public health. Accordingly, the Agency has formulated priorities that

take into consideration the potential risk of one release when compared with another.

EPA's Superfund Comprehensive Accomplishments Plan (SCAP) comprehensively identifies the plan for each fiscal year's activities and the interactions of the Superfund removal, remedial, enforcement, community relations, and other program components. The SCAP contains: targets for removals at NPL and non-NPL sites; a reserve for unanticipated removal actions; projected remedial, enforcement, and community relations activities by site name, State, activity type (e.g., investigation, design, construction), expected start date, and estimated cost; and tentative lead agency assignments. The SCAP is available from EPA Headquarters in Washington, DC, or any EPA Regional Office at the beginning of each fiscal year.

The Agency will consider all applications for preauthorization against the alternatives of an enforcement action or conducting the remedial action through a cooperative agreement or a contract. EPA will approve a response action by a private-party when it determines that such a response is the best available means to address a release for the site at issue.

Releases may occur at sites both on and off the NPL. Fund-financed remedial actions may be taken only at NPL sites; however, removal actions may be taken both at NPL and non-NPL sites. For this reason, EPA proposes to adopt two approaches to determine whether to approve response actions under the preauthorization process: one for removal actions, and a second for remedial actions.

1. Removal Claims

The release or threat of release of a hazardous substance may be accompanied by an acute threat of direct human contact and/or fire or explosion. Assessing the degree of risk and the necessity for a removal action usually requires an on-site inspection by the lead agency. Undertaking such an inspection as a precondition to approving a response by a third party may unduly delay cleanup and increase the danger to the environment. EPA will not approve removal actions under the preauthorization process where the need for immediate action does not allow sufficient time for site inspection or for the data collection and evaluation necessary to evaluate a preauthroization request. Potential claimants who may wish to be preauthorized to respond to a release are advised to contact the National Response Center (NRC) (800–424–8802 or 554–1400 in the Washington, DC, metropolitan area), as provided in § 300.405(b) of the proposed revised NCP (§ 300.63(b) of the 1985 NCP), and as would be required by proposed § 300.700(d), to request advice on whether there is sufficient time for the preauthorization process. (This notification is separate and distinct from the CERCLA section 103 requirement (i.e., any person in charge of a vessel or a facility must notify the NRC of a hazardous substance release if certain specified conditions are met)).

The NRC may direct the potential claimant to the U.S. Coast Guard Marine Safety Office or Captain of the Port or to the emergency response program in the EPA Regional Office that may be assigned lead responsibility for the release. The lead agency will determine if an immediate governmental response is necessary. Alternatively, the lead agency may determine that sufficient time is available to process a preauthorization application. In such a case, the potential claimant must comply with the requirements for obtaining preauthorization. This policy is designed to: (1) Provide an immediate response action where the conditions warrant such a response; and (2) protect the health and safety of the surrounding population and those who would be involved in cleanup.

2. Remedial Claims

Section 105(a)(8)(B) of CERCLA requires that the President (EPA by delegation) establish the NPL to identify priorities among releases and potential releases. Consequently, the NPL serves as a basis to guide the allocation of Fund resources among releases. Section 300.425(b)(1) of the proposed revised NCP (§ 300.66(c)(2) of the 1985 NCP) provides that only those releases included on the NPL will be eligible for Fund-financed remedial action. The purpose of this restriction is to ensure that limited Fund monies are used only at sites that have been identified as posing the greatest potential threats to human health and the environment. (The purpose is *not* to make the NPL the exclusive list of necessary remedial and enforcement actions.) Therefore, the Agency will consider applications for preauthorization of remedial actions only for releases that are on the NPL. Inclusion on the NPL is *not* a precondition to removal actions, remedial planning activities, non-Fund-financed remedial actions, or any type of Agency action under section 106 of CERCLA.

For sites that are on the NPL, EPA will consider applications for pre-authorization of remedial actions where the Agency does not in the near future intend: (1) To bring an enforcement action against responsible parties; (2) to initiate a Fund-financed response through contracts or cooperative agreements with States; or (3) where the Agency finds it desirable to allow claims in addition to one or more of the above mechanisms (e.g., mixed funding). EPA will also weigh whether preauthorization of a response action will facilitate meeting the schedules for initiating RI/FSs and remedial actions mandated by section 116 of CERCLA.

C. Preauthorization of Operable Units and Response Stages

As defined in § 300.5 of the proposed revised NCP (described in § 300.68(c) of the 1985 NCP), an operable unit is a discrete action that comprises an incremental step toward comprehensively addressing site problems. The definition contained in today's proposed rule at § 307.13 also states that such a discrete portion of a remedial response acts to either manage migration or to eliminate or mitigate a release or pathway of exposure. While EPA may approve operable units, the Agency may require a commitment to finish site cleanup, and in some instances will not reimburse claims for operable units until the entire site is cleaned up. This is to ensure that projects, once initiated, are completed in a timely manner. Additionally, EPA may approve an application for preauthorization of stages (e.g., RI/FS, design, construction) of a response or an operable unit. Preauthorization of stages may be advantageous when subsequent actions and costs are dependent upon the findings of a previous stage.

D. Requirements for Preauthorization Applications

EPA today proposes that an applicant satisfy the requirements set forth in §§ 307.20, 307.21 and 307.22 in order to obtain EPA's preauthorization. These provisions set forth those who are eligible to file CERCLA response claims (see II.C.). They also define eligible claims and specify the elements that must be addressed in an application for preauthorization.

1. Eligible Claims

There are four general requirements in order for costs to be eligible for reimbursement: the response action must be preauthorized by EPA, the costs must be incurred for activities within the scope of such preauthorization, the response action must be consistent with the NCP, and the costs incurred must be necessary response costs.

(a) Necessary Costs. In order to be reimbursed from the Fund, the applicant must demonstrate that proposed response costs are "necessary response costs." In order for EPA to consider costs to be necessary, they must be: (1) Required (based upon the site-specific circumstances), (2) reasonable (nature and amount do not exceed that estimated or which would be incurred by a prudent person), (3) allocable (incurred specifically for the site at issue), and (4) otherwise allowable (consistent with the limitations and exclusions under the appropriate Federal cost principles). Hereinafter, "necessary response costs" shall be used to refer to costs which are required, resonable, allocable and allowable. EPA will issue guidance to prospective claimants on necessary response costs.

Section 111(a)(2) of CERCLA authorizes the Fund to reimburse claimants only for "necessary" response costs. This limitation is distinct from and does not apply to cost recovery actions initiated by the government under CERCLA section 107. In section 107 actions, the United States, States, and Indian Tribes may recover "all" response costs incurred in a manner not inconsistent with the NCP.

The applicant must justify in the application for preauthorization any proposal to perform an activity either in-house or to contract it out, and must describe plans to conduct all procurement transactions in a manner that: ensures to the maximum practicable extent, open and free competition; does not unduly restrict or eliminate competition; and provides where applicable for the award of contracts to the lowest responsive, responsible bidder, where selection can be made principally on the basis of price.

Necessary response costs may include costs incurred for the payment of contractor claims. Unless approved in advance by EPA, necessary response costs will not include costs incurred under construction contracts that do not contain a differing sites conditions clause as provided in proposed § 307.21(g). In addition, where the Fund has been used to pay the cost of a response action, EPA will pay no other claim for the same cost from the Fund.

Proposed § 307.21(c) would authorize reimbursement of expenses incurred by a claimant as a result of the settlement of a contractor claim. It would also allow reimbursement of an award by a third party of such a claim to the extent that EPA determines that the following conditions are met. First, the contractor claim must arise from work that is preauthorized and that is within the scope of the contract at issue. Second, the contractor claim must be meritorious (i.e., the contractor has demonstrated the requisite facts to establish the claimant's liability and the contractor's legal right to the claimed costs). Third, the contractor claim cannot be caused by the mismanagement of the claimant (e.g., errors and omissions in the plans and specifications, impact costs caused by defects). Fourth, the contractor claim cannot be caused by the claimant's vicarious liability for the improper actions of others (e.g., liability for the actions of others that the claimant must accept as a part of his/her general management responsibility). Fifth, the claimed amount must be reasonable and necessary. Sixth, the CERCLA claim for the amount of the contractor claim must be filed within five years of completion of the preauthorized activities. Seventh, payment of the contractor claim will not result in total payments from the Fund exceeding the amount that was preauthorized. The claimant has the burden of proof in substantiating the allowability of settlements, arbitration awards, and judgments.

An award by a third party of a contractor claim should include: (i) findings of fact; (ii) conclusions of law; (iii) allocation of responsibility for each issue; (iv) basis for the amount of award; and (v) the rationale for the decision.

Proposed § 307.21(f) provides that expenses incurred by a claimant for the payment of a person while such person is on the "List of Parties Excluded from Federal Procurement or Non-Procurement" shall not be reimbursable from the Fund unless the claimant obtains approval from EPA prior to incurring the obligation. The "List of Parties Excluded from Federal Procurement or Non-Procurement" is available as a monthly subscription through the Government Printing Office (Order # 722–002–00000–8). Copies of this list are also available from EPA's Office of Compliance. EPA may approve the use of such persons in a manner not inconsistent with 40 CFR part 32.

Proposed § 307.21(g) would require claimants to include a differing sites conditions clause in construction contacts as a precondition to reimbursement, unless EPA waives the requirement. Such clauses prevent firms competing for contracts from inflating their bids to account for contingencies such as differing site conditions. If the applicant does not propose the use of a differing site conditions clause equivalent to that in § 307.21(g), he/she should fully explain why this is appropriate in the application for preauthorization.

2. Elements of the Application for Preauthorization

A potential claimant must seek preauthorization by completing an application for preauthorization. A preauthorization application form, available for EPA, must include the following information, where applicable: (1) The location of the release or threatened release; (2) the type and quantity of hazardous substance, pollutant, or contaminant; (3) a description of the surrounding population and/or environmental risk; (4) any identification and investigation of PRPs; (5) a description of the proposed cleanup or investigation or evaluation actions and how such actions would be consistent with the NCP; (6) the applicant's capabilities (including financial capability) to perform the proposed activities; (7) evidence of consultation with the State on the proposed action; (8) provisions for long-term operation and maintenance; (9) projected costs; and (10) proposed project management, contracting procedures and proposed procedures for reporting to EPA.

The application is organized in a manner to enable EPA to determine whether: (1) It is appropriate to authorize a response under CERCLA; (2) the proposed response action can be carried out in manner consistent with the NCP; (3) proposed costs are, in the meaning of section 111(a)(2) of CERCLA, "necessary response costs;" and (4) the proposed procedures are consistent with sound business judgment and good administrative practices.

(a) Appropriate Response Action. As stated above, the applicant must state the nature and extent of the release or threat of release. The applicant should be guided by § 300.400(a) of the proposed revised NCP (§ 300.61(a) of the 1985 NCP) in determining whether a response to a release or threat of release is appropriate and authorized by CERCLA. Further, in determining the need for and in planning or undertaking a response action, the applicant must, to the extent practicable, comply with the requirements of § 300.400(c) (1), (4), (5) and (7) of the proposed revised NCP (§ 300.61(c) (1), (4), (5) and (7) of the 1985 NCP). These provisions require that the applicant: (1) Be capable of engaging in a prompt response when authorized; (2) be sensitive to local community concerns; (3) consider using treatment technologies; and (4) encourage the involvement and sharing of technology by industry and other experts. For remedial actions, the applicant should be guided by § 300.420 of the proposed revised NCP (§ 300.66(a) of the 1985 NCP) in evaluating releases or threats of release.

(b) Potentially Responsible Parties. If EPA previously notified the applicant that he/she was a PRP pursuant to section 107 of CERCLA, the applicant must disclose this fact to EPA. The applicant must also disclose whether he/she has reason to believe, without regard to any potential defenses that may be available under section 107(b), the he/she may be:

(1) The owner and operator of a vessel or a facility;

(2) Any person who at the time of disposal of any hazardous substance owned or operated any facility at which such hazardous substances were disposed of;

(3) Any person who by contract, agreement, or otherwise arranged for disposal or treatment, or arranged with a transporter for transport for disposal or treatment, of hazardous substances owned or possessed by such person, by any other party or entity, at any facility or incineration vessel owned or operated by another party or entity and containing such hazardous substance; or

(4) Any person who accepts or accepted any hazardous substances for transport to disposal or treatment facilities, or incinerator vessels or sities selected by such person, from which there is a release, or a threatened release that causes the incurrence of response costs, or a hazardous substance.

If the following conditions are met, an approved preauthorization application will be deemed invalid and any subsequent claim will be denied in total: (1) The applicant is a person previously notified by EPA that he/she is a PRP and that applicant does not disclose this information on his/her application for preauthorization, and (2) EPA subsequently determines that the applicant is a potentially liable party under section 107 of CERCLA. Similarly, if an applicant has reason to believe that he/she may be a person as described above and does not disclose this information on his/her application for preauthorization, and EPA subsequently determines that the applicant is a potentially liable party under section 107 of CERCLA, an approved preauthorization application will be deemed invalid and any subsequent claim will be denied. In either case, withdrawal of preauthorization will be preceded by written notice from EPA. The procedures for preauthorizing PRPs are explained in section V of this preamble.

The applicant must list all known PRPs and any contacts with and replies by such parties. If PRPs are unknown to the applicant, any efforts undertaken by the applicant to locate and identify PRPs should be described.

(c) Proposed Response Action. The applicant must describe the proposed response action, explain why the actions are necessary and how they are consistent with the NCP, and provide a schedule for major response activities.

(1) Requirements for Removal Actions. Prior to applying for preauthorization for a removal action, the applicant must comply with the requirements of § 300.410 of the proposed revised NCP (§ 300.64 of the 1985 NCP) regarding preliminary assessments for removal actions, with the exception of §§ 300.410(e) (5) and (6), and (h) of the proposed revised NCP (§§ 300.64(c) (4) and (5), and (e) of the 1985 NCP). The applicable subsections require the applicant, as appropriate, to: (1) undertake a preliminary assessment as promptly as possible to evaluate the nature and extent of the actual or threatened release; (2) consider information readily available and make a site visit if necessary; and (3) determine the impact on natural resources and notify the appropriate trustee. The applicant will determine, based on the exigency of the situation, whether a preliminary assessment is necessary. The applicant will be guided by § 300.415 of the the proposed revised NCP (§ 300.65 of the 1985 NCP) in determining the appropriate extent of action required to mitigate the actual or threatened release and shall consider the factors contained in § 300.415(b)(2) of the proposed revised NCP (§ 300.65(b)(2) of the 1985 NCP) in proposing a response. However, §§ 300.415(j) and 300.415(k) of the proposed revised NCP (§§ 300.65(f) and 300.65(h) of the 1985 NCP), which concern removal actions pursuant to sections 104 and 106, apply to response claims only if they are preauthorized in the context of administrative orders or consent decrees reached pursuant to section 122.

(2) Requirements of Studies and Remedial Planning. Persons interested in responding to a release or threat of release may request preauthorization to conduct a remedial investigation (RI) or feasibility study (FS). The purpose of an RI is to determine the nature and extent of the problem presented by the release. The purpose of an FS is to define the objectives of the response action, using data from the RI, and to develop and analyze remedial action alternatives. Applicants for RI/FS preauthorization must submit a plan detailing how the RI/FS will be conducted. In developing that plan, the applicant will be guided by the provisions contained in § 300.430(a)(2) of the proposed revised NCP (§ 300.68(d) of the 1985 NCP), which defines the components of an RI/FS. In the revision, to the NCP, EPA has proposed that each applicant design his/her plan to assure compliance with the following provisions of § 300.430 (note: corresponding sections of the 1985 NCP are noted in parentheses):

- Section 300.430(b)(5) (300.68(k)) on sampling and analysis plans.
- Section 300.430(d)(2) (300.68(e)) characterizing the release;
- Section 300.430(e) (1)–(6) (300.68(f)) on the development of alternatives;
- Section 300.430(e)(7) (300.68(g)) on screening of alternatives;
- Section 300.430(e)(9) (300.68(h)) on detailed analysis of alternatives;
- Section 300.430(e)(7)(iii) (300.68(i) except for paragraph (iv), regarding waivers) on selection of the remedy.

In general, EPA does not anticipate preauthorzing private-parties to conduct an RI/FS unless such parties also agree to implement any response action that EPA may subsequently determine is required at the site. This is because preauthorization will prove too burdensome for the relatively small amount of money associated with such studies and the short time-frames within which the RI/FS is gennerally needed will not permit protracted negotiations. Additionally, section 104(a)(1) of CERCLA imposes new requirements on RI/FSs conducted by PRPs (see section V of this preamble for special requirements for PRPs).

(3) Requirements for Remedial Actions. Once a potential claimant has decided on a proposed remedy or chosen to implement the remedy selected by EPA, he/she may seek preauthorization to complete that remedy. EPA recommends that the applicant develop his/her proposed remedy in accordance with § 300.430 of the revised NCP (§ 300.68 of the current NCP). An RI/FS is generally required at any site where an expenditure from the Fund for remedial work will be authorized. Under the proposed revised NCP, alternative remedies will have to be: developed in accordance with § 300.430(e) (§ 300.68(f) of the 1985 NCP), screened in accordance with § 300.430(e)(7) (§ 300.68(g) of the 1985 NCP), and analyzed in accordance with § 300.430(e)(9) (§ 300.68(h) of the 1985 NCP). The proposed remedy must also have been selected from the alternatives in accordance with proposed § 300.430(f)(3) (§ 300.68(i) except for the waivers in paragraph (iv) of the 1985

NCP). The applicant must also have considered, as appropriate, the methods of remedying releases as specified in proposed Appendix D (§ 300.70 of the 1985 NCP) (except for Appendix D, paragraph (g) (§ 300.70(e) of the 1985 NCP) on relocation, which should be coordinated pursuant to § 300.175(b)(3)). The types of remedial actions that are generally appropriate in particular situations are listed in proposed Appendix D (§ 300.68(j) of the 1985 NCP). Preauthorization may be sought with respect to individual operable units.

If the applicant proposes a remedy other than that selected by EPA for the site, the application for preauthorization shall describe, as appropriate, whether and how the proposed remedy: (1) Differs from the one selected by EPA; (2) is cost-effective; (3) mitigates and minimizes future risks; (4) improves the reliability of the remedy; and/or (5) utilizes new or innovative technology. If the applicant proposes a remedy other than the remedy selected by EPA, the Agency will evaluate the information submitted and modify its remedy, if appropriate, consistent with the procedures proposed in Subpart E of the proposed revision to the NCP. If EPA has not selected a remedy, the application for preauthorization shall describe, as appropriate: (1) The proposed remedy; (2) how the remedy achieves protection of public health and welfare and the environment and complies with Federal public health or environmental ARARs; (3) whether the remedy is cost-effective; (4) how the remedy mitigates and minimizes future risks; (5) the reliability of the remedy; (6) whether the remedy utilizes new or innovative technology; and (7) whether the remedy employes treatment that reduces toxicity, mobility, or volume of the hazardous substances. (See EPA's "Superfund Remedial Design and Remedial Action Guidance," EPA/OSWER Directive 9355.0–4A, June 1986, for more details.)

As discussed above, private-party response actions are not exempt from other applicable Federal, State, and local laws. Thus, a private-party response action (other than those preauthorized in the context of an administrative order or a consent decree performed pursuant to section 106/122 of CERCLA) will be preauthorized only if it will comply with all legally applicable requirements, including on-site permit requirements. The response action also must comply with environmental laws that, although not applicable, are relevant and appropriate to the situation at hand, unless the waivers of section 121 apply. Section 300.700(d)(3) of the proposed revised NCP clarifies these requirements. Similarly, certain exemptions proposed in § 300.430(f)(3)(iv) (which is proposed to be revised pursuant to section 121 of CERCLA) would apply to private-party response actions only (except for the Fund-balancing waiver in subparagraph (F)). The specific exemptions are: the selected alternative is an interim measure not a final remedy (subparagraph (A)); all alternatives that meet the requirements would result in greater risk to human health and the environment (subparagraph (B)); no alternative that meets the relevant and appropriate requirements is technically practical (subparagraph (C)); the alternative that does not attain ARARs will attain an equivalent standard of performance (subparagraph (D)); and, with respect to State ARARs, the State has not consistantly applied the standard (subparagraph (E)). The sixth waiver (subparagraph (F)) applies to Fund-financed response actions only remedy.

As stated earlier, for most sites listed on the NPL, EPA intends to pursue CERCLA section 106 actions against and, if possible, to enter into consent agreements pursuant to CERCLA section 122 with parties responsible for the release, or enter into contracts or cooperative agreements with States for response actions. EPA and the States have already initiated response or enforcement actions at many of these sites, and it is unlikely that EPA will approve through the preauthorization process a private-party to implement remedial design and construction already underway through a consent decree or order or a cooperative agreement. If the applicant seeks preauthorization in this circumstance, he/she must demonstrate special or unique capabilities to implement the selected remedy.

(d) *Other Requirements for Consistency with the NCP.* Section 300.700(c)(3) of the proposed revised NCP (see III.A.) sets forth the requirements in order to be consistent with the NCP. The discussion above highlights the requirements related to specific types of response actions. Other requirements relate to worker/community health and safety and community relations.

(1) Health and Safety. In order to be consistent with the NCP, § 300.700(c) of the proposed revised NCP would require compliance with § 300.150 of the proposed revised NCP (§ 300.38 of the 1985 NCP). Today's proposed rule would require that applicants provide evidence of adequate provision for worker training, health and safety, and the safety of the public in order to satisfy this requirement. While a site safety plan is not required in advance of submitting an application for preauthorization, the applicant must demonstrate familiarity with "OSHA Safety and Health Standards: Hazardous Waste Operations and Emergency Response" (29 CFR part 1910, 51 FR 45654 *et seq.*, December 19, 1986).

If the site safety plan is not included with the application for preauthorization, the applicant must specify when, in advance of site work, the plan will be completed and submitted to EPA. Section 300.150(a) of the proposed revision to the NCP reiterates that private employers are directly responsible for the health and safety of their own employees.

The applicant should attach, or describe plans to develop a spill/volatile emissions contingency plan that will address the protection of area residents from the physical, chemical and/or biological hazards particular to the release or the proposed response action.

(2) Community Relations. In order to be consistent with the NCP, § 300.700(c) of the proposed revised NCP would require compliance with §§ 300.155, 300.415, 300.430, and 300.435 of the proposed revised NCP, or substantially equivalent State or local requirements. Applications for preauthorization must address the appropriate provisions regarding public participation. Community relations plans developed for preauthorized response actions are to be in accordance with the relevant sections of the NCP. The applicant must demonstrate, through information contained in the application for preauthorization, a thorough knowledge of applicable EPA guidance, and describe the applicant's proposed role in community relations during the conduct of the response action. The discussion below provides information on the requirements for public participation for removal and remedial actions. Note that special provisions apply to response actions to be conducted by PRPs.

In the case of removal actions taken pursuant to proposed § 300.415 (§ 300.65 of the current NCP) or other short-term actions, a formal community relations plan is not necessary. However, for removal actions expected to extend beyond 45 days (proposed to be 120 days in the proposed revised NCP), the applicant must agree to develop a formal community relations plan upon EPA's approval of the response action and prior to the initiation of field work. If the following conditions are satisfied, the claimant must develop a formal plan: (1) EPA approves a response action which is expected to extend beyond 45 days (120 days under the proposal), and (2) it becomes apparent that a brief response action will require more than 45 days (120 days under the proposal). An applicant need not prepare a new plan if a detailed current plan already exists.

Prior to commencing field activities for an RI, a community relations plan must be developed by the applicant. After completion of a final draft FS, the applicant shall provide for public review of the study for at least 30 days. An applicant shall also provide an opportunity for a public meeting at or near the facility. A transcript of the meeting shall be compiled, and the transcript shall be available to the public. Once a plan is adopted, it shall be available to the public before the remedial action is commenced. The plan shall include a discussion of any significant differences from the proposed plan. Applicants requesting preauthorization for remedial actions must demonstrate familiarity with any community relations plan already developed for the site, and must demonstrate the ability to obtain public comment and keep the public informed throughout field activities. If conditions require reconsideration of major aspects of the remedy, the applicant should describe the process proposed for public review and comment.

Response actions preauthorized in the context of administrative orders or consent decrees will be governed by the provisions of § 300.67 regarding actions pursuant to CERCLA section 106. As proposed in § 300.430(c)(3) (§ 300.67(c) of the current NCP), PRPs may participate in aspects of the community relations program at the discretion and with oversight by the lead agency.

Applicants should consult EPA's *Community Relations in Superfund: A Handbook* (EPA/OSWER Directive 9230.0–3B, June 1988) for more details. PRPs should consult Chapter 6 of the *Handbook* and subsequent clarifying guidance contained in "Community Relations During Enforcement Activities and Review of Administrative Record" (EPA/OSWER Directive 9836.0–1A, November 1988). Both the Handbook and the Guidance are available through EPA Regional Offices.

(e) Schedule of Response Activities. Proposed § 307.22(b) of this Regulation would also require that the applicant supply a proposed schedule of response activities. The purposes of the schedule are to ensure: (1) The timely initiation and completion of the response action consistent with section 300.400(c)(1) of the proposed revised NCP (section 300.61(c)(1) of the 1985 NCP); (2) that the applicant understands the major tasks associated with the proposed response action; and (3) that the applicant has allowed sufficient time for response activities, including necessary reviews by EPA. The format for this information may be a milestone chart or timeline that lists the major tasks/activities. The time may be expressed in weeks or months, at the option of the applicant, and may be reflect elapsed time (e.g., 6 months to complete task A) rather than a date certain, due to uncertainties regarding the effective date of preauthorization. At a minimum, the applicant must supply the point following preauthorization at which the response action will be initiated (e.g., contractor on-board within 3 months) and the point at which the response action will be completed (e.g., completion 54 months from start-up).

(f) Capabilities. Just as section 104(d)(1) of CERCLA requires that the President determine whether a State, political subdivision, or Indian Tribe is capable of carrying out a given action before entering into a contract or cooperative agreement, EPA believes it reasonable and appropriate to include a demonstration of technical expertise as one of the requirements for obtaining preauthorization to conduct a response action. Section 300.700(d)(4)(i) of the proposed revised NCP (§ 300.25(d)(5) of the current NCP) requires that all persons filing an application for preauthorization demonstrate their technical and other capabilities to respond.

The application for preauthorization should demonstrate, in addition to a knowledge of the NCP and EPA procedures: the applicant's engineering, scientific, or other technical expertise necessary to evaluate the appropriate extent of remedy; the ability to handle any on-site emergency action; the ability to oversee the design of remedial actions; the ability to manage any necessary contracts; the ability to manage the sampling plan; the ability to furnish continuous contruction oversight; and the financial ability to implement the removal or remedial action.

The applicant may demonstrate technical capabilities in part through: (1) Previous experience in hazardous site cleanups; (2) management of other types of government or private contracts or similar scope, magnitude and complexity; or (3) previous experience that required similar technical and managerial capabilities. The applicant may demonstrate financial capability through the inclusion of audited financial statements or balance sheets and tax returns or other evidence that the applicant has the necessary resources to carry out and complete the proposed response action. As appropriate, the applicant may propose a financial bond, letter of credit, or other assurance of completion.

(g) Consultation with State Agencies and Indian Tribes. In order to accomplish timely coordination and consultation with the affected State(s) and Indian Tribe(s), the applicant seeking preauthorization of a remedial action is encouraged, at the time the application for preauthorization is filed, to obtain a letter signed by the designated State or Indian Tribe hazardous waste official that: (1) Concurs with the proposed action; and (2) assures the cooperation of the State or Indian Tribe in the proposed actions. This will facilitate EPA's processing of the application for preauthorization by reducing or eliminating the need for EPA to consult with the affected State(s) or Indian Tribe(s) during its review of the applications for preauthorization of remedial actions. If the applicant does not supply a letter from the State or Indian Tribe official, documentation must be supplied that every reasonable effort was made to obtain the cooperation of the State or Indian Tribe.

(h) Future Maintenance. Section 104(c)(3) of CERCLA requires the assurance of future maintenance of response actions. Section 300.430(e)(7)(iii) of the proposed revision to the NCP (§ 300.68(g)(1) of the current NCP) requires that the lead agency consider costs for each alternative, including operation and maintenance costs. While section 104 does not apply to private-party response actions, EPA does not believe it is appropriate to approve a response action through the preauthorization process unless long-term operation and maintenance will be undertaken and/or paid for by a party other than EPA.

The applicant may satisfy long-term operation and maintenance activities, if applicable, in one of two ways: (1) A bond or other financial assurance, satisfactory to EPA, sufficient in amount to cover the costs of necessary long-term operation and maintenance; or (2) a written assurance from the State to provide for long-term operation and maintenance of the response action. Pursuant to sections 104(c)(3) and (6) of CERCLA, in the case of ground- or surface-water contamination, the remedial action must include measures necessary to restore ground- and surface-water quality and provide for the operation of such measures for up to 10 years. It is EPA policy to pay operating costs necessary to ensure that all or a portion of the remedy is operational and functional (i.e., shakedown costs), only if such costs are incurred within one year of the completion of the remedy or a portion of the remedy. The Agency will not pay for the long-term costs (i.e., operation and maintenance) necessary to maintain the effectiveness of a response measure following completion in either Fund-financed or claims situations.

(i) Projected Costs. Section 307.22(b) of the proposed rule would require that applications for preauthorization contain projected costs of response activities. The applicant may demonstrate the validity of projected costs on the basis of: (1) Cost estimates from firms qualified to provide goods or services; (2) competitive procurements for similar activities, if the prices were determined on an open market; or (3) documentation of market prices (e.g., price sheets) based on similar procurements. The proposed rule would also require that the applicant base such projected costs on actual anticipated costs without a contingency for unanticipated site conditions. (See Section IV.D.—necessary response costs.)

(j) Management, Contracting and Reporting. The application for preauthorization should describe in detail the management structure that the applicant proposes to use to implement the project and control financial matters. The project management structure should include an organizational and functional statement (complete with chart) to assist EPA in determining the level of management necessary for the project. The structure should demonstrate the relationship among the following parties (if relevant): the applicant, the technical committee or advisors, the project manager, the Trustee, and the contractors/subcontractors.

The applicant should describe in detail proposed contracting procedures that are in accordance with sound business judgment and good administrative practice and that are consistent with the requirements for eligible costs (see Section IV.D.1.). The applicant should fully explain the type of contract proposed for specific activities and proposed procedures to settle and satisfactorily resolve all contractual and administrative issues arising out of agreements he/she may enter into to perform preauthorized response actions. The applicant should describe proposed procedures for: the issuance of invitations for bids or requests for proposals; selection of contractors; the award of subcontracts; a system or strategy to minimize change orders and prevent contractor claims; and procedures for settlement of protests, claims disputes, and other related procurement matters. The applicant should also describe how he/she proposes to handle contracts to assure that subcontracted work is performed in accordance with the terms, conditions, and specifications of such contracts. EPA will issue guidance on procurement and other management practices that may be adopted by the applicant to help assure that costs incurred are eligible for reimbursement.

Section 300.160 of the proposed revisions (§ 300.69 of the current NCP), would require documentation of all phases of response actions. The applicant must demonstrate, through proposed reporting, oversight, and recordkeeping procedures, a knowledge of how the Superfund program operates. EPA recommends that the applicant utilize a flow diagram or other chart to demonstrate critical activities, processes, the relationship of activities and processes to each other, and key decision points. Reporting and oversight are key to the satisfactory management and monitoring of a project. The applicant's plan should show: (1) The number and frequency of reports to EPA and the State detailing progress at the site; (2) documents that the applicant proposes to submit to EPA prior to undertaking key steps (e.g., requesting proposals, contract awards, or analysis of lab results); (3) reports that document conditions at the site (e.g., actions taken, resources committed, problems encountered, or recommendations for further actions); and (4) documents that will be retained by the applicant for ten years or until EPA completes cost recovery. Applications submitted by PRPs may rely on the reporting requirements contained in the most recent draft settlement agreement.

In order to establish that costs are allocable (see "necessary response costs") the claimant should propose a financial management system that consistently applies generally accepted accounting principles and practices. At a minimum, the system must include an accurate, current, and complete accounting of all financial transactions for the project (complete with supporting documents) and a systematic method to resolve audit findings and recommendations. Proposed section 307.32(m) provides for the adjustment of the claimed amount if the claimant fails to maintain records, documents, and other evidence of claimed costs in accordance with generally accepted accounting principles and practices consistently applied.

EPA will approve or modify the applicant's proposed management, procurement and reporting plans and may: (1) Provide additional oversight as deemed appropriate, pursuant to proposed § 300.400(h) (§ 300.61(d) of the 1985 NCP); and (2) condition preauthorization on such requirements as it may deem necessary, pursuant to § 307.23(c) of the proposed rule.

V. Preauthorization Under CERCLA Section 122

Section 122(b) provides the President with the discretionary authority to enter into agreements with PRPs, whereby the PRPs will perform all or a portion of an operable unit of a response action in return for reimbursement of an agreed-on portion of response costs, plus interest. The intent of section 122(b) is to encourage private-party cleanups where PRPs are willing and able to perform response actions properly. These "mixed funding" agreements should encourage a PRP or a group of PRPs to settle when, for example, the other PRPs either refuse or lack the funds to participate in a settlement. Therefore, while the Agency strives to obtain complete cleanup by PRPs or to collect 100 percent of cleanup costs in every case, it will consider settlement proposals for less than 100 percent of cleanup activities or costs in certain limited circumstances.

The Agency's Interim CERCLA Settlement Policy (50 FR 5034 *et seq.*, February 5, 1985) and guidance entitled "Evaluating Mixed Funding Settlements under CERCLA" (53 FR 8279 *et seq.*, March 14, 1988) contain a number of criteria or factors to be used in considering offers from PRPs for less than 100 percent of cleanup. The criteria or factors include the nature and volume of wastes, the PRPs' ability to pay, the strength of available evidence, public interest considerations, the nature of the case remaining after partial settlement, and other mitigating and aggravating factors. If the Government determines on the basis of such factors to accept an offer for less than 100 percent of cleanup costs, it could then determine whether allowing preauthorization would be useful to expedite cleanup.

This approach is fully consistent with joint and several liability under CERCLA. First, it involves a pragmatic determination by the Government that settlement for less than 100 percent will facilitate cleanup. Second, it does not involve a Government apportionment

scheme to allocate costs among responsible parties. Third, the Government retains its discretion to pursue an action against non-settling parties for the Fund-reimbursed portion of a PRPs' response.

In addition to preauthorization, which is the subject of this proposed rule, the guidance "Evaluating Mixed Funding Settlements under CERCLA" discusses two other types of mixed funding: "cash-out" and "mixed work." Consult the guidance for more information on these types of mixed funding agreements.

The partial reimbursement of PRPs' costs under the preauthorization type of mixed funding will occur through the response claims mechanism. While applications for preauthorization may be filed at any time prior to undertaking work for which reimbursement will be sought, EPA will not consider any application for preauthorization from PRPs outside of negotiations aimed at reaching a judicial or administrative settlement. That is, if EPA has not initiated negotiations with PRPs, an application for preauthorization will serve to notify EPA that a PRP wishes to initiate negotiations with EPA. The Agency will not consider preauthorization of response actions to be conducted by PRPs until negotiations are underway. Preauthorization of PRPs generally will not become effective until the consent decree or administrative order is entered.

EPA is exploring methods to streamline the application process for PRPs seeking preauthorization. Such streamlining may incorporate by reference available documents (e.g., RI/FS, ROD) and thereby reduce the amount of information to be submitted by PRPs and the time required to prepare the application for preauthorization. EPA requests comment on whether and how the regulation can assure that the Agency receives necessary information yet does not require unnecessary submissions. EPA expects to issue subsequent guidance reflecting any streamlining of the process.

Section 122(d)(3) of CERCLA authorizes the use of an administrative order or a consent decree to enable a PRP to conduct an RI/FS. However, preauthorization of an RI/FS in the context of a settlement agreement is not likely unless the PRPs agree to undertake any response action EPA may subsequently determine is necessary. The Agency has concluded that it would be an inefficient use of resources to negotiate settlement agreements limited in scope to an RI/FS. In addition, there is generally insufficient information available during the early stages of negotiation to evaluate fully the merits of a mixed funding agreement. However, where the PRP enters into negotiations with EPA for remedial design and/or remedial action, it is EPA's policy to consider the extent to which the PRP has cooperated with the Government in determining the percentage of reimbursement for such subsequent remedial actions at the site.

It should also be noted that section 104(a)(1) of CERCLA requires that certain conditions be met before EPA authorizes a responsible party to conduct either an RI or an FS. First, the Agency shall determine that the party is qualified to conduct the RI/FS. Second, EPA must contract or arrange for a qualified person to assist in overseeing and reviewing the conduct of the RI/FS. Third, the responsible party shall agree to reimburse the Fund for any cost incurred by the Agency through such an oversight contract or arrangement.

EPA will pay claims submitted by PRPs who are preauthorized up to a specified maximum amount only to the extent that such parties are in compliance with the order or consent decree. The Fund share of any preauthorized response action will not be available until either an agreed-upon stage of a cleanup or the entire cleanup is completed. Unless cleanup is conducted in complete satisfaction of the terms and conditions set forth in the administrative order or consent decree and the PDD, PRPs will not be entitled to full reimbursement. Further, § 300.700(g) of the proposed revised NCP (§ 300.71(d) of the current NCP) states that a response completed by any party (including a PRP) does not of itself release parties from liability to the Government under CERCLA. Response actions preauthorized in the context of orders or decrees will be governed by the NCP provisions regarding actions taken pursuant to sections 106 and 122 of CERCLA and other requirements established by this regulation as ultimately promulgated.

Section 122(b) requires EPA to take all reasonable efforts to require the non-settling PRPs to reimburse the Fund for the amount of the claim. CERCLA requires that EPA acquire by subrogation the rights of the claimant to recover his/her response costs once the Agency awards the claim.

Under a settlement pursuant to section 122(b) of CERCLA, if there is a failure of the original remedial action, the Fund may be available for the reimbursement of some costs of any new cleanup required, but is obligated only for that proportion contributed by the Fund for the original remedial action. (*See* section 122(b)(4)). However, the Fund is not obligated to reimburse the claimant for subsequent remedial actions if those subsequent remedial actions are necessary as a result of the failure of the claimant, his/her employees or agents, or any third party to perform properly the required response activities. Required response activities include those specified by: the administrative order or consent decree, any modification to such order or decree approved by EPA, or by the PDD, which specifies many of the terms and conditions of reimbursement.

Section 122(b) authorizes not only that a portion of a PRP's response costs be reimbursed, but also that interest be paid. Interest will accrue on amounts due the PRP(s) if EPA fails to pay the amount within 60 days of EPA receipt of a complete claim from the settlors. A completed claim is a demand for a sum certain that includes all documentation required to substantiate the appropriateness of the amounts claimed. Where the PRPs submit a claim that is technically complete, but for which EPA requires additional information in order to evaluate the amount claimed, interest will not accrue on the claim until 60 days after EPA's receipt of the requested additional information. The rate of interest paid on a claim is the rate of interest on investments of the Fund established by subchapter A of chapter 98 of the Internal Revenue Code of 1954.

VI. Submission and Evaluation of Applications for Preauthorization

Preauthorization of a response action may be obtained only in accordance with this regulation, once these rules are promulgated and effective. In the meantime, preauthorization will be determined on a case-by-case basis. Unless otherwise agreed to by the Agency, the following are not deemed to be preauthorization: (1) Terms, provisions or requirements of court judgments, (2) consent decrees, (3) administrative orders, or (4) any other consensual agreement with EPA requiring a response action. The previous section specifies the procedures for preauthorization of a response action to be conducted by PRPs.

Forms and instructions for submitting an application for preauthorization may be obtained from any EPA Regional Office. The current addresses for these offices are contained in the Appendix to this preamble. The preauthorization application, EPA Form 2075–3, "Application for Preauthorization," must be filled out completely, signed, and submitted to EPA, 401 M Street, SW., Washington, DC 20460, Attention:

Director, Office of Emergency and Remedial Response (OS-220).

A. Confidential Business Information

A person may assert a claim of business confidentiality for information submitted as part of an application for preauthorization or a claim against the Fund. Information claimed confidential will be disclosed by EPA only to the extent permitted by CERCLA, this proposed rule, and 40 CFR part 2, Subpart B. The applicant or claimant must assert his/her claim at the time the information is submitted to EPA by clearly marking the specific information claimed confidential. Items should be marked confidential as prescribed on the forms. For information either on the forms or in the attachments to the forms, items claimed confidential should be circled or bracketed. Unless a business confidentiality claim is asserted in this manner at the time the application for preauthorization or claim against the Fund is first filed, EPA will deem the applicant or claimant to have waived any rights to confidentiality for that information, and the information may be made public with no further notice.

Any response claimant or applicant claiming information confidential must submit two copies of his/her submittal: a complete copy containing all information claimed confidential clearly marked as such and a redacted copy from which only information claimed confidential has been deleted. EPA will assume that the redacted copy accurately deletes any information claimed confidential. EPA will not consider an application for preauthorization to be complete or a claim against the Fund to be perfected until the applicant/claimant supplies a complete version and a redacted version of any submittal which contains information claimed as business confidential.

B. Criteria for Evaluating Applications for Preauthorization

In determining whether to approve a response action through the preauthorization process, EPA will evaluate information submitted by the applicant according to the criteria described below. The criteria EPA will use to evaluate the advisability of using the claims process, compared to other mechanisms, include: (1) Priority; (2) proposed approach, projected costs, and schedule for cleanup; (3) capabilities and experience of the applicant; and (4) consultation with the State or Indian Tribe. EPA will, on the basis of its evaluation, develop a PDD, which will establish a record of the Agency's decision regarding preauthorization of a site-specific response action. The PDD will contain the terms and conditions that must be satisfied in order for a claimant to be reimbursed from the Fund.

1. Priority—Significance of Threat

As stated above, EPA must ensure that Fund expenditures are used to address the most significant threats to public health, welfare, and the environment. EPA will, through the preauthorization process, evaluate whether the applicant has demonstrated that the proposed cleanup merits expenditure of Fund monies. Section 104 of CERCLA limits the circumstances under which Fund monies may be used to respond to: (1) The release or substantial threat of release of hazardous substances; and (2) the release or substantial threat of release of pollutants or contaminants that may present an imminent and substantial endangerment to public health or welfare.

For removal actions, EPA will, as proposed in § 300.415(b)(2) of the proposed revised NCP (§ 300.65(b)(2) of the 1985 NCP), evaluate the information submitted to determine whether a threat to public health, welfare, or the environment exists (e.g., exposure of nearby populations, contamination of drinking water or sensitive ecosystems, weather conditions, threat of fire or explosion).

For remedial actions, EPA will carefully evaluate the threat (e.g., population at risk, routes of exposure, amount and concentration of substances, whether the substances are on the CERCLA section 102 toxicological lists, area hydrogeology, climate, likelihood of future releases, extent of possible migration, and extent to which contamination levels exceed health and environmental standards). Section 118 of CERCLA provides that high priority is to be given to facilities where the release resulted in closing drinking water wells or the contamination of a principal drinking water supply.

2. Proposed Approach, Projected Costs, and Schedule for Cleanup

EPA will evaluate the proposed removal, remedial planning, or remedial action under the NCP and will be guided by the proposed revisions of the NCP and these proposed response claims procedures. The proposed response action must be a cost-effective means of addressing the release or threat of release at issue. EPA will also evaluate: (1) The consistency of the proposed response action with other environmental requirements, (2) the extent to which the applicant has assured timely initiation and completion of response actions and (3) reporting and record-keeping requirements. As set forth in the NCP, EPA encourages response approaches that utilize new and innovative technology and/or offer an alternative to land disposal. However, where the proposed action would implement a remedial action previously selected by EPA, the Agency does not contemplate undertaking a new analysis of that remedy.

EPA will evaluate the estimated cost based on: (1) Methodology used for the estimates (including the applicant's use of the differing site conditions clause, if appropriate); (2) the reasonableness of estimates; (3) the necessity of proposed activities; and (4) the applicant's proposed procurement method (including the use of sealed bidding, contractor selection criteria, approach to contracts management, and accounting procedures). Where feasible, costs will be compared against costs for similar activities under contracts and cooperative agreements with States, political subdivisions, or Indian Tribes. Similarily, EPA will consider the schedule proposed by the applicant against the time required to implement activities under contracts and cooperative agreements. Contracts or cooperative agreements are likely to be used (assuming agreement with the State, political subdivision, or Indian Tribe) where the comparison between claims and such agreements results in a marginal advantage for claims. As stated earlier, the contract and cooperative agreement mechanisms offer advantages over the claims mechanism.

3. Technical Capabilities and Experience

EPA will evaluate whether the application demonstrates: (1) a knowledge of the NCP and EPA procedures; (2) sufficient engineering, scientific, or other technical expertise necessary to evaluate the appropriate extent of remedy; (3) the ability to handle any on-site emergency action; (4) the ability to oversee the design of remedial actions; (5) the ability to manage any necessary contracts (including change order management, termination, and re-bidding and close-out); (6) the ability to manage the sampling plan; (7) the ability to furnish continuous construction oversight; and (8) the ability to implement the removal or remedial action. EPA will evaluate the applicant's experience, technical and financial capabilities based upon the demonstrations contained in the preauthorization application. EPA will

also evaluate the applicant's proposed quality control and quality assurance program against EPA's quality control and quality assurance program guidelines.

4. State and Indian Tribe Consultation

Sections 104(c)(2) and 126 of CERCLA provide that EPA will consult with the affected State(s) or Indian Tribe(s) before determining the appropriate remedial action to be taken at a site pursuant to section 104. EPA will consult with the affected State(s) or Indian Tribe(s) during its review of a request for preauthorization of a remedial planning study or a remedial action, unless the applicant has already obtained such a letter of cooperation (see Section IV.D.2.f). EPA will consider the views of the State(s) or Indian Tribe(s) in evaluating the application for preauthorization. The applicant's submission of a letter signed by the designated State or Indian Tribe hazardous waste official will minimize the time required for coordination and consultation with States or Indian Tribes. This letter should state that the State or Indian Tribe: (1) Concurs with the proposed action, and (2) assures its cooperation in the proposed response action.

5. Summary of Criteria for Preauthorization

In summary, EPA will approve a response action through the preauthorization process only when the Agency determines that a Fund-reimbursed private-party response is the appropriate means to achieve site cleanup. The proposed expenditures must be reasonable and the proposed activities must be necessary to the response action at issue. EPA will, as appropriate, consult with the affected State or Indian Tribe before approving an application for preauthorization, unless the applicant supplies a letter of cooperation signed by the designated State or Indian Tribe official. EPA may approve all or any portion of a response action at a site, but will not approve less than a stage of an operable unit (see section IV.C.). EPA may approve a private party to do planning work (e.g., RI/FS). EPA's approval of an application for preauthorization of construction constitutes acceptance of the proposed remedy and a determination that the remedy is consistent with the NCP.

EPA will review and analyze the information contained in the application for preauthorization against the non-exclusive list of criteria proposed in § 307.23(b). EPA will generally approve the filing of a claim for the response action where:

1. The release is within the scope of CERCLA;

2. The release or threat of release merits expenditure from the Fund in view of competing demands on the Fund;

3. There is sufficient time to process the request for preauthorization (if a removal action is proposed);

4. The party liable for the release or threat of release of the hazardous substance is unknown, or if known, has been notified of the application for preauthorization and is unwilling or incapable of performing the response in a reasonable period of time;

5. The State, political subdivision, or Indian Tribe is unwilling to undertake the response action through a contract or a cooperative agreement;

6. The cost and effectiveness of the proposed response actions compare favorably with an alternative cleanup under section 104 of CERCLA;

7. The proposed response can be carried out in accordance with the NCP and other environmental requirements;

8. The applicant is eligible to file a claim and has the capabilities, experience, technical expertise, and knowledge of and familiarity with the NCP and relevant guidance necessary to carry out the proposed response action;

9. The applicant is implementing an administrative order or has entered into a consent decree with the Government regarding the site for which the request is made (if the applicant is a PRP);

10. The applicant is implementing an administrative order or has entered into a consent decree with the Government to undertake a remedial investigation and feasibility study and has affirmed that he/she will not directly or indirectly benefit from the preauthorization as a response action contractor, or as a person hired or retained by such a contractor with respect to the site at issue, and agrees to reimburse the Fund for any cost incurred under, or in connection with, the oversight contract or arrangement for the remedial investigation and feasibility study;

11. The proposed costs are eligible and the applicant has proposed appropriate procurement, contract management, project management, financial management and documentation procedures;

12. The applicant has met the necessary assurances, financial responsibilities, and other requirements;

13. The applicant has made the adequate provisions for long-term operation and maintenance of the response action, if appropriate;

14. The applicant has consulted with the State or Indian Tribe on the proposed response action;

15. The proposed procedures for oversight and the reporting of project issues and progress are acceptable to EPA;

16. The applicant cooperated with EPA at any earlier stage of response activity; and

17. The proposed schedule for filing a claim(s) is based on completion of the project or an operable unit.

C. Preauthorization Does Not Create Third Party Rights or Benefits

The terms and conditions set forth by EPA in the Preauthorization Decision Document (PDD) establish the requirements that the claimant must satisfy in order that costs incurred for a specific response action are eligible for reimbursement from the Fund. The terms and conditions are intended to clearly set forth the general technical, procedural and administrative requirements to be met by the claimant and are intended to benefit only the claimant and EPA. The terms and conditions contained in the PDD establish the requirements for reimbursement from the Fund. The PDD neither extends benefits to nor creates any rights in any third party. Nor is compliance with the terms and conditions of the PDD required for recovery of costs under other sections of CERCLA or other laws.

VII. Submission of Response Claims

This section describes the steps that the claimant must follow after completing the preauthorized response action.

A. Site Cleanup Following Preauthorization

Once EPA issues the PDD, the applicant may begin the preauthorized action and, upon the completion of all work or an authorized phase, submit a claim on EPA Form 2075-4, "Claim for CERCLA Response Actions," for the costs of approved activities up to the maximum dollar amount contained in the PDD. As proposed in § 300.400(h) (§ 300.61(d) of the current NCP), the lead agency may monitor (through an On-Scene Coordinator (OSC) or Remedial Project Manager (RPM)) an applicant's response actions. If, due to previously unknown or unexpected site conditions or to other factors that could not have been previously discovered by the exercise of due diligence, the applicant finds it necessary to modify the actions that EPA preauthorized, or if it becomes apparent that the project's costs will exceed the approved costs, the applicant may submit to EPA a revised application for preauthorization. If the applicant intends to seek compensation from the Fund for activities that deviate from the activities preauthorized, additional preauthorization by EPA would then be necessary before additional or different actions can be undertaken.

B. Election to Commence a Court Action or File a Claim

Up to the point when a claimant actually files a claim for a preauthorized response action, he/she is free either to present a claim to the Fund or to sue the responsible parties under section 107 of CERCLA for the response costs. Thus, a claimant preserves the option of seeking reimbursement either from the PRP through a court action or from the Fund through invocation of the administrative process contemplated by the PDD. However, pursuant to section 112(a) of CERCLA, EPA will not consider a claim while an action for the same costs is before the courts. The claim will be returned to the claimant without a determination of its merits. Should the claimant elect to pursue a judicial remedy that proves unsuccessful, he/she is then free to pursue a claim against the Fund, if all other requirements for filing a claim are satisfied.

C. Presentation of Claims to Potentially Responsible Parties

Section 112(a) states that claims may not be submitted against the Fund unless they have first been presented to the owner, operator, or guarantor of the vessel or facility from which the hazardous substance has been released and to any other person who may be liable under section 107. If the PRP is unknown, the claimant must make a good-faith effort to identify the parties believed responsible for the release. The standard for determining what is a "good-faith" effort will depend on the circumstances of the release; however, at a minimum, it should include a search of deed records, a letter to the last known address requesting a forwarding address, and a notice in a local newspaper requesting information on, or witnesses to, the release. These efforts must be documented and must be available for EPA's review.

Upon a request from the potential claimant, EPA will provide the names and addresses of PRPs to whom the Agency has sent notice letters, or PRPs who have reported a release at the site pursuant to section 8(e) of the Toxic Substances Control Act or section 103(a) of CERCLA.

Before presentation of a claim to the Fund, a potential claimant who can identify the PRPs should make a reasonable effort to settle the claim with them. If the claim against the parties remains unsatisfied for 60 days, the potential claimant may present the claim for the preauthorized response action to the Fund for payment pursuant to section 112(a) of CERCLA. Any reply or other correspondence received from the PRPs should be retained and submitted with the claim.

If the first claim was denied by the responsible party or not responded to, and EPA agrees that there is no reason to believe that subsequent claims would be honored by the responsible party, the denial of the first claim, or lack of response, will be considered a denial of every subsequent claim.

If the potential claimant and the PRP reach a settlement for less than the total amount of the claim, the potential claimant may submit a claim against the Fund for the difference between the amount of any settlement and the amount preauthorized only if EPA has approved any release of liability given to the PRP by the claimant.

The potential claimant may submit a claim for a preauthorized response action to the Fund if the claimant: (1) Is unable to locate the PRP; (2) is unable to reach a settlement; or (3) has obtained EPA's approval of any partial settlement between the claimant and the PRP that contains a release from liability.

D. Presentation to EPA

Only persons who have obtained preauthorization from EPA to conduct a response action and who have first presented their claim to the parties believed responsible (when identified) may submit claims for reimbursement against the Fund.

In order for a claim for reimbursement to be considered by EPA, a fully completed claims form (i.e., a "perfected" claim) must be submitted to EPA. Claimants may obtain the required claims forms and instructions from any EPA Regional Office (see Appendix).

Claims for response actions may be filed only after the response action or the preauthorized phase (e.g., RD/RA for the operable unit) has been completed and within five years of completion of the preauthorized response action. Among other things, the claims form requires: (1) Certification that the action was preauthorized, (2) a statement that the preauthorized actions were taken, (3) itemization of the claimed costs, and (4) a description of the procedures followed in identifying and searching for the parties believed responsible for the release. Forms must be completed, signed, and submitted to EPA, 401 M Street, SW., Washington, DC 20460, Attention: Director, Office of Emergency and Remedial Response (OS–220).

The maximum size of a claim award is explicitly set forth in the PDD. This ceiling is usually stated in the alternative: that the award cannot exceed a particular dollar figure or a specified percentage of response costs, whichever is lower.

For example, a PDD may authorize a single claim award for an amount not to exceed the lesser of $1 million or 15 percent of eligible response costs. If the actual costs totaled $5 million, the most the claimant could receive would be $750,000 (or 15 percent). However, if the response costs were $10 million (15 percent of which would be $1.5 million), the highest possible award would be $1 million.

In cases where the PDD authorizes multiple claims (i.e., for operable units or response stages), both the individual awards and the final total must be within the lower of the two reimbursement caps. For example, a PDD could authorize four claims, with the reimbursement cap set at $1 million or 15 percent of response costs. As the following scenarios indicate, each of the four claim awards cannot exceed 15 percent of the eligible response costs represented by the particular claim. However, if a particular award would cause the total to exceed $1 million, that award may be for substantially less than 15 percent of eligible response costs.

In Scenario A, the most that can be awarded for Claim 4 is $100,000. If EPA would award 15 percent of the $3 million response costs, this would cause the total award to exceed the $1 million cap. The interaction between the 15 percent cap for individual awards and the $1 million cap for overall awards in our example is further illustrated in Scenarios B and C.

Claim	Actual response cost (in millions)	Highest possible award (in thousands)	Award to date (in thousands)
		Scenario A	
1	$2	$300 (or 15%)	$300
2	1	150 (or 15%)	450
3	3	450 (or 15%)	900
4	3	100	1,000
		Scenario B	
1	3	450 (or 15%)	450
2	3	450 (or 15%)	900
3	3	100	1,000
4	3	0	1,000
		Scenario C	
1	1	150 (or 15%)	150
2	1	150 (or 15%)	300
3	1	150 (or 15%)	450
4	1	150 (or 15%)	600

VIII. EPA Review and Payment of Claims Against the Fund

Upon receiving a claim, EPA will review and analyze the forms and documentation and determine whether all filing requirements have been met. Once the claimant has complied with all filing requirements, the claim will be considered "perfected." When EPA is unable to evaluate the claim because of omissions in filed documents, the Agency will return the materials and advise the claimant of specific problems with the filing. When EPA needs additional information to evaluate the claim's validity, EPA will suspend further processing of the claim and will request that the claimant provide the necessary information. A claim that EPA returns because of a filing deficiency may be corrected and resubmitted. Failure of the claimant to provide the information in a timely manner can form the basis for denial of the claim. As proposed in §§ 300.120(e)(3) and 300.400(h) (§§ 300.33(b)(14)(iii) and 300.61(d) of the current NCP), the OSC/RPM may review the response for consistency with the preauthorized response actions.

EPA may adjust claims and will make awards of response claims only to the extent that the Agency determines that the expenditures were necessary to carry out the preauthorized response action. EPA's review of the expenditures will include: (1) The documentation supporting all claimed costs under generally accepted accounting principles and practices consistently applied; and (2) documentation that all contracts were awarded using to the maximum extent practicable, open and free competition (i.e., formal advertising, competitive negotiations, or other generally accepted procurement methods). These criteria are designed to conserve Fund monies and protect against fraud and abuse. The claimant may demonstrate the reasonableness of claimed costs through reference to cost estimates by firms qualified in such areas, the results of competitive procurements for similar activities, or documentation of market costs based on similar procurements by others (assuming such prices were arrived at through free and open competition).

As provided in proposed § 307.32(i), if EPA determines (based on its monitoring or subsequent evaluation) that the response action is ineffective due to acts or omissions of the claimant, payment of the claim by EPA will be adjusted accordingly.

Where a claimant disagrees with the amount of an award, the claimant may, within 30 days of receiving notice of the decision, request that EPA arrange for an administrative hearing (section 112(b) of CERCLA). In such a hearing, the claimant bears the burden of proof. The administrative hearing shall be conducted by an Administrative Law Judge (ALJ) and shall proceed in accordance with 5 U.S.C. 554 and any rules that EPA may promulgate. All administrative decisions shall be in writing, with notification to all appropriate parties. Moreover, pursuant to section 112(b)(4) of CERCLA all decisions shall be rendered within 90 days of submission of the claim, unless all parties agree in writing to an extension, or EPA, in its discretion, extends the time limits for a period not to exceed 60 days.

Pursuant to section 112(b) of CERLA, awards from the Fund shall be made within the following time periods. First, after EPA's decision whether to award or deny a claim, the claimant has 30 days to request an administrative hearing. If the claimant does not exercise this option, EPA must pay any award within 20 days of the expiration of the period for administrative appeal. Thus, the claimant shall receive reimbursement of costs from the Fund within 50 days of the Agency's determination of an award if he/she does not exercise his/her option of requesting an administrative hearing.

If, however, the administrative hearing option is exercised, the time periods shift. Once the ALJ determines whether to award or deny the claim, any party has 30 days to decide whether to appeal the ALJ's determination to the appropriate Federal district court. If no party decides to exercise this option, the Fund must pay any award within 20 days of the expiration of the appeal period. Therefore, payment of any claim shall occur within 50 days of an ALJ determination, if no party appeals.

Finally, if a party does not seek judicial review, EPA will award the claim within 20 days of the final judicial decision (which may be a decision of a Federal district court, a Federal court of appeals, or the U.S. Supreme Court, depending on the history of the case).

A claimant receiving an award from the Fund must retain the documentation and any other records relating to the claim, and must provide EPA with access to such records. These records must be maintained for ten years from the date of award of the final claim from the Fund. A ten-year record retention period is established to: (1) Create a window beyond the six-year statute of limitations established by section 112(d) of CERCLA; (2) permit the completion or resolution of all issues related to any litigation, claim, negotiation, audit, cost recovery, or other action involving the records for Superfund expenditures; and (3) create a uniform period for documentation involving Superfund expenditures. Before the records are destroyed, the claimant must notify EPA of the location or the records and allow EPA the opportunity to take possession of the records.

Section 112(c)(1) states that payment of any claim shall be subject to the claimant(s) subrogating to the United States all rights as claimant to the extent that the claimant's response costs are compensated from the Fund. Further, the claimant(s) and contractors and subcontractors shall furnish the personnel, services, documents, and materials needed to assist the United States in any cost recovery action that it may initiate. In particular, the claimant's contractors and subcontractors shall be available to testify in all proceedings relating to EPA's cost recovery efforts. All of the claimant's contracts shall include a specific requirement that the contractors and subcontractors agree to provide this cost recovery assistance.

Payment of a claim indicates EPA's judgment that the claimant incurred response costs pursuant to the PDD and that all or a portion of those costs should be reimbursed. Such payment does not denote acceptance of the response action for purposes of compliance with the consent decree. For purposes of consent decrees, the Agency will issue a certificate of completion to denote final acceptance of the adequacy and quality of the response work.

IX. Notification of Concerned Parties Regarding Limitations to Response Claims

Section 111(o) of CERCLA requires that the Agency develop and implement procedures to inform certain persons concerning limitations on payment of response claims. Those persons are "concerned local and State officials and other concerned persons." Moreover, this notification is to occur "as soon as practicable" after the site is included on the NPL.

The Agency proposes to institute two procedures to notify concerned parties of limitations on the payment of response claims. First, a citation to this proposed rule (after promulgation, the promulgated rule), along with a brief statement of its contents, will be published in the **Federal Register** preamble each time a site is added to the final NPL (see Appendix C). Second, the public docket established for each NPL site by EPA Headquarters and the applicable EPA Region will contain a summary of response claims limitations, along with a citation to this proposed rule. A copy of the document that will be placed in these public dockets is attached as Appendix D. The Agency solicits comments on this approach.

X. Regulatory Analyses

Proposed and final rules issued by Federal agencies are governed by several statutes and executive orders. These include Executive Order 12291, the Regulatory Flexibility Act, and the Paperwork Reduction Act.

A. Executive Order No. 12291

Executive Order No. 12291 requires that proposed regulations be classified as "major" or "non-major" for purposes of review by the Office of Management and Budget. A Regulatory Impact Analysis is required for a "major" rule. According to E.O. 12291, "major" rules are regulations that are likely to result in:

(1) An annual adverse (cost) effect on the economy of $100 million or more; or

(2) A major increase in cost or prices for consumers, individual industries, Federal, State, or local government agencies, or geographical regions; or

(3) Significant adverse effects on competition, employment, investment, productivity, innovation, or on the ability of the United States-based enterprises to compete with foreign-based enterprises in domestic or export markets.

EPA has determined that this regulation is a "non-major" rule under Executive Order 12291 because it is unlikely to result in any of the economic impacts identified above. Therefore, the Agency has not prepared a Regulatory Impact Analysis for this regulation.

B. Regulatory Flexibility Act

The Regulatory Flexibility Act of 1980 requires that a Regulatory Flexibility Analysis be performed for all rules that are likely to have "significant impact on a substantial number of small entities." The response claims regulation involves reimbursement of the costs of certain parties for responding to a hazardous substance release. This is a benefit authorized by CERCLA, and does not adversely affect the private sector economy. EPA therefore certifies that this regulation will not have a significant impact on a substantial number of small businesses, organizations and units of government. EPA certifies that a Regulatory Flexibility Analysis is not necessary.

C. Paperwork Reduction Act

The information collection requirements in this proposed rule have been submitted for approval to the Office of Management and Budget under the *Paperwork Reduction Act*, 44 U.S.C. 3501 *et seq*. An Information Collection Request document has been prepared by EPA (ICR No. 1304) and a copy may be obtained from Carl Koch, Information Policy Branch; U.S. Environmental Protection Agency; 401 M Street, SW. (PM–223); Washington, DC 20460 or by calling (202) 382–2739.

Public reporting burden for the collection of information under EPA Form 2075–3, "Application for Preauthorization of Response Actions," for a response action is estimated to vary from 95 to 173 hours per response, with an average of 134 hours per response. These burden estimates include time for reviewing instructions, searching existing data sources, gathering and maintaining data needed, and completing and reviewing the collection of information.

Public reporting burden for the collection of information under EPA Form 2075–4, "Claim for CERCLA Response Action," is estimated to vary from 25 to 58 hours per response, with an average of 42 hours per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining data needed, and completing and reviewing the collection of information.

Send comments regarding the burden estimates or any other aspects of this collection of information, including suggestion for reducing this burden to the following addresses: Chief, Information Policy Branch, (PM–223); U.S. Environmental Protection Agency, 401 M Street, SW.; Washington, DC 20460 and Office of Information and Regulatory Affairs; Office of Management and Budget; 726 Jackson Place, NW., Washington, DC 20503; Attention: Desk Officer for EPA. The final rule will respond to any OMB or public comments on the information collection requirements contained in this proposal.

XI. List of Subjects in 40 CFR Part 307

Administrative practices and procedures, Chemicals, Hazardous materials, Intergovernmental relations, Natural resources, Reporting and recordkeeping requirements, Superfund, Waste treatment and disposal.

Dated: August 14, 1989.

William K. Reilly,

Administrator.

Appendix

Forms applicable to the CERCLA response claims process, EPA Form 2075–3 and EPA Form 2075–4 may be obtained from and must be submitted to EPA Headquarters, CERCLA Response Claims, Office of Emergency and Remedial Response (OS–220), U.S. Environmental Protection Agency, 401 M Street, SW., Washington, DC 20460. Forms may also be obtained from the EPA regional offices at these addresses:

(a) Region I, John F. Kennedy Federal Building, Boston, Massachusetts 02203
(b) Region II, 26 Federal Plaza, New York, New York 10278
(c) Region III, 841 Chestnut Street, Philadelphia, Pennsylvania 19107
(d) Region IV, 345 Courtland Street, NE., Atlanta, Georgia 30365
(e) Region V, 230 South Dearborn Street, Chicago, Illinois 60604
(f) Region VI, 1445 Ross Avenue, Dallas, Texas 75202
(g) Region VII, 726 Minnesota Avenue, Kansas City, Missouri 66101
(h) Region VIII, One Denver Place, Denver, Colorado 80202
(i) Region IX, 215 Fremont Street, San Francisco, California 94105
(j) Region X, 1200 Sixth Avenue, Seattle, Washington 98101

For the reasons set out in the preamble, Title 40, Chapter I of the Code of Federal Regulations is proposed to be amended by adding Part 307 to read as follows:

PART 307—COMPREHENSIVE ENVIRONMENTAL RESPONSE, COMPENSATION, AND LIABILITY ACT (CERCLA) CLAIMS PROCEDURES

Subpart A—General

307.10 Purpose.
307.11 Scope and applicability.
307.12 Use of number and gender.
307.13 Definitions.
307.14 Penalties.

Subpart B—Eligible Claimants; Allowable Claims; Preauthorization

307.20 Who may present claims.
307.21 Nature of eligible claims.
307.22 Preauthorization of response actions.
307.23 EPA's review of preauthorization applications.

Subpart C—Procedures for Filing and Processing Response Claims

307.30 Requesting payment from the potentially responsible party.
307.31 Filing procedures.
307.32 Verification, award, and administrative hearings.
307.33 Records retention.

Subpart D—Payments and Subrogation

307.40 Payment of approved claims.
307.41 Subrogation of claimants' rights to the Fund.
307.42 Fund's obligation in the event of failure of remedial actions taken pursuant to section 122.

Appendix A—Application for Preauthorization of a CERCLA Response Action

Appendix B—Claim for CERCLA Response Action

Appendix C—Notice of Limitations on the Payment of Claims for Response Actions, Which is to be Placed in the Federal Register Preamble Whenever Sites Are Added to the Final NPL

Appendix D—Notice of Limitations on the Payment of Claims for Response Actions, Which is to be Placed in Public Dockets

Authority: 42 U.S.C. 9601 *et seq.* and Executive Order 12580, Sections 4 and 9, 3 CFR, 1987 Comp., p. 193 (52 FR 2923; January 29, 1987).

Subpart A—General

§ 307.10 Purpose.

This regulation prescribes the appropriate forms and procedures for presenting claims for necessary response costs as authorized by section 112(b)(1) of the Comprehensive Environmental Response, Compensation, and Liability Act of 1980, as amended by the Superfund Amendments and Reauthorization Act of 1986 (SARA) (hereinafter referred to as CERCLA, or the Act) (42 U.S.C. 9601 *et seq.*). Such claims may be presented to the Hazardous Substance Superfund (the Fund) established by section 9507 of the Internal Revenue Code of 1986. See section 101(11) of CERCLA.

§ 307.11 Scope and applicability.

Claims for responses to a release or substantial threat of release of a hazardous substance into the environment; responses to a release or substantial threat of release of any pollutants or contaminants into the environment, which may present an imminent and substantial danger to public health or welfare; and response actions undertaken pursuant to settlement agreements in which the Federal Government agrees to reimburse a portion of the cost, may be submitted only through the procedures established by this regulation. Under this regulation, persons may bring claims for necessary costs incurred in carrying out the National Contingency Plan (NCP or the Plan) (40 CFR Part 300) developed under section 311(c) of the Federal Water Pollution Control Act (33 U.S.C. 1251 *et seq.*) and revised pursuant to section 105 of CERCLA. Only response actions that EPA has preauthorized are eligible for reimbursement through the claims process of section 112 of CERCLA. Authority for the payment of claims for response costs is provided by section 111(a)(2) of CERCLA. Authority for the reimbursement of certain costs incurred by parties to a settlement agreement entered pursuant to section 122 of CERCLA is provided by section 122(b) of CERCLA.

§ 307.12 Use of number and gender.

As used in these regulations, words in the singular also include the plural and words in the masculine gender also include the feminine and vice versa, as the case may require.

§ 307.13 Definitions.

Terms that are not defined in this section or restated herein, shall have the meaning set forth in section 101 of CERCLA or the 1985 NCP or any final revision thereto. *As used in this regulation, the following words and terms shall have the meanings set forth below:*

Act or *CERCLA* both mean the Comprehensive Environmental Response, Compensation, and Liability Act of 1980, as amended by the Superfund Amendments and Reauthorization Act of 1986.

Administrative Hearing means an administrative adjudication required by section 112(b)(2) of CERCLA in the event a claimant contests a determination of his claim made by the U.S. Environmental Protection Agency (EPA).

Assistance Agreement means the legal instrument EPA uses to transfer money, property, services, or anything of value to a recipient to accomplish a public purpose. It is either a grant, cooperative agreement, or Superfund State Contract (see 40 CFR part 35) and will specify: budget and project periods; the Federal share of eligible project costs; a description of the work to be accomplished; and any special conditions.

Claim means a demand in writing for a sum certain presented to the Fund in accordance with sections 111 and 112 of CERCLA.

Claimant means any person who presents a claim to the Fund for reimbursement under section 112(b)(1) of CERCLA.

Contractor Claim means the disputed portion of a written demand or written assertion by any contractor who has contracted with a person (i.e., the owner) for the conduct of a preauthorized response action, seeking as a matter of right, the payment of money, adjustment, or interpretation of contract terms, or other relief, arising under or related to a contract, which has been finally rejected or not acted upon by the owner and which is subsequently settled by the owner or is awarded by a third party in accordance with the disputes clause of the contract document.

Eligible Claim means any claim that has satisfied the requirements set forth in § 307.21(b) of this rule.

Facility as defined by section 101(9) of CERCLA, means any:

(1) Building, structure, installation, equipment, pipe or pipeline (including any pipe into a sewer or publicly owned treatment works), well, pit, pond, lagoon, impoundment, ditch, landfill, storage container, motor vehicle, rolling stock, or aircraft, or

(2) Any site or area where a hazardous substance has been deposited, stored, disposed of, or placed, or otherwise come to be located; but does not include any consumer product in consumer use or any vessel.

Fund means the Hazardous Substance Superfund established by section 9507 of the Internal Revenue Code of 1986.

Hazardous Substance as defined by section 101(14) of CERCLA, means:

(1) Any substance designated pursuant to section 311(b)(2)(A) of the Federal Water Pollution Control Act (33 U.S.C. 1251 *et seq.*);

(2) Any element, compound, mixture, solution, or substance designated pursuant to section 102 of CERCLA;

(3) Any hazardous waste having the characteristics identified under or listed pursuant to section 3001 of the Solid Waste Disposal Act (42 U.S.C. 6901 *et seq.*) (but not including any waste the regulation of which under the Solid Waste Disposal Act has been suspended by Act of Congress);

(4) Any toxic pollutant listed under section 307(a) of the Federal Water Pollution Control Act;

(5) Any hazardous air pollutant listed under section 112 of the Clean Air Act (42 U.S.C. 7401 *et seq.*); and

(6) Any imminently hazardous chemical substance or mixture with respect to which the Administrator of EPA (Administrator) has taken action pursuant to section 7 of the Toxic Substances Control Act. The term does not include petroleum, including crude oil or any fraction thereof which is not otherwise specifically listed or designated as a hazardous substance under paragraphs (1) through (6) of this definition, and the term does not include natural gas, natural gas liquids, liquefied natural gas, or synthetic gas usable for fuel (or mixtures of natural gas and such synthetic gas).

National Contingency Plan, NCP, or the Plan means the National Oil and Hazardous Substances Pollution Contingency Plan (40 CFR part 300) developed under section 311(c) of the Federal Water Pollution Control Act and revised pursuant to section 105 of CERCLA.

Necessary Costs means "necessary response costs" as required by section 111(a)(2) of CERCLA for Fund reimbursement of a preauthorized response action. Necessary response costs are costs determined to be:

(1) Required (based upon the site-specific circumstances);

(2) Reasonable (nature and amount do not exceed that estimated or which would be incurred by a prudent person);

(3) Allocable (incurred specifically for the site at issue); and

(4) Otherwise allowable (consistent with the limitations and exclusions under the appropriate Federal cost principles). *See* OMB Circular A–122 (non-profit organizations); OMB Circular A–87 (States and political subdivisions); and 48 CFR 31.1 and 31.2 (profit-making organizations).

NPL means the National Priorities List established pursuant to section 105 of CERCLA and 40 CFR 300.425 [1] (§ 300.66 of the existing 40 CFR), which consists of uncontrolled hazardous substance facilities in the United States that need to be addressed under CERCLA authorities. Only NPL sites are eligible for Fund-financed remedial action.

Operable Unit means a discrete action that comprises an incremental step toward comprehensively addressing site problems. This discrete portion of a remedial response manages migration, or eliminates or mitigates a release, threat of release, or pathway of exposure. The cleanup of a site can be divided into a number of operable units, depending on the complexity of the problems associated with the site. Operable units may address geographical portions of a site, specific site problems, or initial phases of an action, or may consist of any set of actions performed over time or any actions that are concurrent but located in different parts of a site. Operable units will not impede implementation of subsequent actions, including final action at the site.

Party means EPA or a claimant.

Perfected means the point at which EPA determines that the written demand for a sum certain (i.e., claim) has all the documentation required to substantiate the appropriateness of the amounts claimed.

Person as defined by section 101(21) of CERCLA, means an individual, firm, corporation, association, partnership, consortium, joint venture, commercial entity, United States Government, State, municipality, commission, political subdivision of a State, or any interstate body.

Political Subdivision means any general purpose unit of a local or State government.

Pollutant or Contaminant as defined by section 101(33) of CERCLA, includes, but is not limited to, any element, substance, compound, or mixture, including disease-causing agents, which after release into the environment and upon exposure, ingestion, inhalation, or assimilation into any organism, either directly from the environment or indirectly by ingestion through food chains, will or may reasonably be anticipated to cause death, disease, behavioral abnormalities, cancer, genetic mutation, physiological malfunctions (including malfunctions in reproduction) or physical deformations in such organisms or their offspring. The term does not include petroleum, including crude oil and any fraction thereof which is not otherwise specifically listed or designated as a hazardous substance under section 101(14) (A) through (F) of the Act, nor does it include natural gas, liquefied natural gas, or synthetic gas of pipeline quality (or mixtures of natural gas and such synthetic gas).

Preauthorization means EPA's prior approval to submit a claim against the Fund for necessary response costs incurred as a result of carrying out the NCP. The process of preauthorization consists of three steps:

(1) EPA's receipt of the application for preauthorization;

(2) EPA's review and analysis of the application; and

(3) EPA's issuance of the Preauthorization Decision Document (PDD) which sets forth the terms and conditions for reimbursement.

Preauthorized response actions are response actions approved through the preauthorization process.

Respond or Response as defined by section 101(25) of CERCLA, means remove, removal, remedy, and remedial action, all such terms (including *removal* and *remedial action*) including enforcement activities related thereto.

Response claim means a preauthorized demand in writing for a sum certain for response costs referred to in section 111(a)(2) of CERCLA, and for certain costs of actions referred to in section 122(b)(1) of CERCLA.

§ 307.14 Penalties.

(a) If any person knowingly gives a material statement or representation in the application for preauthorization or in the claim that is false, misleading, misrepresented, or misstated, and EPA relies upon such a statement or representation in making its decision, the preauthorization or the award by EPA may be withdrawn following written notice to the claimant.

(b) Any person who knowingly gives, or causes to be given, any false information as part of an application for preauthorization or of a claim (including any person who meets the conditions of paragraph (a) of this section) may, upon conviction, be fined or imprisoned in accordance with CERCLA section 112(b)(1) and other laws.

Subpart B—Eligible Claimants; Allowable Claims; Preauthorization

§ 307.20 Who may present claims.

(a) Subject to the provisions of this subpart, claims for the costs of response actions may be asserted against the Fund by any person other than the United States Government, States, and political subdivisions thereof, except to the extent the claimant is otherwise compensated for the loss. States and political subdivisions may assert such claims if they are potentially responsible parties subject to an agreement reached pursuant to section 122(b)(1) of CERCLA.

(b) Claims presented by an individual must be signed by that individual. If, because of death, disability, or other reasons satisfactory to EPA, the foregoing requirement cannot be fulfilled, the claim may be filed by a duly authorized agent, executor, administrator, or other legal representative. A claim presented by an entity or an authorized agent, executor, administrator, or other legal representative must be presented in the name of the claimant. The claim must be signed by the authorized agent, executor, administrator, or other legal representative (including the title or legal capacity of the person signing) and be accompanied by evidence of the authority to present a claim on behalf of the claimant as authorized agent, executor, administrator, or other legal representative.

(c) A claim for response costs as to which any release from liability was executed between the claimant and a potentially responsible party may be presented against the Fund to the extent that the claimant obtained EPA's approval prior to executing such release

---

[1] See the proposed NCP at 53 FR 51394, December 21, 1988.

and provided that the other requirements of this Part are met.

(d) A foreign claimant may present a response claim to the Fund, to the same extent that a United States claimant may assert a claim, if:

(1) The requirements of § 307.21 and § 307.22 are met; and

(2) The release of a hazardous substance occurred in the navigable waters of the United States, including the territorial sea, or in or on the territorial sea or adjacent shoreline of a foreign country of which the claimant is a resident; and

(3) The claimant is not otherwise compensated for the loss; and

(4) The hazardous substance was released from a facility or from a vessel located adjacent to or within the navigable waters or was discharged in connection with activities conducted under the Outer Continental Shelf Lands Act, as amended (43 U.S.C. 1331 *et seq.*), or the Deepwater Port Act of 1974, as amended (33 U.S.C. 1501 *et seq.*); and

(5) Recovery is authorized by a treaty or an executive agreement between the United States and the foreign country involved, or if the Secretary of State, in consultation with the Attorney General and other appropriate officials, certifies that such country provides a comparable remedy for United States claimants.

§ 307.21 Nature of eligible claims.

(a) Claims may be asserted against the Fund for necessary costs incurred for response actions due to a release or substantial threat of release of a hazardous substance into the environment; a release or substantial threat of release of pollutants or contaminants into the environment that may present an imminent or substantial danger to public health or welfare; or actions taken by a potentially responsible party subject to an agreement reached pursuant to section 122(b)(1) of CERCLA. Claims must be filed in accordance with § 307.22 of this regulation. Claims may be asserted for the costs of removal actions, remedial planning activities, and remedial actions.

(b) Costs will be considered to be eligible under this section if:

(1) The response action is preauthorized by EPA pursuant to § 307.22 of this regulation;

(2) The costs are incurred for activities within the scope of EPA's preauthorization;

(3) The response action is conducted in a manner consistent with the NCP; and

(4) The costs incurred are necessary costs pursuant to § 307.11 of this regulation.

(c) Money in the Fund may be used for paying any claim under this section for expenses incurred for the payment of contractor claims either through settlement of such claims or an award by a third party to the extent EPA determines that:

(1) The contractor claim arose from work within the scope of the contract at issue and the contract was for preauthorized response activities;

(2) The contractor claim is meritorious;

(3) The contractor claim was not caused by the mismanagement of the claimant;

(4) The contractor claim was not caused by the claimant's vicarious liability for the improper actions of others;

(5) The claimed amount is reasonable and necessary;

(6) The claim for such costs is filed by the claimant within 5 years of completion of the preauthorized response action; and

(7) Payment of such a claim will not result in total payments from the Fund in excess of the maximum amount for which claims were preauthorized.

(d) An award by a third party on a contractor claim under paragraph (c) of this section should include:

(1) Findings of fact;

(2) Conclusions of law;

(3) Allocation of responsibility for each issue;

(4) Basis for the amount of award; and

(5) The rationale for the decision.

(e) Money in the Fund may not be used for paying any claim under this section for expenses incurred for procurement that were not conducted in a manner that provided to the maximum extent practicable, open and free competition; unduly restricted or eliminated competition; and did not provide where applicable for the award of contracts to the lowest responsive, responsible bidder where the selection was made principally on the basis of price.

(f) Money in the Fund may not be used for paying any claim under this section for expenses incurred by a person operating pursuant to a procurement contract or assistance agreement with the United States.

(g) Money in the Fund may not be used for paying any claim under this section for expenses incurred for the payment of persons who are on the "List of Parties Excluded From Federal Procurement or Non-Procurement" at the time the contract is awarded, unless EPA approval is obtained in advance.

(h) Unless EPA waives this requirement prior to the award of a construction contract, money in the Fund may not be used for paying any claim under this section for expenses incurred under such a construction contract that does not contain a "differing site conditions" clause equivalent to the following:

(1) The contractor shall promptly, and before such conditions are disturbed, notify the claimant in writing of:

(i) Subsurface or latent physical conditions at the site differing materially from those listed in this contract, or

(ii) Unknown physical conditions at the site, of an unusual nature, differing materially from those ordinarily encountered and generally recognized as inherent in work of the character provided for in this contract.

(2) Upon notification by the construction contractor, the claimant shall promptly investigate the conditions. If the claimant finds that conditions materially differ and will cause an increase or decrease in the contractor's cost or the time required to perform any part of the work under its contract, whether or not changed as a result of such conditions, the claimant shall make an equitable adjustment and modify the contract in writing.

(3) No claim of the contractor under the differing site conditions clause shall be allowed unless the contractor has given the notice required in paragraph (h)(1) of this section. However, the claimant may extend the time prescribed in paragraph (h)(1) of this section.

(4) No claim by the contractor for an equitable adjustment shall be allowed if asserted after final payment under this contract.

(i) Where money in the Fund has been used to pay for any response costs under this section, no other claim may be paid out of the Fund for the same costs.

§ 307.22 Preauthorization of response actions.

(a) No person may submit a claim to the Fund for a response action unless that person notifies the Administrator of EPA or his designee prior to taking such response action and receives preauthorization by EPA. In order to obtain preauthorization, any person intending to submit a claim to the Fund must fulfill the following requirements *before commencing a response action:*

(1) Notify the lead agency through the National Response Center (as described in 40 CFR 300.125 [2] and § 300.36 of the

---

[2] See footnote 1 of § 307.13.

existing 40 CFR), if there is acute threat of fire, explosion, or direct human contact with hazardous substances, pollutants or contaminants or other emergency situation, to determine if there is sufficient time to submit an application for preauthorization;

(2) Submit an application for preauthorization (EPA Form 2075–3, found at Appendix A) to the Director, Office of Emergency and Remedial Response EPA, 401 M Street, SW., Washington, DC 20460; and

(3) Obtain the approval of the Administrator before initiating the response action.

(b) All applications for preauthorization must include, where available.

(1) A description of the location and nature of the release or threatened release of a hazardous substance or pollutant or contaminant (e.g., type and location of vessel or facility, population at risk, routes of exposure);

(2) A description of the nature and quantity of the hazardous substance or pollutant or contaminant which has been or may be released, including whether the substance is on the list of hazardous substances set forth pursuant to section 102 of CERCLA;

(3) The identity of any person who received a general or special notice letter from EPA or any known potentially responsible parties (including the applicant), and any contact with such parties, including, but not limited to, any correspondence, agreements, or litigation with such parties;

(4) Evidence of the applicant's eligibility to file a claim pursuant to § 307.20;

(5) An explanation of why the proposed response action is necessary, and how the proposed action is consistent with 40 CFR 300.700(d)(4)(ii) [3] (section 300.25(d) of the existing 40 CFR);

(6) A description of the applicant's capability (including financial and technical capability) to implement the proposed response action;

(7) Proposed schedule of activities;

(8) Projected costs of response activities, with the basis for those projections (projections shall be based on actual anticipated costs without a contingency for unanticipated conditions);

(9) The proposed contracting procedures;

(10) Proposed procedures for project management, EPA oversight, and reporting of progress of the project; and

(11) The assurances of timely initiation and completion.

(c) Applications for preauthorization to undertake a removal action shall, in addition to the requirements in paragraph (b) of this section, include:

(1) A summary or copy of the preliminary assessment; and

(2) A description of the proposed removal action for which the claim will be made, which environmental requirements are applicable or relevant and appropriate, and how the removal will comply with such requirements.

(d) Applications for preauthorization to undertake a remedial investigation and feasibility study shall, in addition to the requirements in paragraph (b) of this section, include:

(1) The scope of the proposed study;

(2) A proposed site sampling plan and quality assurance procedures;

(3) The plan for the development of alternatives;

(4) Approaches to consideration of alternatives to land disposal;

(5) Plans for initial screening of alternatives;

(6) Proposed procedures for the detailed analysis of alternatives; and

(7) Proposed considerations in selection of the remedy.

(e) Applications for preauthorization to undertake a remedial alternative other than that selected by EPA, or where EPA has not selected a remedy, shall, in addition to the requirements in paragraph (b) of this section, include a discussion of how the proposed remedy:

(1) Differs from the one selected by EPA, if applicable;

(2) Achieves protection of public health and welfare and the environment and complies with legally applicable or otherwise relevant and appropriate Federal, State, local requirements pursuant to 40 CFR 300.400(g) [4] (§ 300.71(a)(4) of the existing 40 CFR) or waivers to those requirements in 40 CFR 300.430(f)(3)(iv) [5] (§ 300.68(i)(5) of the existing 40 CFR). The application shall also include a discussion of pertinent Federal and State guidance, advisories, and criteria;

(3) Will be cost-effective as set out in section 121(a) of CERCLA and 40 CFR 300.430(f)(3) [6] (§ 300.68(i) of the existing 40 CFR);

(4) Mitigates and minimizes future risks;

(5) Improves the reliability of the remedy;

(6) Utilizes new or innovative technology, if appropriate;

(7) Employs treatment that reduces the volume, toxicity or mobility of the hazardous substances;

(8) Impacts projected costs; and

(9) Takes into account Appendix D [7] (methods of remedying releases).

(f) Applications for preauthorization to undertake a remedial action, including those described in paragraph (e) of this section, shall in addition to the requirements in paragraph (b) of this section, include:

(1) A description of the proposed remedial action for which the claim will be made;

(2) A proposed site sampling plan and quality assurance procedures;

(3) Assurance of State or Indian Tribe cooperation;

(4) A bond or other financial assurance to cover the costs of necessary long-term operation and maintenance of the response action or written assurance from the State to provide such long-term operation and maintenance;

(5) Proposed procedures using sealed bidding to select the construction contractor, or an explanation of why the applicant intends to use any other method; and

(6) Documentation showing that the response will be carried out in accordance with applicable or relevant and appropriate environmental requirements. Documentation should include the potential impacts on any environmentally sensitive areas.

(g) Claims of business confidentiality may be asserted for information submitted to EPA under this subpart. Information claimed confidential will be disclosed by EPA only to the extent permitted by CERCLA, this subpart, and Part 2, Subpart B, of this chapter.

(1) Any claim of business confidentiality must accompany the information when it is submitted to EPA. Claims must be asserted as prescribed on the forms. Items claimed confidential on the forms and attachments to the forms must be clearly marked by circling or bracketing them.

(2) The applicant or response claimant must provide EPA with two copies of its submittal if any information is claimed confidential.

(i) One copy of the submittal must be complete, with items claimed confidential clearly marked in accordance with paragraph (g)(1) of this section.

(ii) The second copy must be complete except that all information claimed as confidential in the first copy must be

deleted. EPA may make this second copy available to the public.

(iii) If the applicant does not provide a redacted copy, the application for preauthorization is incomplete. If the claimant does not provide a redacted copy, the claim against the Fund is not perfected. EPA will not process such submittals until it receives the redacted copy.

(3) If a submitter of a response claim or an application for preauthorization does not assert a claim of business confidentiality for information at the time the information is submitted to EPA, the Agency may make the information public without further notice to the submitter.

(h) In addition to the foregoing, an application for preauthorization filed by a potentially responsible party for partial reimbursement of response costs shall include:

(1) A copy of the settlement agreement, or the most recent draft of any pending agreement, reached between such parties and the Federal Government; and

(2) If the application is to undertake a remedial investigation and feasibility study, an affirmation that the applicant will not directly or indirectly benefit from the preauthorization as a response action contractor, or as a person hired or retained by such a contractor with respect to the site at issue and an agreement to reimburse the Fund for any costs incurred under, or in connection with, the oversight contract or arrangement for the remedial investigation and feasibility study.

(i) If it is subsequently determined that the preauthorized response actions require modification or if it appears that project costs will exceed approved costs, a revised application for preauthorization must be approved by EPA before different, or additional, actions can be undertaken, if such actions are to be eligible for compensation from the Fund.

(j) Unless otherwise specified and agreed to by EPA, the terms, provisions, or requirements of a court judgment, consent decree, administrative order (whether unilateral or on consent), or any other consensual agreement with EPA requiring a response action do not constitute preauthorization to present a claim to the Fund.

§ 307.23 EPA's review of preauthorization applications.

(a) EPA shall review each preauthorization application and will notify the applicant of the decision to grant or deny preauthorization. Decisions to grant preauthorization will be memoralized in a Preauthorization Decision Document.

(b) Each application for preauthorization must include information sufficient for EPA to determine whether the response will be consistent with 40 CFR 300.700(d) [8] (§ 300.25(d) of the existing 40 CFR). EPA will evaluate applications based on the following non-exclusive list of criteria, as appropriate:

(1) Whether the release is within the scope of CERCLA;

(2) The seriousness of the problem or importance of the response activity when compared with competing demands on the Fund;

(3) Whether there is sufficient time to process the request for preauthorization (if a removal action is proposed);

(4) Whether the party liable for the release or threat of release of the hazardous substance is unknown, or if known, has been notified of the application for preauthorization and is unwilling or incapable of performing the response in a reasonable period of time;

(5) Whether the State, political subdivision, or Indian Tribe is willing to undertake the response action through a contract or a cooperative agreement;

(6) The cost and effectiveness of the proposed response actions when compared with other alternatives;

(7) Whether the proposed response can be carried out in accordance with the NCP and other environmental requirements;

(8) The applicant's eligibility to file a claim; his capabilities, experience, and technical expertise; and his knowledge and familiarity with the NCP and relevant guidance;

(9) Whether the party is proposing to conduct a cleanup through an administrative order or a consent decree with the Government regarding the site for which the request is made (if the applicant is a potentially responsible party);

(10) Whether the applicant, if he is a potentially responsible party seeking to undertake a remedial investigation and feasibility study has affirmed that he will not directly or indirectly benefit from the preauthorization as a response action contractor, or as a person hired or retained by such a contract with respect to the site at issue, and agrees to reimburse the Fund for any cost incurred under, or in connection with, the oversight contract or arrangement for the remedial investigation and feasibility study;

(11) Whether the proposed costs are eligible and the applicant has proposed appropriate procurement, contract management, project management, financial management and documentation procedures;

(12) Whether the applicant has met the necessary assurances, financial responsibilities, and other requirements;

(13) Provisions for long-term operation and maintenace of the site, if appropriate;

(14) Whether the applicant has consulted with the State or Indian Tribe on the proposed response action;

(15) The applicant's proposed procedures for oversight and the reporting of project issues and progress;

(16) Cooperation of the applicant at any earlier stage of response activity; and

(17) Whether the proposed schedule for filing a claim(s) is based on completion of the project or an operable unit.

(c) The Administrator may grant preauthorization for all or part of a proposed response action, but not less than a stage of an operable unit.

(1) The Administrator may set a limit on the amount that may be claimed as reimbursement from the Fund for any response action.

(2) The Administrator may condition the preauthorization on such inspection, monitoring, reporting, safety, and long-term operation and maintenance requirements as he deems necessary. The costs of such requirements may not necessarily be reimbursed from the Fund.

(3) The Administrator may condition the preauthorization on such time period for starting and completing the response action as he may deem necessary.

(4) The Administrator may condition the preauthorization on such financial or other assurance from the claimant or other entity as he may deem necessary to ensure completion of work at the site.

(5) The Administrator will not subject potentially responsible parties who may wish to undertake a remedial investigation and feasibility study to a lesser standard of liability nor will he give such parties preferential treatment in EPA's review of applications for preauthorization.

(d) If EPA denies a preauthorization because of an insufficient balance in the Fund or the low priority assigned to the response action when weighed against other applications or uses of the Fund, the applicant may resubmit the application in another fiscal year. If preauthorization is denied because of the inability of the applicant to demonstrate his experience and capabilities, the applicant may resubmit the application form only after

correcting the deficiencies, or by proposing an alternative approach.

(e) If EPA grants preauthorization, the applicant may begin the approved response action subject to the terms and condition contained in the PDD. The applicant as a condition of preauthorization shall assure that the lead agency shall have such site access as may be necessary for oversight and monitoring.

(f) If the applicant is unable to initiate or complete the preauthorized response action, the applicant shall immediately notify EPA in writing.

(g) EPA will not grant preauthorization for any response actions where:

(1) The proposed action is not a response action authorized under CERCLA;

(2) There is a significant threat to the public health or the environment caused by acute threat of fire, explosion, direct human contact with a hazardous substance, or other similar hazardous situations requiring immediate action, and there is insufficient time to process an application for preauthorization;

(3) The proposed response is a remedial action and the site is not on the NPL; or

(4) The action is to be performed by a State, political subdivision, Indian Tribe through an assistance agreement with the United States, or a person operating pursuant to a contract with the United States.

(h) EPA will deny preauthorization to a person whom the Agency believes is a liable party under section 107 of CERCLA unless negotiations are underway aimed at reaching a judicial or administrative settlement. Such parties may be preauthorized under this paragraph to submit claims to the Fund for response costs up to the maximum amount specified in the Preauthorization Decision Document.

Subpart C—Procedures for Filing and Processing Response Claims

§ 307.30 Requesting payment from the potentially responsible party.

(a) A claimant must present all claims to any person who is known to the claimant and who may be liable under section 107 of CERCLA at least 60 days before filing a claim against the Fund. The presentation to the potentially responsible party must be a written request for payment, delivered either by certified mail (return receipt requested) or in such a manner as will establish the date of receipt. At a minimum this request must contain:

(1) The name of the claimant (commercial entity or individual);

(2) The name, title, and address of any authorized representative;

(3) The location of the release and cleanup;

(4) The date of the release, if known;

(5) The owner of the property, if other than the claimant;

(6) A description of the response action taken; and

(7) The amount of the request (in dollars);

(8) If applicable, notice of intent to file a subsequent application for preauthorization or claim against the Fund for additional operable units.

(b) Where the potentially responsible party is unknown, the claimant must make a good-faith effort to identify the potentially responsible party prior to submitting a claim. If the potentially responsible party is identified, the claimant must then comply with the procedures of § 307.30(a). Where a potentially responsible party cannot be identified, the claimant may submit a claim to the Fund pursuant to § 307.31. Claims submitted under this paragraph must be accompanied by documentation of efforts to identify potentially responsible parties.

(c) If the claimant and the potentially responsible party agree to a settlement involving a release from liability, the claimant may submit a claim against the Fund for any costs that are not recovered provided the claimant complies with the provisions of § 307.20(d), which require EPA's prior approval of such releases from liability.

(d) If the claim is denied by the potentially responsible party, or has not been satisfied after 60 days of presentation to such party, the claimant may submit a claim to the Fund in accordance with § 307.31.

(e) If the first claim was denied by the responsible party or not responded to, and EPA agrees that there is no reason to believe that subsequent claims would be honored by such responsible party, the denial of the first claim, or lack of response, shall be considered denial of every subsequent claim.

§ 307.31 Filing procedures.

(a) A response claim must be submitted on EPA Form 2075–4 and must include:

(1) Documentation showing that the claimed response activities were preauthorized by EPA; and

(2) Documentation showing that the response activity was accomplished in a manner consistent with the PDD, noting any deviation from preauthorized activities; and

(3) Documentation that a search to identify potentially responsible parties was conducted in accordance with § 307.30 and of any contacts with such parties; and

(4) Substantiation that all claimed costs are necessary costs.

(b) Claimants (or their authorized representatives) may amend their claims at any time before final action by EPA. Amendment of claims after final action by EPA will be allowed only at EPA's discretion. Each amendment must be submitted in writing and must be signed by the claimant or authorized representative. The time limitations of § 307.32(i) refer to the date by which an amendment is filed.

(c) Claimants may not pursue both an action in court against potentially responsible parties and a claim against the Fund at the same time for the same response costs. EPA will return claims presented under this subpart when the Agency determines that a claimant has initiated an action for recovery of the same response costs, in court, against a party potentially liable under section 107 of CERCLA.

§ 307.32 Verification, award, and administrative hearings.

(a) Upon receipt of a response claim, EPA will verify that it complies with all filing requirements. Where the claim is incomplete or has significant defects, EPA will return the claim to the claimant with written notification of its deficiencies.

(b) A claim returned to the claimant for failure to comply with the filing requirements may be resubmitted to EPA.

(c) For purposes of this regulation, a response claim is deemed perfected when EPA determines that the claim complies fully with all filing requirements. When the claim is perfected, a notice will be provided to the claimant of EPA's receipt and acceptance of the claim for evaluation.

(d) EPA may adjust claims and in making a determination whether costs are allowable, the Agency will be guided by the Federal cost principles (non-profit organizations—OMB Circular A–122; States and political subdivisions—OMB Circular A–87; profit-making organizations—48 CFR subparts 31.1 and 31.2).

(e) In evaluating claims, EPA will determine whether the claimant has settled and satisfactorily completed in accordance with sound business judgment and good administrative practice all contractual and administrative matters arising out of agreements to perform preauthorized response actions. This includes the issuance of invitations for bids or requests for proposals, selection of

contractors, approval of subcontracts, settlement of protests, claims, disputes, and other related procurement matters. EPA will examine how the claimant assured (e.g., by the use of a subcontract administration system) that work was performed in accordance with the terms, conditions, and specifications of such agreements.

(f) Awards will be made:

(1) Only for necessary costs of completing the response action or stage of an operable unit;

(2) Only to the extent that the response actions were preauthorized by EPA pursuant to § 307.23 of this rule;

(3) Only to the extent that the cleanup was performed effectively, as provided in 40 CFR 300.120(e)(3) and 300.400(h) [9] (§§ 300.33(b)(14)(iii) and 300.61(d) of the existing 40 CFR); and

(4) Only to the extent that the cleanup was performed in compliance with the terms and conditions of the PDD.

(g) No award will be made on a claim where the claimant has released the potentially responsible party from liability unless EPA has approved the release in advance.

(h) Where a response action is determined to have been ineffective due to acts or omissions of the claimant, his employees or agents, or any third party having a contractual relationship with the claimant, payment of the claim will be adjusted accordingly. EPA may require the claimant to submit any additional information needed to determine whether the actions taken were reasonable and necessary.

(i) For claims submitted in connection with a settlement reached under section 122(b) of CERCLA only, interest will be paid on amounts due if EPA fails to pay the amount within 60 days of a perfected claim.

(1) Interest shall accrue on the amounts due the claimant where EPA fails to pay the claim for the preauthorized response action within 60 days of EPA's receipt of a perfected claim.

(2) Where the claim is technically complete but EPA requires additional information in order to evaluate the amount claimed, interest will not accrue on the claim until 60 days after EPA's receipt of the requested additional information.

(3) The rate of interest paid on a claim is the rate of interest on investments of the Fund established by subchapter A of chapter 98 of the Internal Revenue Code of 1954.

(j) For claims submitted in connection with a settlement reached under section 122(b) of CERCLA, a preauthorized potentially responsible party will be entitled to full reimbursement only where the response action is conducted in complete satisfaction of the requirements set forth in the consent order or decree.

(k) Future site-specific actions required by preauthorized potentially responsible parties, and any future obligations on the Fund, shall be governed by § 307.42 of this rule.

(1) Any withdrawal of preauthorization will be preceded by written notice from EPA. The application for preauthorization will be deemed invalid and no award will be made from the Fund where the claimant is determined by EPA to be liable under section 107 of CERCLA for the costs for which the claim is made, and the application for preauthorization did not disclose that the claimant may be a person described as follows:

(1) The owner and operator of a vessel or a facility;

(2) Any person who at the time of disposal of any hazardous substance owned or operated any facility at which such hazardous substances were disposed of;

(3) Any person who by contract, agreement, or otherwise arranged for disposal or treatment, or arranged with a transporter for transport for disposal or treatment, of hazardous substances owned or possessed by such person, by any other party or entity, at any facility or incineration vessel owned or operated by another party or entity and containing such hazardous substance; or

(4) Any person who accepts or accepted any hazardous substances for transport to disposal or treatment facilities, incineration vessels or sites selected by such person, from which there is a release, or a threatened release which causes the incurrence of response costs, of a hazardous substance.

(m) If EPA determines that it cannot complete its evaluation of a claim because of insufficient information, it will request the necessary information from the claimant. If EPA determines that it cannot complete its evaluation of a claim because the records, documents, and other evidence were not maintained in accordance with generally accepted accounting principles and practices consistently applied, or were for any reason inadequate to demonstrate that claimed costs are necessary costs, EPA will adjust the claim accordingly. Further consideration of such amounts will depend on the adequacy of subsequent documentation. Any additional information requested by EPA must be submitted within 30 days unless specifically extended by EPA. The failure of the claimant to provide in a timely manner the requested information without reasonable cause may be cause for denial of the claim.

(n) Once the claim is perfected, EPA will proceed to:

(1) Make an award on the claim; or

(2) Decline to make an award.

(o) If the claimant is dissatisfied either with EPA's denial of a claim or with the amount of an award, the claimant may request that EPA arrange an administrative hearing in accordance with section 112(b) of CERCLA and 5 U.S.C. 554. The request for an administrative hearing must occur within 30 days of being notified of EPA's decision.

(p) Notice of an award under paragraph (f) of this section will be given by First Class Mail within five (5) days of the date of the decision. Payment of approved claims will be made according to § 307.40 of this regulation.

§ 307.33 Records retention.

A claimant receiving an award from the Fund is required to maintain all cost documentation and any other records relating to the claim, and to provide EPA with access to such records. These records must be maintained until cost recovery is initiated by EPA. If, after ten (10) years from the date of award of the final claim, EPA has not initiated a cost recovery action, the claimant need no longer retain the records. The claimant shall, however, notify EPA of the location of the records, and allow EPA the opportunity to take possession of the records before they are destroyed. The claimant shall cause to be inserted in all agreements between itself and contractors performing work at the site a clause providing for the same requirement to maintain records and to provide access to records as that required of the claimant.

Subpart D—Payments and Subrogation

§ 307.40 Payment of approved claims.

(a) Payment of claims will be made, as applicable, within:

(1) 50 days of EPA's decision to make an award, if the claimant does not request an administrative hearing;

(2) 50 days of an award by an administrative tribunal if no appeal of such award is taken; or

(3) 20 days of the final judicial decision of any appeal taken.

(b) Payment of a claim shall not be seen as EPA's final acceptance of the claimant's response action. Final acceptance shall await EPA's determination that the response action was conducted in accordance with the terms and conditions of the PDD or the consent order or decree, as applicable.

---

[9] See footnote 1 or § 307.13.

§ 307.41 Subrogation of claimants' rights to the Fund.

(a) The United States acquires by subrogation all rights of the claimant to recover the amount of the claim paid by the Fund from the person or persons liable under section 107 of CERCLA for the release giving rise to the response action.

(b) Claimants shall assist in any cost recovery action that may be initiated by the United States. The claimant and the claimant's contractors shall furnish the personnel, services, documents, and materials needed to assist EPA in the collection of evidence to document work performed and costs expended by the claimant or the claimant's contractors at the particular site in order to aid in cost recovery efforts. The claimant and the claimant's contractors shall also provide all requested assistance in the interpretation of documents detailing work and costs that may be needed as evidence, and shall testify on behalf of the United States in any judicial or administrative cost recovery proceeding regarding the response costs claimed. All of the claimant's contracts for implementing the Preauthorization Decision Document shall expressly require their contractors to provide this cost recovery assistance.

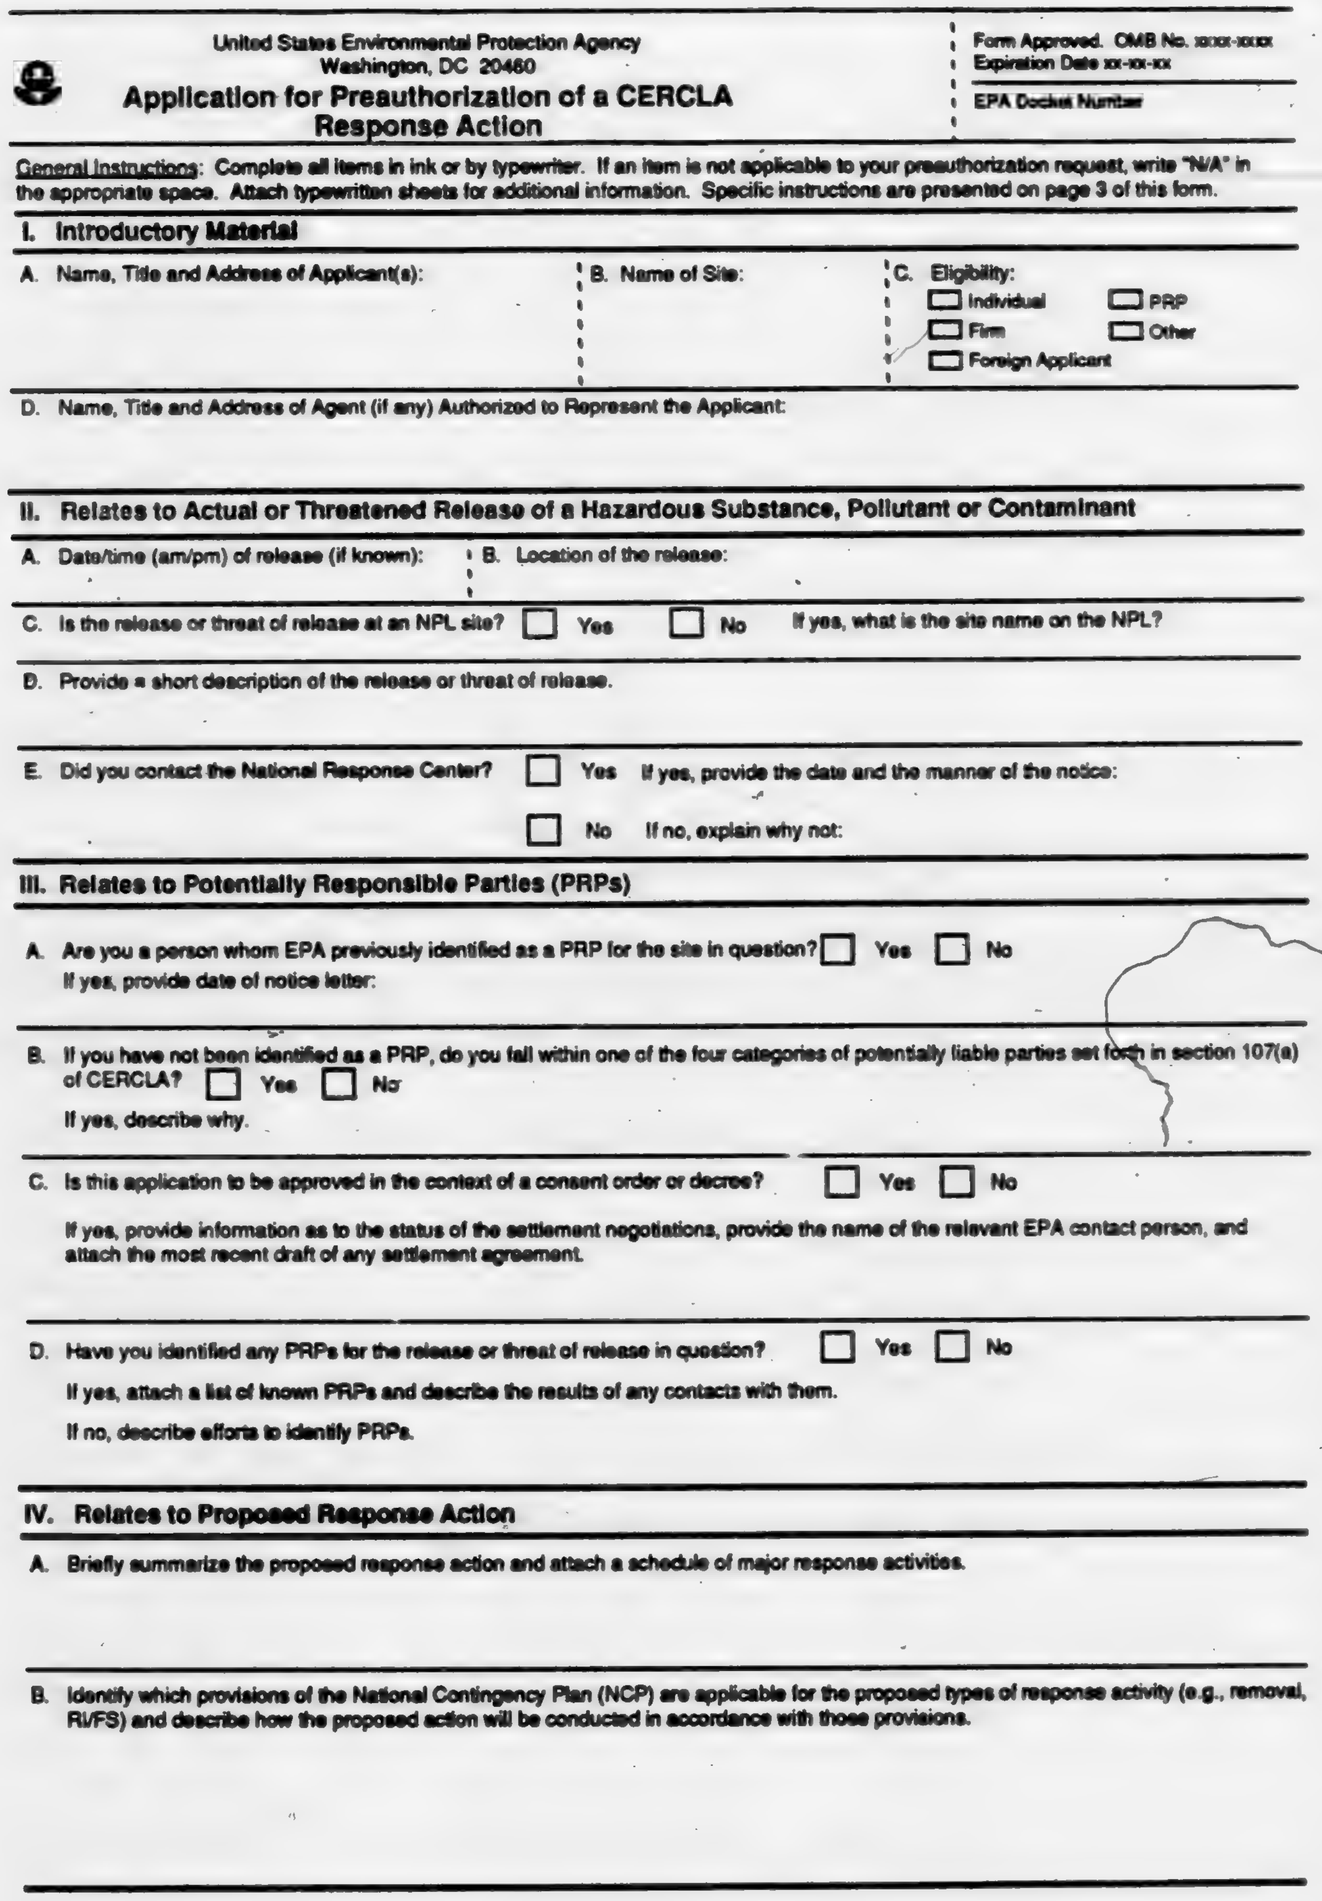
§ 307.42 Fund's obligation in the event of failure of remedial actions taken pursuant to Section 122.

(a) In the case of the failure of a completed remedial action taken by a potentially responsible party pursuant to a remedial action preauthorized in connection with a settlement under section 122(b)(1) of CERCLA, the Fund may be available for the costs of any new cleanup required, but shall not be obligated to a proportion exceeding that proportion contributed by the Fund for the original remedial action.

(b) The Fund is not obligated by preauthorization of a response action to reimburse the claimant for subsequent remedial actions if those subsequent remedial actions are necessary as a result of the failure of the claimant, his employees or agents, or any third party having a contractual relationship with the claimant to properly perform authorized activities or otherwise comply with the terms and conditions of the PDD, and the consent decree or order regarding the site cleanup entered into by EPA and the claimant.

Appendix A—Application for Preauthorization of a CERCLA Response Action

BILLING CODE 6560-50-M



United States Environmental Protection Agency
Washington, DC 20460

Application for Preauthorization of a CERCLA Response Action

Form Approved. OMB No. xxxx-xxxx
Expiration Date xx-xx-xx

EPA Docket Number

General Instructions: Complete all items in ink or by typewriter. If an item is not applicable to your preauthorization request, write "N/A" in the appropriate space. Attach typewritten sheets for additional information. Specific instructions are presented on page 3 of this form.

I. Introductory Material

A. Name, Title and Address of Applicant(s):

B. Name of Site:

C. Eligibility:
☐ Individual ☐ PRP
☐ Firm ☐ Other
☐ Foreign Applicant

D. Name, Title and Address of Agent (if any) Authorized to Represent the Applicant:

II. Relates to Actual or Threatened Release of a Hazardous Substance, Pollutant or Contaminant

A. Date/time (am/pm) of release (if known):

B. Location of the release:

C. Is the release or threat of release at an NPL site? ☐ Yes ☐ No If yes, what is the site name on the NPL?

D. Provide a short description of the release or threat of release.

E. Did you contact the National Response Center? ☐ Yes If yes, provide the date and the manner of the notice:
☐ No If no, explain why not:

III. Relates to Potentially Responsible Parties (PRPs)

A. Are you a person whom EPA previously identified as a PRP for the site in question? ☐ Yes ☐ No
If yes, provide date of notice letter:

B. If you have not been identified as a PRP, do you fall within one of the four categories of potentially liable parties set forth in section 107(a) of CERCLA? ☐ Yes ☐ No
If yes, describe why.

C. Is this application to be approved in the context of a consent order or decree? ☐ Yes ☐ No

If yes, provide information as to the status of the settlement negotiations, provide the name of the relevant EPA contact person, and attach the most recent draft of any settlement agreement.

D. Have you identified any PRPs for the release or threat of release in question? ☐ Yes ☐ No

If yes, attach a list of known PRPs and describe the results of any contacts with them.

If no, describe efforts to identify PRPs.

IV. Relates to Proposed Response Action

A. Briefly summarize the proposed response action and attach a schedule of major response activities.

B. Identify which provisions of the National Contingency Plan (NCP) are applicable for the proposed types of response activity (e.g., removal, RI/FS) and describe how the proposed action will be conducted in accordance with those provisions.

C. Address how the proposed response action will be consistent with the NCP with regard to the following performance standards:

1. Worker training, health and safety, and the safety of the public.
2. Community relations plan.
3. Compliance with legally applicable, or relevant and appropriate, Federal and State environmental requirements (ARARs).

V. Relates to Applicant's Capabilities

Describe your capabilities to carry out the proposed response actions.

VI. Relates to State or Indian Tribe Consultation

Has a letter signed by the designated State or Indian Tribe official been attached? ☐ Yes ☐ No If no, explain.

VII. Relates to Long-Term Operations and Maintenance (O&M) (If applicable)

☐ I will provide a bond or other financial assurance for O&M. ☐ The State has agreed to provide for O&M.

Attach documentation to support your assertion.

VIII. Relates to Projected Costs

Provide the projected costs for each proposed response activity and attach an explanation of why each of these costs is "necessary."

1. ______ $______
2. ______ $______
3. ______ $______
4. ______ $______

TOTAL $______

IX. Relates to Project Management

A. Describe the management structure to be put in place to implement the proposed project and to control financial matters.

B. Describe your procedures for comprehensively documenting the work performed and the costs incurred for all phases of the proposed response action.

C. Describe your procedures for reporting to EPA on the progress of the proposed project and for EPA oversight.

D. Describe your proposed procurement procedures.

Certification

I certify that all information herein is true to the best of my knowledge. I agree to supply additional information, as requested, in support of this application and access to the site for purpose of inspection.

Signature of Applicant Date

CERCLA Penalty for Presenting Fraudulent Claim

Any person who knowingly gives or causes to be given false information as a part of a claim against the Hazardous Substance Superfund may, upon conviction, be fined in accordance with the applicable provisions of Title 18 of the United States Code or imprisoned for not more than 3 years (or not more than 5 years in the case of a second or subsequent conviction), or both. (42 USC 9612 (b)(1))

Civil Penalty for Presenting Fraudulent Claim

The claimant is liable to the United States for a civil penalty of $2,000 and an amount equal to two times the amount of damages sustained by the Government because of the acts of that person, including costs of the civil action.

Criminal Penalty for Presenting Fraudulent Claim or Making False Statements

The claimant will be charged a maximum fine of not more than $10,000 or be imprisoned for a maximum of 5 years, or both. (See 62 Stat. 698, 749; 18 USC 287, 1001)

INSTRUCTIONS TO APPLY FOR PREAUTHORIZATION OF A CERCLA RESPONSE CLAIM

This form is to allow parties to apply for EPA preauthorization of a claim against the Hazardous Substances Superfund (Fund) as authorized by sections 111(a)(2) and 112 of the Comprehensive Environmental Response, Compensation and Liability Act of 1980 (CERCLA). EPA preauthorization is required before a party can begin response work if that party desires Fund reimbursement of his/her response costs. The regulatory procedures for obtaining preauthorization from EPA are found at 40 CFR Part 307. The public reporting burden for the completion of this form is estimated to vary between 95 and 173 hours – averaging 134 hours per application. These estimates include the time needed to review instructions, search existing data services, gather and maintain the data needed for completing and reviewing the collection of information. Any comments concerning the burden estimate (including suggestions for reducing the burden) or any other aspect of this form should be sent to the following addresses:

Chief, Information Policy Branch, PM-223
U.S. Environmental Protection Agency
401 M Street, S.W.
Washington, D.C. 20460

and

Office of Information and Regulatory Affairs
Office of Management and Budget
726 Jackson Place, N.W.
Washington, D.C. 20503
Attention: Desk Officer for EPA

The applicant bears the burden for demonstrating that scarce Fund resources should be utilized for this project. Consequently, all preauthorization applications should be factually thorough, well-documented and based on sound analysis. Due to the complexity of the issues involved, it is in the applicants' best interest to organize the submission so that it can be easily read by EPA officials.

In many cases, the spaces provided on this form will be insufficient for a full presentation of the information solicited. In such circumstances, the applicant shall attach typewritten sheets and provide clear cross-references between the items on this form and the attachments.

A number of items will also require that the applicants provide appendices. In these appendices, the applicants shall supply sufficient documentation to support the statements presented in the form. Since it would be impractical and undesirable to include all supporting data, the appendices should usually consist of detailed summaries of the primary data. However, the original documents should be identified, catalogued and available for presentation, if requested. As with the attachments, the applicant shall provide clear cross-references between this form and the appendices.

Applicants should consult 40 CFR section 307.22(g) to assert any claims of business confidentiality.

When completed this form should be sent to:

U.S. Environmental Protection Agency
401 M Street, S.W.
Washington, D.C. 20460
Attention: Director, Office of Emergency and Remedial Response (OS-200)

The sections below provide instructions for particular items on the claim form.

I. A. Provide the name, title and address of the person(s) submitting the application. If the claim is submitted by a group of persons who have created a legal entity to act as claimant, information should be provided concerning the identity and location of both the entity and the constituent parties.

B-C. Self-explanatory.

D. "Agent" refers to any duly authorized agent, executor, administrator, or other legal representative of the applicant. If the preauthorization application is submitted by such an agent, he/she must present evidence of authority to so represent the applicant. (See 40 CFR Section 307.20)

II. A-C. Self-explanatory.

D. This description must include the following information: the type of vessel and facility; the type and quantity of hazardous substance (including whether the substance is listed under CERCLA section 102), and a description of the surrounding population and/or environmental risk.

E. Self-explanatory.

III. A. Check whether you are a person who EPA previously identified as a potentially responsible party (PRP).

B. Check whether you have reason to believe, without regard to whether a defense under Section 107(b) may be available, that you may be a person described as follows:

1) the owner or operator of a vessel or facility,

2) any person who at the time of disposal of any hazardous substance owned or operated any facility at which such hazardous substances were disposed of,

3) any person who by contract, agreement, or otherwise arranged for disposal or treatment, or arranged with a transporter for transport for disposal or treatment, of hazardous substances owned or possessed by such person, by any other party or entity, at any facility or incineration vessel owned or operated by another party or entity and containing such hazardous substance, or

4) any person who accepts or accepted any hazardous substances for transport to disposal or treatment facilities, incineration vessels, or sites selected by such person, from which there is a release, or a threatened release of a hazardous substance, which causes the incurrence of response costs.

C. If you checked YES for item A or B and NO for this item, explain why this application is not to be approved in the context of a consent order or decree. Describe the status of any settlement negotiations.

D. List all PRPs known to you. Describe any contacts with PRPs and any reply from such parties. If PRPs are unknown, describe efforts to locate PRPs.

IV. A. Self-explanatory.

B. Describe the response action(s) that is the subject of this request (e.g., removal, RI/FS, selection of remedy, design, construction), and methods proposed for carrying out such actions, including site sampling plan and quality assurance procedures. Address the requirements contained in 40 CFR 307.22.

C. Worker/community health and safety plan. The worker plan must comply with OSHA Safety and Health standards at 29 CFR Part 1910.120. The community plan must address the protection of area residents from the physical, chemical and/or biological hazards particular to the site and the selected response.

Community Relations Plan. The applicant need not develop a plan if the response action is of short duration or a community relations plan already exists for the site at issue.

ARARs. See 40 CFR Sections 300.400(g), 300.430(f)(3)(iv).

V. Include a discussion of financial and technical/scientific capabilities.

VI. If a letter of cooperation signed by the designated State or Indian Tribe is not attached to an application to undertake a remedial action, explain efforts made by the applicant to obtain such cooperation.

VII. Self-explanatory.

VIII. The figures provided on the form should be the overall cost for a particular type of response activity (e.g., removal, RI/FS, design). Documentation should be attached to support each cost figure. In addition, the applicant must explain why each of the proposed costs is "necessary." "Necessary" costs are those which are 1) required, 2) reasonable, 3) allowable and 4) allocable according to Federal cost principles. Federal cost principles are presented in the following documents: OMB Circular A-87 (State and local government and Federally recognized Indian Tribes), OMB Circular A-122 (non-profit organizations), 48 CFR sections 31.1, 31.2 (profit-making organizations).

IX. Self-explanatory.

Claim for CERCLA Response Action

General Instructions: Complete all items in ink or by typewriter. If an item is not applicable to your claim, write "N/A" in the appropriate space. Attach typewritten sheets for additional information. Specific instructions are presented on page 3 of this form.

I. Introductory Material

A. Name, Title and Address of Claimant(s):	B. Name of Site:	C. Preauthorization Decision Document (PDD): Number __________ Date __________ (attach copy)

D. Name, Title and Address of Agent (if any) Authorized to Represent the Claimant:

II. Relates to Potentially Responsible Parties (PRPs)

A. Has the claimant made a reasonable effort to identify any PRPs (other than any who may be parties to this claim)? Describe those efforts.	B. Has the claimant presented a request for reimbursement to known PRPs (other than any who may be parties to the claim)? ☐ Yes ☐ No Attach names, addresses and dates of presentation. Describe any responses.
C. If a partial settlement was reached with PRPs after presentation of the claim as described in II.B., did EPA approve any release? ☐ Yes ☐ No If no, explain.	D. Is there any action pending in court regarding this site or response actions? ☐ Yes ☐ No If yes, explain.

III. Relates to Operable Unit Claims

A. Is this a claim for an operable unit? ☐ Yes ☐ No

If no, provide the completion date of the subject response action and skip B, C, D and E.

B. How many operable units are authorized in the PDD?	C. Which operable unit are you filing a claim for at this time?
D. Is completion of the next operable unit on schedule? ☐ Yes ☐ No If no, explain.	E. Estimated date for submitting claim for the next operable unit.

IV. Relates to Response Action

A. Was the response/operable unit completed in accordance with the PDD? ☐ Yes ☐ No If yes, skip B

B. Was a modification to the preauthorization request submitted to and approved by EPA?

☐ Yes — Supply number and date ____________________

☐ No — Explain how and why response differs from PDD.

C. Was the response completed in accordance with the Statement of Work and the Work Plan? ☐ Yes ☐ No If yes, skip D

D. Explain how and why the response differs from the Statement of Work and/or the Work Plan.

E. Address how each of the PDD terms and conditions were met (in the order that they appear in the PDD). Provide documentation of such adherence in an appendix.

V. Relates to Amount of Response Claim

A. Provide the following summary information:

Re Current Claim Submission:

Type of Response Activity(ies) Represented by Claim	- ________
Total Response Costs Represented by Claim	- $________
Percentage of Claimed Costs to Total Response Costs	- ________ %
Dollar Amount of Reimbursement Claimed	- $________

Re Any Past Claim Awards Under the Subject PDD:

Number of Previous Claims	- ________
Total Sum of Previous Awards	- $________

Re PDD:

Reimbursement Cap Set For All Claim Submissions	- $________

B. Provide the following breakdown of the response costs asserted in this claim submission:

Labor	$________
Travel	$________
Equipment	$________
Materials and Supplies	$________
Contractual Services	$________
Other Direct Costs	$________
Indirect Costs	$________
TOTAL RESPONSE COSTS	$________

With the exception of contractual services, provide detailed summaries of the components of each of the above cost categories. Address how the costs incurred were required under the PDD and reasonable, allowable and allocable according to Federal cost principles.

C. Provide a cost breakdown of all contractual services performed for this claim submission. Explain how the incurred costs were required under the PDD and reasonable, allowable and allocable according to Federal cost principles.

Certification

I certify that all information herein is true to the best of my knowledge. I agree to supply additional information, as requested, in support of this application and access to the site for purpose of inspection.

Signature of Claimant Date

CERCLA Penalty for Presenting Fraudulent Claim

Any person who knowingly gives or causes to be given false information as a part of a claim against the Hazardous Substance Superfund may, upon conviction, be fined in accordance with the applicable provisions of Title 18 of the United States Code or imprisoned for not more than 3 years (or not more than 5 years in the case of a second or subsequent conviction), or both. (42 USC 9612 (b)(1))

Civil Penalty for Presenting Fraudulent Claim

The claimant is liable to the United States for a civil penalty of $2,000 and an amount equal to two times the amount of damages sustained by the Government because of the acts of that person, including costs of the civil action.

Criminal Penalty for Presenting Fraudulent Claim or Making False Statements

The claimant will be charged a maximum fine of not more than $10,000 or be imprisoned for a maximum of 5 years, or both. (See 62 Stat. 698, 749; 18 USC 287, 1001)

INSTRUCTIONS FOR SUBMITTING A CLAIM FOR A CERCLA RESPONSE ACTION

This form is for claims against the Hazardous Substances Superfund as authorized by sections 111 (a)(2) and 112 of the Comprehensive Environmental Response, Compensation and Liability Act of 1980 (CERCLA). Claims can only be awarded for reasonable response costs incurred pursuant to a preauthorization decision document (PDD) issued by EPA. The regulatory procedures for obtaining preauthorization from EPA and for the submission and award of claims are found at 40 CFR Part 307.

The public reporting burden for the completion of this form is estimated to vary between 25.0 and 58 hours -- averaging 41.5 hours per claim. These estimates include the time needed to: review instructions, search existing data sources, gather and maintain the data needed, and complete and review the collection of information. Any comments concerning the burden estimate (including suggestions for reducing the burden) and any other aspect of this form should be sent to the following addresses:

Chief, Information Policy Branch, PM-223
U.S. Environmental Protection Agency
401 M Street, S.W.
Washington, D.C. 20460

and

Office of Information and Regulatory Affairs
Office of Management and Budget
725 Jackson Place, N.W.
Washington, D.C. 20503
Attention: Desk Officer for EPA

The claimant bears the burden for demonstrating that his response costs should be reimbursed. Consequently, all claim submissions should be factually thorough, well-documented and based on sound analysis. Due to the complexity of the issues involved, it is in the claimant's best interest to organize the submission so that it can be easily read by EPA officials.

In many cases, the spaces provided on this form will be insufficient for a full presentation of the information solicited. In such circumstances, the claimant shall attach typewritten sheets and provide clear cross-references between the items on this form and the attachments.

A number of items will also require that the claimants provide appendices. In these appendices, the claimant shall supply sufficient documentation to support the statements presented in the form. Since it would be impractical and undesirable to include all supporting data, the appendices should usually consist of detailed summaries of the primary data. However, the original documents should be identified, catalogued and available for presentation, if requested. As with the attachments, the claimant shall provide clear cross-references between this form and the appendices.

Claimants should consult 40 CFR Section 307.22 (g) to assert any claims of business confidentiality.

When completed, this form should be sent to:
U.S. Environmental Protection Agency
401 M Street, S.W.
Washington, D.C. 20460
Attention : Director, Office of Emergency and Remedial Response (OS-220)

The sections below provide instructions for particular items on the claim form.

I. A. Provide the name, title and address of the person(s) submitting this claim. If the claim is submitted by a group of persons who have created a legal entity to act as claimant, information should be provided concerning the identity and location of both the entity and the constituent parties.

B. Provide the site name as it appears on the PDD.

C. Supply the number and date of the PDD for this claim. A copy of the PDD shall also be provided in an appendix. If the claimant has been granted preauthorization to modify the PDD, these amendments must be described and copies provided.

D. "Agent" refers to any duly authorized agent, executor, administrator or other legal representative of the claimant. If this claim is submitted by such an agent, he/she must present evidence of authority to so represent the claimant.

II-IV. Self-explanatory.

V. A. Self-explanatory.

B. This item is concerned with the actual response costs incurred during the time period represented by this claim submission -- not the percentage of those response costs for which the claimant is seeking reimbursement. Federal cost principles are presented in the following documents: OMB Circular A-87 (State and local governments and Federally recognized Indian Tribes); OMB Circular A-122 (non-profit organizations); 48 CFR 31.1, 31.2 (profit-making organizations). If the claim represents more than one stage of response activity, indicate this on the form and provide similar cost breakdown in an appendix. These instructions are applicable to Item V.C. below.

C. Contractual services will vary depending on the response action performed and the operable unit represented by the claim submission. Typical categories of response activity include:

Security
Groundwater sampling
Construction
    Administrative Expenses
    Materials
Operation & Maintenance.

BILLING CODE 6560-50-C

Appendix C—Notice of Limitations on the Payment of Claims for Response Actions, Which is to be Placed in the Federal Register Preamble Whenever Sites Are Added to the Final NPL

Limitations on the Payment of Claims for Response Actions

Sections 111(a)(2) and 122(b)(1) of CERCLA authorize the Fund to reimburse certain parties for necessary costs of performing a response action. As is described in more detail at____Federal Register______ (____________), 40 CFR Part 307, there are two major limitations placed on the payment of claims for response actions. First, only private parties, certain potentially responsible parties (including States and political subdivisions), and certain foreign entities are eligible to file such claims. Second, all response actions under sections 111(a)(2) and 122(b)(1) must receive prior approval, or "pre-authorization," from EPA.

Appendix D—Notice of Limitations on the Payment of Claims for Response Actions Which is to be Placed in Public Dockets

Statutory Limitations on the Payment of Claims for Response Actions Filed Pursuant to Section 111(a)(2) and 122(b)(1) of CERCLA

The Comprehensive Environmental Response, Compensation, and Liability Act of 1980 (CERCLA), as amended by the Superfund Amendments and Reauthorization Act of 1986 (SARA) (42 U.S.C 9601 *et seq.*) authorizes a number of mechanisms for responding to a release, or threat of release, of hazardous substances or pollutants or contaminants. One of these mechanisms is response claims. Section 111(a)(2) of CERCLA authorizes the Environmental Protection Agency (EPA or the Agency) to compensate claimants for necessary response costs if certain conditions are met. Section 122(b)(1) of CERCLA authorizes EPA to reimburse certain potentially responsible parties for a portion of the costs of response actions conducted pursuant to a settlement agreement. These conditions are outlined below.

First, only private parties, parties to section 122(b)(1) agreements (including States and political subdivisions thereof) and foreign entities are eligible for payment through the response claims mechanism. Federal, State, and local government units, and Indian Tribes, can receive funding for response activities through other authorities of sections 111(a) and 123 of CERCLA.

Second, eligible claimants can only be reimbursed for costs that are incurred in carrying out the National Contingency Plan (NCP), 40 CFR Part 300. In order to be in conformity with the NCP, all claims must receive prior approval, or "preauthorization," from EPA. This means that before response work is initiated, the party must: (1) Notify EPA of its intent to file a claim; (2) demonstrate that the release merits priority consideration; (3) propose activities to remedy the release that can be carried out consisent with the NCP; and (4) demonstrate the capabilities necessary to carry out such activities in a safe and effective manner. In order for potentially responsible parties to be eligible for reimbursement they must conduct the response actions as specified in a consent decree or administrative order. Only if EPA preauthorizes a response action can the party begin work, and later file a claim for reimbursement of costs.

The limitations placed on the payment of claims for response actions and the procedures for filing such claims are described in more detail at____Federal Register______ (____________), 40 CFR Part 307. Additional information can be obtained by contacting William O. Ross, Office of Emergency and Remedial Response (OS-220), 401 M Street, SW., Washington, DC 20460, (202) 382–4645, or the RCRA/CERCLA Hotline, (800) 424–9386 (or 382–3000 in the Washington DC, metropolitan area).

LIST OF PUBLIC LAWS

Note: No public bills which have become law were received by the Office of the Federal Register for inclusion in today's **List of Public Laws.**

Last List August 22, 1989

Public Laws

are now available for the 101st Congress, 1st Session, 1989

Pamphlet prints of public laws, often referred to as slip laws, are the initial publication of Federal laws upon enactment and are printed as soon as possible after approval by the President. Legislative history references appear on each law. Subscription service includes all public laws, issued irregularly upon enactment, for the 101st Congress, 1st Session, 1989.

(Individual laws also may be purchased from the Superintendent of Documents, Washington, DC 20402-9328. Prices vary. See Reader Aids Section of the Federal Register for announcements of newly enacted laws and prices).
